## INFRASTRUCTURE/SERVICES

### Transportation

1. Estimate the average daily traffic. On the tentative map identify the average daily traffic on each street within the boundary of the tentative map.

---

---

---

---

2. Are the street sections consistent with the Final Development Agreement? (Tentative Map Condition #22)

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, explain the differences and justify their use.

---

---

---

3. Has a detailed pedestrian circulation plan been submitted? (Development Agreement Condition #13)

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, explain why not.

---

---

---

---

### **Water Supply**

1. What is the estimated water right requirement for this project?

\_\_\_\_\_ acre feet/year

2. Explain how the water right requirements will be met for this project.

---

---

---

---

### **Sewer Service**

1. Explain how sewer service will be provided to this project?

---

---

---

---

2. How much sewage will be generated by this project?

---

---

---

**Fire Protection**

1. What is being done to comply with the requirements of the Nevada Division of Forestry? (Tentative Map Condition #83 and Special Use Permit Condition #42)

---

---

---

---

---

---

---

**Open Space/Recreation**

1. Will any open space be offered for dedication as part of this project?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If yes, how many acres are being dedicated, when will the land be dedicated, and what improvements will be located in the open space (e.g., trails, emergency access roads)?

---

---

---

---

---

---

---

---

---

---

2. What, if any, private community recreation facilities are proposed?

---

---

---

---

---

Who will maintain these facilities and how?

---

---

---

---

# DEVELOPMENT STANDARDS

## Community Design Guidelines

1. Are any neighborhood entries proposed?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If yes, describe the materials, height, style, color, etc. Show the location(s) on the tentative map or site plan.

---

---

---

---

---

---

---

2. Is the entry(s) design consistent with the Development Standards Handbook (Chapter II)? \_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

---

---

---

3. Are any community fences and/or walls proposed? \_\_\_\_\_ Yes \_\_\_\_\_ No

If yes, describe the materials, height, style, and color. Show the location on the tentative map or site plan.

---

---

---

---

---

---

---

4. Are the fencing and/or walls consistent with the community design standards in the Development Standards Handbook (Chapter II)?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

---

5. Is any community lighting proposed? \_\_\_\_\_ Yes \_\_\_\_\_ No

If yes, describe the location(s), materials, height, style, and lighting levels.

---

---

---

---

---

6. Is the community lighting consistent with the Development Standards Handbook (Chapter II)?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

---

7. Are any signs proposed? \_\_\_\_\_ Yes \_\_\_\_\_ No

If yes, describe the location, size, materials, and color.

---

---

---

---

8. Are the signs, if any, consistent with the Development Standards Handbook (Chapter II)?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

9. Are any private trails proposed? \_\_\_\_\_ Yes \_\_\_\_\_ No

If yes, show the location on the tentative map or the site plan for the special use permit.

---

---

---

---

---

10. Are the private trails, if any, consistent with the Development Standards Handbook (Chapter II)?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

### Site Development Guidelines

1. What are the proposed building setbacks?

---

---

---

---

2. For residential units, are the building setbacks consistent with the Development Standards Handbook (Chapter III)?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

---

3. Have the setbacks from any potentially active fault traces been identified on the tentative map or site plan for the special use permit?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, explain why not.

---

---

---

---

---

4. What are the minimum lot widths?

---

---

---

---

5. Are the widths consistent with the Development Standards Handbook (Chapter III)?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

6. Explain the grading. (e.g., have the slopes been rounded to blend into the natural contours? Has the grading been minimized?) Explain the erosion control techniques (temporary and permanent) that will be used.

---

---

---

---

---

---

---

---

---

---

7. Explain how the drainage is being handled.

---

---

---

---

---

---

---

---

8. Is any lot perimeter fencing proposed?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If yes, describe the materials, height, style, and color. Show the location on the tentative map.

---

---

---

---

---

---

---

---

9. Are the fencing and/or walls consistent with the site development standards in the Development Standards Handbook (Chapter III)?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

---

**Landscape Design Guidelines**

1. For a tentative map application, is any common area landscaping proposed? \_\_\_\_\_ Yes \_\_\_\_\_ No

For a special use permit application, is any on-site and/or common area landscaping proposed? \_\_\_\_\_ Yes \_\_\_\_\_ No

If yes, describe the landscaping (e.g., species, irrigation, drought tolerant? amount of turf). Show the locations on the tentative map or site plan for the special use permit.

---

---

---

---

---

---

---

---

2. What entity will maintain the landscaping identified in the previous question?

---

---

---

---

---

3. Is the landscaping described in question #1 consistent with landscape design guidelines in the Development Standards Handbook (Chapter V)?  
\_\_\_\_ Yes \_\_\_\_ No \_\_\_\_ Not Applicable  
If no, describe any changes and explain the reasons.

---

---

---

---

---

---

---

---

4. Describe the revegetation techniques that will be implemented

---

---

---

---

---

---

---

---

5. What measures will be used to control fugitive dust during construction?

---

---

---

---

---

---

---

---

6. Are any fire fuel breaks required beyond the property line of the residential lots?

\_\_\_\_ Yes \_\_\_\_ No \_\_\_\_ Not Applicable  
If yes, show the locations on the tentative map.

7. Is the design of the fire fuel breaks consistent with the guidelines identified in Chapter V of the Development Standards Handbook?

\_\_\_\_ Yes \_\_\_\_ No \_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

---

---

---

---

8. Explain the water conservation techniques that will be used.

---

---

---

---

---

---

---

---

9. Is a 25-foot landscaped buffer shown between the lots and the collector and minor arterial streets? (Tentative Map Condition #85)

\_\_\_\_ Yes \_\_\_\_ No \_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

---

---

---

---

10. Is a 50-foot buffer shown between the structure and any riparian vegetation? (Tentative Map Condition #51)

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

SUBJECT: Attached Water Quality Management Plan  
Southwest Pointe Golf Course

Dear Mr. Crowe:

Kleinfelder, Inc. is pleased to forward the attached Water Quality Management Plan (WQMP) for the Southwest Pointe Golf Course. Southwest Pointe Partners retained Kleinfelder to prepare the WQMP to meet condition 61 of Washoe County's conditions of approval.

Kleinfelder incorporated your verbal comments/concerns into the WQMP. If you do not have any additional concerns after reading the report, Southwest Pointe Partners would like a letter of approval from your office so the project can proceed.

If you have any questions regarding the WQMP, please give me a call at (702)323-7182.

**Kleinfelder, Inc.**

Sincerely yours,

A handwritten signature in cursive script that reads 'Brett Freeborn'.

## WATER CHEMISTRY ANALYSIS:

Attn: Fees may apply to some types of samples.

All of the information below must be filled in or the analysis will not be performed.

### TYPE OF ANALYSIS:

Check here for ROUTINE DOMESTIC ANALYSIS.  
Circle the constituents needed for PARTIAL ANALYSIS.

### SAMPLING INSTRUCTIONS:

The sample submitted must be representative of the source. Spring and surface water samples should be as free of dirt and debris as possible. Wells should be pumped thoroughly before sampling, changing the water in the casing at least three times. Product water from filters should be sampled after running for about ten (10) minutes.

Re: Southwest Pointe Development Agreement  
DA9-1-93  
Final Development Agreement

Dear Maddy and Don:

Enclosed is a highlighted version of the changes suggested at our meeting last week, the meeting with John Swendseid on the SAD and my further discussions with Don regarding additional comments of his and Kris Klein. Also enclosed is a clean copy of the final draft. Brita is assembling a booklet with all exhibits for Don's use in processing approval by the Board of County Commissioners.

Sincerely,

ROBERT M. SADER

Reno, Nevada 89520

**SUBJECT: Seismic Related Recommendations for  
Earthen Retention and Detention Structures  
Southwest Pointe  
Washoe County, Nevada**

Reference: "Geotechnical Investigation, Southwest Pointe, Phase I, Reno, Nevada," by  
Harding Lawson Associates, dated August 16, 1993

Dear Dave:

This letter addresses Condition 22 of the Conditions of Approval for Southwest Pointe (Case No. DA9-1-93). Condition 22 reads:

"A geotechnical report shall be prepared, which considers the effects of earthquake forces and faulting in the area. The siting and design of detention/retention facilities shall be addressed based on the findings and recommendations provided in the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition."

The development will involve construction of a golf course which will include numerous excavated ponds and ponds behind earthen dikes. Harding Lawson Associates performed a geotechnical investigation/geologic fault study in order to identify and locate active faults at the site. Several active faults do trend through the project site. We understand that the building setbacks shown on numerous project documents were established by the above-referenced report.

With regard to the seismic-related recommendations for earthen retention/detention structures, we recommend that these improvements meet the following criteria:

- Any earthen retention or detention bermed structures located within previously identified fault setback zones shall be limited to a maximum height of four feet and impoundment capacity of three acre-feet.

The intent of this recommendation is to limit, but not eliminate, damage which could occur as a result of fault movement under the earthen dike.

We trust this provides the information you need at this time. If we can be of further service, or if you have any questions regarding this letter, please contact the undersigned in our Reno office.

Very truly yours,

**Subject: Open Space Management Plan for Southwest Pointe  
(Case No. DA9-1-93) SECOND DRAFT**

Dear Karen:

Attached to this letter is a copy of the second draft of the Open Space Management Plan for Southwest Pointe. Deletions are ~~struck through~~ and additions are in *italic*. I believe you will find that all of the items mentioned in your April 26, 1996 memorandum have been addressed, except for the issue about paying for the land. During your absence, I scheduled a meeting through your secretary for Wednesday, May 22 at 2:00 at your office to discuss this issue. I also would like to discuss the changes that were made to make sure I have adequately addressed your concerns.

I am confident that we can reach agreement on all items listed in your letter. Assuming that this will be the case, I would appreciate if you could give me a brief letter stating that you approve the Open Space Management Plan. I want to include your letter in the final development agreement.

Sincerely,

Brita Tryggvi, AICP

Letter from Washoe County Dept. of Parks and Recreation .....	A-1

## Open Space Management Plan

This plan has been prepared to comply with the Conditions of Approval for Southwest Pointe (Case No. DA9-1-93). Specifically, the following conditions are relevant:

9328. Prior to the approval of the final development agreement, an open space management plan and map shall be prepared that specifies the ownership of open spaces, type of uses allowed, phasing of open space dedication, phasing of trail construction and who is responsible for maintenance. This plan shall address the provisions of Section 110.408.45 of the Development Code. Common areas shall be maintained by the homeowner's association and provisions be made for perpetual funding for maintenance. Prior to approval of the final development agreement, a government entity (e.g., United States Forest Service, Washoe County Parks Department, etc.) or a non-profit organization (e.g., Washoe Parks Foundation) shall be identified that will accept the dedication of the open space buffers identified on the Concept Plan, which consists of approximately 1,500 acres.

9429. The final development agreement shall include a provision for public open space that prohibits the sale of any open space without the consent of Washoe County.

9530. A minimum 10-acre public park site shall be offered for dedication to the county. A sketch plan will be included in the final development agreement. The final park design shall be mutually agreeable to the county and the developer. The developer will construct the recreational facilities in the park and then be reimbursed for the cost of the construction from the Residential Construction Tax. The responsibility of park maintenance shall be negotiated by the developer and Washoe County prior to the approval of the final development agreement.

9631. The developer will work together with staff from the Department of Parks and Recreation to locate the proposed regional public trails to the satisfaction of Washoe County and the developer.

*This Open Space Management Plan has been prepared to address these conditions. This document was approved by Karen Mullen, Assistant Director of the Washoe County Department of Parks and Recreation on May \_\_, 1996. (Refer to attached letter.)*

## **Neighborhood Park**

A neighborhood park is planned near the entrance to Southwest Pointe. As shown in Figure 1, the park will be constructed on the south side of Whites Creek Lane and on the east side of Thomas Creek. *If the Washoe County Parks Commission and the Board of County Commissioners will allow the developer to construct the park pursuant to a construction and dedication agreement acceptable to the county and the developer, then the park will be dedicated to Washoe County after the improvements have been completed; however, the land will be placed in escrow prior to commencement of construction. Southwest Pointe Partners or its successor will be reimbursed for the cost of the improvements and for the fair market value of the land from fees collected in Southwest Pointe from the Residential Construction Tax. All funds collected from the Residential Construction Tax from this project will be dedicated to reimbursement of the developer to the extent of the costs incurred, subject to the limitations of NRS Chapter 278.*

It is important to ensure that recreational facilities are developed in a time frame that coincides with the demands created by development. *A construction agreement will be negotiated and construction on the neighborhood park will commence ~~prior to~~ at approximately the time of issuance of the 400<sup>th</sup> building permit and the park will be completed prior to issuance of the 600650<sup>th</sup> building permit. Southwest Pointe Partners or its successor will be responsible for preparing a parcel map or final map to create the park parcel.*

A conceptual plan of the park is presented in Figure 1. *The park is located on the east side of Thomas Creek and on the south side of Whites Creek Lane. This segment of Whites Creek Lane is a public road. The park consists of approximately 15 acres. The area to the east is generally undeveloped with the developed portion of the park located on the western half of the site to take advantage of the creekside location. Proposed facilities include a children's play area, "T" ball field, trail head, parking areas (for passenger vehicles and truck/trailers), landscaped areas, paths, and individual and group picnic*

FIGURE 1  
 WASHOE COUNTY NEIGHBORHOOD PARK AT EAST ENTRY - 15 ACRES

SCALE: 1" = 100'

areas. The "T" ball backstop is proposed for the lawn area, with 4-foot tall fencing along the perimeter. A hitching post and water trough are proposed for horses entering the regional trail system along Thomas Creek. The approximate construction cost for the park, as proposed, is \$750,000 in 1996 dollars. These facilities have been identified after meetings with the staff of the Washoe County Parks and Recreation Department; however, it is anticipated that neighborhood meetings will be held and, as a result of ~~these meetings~~ citizen input or direction of the Washoe County Parks Commission, the conceptual plan may be modified. Washoe County will be responsible for maintenance of the park once it has been dedicated to the county.

### **Multi-Purpose Trails**

The proposed public trail system is shown in Figure 2 and is consistent with Washoe County's master plan for this park district. Public trails are proposed along Thomas Creek for access to the Mt. Rose Crest Trail and trailhead and around the northern portion of the project for access to the Mackay Fair Flume Trail and the U.S.F.S. parcel in Section 11, which is proposed for a future community or regional park. Both trails provide access to the Sierra Base Trail, which eventually ties into the Hunter Lake Trail. Portions of the Sierra Base Trail are located on U.S.F.S. property and other portions, especially near Dry Creek, are located on Southwest Pointe. It will be necessary to relocate portions of the existing dirt road because of golf course and residential development along Dry Creek. In total, approximately 6 miles of public trails are proposed. *In addition to the trails mentioned above, the Department of Parks and Recreation anticipates linking Whites Creek and Thomas Creek with a trail. ~~Since Whites Creek is not located on Southwest Pointe such a connection would have to be made on U.S.F.S. property.~~*

A system of internal private trails that connect to the public trails will be developed, and the location will be determined by the internal street system and/or parcelization. Southwest Pointe Partners or their successor will be responsible for construction and maintenance of all private trails.

Access to the public trail system will be available at several locations. The only access point with public parking will be at the neighborhood park, which will include the trailhead and parking areas. Access for individuals without vehicles is available from

FIGURE 2  
PUBLIC TRAIL SYSTEM

Whites Creek Lane, Zolezzi Lane, the neighborhood park, and the future regional or community park in Section 11. Motorized vehicles will be prohibited. The trails will be available for use by hikers, bicyclists, pedestrians, and equestrians.

The public trails will be constructed in the open space around Southwest Pointe. The trails will be located in a manner acceptable to Southwest Pointe Partners or their successor and the Washoe County Department of Parks and Recreation. Construction and maintenance of the trails will be the responsibility of Washoe County. When construction of the first 18-hole golf course is completed, the open space along Thomas Creek adjacent to the golf course and Phase I residential areas will be dedicated to Washoe County. *Should the county desire to construct the trail along Thomas Creek in conjunction with construction of the golf course and/or the Phase I residential area, the developer will offer an easement or other acceptable entry agreement for this purpose, with language acceptable to both parties. If the county desires to extend the Thomas Creek trail beyond Phase I and the first golf course, the developer will also grant an easement over a portion of open space along the eastern and southern boundaries of the project.* These easements will ultimately be dedicated on future applicable final maps.

The staff of the Washoe County Department of Parks and Recreation has also expressed interest in stocking Thomas Creek with fish through the Urban Fisheries Program. To accomplish this work, vehicular access to the creek is necessary. Two locations for vehicular access are proposed -- one is at the neighborhood park and the other is off of the maintenance road to the existing water tanks.

## Open Space

The site plan identifies approximately 1,500 acres of natural open space. The open space is located around the periphery of the project and provides a generous buffer between Southwest Pointe and all adjacent properties. Within the project itself, the goal is to create an open feeling through the lot layout, controls on fencing, siting of homes, and development of 36 holes of golf that meander through the neighborhoods.

As explained previously, to facilitate development of a public trail system along Thomas Creek, the open space along the creek will be dedicated or an easement will

be granted when the first golf course is completed. The remaining open space will be dedicated as development progresses. With each final map on land adjacent to open space, an open space parcel will be created. When the map is recorded, the open space parcel will be deeded to Washoe County.

Only minimal disturbance of the natural habitat will be allowed. *Deed restrictions shall restrict future use to open space. Motorized vehicle use by the public will be prohibited. Some of the permitted uses will include public trails, emergency access roads, water tanks and associated maintenance roads, fire breaks, stormwater detention ponds, and any other utility uses necessary to serve the project. Any non-open space related improvements made by the developer in the open space shall remain the responsibility of Southwest Pointe Partners or their successor. Any improvements made and/or owned by Washoe County or another public entity will be the responsibility of that entity to maintain. Public access to designated wetlands will be restricted and seasonal restrictions and/or regulated recreational use in areas identified as key mule deer habitat will also be enforced. Provisions will be made for these types of uses and restrictions at the time of deeding.*

Prior to dedication or grant of easements of the open space to Washoe County, Southwest Pointe Partners or their successors will be responsible for any maintenance that may be required. Possible maintenance activities may include debris and litter removal, fire prevention measures required by the Nevada Division of Forestry, and measures for habitat enhancement for mule deer that may be developed in consultation with the Nevada Department of Wildlife. Washoe County will be responsible for any maintenance activities required on property that is under its control. Maintenance activities for which the county is responsible may be identified by Southwest Pointe Partners or their successor at the time of deeding.

On residential lots adjacent to open space, fences should be used sparingly and with consideration for protection of privacy for key outdoor areas on the lot, safety, or animal control. Lot perimeter fencing is allowed. Specific design details will be included in the Development Standards Handbook and/or the CC&Rs. Proposed locations for perimeter lot and golf course fencing are shown in Exhibit F, Sheet 1 Site Plan - Layout.

**SUBJECT: Water Quality Management Plan  
Southwest Pointe Golf Course  
Reno, Nevada**

Dear Mr. Mohler:

We are pleased to present the Water Quality Management Plan (WQMP) for Southwest Pointe Golf Course. We have included input from Southwest Pointe Partners, Washoe County Planning Department (WCPD) and Nevada Division of Environmental Protection (NDEP). We will submit a copy of the WQMP directly to Mr. Leonard Crow of the Washoe County Planning Department and Ms. Laura Helsel of the NDEP Bureau of Water Quality Planning after your review and approval.

We developed the WQMP on information provided by you and on our understanding of your desires and those of Washoe County and NDEP. The WQMP includes sampling of surfac water and collection of water samples from the golf course green underdrain system to assess vadose zone water. The regulatory agencies may require groundwater monitoring if fertilizers are detected at elevated concentrations in the vadose zone water.

If your schedule is to begin grading in the summer of 1996, the sampling and analyses required to establish a baseline of water quality should begin shortly. We are preparing a work plan for the surface water sampling/monitoring that should meet the needs of both Southwest Pointe and regulatory agency requirements. We will contact you to further discuss the terms and details. Kleinfelder's experience and expertise in sampling and monitoring will help maintain a defensible environmental program.

LIMITATIONS

This Water Quality Management Plan may be used only by Southwest Pointe for the purpose stated, within a reasonable time from issuance. It should be recognized that definition and evaluation of environmental conditions is a complex and inexact science. Due to the scope of

our assessment, judgments leading to the development of the WQMP were generally made without a complete knowledge of the environmental and subsurface conditions present. If you wish to increase the probability of detecting changes in water quality, Kleinfelder can modify this WQMP. If you wish to further reduce the uncertainty associated with this WQMP, Kleinfelder should be notified for additional consultation.

CLOSURE

We appreciate this opportunity to be of service to you, and look forward to future endeavors. If you have any questions regarding this report, or need additional information or services, please contact either Mr. Brett Freeborn or Mr. Brett Whitford in our Reno office.

Very truly yours,

## 1.0 EXECUTIVE SUMMARY

This document presents the Water Quality Management Plan (WQMP) for the Southwest Pointe development, hereafter referred to as the "Project." Plate 1 (Appendix A) shows the approximate Project location. The Project consists of a 36-hole golf course and residential development. The purpose of the WQMP is to present a workable plan to manage the surface water and groundwater quality at the project site during construction and during golf course operation. The WQMP includes a water quality monitoring program and a list of construction practices to be used at the project to reduce the chance of degrading the water quality in Thomas and Dry Creeks.

Kleinfelder, Inc., developed the monitoring program to assess the pre-construction quality of surface water and to assess potential changes in surface water and groundwater quality during golf course operation. The monitoring program is summarized in the following bulleted items:

- Prior to golf course construction, sample and analyze surface water taken from Thomas and Dry Creeks as it enters and leaves the Project. To establish baseline concentrations (pre-construction), a minimum of one sampling event should be performed before construction begins. Section 5.2 lists the analytical parameters.
- During golf course construction, quarterly sample and analyze surface water quarterly in Thomas and Dry Creek, if flowing (Section 5.2).
- Graphically plot surface water analytical monitoring results to assess significant changes in water quality and summarize findings in a quarterly letter report.
- During golf course operation, sample and analyze water collected from three golf course green underdrain systems. The chemical analysis of these water samples will help determine if fertilizers or pesticides leach through the greens due to irrigation water and/or seasonal precipitation. A minimum of one baseline sampling event should be performed prior to first chemical/fertilizer application. Plate 2 shows the test green locations.
- During golf course operation, tri-annually sample and analyze surface water to compare with baseline/pre-construction water quality. If changes in water quality are observed the data will be evaluated to assess whether the changes are regional, climatic or a response to golf course operation. The Nevada Division of Environmental Protection (NDEP) and Washoe County maintain a non degradation policy. Any increasing trend is viewed as degradation. Golf course operations would need to be modified to stop the degradation.

Southwest Pointe will change the construction and/or golf course management techniques if monitoring parameter concentrations indicate a change in water quality is occurring due to golf course construction or operations. If necessary, physical/construction mitigation options will be considered. If management of the chemical application is successful, as shown by non-degradation, the golf course can petition Washoe County District Comprehensive Planning (WCDCP) to reduce or eliminate sampling requirements.

---

## 2.0 INTRODUCTION

---

Kleinfelder, Inc. prepared this WQMP for Southwest Pointe. This WQMP was prepared to satisfy Washoe County's Condition of Approval No. 61. The WCDGP requires the WQMP.

The Project consists of thirty-six hole golf course with a custom residential community. The WQMP is for the golf course construction and operation.

### 2.1 PURPOSE

The purpose of the WQMP is to present a working plan for managing the quality of the surface and groundwater at the Project site. As part of the WQMP, a water quality monitoring program was developed to assess the water quality prior to the Project construction, during construction and during operation of the golf course. In addition, the WQMP includes a list of construction practices that can be followed/implemented at the Project. These environmentally sound procedures can reduce the chances of degrading the water quality at the Project.

### 3.0 WATER QUALITY MANAGEMENT GOALS

This WQMP was developed as a plan to reduce the potential for irreversibly degrading the water quality at the Project. In addition, the WQMP will assess the impact the construction and operation of the Project may have on water quality, if any.

The phrase "water quality" is not synonymous with water pollution, but is rather, a quantification of the chemical/physical state of the water as it applies to its many beneficial uses. The water composition/chemistry reflects the natural and cultural responses to inputs and withdrawals to and from the system (Krenkel, 1980).

The surface water monitoring program will assess changes from the pre-construction water quality. An observed change in water quality that occurs during the project construction and operation, will be compared to background mean concentrations. The change will be assessed in order to determine the cause. If the change is attributed to Southwest Pointe, the practice causing the degradation will be modified or abandoned. The total suspended solids (TSS) and turbidity concentration in Thomas and Dry Creeks are the primary or key monitoring parameters during the construction phase.

The golf course green underdrain monitoring program will assess water quality as the water moves down into the vadose zone. Because static groundwater level is 100 feet below ground surface or greater, the water quality information will help assess if leaching of chemicals could pose a threat to groundwater quality. If the water quality in the golf green underdrain samples indicates fertilizer could migrate deeper to groundwater, other monitoring systems may be required by WCDPCP. Baseline golf course green underdrain monitoring will be initiated when the golf course construction nears completion, but before chemical application begins.

The preliminary greens to be monitored are numbers 1, 4 and 6. These greens are located adjacent to biologically sensitive areas. The proposed locations will increase the probability of detecting a potential problem early, before it becomes irreversible.

The golf course green underdrain leachate water quality should not show significant increase in nitrogen concentration because application at the optimum rate nitrogen is biologically utilized, sorbed, diluted, and chemically consumed. If over-applied, non-utilized nitrogen could migrate past the target soil profile and move into the golf green underdrain system and downward into the vadose zone. The utilization process should continue to reduce and retard the nitrogen flow until dissolved concentrations reach background levels. If elevated concentrations are detected in the golf green underdrain leachate, Southwest Pointe will need to modify the chemical application plan. If change in management techniques do not rectify the problem it may be necessary to install vadose zone monitoring system such as lysimeters.

Changes in water quality can represent natural seasonal fluctuations in response to above or below normal precipitation, from the golf course operation or off-site operations. The NDEP and WCDEP maintain a non-degradation policy, where any increasing pollutant concentration trend is considered degradation. The objective of Southwest Pointe is to prevent degradation of the surface and groundwater, and if degradation is observed, assess the cause and modify practices to mitigate the degradation.

## 4.0 GEOLOGIC AND HYDROGEOLOGIC SETTING

### 4.1 REGIONAL PHYSIOGRAPHY

The Project area is located in the southwest part of the Truckee Meadows. The Truckee Meadows is a structural depression within a region transitional between the Sierra Nevada and the Basin and Range Geomorphic provinces (Gates and Watters, 1992) not referenced. The eastern edge of the Sierra Nevada province is dominated by the Sierra Nevada fault system. This fault system is a zone of movement in which faults have an echelon course and predominantly have dip-slip offset (Bonham, 1969). The Sierra Nevada fault system resembles Basin and Range faults, and trends north to south, from Reno to Markleeville.

The project area is bounded by the Carson Range to the west and the Virginia Range on the east. The topography of the site generally slopes to the east and has a range of elevation from 4,800 feet to 5,920 feet. Thomas and Dry Creeks are the main drainage features on the site. Dry Creek is an intermittent stream, while Thomas Creek normally flows year-round. Appendix B contains flow measurement and water quality data for Thomas Creek.

### 4.2 SITE GEOLOGY AND HYDROGEOLOGY

The Project is located on the upper (western) portion of the Mount Rose alluvial fan complex. Around the Truckee Meadows, Pleistocene, and Holocene faults are associated with the Sierra Nevada fault system. These faults are primarily north-south trending and bisect alluvial fans, including the Mount Rose fan complex. Similar faults have been mapped on the Project site (Bonham, 1983). There is evidence that suggests east-west trending faults are present that predate the north-south trending faults (Van deKamp and Goranson, 1990).

The Mount Rose fan complex is composed of an alluvial veneer over a volcanic pediment. The alluvium is composed of older Quaternary Donner Lake Outwash, overlain by younger Quaternary Tahoe Outwash. Both the Tahoe and Donner Lake units are glacial outwash stream deposits from major creeks that flowed from alpine glaciers on Mount Rose (Bonham, 1983). These outwash deposits consist primarily of volcanic rock with minor granitic cobbles.

Plate 2 shows the approximate locations and depth to water of monitoring wells installed by Washoe County Utility Division (WCUD) on the Project. In general, depth to groundwater is approximately 100 to 200 feet below the ground surface throughout the Project area. The depth to water measurements obtained were taken from drilling logs prepared for WCUD during the exploratory drilling on the Mt. Rose Fan. Appendix C contains a copy of the well logs.

## 5.0 WATER QUALITY MANAGEMENT

Management of the water quality at the Project will be accomplished by three primary activities. The first is construction and operation practices that will be implemented to reduce the effect the Project construction and operation has on the water quality. The second activity is the water quality monitoring program. The monitoring program will help maintain water quality by providing a method to detect problems before they become irreversible. Section 5.2 presents the theory and methodology behind the selected monitoring parameters and the sampling locations. In addition, the schedule and frequency for the monitoring events is included.

### 5.1 CONSTRUCTION MANAGEMENT ACTIVITIES

This construction management section presents procedures and construction techniques that will be utilized to reduce potential for degradation of Thomas and Dry Creeks. This section is not intended to be a drainage plan, grading plan, or a Storm Water Pollution Prevention Plan.

The Project will be constructed and operated under the following general requirements and prohibitions:

1. The golf course will be designed in order to reduce surface water drainage that would cause erosion.
2. There shall be no removal of vegetation or disturbance of existing soil conditions except where adequate erosion control and storm water runoff control facilities are installed and operational.
3. Adequate erosion control and storm water runoff control facilities shall be installed, operated, and maintained to manage discharges from areas where existing ground surface conditions have been disturbed.
4. The discharge of surplus waste earthen material to drainage ways is prohibited.
5. The placement of waste earthen materials in such a manner as to allow the discharge of such materials to adjacent undisturbed land areas or to any surface water is prohibited.
6. There shall be no significant modification of stream channel geometry without proper notification of regulatory authorities.
7. Disturbed areas shall be adequately re-stabilized or re-vegetated. Re-vegetated areas shall be continually maintained until vegetation becomes established.
8. Surface flows from the Project site shall be controlled so as to reduce cause of downstream erosion at any point.
9. Surface waste earthen materials shall be removed from the Project site and deposited only at a legal point of disposal or adequately re-stabilized on-site.

10. Areas not subject to construction shall be marked and protected from soil disturbance.
11. Fresh concrete or cement shall not be allowed to contact or enter surface waters.
12. Stormwater runoff collection, pre-treatment, and infiltration disposal facilities for areas of completed construction shall be designed, installed, and maintained to preclude a discharge that exceeds the capacities of the stormwater detention and control system described in the grading plan.

## 5.2 WATER QUALITY MONITORING

Kleinfelder developed the WQMP considering the physical location of the monitoring points, the schedule of sampling, and the selection of the analytical parameters. We chose the analytical parameters as key indicators parameters in monitoring changes in water quality. The analytical assessment consists of monitoring for the following water quality indicator parameters:

<u>LABORATORY PARAMETERS:</u>	<u>SURFACE WATER</u>	<u>UNDERDRAIN LEACHATE</u>
Total Dissolved Solids (TDS)		X
Total Suspended Solids (TSS)	X	
Nitrate Nitrogen	X	X
Ammonia	X	X
Total Kjeldahl Nitrogen (TKN)	X	X
Individual pesticides used during golf course operations	X	X
Total Phosphorus	X	X
 <u>Field Parameters:</u>		
pH	X	X
Turbidity	X	X
Electrical Conductivity	X	X

NOTE: The post-construction sampling/analyses will include analyses for pesticides used on the golf course.

The analyses will be performed by a laboratory certified/approved by the Nevada Division of Environmental Protection (NDEP).

The analytical parameters were selected to identify a variety of sources and pollutants. The following paragraphs present the rationale behind the selection of the analyses.

The TKN analysis is used to monitor for nitrogen and ammonia. The presence of elevated levels of TKN can indicate a relatively new source of pollution. Elevated TKN in upgradient Thomas Creek monitoring station SW-1 may indicate off-site degradation from septic systems leaching into the surface water. The ammonia analysis is used to assess the relative age or "freshness" of the

pollutants and to distinguish between organic and inorganic nitrogen in the TKN analysis. The nitrate and total phosphorous analyses will be used to monitor for the hydrolyzed fertilizers. The TSS analysis is used to monitor for erosion/runoff of sediment into Thomas and Dry Creeks during the Project construction and operation. TDS concentration is monitored in the groundwater to assess changes in dissolved materials due to surface activity.

During the post-construction sampling of the golf course, each individual pesticide that is applied will be analyzed in both underdrain and surface water samples.

The field parameters, pH, electrical conductivity, and turbidity are used to monitor water quality changes and to support laboratory analyses. A significant change in any of the field parameters could indicate a change in water quality, either a natural seasonal change or a response to the Project construction and operation. Electrical conductivity can be used to estimate TDS and turbidity, and to some extent can be used to estimate TSS.

Sampling station locations, on Thomas and Dry Creeks and golf green leachate sampling locations were selected to assess surface water quality entering and exiting the Project. The underdrain water collection systems will help assess fertilizer leaching in the vadose zone before it can degrade groundwater. The selected golf course green underdrain systems will be sampled a minimum of once for baseline data.

#### 5.2.1 Surface Water Monitoring Plan

The water quality monitoring of Thomas and Dry Creeks includes sampling, laboratory analysis, and assessment of the results. Both creeks will be sampled at an upstream and downstream stations. Station SW-1 is located where Thomas Creek enters the Project property, and SW-2 is located where it exits the Project. Monitoring of Dry Creek sampling station SW-3 and SW-4, will depend whether it is flowing. During spring snow melt, Dry Creek may flow, but is dry the majority of the year. Dry Creek will be sampled if it is flowing during the scheduled sampling dates. Plate 2 shows the approximate sampling station locations.

In order to establish a concentration baseline for the monitored parameters, the two surface water stations will be sampled a minimum of one times prior to construction start-up. Appendix B contains a summary table of analytical results for the upper Thomas Creek measured by NDEP. The baseline data will be used later to compare construction and operation concentrations for each parameter.

During construction of the Project, Thomas and Dry Creek will be sampled quarterly for the laboratory analytical parameters 5.2. In addition, monthly volumetric flow measurements for Thomas will be obtained from the NDEP. NDEP measures the flow and samples the water monthly. Section 6.0 presents possible mitigating options to be considered.

*Wade County*

We understand WCDCP will require tri-annual monitoring of the surface water following the first round of seeding/fertilization. The tri-annual sampling will be performed in the spring, summer and late fall of each year. If construction or post-construction concentrations are statistically significantly different than pre-construction levels, corrective measures will be implemented. Appendix B, summarizes the monitoring schedule.

The table in section 5.2.2 summarizes the monitoring schedule.

### 5.2.2 Vadose Zone Groundwater Monitoring Plan

The water entering the vadose will be sampled from golf course green underdrain systems and analyzed to assess changes in water quality with time under golf greens 1, 4, and 6. Monitoring vadose zone water quality will help assess if groundwater can potentially be impacted.

Like the surface water, a baseline for pre-operation water quality will be established using analytical results from a minimum of one sampling events performed prior to the first chemical application/fertilization. Plate 2 shows the locations of the greens to be sampled.

The baseline, golf green, underdrain water quality monitoring will be performed a minimum of one time before the first chemical/fertilizer application to the golf course. The monitoring will include sampling, chemical analysis, and comparison to baseline concentrations. The data will be monitored in order to assess increasing concentrations at depth of analytical parameters. If concentrations appear to be increasing significantly, procedures will be modified. Section 6.0 presents possible golf course operation management techniques, and construction methods to mitigate the source/problems.

Golf course operation (post-construction) monitoring will be performed tri-annually each year following the first round of chemical/fertilization. The analytical constituents will be the same as the baseline events with the addition of analyses for individual pesticides used on the golf course. The tri-annual sampling will be performed in the spring, summer, and late fall of each year in conjunction with the surface water sampling. Table 1 summarizes the surface and vadose zone sampling schedule.

**TABLE 1**

**SURFACE AND VADOSE ZONE  
MONITORING SCHEDULE**

**SOUTHWEST POINTE GOLF COURSE WATER QUALITY MANAGEMENT PLAN  
RENO, NEVADA**

	<b>Pre-Construction Baseline</b>	<b>Construction</b>	<b>Golf Course Operation</b>
Surface Water - Thomas and Dry Creeks	Minimum of One Sampling Event	Quarterly Sampling and Reporting	Tri-annual Sampling and Reporting
Golf Green Underdrain Monitoring	Not Applicable	Minimum of One Baseline Sampling Event Before First Chemical Application	Tri-annual Sampling and Reporting

**5.2.3 Water Quality Reporting**

The golf course construction quarterly surface water monitoring results will be presented to WCDP in a letter format summarizing monitoring events, analytical data and findings/conclusions. The letter report will be submitted to WCDP and NDEP within 30 days of Southwest Pointe receiving analytical report data. The letter report will discuss the changes in water quality, if any. Additionally, a tabulation of current, post, and baseline analytical data will be included. When the tri-annual sampling begins, the report presentation will coincide with sampling events.

---

## 6.0 MITIGATION OPTIONS

---

The water quality monitoring program was designed to detect changes in water quality. If water quality changes are detected and show a trend of increasing concentration, or if water quality standards are approached, mitigating options will be considered. The options available range from management techniques to physical abatement structures. The following items represents possible mitigation alternatives:

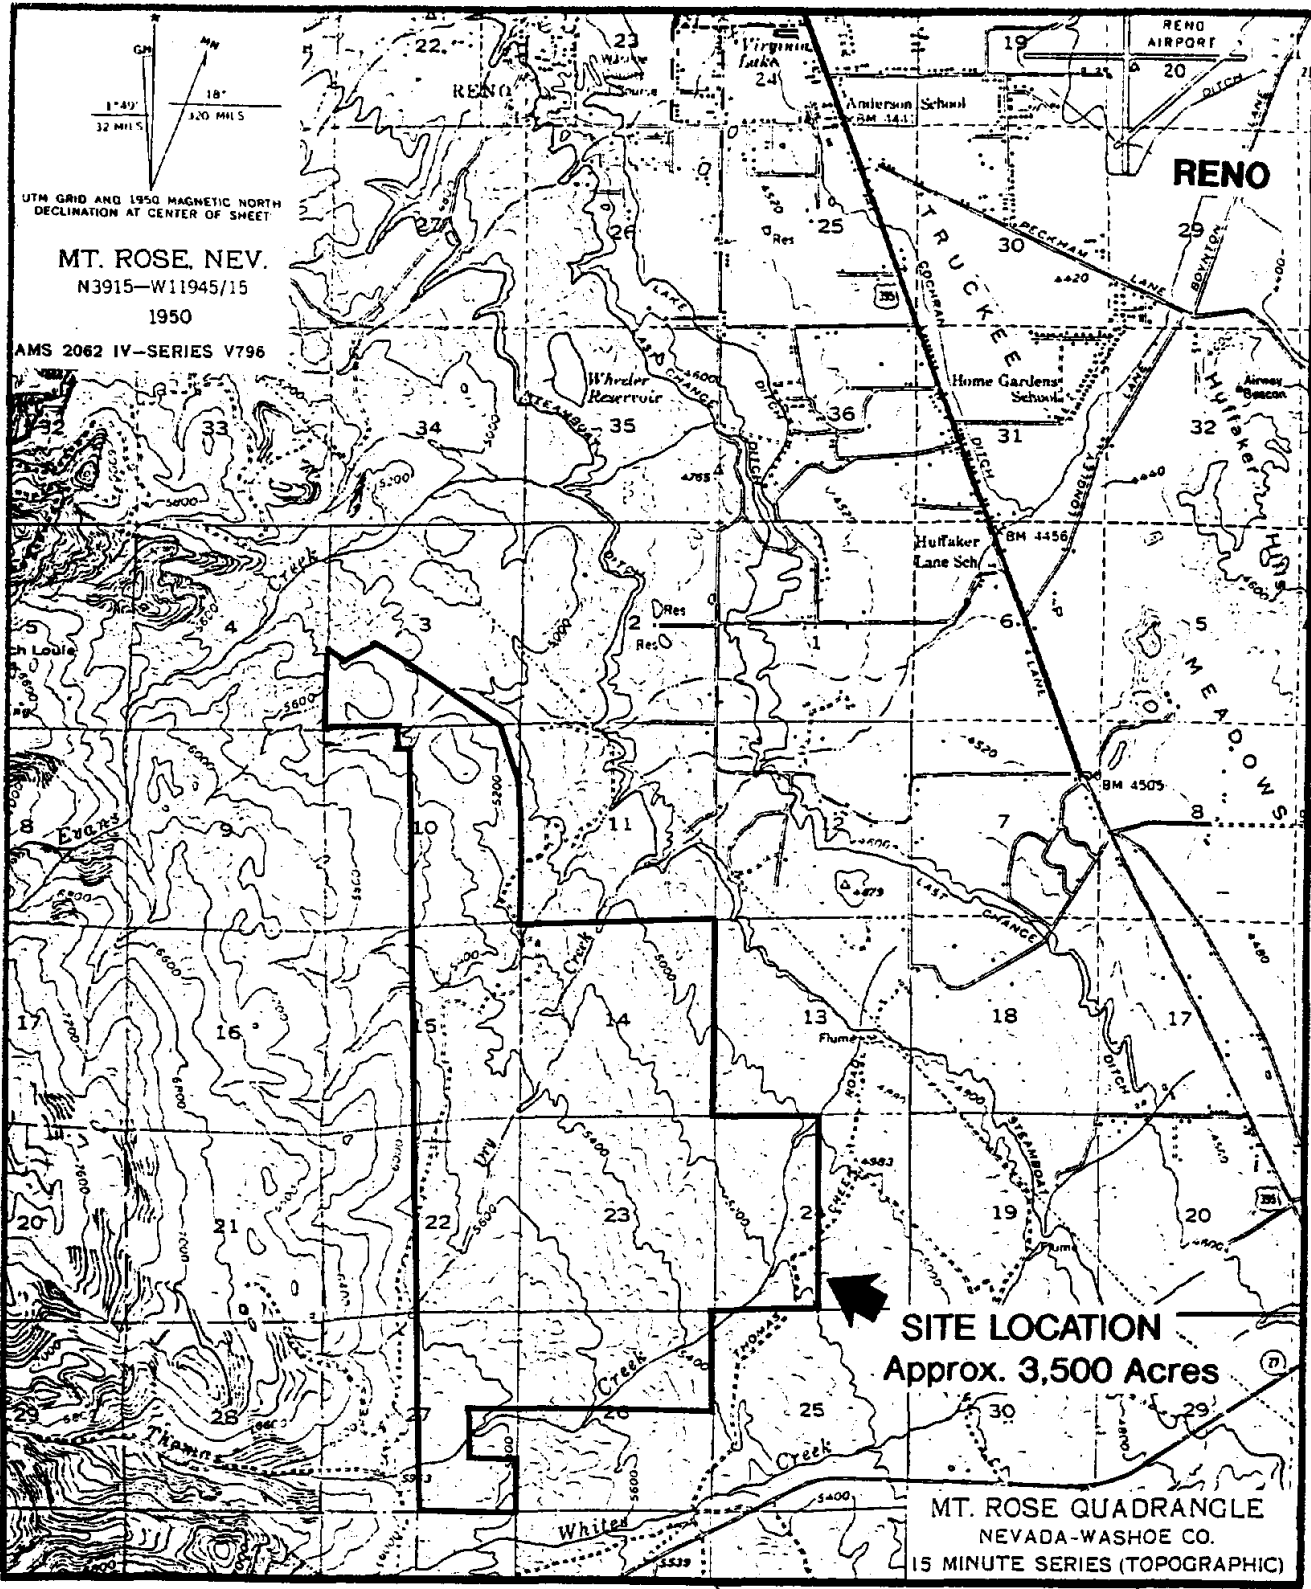

- Elimination or exchange of a potential environmentally unsafe material for a less harmful material/chemical.
- Reduction of the concentration or frequency of chemical application.
- Modification to the irrigation frequency/timing.
- Collection and treatment of underdrain leachate.

---

Re: Southwest Pointe

Dear Don and Kristine:

*The purpose of this letter is to comply with Condition 8 of the General Conditions specified in DA9-1-93 (Southwest Pointe), as amended on May 7, 1996 by action of the Washoe County Planning Commission. Condition 8 specifies that the developer shall define a process to insure that the maintenance and replacement of streets, parking areas, lighting, landscaping, recreational facilities, utilities, and other private infrastructure shall be performed by the homeowners associations and shall be perpetually funded. The condition further specifies that the County Engineer and the Department of Development Review shall be responsible for determining compliance with this condition.*

*The legal instrument creating the process for maintenance and replacement of the facilities listed above ("common areas") will be the declaration of covenants, conditions and restrictions (CC&Rs). The CC&Rs will be drafted, approved by county staff, and recorded at or before the time of the recording of the first final map in this project.*

*The CC&Rs shall require the creation of the Southwest Pointe Association, a Nevada nonprofit corporation, as a homeowners association, to be responsible for the maintenance and replacement of common areas. Common areas, such as those facilities specified above, will be specifically identified in the CC&Rs and will be owned by the association, either as easements or with fee simple title transferred to the association.*

Don Young  
Kristine Klein  
May 10, 1996  
Page 2

The association will have a board of directors elected by the members. The members will include all lot owners, and owners of other real property, within the project, with equal voting power based on real estate owned. On an annual basis the board of directors will create a budget for the association, which will provide funding for the maintenance and replacement of common areas. The budget will be premised on a plan of ongoing maintenance for all common areas. The budget will include a substantial reserve for future major capital expenditures (street overlays, roof repairs, etc.) and emergencies, as well as the necessary administrative costs of such an association (accounting, insurance, administrative fees, employee salaries (if any), etc.). The members will be required to approve a budget at least annually.

Once the annual budget is approved, assessments will be levied against all properties within the project on an equal basis based on the income necessary to be generated to meet budgetary demands. Property subject to assessments will be liened automatically under Chapter 116 of the Nevada Revised Statutes. The county will be included as a third party beneficiary of these assessment and lien provisions in order to enforce the funding requirements and lien rights, if this should ever be necessary.

Associations in large, private communities such as this one generally have big budgets and significant ongoing business activities. In essence, the association becomes a form of private government run by the homeowners for their own benefit and, because the assessments against each homeowner's lot are significant, the association members tend to have much input into the budgetary process and the governance of the association. Due to the size and extent of the assets and activities of the association, there is little likelihood that this particular homeowners association will be one of those neglected, underfunded entities in small subdivisions with which the county has had some bad experiences. The homeowners living in this project will have large sums invested in their residences, and will demand a high standard for landscaping, road repair and maintenance of common areas.

Don Young  
Kristine Klein  
May 10, 1996  
Page 3

Please let me know if there is any further information you would like to have for compliance with Condition No. 8 of the General Conditions of DA9-1-93. Of course, the CC&Rs will provide more detail for the process of maintenance and replacement of common areas, and will be submitted for county review at the appropriate time.

Sincerely,

ROBERT M. SADER

Re: Southwest Pointe

Dear Don and Kristine:

The purpose of this letter is to comply with Condition 8 of the General Conditions specified in DA9-1-93 (Southwest Pointe), as amended on May 7, 1996 by action of the Washoe County Planning Commission. Condition 8 specifies that the developer shall define a process to insure that the maintenance and replacement of streets, parking areas, lighting, landscaping, recreational facilities, utilities, and other private infrastructure shall be performed by the homeowners associations and shall be perpetually funded. The condition further specifies that the County Engineer and the Department of Development Review shall be responsible for determining compliance with this condition.

The legal instrument creating the process for maintenance and replacement of the facilities listed above ("common areas") will be the declaration of covenants, conditions and restrictions (CC&Rs). The CC&Rs will be drafted, approved by county staff, and recorded at or before the time of the recording of the first final map in this project.

The CC&Rs shall require the creation of the Southwest Pointe Association, a Nevada nonprofit corporation, as a homeowners association, to be responsible for the maintenance and replacement of common areas. Common areas, such as those facilities specified above, will be specifically identified in the CC&Rs and will be owned by the association, either as easements or with fee simple title transferred to the association.

Don Young  
Kristine Klein  
May 10, 1996  
Page 2

The association will have a board of directors elected by the members. The members will include all lot owners, and owners of other real property, within the project, with equal voting power based on real estate owned. On an annual basis the board of directors will create a budget for the association, which will provide funding for the maintenance and replacement of common areas. The budget will be premised on a plan of ongoing maintenance for all common areas. The budget will include a substantial reserve for future major capital expenditures (street overlays, roof repairs, etc.) and emergencies, as well as the necessary administrative costs of such an association (accounting, insurance, administrative fees, employee salaries (if any), etc.). The members will be required to approve a budget at least annually.

Once the annual budget is approved, assessments will be levied against all properties within the project on an equal basis based on the income necessary to be generated to meet budgetary demands. Property subject to assessments will be liened automatically under Chapter 116 of the Nevada Revised Statutes. The county will be included as a third party beneficiary of these assessment and lien provisions in order to enforce the funding requirements and lien rights, if this should ever be necessary.

Associations in large, private communities such as this one generally have big budgets and significant ongoing business activities. In essence, the association becomes a form of private government run by the homeowners for their own benefit and, because the assessments against each homeowner's lot are significant, the association members tend to have much input into the budgetary process and the governance of the association. Due to the size and extent of the assets and activities of the association, there is little likelihood that this particular homeowners association will be one of those neglected, underfunded entities in small subdivisions with which the county has had some bad experiences. The homeowners living in this project will have large sums invested in their residences, and will demand a high standard for landscaping, road repair and maintenance of common areas.

May 9, 1996  
Project No. 88-003.20

**RECEIVED**  
**MAY 10 1996**  
WASHOE COUNTY  
DEVELOPMENT REVIEW  
2:57pm

Mr. Dave Price, P.E., County Engineer  
Washoe County Dept. of Public Works  
P.O. Box 11130  
Reno, NV 89520

**Re: Southwest Pointe Construction Traffic Haul Route Plan  
(Case No. DA9-1-93)**

Dear Dave,

This correspondence has been prepared to satisfy Condition #12 which reads as follows:

- 12. Prior to approval of the final development agreement, a proposed Construction Traffic Haul Route Plan shall be submitted to the County Engineer for review and approval. The primary construction haul route shall be Whites Creek Lane. As part of Phase I development, however, Zolezzi Lane may be used, for construction mobilization only, for completion of the first 18-hole golf course and for the extension of utilities into the project site.

Prior to the issuance of the first building permit, all construction traffic will be diverted to Whites Creek Lane. Access to Whites Creek Lane will be from the Mt. Rose Highway to Thomas Creek Road. Construction traffic is prohibited from using Thomas Creek Road between Zolezzi Lane and Whites Creek Lane. When the 35th building permit is issued, all construction traffic will be required to use Whites Creek Lane from Wedge Parkway. Construction traffic will use Whites Creek Lane from Wedge Parkway if this segment is completed prior to the issuance of the 35th building permit. Thomas Creek Road from Mt. Rose Highway to the proposed Whites Creek Lane may be considered for a haul route provided the developer submit a traffic analysis and intersection design prepared by a licensed Nevada Civil Engineer which addresses and provides, as a minimum, recommendations regarding:

Samuel Chacón, P.E.  
President

Bryan Sprague, P.E.  
Vice President

Brita Tryggvi, A.I.C.P.  
Principal

Greg Doerr, A.I.C.P.  
Principal

- a) site distance requirements;
- b) left turn storage capacity and design;
- c) intersection location and alignment;
- d) proximity to existing intersections and recommended separate distances;
- e) existing center median and landscaping concerns;
- f) determination of adequacy of existing Thomas Creek Road roadway geometric section; and
- g) determination of adequacy of existing structural section and load bearing capability.

The submitted report shall be evaluated and accepted by the County Engineer prior to any approval of the use of Thomas Creek Road as a haul route. Once Whites Creek Lane is connected to Wedge Parkway, this road shall become the primary construction haul route.

Any existing or proposed roads that will be used as construction haul routes and are not designated truck routes must be evaluated by a geotechnical study to determine the existing structural section and its load supporting capability. If the pavement section is inadequate to support the proposed construction loadings, the roadway must be redesigned or reconstructed as needed to provide a 20-year design life in accordance with the AASHTO Interim Guide for Flexible Pavements.

In considering construction traffic haul routes, two distinct scenarios exist. First, the permanent or long-term route, and second, the initial or Phase 1 development requirement. This letter addresses both situations.

### **Primary Construction Traffic Haul Route**

The primary, long-term construction traffic haul route will use Mt. Rose Highway to Wedge Parkway to Whites Creek Lane into the project. (When Whites Creek Lane is constructed to Zolezzi Lane, the construction haul route could be South Virginia to Zolezzi Lane to Whites Creek Lane into the project.) Per the conditions of approval, Whites Creek Lane must be utilized prior to the issuance of the 35th building permit. Along those lines, it is the intent of the developer to construct this segment of Whites Creek Lane (i.e., east of Thomas Creek Road) to a level sufficient for construction traffic

prior to the 35th building permit. This means the roadway would at least be rough graded to the ultimate horizontal and vertical alignment. It would not be necessary to be paved for construction traffic. Any paving which is completed would be to a standard adequate for construction traffic loading.

The existing segments of this route (Mt. Rose Highway and Wedge Parkway) are newly constructed roadways and are designated truck routes. Therefore, no additional geotechnical evaluation is required.

### Phase 1 Construction Traffic Haul Route

The Phase 1 construction traffic haul route will be Mt. Rose Highway to Thomas Creek Road to Whites Creek Lane into the project. Per the conditions of approval, this route is allowed up to the 35th building permit. For this route to be considered for construction traffic, several items need to be analyzed. These items generally fall into two categories -- geometric considerations and structural sections.

Geometric Considerations - There are several geometric issues included in Condition #12, which needs to be addressed with the construction traffic haul route plan. These include site distance, left-turn storage, intersection location and alignment, consideration of proximity to other intersections, and geometrics of Thomas Creek Road. Subsequent to this initial approval, much work has been accomplished to address these issues.

In October 1995, Washoe County approved a special use permit for the elementary school at Southwest Pointe. Prior to this approval, the geometric issues regarding Whites Creek Lane and Thomas Creek Road were addressed in a traffic report prepared by Solaegui Engineers. These issues were also discussed at several meetings with county staff. The recommendations reached for the elementary school also considered the ultimate buildout of the Southwest Pointe project and are applicable to this construction traffic haul route plan. In summary, the conclusions and recommendations are as follows:

- 1) The intersection of Thomas Creek Road and Whites Creek Lane will initially operate as a "T" intersection with stop control on the Whites Creek Lane approach.
- 2) Landscaping in the existing center median island on Thomas Creek Road south of Whites Creek Lane must be removed or altered to provide a minimum of 250 feet site distance. Per Condition #28 of the elementary school special use permit, Washoe County will be responsible for this improvement. An alternative is to create a three-way stop condition at this intersection.
- 3) For the Phase 1 construction of Whites Creek Lane (i.e., west of Thomas Creek Road), queuing conflicts will not exist with other intersections. With construction of the easterly leg, these conflicts will exist. Therefore, for this Phase 1 construction traffic haul route queuing conflicts are not a concern. The concern will be later when construction traffic uses the east leg of Whites Creek Lane. However, by that time, one of the recommended intersection improvements (i.e., raised median curb on Thomas Creek Road) would have been completed.

Structural Section Considerations - To address issues regarding the adequacy of the existing roadway structural section, Kleinfelder has prepared a geotechnical report. This report consisted of evaluation and analysis of Thomas Creek Road. The general conclusions of this report are as follows:

- 1) The portion of Thomas Creek Road south of Saddlehorn Drive is in fairly good condition and construction traffic will have a minimal adverse impact.
- 2) The portion of Thomas Creek Road north of Saddlehorn Drive has already failed and that construction traffic will have nearly no long-term impact.

(The reports referenced previously -- Solaegui Engineers, August 25, 1994, and Kleinfelder, May 2, 1996 -- are attached for your information and review.)

If you have any questions please call me. When you are prepared to approve this construction haul route plan, please provide me with a brief letter stating that this plan is acceptable. We need this letter so that it can be included in the final development agreement.

Sincerely,

A handwritten signature in black ink, appearing to read 'Bryan Sprague', with a long horizontal flourish extending to the right.

Bryan Sprague, P.E.  
Vice President

Attention: Mr. Michael Mohler

**SUBJECT: Geotechnical Investigation Report  
Proposed Use of Thomas Creek Road as a Haul Road  
Southwest Pointe Development  
Washoe County, Nevada**

Dear Mr. Mohler:

The attached report presents the results of our geotechnical investigation for the proposed use of Thomas Creek Road a haul road for the initial construction of Southwest Pointe Development to be located in Washoe County, Nevada. Our work consisted of subsurface exploration, laboratory testing, engineering analyses, and preparation of this report.

Based on our work completed to date, we have drawn the following general conclusions:

- The portion of Thomas Creek Road south of Saddlehorn Drive is in fairly good condition with minor cracking. The projected construction traffic will have a minimal adverse impact on this section of roadway pavement.
- The portion of Thomas Creek Road north of Saddlehorn Drive has essentially failed. The projected construction will have nearly no long-term impact on the present condition of this section of roadway pavement, since it has failed under current traffic conditions.

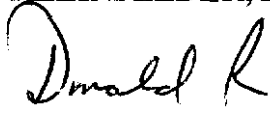

These and other conclusions and recommendations, along with restrictions and limitations on these conclusions, are discussed in the attached report.

We appreciate this opportunity to be of service to you, and look forward to future endeavors. We will contact you within the next two weeks to review the information in this report and to start planning for the construction phase of this project.

If, in the meantime, you have any questions regarding this report or need additional information or services, please feel free to call one of the undersigned in our Reno office.

Very truly yours,

KLEINFELDER, INC.

**GEOTECHNICAL INVESTIGATION REPORT  
PROPOSED USE OF THOMAS CREEK ROAD AS A HAUL ROAD  
SOUTHWEST POINTE DEVELOPMENT  
WASHOE COUNTY, NEVADA**

**1.0 INTRODUCTION AND SCOPE**

**1.1 Project Description**

This report presents the results of our geotechnical study for the proposed use of Thomas Creek Road as a haul road for the initial construction of Southwest Pointe Development to be located in Washoe County, Nevada. Information regarding the proposed construction presented in this report was obtained from conversations with Ms. Britta Tryggvi of CFA, and from a review of the Southwest Pointe Concept Plan prepared by CFA, dated March 1996. Our work focused on the following planned improvements associated with the 3,272-acre site:

- Use of 4,600± feet of the existing Thomas Creek Road as a construction haul road during grading operations.

We believe that the use of the planned Whites Creek extension as a haul road has been adequately addressed by our November 27, 1995 geotechnical investigation for the Southwest Pointe School (Job No. 30-1281-24.002).

**1.2 Purpose and Scope of Work**

The purpose of this study is to evaluate the impact of the proposed construction traffic for the development on Thomas Creek Road with respect to the observed surface and subsurface conditions, and to provide our geotechnical recommendations and opinions as outlined in our proposal dated January 8, 1996, and summarized below.

- Summary of existing Thomas Creek Road pavement section thicknesses at each core location and subgrade R-Values obtained on selected samples; and
- Conclusions regarding adequacy of the existing roadway to support planned construction traffic, and recommendations for mitigation of adverse impacts, including a discussion of when such mitigation should be performed (before or after golf course grading). Analyses will be based on construction traffic loads and frequencies to be provided by Client.

**1.3 Authorization**

Authorization to proceed with our work on this project was provided by Mr. Michael Mohler on January 30, 1996 in the form of a signed Kleinfelder Standard Form of Agreement.

#### 1.4 References

The following information was provided to Kleinfelder in the course of this study and serves as the basis of our understanding of the project type and scope.

- "Geotechnical Investigation, Southwest Point, Phase I, Reno, Nevada," by Harding Lawson Associates, dated July 31, 1992.

In addition, the following is a partial quote from Condition Number 21 of the Conditions of Approval for the Southwest Pointe Development Agreement which forms the basis of our study.

"Any existing or proposed roads that will be used as construction haul routes and are not designated truck routes, must be evaluated by a geotechnical study to determine the existing structural section and its load supporting capability. If the pavement section is inadequate to support the proposed construction loadings, the roadway must be re-designed or reconstructed as needed to provide a 20-year design life in accordance with the AASHTO Interim Guide for Flexible Pavements."

The estimated construction traffic for this study was provided by CFA. It has been estimated that 25,000 ESALs will be added to Thomas Creek Road during construction of the golf course and up to 35 new homes.

## 2.0 METHODS OF STUDY

### 2.1 Field Exploration

Prior to drilling cores along the section of Thomas Creek Road planned for use as a haul road, an engineer from our firm conducted a visual survey of the roadway pavement under study. The results of this survey, conducted in February of 1996, indicated that the majority of the pavement is in fairly good condition. Only widely spaced transverse cracks were observed on the majority of the pavement. One small section (500 to 600 feet in length north of Saddlehorn Drive) was observed to have extensive alligator (fatigue) cracking.

Our selection of field exploration locations was based on approximate 600-foot spacing of the core drilling along the 4,600± feet of Thomas Creek Road under study with alternating cores taken on each side of the roadway centerline. The subsurface exploration consisted of drilling seven core borings in the proposed haul road.

A field engineer logged the pavement conditions exposed in the core borings and collected two bulk samples of the subgrade soil for laboratory testing. Soil samples were obtained at two random locations along the Thomas Creek Road alignment. The pavement conditions encountered in the core borings are presented in Table 1.

**TABLE 1**  
**SUMMARY OF PAVEMENT CONDITIONS**

<u>Core No.</u>	<u>Direction of Travel</u>	<u>Thickness, inches</u>	
		<u>Asphalt Concrete</u>	<u>Aggregate Base</u>
1	Northbound	4¾	5
2	√	4¼	5
3	√	3½	8
4	√	3½	7
5	Southbound	3	12
6	√	3½	6
7	√	4½	6

### 2.2 Laboratory Testing

We performed laboratory testing on the two bulk soil samples for Resistance Value. These tests were conducted in accordance with Nevada Test Method T115.

Individual laboratory test results can be found on Plates 1 and 2, Appendix A, at the end of this report.

## 3.0 DISCUSSION

---

### 3.1 Site Conditions

Starting at the intersection of Mt. Rose Highway and moving northbound, the condition of Thomas Creek Road is very good. Widely spaced transverse cracks were noted. This is a typical condition for pavements in the Reno area, and is caused by the wide range of temperature variations for summer to winter conditions. A marked difference in pavement condition was observed to the north of the intersection of Thomas Creek Road and Saddlehorn Drive.

Immediately to the north of the intersection, a center divider extends to approximately the end of the project area where Thomas Creek Road will intersect Whites Creek Lane. This section of Thomas Creek Road has essentially failed. Extensive alligator (fatigue) cracking with some localized depressions were observed during our field investigation. This failed condition is most likely caused by excess moisture in the subgrade soil as a result of watering of the landscaping within the center divider.

### 3.2 Subsurface Conditions

As discussed in the field exploration section of this report, seven core holes were drilled through the pavement along the section of Thomas Creek Road under study. As shown on Table 1, the thickness of asphalt concrete surfacing encountered in our cores ranged from 3 to 4¾ inches with an average of slightly less than 4 inches. The aggregate base thickness ranged from 5 to 12 inches, with an average of about 7 inches. The quality of both of these pavements materials appeared to be fairly good.

The two samples of subgrade soil taken at the edge of the roadway consist of clayey and silty sand with some gravel. This type of soil generally provides fairly good support for pavements.

### 3.3 Analytical Method

Field and laboratory data are useful when combined with engineering fundamentals to assess specific behavior such as bearing capacity, settlement, slope stability, and other design parameters. In accordance with project requirements, the following approach was used in developing the conclusions and recommendations presented in subsequent sections of this report.

- Pavement sections were evaluated using the AASHTO Interim Guide for Flexible Pavements Method. This method uses as its basis the total traffic expected for the project (converted to standard 18-kip single axle loads), and the subgrade soil strength evaluated using the R-Value test (converted to resilient modulus).

## 4.0 CONCLUSIONS

---

The following conclusions are based on the data collected during this assessment and are subject to the limitations stated in this report. These conclusions may change if additional information becomes available. Based on the results of our study, no severe pavement or traffic constraints were observed which would preclude development. The following is a summary of our conclusions.

- The portion of Thomas Creek Road south of Saddlehorn Drive is in fairly good condition with minor cracking. The projected construction traffic will have a minimal adverse impact on this section of roadway pavement.
- The portion of Thomas Creek Road north of Saddlehorn Drive has essentially failed. The projected construction will have nearly no long-term impact on the present condition of this section of roadway pavement, since it has failed under current traffic conditions.

Specific recommendations for project design and construction including mitigation of potential problems described above are presented in Section 5.0.

## 5.0 RECOMMENDATIONS

### 5.1 Current Conditions

As previously discussed, the section of Thomas Creek Road north of Saddlehorn Drive to the northern limits of the project at the planned intersection of Whites Creek Lane, has essentially failed under the action of current and past traffic. We recommend that a "do nothing" approach be taken for this section of roadway. The extensive alligator (fatigue) cracking will most likely become more pronounced after the action of construction traffic; however, the current pavement surface is in need of rehabilitation and no more appreciable pavement damage can occur.

The roadway section for Thomas Creek Road south of Saddlehorn Drive is currently in fairly good condition with only minor thermal cracking (freeze-thaw related as opposed to traffic related). It has been estimated that construction traffic for the golf course and up to 35 homes will add on the order of 25,000 ESAL (Equivalent Single Axle Loads) to the total traffic on Thomas Creek. Based on the existing traffic, the existing pavement structure section, and the anticipated increased traffic due to construction, a 0.1-inch overlay of Thomas Creek Road would be required. Obviously, an overlay of this thickness is impossible to construct. Generally, an overlay is at least one-inch thick.

In summary, we recommend that no action be taken prior to construction of the golf course and up to 35 homes within Southwest Pointe.

### 5.2 Post-Construction Conditions

At the conclusion of construction of the golf course and up to 35 homes, the section of Thomas Creek Road north of Saddlehorn Drive will remain in a failed condition, although the alligator cracking may become more severe and/or extensive rutting within the failed pavement may be observed. The current condition of this section of Thomas Creek Road requires extensive rehabilitation and/or reconstruction. The planned construction traffic will not greatly impact this requirement for pavement rehabilitation. When reconstruction is done, the issue of subsurface drainage should be addressed.

It is anticipated that the visual condition of Thomas Creek Road pavement south of Saddlehorn Drive will be unchanged. Based on our analysis of this section of pavement using the AASHTO method of evaluation, a 0.1-inch overlay would meet the projected construction traffic needs. Since an overlay of this thickness is not practical to construct, it is recommended that an equivalent dollar amount be paid to Washoe County to reimburse the County for the reduced pavement life caused by the anticipated traffic.

## 6.0 ADDITIONAL SERVICES

---

### 6.1 Project Bid Documents

It has been our experience during the bidding process, that contractors often contact us to discuss the geotechnical aspects of the project. Informal contacts between Kleinfelder and an individual contractor could result in incorrect or incomplete information being provided to the contractor. Therefore, we recommend a pre-bid meeting be held to answer any questions about the report prior to submittal of bids. If this is not possible, questions or clarifications regarding this report should be directed to the project Owner or his designated representative. After consultation with Kleinfelder, the project Owner (or his representative) should provide clarifications or additional information to all contractors bidding the job.

### 6.2 Construction Observation/Testing and Plan Review

The recommendations made in this report are based on the assumption that an adequate program of tests and observations will be made during construction to verify compliance with these recommendations. These tests and observations should include, but not necessarily be limited to, the following:

- Observations and testing during site preparation and earthwork.
- Observation and testing of construction materials.
- Consultation as may be required during construction.

We also recommend that project plans and specifications be reviewed by us to verify compatibility with our conclusions and recommendations. Additional information concerning the scope and cost of these services can be obtained from our office.

The review of plans and specifications and the field observation and testing by Kleinfelder are an integral part of the conclusions and recommendations made in this report. If we are not retained for these services, the Client agrees to assume Kleinfelder's responsibility for any potential claims that may arise during construction.

## 7.0 LIMITATIONS

---

Recommendations contained in this report are based on our field explorations, laboratory tests, and our understanding of the proposed construction. The study was performed using a mutually agreed upon scope of work. It is our opinion that this study was a cost-effective method to evaluate the subject site and evaluate some of the potential geotechnical concerns. More detailed, focused, and/or thorough investigations can be conducted. Further studies will tend to increase the level of assurance, however, such efforts will result in increased costs. If the Client wishes to reduce the uncertainties beyond the level associated with this study, Kleinfelder should be contacted for additional consultation.

The soils data used in the preparation of this report were obtained from coreholes and bulk samples taken for this investigation. It is possible that variations in soils exist between the points explored. The nature and extent of soil variations may not be evident until construction occurs. If any soil conditions are encountered at this site which are different from those described in this report, our firm should be immediately notified so that we may make any necessary revisions to our recommendations. In addition, if the scope of the proposed project, locations of structures, or building loads change from the description given in this report, our firm should be notified.

*This report has been prepared for planning and design purposes for specific application to the Thomas Creek Haul Road/Southwest Pointe Development Project in accordance with the generally accepted standards of practice at the time the report was written. No warranty, express or implied, is made.*

This report may be used only by the Client and for the purposes stated, within a reasonable time from its issuance. Land use, site conditions (both on- and off-site), traffic conditions, or other factors including advances in man's understanding of applied science may change over time and could materially affect our findings. Therefore, this report should not be relied upon after 24 months from its issue. Kleinfelder should be notified if the project is delayed by more than 18 months from the date of this report so that a review of site conditions can be made, and *recommendations revised if appropriate.*

It is the CLIENT'S responsibility to see that all parties to the project including the designer, contractor, subcontractors, etc., are made aware of this report in its entirety. The use of information contained in this report for bidding purposes should be done at the Contractor's option and risk. Any party other than the Client who wishes to use this report shall notify Kleinfelder of such intended use by executing the "Application for Authorization to Use" which follows this document as an appendix. Based on the intended use of the report, Kleinfelder may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by the Client or anyone else will release Kleinfelder from any liability resulting from the use of this report by any unauthorized party.

Re: Southwest Pointe  
Final Development Agreement

Dear Maddy and Don:

Enclosed please find a revised agreement draft for your review, including changes discussed at our recent meeting. All revisions are highlighted.

I would like to schedule another meeting for next week to discuss any clean-up revisions. I will call you to make arrangements.

Sincerely,

ROBERT M. SADER

This Agreement is entered into this \_\_\_ day of \_\_\_\_\_, 1996 by and between the **COUNTY OF WASHOE**, a political subdivision of the State of Nevada ("COUNTY"); and **BETTY ALYCE JONES, HELEN JEANE JONES, IRIS G. BREWERTON, KENNETH G. WALKER, AND GERALD C. SMITH**, Trustees of The Neil J. Redfield Trust and **SOUTHWEST POINTE PARTNERS**, a Nevada general partnership, (collectively referred to as "OWNERS"). For valuable consideration, receipt of which is hereby acknowledged, the parties agree as follows:

1. **GENERAL.**

1.1 **Legal Authority.** Nevada Revised Statute ("NRS") 278.0201 to 278.0207 and Washoe County Development Code (the "Code") §§ 110.814.00 to 110.814.95 authorize the COUNTY and the OWNERS to enter into agreements for the development of real property. This Agreement is a final development agreement, as defined in Code § 110.814.75, and as provided in NRS Chapter 278.

1.2 **The Project.** The OWNERS hold a legal or equitable interest in certain real property located in COUNTY, a legal description of which is attached as Exhibit "A". Development of the real property, subject to the terms of this Agreement, has been authorized by COUNTY under Case No. DA9-1-93 and ancillary cases, and is described as a residential community which includes 1,090 residential lots with common open space, a water delivery system (potable and nonpotable), sewer system, two golf courses with related recreational facilities, and a commercial village center, the total acreage being ±3,171.6 acres, designated under COUNTY land use

designations as Low Density Suburban, Low Density Rural, Medium Density Rural, High Density Rural, and General Rural (the "Project").

**1.3 Past Approvals.** The OWNERS have obtained the following approvals from the COUNTY pertaining to the Project:

- a) On February 8, 1994 OWNERS obtained approval from the ~~Washoe~~ Board of County Commissioners pursuant to Code § 110.814.70 of a preliminary development agreement.
- b) On November 8, 1994 OWNERS obtained approval from the ~~Washoe~~ Board of County Commissioners to amend the preliminary development agreement.
- c) On May 2, 1995 OWNERS obtained approval from the ~~Washoe County~~ Planning Commission for a Special Use Permit to grade the first golf course and improve the construction access. The order issuing such approval is attached as Exhibit "B".
- d) On September 5, 1995 OWNERS obtained approval from the ~~Washoe County~~ Planning Commission for a Special Use Permit to develop a water system having storage of 1.4 million gallons and necessary delivery system. The order issuing such approval is attached as Exhibit "C"
- e) On September 27, 1994 Owners obtained approval from the Board of County Commissioners for an 18-month extension to submit a draft final agreement, which Owners have submitted in compliance with said extension.
- f) On \_\_\_\_\_ OWNERS obtained approval from the Washoe County Planning Commission for conditions to the final development agreement. Said conditions and amendments thereto approved concurrently with this Agreement by the Board Of County Commissions, and are attached hereto as Exhibit "D".

**1.4 Ordinance.** This Agreement shall be approved by ordinance. The Project is to be developed as a single entity and includes uses and development

standards consistent with the Washoe County Comprehensive Plan and the Southwest Truckee Meadows Area Plan.

**1.5 Benefit To OWNERS.** The OWNERS acknowledge and agree that, prior to entering into this Agreement appropriate legal advice and counsel was sought, that the OWNERS made a voluntary informed business decision to enter into this Agreement in good faith. The OWNERS further acknowledge and agree that substantial benefits will accrue to the OWNERS as a result of the OWNERS and the COUNTY entering into this Agreement, including entitlements to develop the Project in accordance with this Agreement and the Conditions of Approval, an extension or opportunity to seek an extension of the time in which to file a final subdivision map under this Agreement, certainty in the particular on-site and offsite improvements and requirements which the OWNERS will be responsible for constructing or completing, and certainty in the imposition of land use fees or obligations which may be imposed by the COUNTY.

**1.6 Benefit to COUNTY.** The COUNTY acknowledges and agrees that substantial benefits will accrue to the COUNTY as a result of OWNERS and the COUNTY entering into this Agreement, including the rational, planned land uses and development of the Real Property.

**2. SELECTED DEFINITIONS.**

2.1 "Agreement" means this development agreement.

2.2 "Conditions of Approval" mean all conditions of the Project approvals as set forth in the orders from Washoe County attached to this Agreement

1

as Exhibits B, C, and D, which conditions are incorporated herein as provisions of this Agreement.

2.3 "COUNTY" means Washoe County, a political subdivision of the State of Nevada, and its officers, elected officials, agents, employees, divisions, departments, committees, boards and commissions.

2.4 CC&Rs means the declaration of covenants, conditions and restrictions which will be drafted by OWNERS, approved by the COUNTY and recorded against the Real Property, as further provided in the Conditions of Approval.

2.5 "Development Standards Handbook" means the development standards for the Project as set forth in Exhibit "\_\_\_".

2.6 "Golf Course Property" includes all real property for the golf and related recreational facilities component of the Project.

2.7 "OWNERS" mean those property owners identified above and their successors and assigns.

2.8 "Project" means the Southwest Pointe development as approved by the COUNTY in Case No. DA9-1-93 and this Agreement.

2.9 "Public Facilities" are facilities that will be dedicated to the COUNTY. Public Facilities shall include, but are not limited to: storm drains and drop inlets; on-site or offsite sewage collection facilities; water rights dedicated for service; water systems facilities; together with all lines, mains, holding and disposing areas, tanks, public easements and rights-of-way; and all off-site improvements that include public roadways, equipment, street lights and traffic signals. OWNER constructed Public Facilities for water will include all non-golf related improvements consisting of

the required water storage tanks, well improvements, water mains, water services, water meters, gate valves, fire hydrants, flush valves, air release valves and related appurtenances. The Public Facilities for sewer will include sewer manholes, sewer mains, sewer laterals and collection lines within the Common Area Property as well as off-site effluent Irrigation lines, tanks and pump stations, and the on-site effluent main line and reservoirs. In addition, Public Facilities also includes improvement of Whites Creek Lane as specified in the Conditions of Approval.

2.10 "Public Utilities" include, but are not limited to, water, sewer, natural gas, electricity, telephone, and cable television, together with all equipment and easements dedicated for these utilities.

2.11 "Real Property" means all the real property described in Exhibit "A". The real property includes the Golf Course Property, the Subdivision Property, and any remaining real property within the Project.

2.12 "Site Plan" means the plans in compliance with Code § 110.814.45 and attached hereto as Exhibit "\_\_\_\_", and includes the Development Standards Handbook, Exhibit "\_\_\_\_".

2.13 "Subdivision Improvements" are any on-site or off-site improvements or facilities required of residential subdivisions pursuant to this Agreement. Subdivision Improvements include, but are not limited to, all drainage improvements, common area improvements, curbs, streets, gutters, medians, parkways, pedestrian and bike paths, sidewalks, street lights, storm drains, any directional traffic devices, and the Public Facilities required in connection with residential development.

**3. REQUIRED CONTENTS OF AGREEMENT.** Pursuant to Code § 110.814.75, the following matters are included in this Agreement.

**3.1 Preliminary Agreement.** Reference is made to the preliminary development agreement as approved in Case No. DA9-1-93 and amended or superseded by this Agreement.

**3.2 Legal Agreement.** The substance of covenants, grants or easements, or other restrictions proposed to be imposed upon the use of the land, buildings and structures, including proposed easements or grants for Public Utilities shall be as provided in the CC&Rs and as specified in the Conditions of Approval.

**3.3 Site Plan.** A Site Plan in conformance to Code § 110.814.45 is attached to this Agreement as Exhibit "\_\_\_"; and includes the Development Standards Handbook, Exhibit "\_\_\_".

**3.4 Installation and Maintenance.** A program for the installation and maintenance of parking areas, lighting, landscaping, private streets, utilities, recreational facilities and other infrastructure is specified in the Conditions of Approval and will be further provided for, in part, in the CC&Rs.

**3.5 Open Space Resources.** A program for the protection of open space resources, approved by COUNTY, is attached as Exhibit "\_\_\_".

**3.6 Development Schedule And Phasing. Guidelines for a development schedule and phasing of the Project are more particularly described in the Development Standards Handbook ( See Article I), Exhibit "\_\_\_".**

~~The approximate date for the start of construction for the first phase shall be on or before October 1, 1996. The first phase of the Project shall be construction of the first 18 holes of the Golf Course Property. All phases after the first phase for Subdivision Improvements shall be constructed within the time frames allowed pursuant to tentative maps and final maps for the Project. Nonresidential development shall be constructed pursuant to special use permits, when applicable, under the time frame provided therein. Other phasing requirements shall be as provided in the Conditions of Approval.~~

**3.7 Development Standards Handbook.** A Development Standards Handbook in compliance with Code § 110.814.35(a) is attached hereto as Exhibit" \_".

**4. EFFECT OF AGREEMENT.**

**4.1 Entitlements.** The approval of this Agreement by County constitutes a vested right of Owners to develop the Real Property as set forth in this Agreement and pursuant to the land use designations provided herein. Pursuant to Code § 110.814.15(b), this Agreement does not prevent COUNTY in a subsequent action applicable to the Real Property from adopting new ordinances, resolutions or regulations that conflict with those ordinances, resolutions and regulations in effect at the time this Agreement is made, provided any new ordinances, resolutions or regulations do not impose upon OWNERS restrictions, requirements or standards which are more burdensome, more expensive or more onerous to satisfy than those in effect at the time this Agreement is made; and provided further that any said new ordinances, resolutions or regulations do not conflict with provisions of this Agreement in a manner that adversely affects OWNERS. The parties agree such a conflict or

Inconsistency would prevent development of the Project as set forth in this Agreement. Nothing contained in this subsection 4.1 shall be construed to impair enforcement or compliance with the provisions of Code § 110.814.15(c) or (d).

**4.2 Subsequent Approvals And Conditions.** Tentative maps and

final maps for Subdivision Property, building permits, variances, parcel maps, boundary line adjustments, special use permits for nonresidential property, and other approvals by COUNTY within the Project ("Subsequent Approvals") shall be required pursuant to Code requirements in existence at the time this Agreement is made, except as stated otherwise herein. All Subsequent Approvals in conformance with NRS Chapter 278 and the Code (as amended hereby), and in substantial conformance with the provisions of this Agreement shall be approved by the COUNTY as a consent item without public hearing. The Conditions of Approval specified in Exhibit "B", "C", and "D" may not be amended by Subsequent Approvals without the consent of OWNERS. Any conditions imposed by COUNTY in Subsequent Approvals which pertain to the same subject matter as any Conditions of Approval may not impose restrictions, requirements or standards which are more burdensome, more expensive or more onerous for Owners to satisfy than any Conditions of Approval, without the consent of OWNERS; provided that reasonable conditions imposed by COUNTY in Subsequent Approvals which pertain to matters not addressed by any Conditions of Approval, or provide more detail and do not conflict with matters addressed by any Conditions of Approval, shall be allowed.

Conditions and provisions hereof regarding construction of off-site or on-site improvements (e.g. streets and utilities), including development standards and design

guidelines, may be varied upon request of the Owner and approval of the County Engineer.

**4.3 Subsequent Fees.** COUNTY currently imposes four (4) fees for the privilege of developing real property: a water connection fee; a sewer connection fee; a park residential construction tax; and the Regional Road Impact Fee ("RRIF") ("collectively County Fees"). The County Fees shall be imposed on applicable development within the Project in the same manner said fees are imposed for other similarly situated development in the COUNTY, subject to the following conditions.

4.3.1 Provided OWNERS construct a potable water system as part of the Public Facilities to serve the potable water demands of the Project as those demands arise, COUNTY shall charge no water connection fee for development within the Project.

4.3.2 Provided OWNERS receive a credit for all off-site sewer facilities infrastructure constructed by OWNERS, OWNERS shall pay the sewer connection fee at the time and in the amount specified by COUNTY ordinance.

4.3.3 Subject to any credits allowed by a RRIF Capital Front-Ending Agreement, OWNERS shall pay the RRIF at the time and in the amount specified by County ordinance.

4.3.4 Subject to the provisions of an agreement between COUNTY and OWNERS for the construction of neighborhood park improvements within the Project, OWNERS shall pay the park residential construction tax at the time and in the amount specified under NRS 278.497 to NRS 278.4987.

**4.4 No New COUNTY Fees.** Except for the County Fees or as

specified in subsections 4.5 and 4.6 below, no new fees or taxes enacted or approved by COUNTY after the date this Agreement is made for construction or development within the Project or for capital improvements for Public Facilities shall apply to the Project.

**4.5 Special Assessment Districts.** At the option of OWNERS, the parties agree that certain Public Facilities shall be financed, constructed and paid for, in whole or in part, by one or more developer special assessment districts. The following improvements are agreed to provide a public benefit and are includable at the discretion of OWNERS in such special assessment districts:

- (a) the construction and land costs of Whites Creek Lane;
- (b) the County-owned nonpotable water system for golf course and landscape irrigation;
- (c) the purchase price of creek water rights (with supplemental groundwater rights for the nonpotable water system and water rights for the potable water system;
- (d) the off-site Public Utilities;
- (e) the County-owned potable water system; and
- ~~(f) the neighborhood park improvements and land costs; and~~
- (f) landscaping improvements in common area and trails/paths along public streets.

**4.6 Nonpotable Water Agreement.** Any fees, costs and expenses of OWNERS pursuant to an agreement between the parties for the provision of nonpotable water for golf course and common area landscape irrigation shall not be construed as a new fee under subsection 4.4. above.

**5. TERM OF AGREEMENT.**

The term of this Agreement shall be fifteen (15) years from the date hereof; provided that all applicable terms of this Agreement shall remain binding and enforceable regarding permits, construction or development on any portion of the Real Property subject to a tentative map, a recorded final map or a special use permit in existence at the time of expiration of this Agreement.

**6. OBLIGATIONS OF OWNERS/ASSIGNMENT.**

The parties acknowledge that OWNERS will sell or otherwise convey title to portions of the Real Property as development occurs. Successors to OWNERS shall acquire rights and assume obligations only to the extent required under this Agreement to develop or use the portion of the Real Property so acquired. Upon conveyance of each portion of Real Property, OWNERS' liability for obligations under this Agreement shall terminate, provided the successor OWNER assumes said obligations. The provisions of this Agreement constitute covenants running with the Real Property. Notwithstanding the provisions of this Section 6, a successor OWNER of a single lot created by final map within the Project shall not have any obligation under this Agreement other than for development and use of the lot so owned consistent with this Agreement.

**7. MISCELLANEOUS.**

**7.1 Governing Law; Venue.** This Agreement is being executed and delivered in Washoe County, Nevada, and is intended to be performed in the State of Nevada, and the laws of Nevada shall govern the validity, construction, enforcement and interpretation of this Agreement. Venue for any legal action arising out of this Agreement shall be in Washoe County, Nevada.

**7.2 Entirety and Amendments.** This Agreement embodies the entire Agreement between the parties and supersedes all prior agreements and understandings, if any, relating to the Project, and may be amended or supplemented only by an instrument in writing executed by the party against whom enforcement is sought, and as provided in Code § 110814.95(b). No oral statements or representations made before or after the execution of this Agreement regarding the subject matter of this Agreement are binding on a party, nor may any such oral statements or representations be relied on by a party.

**7.3 Invalid Provisions.** If any provision of this Agreement is held to be illegal, invalid or unenforceable under present or future laws, such provision shall be fully severable. The Agreement shall be construed and enforced as if such illegal, invalid or unenforceable provision had never comprised a part of the Agreement. The remaining provisions of the Agreement shall remain in full force and effect and shall not be affected by the illegal, invalid or unenforceable provision or by its severance from this Agreement.

**7.4 Parties Bound and Assignment.** Subject to the provisions of Section 6, this Agreement shall be binding upon and inure to the benefit of the parties, and their respective heirs, personal representatives, successors and assigns. In the event COUNTY, for any reason, ceases to have jurisdiction as the applicable local governmental entity regarding the subject matter of all or any part of the Agreement, COUNTY shall require the new entity to assume the applicable obligations hereof.

**7.5 Further Acts.** In addition to the acts recited in this Agreement to be performed, the parties agree to perform, or cause to be performed, any and all further acts as may be reasonably necessary to consummate the obligations contemplated hereby.

**7.6 Headings.** Headings used in this Agreement are used for reference purposes only and do not constitute substantive matter to be considered in construing the terms of this Agreement.

**7.7 Attorneys' Fees.** In the event that any action is necessary to enforce the rights of any party hereto, the prevailing party in any such action shall be entitled to reasonable costs and attorneys' fees.

**7.8 Notice.** All notices given pursuant to this Agreement shall be in writing and shall be given by personal delivery, by facsimile transmission, by United States mail or by United States express

other party. All notices given pursuant to this Agreement shall be deemed given upon delivery.

**7.9 Receipt Defined.** For the purpose of this Agreement, the term "delivery" shall mean any of the following: (a) the date of delivery of the notice or other document as shown on the return receipt; (b) the date of actual receipt of the notice or other document; or (c) in the case of refusal to accept delivery or inability to deliver the notice or other document, the earlier of: (i) the date of the attempted delivery or refusal to accept delivery; (ii) the date of the postmark on the return receipt; or (iii) the date of receipt of notice of refusal or notice of nondelivery by the sending party.

**7.10 Indemnity.** Developer shall indemnify and hold harmless COUNTY and its officers, employees, and agents, from any claims, demands, losses, defense costs, or liability of any kind or nature, which COUNTY may sustain or incur or which may be imposed upon them out of actions by, or the negligence of, Developer, its officers, agents or employees, arising out of Developer's obligations specified in Section 2 hereof, accepting only liability arising out of gross negligence or intentional wrong doing by County, its officers, agents, or employees.

**7.11 Arbitration.** Any dispute arising from rights or obligations of this Agreement shall be submitted to arbitration pursuant to the Commercial Rules of the American Arbitration Association, including any disputes regarding consents or approvals to be given by a party. The decision of the arbitrator shall be final and binding on both parties.

**7.12 Recordation.** This Agreement shall not be recorded, but in order to comply with Code § 110.814.95(c) the Memorandum Of Agreement attached hereto as Exhibit \_\_\_\_ shall be recorded upon execution hereof in the office of the Recorder of Washoe County, Nevada.

**7.13 Exhibits.** All exhibits to this Agreement are incorporated herein as if fully set forth.

Page 1-8 **Development Phasing.**

Construction will commence in late summer or early fall 1996. The project will begin with the development of construction access roads and grading of the initial (lower) golf course. Coincidental with these activities will be the construction of utilities as well as the entry road and the main loop road that services the golf course clubhouse, swim and tennis facility and Phase I residential areas (approximately 400 lots). It is estimated that "intract" improvements for the residential lots in Phase I will occur over a three to four year period following grading of the entry road and main loop road, depending on market conditions.

Construction of the swim and tennis facility is proposed to commence as Phase I approaches "build out".

As the Phase I residential land approaches build out, grading, road improvements and utilities for the Phase II residential areas (approximately 350 lots) will commence. It is estimated that "intract" improvements for the residential lots in Phase II will occur over a three to four year period following grading of the roads, depending on market conditions. The second golf course is proposed for construction during the development of Phase II; however, the demand for golf will dictate whether it occurs sooner or later.

As the Phase II residential land approaches build out, grading and road improvements for the Phase III residential areas (approximately 340 lots) will commence. It is estimated that "intract" improvements for the residential lots in Phase III will occur over a three to four year period following grading of the roads, depending on market conditions.

It should be noted that, depending on market conditions, Phase II and Phase III may be smaller than indicated above, resulting in the potential of one or more additional phases.

24  
25  
26  
27  
28

The proposed neighborhood commercial use, located across from the golf clubhouse area, is projected for development in or beyond Phase III. The precise timing, and whether or not it will be built, will be predicated on market conditions. In any event, at the time the initial phases are developed, there will probably not be enough residents to support neighborhood commercial uses.

Appropriate open space dedications, trail improvements, right-of-way landscaping and other community improvements will occur coincidental to the development of each phase of the project, pursuant to conditions of tentative maps or special use permits.

The time frames mentioned above may be shortened or lengthened by the developer, and the phases may be changed, if the developer believes such changes are necessary or advisable to improve development potential. As more particularly specified in the final development agreement, the agreement expires fifteen (15) years from the date of its execution.

**MEMORANDUM OF FINAL DEVELOPMENT AGREEMENT**

A certain Final Development Agreement of even date herewith has been entered by and between **BETTY ALYCE JONES, HELEN JEANE JONES, IRIS G. BREWERTON, KENNETH G. WALKER, AND GERALD C. SMITH**, Trustees of The Neil J. Redfield Trust and **SOUTHWEST POINTE PARTNERS**, a Nevada general partnership, (collectively referred to as "OWNERS"); and the **COUNTY OF WASHOE**, a political subdivision of the State of Nevada ("County"). The real property subject to this Agreement is described on Exhibit "A", attached hereto and incorporated herein. The Agreement creates rights and obligations between the parties regarding development of Exhibit "A". These rights and obligations are intended to be covenants and conditions which run with the land and bind successors, heirs and assigns of the parties. All provisions of the Final Development Agreement are incorporated herein by reference as if fully set forth. The Final Development Agreement expires fifteen (15) years from the date of its execution.

Surveying

Project No. 88-003.20  
March 29, 1996  
Revised April 30, 1996

Mr. Don Young, Planner  
Department of Development Review  
P. O. Box 11130  
Reno, NV 89520

**Subject: Southwest Pointe**

Dear Don:

This letter incorporates all previous correspondence pertaining to clarifications and modifications to the Conditions of Approval for Southwest Pointe. Those changes are summarized below. Deletions are ~~struck thru~~ and additions are in *italic*. One of the more significant modifications has to do with Condition #26, which pertains to street standards for public and private roads. We are requesting that the primary loop road, which will have either an 80-foot or a 60-foot right-of-way, be private rather than public and that we have the option of installing a gate at the point where Whites Creek Lane becomes a private road.

One change that does not deal with a condition, but rather with the concept plan, is the number of 12,000 square foot, 1/2 acre, and 1 acre lots. We are proposing to modify the percentage of lots in each category as outlined below.

<u>Lot Size</u>	<u>As Approved</u>	<u>Proposed</u>
12,000 sq. ft.	40%	40%
1/2 acre & larger	15%	35%
1 acre & larger	45%	25%

Samuel Chacón, P.E.  
President

Bryan Sprague, P.E.  
Vice President

Brita Tryggvi, A.I.C.P.  
Principal

Greg Doerr, A.I.C.P.  
Principal

The biggest change occurs in the number of 1/2-acre lots which has been increased and the number of 1-acre lots which has been decreased. The rationale for this change is based on a marketing study performed by Whitney Research Group in February 1996. This study identified a greater demand for 1/2 acre lots. Their

reasoning is based on demographic aging trends which suggest that as consumers grow older (i.e., aging baby boomers), they do not want the upkeep of a large custom homesite. The older consumer desires freedom to travel and not be tied down to a large custom home and lot requiring extensive maintenance upkeep. Further, we are requesting a range, rather than a specific percentage, to permit some flexibility in site planning and to minimize the need for future revisions.

**Conditions for Development Agreement Case No. DA9-1-93**

- ✓ 1. *Unless specifically stated in the final development agreement, all uses, densities and standards shall be consistent with the Washoe County Development Code and with the goals and policies in the Comprehensive Plan and the Southwest Truckee Meadows Area Plan. Unless specifically stated in the final development agreement, the allowed uses, densities, and standards of the land subject to the development agreement shall be those in effect at the time the final agreement is approved.*

**Reason for Modification:** Different standards may be proposed in the final development agreement; therefore, the wording of this condition needs to reflect this possibility.

- ✓ 2. As part of every tentative map and special use permit application, the developer shall include a "statement of compliance" that demonstrates how the development application is consistent with the recorded final development agreement. The A "statement of compliance" format shall be made a part of the final development agreement. ~~For the Phase I applications, including the tentative map, special use permit and administrative waiver, a "draft statement of compliance" shall be provided to staff prior to the public hearing. When the final development agreement is approved, a revised statement of compliance for the Phase I tentative map and special use permit applications shall be submitted to Department of Development Review staff.~~

**Reason for Modification:** The second sentence should become a separate condition because it refers to the development agreement. The first sentence should also be a separate condition because it deals with the tentative maps and special use permits. The proposed deletions simply reflect the fact that

there is no reason to prepare a draft statement of compliance because the Phase I applications will not be submitted before the final development agreement is approved.

- ✓ ~~3. The recorded final development agreement shall be effective for a period not more than 15 years. An extension of this approval may be granted if mutually agreed to by the developer and Washoe County.~~

**Reason for Modification:** Article 814, Section 110.814.75 requires a development schedule as part of the final development agreement. Therefore, this condition is unnecessary because it simply repeats the requirements of the Washoe County Development Code.

- ✓ 4. Conditions, covenants, and restrictions (CC&Rs) shall be reviewed and approved by the District Attorney's Office, *County Engineer*, and the Department of Development Review *prior to final map approval or prior to issuance of a certificate of occupancy for a non-residential use*. Washoe County shall be made a party to the applicable provisions of the CC&Rs to the satisfaction of the District Attorney's office. *If the CC&Rs are not recorded on the entire property, subsequent phases will be annexed to the previously recorded CC&Rs.* Said CC&Rs shall specifically address the ~~potential for liens~~ *county's ability to enforce certain provisions* against the property and the individual property owner's responsibilities for the perpetual funding, maintenance and replacement, of the following items, at a minimum.

g. *Common area landscaping including along streets or landscaping along Whites Creek Lane*

h. *Fire and fuelbreaks on open space*

~~l. Private streets and utilities~~

~~e. Public park center~~

. . . At a minimum, the CC&Rs shall also specifically address the following items:

j. ~~Requirement of Access to open space remaining open to~~ *for pedestrian and bicycle traffic.*

l. *Retention of public access to the golf course, bike paths, (i.e., 8-foot meandering paths along minor arterials and some collectors; refer to street sections), public trails, and non-residential uses.*

**Reason for Modifications:** The first change more accurately reflects the county's interest in enforcement. The second changes clarifies that this condition does not pertain to landscaping on private property along streets but is strictly limited to landscaping in common areas. Fire and fuelbreaks may be located on property other than open space, therefore, the reference to open space should be deleted. Private streets are listed in an earlier item. (i.e., Item A). The developer will not be maintaining the public park and, therefore, this reference should be deleted. Lastly, some open space, such as wetlands, may not be open to pedestrian and bicycle traffic, therefore, this wording should be clarified.

- ✓ 11. ~~Within six months of the approval of the preliminary development agreement, a draft final development agreement that conforms with the provisions of Section 814 of the Washoe County Development Code shall be completed and submitted to the Washoe County Department of Development Review. Washoe County Department of Development Review will provide comments on the draft final agreement. The final development agreement will then be submitted to the Washoe County Board of County Commissioners within three months of submission of a completed agreement with all accompanying exhibits, provided the Department of Development Review does not delay the submission in order to approve provisions of the agreement to its satisfaction. Extension of any of these time frames may be requested if mutually agreeable to Washoe County and the developer.~~

**Reason for Modification:** A draft of the final development agreement has already been submitted, therefore, the proposed deletions simply reflect the current status. The proposed addition provides for delay in the submission.

- ✓ 12. ~~The project shall be developed in three phases. Phase I includes a tentative map for 436 lots, an 18-hole golf course, the village center, and driving range. Phase II will include an additional nine holes, the equestrian center and a tentative map for approximately 220 dwelling units. Phase III includes the remaining 434 lots and the last nine holes of golf. Modifications to the proposed phasing plan may be made if mutually agreeable to the developer and Washoe County. These modifications may include the commercial portion of the project and the second 18-hole golf course, which may be constructed during Phase II or Phase III.~~

**Reason for Modification:** Section 110.814.75 states that the final development agreement must include a development schedule that indicates the phases in which the land subject to the development agreement will be built and the approximate dates for the completion of each phase.

- ✓ 13. The subdivider shall present to the ~~governing body~~ or planning commission a final map, prepared in accordance with the tentative map, for the entire area for which a tentative map has been approved, or one of a series of final maps, each covering a portion of the approved tentative map, within two (2) years after the date of approval of the tentative map.

↙ ↘

The governing body or planning commission <sup>, upon appeal,</sup> may grant an extension of not more than two (2) years for the presentation of any final map after the two (2) year period for presenting the entire final map or next successive final map has expired. *Revised to clarify that map cannot have expired*

If the subdivider fails to record a final map for any portion of the tentative map *or obtain an extension* within two years after the date of approval of the tentative map, all proceedings concerning the subdivision are terminated.

**Reason for Modification:** For clarification, the order of the second and third paragraphs was reversed and the phrase regarding an extension was added.

- ✓ 14. The developer shall provide the Department of Development Review staff with a ~~monthly~~ *quarterly* report indicating the number of building permits issued *and other building activity*, once residential construction has started.

**Reason for Modification:** Monthly is too frequent, and quarterly should be often enough. The scope of the report was broadened to include all building activity (e.g., golf course, infrastructure) rather than simply an inventory of building permits.

- ✓ 20. Prior to final approval of the development agreement, the developer for Southwest Pointe shall petition the Washoe County Board of County Commissioners to create a Special Assessment District for the purpose of financing the construction of Whites Creek Lane from the project site to

*Moved to DA*

Wedge Parkway and other roads as defined in the SAD agreement. In the event that a special assessment district is not created, the developer shall construct Whites Creek Lane, as outlined in Condition No. 16 and 18, from the project site to Wedge Parkway, to the satisfaction of the County Engineer.

~~Unless substituted by Washoe County Board of County Commissioner action, each final map shall contain the following not to the satisfaction of the Development Review staff.~~

#### NOTE

~~An off-site road construction fee is applicable to all parcels created by this map. Any applicant for a permit to construct or otherwise use this land shall either (1) enter into an agreement with Washoe County requiring financial assurances and approval by the District Attorney's Office, to pay the future off-site road impact fee upon its adoption or (2) pay any interim fee imposed by Washoe County, be released from the responsibility of the future impact fee, and be eligible for a refund should the future impact fee charge be less than the interim fee. All options to pay existing interim fees expire upon the subsequent adoption of a replacement interim fee or an impact fee.~~

**Reason for Modification:** The county has approved the Regional Road Impact Fee, which goes into effect this month. As a result, the second half of this condition is no longer necessary.

- ✓ 21. Prior to approval of the final development agreement, a proposed Construction Traffic Haul Route Plan shall be submitted to the County Engineer for review and approval. The primary construction haul route shall be Whites Creek Lane. As part of Phase I development, however, Zolezzi Lane may be used, for construction mobilization only, for completion of the first 18-hole golf course and for the extension of utilities into the project site.

*or final map*

Prior to the issuance of the first building permit, all construction traffic will be diverted to Whites Creek Lane. Access to Whites Creek Lane will be from the Mt. Rose Highway to Thomas Creek Road. When the 35th building permit is issued, all construction traffic will be required to use Whites Creek Lane from Wedge Parkway. Construction traffic will use Whites Creek Lane from Wedge Parkway if this segment is completed prior to the issuance of the 35th building permit. Thomas Creek Road from Mt. Rose Highway to the proposed Whites Creek Lane may be considered for a haul route provided the developer submit a traffic analysis and intersection design prepared by a licensed Nevada Civil Engineer which addresses and provides, as a minimum, recommendations regarding:

- a) site distance requirements;
- b) left turn storage capacity and design;
- c) intersection location and alignment;
- d) proximity to existing intersections and recommended separate distances;
- e) existing center median and landscaping concerns;
- f) determination of adequacy of existing Thomas Creek Road roadway geometric section; and
- g) determination of adequacy of existing structural section and load bearing capability.

The submitted report shall be evaluated and accepted by the County Engineer prior to any approval of the use of Thomas Creek Road as a haul route. Once Whites Creek Lane is connected to Wedge Parkway, this road shall become the primary construction haul route.

Any existing or proposed roads that will be used as construction haul routes and are not designated truck routes must be evaluated by a geotechnical study to determine the existing structural section and its load supporting capability. If the pavement section is inadequate to support the proposed construction loadings, the roadway must be redesigned or reconstructed as needed to provide a 20-year design life in accordance with the AASHTO Interim Guide for Flexible Pavements.

**Reason for Modification:** This condition should be divided into two conditions because the first paragraph deals with the development agreement and the remainder refers to the tentative maps and special use permits.

- ✓ 22. Prior to *or upon* approval of the ~~final development agreement~~ CC&Rs, the developer shall provide a street maintenance program to the satisfaction of the County Engineer and the Department of Development Review. Street maintenance of private streets shall be performed by the homeowner's association and shall be perpetually funded.

*Altered condn also to DA*

**Reason for Modification:** The Homeowners' Association will be responsible for street maintenance, therefore, this topic is more accurately addressed in the CC&Rs.

- ✓ 23. Prior to approval of the final development agreement, *the developer shall provide* a schematic pedestrian circulation plan. As part of each tentative map, a detailed pedestrian circulation plan will be submitted and approved by the Department of Development Review. *Slightly altered*

**Reason for Modification:** The condition was incomplete.

- ✓ 25. Unless specifically stated *in these Conditions of Approval or in the final development agreement*, all (public and private) street design and construction is to be done in accordance with the Washoe County Standards that are approved at the time the final development agreement is recorded, to the satisfaction of the County Engineer.

**Reason for Modification:** The conditions of approval are separate from the final development agreement and may include some items that are not in the development agreement.

- ✓ 26. The following roadway sections shall be applicable to the public and private on-site streets shown on the tentative map. A traffic report shall be submitted ~~prior to approval of the first final~~ *with each tentative map* which identifies the ultimate average daily traffic on each street *and make recommendations for geometric design (e.g., left turn storage capacity, site distance, minimum required turning radius)*

a. *Private Common Driveways - Serving 4 or less lots, pavement width 20 feet; serving 5 or more lots, pavement width 22 feet; no parking either side. Curb returns shall have a minimum face of curb radius of 20 feet on local streets and 25 feet on collector streets. Private common driveway locations will be shown on all tentative maps. Private common driveways will line up with proposed street intersections where possible and will comply with street intersection offset requirements. Single lot driveway access will not be allowed onto streets on which the average daily traffic exceeds 2000. (Refer to street sections.)*

*Added to Common Driveway 2000*

a. b. ~~Rural Private - 41 60 foot minimum ROW cul-de-sac rural street~~ (maximum 200 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4 foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. (Refer to street sections.)

b. c. ~~Local Private - 50-60 foot minimum ROW local street (200 - 500 ADT):~~ minimum 22 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4 foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. (Refer to street sections.)

e. d. ~~Collector Private - 50 60 foot minimum ROW collector street (500 ADT to 2000 ADT):~~ minimum 24 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. a minimum 4 foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. (Refer to Street Sections.)

- d. ~~e. Collector Private - 60 foot minimum ROW collector street (2000 ADT to 8000 ADT): minimum 36 24-foot pavement width with an additional 12-foot left turn lane at intersections where warranted; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking permitted on both on either side. A minimum five (5) eight (8) foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. No residential driveway access will be allowed. Access for private common driveways will be allowed. (Refer to street sections.)~~
- e. ~~Public 60 foot ROW collector street (2000 ADT to 9600 ADT): minimum 36 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides; parking prohibited both sides; minimum four (4) foot meandering asphalt path one side; residential driveway access not allowed. Where proposed, center medians shall be limited to a minimum of 11 feet from curb face to curb face.~~
- f. ~~Public-Collector Private - 80 120 foot minimum ROW minor arterial collector street (up to 9600 ADT to 10,830 ADT): A minimum 11 27 foot center median from curb face to curb face, 29.5 19 foot roadway section curb face to curb face pavement width on either side of the median; curb and gutter on both sides or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side except during special events; a minimum four (4) eight (8) foot meandering asphalt path both sides; no residential driveway access allowed. (Refer to street sections.)~~
- g. ~~Minor Arterial, Private - 120 foot minimum ROW (more than 10,800 ADT): A minimum 27 foot center median from curb face to curb face, 24 foot pavement width on either side of the median; County Engineer approved concrete header with roadside ditch; no parking either side; a minimum 8 foot meandering asphalt path both sides. A gate may be installed at the point where Whites Creek Lane becomes a private road. (Refer to street sections.)~~

- h. Minor Arterial, Public - 120 foot minimum ROW (more than 10,800 ADT): A minimum 27 foot center median from curb face to curb face, 29.5 foot roadway section on either side of the median; curb and gutter on both sides; a minimum 6 foot concrete sidewalk on both sides; no residential driveway access is allowed. (Refer to street sections.) A gate may be installed at the point where Whites Creek Lane becomes a private road. A public turn-around is required on the public side of the gate.*

**Reason for Modification:** To be consistent with Washoe County Street Design Standards, to create a hierarchy of paths, and to change some of the public streets to private streets.

- ✓ 27. Landscaped medians shall be designed in accordance with AASHTO site distance and safety guidelines to the satisfaction of the County Engineer, Washoe County Department of Development Review ~~and the developer.~~ Maintenance of median landscaping shall be by the Homeowners' Association as provided for in a separate maintenance agreement to be approved by the County Engineer and the District Attorney's Office prior to approval of the ~~final development agreement~~ CC&Rs. *Moved to TM*

**Reason for Modification:** The Homeowners' Association will be responsible for the maintenance of median landscaping, therefore, this topic is more accurately addressed in the CC&Rs.

- ✓ 28. Meandering asphalt paths will be acceptable provided . . .
- c. Maintenance of the asphalt paths and landscaping shall be the responsibility of the developer and, when created, by the Homeowners' Association as provided for in a separate maintenance agreement and be approved by the County Engineer and the District Attorney's office prior to approval of the ~~final development agreement~~ CC&Rs.

**Reason for Modification:** The Homeowners' Association will be responsible for the maintaining the asphalt paths and the landscaping between the road and the path, therefore, this topic is more accurately addressed in the CC&Rs. *Moved to TM*

- ✓ 29. ~~Proposed roadways (public or private) are not to be centered along fault lines. Fault lines shall be located behind the curb line, on the up-thrown side, to the satisfaction of the County Engineer. Roads may cross fault lines. If fault lines are more accurately located in the field, the setback excluding construction for buildings for human occupancy may be reduced, to the satisfaction of the County Engineer.~~

✓ Construction near fault lines shall be as follows:

- TM  
≠  
SOP
- a. *Buildings for human occupancy shall be set back from the centerline of fault traces. Setback distances shall be determined by a geotechnical investigation prepared by a Nevada Registered Civil Engineer experienced in geotechnical engineering. The minimum setback shall be 50 feet on each side of the fault line.*
  - b. *Roadway construction in fault zones and along fault traces shall be reviewed by a Nevada Registered Civil Engineer experienced in geotechnical engineering. Any recommended special construction requirements (e.g., flexible joint connections for utilities) shall be complied with.*

**Reason for Modification** There was confusion over how the original condition should be interpreted. The proposed wording was developed in conjunction with the staff of the Engineering Division, Kleinfelder, and Harding Lawson.

- ✓ 33. All-weather emergency access roads shall be constructed at the end of all cul-de-sacs that are longer than 500 1,500 feet to the satisfaction of the County Engineer and the applicable fire protection agency. These roads shall have a 30-foot access easement with a minimum 20-foot width of ~~6 inches of Type 2 Class B aggregate base. 2.5 inches of asphalt concrete pavement on an engineered gravel base.~~ The roads shall be controlled by emergency access gates and shall be posted with signs stating "For emergency Vehicles Only" to the satisfaction of the applicable fire protection agency and the County Engineer.

**Reason for Modification:** The county has adopted new standards for emergency access roads since this project was approved. The proposed change is consistent with the new standards.

- ✓ 34. Prior to final map approval, the developer shall provide all weather emergency access easements and road improvements at the locations shown on the tentative map, terminating at public or privately maintained streets, to the satisfaction of the County Engineer. ~~The emergency access road shall be constructed within a 30 foot access easement to a minimum 20 foot width with 4 inches of Type 2 Class B aggregate base.~~

**Reason for Modification:** The last sentence repeats Condition #33.

- ✓ 36. Unless otherwise stated *in these conditions of approval or in the final development agreement*, all roadway improvements necessary (including but not limited to, curb, gutter, sidewalk, signing and striping, driveway access, and street lighting) to serve the project shall be designed and constructed to county standards and specifications and/or financial assurances in an appropriate form and amount shall be provided to the satisfaction of the County Engineer.

**Reason for Modification:** The conditions of approval are separate from the final development agreement and may include some items that are not in the development agreement.

- ✓ 37. The minimum pavement structural section shall be *5 inches of asphalt over 8 inches of aggregate base for minor arterials*, 4 inches of asphalt over 6 inches of granular base for roadways (private and public) for collector streets, and 3 inches of asphalt over 6 inches of granular base for roadways for local streets to the satisfaction of the County Engineer.

**Reason for Modification:** No structural section for minor arterials had been identified.

- ✓ 40. Off-site parking areas shall be provided within ~~300~~ 500 feet of homes that have *lots ranging in size between 12,000 square feet and 0.5 acre*. One space shall be provided for every three homes. Parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the tentative map(s), to the satisfaction of Washoe County Department of Development Review ~~and the Developer.~~

**Reason for Modification:** To avoid having a multitude of guest parking areas with 1 or 2 spaces, the spacing requirement was increased to 500 feet so that the guest parking areas will consist of 4 or 5 spaces. Guest parking areas will be added to the neighborhoods with 0.5 acre lots because on-street parking will be prohibited on the private streets and the front yard setback can be reduced with side-entry and detached garages.

- ✓ 41. All private roadways shall be depicted on the final maps and identified ~~in the final development agreement on the tentative map~~ as either private access easements over individual adjacent lots or, if identified as separate parcels, as *either* common areas with equal fractional ownership by all of the lots within the development *or common areas owned by the Homeowners' Association* to the satisfaction of the County Engineer.

**Reason for Modification:** NRS Chapter 116 (Uniform Common Interest Ownership Act) requires a corporation to be formed for the Homeowners' Association. The corporation owns the common areas.

- ✓ 43. Regulatory signs must be installed at the juncture of all public streets with a private street *and at intersections along the primary loop road* to the satisfaction of the County Engineer. Said sign shall state: "PRIVATE STREET NOT MAINTAINED BY COUNTY." All regulatory signs shall meet the Manual of Uniform Traffic Control Device standards.

**Reason for Modification:** Since there is only one location where a public street intersects with a private street (i.e., at the main project entrance), there would only be one sign. The county staff wants signs at additional locations and, therefore, the suggested wording to add "at intersections along the primary loop road."

- ✓ 48. Prior to the submittal of any final map or issuance of any grading permit, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted and approved by the County Engineer. The report shall be in substantial compliance with the general storm drain master plan and contain all final storm drain pipe, ditch and retention pond sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed and constructed to the satisfaction of the District Health Department and the County Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.

Prior to the issuance of a grading permit, the applicant shall provide a letter granting a blanket drainage and construction easement to the Southwest Pointe Subdivision that allows the subdivision to drain onto the golf course and to construct detention facilities necessary to accommodate the subdivision-generated stormwaters in mutually agreed upon locations to the satisfaction of the County Engineer. The easement shall be submitted with the plans for the final golf course improvements.

**Reason for Modification:** The first paragraph pertains to tentative maps and special use permits; whereas, the second paragraph only refers to the special use permit for the golf course. Therefore, only the first paragraph should appear with the tentative map conditions and both paragraphs should appear with the special use permit conditions.

- ✓ 49. A maintenance plan of all drainage facilities to be owned by the homeowners' association shall be provided prior to approval of the ~~final development agreement~~ CC&Rs. All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe County water treatment plant and associated Steamboat Ditch conveyance system . . .

**Reason for Modification:** The Homeowners' Association will be responsible for the maintaining the asphalt paths and the landscaping between the road and the path, therefore, this topic is more accurately addressed in the CC&Rs.

- ✓ 51. The off-stream detention/debris basin recommended in the 1990 Kennedy/Jenks/Chilton report shall be reserved based on the following timetable:
- a. Washoe County will have three years to obtain the necessary permits for construction of the off-stream detention basin. This three years shall commence upon the approval of the final development agreement. If Washoe County fails to obtain the necessary permits, the property for the detention site shall be offered by the applicant or his successors, for dedication to the Washoe County School District for a middle school, ~~the Washoe County Parks and Recreation Department for a neighborhood park,~~ or revert to open space.
  - b. If Washoe County does obtain the necessary permits within three years, construction of the project shall commence within 5 years of the approval of the final development agreement. If construction is not started by that date, the property for the detention site shall be offered by the applicant or his successors, for dedication to the Washoe County School District for a middle school, ~~the Washoe County Parks and Recreation Department for a neighborhood park,~~ or revert to open space.
  - c. If an alternative solution or site becomes available for flood control, this property will immediately become available for dedication to the Washoe County School District for a middle school, ~~the Washoe County Parks and Recreation Department for a neighborhood park,~~ or revert to open space.
  - d. If the detention basin is constructed, Washoe County shall pay fair market value for the property.

**Reason for Modification:** We have been working with Karen Mullens, Washoe County Parks and Recreation Department, to identify a neighborhood park that is not adjacent to the school. The preferred location is adjacent to Thomas Creek on the south side of Whites Creek Lane.

- ✓ 56. A buffer shall be provided next to riparian vegetation. The size of the buffer shall be mutually agreeable to Washoe County and the developer. A minimum 50-foot buffer shall be provided ~~between property lines of single-family residences and riparian vegetation from any structures.~~

**Reason for Modification:** It would be difficult and impractical to implement the original wording because it would result in long, thin parcels along riparian areas that would become a "no man's land". The suggested wording is consistent with the intent of this condition and avoids the creation of unusable parcels.

- ✓ ~~64. Prior to the approval of the final development agreement, the applicant shall provide staff with a phasing schedule for the dedication of water rights. Permitted or certificated groundwater rights in the amount of 1.12 acre feet must be dedicated to Washoe County for each lot of a final map. Water rights, in accordance with the Washoe County Utility Division policies for the Southwest Truckee Meadows, shall be dedicated to Washoe County. Prior to acceptance, the water rights must be in good standing with the State of Nevada Division of Water Resources and must reflect a point of diversion, place and manner of use acceptable to the Utility Division.~~

**Reason for Modification:** Current county policy requires that sufficient water rights will be dedicated prior to recordation of each final map. A phasing schedule is typically not necessary. The required number of water rights for each lot may change in the future because the county is evaluating SPPCo water rights dedication requirement which is based on lot size. If the requirement changes, we do not want to be constrained by this condition.

Moved to  
TM & SUP

- ✓ ~~65. Prior to the approval of the final map, the developer shall demonstrate how compliance with NRS 278.349, that requires the availability of water meet applicable health standards and is sufficient in quantity to serve the foreseeable needs of the subdivision, shall be met to the satisfaction of the District Health Department and Washoe County Department of Development Review.~~

**Reason for Modification:** Condition #67 addresses this topic, therefore, this condition is repetitive.

~~69. The developer shall provide adequate assurance that the sewage, water, and drainage systems will be satisfactorily maintained and operated.~~

**Reason for Modification:** The developer is not responsible for maintaining the sewage and water systems. These facilities are maintained Washoe County. Maintenance of the drainage system has already been addressed in Condition #49.

✓ 74. If a supplemental water source is required, evidence that an adequate source has been procured by the developer/water purveyor shall be submitted to the Utility Division for their review and approval. ~~The water source shall meet both primary and secondary standards of the Safe Drinking Water Act.~~

**Reason for Modification:** The last sentence repeats federal, state, and local law. A subsequent condition (i.e., #77) requires the developer to use treated wastewater which will not meet drinking water standards. Therefore, the two conditions contradict one another.

✓ ~~79. The project shall be designed to accommodate a gravity flow sanitary sewer system within the boundaries of the subdivision. Such design shall be to the satisfaction of the Utility Division.~~

**Reason for Modification:** According to Terri Svetich, Washoe County Utility Division, this is not a Utility Division condition and can be deleted.

✓ 83. The sanitary sewer collection system and water system facilities, *with the exception of the golf course and common area irrigation systems*, must be offered for dedication to Washoe County.

**Reason for Modification:** Washoe County does not want to be responsible for golf course and common area irrigation systems, therefore, these systems should remain private.

✓ ~~90. Should the proposed "off stream" location for the flood detention facility proposed in the 1990 Kennedy/Jenks report not be dedicated for this purpose, a minimum ten acre site for an elementary and a minimum 25 acre site for a middle school shall be offered for dedication. If the "off stream"~~

~~flood control facility is dedicated to Washoe County, a 10-acre site for the elementary school shall be offered for dedication. If the area for the "off-stream" facility is dedicated, but the county has not complied with Condition No. 51, the use for the area shall revert back to a school site and/or a park site (if requested by Washoe County) as proposed by the developer. If a school or park site is not requested by Washoe County, this area shall remain as an open space buffer.~~

**Reason for Modification:** The special use permit for the elementary school has already been approved. The elementary school will be located on a 17-acre parcel on the north side of Whites Creek Lane. This elementary school site is not impacted by the flood control facility. A neighborhood park site has also been proposed on the south side of Whites Creek Lane.

- NO ✓ 92. A minimum one-acre site shall be offered for dedication *prior to approval of a final map*, if requested by the applicable fire protection agency, for a fire station. The developer shall enter into talks with the applicable fire protection agency for any other requirements, such as, a fire station site, manpower and equipment needs, or for coordination with other developments that have similar requirements.

**Reason for Modification:** To clarify when the fire station site must be dedicated.

- ✓ 95. ~~Unless the off-stream site is dedicated to the county,~~ A minimum 10-acre public park site shall be offered for dedication to the county. A sketch plan ~~has been submitted, which if conceptually approved by the county, should~~ *will* be included in the final development agreement. The final park design shall be mutually agreeable to the county and the developer. The developer will construct the recreation facilities in the park and then be reimbursed for the cost of the construction from the Residential Construction Tax. The responsibility of park maintenance shall be negotiated by the developer and Washoe County prior to the approval of the final development agreement.

**Reason for Modification:** The park site has nothing to do with the off-stream detention facility, therefore, this reference is inaccurate. The sketch

plan that is referred to in this condition has been changed and the park site has been moved, therefore, this reference is also inaccurate.

- ✓ 97. Prior to approval of the final development agreement, the developer shall submit ~~schematic landscaping and architectural design guidelines~~ *a Development Standards Handbook* for the entire project to the Design Review Committee for its review and approval. These guidelines shall address, but not be limited to, type and color of building material, general architectural design, fencing, landscaping material (if plant material: type, size at time of planting, maturation size at full growth, period of time between planting and full growth), landscaping location, landscaping irrigation system, and financial assurances that landscaping will be planted and maintained.

**Reason for Modification:** To make the wording consistent with Article 814, Development Agreements.

- ~~99. Homes located on 12,000 square foot lots shall have a minimum 160 square foot storage space added in their garages, if only one garage space is provided. All homes will have a minimum two car garage.~~

**Reason for Modification:** No homes will be constructed with one garage space.

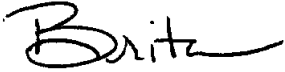

*Moved  
to CCR  
ref.*

**Tentative Map Conditions for Development Agreement Case No. DA9-1-93**  
**Final Map Conditions for Development Agreement Case No. DA9-1-93**  
**Special Use Permit Application and Construction Conditions for Development Agreement Case No. DA9-1-93**

Currently, there are numerous repetitive conditions under each of these headings, and there are also conditions that pertain to the tentative map that appear under the development agreement and vice versa. I have reorganized the conditions under three headings -- development agreement conditions, tentative map conditions, and special use permit conditions. I think this format will be easier for everyone to work with.

Thank you for your consideration of this request. Please call me if I can provide you with additional information or answer any questions.

Sincerely,

A handwritten signature in black ink that reads "Brita". The signature is fluid and cursive, with a long horizontal stroke at the end.

April 10, 1996

Mr. Don Young  
Washoe County Planning  
Development Review  
P.O. Box 11130  
Reno, NV 89520

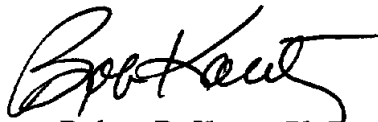

Dear Don:

Enclosed, please find one copy of the report for the Class III cultural resources survey that my firm surveyed in 1995 and 1996 for archaeological resources. The survey was over a large part of the Mt. Rose fan in the vicinity of Thomas and Dry Creeks in southwest Reno. The land is privately owned by Redfield Land Trust and much of the area is proposed for residential and recreation (golf course) development. The Intermountain Antiquities Computer System forms (IMACS) for the sites recorded in this area are also included in your copy of the report. As usual, we appreciate it that you will be forwarding this copy of the report to Ms. Rebecca Palmer at SHPO.

The report provides the survey results for two different block areas associated with what we have identified as the Dry Creek Fan Survey. The first block is an estimated 936 acres situated around Dry Creek and on the broad pediment to the east. The second block is an estimated 100 acres which was surveyed in March 1996, and the results from this additional survey are reported in Appendix A of the report.

If you have any questions or concerns, or if there is anything further we can do, please call me.

Sincerely,

Robert R. Kautz, Ph.D.  
President

**Subject: Open Space Management Plan for Southwest Pointe  
(Case No. DA9-1-93)**

Dear Karen and Don:

Attached to this letter is a copy of the draft Open Space Management Plan for Southwest Pointe. It has been prepared to comply with Conditions 93 through 96. Please review and send me any written comments by April 19. I will then finalize this plan by May 1.

If you have any questions, please call me before April 5 because I will be on vacation from April 8 through April 19. I will be back in the office on Monday, April 22.

Thanks for your help.

Sincerely,

Brita Tryggvi, AICP

Conceptual Park Plan .....	3
Trail System .....	4

## Open Space Management Plan

This plan has been prepared to comply with the Conditions of Approval for Southwest Pointe (Case No. DA9-1-93). Specifically, the following conditions are relevant:

93. Prior to the approval of the final development agreement, an open space management plan and map shall be prepared that specifies the ownership of open spaces, type of uses allowed, phasing of open space dedication, phasing of trail construction and who is responsible for maintenance. This plan shall address the provisions of Section 110.408.45 of the Development Code. Common areas shall be maintained by the homeowner's association and provisions be made for perpetual funding for maintenance. Prior to approval of the final development agreement, a government entity (e.g., United States Forest Service, Washoe County Parks Department, etc.) or a non-profit organization (e.g., Washoe Parks Foundation) shall be identified that will accept the dedication of the open space buffers identified on the Concept Plan, which consists of approximately 1,500 acres.
94. The final development agreement shall include a provision for public open space that prohibits the sale of any open space without the consent of Washoe County.
95. A minimum 10-acre public park site shall be offered for dedication to the county. A sketch plan will be included in the final development agreement. The final park design shall be mutually agreeable to the county and the developer. The developer will construct the recreational facilities in the park and then be reimbursed for the cost of the construction from the Residential Construction Tax. The responsibility of park maintenance shall be negotiated by the developer and Washoe County prior to the approval of the final development agreement.
96. The developer will work together with staff from the Department of Parks and Recreation to locate the proposed regional public trails to the satisfaction of Washoe County and the developer.

## **Neighborhood Park**

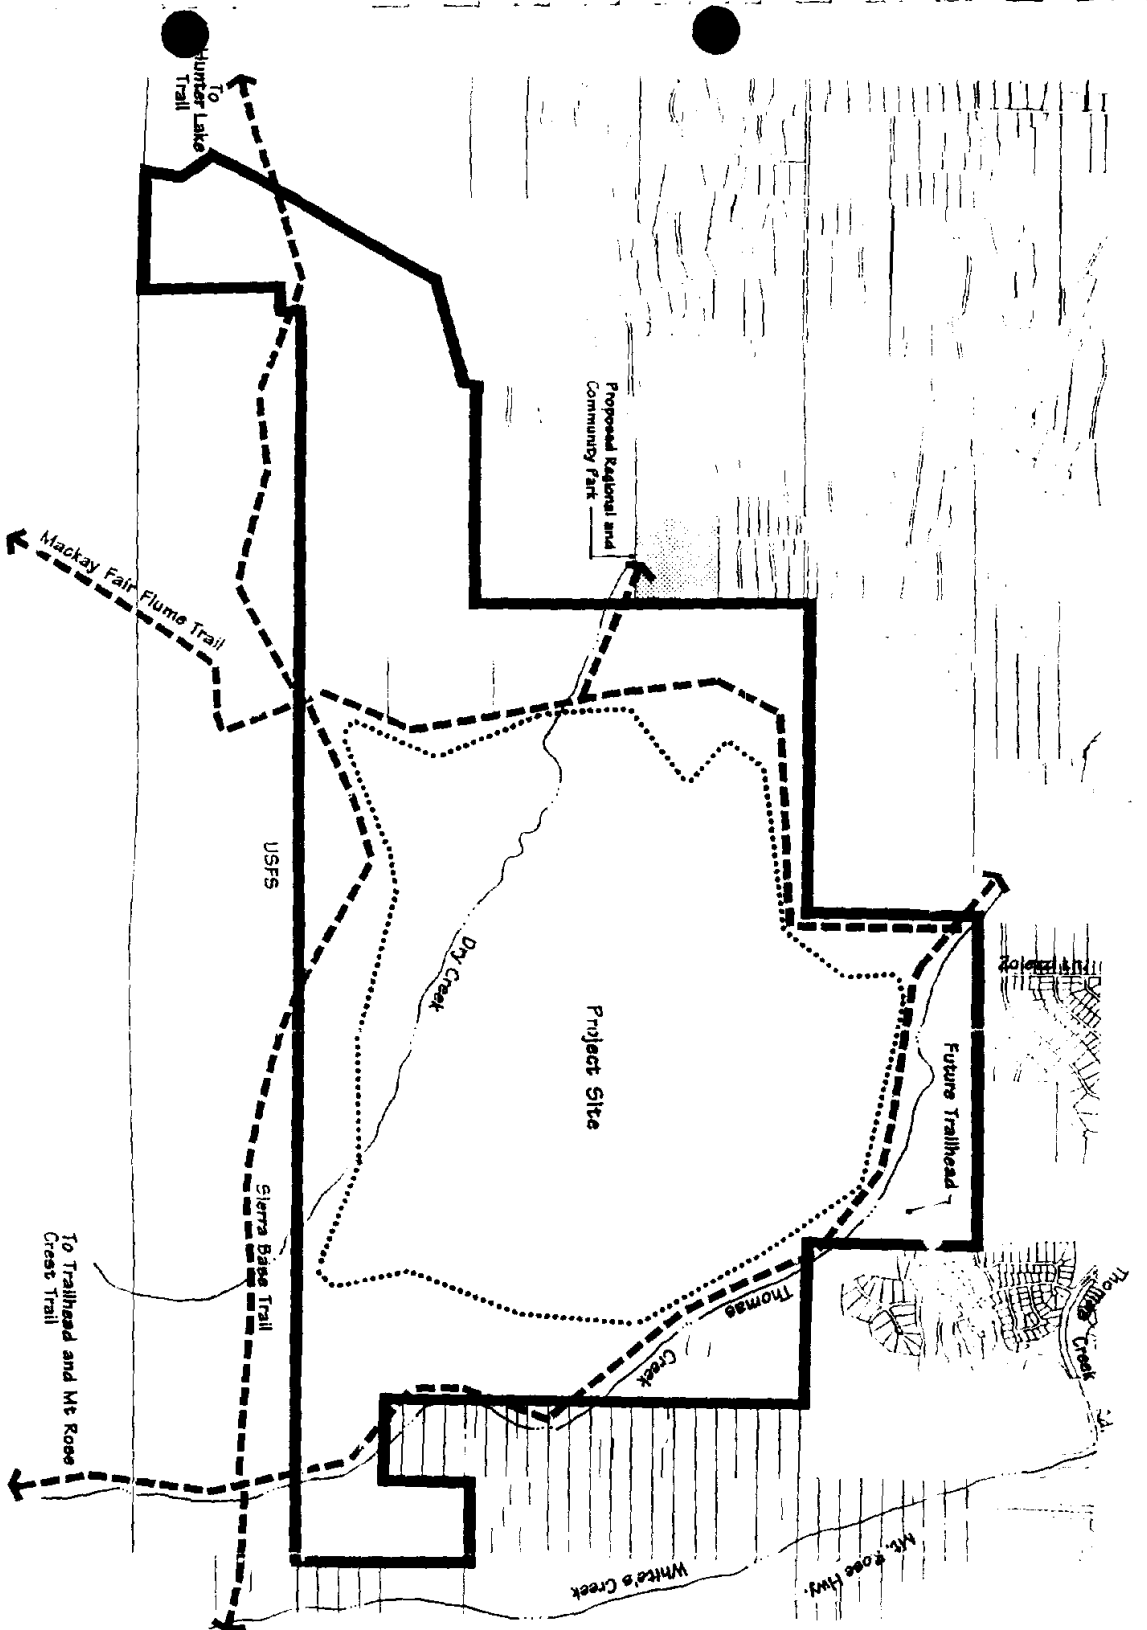

A neighborhood park is planned near the entrance to Southwest Pointe. As shown in Figure 1, the park will be constructed on the south side of Whites Creek Lane and on the east side of Thomas Creek. The park will be dedicated to Washoe County after the improvements have been completed. Southwest Pointe Partners or its successor will be reimbursed for the cost of the improvements and for the fair market value of the land from fees collected in Southwest Pointe from the Residential Construction Tax. All funds collected from the Residential Construction Tax from this project will be dedicated to reimbursement of the developer to the extent of the costs incurred.

It is important to ensure that recreational facilities are developed in a time frame that coincides with the demands created by development. Construction on the neighborhood park will commence prior to issuance of the 400<sup>th</sup> building permit and will be completed prior to issuance of the 600<sup>th</sup> building permit. Southwest Pointe Partners or its successor will be responsible for preparing a parcel map or final map to create the park parcel.

A conceptual plan of the park is presented in Figure 1. The park consists of approximately \_\_ acres. The area to the east is generally undeveloped with the developed portion of the park located on the western half of the site to take advantage of the creekside location. Proposed facilities include a children's play area, "T" ball field, trail head, parking areas, landscaped areas, paths, and individual and group picnic areas. These facilities have been identified after meetings with the staff of the Washoe County Parks and Recreation Department; however, it is anticipated that neighborhood meetings will be held and, as a result of these meetings, the conceptual plan may be modified. Washoe County will be responsible for maintenance of the park once it has been dedicated to the county.

## **Multi-Purpose Trails**

The proposed public trail system is shown in Figure 2 and is consistent with Washoe County's master plan for this park district. Public trails are proposed along Thomas Creek for access to the Mt. Rose Crest Trail and trailhead and around the northern

*Karen + Dan - The shape of the project site needs to be updated.*

**Legend**  
 Trail System

**Southwest Pointe**

Scale: 1"=2000'

Figure 2  
 Trail System

portion of the project for access to the Mackay Fair Flume Trail and the U.S.F.S. parcel in Section 11, which is proposed for a future community or regional park. Both trails provide access to the Sierra Base Trail, which eventually ties into the Hunter Lake Trail. Portions of the Sierra Base Trail are located on U.S.F.S. property and other portions, especially near Dry Creek, are located on Southwest Pointe. It will be necessary to relocate portions of the existing dirt road because of golf course and residential development along Dry Creek. In total, approximately 6 miles of public trails are proposed.

A system of internal private trails that connect to the public trails will be developed, and the location will be determined by the internal street system and/or parcelization. Southwest Pointe Partners or their successor will be responsible for construction and maintenance of all private trails.

Access to the public trail system will be available at several locations. The only access point with public parking will be at the neighborhood park, which will include the trailhead and parking areas. Access for individuals without vehicles is available from Whites Creek Lane, Zolezzi Lane, the neighborhood park, and the future regional or community park in Section 11. Motorized vehicles will be prohibited. The trails will be available for use by hikers, bicyclists, pedestrians, and equestrians.

The public trails will be constructed in the open space around Southwest Pointe. The trails will be located in a manner acceptable to Southwest Pointe Partners or their successor and the Washoe County Department of Parks and Recreation. Construction and maintenance of the trails will be the responsibility of Washoe County. When construction of the first 18-hole golf course is completed, the open space along Thomas Creek adjacent to the golf course and Phase I residential areas will be dedicated to Washoe County. If the county desires to construct the entire Thomas Creek trail, the developer will also grant an easement over a portion of open space along the eastern and southern boundaries of the project. These easements will ultimately be dedicated on future applicable final maps.

The staff of the Washoe County Department of Parks and Recreation has also expressed interest in stocking Thomas Creek with fish through the Urban Fisheries Program. To accomplish this work, vehicular access to the creek is necessary. Two

locations for vehicular access are proposed -- one is at the neighborhood park and the other is off of the maintenance road to the existing water tanks.

## Open Space

The site plan identifies approximately \_\_\_\_\_ acres of natural open space. The open space is located around the periphery of the project and provides a generous buffer between Southwest Pointe and all adjacent properties. Within the project itself, the goal is to create an open feeling through the lot layout, controls on fencing, siting of homes, and development of 36 holes of golf that meander through the neighborhoods.

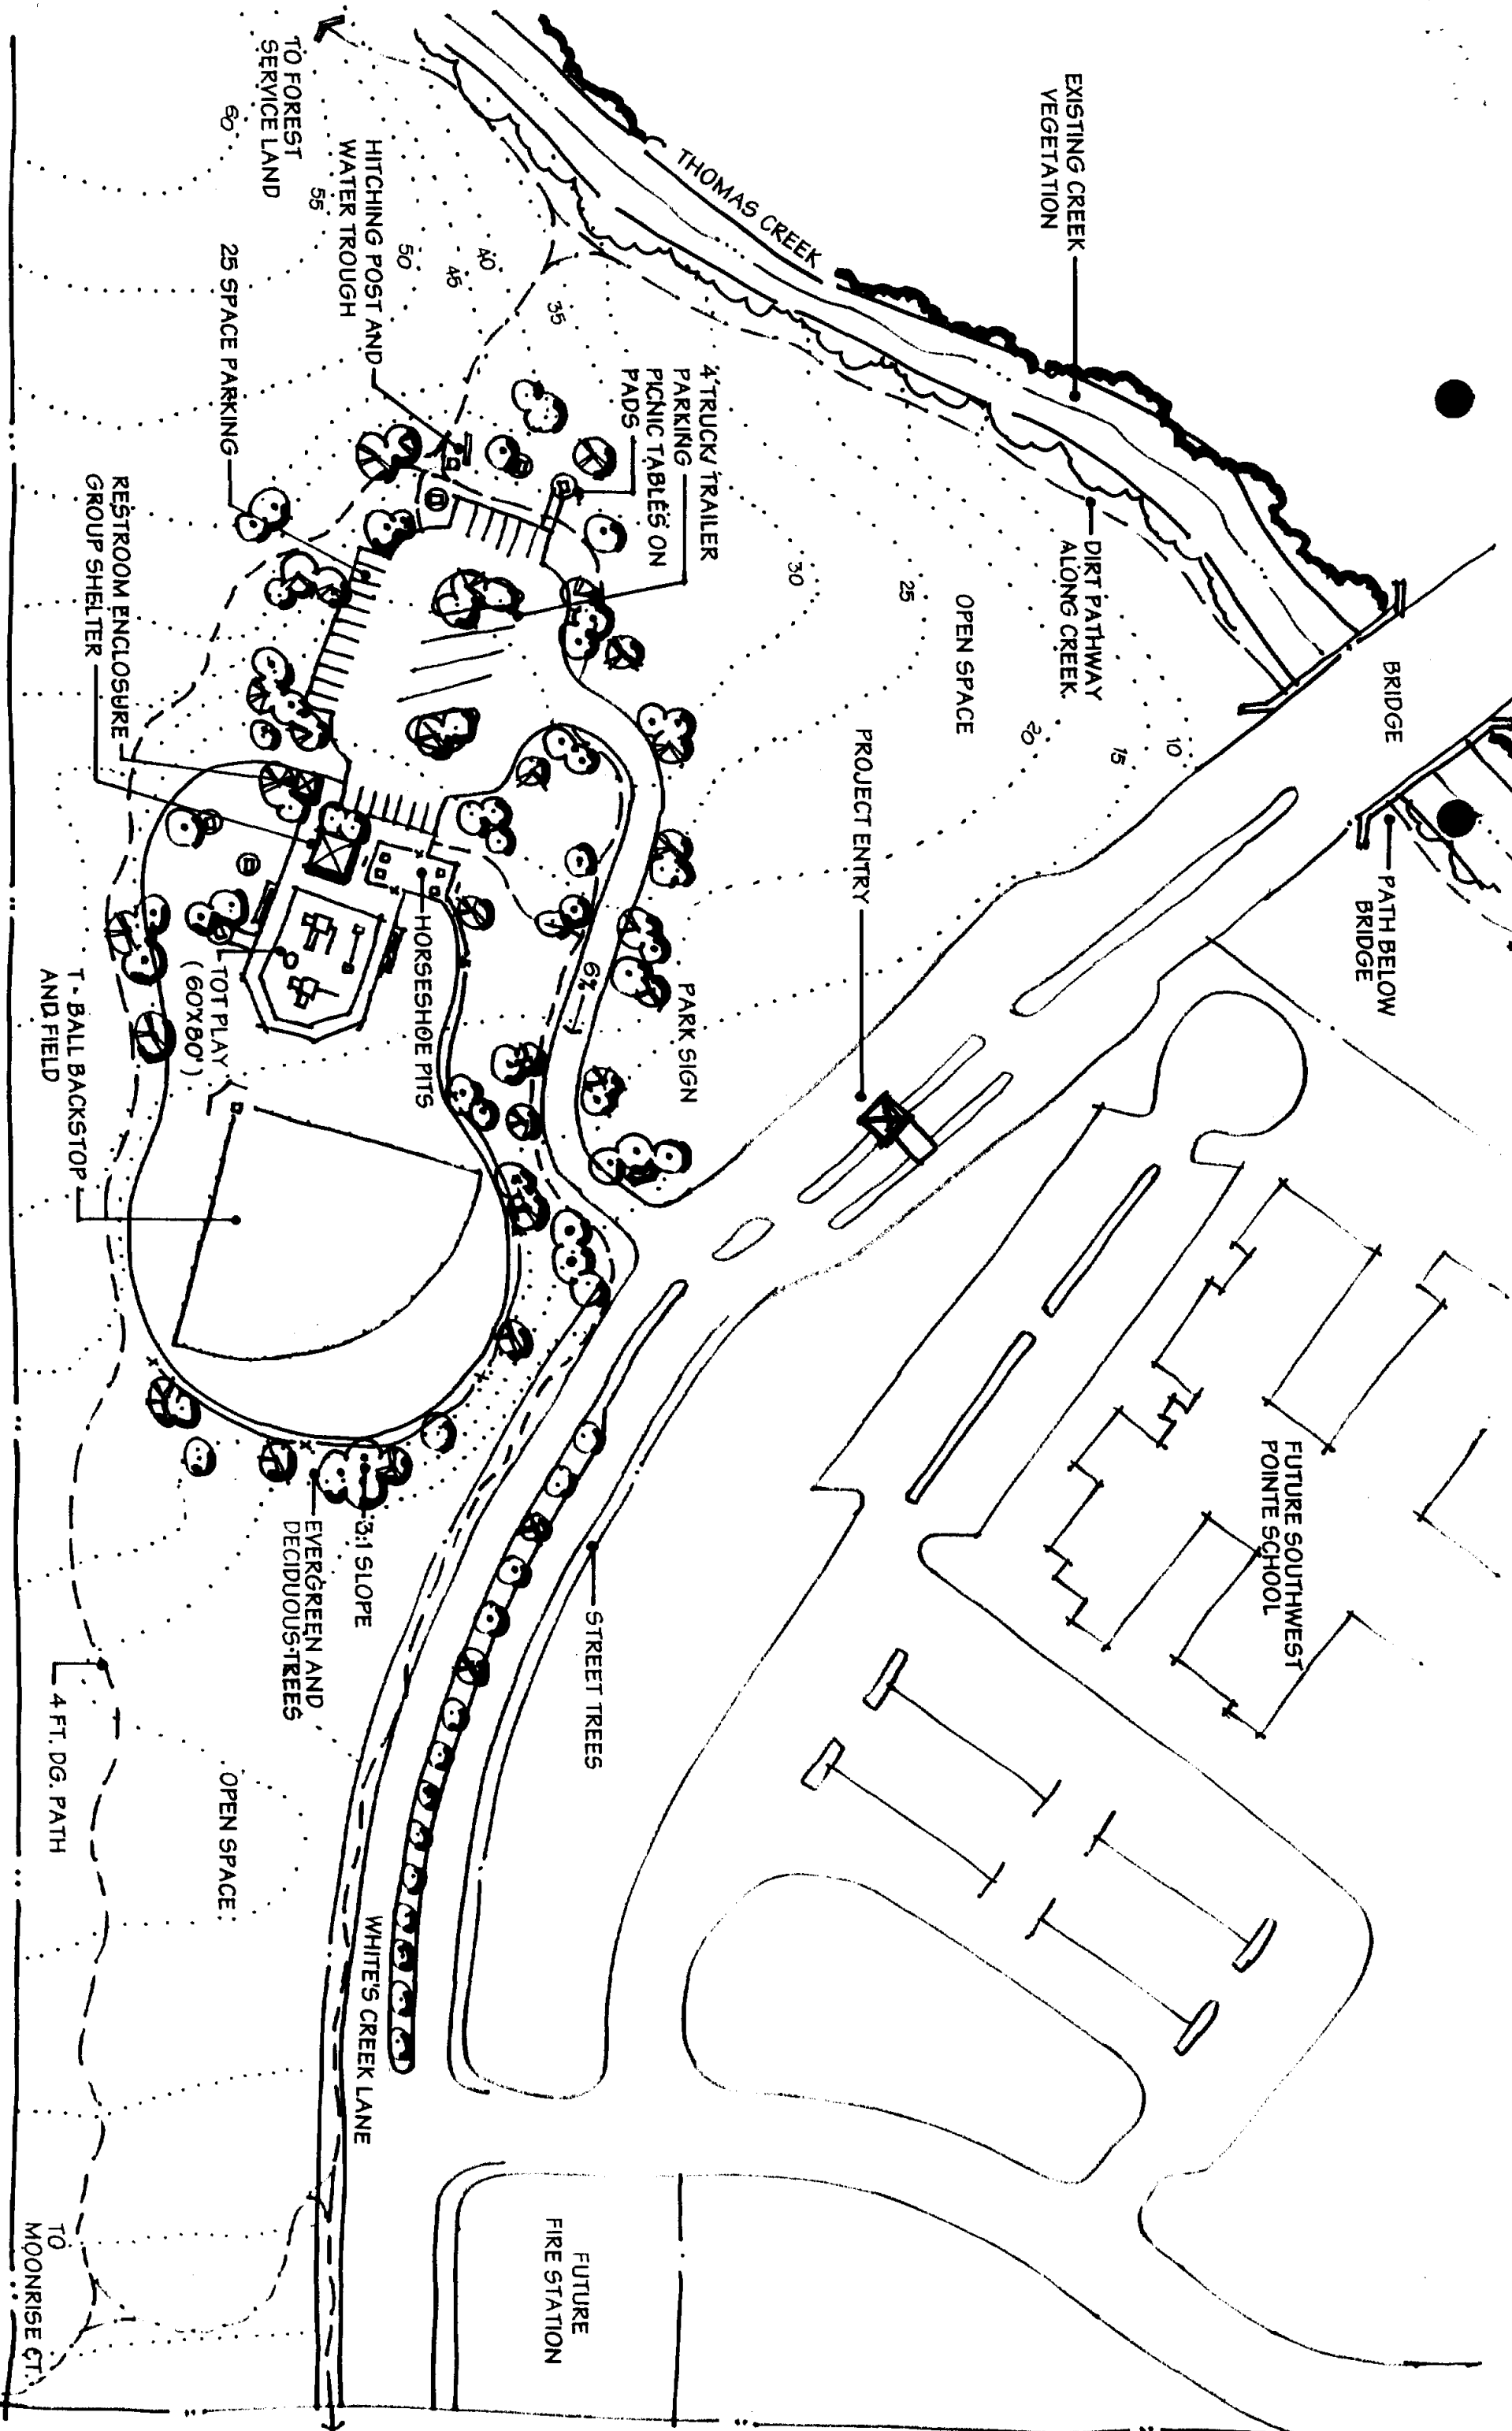

*Karen + Don - We just received a disk w/ the site plan. I will be able to give you the approximate acreage soon.*

As explained previously, to facilitate development of a public trail system along Thomas Creek, the open space along the creek will be dedicated or an easement will be granted when the first golf course is completed. The remaining open space will be dedicated as development progresses. With each final map on land adjacent to open space, an open space parcel will be created. When the map is recorded, the open space parcel will be deeded to Washoe County.

Only minimal disturbance of the natural habitat will be allowed. Some of the permitted uses include public trails, emergency access roads, water tanks and associated maintenance roads, fire breaks, stormwater detention ponds, and any other utility uses necessary to serve the project. Public access to designated wetlands will be restricted and seasonal restrictions and/or regulated recreational use in areas identified as key mule deer habitat will also be enforced. Provisions will be made for these types of uses and restrictions at the time of deeding.

Prior to dedication or grant of easements of the open space to Washoe County, Southwest Pointe Partners or their successors will be responsible for any maintenance that may be required. Possible maintenance activities may include debris and litter removal, fire prevention measures required by the Nevada Division of Forestry, and measures for habitat enhancement for mule deer that may be developed in consultation with the Nevada Department of Wildlife. Washoe County will be responsible for any maintenance activities required on property that is under their control. Maintenance activities for which the county is responsible may be identified by Southwest Pointe Partners or their successor at the time of deeding.

On residential lots adjacent to open space, fences should be used sparingly and with consideration for protection of privacy for key outdoor areas, safety, or animal control. Lot perimeter fencing is allowed. Specific design details will be included in the Development Standards Handbook and/or the CC&Rs.

WASHOE COUNTY DEVELOPMENT REVIEW

Mr. Don Young, Planner
Department of Development Review
P. O. Box 11130
Reno, NV 89520

Subject: Southwest Pointe

Dear Don:

This letter incorporates all previous correspondence pertaining to clarifications and modifications to the Conditions of Approval for Southwest Pointe. Those changes are summarized below. Deletions are struck thru and additions are in italic. One of the more significant modifications has to do with Condition #26, which pertains to street standards for public and private roads. We are requesting that the primary loop road, which will have either an 80-foot or a 60-foot right-of-way, be private rather than public and that we have the option of installing a gate at the point where Whites Creek Lane becomes a private road.

One change that does not deal with a condition, but rather with the concept plan, is the number of 12,000 square foot, 1/2 acre, and 1 acre lots. We are proposing to modify the percentage of lots in each category as outlined below.

Table with 3 columns: Lot Size, As Approved, Proposed. Rows include 12,000 sq. ft., 1/2 acre & larger, and 1 acre & larger.

The biggest change occurs in the number of 1/2-acre lots which has been increased and the number of 1-acre lots which has been decreased. The rationale for this change is based on a marketing study performed by Whitney Research Group in February 1996. This study identified a greater demand for 1/2 acre lots. Their reasoning is based on demographic aging trends which suggest that as consumers

Greg Doerr, A.I.C.P.
Principal

grow older (i.e., aging baby boomers), they do not want the upkeep of a large custom homesite. The older consumer desires freedom to travel and not be tied down to a large custom home and lot requiring extensive maintenance upkeep. Further, we are requesting a range, rather than a specific percentage, to permit some flexibility in site planning and to minimize the need for future revisions.

**Conditions for Development Agreement Case No. DA9-1-93**

1. *Unless specifically stated in the final development agreement, all uses, densities and standards shall be consistent with the Washoe County Development Code and with the goals and policies in the Comprehensive Plan and the Southwest Truckee Meadows Area Plan. Unless specifically stated in the final development agreement, the allowed uses, densities, and standards of the land subject to the development agreement shall be those in effect at the time the final agreement is approved.*

**Reason for Modification:** Different standards may be proposed in the final development agreement; therefore, the wording of this condition needs to reflect this possibility.

2. As part of every tentative map and special use permit application, the developer shall include a "statement of compliance" that demonstrates how the development application is consistent with the recorded final development agreement. The A "statement of compliance" format shall be made a part of the final development agreement. ~~For the Phase I applications, including the tentative map, special use permit and administrative waiver, a "draft statement of compliance" shall be provided to staff prior to the public hearing. When the final development agreement is approved, a revised statement of compliance for the Phase I tentative map and special use permit applications shall be submitted to Department of Development Review staff.~~

**Reason for Modification:** The second sentence should become a separate condition because it refers to the development agreement. The first sentence should also be a separate condition because it deals with the tentative maps and special use permits. The proposed deletions simply reflect the fact that

there is no reason to prepare a draft statement of compliance because the Phase I applications will not be submitted before the final development agreement is approved.

- ~~3. The recorded final development agreement shall be effective for a period not more than 15 years. An extension of this approval may be granted if mutually agreed to by the developer and Washoe County.~~

**Reason for Modification:** Article 814, Section 110.814.75 requires a development schedule as part of the final development agreement. Therefore, this condition is unnecessary because it simply repeats the requirements of the Washoe County Development Code.

4. Conditions, covenants, and restrictions (CC&Rs) shall be reviewed and approved by the District Attorney's Office, *County Engineer*, and the Department of Development Review *prior to final map approval*. Washoe County shall be made a party to the applicable provisions of the CC&Rs to the satisfaction of the District Attorney's office. Said CC&Rs shall specifically address the ~~potential for liens~~ *county's ability to enforce certain provisions* against the property and the individual property owner's responsibilities for the perpetual funding, maintenance and replacement, of the following items, at a minimum.

g. *Common area landscaping including along streets or landscaping along Whites Creek Lane*

h. Fire and fuelbreaks ~~on open space~~

~~l. Private streets and utilities~~

~~e. Public park center~~

. . . At a minimum, the CC&Rs shall also specifically address the following items:

j. ~~Requirement of Access to open space remaining open to~~ *for pedestrian and bicycle traffic.*

**Reason for Modifications:** The first change more accurately reflects the county's interest in enforcement. The second changes clarifies that this condition does not pertain to landscaping on private property along streets but is strictly limited to landscaping in common areas. Fire and fuelbreaks

may be located on property other than open space, therefore, the reference to open space should be deleted. Private streets are listed in an earlier item. (i.e., Item A). The developer will not be maintaining the public park and, therefore, this reference should be deleted. Lastly, some open space, such as wetlands, may not be open to pedestrian and bicycle traffic, therefore, this wording should be clarified.

11. ~~Within six months of the approval of the preliminary development agreement, a draft final development agreement that conforms with the provisions of Section 814 of the Washoe County Development Code shall be completed and submitted to the Washoe County Department of Development Review. Washoe County Department of Development Review will provide comments on the draft final agreement. The final development agreement will then be submitted to the Washoe County Board of County Commissioners within three months of submission of a completed agreement with all accompanying exhibits, provided the Department of Development Review does not delay the submission in order to approve provisions of the agreement to its satisfaction.~~ Extension of any of these time frames may be requested if mutually agreeable to Washoe County and the developer.

**Reason for Modification:** A draft of the final development agreement has already been submitted, therefore, the proposed deletions simply reflect the current status. The proposed addition provides for delay in the submission.

12. ~~The project shall be developed in three phases. Phase I includes a tentative map for 436 lots, an 18-hole golf course, the village center, and driving range. Phase II will include an additional nine holes, the equestrian center and a tentative map for approximately 220 dwelling units. Phase III includes the remaining 434 lots and the last nine holes of golf. Modifications to the proposed phasing plan may be made if mutually agreeable to the developer and Washoe County. These modifications may include the commercial portion of the project and the second 18-hole golf course, which may be constructed during Phase II or Phase III.~~

**Reason for Modification:** Section 110.814.75 states that the final development agreement must include a development schedule that indicates

the phases in which the land subject to the development agreement will be built and the approximate dates for the completion of each phase.

14. The developer shall provide the Department of Development Review staff with a ~~monthly~~ *quarterly* report indicating the number of building permits issued *and other building activity*, once residential construction has started.

**Reason for Modification:** Monthly is too frequent, and quarterly should be often enough. The scope of the report was broadened to include all building activity (e.g., golf course, infrastructure) rather than simply an inventory of building permits.

20. Prior to final approval of the development agreement, the developer for Southwest Pointe shall petition the Washoe County Board of County Commissioners to create a Special Assessment District for the purpose of financing the construction of Whites Creek Lane from the project site to Wedge Parkway and other roads as defined in the SAD agreement. In the event that a special assessment district is not created, the developer shall construct Whites Creek Lane, as outlined in Condition No. 16 and 18, from the project site to Wedge Parkway, to the satisfaction of the County Engineer.

~~Unless substituted by Washoe County Board of County Commissioner action, each final map shall contain the following not to the satisfaction of the Development Review staff.~~

#### NOTE

~~An off-site road construction fee is applicable to all parcels created by this map. Any applicant for a permit to construct or otherwise use this land shall either (1) enter into an agreement with Washoe County requiring financial assurances and approval by the District Attorney's Office, to pay the future off-site road impact fee upon its adoption or (2) pay any interim fee imposed by Washoe County, be released from the responsibility of the future impact fee, and be eligible for a refund should the future impact fee charge be less than the interim fee. All options to pay existing interim fees expire upon the subsequent adoption of a replacement interim fee or an impact fee.~~

**Reason for Modification:** The county has approved the Regional Road Impact Fee, which goes into effect this month. As a result, the second half of this condition is no longer necessary.

21. Prior to approval of the final development agreement, a proposed Construction Traffic Haul Route Plan shall be submitted to the County Engineer for review and approval. The primary construction haul route shall be Whites Creek Lane. As part of Phase I development, however, Zolezzi Lane may be used, for construction mobilization only, for completion of the first 18-hole golf course and for the extension of utilities into the project site.

Prior to the issuance of the first building permit, all construction traffic will be diverted to Whites Creek Lane. Access to Whites Creek Lane will be from the Mt. Rose Highway to Thomas Creek Road. When the 85th building permit is issued, all construction traffic will be required to use Whites Creek Lane from Wedge Parkway. Construction traffic will use Whites Creek Lane from Wedge Parkway if this segment is completed prior to the issuance of the 85th building permit. Thomas Creek Road from Mt. Rose Highway to the proposed Whites Creek Lane may be considered for a haul route provided the developer submit a traffic analysis and intersection design prepared by a licensed Nevada Civil Engineer which addresses and provides, as a minimum, recommendations regarding:

- a) site distance requirements;
- b) left turn storage capacity and design;
- c) intersection location and alignment;
- d) proximity to existing intersections and recommended separate distances;
- e) existing center median and landscaping concerns;
- f) determination of adequacy of existing Thomas Creek Road roadway geometric section; and
- g) determination of adequacy of existing structural section and load bearing capability.

The submitted report shall be evaluated and accepted by the County Engineer prior to any approval of the use of Thomas Creek Road as a haul route. Once Whites Creek Lane is connected to Wedge Parkway, this road shall become the primary construction haul route.

Any existing or proposed roads that will be used as construction haul routes and are not designated truck routes must be evaluated by a geotechnical study to determine the existing structural section and its load supporting capability. If the pavement section is inadequate to support the proposed construction loadings, the roadway must be redesigned or reconstructed as needed to provide a 20-year design life in accordance with the AASHTO Interim Guide for Flexible Pavements.

**Reason for Modification:** This condition should be divided into two conditions because the first paragraph deals with the development agreement and the remainder refers to the tentative maps and special use permits.

22. Prior to *or upon* approval of the ~~final development agreement~~ CC&Rs, the developer shall provide a street maintenance program to the satisfaction of the County Engineer and the Department of Development Review. Street maintenance of private streets shall be performed by the homeowner's association and shall be perpetually funded.

**Reason for Modification:** The Homeowners' Association will be responsible for street maintenance, therefore, this topic is more accurately addressed in the CC&Rs.

23. Prior to approval of the final development agreement, *the developer shall provide* a schematic pedestrian circulation plan. As part of each tentative map, a detailed pedestrian circulation plan will be submitted and approved by the Department of Development Review.

**Reason for Modification:** The condition was incomplete.

25. Unless specifically stated *in these Conditions of Approval* or in the final development agreement, all (public and private) street design and construction is to be done in accordance with the Washoe County Standards

that are approved at the time the final development agreement is recorded, to the satisfaction of the County Engineer.

**Reason for Modification:** The conditions of approval are separate from the final development agreement and may include some items that are not in the development agreement.

26. The following roadway sections shall be applicable to the public and private on-site streets shown on the tentative map. A traffic report shall be submitted ~~prior to approval of the first final~~ *with each tentative map* which identifies the ultimate average daily traffic on each street *and make recommendations for geometric design (e.g., left turn storage capacity, site distance, minimum required turning radius)*
- a. *Private Common Driveways - Serving 4 or less lots, pavement width 20 feet; serving 5 or more lots, pavement width 22 feet; no parking either side. (Refer to street sections.)*
  - a. b. *Rural Private - 41 60 foot minimum ROW ~~eul-de-sac rural street~~ (maximum 200 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4 foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. (Refer to street sections.)*
  - b. c. *Local Private - 50-60 foot minimum ROW ~~local street~~ (200 - 500 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4 foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. (Refer to street sections.)*
  - e. d. *Collector Private - 50 60 foot minimum ROW ~~collector street~~ (500 ADT to 2000 ADT): minimum 24 foot pavement width; curb and gutter or*

County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. a minimum 4 foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. (*Refer to Street Sections.*)

- d. ~~e. Collector Private - 60 foot minimum ROW collector street (2000 ADT to 8000 ADT):~~ minimum 36 24-foot pavement width with an additional 12-foot left turn lane at intersections where warranted; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking ~~permitted on both on either~~ side. A minimum ~~five (5)~~ eight (8) foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. No residential driveway access will be allowed. (*Refer to street sections.*)
  
- ~~e. Public - 60 foot ROW collector street (2000 ADT to 9600 ADT):~~ minimum 36 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides; parking prohibited both sides; minimum four (4) foot meandering asphalt path one side, residential driveway access not allowed. Where proposed, center medians shall be limited to a minimum of 11 feet from curb face to curb face.
  
- f. ~~Public-Collector Private - 80 120 foot minimum ROW minor arterial collector street (up to 9600 ADT to 10,830 ADT):~~ A minimum 41 27 foot center median from curb face to curb face, 29.5 18 foot roadway section curb face to curb face pavement width on either side of the median; curb and gutter on both sides or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side; a minimum ~~four (4)~~ eight (8) foot meandering asphalt path both sides; no residential driveway access allowed. (*Refer to street sections.*)
  
- g. *Minor Arterial, Private - 120 foot minimum ROW (more than 10,800 ADT):* A minimum 27 foot center median from curb face to curb face, 24 foot roadway

*section on either side of the median; County Engineer approved concrete header with roadside ditch; no parking either side; a minimum 8 foot meandering asphalt path both sides. A gate may be installed at the point where Whites Creek Lane becomes a private road. (Refer to street sections.)*

- h. Minor Arterial, Public - 120 foot minimum ROW (more than 10,800 ADT): A minimum 27 foot center median from curb face to curb face, 29.5 foot roadway section on either side of the median; curb and gutter on both sides; a minimum 6 foot concrete sidewalk on both sides. (Refer to street sections.) A gate may be installed at the point where Whites Creek Lane becomes a private road. A public turn-around is required on the public side of the gate.*

**Reason for Modification:** To be consistent with Washoe County Street Design Standards, to create a hierarchy of paths, and to change some of the public streets to private streets.

- 27. Landscaped medians shall be designed in accordance with AASHTO site distance and safety guidelines to the satisfaction of the County Engineer, Washoe County Department of Development Review and the developer. Maintenance of median landscaping shall be by the Homeowners' Association as provided for in a separate maintenance agreement to be approved by the County Engineer and the District Attorney's Office prior to approval of the ~~final development agreement~~ CC&Rs.

**Reason for Modification:** The Homeowners' Association will be responsible for the maintenance of median landscaping, therefore, this topic is more accurately addressed in the CC&Rs.

- 28. Meandering asphalt paths will be acceptable provided . . .
  - c. Maintenance of the asphalt paths and landscaping shall be the responsibility of the developer and, when created, by the Homeowners' Association as provided for in a separate maintenance agreement and be approved by the County Engineer and the District Attorney's office prior to approval of the ~~final development agreement~~ CC&Rs.

**Reason for Modification:** The Homeowners' Association will be responsible for the maintaining the asphalt paths and the landscaping between the road and the path, therefore, this topic is more accurately addressed in the CC&Rs.

33. All-weather emergency access roads shall be constructed at the end of all cul-de-sacs that are longer than ~~500~~ 1,500 feet to the satisfaction of the County Engineer and the applicable fire protection agency. These roads shall have a 30-foot access easement with a minimum 20-foot width of ~~6 inches of Type 2 Class B aggregate base.~~ *2.5 inches of asphalt concrete pavement on an engineered gravel base.* The roads shall be controlled by emergency access gates and shall be posted with signs stating "For emergency Vehicles Only" to the satisfaction of the applicable fire protection agency and the County Engineer.

**Reason for Modification:** The county has adopted new standards for emergency access roads since this project was approved. The proposed change is consistent with the new standards.

34. Prior to final map approval, the developer shall provide all weather emergency access easements and road improvements at the locations shown on the tentative map, terminating at public or privately maintained streets, to the satisfaction of the County Engineer. ~~The emergency access road shall be constructed within a 30-foot access easement to a minimum 20-foot width with 4 inches of Type 2 Class B aggregate base.~~

**Reason for Modification:** The last sentence repeats Condition #33.

36. Unless otherwise stated *in these conditions of approval or in the final development agreement*, all roadway improvements necessary (including but not limited to, curb, gutter, sidewalk, signing and striping, driveway access, and street lighting) to serve the project shall be designed and constructed to county standards and specifications and/or financial assurances in an appropriate form and amount shall be provided to the satisfaction of the County Engineer.

**Reason for Modification:** The conditions of approval are separate from the final development agreement and may include some items that are not in the development agreement.

40. Off-site parking areas shall be provided within ~~300~~ 500 feet of homes that have lots ranging in size between 12,000 square feet and 0.5 acre . One space shall be provided for every three homes. Parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the tentative map(s), to the satisfaction of Washoe County Department of Development Review and the Developer.

**Reason for Modification:** To avoid having a multitude of guest parking areas with 1 or 2 spaces, the spacing requirement was increased to 500 feet so that the guest parking areas will consist of 4 or 5 spaces. Guest parking areas will be added to the neighborhoods with 0.5 acre lots because on-street parking will be prohibited on the private streets and the front yard setback can be reduced with side-entry and detached garages.

41. All private roadways shall be depicted on the final maps and identified ~~in the final development agreement~~ on the tentative map as either private access easements over individual adjacent lots or, if identified as separate parcels, as either common areas with equal fractional ownership by all of the lots within the development or common areas owned by the Homeowners' Association to the satisfaction of the County Engineer.

**Reason for Modification:** NRS Chapter 116 (Uniform Common Interest Ownership Act) requires a corporation to be formed for the Homeowners' Association. The corporation owns the common areas.

43. Regulatory signs must be installed at the juncture of all public streets with a private street and at intersections along the primary loop road to the satisfaction of the County Engineer. Said sign shall state: "Private street not maintained by county." All regulatory signs shall meet the Manual of Uniform Traffic Control Device standards.

**Reason for Modification:** Since there is only one location where a public street intersects with a private street (i.e., at the main project entrance), there

would only be one sign. The county staff wants signs at additional locations and, therefore, the suggested wording to add "at intersections along the primary loop road."

48. Prior to the submittal of any final map or issuance of any grading permit, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted and approved by the County Engineer. The report shall be in substantial compliance with the general storm drain master plan and contain all final storm drain pipe, ditch and retention pond sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed and constructed to the satisfaction of the District Health Department and the County Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.

Prior to the issuance of a grading permit, the applicant shall provide a letter granting a blanket drainage and construction easement to the Southwest Pointe Subdivision that allows the subdivision to drain onto the golf course and to construct detention facilities necessary to accommodate the subdivision-generated stormwaters in mutually agreed upon locations to the satisfaction of the County Engineer. The easement shall be submitted with the plans for the final golf course improvements.

**Reason for Modification:** The first paragraph pertains to tentative maps and special use permits; whereas, the second paragraph only refers to the special use permit for the golf course. Therefore, only the first paragraph should appear with the tentative map conditions and both paragraphs should appear with the special use permit conditions.

49. A maintenance plan of all drainage facilities to be owned by the homeowners' association shall be provided prior to approval of the ~~final development agreement~~ CC&Rs. All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe County water treatment plant and associated Steamboat Ditch conveyance system . . .

**Reason for Modification:** The Homeowners' Association will be responsible for the maintaining the asphalt paths and the landscaping between the road and the path, therefore, this topic is more accurately addressed in the CC&Rs.

51. The off-stream detention/debris basin recommended in the 1990 Kennedy/Jenks/Chilton report shall be reserved based on the following timetable:
  - a. Washoe County will have three years to obtain the necessary permits for construction of the off-stream detention basin. This three years shall commence upon the approval of the final development agreement. If Washoe County fails to obtain the necessary permits, the property for the detention site shall be offered by the applicant or his successors, for dedication to the Washoe County School District for a middle school, ~~the Washoe County Parks and Recreation Department for a neighborhood park,~~ or revert to open space.
  - b. If Washoe County does obtain the necessary permits within three years, construction of the project shall commence within 5 years of the approval of the final development agreement. If construction is not started by that date, the property for the detention site shall be offered by the applicant or his successors, for dedication to the Washoe County School District for a middle school, ~~the Washoe County Parks and Recreation Department for a neighborhood park,~~ or revert to open space.
  - c. If an alternative solution or site becomes available for flood control, this property will immediately become available for dedication to the Washoe County School District for a middle school, ~~the Washoe County Parks and Recreation Department for a neighborhood park,~~ or revert to open space.
  - d. If the detention basin is constructed, Washoe County shall pay fair market value for the property.

**Reason for Modification:** We have been working with Karen Mullens, Washoe County Parks and Recreation Department, to identify a neighborhood park that is not adjacent to the school. The preferred location is adjacent to Thomas Creek on the south side of Whites Creek Lane.

56. A buffer shall be provided next to riparian vegetation. The size of the buffer shall be mutually agreeable to Washoe County and the developer. A minimum 50-foot buffer shall be provided ~~between property lines of single-family residences and riparian vegetation from any structures.~~

**Reason for Modification:** It would be difficult and impractical to implement the original wording because it would result in long, thin parcels along riparian areas that would become a "no man's land". The suggested wording is consistent with the intent of this condition and avoids the creation of unusable parcels.

- ~~64. Prior to the approval of the final development agreement, the applicant shall provide staff with a phasing schedule for the dedication of water rights. Permitted or certificated groundwater rights in the amount of 1.12 acre-feet must be dedicated to Washoe County for each lot of a final map. Water rights, in accordance with the Washoe County Utility Division policies for the Southwest Truckee Meadows, shall be dedicated to Washoe County. Prior to acceptance, the water rights must be in good standing with the State of Nevada Division of Water Resources and must reflect a point of diversion, place and manner of use acceptable to the Utility Division.~~

**Reason for Modification:** Current county policy requires that sufficient water rights will be dedicated prior to recordation of each final map. A phasing schedule is typically not necessary. The required number of water rights for each lot may change in the future because the county is evaluating SPPCo water rights dedication requirement which is based on lot size. If the requirement changes, we do not want to be constrained by this condition.

- ~~65. Prior to the approval of the final map, the developer shall demonstrate how compliance with NRS 278.349, that requires the availability of water meet applicable health standards and is sufficient in quantity to serve the foreseeable needs of the subdivision, shall be met to the satisfaction of the~~

~~District Health Department and Washoe County Department of Development Review.~~

**Reason for Modification:** Condition #67 addresses this topic, therefore, this condition is repetitive.

- ~~69. The developer shall provide adequate assurance that the sewage, water, and drainage systems will be satisfactorily maintained and operated.~~

**Reason for Modification:** The developer is not responsible for maintaining the sewage and water systems. These facilities are maintained Washoe County. Maintenance of the drainage system has already been addressed in Condition #49.

74. If a supplemental water source is required, evidence that an adequate source has been procured by the developer/water purveyor shall be submitted to the Utility Division for their review and approval. ~~The water source shall meet both primary and secondary standards of the Safe Drinking Water Act.~~

**Reason for Modification:** The last sentence repeats federal, state, and local law. A subsequent condition (i.e., #77) requires the developer to use treated wastewater which will not meet drinking water standards. Therefore, the two conditions contradict one another.

- ~~79. The project shall be designed to accommodate a gravity flow sanitary sewer system within the boundaries of the subdivision. Such design shall be to the satisfaction of the Utility Division.~~

**Reason for Modification:** According to Terri Svetich, Washoe County Utility Division, this is not a Utility Division condition and can be deleted.

83. The sanitary sewer collection system and water system facilities, *with the exception of the golf course and common area irrigation systems*, must be offered for dedication to Washoe County.

**Reason for Modification:** Washoe County does not want to be responsible for golf course and common area irrigation systems, therefore, these systems should remain private.

- ~~90. Should the proposed "off stream" location for the flood detention facility proposed in the 1990 Kennedy/Jenks report not be dedicated for this purpose, a minimum ten acre site for an elementary and a minimum 25 acre site for a middle school shall be offered for dedication. If the "off stream" flood control facility is dedicated to Washoe County, a 10-acre site for the elementary school shall be offered for dedication. If the area for the "off-stream" facility is dedicated, but the county has not complied with Condition No. 51, the use for the area shall revert back to a school site and/or a park site (if requested by Washoe County) as proposed by the developer. If a school or park site is not requested by Washoe County, this area shall remain as an open space buffer.~~

**Reason for Modification:** The special use permit for the elementary school has already been approved. The elementary school will be located on a 17-acre parcel on the north side of Whites Creek Lane. This elementary school site is not impacted by the flood control facility. A neighborhood park site has also been proposed on the south side of Whites Creek Lane.

92. A minimum one-acre site shall be offered for dedication *prior to approval of a final map*, if requested by the applicable fire protection agency, for a fire station. The developer shall enter into talks with the applicable fire protection agency for any other requirements, such as, a fire station site, manpower and equipment needs, or for coordination with other developments that have similar requirements.

**Reason for Modification:** To clarify when the fire station site must be dedicated.

- ~~95. Unless the off-stream site is dedicated to the county, A minimum 10-acre public park site shall be offered for dedication to the county. A sketch plan has been submitted, which if conceptually approved by the county, should will be included in the final development agreement. The final park design shall be mutually agreeable to the county and the developer. The developer~~

will construct the recreation facilities in the park and then be reimbursed for the cost of the construction from the Residential Construction Tax. The responsibility of park maintenance shall be negotiated by the developer and Washoe County prior to the approval of the final development agreement.

**Reason for Modification:** The park site has nothing to do with the off-stream detention facility, therefore, this reference is inaccurate. The sketch plan that is referred to in this condition has been changed and the park site has been moved, therefore, this reference is also inaccurate.

97. Prior to approval of the final development agreement, the developer shall submit ~~schematic landscaping and architectural design guidelines~~ *a Development Standards Handbook* for the entire project to the Design Review Committee for its review and approval. These guidelines shall address, but not be limited to, type and color of building material, general architectural design, fencing, landscaping material (if plant material: type, size at time of planting, maturation size at full growth, period of time between planting and full growth), landscaping location, landscaping irrigation system, and financial assurances that landscaping will be planted and maintained.

**Reason for Modification:** To make the wording consistent with Article 814, Development Agreements.

- ~~99. Homes located on 12,000 square foot lots shall have a minimum 160 square foot storage space added in their garages, if only one garage space is provided. All homes will have a minimum two car garage.~~

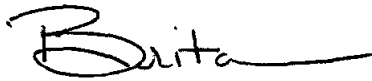

**Reason for Modification:** No homes will be constructed with one garage space.

**Tentative Map Conditions for Development Agreement Case No. DA9-1-93**  
**Final Map Conditions for Development Agreement Case No. DA9-1-93**  
**Special Use Permit Application and Construction Conditions for Development Agreement Case No. DA9-1-93**

Currently, there are numerous repetitive conditions under each of these headings, and there are also conditions that pertain to the tentative map that appear under the development agreement and vice versa. I have reorganized the conditions under three headings -- development agreement conditions, tentative map conditions, and special use permit conditions. I think this format will be easier for everyone to work with.

Thank you for your consideration of this request. Please call me if I can provide you with additional information or answer any questions.

Sincerely,

A handwritten signature in cursive script that reads "Brita".

Don,

The proposed amendments to the developement agreement conditions (Brita's 2/7/96 letter) look ok with the exception of Condition 26. Conditon 26 deals with the street sections and has been superseded by today's meeting. Here are some potential issues I thought of regarding the offsite portion of Whites Creek Lane. We approved attached sidewalks with the special use permit for the elementary school. If the School District decides they don't want to put in the 10' landscape strip and detached sidewalk, I don't think they have to. Will we be creating a potential problem for approving two different standards for the same portion of Whites Creek Lane? Also, per Condition 20, if a special assessment district is created for the construction of the offsite portion of Whites Creek Lane, I don't think it would be fair to include the right-of-way landscaping as part of the cost of the special assessment. The landscaping is an amenity the developer wants, not a necessary part of the roadway required for access. Let me know if you need an official memo on the amended conditions.

Kris

FEB 27 1996  
OFFICE OF  
WASHOE COUNTY ENGINEER

Subject: Southwest Pointe

Dear Don:

Additional modifications to Condition #26, which addresses street sections, are proposed below. Southwest Pointe will have a rural character and the streets that are constructed will contribute to that character. We are, therefore, proposing street sections which we believe are more consistent with the character we are trying to create -- the pavement widths are narrower, concrete headers will be installed rather than curb and gutter, asphalt paths will be constructed rather than concrete sidewalks, and the roads will be private. Since the roads are private, maintenance will be the responsibility of the developer and/or homeowner's association.

The proposed changes to Condition #26 are summarized below. Deletions are ~~struck thru~~ and additions are in *italic*. Some of the changes presented below repeat the information that was presented in my February 13 letter.

Conditions for Development Agreement Case No. DA9-1-93

26. The following roadway sections shall be applicable to the <sup>public and</sup> private on-site streets shown on the tentative map. A traffic report shall be submitted ~~prior to approval of the first final~~ *with each tentative map* which identifies the ultimate average daily traffic on each street *and make recommendations for geometric design (e.g., left turn storage capacity, site distance, minimum required turning radius)*. *Any public streets not specified will be to WCC*

22' MIN. PAVEMENT WIDTH REQUIRED PER CODE SECTION 110.436.110 (a)

PATHS CAN NOT BE IMMEDIATELY ADJACENT TO THE CONCRETE HEADER. FOR PEDESTRIAN SAFETY, USE DETACHED PATHS OR CURB + GUTTER WITH SIDEWALK.

- a. Common Driveways - Maximum 100 ADT: 20-foot easement, minimum 18-foot pavement width, no parking either side.
- a. b. Private - 41 foot ROW ~~cul-de-sac~~ rural street (maximum 200 ADT): minimum ~~22-20~~<sup>22</sup> foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4 foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer.
- b. c. Private - 50 foot ROW local street (maximum 500 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4 foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer.
- e. d. Private - 50 foot ROW collector street (500 ADT to 2000 ADT): minimum 24 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. a minimum 4 foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer.
- e. e. Private - 60 foot ROW collector street (2000 ADT to 8000 ADT): minimum ~~36~~ 32-foot pavement width with an additional 12-foot left turn lane at intersections where warranted; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking ~~permitted on both~~<sup>either</sup> sides. A minimum ~~five (5)~~<sup>defached</sup> four (4) foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. No residential driveway access will be allowed.

OK TO  
DELETE →

~~e. Public 60 foot ROW collector street (2000 ADT to 9600 ADT):  
minimum 36 foot pavement width; curb and gutter or County  
Engineer approved concrete header with roadside ditch both sides;  
parking prohibited both sides; minimum four (4) foot meandering  
asphalt path one side, residential driveway access not allowed.  
Where proposed, center medians shall be limited to a minimum of 11  
feet from curb face to curb face.~~

OK →

f. ~~Public-Private - 80 foot ROW minor arterial collector street (up to 9600  
ADT to 10,830 ADT):~~ A minimum 11 foot center median from curb  
face to curb face, 29.5 16 foot roadway section curb face to curb face  
pavement width on either side of the median; curb and gutter on both  
sides or County Engineer approved concrete header with roadside ditch  
both sides (developer's discretion); no parking either side; a minimum  
four (4) foot meandering asphalt path both sides; no residential  
driveway access allowed.

A PUBLIC TURN-  
AROUND IS  
REQUIRED ON  
THE PUBLIC  
SIDE OF THE  
GATE. →

g. Public or Private - 100 foot ROW ~~major~~ minor arterial street (~~more  
than~~ up to 10,800 ADT): A minimum 20 foot center median from curb  
face to curb face, 29.5 foot roadway section on either side of the median;  
public road will have curb and gutter on both sides; private road will have  
county approved concrete header; no parking either side; public street will <sup>have</sup> a  
six (6) foot concrete sidewalk both sides; private street will have a minimum  
4 foot meandering asphalt path both sides. A gate may be installed at the  
point where Whites Creek Lane becomes a private road.

Thank you for considering these modifications. Please call me if I can provide  
you with additional information or answer any questions.

## COMMENTS FOR CONDITION 26.a. COMMON DRIVEWAYS:

THE COMMON DRIVEWAYS MUST COMPLY WITH THE <sup>MINIMUM</sup> STREET DESIGN STANDARDS IN ARTICLE 436 OF THE DEVELOPMENT CODE. A 20' MINIMUM PAVEMENT WIDTH IS REQUIRED FOR DRIVES SERVING 4 LOTS OR LESS, AND A 22' MINIMUM PAVEMENT WIDTH IS REQUIRED FOR DRIVES SERVING 5 LOTS OR MORE. THE INTERSECTION OFFSET BETWEEN 2 COMMON DRIVEWAYS SHALL BE A MINIMUM OF 200 FEET. COMMON DRIVEWAYS THAT ACCESS COLLECTORS SHALL BE DESIGNED SUCH THAT THE DRIVEWAY TRAFFIC DOES NOT AFFECT THE FLOW OF TRAFFIC ON THE COLLECTOR. THIS SHALL BE ADDRESSED BY A ~~E~~ TRAFFIC REPORT AND MAY REQUIRE TAPERS AND/OR LARGER RETURNS.

#? All public roads will be accessed from an accepted county street.

**Subject: Southwest Pointe (Case No. DA9-1-93)**

Dear Jeff:

Condition #19 from the amended conditions of approval reads as follows:

19. The final development agreement shall not be approved until the right-of-way of all necessary off-site accesses from the project to Thomas Creek Road are obtained. Provided however, that preliminary golf course and roadway grading may commence before such approval has been obtained so long as such construction is done in accordance with Condition #21. A recorded right-of-way document shall be provided to the satisfaction of the County Engineer and the District Attorney's Office.

I have attached a copy of the recorded document that allows ingress and egress of vehicles from Zolezzi Lane to the Redfield Trust property and provides for underground utilities. With receipt of this document, we have complied with this condition in a manner sufficient to permit issuance of a grading permit for the golf course. (We realize that a similar document must be recorded for Whites Creek Lane prior to approval of the final development agreement or issuance of the first building permit.)

Please contact me immediately if you are not in agreement with the preceding statements. If I do not hear from you, I will assume you agree.

Sincerely,

Brita Tryggvi, AICP  
Associate

EASEMENT

This Easement is made this 12<sup>th</sup> day of July, 1994 by and between TMS Associates, a limited partnership ("TMS") and Betty Alyce Jones, Helen Jeanne Jones, Iris G. Brewerton, Kenneth G. Walker and Gerald C. Smith, surviving trustees of the Nell J. Redfield Trust (collectively referred to herein as the "Trust").

R E C I T A L S:

This Easement is made with reference to the following facts:

1. On or about July 1, 1980 Nell J. Redfield and TMS Associates entered into an agreement wherein TMS would provide to Redfield the location of an easement over a portion of the properties owned by TMS more particularly described in Exhibit "A" attached hereto (the "TMS Property") for use in conjunction with certain real property then owned by Ms. Redfield.

2. The Trust, successor-in-interest of Nell J. Redfield, owns that certain real property described in Exhibit "B" (the "Trust Property") and wishes to obtain an easement for the purposes described hereinafter.

NOW THEREFORE, it is hereby agreed between the parties as follows:

A. Easement Over The Easement Property.

1. Grant of Easement: TMS hereby grants to the Trust, for the benefit of the Trust Property and the mortgagees, holders of security interest, tenants, lessees, sublessees, employees and agents of the Trust an easement for the ingress and egress of vehicles to the Trust Property over that portion of the TMS Property described on Exhibit "C" attached hereto (hereinafter the "Easement Property").

2. Purpose of Easement: The easement granted hereby shall be for the purpose of allowing the ingress and egress of vehicles from Zolezzi Lane to the Trust Property and providing for underground utilities.

BK4714PG0118

B. Non-Exclusive Easement. This Easement is non-exclusive and may be used by TMS, its mortgagees, holders of security interest, tenants, lessees, sub-lessees, grantees, employees, agents, licensees, visitors and invitees for any purpose, including general unrestricted access to the TMS Property. TMS may, at TMS's sole discretion, pave the road constructed on the Easement Property (the "Road"), widen it and move it to another location on the TMS Property so long as access is still provided to the Trust Property to the satisfaction of Washoe County and the Nevada Division of Forestry. TMS may, at TMS's sole discretion, relocate the roadway and utilities, if so placed within the Easement Property, with the consent of the Trust which consent will not be unreasonably withheld. The Trust agrees to provide TMS with no less than sixty days notice prior to the placement of any utilities within the Easement Property. The Trust agrees to withhold any and all objections to TMS tying into utilities placed within the Easement Property. TMS agrees to fund its proportionate share of the utility construction cost if TMS ties into the utilities placed within the Easement Property.

C. Road Design: Bridges. The Road shall be constructed at the expense of the Trust and/or the County of Washoe and under no circumstances at the expense of TMS. The Road design, method of construction, any bridges constructed thereon, culverts and all other matters in connection with the design and construction of the Road on the Easement Property must comply with all ordinances and requirements of all governmental agencies for such a road and must be approved by TMS, which approval shall not be unreasonably withheld.

D. Maintenance. The Trust shall maintain the Road at all times, all culverts and bridges constructed thereon or associated therewith and all slopes and shall grade the Road, keep it free of debris and vegetation and keep it passable at all times as shall be reasonably required and approved by TMS and in conformance with all regulations of Washoe County.

E. Easement Runs With The Land. The easement granted hereby shall run with the land, benefit the Trust Property, burden the TMS Property and shall bind and inure to the benefit of the respective heirs, executors, administrators, successors and assigns of both TMS and the Trust in ownership of their respective properties described herein. Neither the benefits nor the burdens of the easement granted hereby shall run with any other land or to the benefit of any other entity or person whatsoever. No other person or entity is intended to nor shall any such person or entity be the beneficiary of any provision of this document.

F. Indemnity. The Trust shall indemnify and hold TMS harmless from any liability, claims, causes of action, damages or costs, including attorneys fees, which TMS may incur in connection with or relative to the easement granted hereby and to the

BK4114PG0119

construction, use and maintenance of the Road, arising from any act or failure to act, except the intentional act, failure to act or negligence of TMS. The Trust shall protect, indemnify and hold harmless TMS, its partners, officers, agents, employees, attorneys, successors and assigns from and against any loss, damage, claim, expense or liability (including attorneys fees) directly or indirectly arising out of or attributable to the use, presence, generation, production, release, discharge or disposal of a hazardous substance (as defined in any statute, ordinance or governmental regulation) on or about the Easement Property caused in any way by the Trust or its successors and assigns or anyone using the Easement Property granted hereby, or any replacement thereof, for access to the Trust Property.

G. Prior Agreements. This Easement supersedes any and all prior understandings and agreements between TMS and the Trust of any kind whatsoever, including but not limited to the agreement of July 1, 1980 described in recital 1 above, and shall be deemed to be in complete satisfaction of and in complete compliance with all such agreements and understandings.

H. Attorneys Fees. Either party may enforce this instrument by appropriate action and the prevailing party shall be entitled to recover costs, including reasonable attorneys fees.

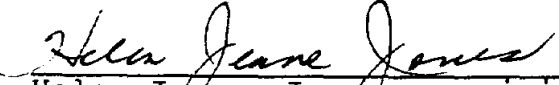

I. Law. This Easement shall be governed by Nevada law.

**Subject: Southwest Pointe**

Dear Kristine and Don:

Attached is my memorandum about the site plan for Southwest Pointe. The content of the site plan was discussed and agreed upon at our meeting on February 1. If I have misunderstood your intent on any items, please contact me immediately. If I do not hear from you, I will assume that you agree with the items listed on the attached pages.

Sincerely,

Brita Tryggvi, AICP

# SITE PLAN

a & b **Name of project - Ok**

**Boundary - Ok**

**Vicinity map - Ok**

**Date, north arrow, scale - Ok**

**Name & address of owner, developer, planner - Ok**

**Seal of engineer - Ok**

How would this be shown? (1) Listed on the site plan.

c. **Existing topography at 2-foot contour intervals -** Because of the slope across the property, we propose to show existing topography at 5-foot contour intervals.

How would this be shown? (1) On the site plan.

**Proposed topography @ 2-foot contour intervals -** We are suggesting that proposed topography not be shown because we are not preparing a grading plan and, therefore, we do not know the proposed topography.

**100-year floodplain -** This information is available from FEMA.

How would this be shown? (1) On the site plan.

**Base flood elevations -** Not applicable, FEMA has not identified base flood elevations for this area.

**Identify areas w/in site and w/in 50 feet of perimeter where ground removal or filling is required -** The limits of grading can be shown.

How would this be shown? (1) A line on the site plan will identify the limits of grading., (2) Edge conditions will be shown on the site plan, (3) Text in Design Guidelines describing how slopes will be treated.

Note: It was agreed that the tentative map will be prepared with 5-foot contours at a scale of 1" = 100'.

d. **Regulatory zone boundaries within 500 feet of perimeter of site -** The land use designations from the Area Plan will be mapped.

How would this be shown? (1) On an 8.5" x 11" or 11" x 17" base map.

- e. **Location and use of structures within 300 feet of perimeter of site** - This information is available on the topo prepared by NAM.  
How would this be shown? (1) On the 1" = 500" site plan.
- f. **Existing lot lines, easements, and R.O.W. on site and w/in 500 feet of perimeter** - Existing lot lines, major easements and R.O.W. on the site can be mapped. Off the site, existing lot lines, dedicated R.O.W. and major easements (e.g., overhead power lines) can be shown.  
How would this be shown? (1) On the site plan but the site plan.
- g. **Traffic flow patterns, entrances and exits, emergency access** - The proposed street system will be shown. Proposed emergency access routes will also be shown.  
How would this be shown? (1) On the 1" = 500' site plan.  
**Loading and unloading areas** - Not applicable  
**Curbs cuts** - Not applicable
- h. **Location of all present & proposed public & private streets** - The proposed street system will be mapped. Streets will be labeled either public or private.  
How would this be shown? (1) On the site plan.  
**Parking areas** - Only two parking areas are proposed -- at the clubhouse and at the neighborhood commercial center. Conceptual site plans of these two uses will be prepared.  
How would this be shown? (1) In the Design Guidelines, on 8.5" x 11" drawings. Could be used in conjunction with the drawing required for Item #k.  
**Driveways, ramps, curbs** - Not applicable  
**Walls and fences** - Walls and fences (e.g., materials, height) can be addressed in the Design Guidelines.  
How would this be shown? (1) Text and 8.5" x 11" drawings in the Design Guidelines.  
**Bicycle and pedestrian ways** - Street sections are presented which identify which streets will have paths. Condition #23 requires a schematic pedestrian circulation plan prior to approval of the final development agreement.

How would this be shown? (1) Text and 8.5" x 11" drawings in the Design Guidelines. (2) A schematic pedestrian circulation plan will be shown on the site plan or, if the site plan is too crowded, on a separate 1" = 500" drawing.

**Landscaping** - Landscaping along streets and common areas can be addressed in the Design Guidelines.

How would this be shown? (1) Text and 8.5" x 11" drawings in the Design Guidelines.

- i. **Proposed land uses** - The overall site plan will distinguish between open space, common area, golf course, residential, and non-residential uses. Approximate acreage and density can be identified.

How would this be shown? (1) An 11" x 17" copy of the site plan will be printed in color so that the different land uses can be shown. Acreage and density will be listed in a chart or, if there is no room, in an accompanying table.

- j. **Approximate arrangement of individual lots** - This can be shown on the site plan.

How would this be shown? (1) On the site plan, which will be at a scale of 1" = 500'.

- k. **Approximate location and arrangement of all structures or outlines of areas within which buildings or structures may be located** -- We would do the latter of these two options. Residential structures will not be shown; rather, we will show the outline of areas within which the clubhouse, neighborhood commercial center, water tanks, well houses, guardhouse, and maintenance buildings will be located.

How would this be shown? (1) We would show the outline of these buildings on the site plan. This information could be combined with the drawing required for Item #h, parking areas.

- l. **Preliminary elevations and/or perspective drawings of all typical proposed buildings or other structures, including maximum heights and floor areas** -- Residential structures will not be shown. We will show elevations or perspective drawings of the clubhouse,

neighborhood commercial center, water tanks, well houses, guardhouse, and maintenance buildings.

How would this be shown? (1) 8.5" x 11" or 11" x 17" drawings in the Design Guidelines. (2) Text in the Design Guidelines.

- m. **General landscaping plan** -- This could be addressed in the Design Guidelines. We would show typical landscaping along roads, at entrances to neighborhoods, in common areas, and around the clubhouse and neighborhood commercial center.

How would this be shown? (1) Text and 8.5" x 11" drawings in the Design Guidelines.

- n. **General grading plan** -- Covered by item C.

Project No. 88-003.20  
February 7, 1996

RECEIVED  
FEB 12 1996  
WASHOE COUNTY  
DEVELOPMENT REVIEW

Mr. Don Young, Planner  
Department of Development Review  
P. O. Box 11130  
Reno, NV 89520

**Subject: Southwest Pointe**

Dear Don:

At our meeting on February 1, we discussed several clarifications and modifications to the Conditions of Approval for Southwest Pointe (Case No. DA9-1-93). Those changes are summarized below. Deletions are ~~struck thru~~ and additions are in *italic*.

- 2. As part of every tentative map and special use permit application, the developer shall include a "statement of compliance" that demonstrates how the development application is consistent with the recorded final development agreement. The "statement of compliance" format shall be made a part of the final development agreement. ~~For the Phase I applications, including the tentative map, special use permit and administrative waiver, a "draft statement of compliance" shall be provided to staff prior to the public hearing. When the final development agreement is approved, a revised statement of compliance for the Phase I tentative map and special use permit applications shall be submitted to Department of Development Review staff.~~

**Reason for Modification:** The final development agreement will be recorded this spring; therefore, there is no reason to prepare a draft statement of compliance because the Phase I applications will not be submitted before the final development agreement is approved.

- 4. Conditions, covenants, and restrictions (CC&Rs) shall be reviewed and approved by the District Attorney's office and the development review

Samuel Chacón, P.E.  
President

Bryan Sprague, P.E.  
Vice President

Brita Tryggvi, A.I.C.P.  
Principal

Greg Doerr, A.I.C.P.  
Principal

staff prior to final map approval. Washoe County shall be made a party to the applicable provisions of the CC&Rs to the satisfaction of the District Attorney's office. . .

**Reason for Modification:**To clarify when the CC&Rs must be prepared.

- ~~12. The project shall be developed in three phases. Phase I includes a tentative map for 436 lots, an 18-hole golf course, the village center, and driving range. Phase II will include an additional nine holes, the equestrian center and a tentative map for approximately 220 dwelling units. Phase III includes the remaining 434 lots and the last nine holes of golf. Modifications to the proposed phasing plan may be made if mutually agreeable to the developer and Washoe County. These modifications may include the commercial portion of the project and the second 18-hole golf course, which may be constructed during Phase II or Phase III.~~

**Reason for Modification:** This condition is unnecessary because the previous condition states that the contents of the final development agreement must conform to the provisions of Article 814. Section 110.814.75 states that the final development agreement must include a development schedule that indicates the phases in which the land subject to the development agreement will be built and the approximate dates for the completion of each phase.

14. The developer shall provide the Department of Development Review staff with a ~~monthly~~ *quarterly* report indicating ~~the number of building permits activity issued~~, once residential construction has started.

Reason for Modification: Monthly is too frequent, and quarterly should be often enough. The scope of the report was broadened to include all building activity (e.g., golf course, infrastructure) rather than simply an inventory of building permits.

20. Prior to final approval of the development agreement, the developer for Southwest Pointe shall petition the Washoe County Board of County

Commissioners to create a Special Assessment District for the purpose of financing the construction of Whites Creek Lane from the project site to Wedge Parkway and other roads as defined in the SAD agreement. In the event that a special assessment district is not created, the developer shall construct Whites Creek Lane, as outlined in Condition No. 16 and 18, from the project site to Wedge Parkway, to the satisfaction of the County Engineer.

~~Unless substituted by Washoe County Board of County Commissioner action, each final map shall contain the following not to the satisfaction of the Development Review staff.~~

#### NOTE

~~An off-site road construction fee is applicable to all parcels created by this map. Any applicant for a permit to construct or otherwise use this land shall either (1) enter into an agreement with Washoe County requiring financial assurances and approval by the District Attorney's Office, to pay the future off-site road impact fee upon its adoption or (2) pay any interim fee imposed by Washoe County, be released from the responsibility of the future impact fee, and be eligible for a refund should the future impact fee charge be less than the interim fee. All options to pay existing interim fees expire upon the subsequent adoption of a replacement interim fee or an impact fee.~~

**Reason for Modification:** The county has approved the Regional Road Impact Fee, which goes into effect this month. As a result, the second half of this condition is no longer necessary.

26. The following roadway sections shall be applicable to the private on-site streets shown on the tentative map. A traffic report shall be submitted prior to approval of the first final map which identifies the ultimate average daily traffic on each street.
  - d. Private - 60 foot ROW collector street (2000 ADT to 8000 ADT): minimum 36-foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides

(developer's discretion); no parking permitted on both sides. A minimum ~~five (5)~~ *four (4)* foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. No residential driveway access will be allowed.

- e. ~~Public - 60 foot ROW collector street (2000 ADT to 9600 ADT): minimum 36 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides; parking prohibited both sides; minimum four (4) foot meandering asphalt path one side, residential driveway access not allowed. Where proposed, center medians shall be limited to a minimum of 11 feet from curb face to curb face.~~
  
- f. *Public Private - 80 foot ROW minor arterial collector street (up to 9600 ADT to 10,830 ADT): A minimum 11 foot center median from curb face to curb face, 29.5 20 foot roadway section curb face to curb face on either side of the median; curb and gutter on both sides; no parking either side; a minimum four (4) foot meandering asphalt path both sides; no residential driveway access allowed.*
  
- g. *Public - 100 foot ROW major-minor arterial street (more than up to 10,800 ADT): A minimum 20 foot center median from curb face to curb face, 29.5 foot roadway section curb face to curb face on either side of the median; curb and gutter on both sides; no parking either side; a six (6) foot concrete sidewalk both sides.*

**Reason for Modification:** To be consistent with Washoe County Street Design Standards, to create a hierarchy of paths, and to change some of the public streets to private streets.

- 33. All-weather emergency access roads shall be constructed at the end of all cul-de-sacs that are longer than ~~500~~ *1,500* feet to the satisfaction of the County Engineer and the applicable fire protection agency. These roads shall have a 30-foot access easement with a minimum 20-foot width of ~~6 inches of Type 2 Class B aggregate base. 2.5 inches of asphalt concrete~~

*pavement on an engineered gravel base.* The roads shall be controlled by emergency access gates and shall be posted with signs stating "For emergency Vehicles Only" to the satisfaction of the applicable fire protection agency and the County Engineer.

**Reason for Modification:** The county has adopted new standards for emergency access roads since this project was approved. The proposed change is consistent with the new standards.

34. Prior to final map approval, the developer shall provide all weather emergency access easements and road improvements at the locations shown on the tentative map, terminating at public or privately maintained streets, to the satisfaction of the County Engineer. ~~The emergency access road shall be constructed within a 30 foot access easement to a minimum 20 foot width with 4 inches of Type 2 Class B aggregate base.~~

**Reason for Modification:** The last sentence repeats Condition #33.

40. Off-site parking areas shall be provided within ~~300~~ 500 feet of homes that have 12,000 square foot *and 0.5 acre* lot sizes. One space shall be provided for every three homes. Parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the tentative map(s), to the satisfaction of Washoe County Department of Development Review and the Developer.

**Reason for Modification:** To avoid having a multitude of guest parking areas with 1 or 2 spaces, the spacing requirement was increased to 500 feet so that the guest parking areas will consist of 4 or 5 spaces. Guest parking areas will be added to the neighborhoods with 0.5 acre lots because on-street parking will be prohibited on the private streets and the front yard setback can be reduced with side-entry and detached garages.

43. Regulatory signs must be installed at the juncture of all public streets with a private street *and at intersections along the primary loop road* to the satisfaction of the County Engineer. Said sign shall state: "Private street not maintained by county." All regulatory signs shall meet the Manual of Uniform Traffic Control Device standards.

**Reason for Modification:** Since there is only one location where a public street intersects with a private street (i.e., at the main project entrance), there would only be one sign. The county staff wants signs at additional locations and, therefore, the suggested wording to add "at intersections along the primary loop road."

51. The off-stream detention/debris basin recommended in the 1990 Kennedy/Jenks/Chilton report shall be reserved based on the following timetable:
  - a. Washoe County will have three years to obtain the necessary permits for construction of the off-stream detention basin. This three years shall commence upon the approval of the final development agreement. If Washoe County fails to obtain the necessary permits, the property for the detention site shall be offered by the applicant or his successors, for dedication to the Washoe County School District for a middle school, ~~the Washoe County Parks and Recreation Department for a neighborhood park~~, or revert to open space.
  - b. If Washoe County does obtain the necessary permits within three years, construction of the project shall commence within 5 years of the approval of the final development agreement. If construction is not started by that date, the property for the detention site shall be offered by the applicant or his successors, for dedication to the Washoe County School District for a middle school, ~~the Washoe County Parks and Recreation Department for a neighborhood park~~, or revert to open space.
  - c. If an alternative solution or site becomes available for flood control, this property will immediately become available for dedication to the Washoe County School District for a middle school, ~~the Washoe County Parks and Recreation Department for a neighborhood park~~, or revert to open space.
  - d. If the detention basin is constructed, Washoe County shall pay fair market value for the property.

**Reason for Modification:** We have been working with Karen Mullens, Washoe County Parks and Recreation Department, to identify a neighborhood park that is not adjacent to the school. The preferred location is adjacent to Thomas Creek on the south side of Whites Creek Lane.

- ~~79. The project shall be designed to accommodate a gravity flow sanitary sewer system within the boundaries of the subdivision. Such design shall be to the satisfaction of the Utility Division.~~

**Reason for Modification:** According to Terri Svetich, Washoe County Utility Division, this is not a Utility Division condition and can be deleted.

- ~~90. Should the proposed "off stream" location for the flood detention facility proposed in the 1990 Kennedy/Jenks report not be dedicated for this purpose, a minimum ten acre site for an elementary and a minimum 25 acre site for a middle school shall be offered for dedication. If the "off-stream" flood control facility is dedicated to Washoe County, a 10-acre site for the elementary school shall be offered for dedication. If the area for the "off-stream" facility is dedicated, but the county has not complied with Condition No. 51, the use for the area shall revert back to a school site and/or a park site(if requested by Washoe County) as proposed by the developer. If a school or park site is not requested by Washoe County, this area shall remain as an open space buffer.~~

**Reason for Modification:** The special use permit for the elementary school has already been approved. The elementary school will be located on a 17-acre parcel on the north side of Whites Creek Lane. This elementary school site is not impacted by the flood control facility. A neighborhood park site has also been proposed on the south side of Whites Creek Lane.

92. A minimum one-acre site shall be offered for dedication *prior to approval of a final map*, if requested by the applicable fire protection agency, for a fire station. The developer shall enter into talks with the applicable fire protection agency for any other requirements, such as, a fire station site,

manpower and equipment needs, or for coordination with other developments that have similar requirements.

**Reason for Modification:** To clarify when the fire station site must be dedicated.

95. ~~Unless the off-stream site is dedicated to the county, A minimum 10-acre public park site shall be offered for dedication to the county. A sketch plan has been submitted, which if conceptually approved by the county,~~ should be included in the final development agreement. The final park design shall be mutually agreeable to the county and the developer. The developer will construct the recreation facilities in the park and then be reimbursed for the cost of the construction from the Residential Construction Tax. The responsibility of park maintenance shall be negotiated by the developer and Washoe County prior to the approval of the final development agreement.

**Reason for Modification:** The park site has nothing to do with the off-stream detention facility, therefore, this reference is inaccurate. The sketch plan that is referred to in this condition has been changed and the park site has been moved, therefore, this reference is also inaccurate.

97. Prior to approval of the final development agreement, the developer shall submit ~~schematic landscaping and architectural design guidelines~~ *a Development Standards Handbook* for the entire project to the Design Review Committee for its review and approval. These guidelines shall address, but not be limited to, type and color of building material, general architectural design, fencing, landscaping material (if plant material: type, size at time of planting, maturation size at full growth, period of time between planting and full growth), landscaping location, landscaping irrigation system, and financial assurances that landscaping will be planted and maintained.

**Reason for Modification:** To make the wording consistent with Article 814, Development Agreements.

~~99. Homes located on 12,000 square foot lots shall have a minimum 160 square foot storage space added in their garages, if only one garage space is provided.~~

**Reason for Modification:** No homes will be constructed with one garage space.

In addition to the conditions of approval pertaining to the development agreement, there are also conditions for the tentative map, final map, and special use permits. Since these latter three applications were never presented to the Planning Commission or the Board of County Commissioners, the reason for these conditions is unclear. As we discussed earlier today, we will meet on February 12 to go through these remaining conditions.

Sincerely,

A handwritten signature in black ink, appearing to read "Brita", with a large, stylized initial "B" that loops around the start of the name.

Brita Tryggvi, AICP  
Principal

2/1/96

# SITE PLAN 1:500 OK

- a & b Name of project - Ok
- Boundary - Ok
- Vicinity map - Ok
- Date, north arrow, scale - Ok
- Name & address of owner, developer, planner - Ok
- Seal of engineer - Ok

How would this be shown? (1) Listed on the site plan.

- c. Existing topography at 2-foot contour intervals - Because of the slope across the property, we propose to show existing topography at 5-foot contour intervals. OK

How would this be shown? (1) On the site plan.

**Proposed topography @ 2-foot contour intervals** - We are suggesting that proposed topography not be shown because we are not preparing a grading plan and, therefore, we do not know the proposed topography.

**100-year floodplain** - This information is available from FEMA.

How would this be shown? (1) On the site plan. OK

**Base flood elevations** - Not applicable, FEMA has not identified base flood elevations for this area. OK

**Identify areas w/in site and w/in 50 feet of perimeter where ground removal or filling is required** - The limits of grading can be shown.

How would this be shown? (1) A line on the site plan will identify the limits of grading.

TMG WILL BE  
1:100 AT 5' INTERVALS  
WITH LARGER SCALE  
COMPOSITE

- ① limits of grading
  - ② Visual impacts of edge treatments
  - ③ Slope treatments & standards.
- TM will be code

- d. Regulatory zone boundaries within 500 feet of perimeter of site - The land use designations from the Area Plan will be mapped. OK

How would this be shown? (1) On an 8.5" x 11" or 11" x 17" base map.

- e. Location and use of structures within 300 feet of perimeter of site - This information is available on the topo prepared by NAM.

How would this be shown? (1) On the 1" = 500" site plan.

OK

- f. Existing lot lines, easements, and R.O.W. on site and w/in 500 feet of perimeter - Existing lot lines, <sup>major</sup> easements and R.O.W. on the site can be mapped. Off the site, existing lot lines, dedicated R.O.W. and major easements (e.g., overhead power lines) can be shown.

*On site plan (geometrics)* How would this be shown? (1) This may be shown on the site plan but the site plan may be too cluttered. In the original application, this information was shown on an 11" x 17" map and we would probably use a similar 11" x 17" map.

- g. Traffic flow patterns, entrances and exits, emergency access - The proposed street system will be shown. Proposed emergency access routes will also be shown.

How would this be shown? (1) On the 1" = 500' site plan.

*N/A* Loading and unloading areas - Not applicable

*N/A* Curb cuts - Not applicable

- h. Location of all present & proposed public & private streets - The proposed street system will be mapped. Streets will be labeled either public or private.

How would this be shown? (1) On the site plan.

Parking areas - Only two parking areas are proposed - at the clubhouse and at the neighborhood commercial center. Conceptual site plans of these two uses will be prepared.

How would this be shown? (1) In the Design Guidelines, on 8.5" x 11" drawings. Could be used in conjunction with the drawing required for Item #k.

*N/A* Driveways, ramps, curbs - Not applicable

Walls and fences - Walls and fences (e.g., materials, height) can be addressed in the Design Guidelines.

How would this be shown? (1) Text and 8.5" x 11" drawings in the Design Guidelines.

Bicycle and pedestrian ways - Street sections are presented which identify which streets will have paths. Condition #23 requires a schematic pedestrian circulation plan prior to approval of the final development agreement.

*OK*

*It will be proposed at 500 for 1/2 acre lots*

*Will add to Design Guidelines*

How would this be shown? (1) Text and 8.5" x 11" drawings in the Design Guidelines. (2) A schematic pedestrian circulation plan will be shown on the site plan or, if the site plan is too crowded, on a separate 1" = 500" drawing.

OK **Landscaping** - Landscaping along streets and common areas can be addressed in the Design Guidelines.

How would this be shown? (1) Text and 8.5" x 11" drawings in the Design Guidelines.

i. **Proposed land uses** - The overall site plan will distinguish between open space, common area, golf course, residential, and non-residential uses. Approximate acreage and density can be identified.

OK

11x17  
Color

How would this be shown? (1) The site plan will be printed in color so that the different land uses can be shown. Acreage and density will be listed in a chart on the site plan or, if there is no room on the site plan, in a table accompanying the site plan.

j. **Approximate arrangement of individual lots** - This can be shown on the site plan.

OK

How would this be shown? (1) On the site plan, which will be at a scale of 1" = 500'.

k. **Approximate location and arrangement of all structures or outlines of areas within which buildings or structures may be located** -- We would do the latter of these two options. According to Don Young, residential structures do not need to be shown; rather, we would show the outline of areas within which the clubhouse, neighborhood commercial center, water tanks, and well houses would be located.

OK

How would this be shown? (1) We would show the outline of the clubhouse, neighborhood commercial center, water tanks, and well houses on the site plan. Could also be combined with the drawing required for Item #h, parking areas. *Guard house*  
*main Bldgs for GC, life stations*

l. **Preliminary elevations and/or perspective drawings of all typical proposed buildings or other structures, including maximum heights and floor areas** -- According to Don Young, residential structures do

OK

not need to be shown. We would show elevations or perspective drawings of the clubhouse, neighborhood commercial center, water tanks, and well houses. *↳ other*

How would this be shown? (1) 8.5" x 11" or 11" x 17" drawings in the Design Guidelines. (2) Text in the Design Guidelines.

- OK*
- m. **General landscaping plan** -- This could be addressed in the Design Guidelines. We would show typical landscaping along roads, at entrances to neighborhoods, in common areas, and around the clubhouse and neighborhood commercial center.

How would this be shown? (1) Text and 8.5" x 11" drawings in the Design Guidelines.

- n. **General grading plan** -- We could add standards for grading in the Design Guidelines. We could also show how a typical neighborhood and a typical lot would be graded.

*Covered by C.*

How would this be shown? (1) Text in Design Guidelines. (2) 8.5" x 11" or 11" x 17" drawing of typical neighborhood grading using a neighborhood with 12,000 square foot lots and one-acre lots as examples. (3) 8.5" x 11" drawing of typical lot grading.

**Washoe County  
Development Agreement with  
Southwest Pointe**

**Cross Reference with Conditions of Approval  
by Condition Number**

The purpose of this report is to identify the locations where all the conditions of approval are referred to or clarified within the Development Agreement. The report is organized in order of the conditions of approval and all references are to the Development Agreement.

Note that the order issued February 8, 1994 which sets forth the conditions of approval of Development Agreement Case No. DA9-1-93 and the amendment of those conditions of approval dated November 8, 1994 are incorporated by reference into the Development Agreement by language in Article 4.

1/25/96

## Washoe County Development Agreement with Southwest Pointe

Condition #	Description	Reference
1	Standards	Generally in Article 4
2	Stmnt of Compliance	Format included in Exhibit J-may be changed to separate tab Balance of condition is incorporated by reference through Article 4
3	15 Year Term	Article 12 with extensions available through Section 10.3
4	CC&R's	Incorporated by reference through Article 4 As interpreted by County, condition is required prior to first final map
5	Archeological Survey	Incorporated by reference through Article 4
6	GID/Ass. District	Incorporated by reference through Article 4
7	Underground Utility	Incorporated by reference through Article 4
8	US Postal Service	Incorporated by reference through Article 4
9	Notice of Sale	Incorporated by reference through Article 4
10	D.A. approval	Section 1.7 and signature block
11	Dev. Agree submittal	Submitted 11/27/95 which is within the extended time frame
12	Phasing Schedule	Exhibit K
13	Final Map Submission	Section 10.2 and 10.3
14	Monthly Reporting	Incorporated by reference through Article 4
15	Transportation Basis	Incorporated by reference through Article 4
16	Whites Creek - Ph 1	Section 4.5.2
17	Emergency Access	Section 4.5.2
18	Whites Creek - Ph 2	Section 4.5.1 & 4.5.2
19	ROW - Forest Service	Exhibit J
20	SAD petition	Exhibit J
21	Const. Haul Route Plan	Exhibit J
22	Street Main. Program	Exhibit J
23	Pedestrian Plan	Exhibit J
24	Road Grades	Incorporated by reference through Article 4
25	Street Design/Const.	Incorporated by reference through Article 4
26	Street sections	Incorporated by reference through Article 4

1/25/96

<b>Condition #</b>	<b>Description</b>	<b>Reference</b>
27	Landscape Medians	Incorporated by reference through Article 4
28	Asphalt Paths	Incorporated by reference through Article 4

Dear Don:

Enclosed is a binder containing the first draft of the Development Agreement and Exhibits. Note that the Exhibits which require our engineer's assistance have not been included. We will get you those Exhibits by separate cover.

I have included a binder so that as we refine the agreement, I can forward updates to you for substitution in the binder. At any time during the process, we should all have the same documents.

We look forward to working with you and to bringing this agreement to finalization.

Sincerely,

Rick Gardner

WASHOE COUNTY  
DEVELOPMENT REVIEW

Dear Don:

Enclosed is a copy of the Development Agreement for Genoa Lakes North as promised in our meeting yesterday. You may want to hold off sending a copy to the District Attorney's office because the form I will give you on the 27th will be much better organized.

Sincerely,

  
Rick Gardner

Message: 0955 - SW Pointe - RP has been informed by their inventory with the sites that were recorded for this project. The problems may be substantial and may result in changes to their review of the consultant's findings. A # of sites were previously recorded by someone else but were not documented that way. Several of the sites that were determined not significant are actually within the boundaries of one of the significant sites. All this may change how SHPO would review this. Additional work will likely be required before a treatment plan can be reviewed. Consultant is apparently working on treatment plan and research design now, but these items need to be cleared up.

1455 6/26/95

SHPO cannot review any treatment plan. Kauty missed about 5 of ~~the~~ 10 previously identified sites. 5 of the new sites he had identified should actually been included within a larger site that had somehow been reduced in size.

2 Options

1. Produce an addendum identifying the sites & modifying boundary of large site.
2. Submit new document that includes amendments & incorporates a treatment plan.

I told RP that I would contact BK & inform him of the problems.

RE: Southwest Pointe Elementary School

Dear Cheryl;

We have completed the analysis for the Southwest Pointe Elementary School per our agreement. The analysis includes trip generation, distribution, and assignment calculations, capacity analysis of the Whites Creek Lane intersections with Thomas Creek Road and the school access, and design recommendations regarding the Whites Creek Lane/Thomas Creek Road intersection.

The trip generation for the proposed school was calculated based on trip generation rates obtained from the Fifth Edition of "TTE Trip Generation" for Land Use 520: Elementary School. The trip generation was calculated based on a school capacity of 600 students. The elementary school will generate 654 average daily trips with 180 trips occurring during the AM peak hour, 150 trips occurring during the afternoon PM peak hour, and only 6 trips occurring during the evening PM peak hour.

The ultimate distribution of project traffic was estimated based on the number and location of homes approved in the southwest area. It is estimated that 25% of the project trips will approach the school from the Southwest Pointe development to the west with the remaining 75% approaching on Whites Creek Lane from the east. The breakdown of the 75% from the east includes 30% on Thomas Creek Road from the north, 20% on Thomas Creek Road from the south, and 25% from the east on Whites Creek Lane. The project trips were then assigned to the Whites Creek Lane intersections with Thomas Creek Road and the project access roadway.

Ultimate Peak hour traffic volumes at the Whites Creek Lane intersections with Thomas Creek Road and the project access were projected in order to perform traffic capacity analysis. The ultimate traffic volumes were estimated based on full buildout of adjacent developments. Afternoon PM peak hour traffic volumes, corresponding to the afternoon peak hour of the school, were estimated from historical residential traffic count data. The historical traffic count data indicates that traffic volumes occurring during the peak hour between 2:00 and 4:00 PM are approximately equal to 60% of the traffic volumes occurring during the peak hour between 4:00 and 6:00 PM. The attached Figures 1 through 3 show the ultimate background and background plus project traffic volumes for the AM, afternoon, and PM peak hours, respectively.

The Whites Creek Lane intersections with Thomas Creek Road and the project access were subsequently analyzed for capacity based on the ultimate peak hour traffic volumes. The Whites Creek Lane/Project Access intersection was analyzed as an unsignalized "T" intersection. The analysis was performed with a single lane at the north approach and two lanes at each Whites Creek Lane approach. The intersection critical movements operate at level of service D or better during the AM, afternoon, and PM peak hours for the background plus project traffic volumes.

The Whites Creek Lane/Thomas Creek Road intersection was analyzed as an unsignalized intersection with stop sign control on the north and south Thomas Creek Road approaches. The analysis was performed using two lanes at the Whites Creek Lane approaches and single lanes at the Thomas Creek Road approaches. For the ultimate background traffic volumes the intersection critical movements operate at level of service D or better with the exception of the northbound left turn movement during the AM peak hour which operates at level of service E and the north and southbound left turn movements during the PM peak hour which operate at level of service F and E, respectively. With the addition of the project traffic the intersection critical movements generally remain at the same level of service with the exception of the southbound left turn movement during the AM peak hour which drops to level of service E.

Traffic signal warrant #11 as presented in the Manual on Uniform Traffic Control Devices (MUTCD) was reviewed for peak hour volumes at the Whites Creek Lane/Thomas Creek Road intersection. The warrant is satisfied during the PM peak hour for the ultimate background plus project traffic volumes. The Whites Creek Lane/Thomas Creek Road intersection was subsequently analyzed for capacity as a signalized intersection. The analysis was performed with exclusive left turn lanes at all approaches. The intersection operates at level of service B with delay times of less than 10 seconds during the AM, afternoon, and PM peak hours.

The Whites Creek Lane/Thomas Creek Road intersection was further analyzed for design elements which include a review of sight distance, travel speeds, median conflicts, and intersection spacing. The speed limit on Thomas Creek Road is currently posted at 25 miles per hour. The design 25 mile per hour posted speed limit appears to be somewhat aggressive after actually driving the road.

The stopping sight distance at the Thomas Creek Road/Whites Creek Lane intersection was reviewed based on AASHTO's "A Policy on Geometric Design of Highways and Streets". The stopping sight distance on Thomas Creek Road is 150 feet based on the existing 25 mile per hour speed limit and 225 feet to 250 feet based on an estimated design speed of 35 miles per hour. Field measurements indicate that with the construction of Thomas Creek Lane approximately 160 feet of stopping sight distance will be available at the south leg of the intersection and approximately 325 feet of stopping sight distance will be available at the north leg of the intersection. Adequate sight distance will exist on Thomas Creek Road north of the intersection with Whites Creek Lane based on a 35 mile per hour design speed. However, the sight distance on Thomas Creek Road south of the intersection with Whites Creek Lane will not be adequate based on the 35 mile per hour design speed due to landscaping in the existing center median.

The project site plan indicates that Whites Creek Lane will intersect Thomas Creek Road approximately 200 feet (centerline to centerline) south of the existing Thomas Creek Road/Fieldcreek Lane "T" intersection. The limited spacing between these two intersections may ultimately lead to queuing conflicts. Initially, queuing conflicts will not exist with Phase I Whites Creek Lane construction from Thomas Creek Road to the school. However, the construction of the easterly section of Whites Creek Lane may impact the operation of the Thomas Creek Road/Fieldcreek Lane intersection with the southbound left turning vehicles at the Thomas Creek Road/Whites Creek Lane intersection blocking the Fieldcreek Lane intersection, preventing the left turn egress movement. Three alternates were reviewed regarding this potential queuing conflict. The first alternate includes constructing a cul-de-sac on Fieldcreek Lane, preventing direct access onto Thomas Creek Road. The second alternate includes constructing a raised center median on Thomas Creek Road, prohibiting left turn movements at Fieldcreek Lane. Alternates 1 and 2 will require some Fieldcreek residences to use other means of access. Alternate 3 includes allowing the Thomas Creek Road/Fieldcreek Lane intersection to remain fully operational as it exists now. Left turn storage requirements were reviewed at the Whites Creek Lane/Thomas Creek Road intersection for the southbound left turn movement. Less than 50 feet of left turn storage length is required for the southbound left turn movement at the Whites Creek Lane/Thomas Creek Road intersection based on ultimate traffic volumes and signalized control. The site plan indicates that approximately 125 feet of storage length is available.

In summary, the construction of Phase I Whites Creek Lane (half-street) from Thomas Creek Road to the school will adequately serve project traffic with minor impact on the Thomas Creek Road/Fieldcreek Lane intersection. It is recommended that the Thomas Creek Road/Whites Creek Lane "T" intersection initially operate with stop sign control on the Whites Creek Lane approach. It is recommended that landscaping in the existing center median island on Thomas Creek Road south of Whites Creek Lane be removed or altered in order to allow a minimum of 250 feet of unobstructed sight distance. Ultimate construction of Whites Creek Lane from its existing easterly stub to Southwest Pointe will impact the Thomas Creek Road/Fieldcreek Lane intersection. It is recommended that the Thomas Creek Road/Whites Creek Lane intersection operate with stop sign control on the Thomas Creek Road approaches. It is recommended that a raised center median be constructed on the Thomas Creek Road from Whites Creek Lane north past Fieldcreek Lane in order to prohibit left turn ingress and egress movements from Fieldcreek Lane. It is recommended that, due to the modifications of Fieldcreek Lane, full movement access from the Fieldcreek subdivision be designed on Whites Creek Lane south of Thomas Creek Road to allow Fieldcreek residents an alternate means of access.

RE: AMENDMENT TO DEVELOPMENT AGREEMENT CASE NO. DA9-1-93 (SOUTHWEST POINTE)

You are hereby notified that an application for an amendment to a development agreement has been filed with the Washoe County Planning Commission.

This application requests permission to amend the development agreement that facilitates the development of a residential community including 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities, a day care facility, an equestrian center and a commercial village center. The amendment allows the applicant to modify portions of the agreement pertaining to streets, access, drainage, parks and other portions. The total acreage of the project is +3,171.6 acres. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) in the Southwest Truckee Meadows Area Plan and is situated in portions of Sections 3, 10, 13, 14, 15, 22, 23, 24, 26 and 27, T18N, R19E, MDM, Washoe County, Nevada. (APN: 49-010-04, 49-010-10 and 49-030-12)

A public hearing will be held before the Washoe County Planning Commission, in the Commission Chambers, 1001 East Ninth Street, Reno, Nevada, on May 7, 1996, at 7:00 p.m., or as soon thereafter as may be practicable. As an owner of property in the vicinity, you are invited to present testimony relative to this application.

RE: AMENDMENT TO DEVELOPMENT AGREEMENT CASE NO. DA9-1-93 (SOUTHWEST POINTE/DINGMAN INVESTMENTS)

Dear Property Owner:

You are hereby notified that an application for an amendment to a development agreement has been filed with the Washoe County Planning Commission.

This application requests permission to amend the Development Agreement timeline for an additional 18 months to develop a residential community including 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities and a commercial village center. The total acreage of the project is  $\pm 3,171.6$  acres. The project entrance is proposed west of the intersection of Zolezzi Lane and Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) and situated in Sections 3, 10, 13, 14, 15, 22, 23, 24, 26, and 27, T18N, R19E, MDM, Washoe County, Nevada. (APN: 49-010-04, 49-010-10 and 41-030-12)

STAFF: JEFF MURPHREE - 328-3613

A public hearing will be held in the Commission Chambers, 1001 East Ninth Street, Reno, Nevada, on August 2, 1994 at 8:00 p.m., or as soon thereafter as may be practicable. As an owner of property in the vicinity, you are invited to present testimony relative to this application.

**PUBLIC NOTICE.** All property owners within the vicinity of the parcel on which an application has been made, are noticed by mail concerning the request and time, date and place of the public hearing.

**PUBLIC HEARING.** As an owner of property within the area of notice, you are invited to make comments about this application. The following procedures explain the hearing process:

**PROCEDURES.** Approximately one week before the scheduled hearing on this application, an agenda showing the scheduled time for each item, is available in the Development Review office (see address below). The meetings follow Revised Robert's Rules of Order. This item will be considered under the following procedure:

- Staff presentation,
- Applicant presentation,
- Commission questions of staff/applicant,
- Public testimony,

**If you wish to testify, please complete a Request to Speak form available at the hearing and give it to the recording secretary. There is a three (3) minute limitation for individuals and five (5) minutes for representatives of groups. Longer time periods may be granted if arrangements are made in writing with Development Review staff the day before the meeting.**

**Please direct all questions and comments to the chair of the Planning Commission. If you are presenting written material, please provide a minimum of ten (10) copies to the recording secretary.**

Commission questions of staff/applicant/audience.

**PLANNING COMMISSION ACTION.** Following the public hearing, the Planning Commissioners will approve, approve with conditions or deny.

**APPEAL.** Anyone who disagrees with the decision of the Planning Commission may appeal their action to the Board of County Commissioners. Appeals must be filed within 7 days of the Planning Commission's action with the Department of Development Review. A written appeal letter and a filing fee of \$50.00 is required. If an appeal is filed, the applicant and all property owners within the vicinity of the subject property will be notified by mail of the date and time of the County Commission's appeal hearing.

RE: AMENDMENT TO DEVELOPMENT AGREEMENT CASE NO. DA9-1-93 (SOUTHWEST POINTE/DINGMAN INVESTMENTS)

Dear Property Owner:

You are hereby notified that an amendment to a tentative development agreement has been filed with the Washoe County Planning Commission.

*This application requests permission to amend the preliminary development agreement that facilitates the development of a residential community including 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities, a day care facility, an equestrian center and a commercial village center. The amendment would allow the applicant to begin preliminary grading of the golf course prior to the approval of the final development agreement. The total acreage of the project is  $\pm 3,171.6$  acres. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) and situated in Sections 3, 10, 13, 14, 15, 22, 23, 24, 26, and 27, T18N, R19E, MDM, Washoe County, Nevada. (APN: 49-010-04, 49-010-10 and 41-030-12)*

STAFF: JEFF MURPHREE - 328-3613

A public hearing will be held in the Commission Chambers, 1001 East Ninth Street, Reno, Nevada, on September 7, 1994, at 8:00 p.m., or as soon thereafter as may be practicable. As an owner of property in the vicinity, you are invited to present testimony relative to this application.

**PUBLIC NOTICE.** All property owners within the vicinity of the parcel on which an application has been made, are noticed by mail concerning the request and time, date and place of the public hearing.

**PUBLIC HEARING.** As an owner of property within the area of notice, you are invited to make comments about this application. The following procedures explain the hearing process:

**PROCEDURES.** Approximately one week before the scheduled hearing on this application, an agenda showing the scheduled time for each item, is available in the Development Review office (see address below). The meetings follow Revised Robert's Rules of Order. This item will be considered under the following procedure:

- Staff presentation,
- Applicant presentation,
- Commission questions of staff/applicant,
- Public testimony,

**If you wish to testify, please complete a Request to Speak form available at the hearing and give it to the recording secretary. There is a three (3) minute limitation for individuals and five (5) minutes for representatives of groups. Longer time periods may be granted if arrangements are made in writing with Development Review staff the day before the meeting.**

**Please direct all questions and comments to the chair of the Planning Commission. If you are presenting written material, please provide a minimum of ten (10) copies to the recording secretary.**

Commission questions of staff/applicant/audience.

**PLANNING COMMISSION ACTION.** Following the public hearing, the Planning Commissioners will approve, approve with conditions or deny.

**APPEAL.** Anyone who disagrees with the decision of the Planning Commission may appeal their action to the Board of County Commissioners. Appeals must be filed within 7 days of the Planning Commission's action with the Department of Development Review. A written appeal letter and a filing fee of \$50.00 is required. If an appeal is filed, the applicant and all property owners within the vicinity of the subject property will be notified by mail of the date and time of the County Commission's appeal hearing.

*For further information, please call (702) 328-6100 and indicate the case number or item you are interested in or contact the Department of Development Review by mail at P. O. Box 11130, Reno, NV 89520 or in person at 1001 E. Ninth St., Reno, Nevada.*

STAFF: JEFF MURPHREE - 328-3613

A public hearing will be held in the Commission Chambers, 1001 East Ninth Street, Reno, Nevada, on August 2, 1994 at 8:00 p.m., or as soon thereafter as may be practicable. As an owner of property in the vicinity, you are invited to present testimony relative to this application.

**PUBLIC NOTICE.** All property owners within the vicinity of the parcel on which an application has been made, are noticed by mail concerning the request and time, date and place of the public hearing.

**PUBLIC HEARING.** As an owner of property within the area of notice, you are invited to make comments about this application. The following procedures explain the hearing process:

**PROCEDURES.** Approximately one week before the scheduled hearing on this application, an agenda showing the scheduled time for each item, is available in the Development Review office (see address below). The meetings follow Revised Robert's Rules of Order. This item will be considered under the following procedure:

- Staff presentation,
- Applicant presentation,
- Commission questions of staff/applicant,
- Public testimony,

If you wish to testify, please complete a Request to Speak form available at the hearing and give it to the recording secretary. There is a three (3) minute limitation for individuals and five (5) minutes for representatives of groups. Longer time periods may be granted if arrangements are made in writing with Development Review staff the day before the meeting.

Please direct all questions and comments to the chair of the Planning Commission. If you are presenting written material, please provide a minimum of ten (10) copies to the recording secretary.

Commission questions of staff/applicant/audience.

**PLANNING COMMISSION ACTION.** Following the public hearing, the Planning Commissioners will approve, approve with conditions or deny.

**APPEAL.** Anyone who disagrees with the decision of the Planning Commission may appeal their action to the Board of County Commissioners. Appeals must be filed within 7 days of the Planning Commission's action with the Department of Development Review. A written appeal letter and a filing fee of \$50.00 is required. If an appeal is filed, the applicant and all property owners within the vicinity of the subject property will be notified by mail of the date and time of the County Commission's appeal hearing.

For further information, please call (702) 328-6100 and indicate the case number or item you are interested in or contact the Department of Development Review by mail at P. O. Box 11130, Reno, NV 89520 or in person at 1001 E. Ninth St., Reno, Nevada.

RE: AMENDMENT TO DEVELOPMENT AGREEMENT CASE NO. DA9-1-93 (SOUTHWEST POINTE/DINGMAN INVESTMENTS)

Dear Property Owner:

You are hereby notified that an application for an amendment to a development agreement has been filed with the Washoe County Planning Commission.

This application requests permission to amend the Development Agreement timeline for an additional 18 months to develop a residential community including 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities and a commercial village center. The total acreage of the project is  $\pm 3,171.6$  acres. The project entrance is proposed west of the intersection of Zolezzi Lane and Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) and situated in Sections 3, 10, 13, 14, 15, 22, 23, 24, 26, and 27, T18N, R19E, MDM, Washoe County, Nevada. (APN: 49-010-04, 49-010-10 and 41-030-12)

STAFF: JEFF MURPHREE - 328-3613

A public hearing will be held in the Commission Chambers, 1001 East Ninth Street, Reno, Nevada, on August 2, 1994 at 8:00 p.m., or as soon thereafter as may be practicable. As an owner of property in the vicinity, you are invited to present testimony relative to this application.

**PUBLIC NOTICE.** All property owners within the vicinity of the parcel on which an application has been made, are noticed by mail concerning the request and time, date and place of the public hearing.

**PUBLIC HEARING.** As an owner of property within the area of notice, you are invited to make comments about this application. The following procedures explain the hearing process:

**PROCEDURES.** Approximately one week before the scheduled hearing on this application, an agenda showing the scheduled time for each item, is available in the Development Review office (see address below). Gentlemen:

I, Judi Bailey, County Clerk and Clerk of the Board of County Commissioners, Washoe County, Nevada, do hereby certify that at a regular meeting of the Board of County Commissioners held on July 23, 1996, Chairman Bradhurst issued the following order:

96-734      **ORDINANCE NO. 963, BILL NO. 1138 - FINAL DEVELOPMENT AGREEMENT - SOUTHWEST POINTE**

**9:30 a.m.** This was the time set in a Notice of Public Hearing published in the Reno Gazette-Journal on July 12, 1996, to consider second reading and adoption of Bill No. 1138, approving the Final Development Agreement for Southwest Pointe, a residential community of 1,090 homesites with golf courses and recreational and commercial facilities in the Southwest Truckee Meadows planning area. Proof was made that due and legal Notice had been given.

Don Young, Department of Development Review Planner, presented an overview of the history of the Southwest Pointe project stating that this is the first legislatively enabled Development Agreement to be presented to the Board; and that the purpose of a Development Agreement is to provide protection against future changes in an increasingly complex and uncertain land development process, which is necessary in a project such as this that will not be completed for many years. He further stated that the Preliminary Development Agreement was approved by the Board on February 8, 1994; and that, although it has been amended a couple of times, there have been no major changes or issues relating to the project other than the alignment of White's Creek Lane which was resolved. Mr. Young explained that the applicant's representative, Attorney Robert Sader, has submitted a letter clarifying the non-potable water source to be used as the interim water supply for irrigating the golf course and common areas until such time as the treated effluent from the South Truckee Meadows Wastewater Treatment Plant is available.

Using the overhead projector, Mr. Young then displayed the findings that the Board must be able to make in accordance with the Development Code in order to approve the Final Development Agreement and staff's rationale for determining that the findings can be made. He stated that those required findings are: Finding #1) the proposed gross residential density or intensity of use is not changed, or the total number of dwelling units permitted by the Preliminary Development Agreement, 1,090, is the same; (note: Mr. Young stated that in double-checking, it was determined that the zoning only allows for 1,084 residential units, but that the 1,090 figure was provided to the developer by staff back in 1992 and that the developer has relied on that number all these years.); Finding #2) the proposed ratio of residential to non-residential use is not changed; Finding #3) the area set aside for common open space is not reduced or the area is not substantially relocated; Finding #4) the floor area proposed for non-residential use is not increased; Finding #5) the total ground area covered by buildings and the height of buildings is not increased; and Finding #6) the plan provisions are consistent with the adopted Preliminary Development Agreement.

In response to Chairman Bradhurst, Mr. Young advised that CAB review and Planning Commission approvals were required before the Preliminary Development Agreement and the amendments thereto were approved by the County Commissioners; and that one of the reasons there is very little controversy on this project is because there have been so many reviews.

In response to Commissioner Sims, Mr. Young, Mr. Sader and John Collins, Washoe County Utility Division, provided a more detailed explanation concerning the agreement regarding the non-potable water and the use of creek water and/or potable water when non-potable water is not available for the golf course.

The Chairman opened the public hearing by calling on anyone wishing to speak for or against adoption of said Ordinance.

Brita Tryggvi, CFA, Inc., representing the developer, was present to respond to questions. She stated that the Chairman of the Southwest Truckee Meadows Citizen Advisory Board has requested some minor wording changes to clarify and emphasize that public access will be allowed to the golf course and pedestrian/bike paths and pointed out a typographical error on Table 1-2 which indicates the lot sizes by percentages of total lots. Ms. Tryggvi stated that the developer does not have a problem with these changes; and she and Mr. Young then cited the specific pages where the wording could be changed as proposed. Legal Counsel Madelyn Shipman advised that since these are minor changes needed just for clarification or to correct errors and are not part of the ordinance, she is not concerned.

Mr. Sader reviewed the planning process for this specific project and answered questions of the Board. He also pointed out typographical errors and requested that corrections be made.

Lyn Mundt, Southwest Truckee Meadows Citizen Advisory Board Chair, stated that the CAB feels very strongly that public access through the development for bikes and pedestrians be insured and suggested that wording to that effect be added to the CC&R's as well as the Development Standards Handbook and cited pages that the CAB would like to have changed. She discussed the use of White's Creek Lane as the construction haul route and stated that it was always assumed that White's Creek would be completed to two paved lanes prior to the issuance of the 31st building permit and requested that that be changed. She also talked about the use of non-potable creek water being used for dust control, the golf course, etc., until the treated effluent is available and expressed a concern regarding downstream water rights holders and whether the required State Engineer approvals for such use have been received. Ms. Mundt then cited Section E, page 8-1, regarding certain modifications being approved by the Director of the Department of Development Review and stated that the citizens of the Southwest Truckee Meadows are very uncomfortable with that provision and requested that, at the very least, there should be notification, a time frame, and the changes should be presented to the CAB for comment.

Chairman Bradhurst asked Ms. Mundt if she is satisfied that there has been good citizen involvement in this process and project. Ms. Mundt stated that she is and that CFA has been very good at working with them and that many of the problems were resolved before this went to the Planning Commission.

There being no one else wishing to speak, Chairman Bradhurst closed the public hearing.

Advising that he is authorized by the developers to approve changes that might be requested at this meeting, Mr. Sader stated that as far as public access to the paths, the developer is prepared to make the appropriate changes requested by Ms. Mundt to satisfy that concern; and that he certainly appreciates that the CAB Chairman has taken the time to really review this and is prepared to discuss it. Mr. Sader further stated that he would like to discuss the other three issues raised by Ms. Mundt, the haul route, the creek rights, and having all future changes reviewed and approved by the CAB, a little further. Regarding the haul route, Mr. Sader stated that he thinks there is just a misunderstanding in that the language in Exhibit I addresses what happens prior to issuance of the 35th building permit and the conditions of the Tentative Map require that two lanes of White's Creek Lane be completed prior to the issuance of the 35th building permit.

In regard to the use of creek water until the treated effluent is available, Mr. Sader explained that both Thomas Creek and White's Creek flow right through the project; that they are not planning to divert Thomas Creek water, so Corps of Engineer approval is not required; that the plan is to let that water flow all the way through, just as it does now, until it gets to the sewer treatment plant at which point the water is owned by South Meadows Properties; and that that is where the water has primarily been used for the last 100 years. He further stated that South Meadows is then selling some of these water rights for Southwest Pointe to use up on the fan; that the plan is to store the water in the treatment facility reservoir and then pump it back up; and that they will need to obtain State Engineer approval to change the way the water is used. He stated that he would suggest adding language indicating that any necessary State or Federal approvals must be obtained; and that he wants to assure the Board that they are not going to divert Thomas Creek.

Mr. Sader then stated that the issue on substantial compliance is by far the most important to all concerned. He stated that a project this large, that is going to take 15 years to complete, is going to change; that some changes will be substantial and some will not; and that the question is--should every change go through the whole procedure required for changing a development agreement with lengthy publication and public hearing processes. Mr. Sader explained that what has been negotiated so far is that insubstantial changes can be done through the Director of the Department of Development Review and substantial changes be done through the Board; and that the system will not work if every change has to go through the whole process. Chairman Bradhurst cited the examples of insubstantial changes and asked who is going to determine what is substantial noting that there should at least be CAB review of changes. Mr. Sader responded that the question of whether an issue is substantial or insubstantial is made by the Director and is appealable; and stated that he does not have a problem with CAB review; and that he would urge that the Board not change the basic concept of the development agreement process. Chairman Bradhurst suggested that adding "with review and comment by the CAB" in Exhibit "E", the Development Standards Handbook, on page 8-1, after "Modifications that are in substantial compliance with the overall character.....and approved by the Director of Development Review." Mr. Sader stated that they would agree to that addition.

Ms. Mundt stated that she understands that it would be unworkable to expect CAB approval of every change, but that without some kind of notification and chance for comment back to the Director, there could be changes that the citizens know nothing about and would not have a chance to appeal; and that she agrees with the wording Chairman Bradhurst suggested.

Commissioner Bond suggested that the Director of Development Review provide periodic reports to the Board regarding the changes being requested. Mr. Young

advised that the conditions of the Development Agreement require quarterly reports and Nevada Revised Statutes requires a 2-year review process.

Commissioner Sims asked where he can find the specific conditions regarding screening along White's Creek Lane stating that he has been approached by residents who have expressed concerns and that it appears that not all the affected property owners are in agreement as to the type of screening they would like to see. Mr. Young cited the condition and stated that that will be addressed when the special assessment district for White's Creek Lane comes back before the Board. In further response to Commissioner Sims, Mr. Young confirmed that Fieldcreek property owners will not be assessed in the special assessment district for the construction of White's Creek Lane and screening along the road.

Chairman Bradhurst and Mr. Young then reviewed page-by-page the changes that have been requested and agreed upon. Those changes are:

**Final Development Agreement:**

Section 4.6 - Nonpotable Water Agreement: addition of a paragraph on page 11.

Section 7.10 - Indemnity: Correction of typographical errors on page 16.

**Development Standards Handbook (Exhibit E):**

Page 1-5, Table 1-2 - Lot Summary: Corrected numbers are:

12,000 sf - 436 (40%)  
1/2 acre and larger - 382 (35%)  
1 acre and larger - 272 (25%)

Page 2-14, Paragraph 3, last sentence: add the words "a public" so that it reads "The 8-foot width is intended to be a public multi-purpose -- bicycle, pedestrians, in-line skating, etc."

Page 2-22, Paragraph 2, the sentence that starts with "The private street will have an 120-foot..." and ends with "...8-foot wide meandering asphalt path on both sides." Insert a sentence after that that states, "Public access will be allowed to these paths."

Page 2-23, Paragraph 2, add that same sentence after "On collector roads with up to 9,600 ADT, the 8-foot path will be asphalt."

Page 8-1, Paragraph 2, to the sentence that reads "Modifications that are in substantial compliance with the overall character and design of the project may be requested by Southwest Pointe Partners or its successor and approved by the Director of Development Review." add: "with an opportunity for review and comment by the Southwest Truckee Meadows Citizen Advisory Board." Chairman Bradhurst noted that the assumption would be that that would be done before the Director makes his decision.

Chairman Bradhurst asked Ms. Mundt if these changes will satisfy the concerns of the CAB. Ms. Mundt stated that they will. Mr. Sader stated, for the record, on behalf of the owners in the project agreement, that the changes to the development agreement and exhibits discussed are agreed to by the owners.

Based on the findings that:

1. The proposed gross residential density or intensity of use is not changed;
2. The proposed ratio of residential to non-residential use is not changed;
3. The area set aside for common open space is not reduced or the area is not substantially relocated;
4. The floor area proposed for non-residential use is not increased;
5. The total ground area covered by buildings and the height of buildings is not increased; and
6. The plan provisions are consistent with the adopted Preliminary Development Agreement;

on motion by Commissioner Sims, seconded by Commissioner Mouliot, which motion duly carried, Chairman Bradhurst ordered that Ordinance No. 963, Bill No. 1138 entitled, **"An ordinance pursuant to Nevada Revised Statutes 278.0201 through 278.0207 approving the Final Development Agreement for Southwest Pointe. The Agreement facilitates the development of a residential community which includes 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities, a day care facility, an equestrian center, and a commercial village center. The project has a total acreage of ±3,271.6 acres and is located north of Mount Rose Highway (SR431) and west of Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) in the Southwest Truckee Meadows Area Plan and is situated within portions of Sections 3, 10, 13, 14, 15, 22, 23, 24, 26 and 27, T18N, R19E, MDM**

Washoe County, Nevada, (APN: 41-030-12, 49-010-04, and 49-010-10)" including the amendments as listed above and agreed upon by the parties at this meeting, and in accordance with the following Development Agreement, Tentative Map and Special Use Permit conditions, be approved, adopted and published in accordance with NRS 244.100:

**CONDITIONS  
FOR  
DEVELOPMENT AGREEMENT CASE NO. DA9-1-93  
FOR  
SOUTHWEST POINTE**

(As amended by the Washoe County Planning Commission on May 7, 1996)

\*\*\* important -- please read \*\*\*

**UNLESS OTHERWISE STATED, PRIOR TO APPROVAL OF THE FINAL DEVELOPMENT AGREEMENT, ALL CONDITIONS MUST BE MET.**

**A COPY OF ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL BE FILED WITH THE DEPARTMENT OF PUBLIC WORKS AND/OR DEPARTMENT OF DEVELOPMENT REVIEW.**

**COMPLIANCE WITH THE APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES AND WITH THE CONDITIONS OF APPROVAL OF THIS TENTATIVE MAP IS THE RESPONSIBILITY OF THE DEVELOPER, ITS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY, AND THEIR SUCCESSORS IN INTEREST.**

**GENERAL CONDITIONS**

1. Unless specifically stated in the final Development Agreement, all uses, densities and standards shall be consistent with the Washoe County Development Code and with the goals and policies in the Comprehensive Plan and the Southwest Truckee Meadows Area Plan. Unless specifically stated in the final Development Agreement, the allowed uses, densities, and standards of the land subject to the Development Agreement shall be those in effect at the time the final agreement is approved.

2. The final Development Agreement shall specify any time frames that have been extended beyond those specified by Washoe County Code or Nevada Revised Statutes. The Department of Development Review shall be responsible for determining compliance with this condition.
3. A "statement of compliance" format or formats for both residential and non-residential projects shall be made a part of the final Development Agreement. The Department of Development Review shall be responsible for determining compliance with this condition.
4. The developer and all successors shall direct any potential purchaser of the site, or portions thereof (other than individual single-family lots), to meet with the Department of Development Review to review the Development Agreement and the conditions of approval prior to the final sale of the site. Any subsequent purchasers of the site shall notify the Department of Development Review of the name, address, telephone number, and contact person of the new purchaser within 30 days of the final sale.
5. Prior to submittal to the Washoe County Board of County Commissioners, the final Development Agreement shall be reviewed and approved by the Office of the District Attorney of Washoe County.
6. The final Development Agreement will be submitted to the Washoe County Board of County Commissioners within three months of submission of a completed agreement with all accompanying exhibits, provided the Department of Development Review does not delay the submission in order to approve provisions of the agreement to its satisfaction. Extension of any of these time frames may be requested if mutually agreeable to Washoe County and the developer.
7. The developer shall provide the Department of Development Review staff with a quarterly report indicating the number of building permits issued and other building activity, once residential construction has started. Moved from TM
8. The developer shall define a process to ensure that the maintenance and replacement of the streets, parking areas, lighting, landscaping, recreational facilities, utilities, and other private infrastructure shall be performed by the homeowners associations and shall be perpetually funded. The County Engineer and the Department of Development Review shall be responsible for determining compliance with this condition.

### STREETS AND TRAFFIC

9. A Level of Service C, or the current Washoe County standard, shall be used as a basis for evaluating transportation needs and traffic impact mitigation requirements.
10. The final Development Agreement shall not be approved until the right-of-way (ROW) of all necessary off-site accesses from the project to Thomas Creek Road are obtained. Preliminary golf course and roadway grading may commence before such approval has been obtained so long as such construction is done in accordance with Condition 21 for tentative maps. An approved and recorded ROW document shall be provided to the County Engineer and the District Attorney's Office.
11. Prior to final approval of the Development Agreement, the developer for Southwest Pointe shall petition the Washoe County Board of County Commissioners to create a Special Assessment District for the purpose of financing the construction of Whites Creek Lane from the project site to Wedge Parkway and other roads as defined in the SAD agreement. In the event that a special assessment district is not created, the developer shall construct Whites Creek Lane, as outlined in Conditions 17 and 19 for tentative maps, from the project site to Wedge Parkway. The County Engineer shall be responsible for determining compliance with this condition.
12. A Construction Traffic Haul Route Plan shall be submitted to the County Engineer for review and approval. The primary construction haul route shall be Whites Creek Lane. However, as part of Phase I development, Zolezzi Lane may be used, for construction mobilization only, for completion of the first 18-hole golf course and for the extension of utilities into the project site.

Prior to approval of any final map or prior to the issuance of the first building permit for the first final map, all construction traffic will be diverted to Whites Creek Lane. No construction traffic will be allowed on Thomas Creek Road between Whites Creek Lane and Zolezzi Lane. Access to Whites Creek Lane will be from the Mt. Rose Highway to Thomas Creek Road. When the 35th building permit is issued, all construction traffic will be required to use Whites Creek Lane from Wedge Parkway. Construction traffic will use Whites Creek Lane from Wedge Parkway if this segment is completed prior to the issuance of the 35th building permit. Thomas Creek Road from Mt. Rose Highway to the proposed Whites Creek Lane may be considered for a haul route provided the developer submits a traffic analysis and intersection design prepared by a licensed Nevada

Civil Engineer which addresses and provides, as a minimum, recommendations regarding:

- a. site distance requirements;
- b. left turn storage capacity and design;
- c. intersection location and alignment;
- d. proximity to existing intersections and recommended separate distances;
- e. existing center median and landscaping concerns;
- f. determination of adequacy of existing Thomas Creek Road roadway geometric section; and
- g. determination of adequacy of existing structural section and load bearing capability.

The submitted report shall be evaluated and accepted by the County Engineer prior to any approval of the use of Thomas Creek Road as a haul route. Once Whites Creek Lane is connected to Wedge Parkway, this road shall become the primary construction haul route.

Any existing or proposed roads that will be used as construction haul routes and are not designated truck routes must be evaluated by a geotechnical study to determine the existing structural section and its load supporting capability. If the pavement section is inadequate to support the proposed construction loadings, the roadway must be redesigned or reconstructed as needed to provide a 20-year design life in accordance with the AASHTO Interim Guide for Flexible Pavements.

13. The developer shall provide a schematic pedestrian circulation plan. The Department of Development Review shall be responsible for determining compliance with this condition. The "statement of compliance" shall require that a detailed pedestrian circulation plan will be submitted as part of each tentative map and approved by the Department of Development Review.
14. Unless specifically stated in these conditions of approval or in the final Development Agreement, all public and private street design and construction is to be done in accordance with the Washoe County standards that are in effect at the time the final Development Agreement is recorded. The County Engineer shall be responsible for determining compliance with this condition.
15. Unless otherwise stated in these conditions of approval or in the final Development Agreement, all roadway improvements necessary (including but not limited to, curb, gutter, sidewalk, signing and striping, driveway access, and street lighting) to serve the project shall be designed and constructed to county

standards and specifications and/or financial assurances in an appropriate form and amount shall be provided. The County Engineer shall be responsible for determining compliance with this condition.

16. All private roadways shall be depicted on the final maps and identified on the tentative map as either private access easements over individual adjacent lots or, if identified as separate parcels, as either common areas with equal fractional ownership by all of the lots within the development or common areas owned by the homeowners association. The County Engineer shall be responsible for determining compliance with this condition.

### GRADING AND DRAINAGE

17. A general concept-level storm drain master plan shall be submitted to the County Engineer for approval prior to acceptance of the final Development Agreement. The general concept-level storm drain master plan shall address in general terms proposed methods for handling the existing and increased flows for the 10- and 100-year storms including detention and other proposed mitigation measures for both on-site and off-site areas. This master plan shall include a drawing which shows the existing drainage basins within the development and indicate how they may be impacted. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of a tentative map for any phase or approval of any special use permit, a preliminary hydrology report shall be submitted to the County Engineer for approval. The County Engineer shall be responsible for determining compliance with this condition.
18. Detention/retention facilities are to be maintained by a homeowners association and perpetually funded unless Washoe County agrees to accept maintenance and financial responsibilities. Regional facilities would be maintained by Washoe County. The County Engineer shall be responsible for determining compliance with this condition.
19. A maintenance plan of all drainage facilities to be owned by the homeowners association shall be provided prior to approval of the conditions, covenants, and restrictions (CC&Rs). All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe County water treatment plant and associated Steamboat Ditch conveyance system. The County Engineer shall be responsible for determining compliance with this condition.
20. The off-stream detention/debris basin recommended in the 1990 Kennedy, Jenks, Chilton report shall be reserved based on the following timetable:

- a. Washoe County will have three years to obtain the necessary permits for construction of the off-stream detention basin. This three years shall commence upon the approval of the final Development Agreement. If Washoe County fails to obtain the necessary permits, the property for the detention site shall be offered by the developer or his successors, for dedication to the Washoe County School District for a middle school or revert to open space.
  - b. If Washoe County does obtain the necessary permits within three years, construction of the project shall commence within 5 years of the approval of the final Development Agreement. If construction is not started by that date, the property for the detention site shall be offered by the developer or his successors, for dedication to the Washoe County School District for a middle school or revert to open space.
  - c. If an alternative solution or site becomes available for flood control, this property will immediately become available for dedication to the Washoe County School District for a middle school or revert to open space.
  - d. If the detention basin is constructed, Washoe County shall pay fair market value for the property.
21. The increase in development-caused runoff from the 100-year storm, including drainages which run directly into the Steamboat Ditch, shall be detained/retained on-site because of the limited capacity of the flood control facilities in the area of South Virginia Street and the Steamboat Ditch Company. The County Engineer shall be responsible for determining compliance with this condition.
  22. A geotechnical report shall be prepared, which considers the effects of earthquake forces and faulting in the area. The siting and design of detention/retention facilities shall be addressed based on the findings and recommendations provided in the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.
  23. The development shall comply with the requirements of the Hillside Ordinance of the Development Code, as applicable. The Department of Development Review shall be responsible for determining compliance with this condition.

#### **WATER AND WASTEWATER**

24. A schematic water system plan for the referenced proposal must be submitted to the Utility Division and the District Health Department. Prior to a final map approval, the plan must show that the water system will conform to the State of

Nevada Water Supply Regulations, NAC Chapter 445, and the State of Nevada Regulations Governing Review of Plans for Subdivisions, Condominiums, and Planned Unit Developments, NAC 278.400 through 278.410.

25. Prior to the approval of the final Development Agreement, a complete water analysis from at least one monitoring well must be submitted to the District Health Department. The analysis must demonstrate the water conforms to the existing and proposed drinking water standards.
26. The developer shall utilize treated wastewater from the South Truckee Meadows Wastewater Treatment Plant. As part of the initial construction, the developer shall provide the necessary on-site easements needed to construct the infrastructure. When this resource becomes available to irrigate the golf course, the developer shall construct the necessary on-site infrastructure. The Utility Division shall be responsible for determining compliance with this condition.

#### **FIRE PROTECTION**

27. If requested by the applicable fire protection agency, a minimum one-acre site for a fire station shall be offered for dedication prior to recordation of the first final map. The developer shall enter into talks with the applicable fire protection agency for any other requirements, such as, a fire station site, manpower and equipment needs, or for coordination with other developments that have similar requirements and the results of those discussions, as they relate to the entire project, shall be incorporated into the Development Agreement.

#### **PARKS/RECREATION/OPEN SPACE**

28. An open space management plan and map shall be prepared that specifies the ownership of open spaces, type of uses allowed and who is responsible for maintenance. This plan shall address the provisions of Section 110.408.45 of the Development Code. Common areas shall be maintained by the homeowners association and provisions be made for perpetual funding for maintenance.

Prior to approval of the final Development Agreement, a government entity (e.g. United States Forest Service, Washoe County Parks Department, etc.) or a non-profit organization (e.g. Washoe Parks Foundation) shall be identified that will accept the dedication of the open space buffers identified on the Concept Plan, which consists of approximately 1,500 acres. The Parks and Recreation Department and the Department of Development Review shall be responsible for determining compliance with this condition.

29. The final Development Agreement shall include a provision for the public open space that prohibits the sale of any open space without the consent of Washoe County. The Department of Development Review shall be responsible for determining compliance with this condition.
30. A minimum 10-acre public park site shall be offered for dedication to the county. A sketch plan will be included in the final Development Agreement. The final park design shall be mutually agreeable to the county and the developer. The developer will construct the recreation facilities in the park and then be reimbursed for the cost of the construction from the Residential Construction Tax. The responsibility of park maintenance shall be negotiated by the developer and Washoe County prior to the approval of the final Development Agreement. The Parks and Recreation Department and Department of Development Review shall be responsible for determining compliance with this condition.
31. The developer will work with the Department of Parks and Recreation to locate the proposed regional public trails to the satisfaction of Washoe County and the developer. The Parks and Recreation Department and Department of Development Review shall be responsible for determining compliance with this condition.

#### LANDSCAPING/ARCHITECTURAL DESIGN

32. Prior to approval of the final Development Agreement, the developer shall submit a Development Standards Handbook for the entire project to the Design Review Committee for its review and approval. These guidelines shall address, but not be limited to, type and color of building material, general architectural design, fencing, landscaping material (if plant material: type, size at time of planting, maturation size at full growth, period of time between planting and full growth), landscaping location, landscaping irrigation system, and financial assurances that landscaping will be planted and maintained.

The Design Review Committee shall also review the design of Whites Creek Lane, specifically to address Condition 19.c. for tentative maps. The Department of Development Review shall be responsible for determining compliance with this condition.

[this space intentionally left blank]

**CONDITIONS**  
**FOR**  
**TENTATIVE SUBDIVISION MAP CASE NO. \_\_\_\_\_**  
**FOR**  
**\_\_\_\_\_ SUBDIVISION**

(As recommended by Department of Development Review and attached to Staff Report dated \_\_\_\_\_ )

\*\*\* important -- please read \*\*\*

**UNLESS OTHERWISE STATED, PRIOR TO FINALIZATION OF ANY PORTION OF THE TENTATIVE SUBDIVISION MAP, ALL CONDITIONS MUST BE MET OR FINANCIAL ASSURANCES TO ENSURE COMPLETION OF THE CONDITIONS MUST BE PROVIDED. THE AGENCY RESPONSIBLE FOR DETERMINING COMPLIANCE WITH A SPECIFIC CONDITION SHALL DETERMINE WHETHER THE CONDITION MUST BE FULLY COMPLETED OR WHETHER THE DEVELOPER SHALL BE OFFERED THE OPTION OF PROVIDING FINANCIAL ASSURANCES.**

**A COPY OF ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL BE FILED WITH THE DEPARTMENT OF PUBLIC WORKS AND/OR DEPARTMENT OF DEVELOPMENT REVIEW.**

**THE DEVELOPER SHALL MEET WITH THE ENGINEERING DIVISION AND THE DEPARTMENT OF DEVELOPMENT REVIEW AT LEAST SIXTY (60) DAYS BEFORE THE ANTICIPATED DATE OF APPROVAL BY THE PLANNING COMMISSION TO REVIEW SCHEDULING, REQUIREMENTS, FINAL CONSTRUCTION DRAWINGS, AND DOCUMENTATION NECESSARY TO ADEQUATELY COMPLY WITH THE CONDITIONS OF APPROVAL AND THE APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES. NO FINAL MAP WILL BE SCHEDULED FOR A PLANNING COMMISSION MEETING DATE THAT IS LESS THAN SIXTY (60) DAYS FROM THE DATE OF THIS MANDATORY MEETING.**

**A REQUEST FOR AN EXTENSION OF TIME FOR THE RECORDING OF A FINAL MAP MUST BE SUBMITTED TO THE DEPARTMENT OF DEVELOPMENT REVIEW AT LEAST SIXTY (60) DAYS PRIOR TO THE EXPIRATION DATE OF THE TENTATIVE SUBDIVISION MAP. SAID EXPIRATION IS TWO YEARS FROM THE DATE OF APPROVAL OF THE**

**TENTATIVE MAP OR A SUBSEQUENT FINAL MAP BY THE BOARD OF COUNTY COMMISSIONERS OR, WHEN APPLICABLE, BY THE PLANNING COMMISSION.**

**COMPLIANCE WITH THE DEVELOPMENT AGREEMENT, APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES AND WITH THE CONDITIONS OF APPROVAL OF THIS TENTATIVE MAP IS THE RESPONSIBILITY OF THE DEVELOPER, ITS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY, AND THEIR SUCCESSORS IN INTEREST.**

**GENERAL CONDITIONS**

1. The subdivider shall present to the planning commission a final map, prepared in accordance with the tentative map, for the entire area for which a tentative map has been approved, or one of a series of final maps, each covering a portion of the approved tentative map, within two (2) years after the date of approval of the tentative map.

Prior to the expiration of a tentative map, the planning commission or, upon appeal, the governing body may grant a two (2) year extension for the presentation of the entire final map or next successive final map. The effective date of the extension shall be two (2) years from the date upon which the map would have expired.

If the subdivider fails to record a final map for any portion of the tentative map or obtain an extension within two years after the date of approval of the tentative map, all proceedings concerning the subdivision are terminated.

2. Unless specifically stated in the final Development Agreement, final maps and final construction drawings shall comply with all applicable statutes, ordinances, rules, regulations, and policies in effect at the time of approval of the final map or any subsequent extension date. The Department of Development Review shall be responsible for determining compliance with this condition.
3. Final maps shall be in substantial compliance with all plans and documents submitted with and made part of this tentative map request, as may be amended by action of the final approving authority. Substantial compliance shall be determined by the applicable agency and the Department of Development Review.

4. As part of every tentative map and final map application, the developer shall include a completed "statement of compliance" that demonstrates how the development will be or is consistent with the recorded final Development Agreement. The "statement of compliance" for the final map shall incorporate a description of how the conditions of approval have been met. The Department of Development Review shall be responsible for determining compliance with this condition.
  
5. Conditions, covenants, and restrictions (CC&Rs) shall be reviewed and approved by the District Attorney's Office, County Engineer, and the Department of Development Review prior to final map approval or prior to issuance of a certificate of occupancy for a non-residential use. Washoe County shall be made a party to the applicable provisions of the CC&Rs to the satisfaction of the District Attorney's office. If the CC&Rs are not recorded on the entire property, subsequent phases will be annexed to the previously recorded CC&Rs. Said CC&Rs shall specifically address the ability of the county to enforce certain provisions against the property and the individual property owner's responsibilities for the perpetual funding, maintenance and replacement, of the following items, at a minimum:
  - a. Private roads within the subdivision.
  - b. Equestrian center.
  - c. Staffing of maintenance and security forces.
  - d. Common area landscaping.
  - e. Entrance gates.
  - f. Snow removal and storage areas.
  - g. Common area landscaping including along streets or landscaping along Whites Creek Lane.
  - h. Fire and fuelbreaks.
  - i. Detention basins and the accumulated sediment.
  - j. Equestrian/pedestrian trails.
  - k. Bicycle and pedestrian paths.
  - m. Golf cart crossings.
  - n. Off-site residential parking areas.

At a minimum, the CC&Rs shall also specifically address the following items:

- a. Requirement to abide by Architectural/Community Design Guidelines.
- b. All homes must have a garage with space for a minimum of two cars.
- c. Specifications on the limitation of turf area for single-family homes.

- d. Retention of public access to the golf course, bike paths, (i.e., 8-foot meandering paths along minor arterials and some collectors; refer to street sections), public trails, and non-residential uses.
  - e. Notice of requirement to pay future sewer user fees.
  - f. Requirement to adhere to National Electric Safety Code setbacks for existing overhead power lines.
  - g. Potential for conservation easements or dedication of open space.
  - h. Prohibition of motorized vehicles in open space.
  - i. Areas with potential for equestrian traffic.
  - j. Access to open space for pedestrian and bicycle traffic.
  - k. Notice of pedestrian easements to abutting properties.
  - l. Minimum defensible space requirements.
  - m. Snow storage areas.
6. Prior to ground-disturbing activity or prior to finalization of any portion of the tentative map, the developer shall submit an archaeological/historical survey to the Department of Development Review. The Department of Development Review shall submit the survey to the State Historic Preservation Office of the Department of Museums, Library and Arts for review. Following that review, the State Historic Preservation Office shall submit a letter to the Department of Development Review that indicates the survey was acceptable.
7. A note shall be placed on all grading plans and construction drawings stating:
- NOTE**
- Should any prehistoric or historic remains/artifacts be discovered during site development, work shall temporarily be halted at the specific site and the State Historic Preservation Office of the Department of Museums, Library and Arts, shall be notified to record and photograph the site. The period of temporary delay shall be limited to a maximum of two (2) working days from the date of notification.
8. The developer shall be required to participate in any applicable General Improvement District or Special Assessment District formed by Washoe County. The applicable division of the Department of Public Works shall be responsible for determining compliance with this condition.
9. Prior to acceptance of public improvements and release of any financial assurances, the developer shall furnish to the Utility Division and/or Engineering Division a complete set of reproducible 'as built' construction drawings prepared by a civil engineer registered in the State of Nevada.

10. A complete set of construction improvement drawings, including an on-site grading plan, shall be submitted to the Engineering Division for approval prior to finalization of any portion of the subdivision. Grading shall comply with best management practices and shall include detailed plans for grading and drainage on each lot, erosion control, slope stabilization, mosquito abatement. Placement or disposal of any excavated material shall be indicated on the grading plan.
11. All soil boring logs must be included as part of the construction drawings. The County Engineer shall be responsible for determining compliance with this condition.
12. All new utilities shall be placed underground. The County Engineer shall be responsible for determining compliance with this condition.
13. The developer is to provide written approval from the US Postal Service for the plans for the installation of mail delivery facilities. The system, other than individual mail boxes, must be shown on the project construction plans and installed as part of the on-site improvements. The County Engineer shall be responsible for determining compliance with this condition.
14. The final map shall designate faults, by distance and bearings, that have been active during the Holocene epoch of geological time and shall contain the following note.

**NOTE**

No habitable structures shall be located on a fault that has been active during the Holocene epoch of geological time. The faults have been located by Civil Engineer Registered in Nevada and experienced in Geotechnical Engineering and field surveyed by a Nevada Registered Land Surveyor.

The Department of Development Review shall be responsible for determining compliance with this condition.

15. The Washoe County Planning Commission certificate on the final map shall be approved by the County Engineer and the Department of Development Review.

**STREETS AND TRAFFIC**

16. The developer shall submit a detailed geotechnical analysis and report for pavement design recommendations to the County Engineer for review and approval. The report shall be based on the estimated traffic loadings for a 20-year design life and shall include assumptions concerning the distribution of trucks, to

include project construction truck traffic. The resultant pavement thickness in the geotechnical analysis must be used if the report indicates a structural section that is stronger than minimum is required. The County Engineer shall be responsible for determining compliance with this condition.

17. Prior to the issuance of the first building permit, two lanes of Whites Creek Lane shall be constructed, to two-lane minor arterial standards as a minimum, from Thomas Creek Road to the project site. The County Engineer shall be responsible for determining compliance with this condition.
18. Prior to the issuance of the first building permit, a second access shall be constructed to the project site to emergency standards to the satisfaction of the applicable fire protection agency.
19. The County Engineer shall be responsible for determining compliance with this condition. Prior to the issuance of the 35th building permit, the following roadway improvements shall be constructed:
  - a. The remaining two lanes of Whites Creek Lane from Thomas Creek Road to the project site if warranted by projected traffic demands.
  - b. Two (2) lanes of Whites Creek Lane from Thomas Creek Road to Wedge Parkway with 100 feet of right-of-way. These two lanes will be constructed so that an additional two lanes may be added in the future if warranted by projected traffic volumes.
  - c. Whites Creek Lane will be designed in a manner that minimizes any impacts on the adjacent homes to the north in Fieldcreek Ranch (e.g., fencing, berms, lowering the travel lanes).
20. The minimum pavement structural section shall be 5 inches of asphalt over 8 inches of aggregate base for minor arterials, 4 inches of asphalt over 6 inches of granular base for roadways (private and public) for collector streets, and 3 inches of asphalt over 6 inches of granular base for roadways for local streets. The County Engineer shall be responsible for determining compliance with this condition.
21. Prior to or upon approval of the CC&Rs, the developer shall have a street maintenance program approved by the County Engineer and the Department of Development Review. Maintenance of private streets shall be performed by the homeowners association and shall be perpetually funded.

22. The following roadway sections shall be applicable to the public and private on-site streets shown on the tentative map. A traffic report shall be submitted with each tentative map and shall identify the ultimate average daily traffic on each street and shall make recommendations for geometric design (e.g., left turn storage capacity, site distance, minimum required turning radius, etc.). The County Engineer shall be responsible for determining compliance with this condition.
- a. Private Common Driveways - Serving 4 or less lots, pavement width 20 feet; serving 5 or more lots, pavement width 22 feet; no parking either side. Curb returns shall have a minimum face of curb radius of 20 feet on local streets and 25 feet on collector streets. Private common driveway locations will be shown on all tentative maps. Private common driveways will line up with proposed street intersections where possible and will comply with street intersection offset requirements. Single lot driveway access will not be allowed onto streets on which the average daily traffic exceeds 2000 trips. (Refer to street sections.)
  - b. Rural Private - 60 foot minimum ROW (maximum 200 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)
  - c. Local Private - 60 foot minimum ROW (200 - 500 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)
  - d. Collector Private - 60 foot minimum ROW (500 ADT to 2000 ADT): minimum 24-foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path on both sides of the street will be provided unless alternate provisions or locations of

pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to Street Sections.)

- e. Collector Private - 60 foot minimum ROW (2000 ADT to 8000 ADT): minimum 24-foot pavement width with an additional 12-foot left turn lane at intersections where warranted; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking on either side. A minimum 8-foot path on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. No residential driveway access will be allowed. Access for private common driveways will be allowed. (Refer to street sections.)
- f. Collector Private - 120 foot minimum ROW collector street (up to 9600 ADT): A minimum 27-foot center median from curb face to curb face, 19-foot pavement width on either side of the median; curb and gutter on both sides or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side except during special events; a minimum 8-foot meandering asphalt path both sides; no residential driveway access allowed. (Refer to street sections.)
- g. Minor Arterial, Private - 120 foot minimum ROW (more than 10,800 ADT): A minimum 27-foot center median from curb face to curb face, 24-foot pavement width on either side of the median; County Engineer-approved concrete header with roadside ditch; no parking either side; a minimum 8-foot meandering asphalt path both sides; no residential driveway access allowed. A gate may be installed at the point where Whites Creek Lane becomes a private road. (Refer to street sections.)
- h. Minor Arterial, Public - 120-foot minimum ROW (more than 10,800 ADT): A minimum 27-foot center median from curb face to curb face, 29.5-foot roadway section on either side of the median; curb and gutter on both sides; a minimum 6-foot concrete sidewalk on both sides; no residential driveway access is allowed. (Refer to street sections.) A gate may be installed at the point where Whites Creek Lane becomes a private road. A public turn-around is required on the public side of the gate.

23. All roadway grades shall be limited to the maximum allowable grades for each street classification as provided in the Washoe County Standards. The County Engineer shall be responsible for determining compliance with this condition.
24. Construction near fault lines shall be as follows:
  - a. Buildings for human occupancy shall be set back from the centerline of fault traces. Setback distances shall be determined by a geotechnical investigation prepared by a Nevada Registered Civil Engineer experienced in geotechnical engineering. The minimum setback shall be 50 feet on each side of the fault line.
  - b. Roadway construction in fault zones and along fault traces shall be reviewed by a Nevada Registered Civil Engineer experienced in geotechnical engineering. Any recommended special construction requirements (e.g., flexible joint connections for utilities) shall be complied with.

The County Engineer shall be responsible for determining compliance with this condition.

25. All cul-de-sacs shall be a minimum pavement radius of 43.5 feet to front face of curb or 45 feet to edge of pavement. The County Engineer shall be responsible for determining compliance with this condition.
26. Landscaped medians shall be designed in accordance with AASHTO site distance and safety guidelines. The County Engineer and the Department of Development Review shall be responsible for determining compliance with this part of the condition. Maintenance of median landscaping shall be by the homeowners association as provided for in a separate maintenance agreement to be approved by the County Engineer and the District Attorney's Office prior to approval of the CC&Rs.
27. Temporary county standard turnarounds shall be constructed on all phased roadways which extend more than one lot depth beyond a maintained public or private street. The County Engineer shall be responsible for determining compliance with this condition.
28. All-weather emergency access roads shall be constructed at the end of all cul-de-sacs that are longer than 1,500 feet. These roads shall have a 30-foot access easement with a minimum 20-foot width and 2.5 inches of asphalt concrete pavement on an engineered gravel base. The roads shall be controlled by

emergency access gates and shall be posted with signs stating "For Emergency Vehicles Only". The County Engineer and the applicable fire protection agency shall be responsible for determining compliance with this condition.

29. Prior to final map approval, the developer shall provide all weather emergency access easements and road improvements at the locations shown on the tentative map, terminating at public or privately-maintained streets. The County Engineer shall be responsible for determining compliance with this condition.
30. Meandering asphalt paths will be acceptable provided that:
  - a. Pedestrian easements are included for portions of the paths located outside the county right-of-way.
  - b. Landscaping between the back of the curb and the path shall be designed in accordance with AASHTO site distance and safety guidelines. The County Engineer shall be responsible for determining compliance with the provisions of this condition.
  - c. Maintenance of the asphalt paths and landscaping shall be the responsibility of the developer and, when created, by the homeowners association as provided for in a separate maintenance agreement and to be approved by the County Engineer and the District Attorney's office prior to approval of the final Development Agreement.
31. Asphalt paths or gravel shoulders, located adjacent to private streets shall be privately maintained and funded. The County Engineer shall be responsible for determining compliance with this condition.
32. Street lights shall be installed at major intersections. The County Engineer shall be responsible for determining compliance with this condition.
33. No at-grade golf cart crossings shall be allowed across any street with 500 ADT or greater. Where possible, crossings should be below the grade of public streets. The County Engineer shall be responsible for determining compliance with this condition.
34. Off-site parking areas shall be provided within 500 feet of homes that have lots ranging in size between 12,000 square feet and one-half acre. One space shall be provided for every three homes. Parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the tentative map(s). The Department of

- Development Review shall be responsible for determining compliance with this condition.
35. Project streets that are designed with security gates at points intersecting with public streets shall have adequate on-site stacking space. The specific type and size of the stacking areas must be approved by the County Engineer and constructed as approved.
  36. Regulatory signs must be installed at the juncture of all public streets with a private street and at intersections along the primary loop road. Said sign shall state: "PRIVATE STREET NOT MAINTAINED BY COUNTY." All regulatory signs shall meet the Manual of Uniform Traffic Control Device standards. The County Engineer shall be responsible for determining compliance with this condition.
  37. Street names shall be reviewed and approved by the Regional Street Naming Coordinator. The tentative map shall indicate street names for identification purposes.

#### **DRAINAGE AND GRADING**

38. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of a tentative map for any phase, a preliminary hydrology report shall be submitted to the County Engineer for approval. This preliminary hydrology report shall be prepared in accordance with county requirements for tentative maps, in conformance with the general concept-level storm drain master plan, and be applicable to the specific tentative map or special use permit being approved.  
  
The report shall include, as a minimum, the locations, points of entry and discharge, flow rates and flood limits of all 10- and 100-year storm flows impacting both on-site and off-site areas and the methods for handling these flows as well as the proposed methods for handling storm water increases due to development. Proposed mitigation measures shall be included for any impacts on existing on-site and off-site properties and facilities. The County Engineer shall be responsible for determining compliance with this condition.
39. Prior to the submittal of any final map or issuance of any grading permit, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted to the County Engineer for approval. The report shall be in substantial compliance with the general concept-level storm drain master plan and contain all final storm drain pipe, ditch and retention pond

sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed, constructed, and approved by the District Health Department and the County Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.

40. A maintenance plan of all drainage facilities, to be owned by the homeowners association, shall be provided prior to approval of the CC&Rs. All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe County water treatment plant, and associated Steamboat Ditch conveyance system. All runoff from improved areas which runs into the Steamboat Ditch shall be pre-treated for silt and petrochemicals and shall be routed through a "wet" detention facility or approved alternative. The Utility Division and the Department of Development Review shall be responsible for determining compliance with this condition.
41. The 100-year floodplain boundaries and flood elevations shall appear on each final map. If the floodplain boundary has been changed by a Federal Emergency Management Agency (FEMA) Conditional Letter of Map Amendment or Conditional Letter of Map Revision, the date of that letter and a note to that effect shall appear on the final map. Grading or building permits shall not be issued for areas currently shown as "A" zones on the FEMA floodplain maps until a Letter of Map Amendment or Revision is submitted or until conformance with Washoe County flood construction standards is determined by the County Engineer. The County Engineer shall be responsible for determining compliance with this condition.
42. Prior to approval of the final map, the developer shall obtain a Stormwater Discharge Permit from the Nevada Division of Environmental Protection. If required, point discharge permit for each proposed detention pond will be obtained from the Nevada Division of Environmental Protection and copy shall be submitted to the County Engineer.
43. The developer shall provide pretreatment for petrochemicals, nutrients and other chemicals used for landscaping, and silt for all storm drainage from the site. Systematic cleaning of the streets, parking lots, and catch basins, and control of salt and sanding activities shall to be delineated in the maintenance plan. The County Engineer shall be responsible for determining compliance with this condition.
44. Prior to issuance of a grading permit for the golf course and/or final map, a final wetlands determination must be made and approved by the US Army Corps of

Engineers and the approval letter provided to the Department of Development Review.

45. Prior to issuance of a grading permit for the golf course or approval of a final map, the developer shall obtain from the Army Corps of Engineers a 404 permit for wetland and dredge and fill for all roadway crossing of Thomas and Dry Creeks, or a letter from the COE indicating that a 404 permit is not required and a copy submitted to the County Engineer.
46. All street crossings of Thomas and Dry Creeks shall be designed to pass the 100 year flood flows without obstruction or overtopping of the roadway. Erosion protection shall be provided based upon the recommendation of the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.
47. Standard reinforced concrete headwalls or other approved alternatives shall be placed on the inlet and outlet of all drainage structures and rip-rap shall be used to prevent erosion at the inlets and outlets of all pipe culverts. The District Health Department and the County Engineer shall be responsible for determining compliance with this condition.
48. The stormwater discharges from this development that flow to Dry Creek shall be controlled to pre-development flow conditions and will be controlled to prevent water quality degradation of Steamboat Ditch. The developer shall provide drainage structures under Steamboat Ditch that would pass the 10-year frequency storm or demonstrate that there will not be any water quality degradation in Steamboat Ditch. The County Engineer shall be responsible for determining compliance with this condition.

The developer shall contact the Division of Water Resources, State of Nevada, to determine whether the proposed flood detention facilities will require permits. If required, copies shall be submitted to the County Engineer.

49. Prior to the approval of a grading permit or approval of a final map, a detailed dust control plan shall be prepared and submitted to Air Quality Management of the District Health Department and to the Department of Development Review. The dust control plan shall address, as a minimum, "phased grading" and stabilization methods that include the revegetation, application of palliatives or other District approved methods prior to any grading of new phases, as well as effective street cleaning for any mud or soil tracking to existing paved surfaces, and dust controls on any screening methods or storage piles located on the site.

50. Prior to approval of the first final map, an erosion control and soil stabilization plan and a grading plan shall be approved by the Washoe-Storey Conservation District. A copy of the approval shall be submitted to the District Health Department, Department of Development Review, and County Engineer.
51. A buffer shall be provided next to riparian vegetation. The size of the buffer shall be mutually agreeable to Washoe County and the developer. A minimum 50-foot buffer shall be provided from any structures. The Department of Development Review shall be responsible for determining compliance with this condition.
52. Individual lot drainage shall not be allowed to drain onto neighboring properties without proper reciprocal drainage easements and the individual lot drainage swales shall be designed to handle the 100-year flows and lined. The County Engineer shall be responsible for determining compliance with this condition.

#### WATER AND WASTEWATER

53. The developer shall construct or provide the financial assurances for the construction of the water and sewer system facilities. The financial assurances must be in a form and amount that is satisfactory to the Utility Division.
54. Fees for plan checking and inspection shall be paid in accordance with Washoe County ordinance. The Utility Division shall be responsible for determining compliance with this condition.
55. Easements for all water and sewer utilities shall be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
56. No "certificate of occupancy" shall be issued until the water and sewer facilities have been completed and accepted for operation and maintenance. The Utility Division shall be responsible for determining compliance with this condition.
57. The sanitary sewer collection system and water system facilities, with the exception of the golf course and common area irrigation systems, must be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
58. The Nevada Division of Environmental Protection must submit a letter to the District Health Department certifying their approval of the final map.

59. The developer shall deposit with the Utility Division the sum of \$50.00 per lot prior to recordation of all or part of the final map. This fee shall represent the prorated share of the completed water and wastewater facilities plan for the South Truckee Meadows for this development.
60. In accordance with the Washoe County Utility Division policies for the Southwest Truckee Meadows, water rights shall be dedicated to Washoe County. Prior to acceptance, the water rights must be in good standing with the State of Nevada Division of Water Resources and must reflect a point of diversion, place and manner of use acceptable to the Utility Division.
61. All minor infrastructure for potable water distribution shall be designed, constructed, inspected, and approved by the District Health Department and the Utility Division. The developer shall coordinate with the Utility Division to ensure the major infrastructure design can be accomplished prior to the approval of the final map.
62. Responsibility for design of wells, pump structure, controls, telemetry, and appurtenances, storage tanks, and transmission lines to the edge of the subdivision, all necessary to provide water service to the project, will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
63. Prior to final map approval, a letter of approval from the Division of Water Resources for the water rights serving this proposal must be submitted. A water "will-serve" letter for a final map will not be issued until the production wells have been determined to have adequate water resource. The Utility Division shall be responsible for determining compliance with this condition.
64. Before approval of the final map will be considered, a letter from the water purveyor committing adequate water service to this proposal must be submitted to the District Health Department. This letter shall indicate that the facility will not be brought beyond its permitted capacity by this service.

65. Prior to the approval of a final map by the District Health Department, the production wells that will serve any phase of this development must be constructed, pump tested and sampled to ensure the proposed water system has sufficient quality and quantity.
66. Water quality results from a state-certified laboratory for new water sources shall be submitted to the Utility Division. The water quality sampling and testing shall be in compliance with the current State of Nevada Regulations for Public Water Systems, NAC 445.
67. If the water quality of the wells does not meet the secondary or the primary standards, as defined by NAC 445, water treatment facilities must be on-line and functioning prior to issuance of any building permits. The Utility Division shall be responsible for determining compliance with this condition.
68. If a supplemental water source is required, evidence that an adequate source has been procured by the developer/water purveyor shall be submitted to the Utility Division for their review and approval.
69. Any wells on the property not in use for production or monitoring purposes, shall be properly abandoned in accordance with State Regulations governing Water Wells and Related Drilling. The Utility Division shall be responsible for determining compliance with this condition.
70. The developer shall provide access to the existing monitoring wells. In the event access is no longer available, the developer shall construct new wells. The Utility Division shall be responsible for determining compliance with this condition.
71. The tentative maps shall show the maintenance roads for the existing and proposed water tanks. The location of these roads shall be mutually agreeable to the Department of Public Works and the developer.
72. The final map owner's certificate shall contain language indicating that the developer and his assignees agree to the use of residential water meters. The Department of Development Review shall be responsible for determining compliance with this condition.
73. Pursuant to Section 278.340 of the State of Nevada Regulations Governing Review of Plans for Subdivisions, Condominiums, and Planned Unit Developments, no grading permit shall be issued prior to District Health Department approval of the referenced final map. This condition does not apply to the construction of production wells required in Condition 68.

The developer may seek relief from the District Board of Health for this requirement or may choose to create a separate parcel for the first 18-hole golf course.

74. The Department of Development Review shall be responsible for determining compliance with this condition. The final map shall contain the following note:

**NOTE**

No Certificate of Occupancy shall be issued until the water facilities have been completed and accepted by Washoe County.

75. Responsibility for design of any pump stations and interceptors to provide sewer service to the project will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
76. All minor infrastructure for sewer collection shall be designed, constructed, inspected, and approved by the District Health Department and the Utility Division.
77. The sewer "privilege connection fee" must be paid for each lot when required by the Washoe County Utility Division since it is not anticipated that there will be any additional major infrastructure needed to serve this development. The Utility Division shall be responsible for determining compliance with this condition.
78. All sewer hookup fees for the area within the final map will be paid to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
79. The final subdivision map shall show a dedicated, all-weather easement, with access, over the developments sanitary sewer lines. The Utility Division shall be responsible for determining compliance with this condition.
80. Proper easements shall be shown for off-site sewage and drainage systems. The Utility Division and the County Engineer shall be responsible for determining compliance with this condition.

81. Prior to final map approval, a letter, which can be a will-serve letter, from the Utility Division committing sewer service, must be submitted to the District Health Department. This letter shall indicate that the treatment facility will not be brought beyond its permitted capacity by this service.

### **FIRE PROTECTION**

82. The plans submitted with a building permit application shall show evidence of compliance with the recommendations of the applicable fire protection agency. Those concerns are fire flows, fire hydrant number and location, access, sequential phasing of firebreaks during development, permanent firebreaks, minimum defensible space, use of fire resistant construction and/or roof material, sprinklering of structures, and spark arrestors in chimneys. Access and fire flows shall be addressed to the satisfaction of the fire protection agency prior to the approval of a final map.
83. The developer shall minimize grading to the maximum extent possible in the area around the critical mule deer habitat in order to preserve the existing browse shrubs. The Department of Development Review, in conjunction with the applicable fire protection agency, shall be responsible for determining compliance with this condition.

### **OTHER**

84. A minimum 25-foot landscape buffer shall be installed between the homes and the collector and the arterial streets. The homeowners association shall be required to perpetually maintain these areas. The Department of Development Review shall be responsible for determining compliance with this condition.(CC&Rs)
85. Prior to acceptance of the first final map, the telephone easement Doc. No. 415899, which runs through the middle of many lots, shall be realigned with appropriate abandonment and relocation easements, or the proposed lots realigned. The County Engineer shall be responsible for determining compliance with this condition.

[this space intentionally left blank]

**CONDITIONS**  
**FOR**  
**SPECIAL USE PERMIT CASE NO. \_\_\_\_\_**

(As recommended by Department of Development Review and attached to Staff Report dated \_\_\_\_\_ )

\*\*\* important -- please read \*\*\*

**UNLESS OTHERWISE SPECIFIED, ALL CONDITIONS MUST BE MET OR FINANCIAL ASSURANCES MUST BE PROVIDED TO SATISFY THE CONDITIONS PRIOR TO SUBMITTAL FOR A BUILDING PERMIT. THE AGENCY RESPONSIBLE FOR DETERMINING COMPLIANCE WITH A SPECIFIC CONDITION SHALL DETERMINE WHETHER THE CONDITION MUST BE FULLY COMPLETED OR WHETHER THE DEVELOPER SHALL BE OFFERED THE OPTION OF PROVIDING FINANCIAL ASSURANCES. ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL HAVE A COPY FILED WITH THE COUNTY ENGINEER AND THE DEPARTMENT OF DEVELOPMENT REVIEW.**

**COMPLIANCE WITH THE CONDITIONS OF THIS SPECIAL USE PERMIT IS THE RESPONSIBILITY OF THE DEVELOPER, HIS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY AND THEIR SUCCESSORS IN INTEREST. FAILURE TO COMPLY WITH ANY CONDITIONS IMPOSED IN THE ISSUANCE OF THE SPECIAL USE PERMIT MAY RESULT IN THE INSTITUTION OF REVOCATION PROCEDURES.**

**WASHOE COUNTY RESERVES THE RIGHT TO REVIEW AND REVISE THE CONDITIONS OF THIS APPROVAL SHOULD THEY DETERMINE THAT A SUBSEQUENT LICENSE OR PERMIT ISSUED BY WASHOE COUNTY VIOLATES THE INTENT OF THIS APPROVAL.**

**GENERAL CONDITIONS**

1. As part of every special use permit application, the developer shall include a completed "statement of compliance" that demonstrates how the development will be or is consistent with the recorded final Development Agreement. The

Department of Development Review shall be responsible for determining compliance with this condition.

2. Prior to ground-disturbing activity, the developer shall submit an archaeological/historical survey to the Department of Development Review. The Department of Development Review shall submit the survey to the State Historic Preservation Office of the Department of Museums, Library and Arts for review. Following that review, the State Historic Preservation Office shall submit a letter to the Department of Development Review that indicates the survey was acceptable.
3. A note shall be placed on all grading plans and construction drawings stating:

**NOTE**

Should any prehistoric or historic remains/artifacts be discovered during site development, work shall temporarily be halted at the specific site and the State Historic Preservation Office of the Department of Museums, Library and Arts, shall be notified to record and photograph the site. The period of temporary delay shall be limited to a maximum of two (2) working days from the date of notification.

4. Prior to acceptance of public improvements and release of any financial assurances, the developer shall furnish to the Utility Division and/or Engineering Division a complete set of reproducible 'as built' construction drawings prepared by a civil engineer registered in the State of Nevada.
5. The developer shall be required to participate in any applicable General Improvement District or Special Assessment District formed by Washoe County. The applicable division of the Department of Public Works shall be responsible for determining compliance with this condition.
6. All new utilities shall be placed underground. The County Engineer shall be responsible for determining compliance with this condition.
7. An animal waste management plan shall be prepared prior to the issuance of any building permit for a facility that might require such a plan. The plan must document how the migration of bacteria, nutrients, and other animal waste by-products to surface and ground waters will be prevented. The Department of Development Review shall be responsible for determining compliance with this condition.

### **STREETS AND TRAFFIC**

8. All street construction shall comply, at a minimum, with the requirements for a subdivision within this project. The County Engineer shall be responsible for determining compliance with this condition.
9. The developer shall submit a detailed geotechnical analysis and report for pavement design recommendations to the County Engineer for review and approval. The report shall be based on the estimated traffic loadings for a 20-year design life and shall include assumptions concerning the distribution of trucks, to include project construction truck traffic. The resultant pavement thickness in the geotechnical analysis must be used if the report indicates a structural section that is stronger than minimum is required. The County Engineer shall be responsible for determining compliance with this condition.
10. The minimum pavement structural section shall be 5 inches of asphalt over 8 inches of aggregate base for minor arterials, 4 inches of asphalt over 6 inches of granular base for roadways (private and public) for collector streets, and 3 inches of asphalt over 6 inches of granular base for roadways for local streets. The County Engineer shall be responsible for determining compliance with this condition.
11. Prior to the issuance of the first building permit, two lanes of Whites Creek Lane shall be constructed, to two-lane minor arterial standards as a minimum, from Thomas Creek Road to the project site. The County Engineer shall be responsible for determining compliance with this condition.
12. Prior to the issuance of the first building permit, a second access shall be constructed to the project site to emergency standards. The applicable fire protection agency shall be responsible for determining compliance with this condition.
13. Construction near fault lines shall be as follows:
  - a. Buildings for human occupancy shall be set back from the centerline of fault traces. Setback distances shall be determined by a geotechnical investigation prepared by a Nevada Registered Civil Engineer experienced in geotechnical engineering. The minimum setback shall be 50 feet on each side of the fault line.
  - b. Roadway construction in fault zones and along fault traces shall be reviewed by a Nevada Registered Civil Engineer experienced in

geotechnical engineering. Any recommended special construction requirements (e.g., flexible joint connections for utilities) shall be complied with.

The County Engineer shall be responsible for determining compliance with this condition.

14. Asphalt paths or gravel shoulders, located adjacent to private streets shall be privately maintained and funded. The County Engineer shall be responsible for determining compliance with this condition.
15. No at-grade golf cart crossings shall be allowed across any street with 500 ADT or greater. Where possible, crossings should be below the grade of public streets. The County Engineer shall be responsible for determining compliance with this condition.

#### **GRADING AND DRAINAGE**

16. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of any special use permit, a preliminary hydrology report shall be submitted to the County Engineer for approval. This preliminary hydrology report shall be prepared in accordance with county requirements for tentative maps, in conformance with the general concept-level storm drain master plan, and be applicable to the specific tentative map or special use permit being approved.

The report shall include, as a minimum, the locations, points of entry and discharge, flow rates and flood limits of all 10- and 100-year storm flows impacting both on-site and off-site areas and the methods for handling these flows as well as the proposed methods for handling storm water increases due to development. Proposed mitigation measures shall be included for any impacts on existing on-site and off-site properties and facilities. The County Engineer shall be responsible for determining compliance with this condition.

17. Prior to the submittal of any final map or issuance of any grading permit, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted to the County Engineer for approval. The report shall be in substantial compliance with the general concept-level storm drain master plan and contain all final storm drain pipe, ditch and retention pond sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed, constructed, and by the District Health Department and the County

Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.

Prior to the issuance of a grading permit, the developer shall provide a letter granting a blanket drainage and construction easement to the Southwest Pointe Subdivision that allows the subdivision to drain onto the golf course and to construct detention facilities necessary to accommodate the subdivision-generated stormwaters in mutually agreed-upon locations. The easement shall be submitted with the plans for the final golf course improvements. The County Engineer shall be responsible for determining compliance with this condition.

18. Prior to the approval of a grading permit, a detailed dust control plan shall be prepared and submitted to Air Quality Management of the District Health Department and to the Department of Development Review. The dust control plan shall address, as a minimum, "phased grading" and stabilization methods that include the revegetation, application of palliatives or other District approved methods prior to any grading of new phases, as well as effective street cleaning for any mud or soil tracking to existing paved surfaces, and dust controls on any screening methods or storage piles located on the site.
19. For all projects larger than 5 acres, the developer shall obtain a Stormwater Discharge Permit from the Nevada Division of Environmental Protection and submit a copy to the County Engineer prior to ground-disturbing activity.
20. The developer shall provide pretreatment for petrochemicals, nutrients and other chemicals used for landscaping, and silt for all storm drainage from the site. Systematic cleaning of the streets, parking lots, and catch basins, and control of salt and sanding activities shall to be delineated in the maintenance plan. The County Engineer shall be responsible for determining compliance with this condition.
21. The stormwater discharges from this development that flow to Dry Creek shall be controlled to pre-development flow conditions and will be controlled to prevent water quality degradation of Steamboat Ditch. The developer shall provide drainage structures under Steamboat Ditch that would pass the 10-year frequency storm or demonstrate that there will not be any water quality degradation in Steamboat Ditch. The County Engineer shall be responsible for determining compliance with this condition.
22. All street crossings of Thomas and Dry Creeks shall be designed to pass the 100 year flood flows without obstruction or overtopping of the roadway. Erosion protection shall be provided based upon the recommendation of the geotechnical

- report. The County Engineer shall be responsible for determining compliance with this condition.
23. Standard reinforced concrete headwalls or other approved alternatives shall be placed on the inlet and outlet of all drainage structures and rip-rap shall be used to prevent erosion at the inlets and outlets of all pipe culverts. The District Health Department and the County Engineer shall be responsible for determining compliance with this condition.
  24. Prior to issuance of a grading permit for the golf course and/or final map, a final wetlands determination must be made and approved by the Army Corps of Engineers and the approval letter provided to the Department of Development Review.
  25. Prior to issuance of a grading permit for the golf course or approval of the final map, the developer shall obtain from the United States Army Corps of Engineers a 404 permit for wetland and dredge and fill for all roadway crossing of Thomas and Dry Creeks, or a letter from the COE indicating that a 404 permit is not required and a copy submitted to the County Engineer.
  26. The developer shall submit to the District Health Department a letter approving the proposed methods of erosion control and soil stabilization from the Washoe-Storey Conservation District.
  27. Prior to the issuance of a grading permit for the golf course, a golf course management plan shall be prepared that documents how the migration of fertilizers, pesticides, herbicides, and fungicides to surface and ground waters will be prevented. A surface and ground water sampling program shall be implemented to demonstrate that migration is not occurring and commits to modifying practices in the event that any of the above materials are detected. The Department of Development Review shall be responsible for determining compliance with this condition.

#### WATER AND WASTEWATER

28. The sanitary sewer collection system and water system facilities, with the exception of the golf course and common area irrigation systems, must be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.

29. The developer shall construct or provide the financial assurances for the construction of the water and sewer system facilities. The financial assurances must be in a form and amount that is satisfactory to the Utility Division.
30. Fees for plan checking and inspection shall be paid in accordance with Washoe County ordinance. The Utility Division shall be responsible for determining compliance with this condition.
31. Easements for all water and sewer utilities shall be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
32. No "certificate of occupancy" shall be issued until the water and sewer facilities have been completed and accepted for operation and maintenance. The Utility Division shall be responsible for determining compliance with this condition.
33. If required and in accordance with the Washoe County Utility Division policies for the Southwest Truckee Meadows, water rights shall be dedicated to Washoe County. Prior to acceptance, the water rights must be in good standing with the State of Nevada Division of Water Resources and must reflect a point of diversion, place and manner of use acceptable to the Utility Division.
34. Responsibility for design of wells, pump structure, controls, telemetry, and appurtenances, storage tanks, and transmission lines to the edge of the subdivision, all necessary to provide water service to the project, will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
35. Water quality results from a State of Nevada-certified laboratory for new water sources shall be submitted to the Utility Division. The water quality sampling and testing shall be in compliance with the current State of Nevada Regulations for Public Water Systems, NAC 445.
36. If the water quality of the wells does not meet the secondary or the primary standards, as defined by NAC 445, water treatment facilities must be on-line and

functioning prior to issuance of any building permits. The Utility Division shall be responsible for determining compliance with this condition.

37. If a supplemental water source is required, evidence that an adequate source has been procured by the developer/water purveyor shall be submitted to the Utility Division for their review and approval.
38. Any wells on the property not in use for production or monitoring purposes, shall be properly abandoned in accordance with State Regulations governing Water Wells and Related Drilling. The Utility Division shall be responsible for determining compliance with this condition.
39. The developer shall provide access to the existing monitoring wells. In the event access is no longer available, the developer shall construct new wells. The Utility Division shall be responsible for determining compliance with this condition.
40. Responsibility for design of any pump stations and interceptors to provide sewer service to the project will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
41. The sewer "privilege connection fee" must be paid for each lot when required by the Washoe County Utility Division since it is not anticipated that there will be any additional major infrastructure needed to serve this development. The Utility Division shall be responsible for determining compliance with this condition.

#### **FIRE PROTECTION**

42. The plans submitted with a building permit application shall show evidence of compliance with the recommendations of the applicable fire protection agency. Those concerns are fire flows, fire hydrant number and location, access, sequential phasing of firebreaks during development, permanent firebreaks, minimum defensible space, use of fire resistant construction and/or roof material, sprinklering of structures, and spark arrestors in chimneys. Access and fire flows shall be addressed prior to the introduction of any combustible materials to the

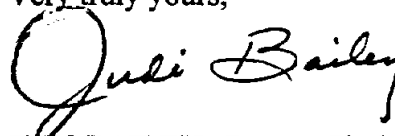

site. The fire protection agency shall be responsible for determining compliance with this condition.

43. The developer shall minimize grading to the maximum extent possible in the area around the critical mule deer habitat in order to preserve the existing browse shrubs. The Department of Development Review, in conjunction with the applicable fire protection agency, shall be responsible for determining compliance with this condition.

### **LANDSCAPING**

44. Detailed landscaping and irrigation plans for the village commercial center, club house, golf course, golf driving range, equestrian center, or other non-residential uses requiring special use permit review shall be submitted prior to the issuance of a building permit for the particular use.
45. A buffer shall be provided between the fairways/greens and all creeks. The setback of the buffer shall comply with 100.200(e) of the Uniform Building Code Section 7011 amended. The Department of Development Review shall be responsible for determining compliance with this condition.

Very truly yours,

JUDI BAILEY, County Clerk  
and Clerk of the Board of  
Washoe County Commissioners

**BOARD OF COUNTY COMMISSIONERS, WASHOE COUNTY, NEVADA**

TUESDAY

9:00 A.M.

JULY 23, 1996

PRESENT:

Steve Bradhurst, Chairman  
Grant Sims, Vice Chairman  
Joanne Bond, Commissioner  
Mike Mouliot, Commissioner

RECEIVED

AUG 14 1996

WASHOE COUNTY  
DEVELOPMENT REVIEW

Judi Bailey, County Clerk (a.m.)  
Betty Lewis, Chief Deputy County Clerk (p.m.)  
John MacIntyre, County Manager  
Madelyn Shipman, Legal Counsel

ABSENT:

Jim Shaw, Commissioner

The Board met in regular session in the Commission Chambers of the Washoe County Administration Complex, 1001 East Ninth Street, Reno, Nevada. Following the pledge of allegiance to the flag of our Country, the Clerk called the roll and the Board conducted the following business:

**AGENDA**

In accordance with the Open Meeting Law, on motion by Commissioner Bond, seconded by Commissioner Sims, which motion duly carried, Chairman Bradhurst ordered that the agenda for the July 23, 1996, meeting be approved.

**MINUTES**

On motion by Commissioner Bond, seconded by Commissioner Mouliot, which motion duly carried with Commissioner Sims abstaining, Chairman Bradhurst ordered that the minutes of the regular meeting of June 25, 1996, be approved.

**PUBLIC COMMENTS**

There was no response to the call for public comments.

96-733

**MANUFACTURER'S LICENSE - COPPER SUMMIT BREWING CO., LTD.**

Upon recommendation of Richard Kishpaugh, Business License Division, on motion by Commissioner Bond, seconded by Commissioner Sims, which motion duly carried, Chairman Bradhurst ordered that a brew pub manufacturer's license for Copper

Summit Brewing Co., Ltd., located at 7671 South Virginia Street, Reno, Nevada, be granted subject to approval by the City of Reno Business License Department.

96-734            **ORDINANCE NO. 963, BILL NO. 1138 - FINAL DEVELOPMENT AGREEMENT - SOUTHWEST POINTE**

**9:30 a.m.**        This was the time set in a Notice of Public Hearing published in the Reno Gazette-Journal on July 12, 1996, to consider second reading and adoption of Bill No. 1138, approving the Final Development Agreement for Southwest Pointe, a residential community of 1,090 homesites with golf courses and recreational and commercial facilities in the Southwest Truckee Meadows planning area. Proof was made that due and legal Notice had been given.

Don Young, Department of Development Review Planner, presented an overview of the history of the Southwest Pointe project stating that this is the first legislatively enabled Development Agreement to be presented to the Board; and that the purpose of a Development Agreement is to provide protection against future changes in an increasingly complex and uncertain land development process, which is necessary in a project such as this that will not be completed for many years. He further stated that the Preliminary Development Agreement was approved by the Board on February 8, 1994; and that, although it has been amended a couple of times, there have been no major changes or issues relating to the project other than the alignment of White's Creek Lane which was resolved. Mr. Young explained that the applicant's representative, Attorney Robert Sader, has submitted a letter clarifying the non-potable water source to be used as the interim water supply for irrigating the golf course and common areas until such time as the treated effluent from the South Truckee Meadows Wastewater Treatment Plant is available.

Using the overhead projector, Mr. Young then displayed the findings that the Board must be able to make in accordance with the Development Code in order to approve the Final Development Agreement and staff's rationale for determining that the findings can be made. He stated that those required findings are: Finding #1) the proposed gross residential density or intensity of use is not changed, or the total number of dwelling units permitted by the Preliminary Development Agreement, 1,090, is the same; (note: Mr. Young stated that in double-checking, it was determined that the zoning only allows for 1,084 residential units, but that the 1,090 figure was provided to the developer by staff back in 1992 and that the developer has relied on that number all these years.); Finding #2) the proposed ratio of residential to non-residential use is not changed; Finding #3) the area set aside for common open space is not reduced or the area is not substantially relocated; Finding #4) the floor area proposed for non-residential use is not increased; Finding #5) the total ground area covered by buildings and the height of buildings is not increased; and Finding #6) the plan provisions are consistent with the adopted Preliminary Development Agreement.

In response to Chairman Bradhurst, Mr. Young advised that CAB review and Planning Commission approvals were required before the Preliminary Development Agreement and the amendments thereto were approved by the County Commissioners; and that one of the reasons there is very little controversy on this project is because there have been so many reviews.

In response to Commissioner Sims, Mr. Young, Mr. Sader and John Collins, Washoe County Utility Division, provided a more detailed explanation concerning the agreement regarding the non-potable water and the use of creek water and/or potable water when non-potable water is not available for the golf course.

The Chairman opened the public hearing by calling on anyone wishing to speak for or against adoption of said Ordinance.

Brita Tryggvi, CFA, Inc., representing the developer, was present to respond to questions. She stated that the Chairman of the Southwest Truckee Meadows Citizen Advisory Board has requested some minor wording changes to clarify and emphasize that public access will be allowed to the golf course and pedestrian/bike paths and pointed out a typographical error on Table 1-2 which indicates the lot sizes by percentages of total lots. Ms. Tryggvi stated that the developer does not have a problem with these changes; and she and Mr. Young then cited the specific pages where the wording could be changed as proposed. Legal Counsel Madelyn Shipman advised that since these are minor changes needed just for clarification or to correct errors and are not part of the ordinance, she is not concerned.

Mr. Sader reviewed the planning process for this specific project and answered questions of the Board. He also pointed out typographical errors and requested that corrections be made.

Lyn Mundt, Southwest Truckee Meadows Citizen Advisory Board Chair, stated that the CAB feels very strongly that public access through the development for bikes and pedestrians be insured and suggested that wording to that effect be added to the CC&R's as well as the Development Standards Handbook and cited pages that the CAB would like to have changed. She discussed the use of White's Creek Lane as the construction haul route and stated that it was always assumed that White's Creek would be completed to two paved lanes prior to the issuance of the 31st building permit and requested that that be changed. She also talked about the use of non-potable creek water being used for dust control, the golf course, etc., until the treated effluent is available and expressed a concern regarding downstream water rights holders and whether the required State Engineer approvals for such use have been received. Ms. Mundt then cited Section E, page 8-1, regarding certain modifications being approved by the Director of the Department of Development Review and stated that the citizens of the Southwest Truckee Meadows are very uncomfortable with that provision and requested that, at the very least, there should be notification, a time frame, and the changes should be presented to the CAB for comment.

Chairman Bradhurst asked Ms. Mundt if she is satisfied that there has been good citizen involvement in this process and project. Ms. Mundt stated that she is and that CFA has been very good at working with them and that many of the problems were resolved before this went to the Planning Commission.

There being no one else wishing to speak, Chairman Bradhurst closed the public hearing.

Advising that he is authorized by the developers to approve changes that might be requested at this meeting, Mr. Sader stated that as far as public access to the paths, the developer is prepared to make the appropriate changes requested by Ms. Mundt to satisfy that concern; and that he certainly appreciates that the CAB Chairman has taken the time to really review this and is prepared to discuss it. Mr. Sader further stated that he would like to discuss the other three issues raised by Ms. Mundt, the haul route, the creek rights, and having all future changes reviewed and approved by the CAB, a little further. Regarding the haul route, Mr. Sader stated that he thinks there is just a misunderstanding in that the language in Exhibit I addresses what happens prior to issuance of the 35th building permit and the conditions of the Tentative Map require that two lanes of White's Creek Lane be completed prior to the issuance of the 35th building permit.

In regard to the use of creek water until the treated effluent is available, Mr. Sader explained that both Thomas Creek and White's Creek flow right through the project; that they are not planning to divert Thomas Creek water, so Corps of Engineer approval is not required; that the plan is to let that water flow all the way through, just as it does now, until it gets to the sewer treatment plant at which point the water is owned by South Meadows Properties; and that that is where the water has primarily been used for the last 100 years. He further stated that South Meadows is then selling some of these water rights for Southwest Pointe to use up on the fan; that the plan is to store the water in the treatment facility reservoir and then pump it back up; and that they will need to obtain State Engineer approval to change the way the water is used. He stated that he would suggest adding language indicating that any necessary State or Federal approvals must be obtained; and that he wants to assure the Board that they are not going to divert Thomas Creek.

Mr. Sader then stated that the issue on substantial compliance is by far the most important to all concerned. He stated that a project this large, that is going to take 15 years to complete, is going to change; that some changes will be substantial and some will not; and that the question is--should every change go through the whole procedure required for changing a development agreement with lengthy publication and public hearing processes. Mr. Sader explained that what has been negotiated so far is that insubstantial changes can be done through the Director of the Department of Development Review and substantial changes be done through the Board; and that the system will not work if every change has to go through the whole process. Chairman Bradhurst cited the examples of insubstantial changes and asked who is going to determine what is substantial noting that there should at least be CAB review of changes.

Mr. Sader responded that the question of whether an issue is substantial or insubstantial is made by the Director and is appealable; and stated that he does not have a problem with CAB review; and that he would urge that the Board not change the basic concept of the development agreement process. Chairman Bradhurst suggested that adding "with review and comment by the CAB" in Exhibit "E", the Development Standards Handbook, on page 8-1, after "Modifications that are in substantial compliance with the overall character.....and approved by the Director of Development Review." Mr. Sader stated that they would agree to that addition.

Ms. Mundt stated that she understands that it would be unworkable to expect CAB approval of every change, but that without some kind of notification and chance for comment back to the Director, there could be changes that the citizens know nothing about and would not have a chance to appeal; and that she agrees with the wording Chairman Bradhurst suggested.

Commissioner Bond suggested that the Director of Development Review provide periodic reports to the Board regarding the changes being requested. Mr. Young advised that the conditions of the Development Agreement require quarterly reports and Nevada Revised Statutes requires a 2-year review process.

Commissioner Sims asked where he can find the specific conditions regarding screening along White's Creek Lane stating that he has been approached by residents who have expressed concerns and that it appears that not all the affected property owners are in agreement as to the type of screening they would like to see. Mr. Young cited the condition and stated that that will be addressed when the special assessment district for White's Creek Lane comes back before the Board. In further response to Commissioner Sims, Mr. Young confirmed that Fieldcreek property owners will not be assessed in the special assessment district for the construction of White's Creek Lane and screening along the road.

Chairman Bradhurst and Mr. Young then reviewed page-by-page the changes that have been requested and agreed upon. Those changes are:

**Final Development Agreement:**

Section 4.6 - Nonpotable Water Agreement: addition of a paragraph on page 11.

Section 7.10 - Indemnity: Correction of typographical errors on page 16.

**Development Standards Handbook (Exhibit E):**

Page 1-5, Table 1-2 - Lot Summary: Corrected numbers are:

12,000 sf - 436 (40%)  
1/2 acre and larger - 382 (35%)  
1 acre and larger - 272 (25%)

Page 2-14, Paragraph 3, last sentence: add the words "a public" so that it reads "The 8-foot width is intended to be a public multi-purpose -- bicycle, pedestrians, in-line skating, etc."

Page 2-22, Paragraph 2, the sentence that starts with "The private street will have an 120-foot..." and ends with "...8-foot wide meandering asphalt path on both sides." Insert a sentence after that that states, "Public access will be allowed to these paths."

Page 2-23, Paragraph 2, add that same sentence after "On collector roads with up to 9,600 ADT, the 8-foot path will be asphalt."

Page 8-1, Paragraph 2, to the sentence that reads "Modifications that are in substantial compliance with the overall character and design of the project may be requested by Southwest Pointe Partners or its successor and approved by the Director of Development Review." add: "with an opportunity for review and comment by the Southwest Truckee Meadows Citizen Advisory Board." Chairman Bradhurst noted that the assumption would be that that would be done before the Director makes his decision.

Chairman Bradhurst asked Ms. Mundt if these changes will satisfy the concerns of the CAB. Ms. Mundt stated that they will. Mr. Sader stated, for the record, on behalf of the owners in the project agreement, that the changes to the development agreement and exhibits discussed are agreed to by the owners.

Based on the findings that:

1. The proposed gross residential density or intensity of use is not changed;
2. The proposed ratio of residential to non-residential use is not changed;
3. The area set aside for common open space is not reduced or the area is not substantially relocated;
4. The floor area proposed for non-residential use is not increased;
5. The total ground area covered by buildings and the height of buildings is not increased; and
6. The plan provisions are consistent with the adopted Preliminary Development Agreement;

on motion by Commissioner Sims, seconded by Commissioner Mouliot, which motion duly carried, Chairman Bradhurst ordered that Ordinance No. 963, Bill No. 1138 entitled, "An ordinance pursuant to Nevada Revised Statutes 278.0201 through 278.0207 approving the Final Development Agreement for Southwest Pointe. The Agreement facilitates the development of a residential community which includes 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities, a day care facility, an equestrian center, and a commercial village center. The project has a total acreage of ±3,271.6 acres and is located north of Mount Rose Highway (SR431) and west of Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) in the Southwest Truckee Meadows Area Plan and is situated within portions of Sections 3, 10, 13, 14, 15, 22, 23, 24, 26 and 27, T18N, R19E, MDM Washoe County, Nevada, (APN: 41-030-12, 49-010-04, and 49-010-10)" including the amendments as listed above and agreed upon by the parties at this meeting, and in accordance with the following Development Agreement, Tentative Map and Special Use Permit conditions, be approved, adopted and published in accordance with NRS 244.100:

**CONDITIONS  
FOR  
DEVELOPMENT AGREEMENT CASE NO. DA9-1-93  
FOR  
SOUTHWEST POINTE**

(As amended by the Washoe County Planning Commission on May 7, 1996)

**UNLESS OTHERWISE STATED, PRIOR TO APPROVAL OF THE FINAL DEVELOPMENT AGREEMENT, ALL CONDITIONS MUST BE MET.**

**A COPY OF ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL BE FILED WITH THE DEPARTMENT OF PUBLIC WORKS AND/OR DEPARTMENT OF DEVELOPMENT REVIEW.**

**COMPLIANCE WITH THE APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES AND WITH THE CONDITIONS OF APPROVAL OF THIS TENTATIVE MAP IS THE RESPONSIBILITY OF THE DEVELOPER, ITS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY, AND THEIR SUCCESSORS IN INTEREST.**

## GENERAL CONDITIONS

1. Unless specifically stated in the final Development Agreement, all uses, densities and standards shall be consistent with the Washoe County Development Code and with the goals and policies in the Comprehensive Plan and the Southwest Truckee Meadows Area Plan. Unless specifically stated in the final Development Agreement, the allowed uses, densities, and standards of the land subject to the Development Agreement shall be those in effect at the time the final agreement is approved.
2. The final Development Agreement shall specify any time frames that have been extended beyond those specified by Washoe County Code or Nevada Revised Statutes. The Department of Development Review shall be responsible for determining compliance with this condition.
3. A "statement of compliance" format or formats for both residential and non-residential projects shall be made a part of the final Development Agreement. The Department of Development Review shall be responsible for determining compliance with this condition.
4. The developer and all successors shall direct any potential purchaser of the site, or portions thereof (other than individual single-family lots), to meet with the Department of Development Review to review the Development Agreement and the conditions of approval prior to the final sale of the site. Any subsequent purchasers of the site shall notify the Department of Development Review of the name, address, telephone number, and contact person of the new purchaser within 30 days of the final sale.
5. Prior to submittal to the Washoe County Board of County Commissioners, the final Development Agreement shall be reviewed and approved by the Office of the District Attorney of Washoe County.
6. The final Development Agreement will be submitted to the Washoe County Board of County Commissioners within three months of submission of a completed agreement with all accompanying exhibits, provided the Department of Development Review does not delay the submission in order to approve provisions of the agreement to its satisfaction. Extension of any of these time frames may be requested if mutually agreeable to Washoe County and the developer.
7. The developer shall provide the Department of Development Review staff with a quarterly report indicating the number of building permits issued and other building activity, once residential construction has started.

8. The developer shall define a process to ensure that the maintenance and replacement of the streets, parking areas, lighting, landscaping, recreational facilities, utilities, and other private infrastructure shall be performed by the homeowners associations and shall be perpetually funded. The County Engineer and the Department of Development Review shall be responsible for determining compliance with this condition.

### STREETS AND TRAFFIC

9. A Level of Service C, or the current Washoe County standard, shall be used as a basis for evaluating transportation needs and traffic impact mitigation requirements.
10. The final Development Agreement shall not be approved until the right-of-way (ROW) of all necessary off-site accesses from the project to Thomas Creek Road are obtained. Preliminary golf course and roadway grading may commence before such approval has been obtained so long as such construction is done in accordance with Condition 21 for tentative maps. An approved and recorded ROW document shall be provided to the County Engineer and the District Attorney's Office.
11. Prior to final approval of the Development Agreement, the developer for Southwest Pointe shall petition the Washoe County Board of County Commissioners to create a Special Assessment District for the purpose of financing the construction of Whites Creek Lane from the project site to Wedge Parkway and other roads as defined in the SAD agreement. In the event that a special assessment district is not created, the developer shall construct Whites Creek Lane, as outlined in Conditions 17 and 19 for tentative maps, from the project site to Wedge Parkway. The County Engineer shall be responsible for determining compliance with this condition.
12. A Construction Traffic Haul Route Plan shall be submitted to the County Engineer for review and approval. The primary construction haul route shall be Whites Creek Lane. However, as part of Phase I development, Zolezzi Lane may be used, for construction mobilization only, for completion of the first 18-hole golf course and for the extension of utilities into the project site.

Prior to approval of any final map or prior to the issuance of the first building permit for the first final map, all construction traffic will be diverted to Whites Creek Lane. No construction traffic will be allowed on Thomas Creek Road between Whites Creek Lane and Zolezzi Lane. Access to Whites Creek Lane will be from the Mt. Rose Highway to Thomas Creek Road. When the 35th building permit is issued, all construction traffic will be required to use Whites Creek Lane from Wedge Parkway. Construction traffic will use Whites Creek Lane from Wedge Parkway if this segment is completed prior to the issuance of the 35th

building permit. Thomas Creek Road from Mt. Rose Highway to the proposed Whites Creek Lane may be considered for a haul route provided the developer submits a traffic analysis and intersection design prepared by a licensed Nevada Civil Engineer which addresses and provides, as a minimum, recommendations regarding:

- a. site distance requirements;
- b. left turn storage capacity and design;
- c. intersection location and alignment;
- d. proximity to existing intersections and recommended separate distances;
- e. existing center median and landscaping concerns;
- f. determination of adequacy of existing Thomas Creek Road roadway geometric section; and
- g. determination of adequacy of existing structural section and load bearing capability.

The submitted report shall be evaluated and accepted by the County Engineer prior to any approval of the use of Thomas Creek Road as a haul route. Once Whites Creek Lane is connected to Wedge Parkway, this road shall become the primary construction haul route.

Any existing or proposed roads that will be used as construction haul routes and are not designated truck routes must be evaluated by a geotechnical study to determine the existing structural section and its load supporting capability. If the pavement section is inadequate to support the proposed construction loadings, the roadway must be redesigned or reconstructed as needed to provide a 20-year design life in accordance with the AASHTO Interim Guide for Flexible Pavements.

13. The developer shall provide a schematic pedestrian circulation plan. The Department of Development Review shall be responsible for determining compliance with this condition. The "statement of compliance" shall require that a detailed pedestrian circulation plan will be submitted as part of each tentative map and approved by the Department of Development Review.
14. Unless specifically stated in these conditions of approval or in the final Development Agreement, all public and private street design and construction is to be done in accordance with the Washoe County standards that are in effect at the time the final Development Agreement is recorded. The County Engineer shall be responsible for determining compliance with this condition.
15. Unless otherwise stated in these conditions of approval or in the final Development Agreement, all roadway improvements necessary (including but not limited to, curb, gutter, sidewalk, signing and striping, driveway access, and street lighting) to serve the project shall be designed and constructed to county

standards and specifications and/or financial assurances in an appropriate form and amount shall be provided. The County Engineer shall be responsible for determining compliance with this condition.

16. All private roadways shall be depicted on the final maps and identified on the tentative map as either private access easements over individual adjacent lots or, if identified as separate parcels, as either common areas with equal fractional ownership by all of the lots within the development or common areas owned by the homeowners association. The County Engineer shall be responsible for determining compliance with this condition.

### **GRADING AND DRAINAGE**

17. A general concept-level storm drain master plan shall be submitted to the County Engineer for approval prior to acceptance of the final Development Agreement. The general concept-level storm drain master plan shall address in general terms proposed methods for handling the existing and increased flows for the 10- and 100-year storms including detention and other proposed mitigation measures for both on-site and off-site areas. This master plan shall include a drawing which shows the existing drainage basins within the development and indicate how they may be impacted. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of a tentative map for any phase or approval of any special use permit, a preliminary hydrology report shall be submitted to the County Engineer for approval. The County Engineer shall be responsible for determining compliance with this condition.
18. Detention/retention facilities are to be maintained by a homeowners association and perpetually funded unless Washoe County agrees to accept maintenance and financial responsibilities. Regional facilities would be maintained by Washoe County. The County Engineer shall be responsible for determining compliance with this condition.
19. A maintenance plan of all drainage facilities to be owned by the homeowners association shall be provided prior to approval of the conditions, covenants, and restrictions (CC&Rs). All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe County water treatment plant and associated Steamboat Ditch conveyance system. The County Engineer shall be responsible for determining compliance with this condition.
20. The off-stream detention/debris basin recommended in the 1990 Kennedy, Jenks, Chilton report shall be reserved based on the following timetable:
  - a. Washoe County will have three years to obtain the necessary permits for construction of the off-stream detention basin. This three years shall commence

upon the approval of the final Development Agreement. If Washoe County fails to obtain the necessary permits, the property for the detention site shall be offered by the developer or his successors, for dedication to the Washoe County School District for a middle school or revert to open space.

b. If Washoe County does obtain the necessary permits within three years, construction of the project shall commence within 5 years of the approval of the final Development Agreement. If construction is not started by that date, the property for the detention site shall be offered by the developer or his successors, for dedication to the Washoe County School District for a middle school or revert to open space.

c. If an alternative solution or site becomes available for flood control, this property will immediately become available for dedication to the Washoe County School District for a middle school or revert to open space.

d. If the detention basin is constructed, Washoe County shall pay fair market value for the property.

21. The increase in development-caused runoff from the 100-year storm, including drainages which run directly into the Steamboat Ditch, shall be detained/retained on-site because of the limited capacity of the flood control facilities in the area of South Virginia Street and the Steamboat Ditch Company. The County Engineer shall be responsible for determining compliance with this condition.
22. A geotechnical report shall be prepared, which considers the effects of earthquake forces and faulting in the area. The siting and design of detention/retention facilities shall be addressed based on the findings and recommendations provided in the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.
23. The development shall comply with the requirements of the Hillside Ordinance of the Development Code, as applicable. The Department of Development Review shall be responsible for determining compliance with this condition.

#### **WATER AND WASTEWATER**

24. A schematic water system plan for the referenced proposal must be submitted to the Utility Division and the District Health Department. Prior to a final map approval, the plan must show that the water system will conform to the State of Nevada Water Supply Regulations, NAC Chapter 445, and the State of Nevada Regulations Governing Review of Plans for Subdivisions, Condominiums, and Planned Unit Developments, NAC 278.400 through 278.410.

25. Prior to the approval of the final Development Agreement, a complete water analysis from at least one monitoring well must be submitted to the District Health Department. The analysis must demonstrate the water conforms to the existing and proposed drinking water standards.
26. The developer shall utilize treated wastewater from the South Truckee Meadows Wastewater Treatment Plant. As part of the initial construction, the developer shall provide the necessary on-site easements needed to construct the infrastructure. When this resource becomes available to irrigate the golf course, the developer shall construct the necessary on-site infrastructure. The Utility Division shall be responsible for determining compliance with this condition.

### **FIRE PROTECTION**

27. If requested by the applicable fire protection agency, a minimum one-acre site for a fire station shall be offered for dedication prior to recordation of the first final map. The developer shall enter into talks with the applicable fire protection agency for any other requirements, such as, a fire station site, manpower and equipment needs, or for coordination with other developments that have similar requirements and the results of those discussions, as they relate to the entire project, shall be incorporated into the Development Agreement.

### **PARKS/RECREATION/OPEN SPACE**

28. An open space management plan and map shall be prepared that specifies the ownership of open spaces, type of uses allowed and who is responsible for maintenance. This plan shall address the provisions of Section 110.408.45 of the Development Code. Common areas shall be maintained by the homeowners association and provisions be made for perpetual funding for maintenance.

--

Prior to approval of the final Development Agreement, a government entity (e.g. United States Forest Service, Washoe County Parks Department, etc.) or a non-profit organization (e.g. Washoe Parks Foundation) shall be identified that will accept the dedication of the open space buffers identified on the Concept Plan, which consists of approximately 1,500 acres. The Parks and Recreation Department and the Department of Development Review shall be responsible for determining compliance with this condition.

29. The final Development Agreement shall include a provision for the public open space that prohibits the sale of any open space without the consent of Washoe County. The Department of Development Review shall be responsible for determining compliance with this condition.
30. A minimum 10-acre public park site shall be offered for dedication to the county. A sketch plan will be included in the final Development Agreement. The final

park design shall be mutually agreeable to the county and the developer. The developer will construct the recreation facilities in the park and then be reimbursed for the cost of the construction from the Residential Construction Tax. The responsibility of park maintenance shall be negotiated by the developer and Washoe County prior to the approval of the final Development Agreement. The Parks and Recreation Department and Department of Development Review shall be responsible for determining compliance with this condition.

31. The developer will work with the Department of Parks and Recreation to locate the proposed regional public trails to the satisfaction of Washoe County and the developer. The Parks and Recreation Department and Department of Development Review shall be responsible for determining compliance with this condition.

### LANDSCAPING/ARCHITECTURAL DESIGN

32. Prior to approval of the final Development Agreement, the developer shall submit a Development Standards Handbook for the entire project to the Design Review Committee for its review and approval. These guidelines shall address, but not be limited to, type and color of building material, general architectural design, fencing, landscaping material (if plant material: type, size at time of planting, maturation size at full growth, period of time between planting and full growth), landscaping location, landscaping irrigation system, and financial assurances that landscaping will be planted and maintained.

The Design Review Committee shall also review the design of Whites Creek Lane, specifically to address Condition 19.c. for tentative maps. The Department of Development Review shall be responsible for determining compliance with this condition.

[this space intentionally left blank]

**CONDITIONS  
FOR  
TENTATIVE SUBDIVISION MAP CASE NO. \_\_\_\_\_  
FOR  
\_\_\_\_\_ SUBDIVISION**

(As recommended by Department of Development Review and attached to Staff Report dated \_\_\_\_\_ )

**UNLESS OTHERWISE STATED, PRIOR TO FINALIZATION OF ANY PORTION OF THE TENTATIVE SUBDIVISION MAP, ALL CONDITIONS MUST BE MET OR FINANCIAL ASSURANCES TO ENSURE COMPLETION OF THE CONDITIONS MUST BE PROVIDED. THE AGENCY RESPONSIBLE FOR DETERMINING COMPLIANCE WITH A SPECIFIC CONDITION SHALL DETERMINE WHETHER THE CONDITION MUST BE FULLY COMPLETED OR WHETHER THE DEVELOPER SHALL BE OFFERED THE OPTION OF PROVIDING FINANCIAL ASSURANCES.**

**A COPY OF ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL BE FILED WITH THE DEPARTMENT OF PUBLIC WORKS AND/OR DEPARTMENT OF DEVELOPMENT REVIEW.**

**THE DEVELOPER SHALL MEET WITH THE ENGINEERING DIVISION AND THE DEPARTMENT OF DEVELOPMENT REVIEW AT LEAST SIXTY (60) DAYS BEFORE THE ANTICIPATED DATE OF APPROVAL BY THE PLANNING COMMISSION TO REVIEW SCHEDULING, REQUIREMENTS, FINAL CONSTRUCTION DRAWINGS; AND DOCUMENTATION NECESSARY TO ADEQUATELY COMPLY WITH THE CONDITIONS OF APPROVAL AND THE APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES. NO FINAL MAP WILL BE SCHEDULED FOR A PLANNING COMMISSION MEETING DATE THAT IS LESS THAN SIXTY (60) DAYS FROM THE DATE OF THIS MANDATORY MEETING.**

**A REQUEST FOR AN EXTENSION OF TIME FOR THE RECORDING OF A FINAL MAP MUST BE SUBMITTED TO THE DEPARTMENT OF DEVELOPMENT REVIEW AT LEAST SIXTY (60) DAYS PRIOR TO THE EXPIRATION DATE OF THE TENTATIVE SUBDIVISION MAP. SAID EXPIRATION IS TWO YEARS FROM THE DATE OF APPROVAL OF THE TENTATIVE MAP OR A SUBSEQUENT FINAL MAP BY THE BOARD OF COUNTY COMMISSIONERS OR, WHEN APPLICABLE, BY THE PLANNING COMMISSION.**

**COMPLIANCE WITH THE DEVELOPMENT AGREEMENT, APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES AND WITH THE CONDITIONS OF APPROVAL OF THIS TENTATIVE MAP IS THE RESPONSIBILITY OF THE DEVELOPER, ITS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY, AND THEIR SUCCESSORS IN INTEREST.**

**GENERAL CONDITIONS**

1. The subdivider shall present to the planning commission a final map, prepared in accordance with the tentative map, for the entire area for which a tentative map has been approved, or one of a series of final maps, each covering a portion of the approved tentative map, within two (2) years after the date of approval of the tentative map.

Prior to the expiration of a tentative map, the planning commission or, upon appeal, the governing body may grant a two (2) year extension for the presentation of the entire final map or next successive final map. The effective date of the extension shall be two (2) years from the date upon which the map would have expired.

If the subdivider fails to record a final map for any portion of the tentative map or obtain an extension within two years after the date of approval of the tentative map, all proceedings concerning the subdivision are terminated.

2. Unless specifically stated in the final Development Agreement, final maps and final construction drawings shall comply with all applicable statutes, ordinances, rules, regulations, and policies in effect at the time of approval of the final map or any subsequent extension date. The Department of Development Review shall be responsible for determining compliance with this condition.
3. Final maps shall be in substantial compliance with all plans and documents submitted with and made part of this tentative map request, as may be amended by action of the final approving authority. Substantial compliance shall be determined by the applicable agency and the Department of Development Review.
4. As part of every tentative map and final map application, the developer shall include a completed "statement of compliance" that demonstrates how the development will be or is consistent with the recorded final Development Agreement. The "statement of compliance" for the final map shall incorporate a description of how the conditions of approval have been met. The Department of Development Review shall be responsible for determining compliance with this condition.

5. Conditions, covenants, and restrictions (CC&Rs) shall be reviewed and approved by the District Attorney's Office, County Engineer, and the Department of Development Review prior to final map approval or prior to issuance of a certificate of occupancy for a non-residential use. Washoe County shall be made a party to the applicable provisions of the CC&Rs to the satisfaction of the District Attorney's office. If the CC&Rs are not recorded on the entire property, subsequent phases will be annexed to the previously recorded CC&Rs. Said CC&Rs shall specifically address the ability of the county to enforce certain provisions against the property and the individual property owner's responsibilities for the perpetual funding, maintenance and replacement, of the following items, at a minimum:

- a. Private roads within the subdivision.
- b. Equestrian center.
- c. Staffing of maintenance and security forces.
- d. Common area landscaping.
- e. Entrance gates.
- f. Snow removal and storage areas.
- g. Common area landscaping including along streets or landscaping along Whites Creek Lane.
- h. Fire and fuelbreaks.
- i. Detention basins and the accumulated sediment.
- j. Equestrian/pedestrian trails.
- k. Bicycle and pedestrian paths.
- m. Golf cart crossings.
- n. Off-site residential parking areas.

At a minimum, the CC&Rs shall also specifically address the following items:

- a. Requirement to abide by Architectural/Community Design Guidelines.
- b. All homes must have a garage with space for a minimum of two cars.
- c. Specifications on the limitation of turf area for single-family homes.
- d. Retention of public access to the golf course, bike paths, (i.e., 8-foot meandering paths along minor arterials and some collectors; refer to street sections), public trails, and non-residential uses.
- e. Notice of requirement to pay future sewer user fees.
- f. Requirement to adhere to National Electric Safety Code setbacks for existing overhead power lines.
- g. Potential for conservation easements or dedication of open space.
- h. Prohibition of motorized vehicles in open space.
- i. Areas with potential for equestrian traffic.
- j. Access to open space for pedestrian and bicycle traffic.
- k. Notice of pedestrian easements to abutting properties.
- l. Minimum defensible space requirements.
- m. Snow storage areas.

6. Prior to ground-disturbing activity or prior to finalization of any portion of the tentative map, the developer shall submit an archaeological/historical survey to the Department of Development Review. The Department of Development Review shall submit the survey to the State Historic Preservation Office of the Department of Museums, Library and Arts for review. Following that review, the State Historic Preservation Office shall submit a letter to the Department of Development Review that indicates the survey was acceptable.
7. A note shall be placed on all grading plans and construction drawings stating:

**NOTE**

Should any prehistoric or historic remains/artifacts be discovered during site development, work shall temporarily be halted at the specific site and the State Historic Preservation Office of the Department of Museums, Library and Arts, shall be notified to record and photograph the site. The period of temporary delay shall be limited to a maximum of two (2) working days from the date of notification.

8. The developer shall be required to participate in any applicable General Improvement District or Special Assessment District formed by Washoe County. The applicable division of the Department of Public Works shall be responsible for determining compliance with this condition.
9. Prior to acceptance of public improvements and release of any financial assurances, the developer shall furnish to the Utility Division and/or Engineering Division a complete set of reproducible 'as built' construction drawings prepared by a civil engineer registered in the State of Nevada.
10. A complete set of construction improvement drawings, including an on-site grading plan, shall be submitted to the Engineering Division for approval prior to finalization of any portion of the subdivision. Grading shall comply with best management practices and shall include detailed plans for grading and drainage on each lot, erosion control, slope stabilization, mosquito abatement. Placement or disposal of any excavated material shall be indicated on the grading plan.
11. All soil boring logs must be included as part of the construction drawings. The County Engineer shall be responsible for determining compliance with this condition.
12. All new utilities shall be placed underground. The County Engineer shall be responsible for determining compliance with this condition.
13. The developer is to provide written approval from the US Postal Service for the plans for the installation of mail delivery facilities. The system, other than individual mail boxes, must be shown on the project construction plans and

installed as part of the on-site improvements. The County Engineer shall be responsible for determining compliance with this condition.

14. The final map shall designate faults, by distance and bearings, that have been active during the Holocene epoch of geological time and shall contain the following note.

**NOTE**

No habitable structures shall be located on a fault that has been active during the Holocene epoch of geological time. The faults have been located by Civil Engineer Registered in Nevada and experienced in Geotechnical Engineering and field surveyed by a Nevada Registered Land Surveyor.

The Department of Development Review shall be responsible for determining compliance with this condition.

15. The Washoe County Planning Commission certificate on the final map shall be approved by the County Engineer and the Department of Development Review.

**STREETS AND TRAFFIC**

16. The developer shall submit a detailed geotechnical analysis and report for pavement design recommendations to the County Engineer for review and approval. The report shall be based on the estimated traffic loadings for a 20-year design life and shall include assumptions concerning the distribution of trucks, to include project construction truck traffic. The resultant pavement thickness in the geotechnical analysis must be used if the report indicates a structural section that is stronger than minimum is required. The County Engineer shall be responsible for determining compliance with this condition.
17. Prior to the issuance of the first building permit, two lanes of Whites Creek Lane shall be constructed, to two-lane minor arterial standards as a minimum, from Thomas Creek Road to the project site. The County Engineer shall be responsible for determining compliance with this condition.
18. Prior to the issuance of the first building permit, a second access shall be constructed to the project site to emergency standards to the satisfaction of the applicable fire protection agency.
19. The County Engineer shall be responsible for determining compliance with this condition. Prior to the issuance of the 35th building permit, the following roadway improvements shall be constructed:
  - a. The remaining two lanes of Whites Creek Lane from Thomas Creek Road to the project site if warranted by projected traffic demands.

- b. Two (2) lanes of Whites Creek Lane from Thomas Creek Road to Wedge Parkway with 100 feet of right-of-way. These two lanes will be constructed so that an additional two lanes may be added in the future if warranted by projected traffic volumes.
  - c. Whites Creek Lane will be designed in a manner that minimizes any impacts on the adjacent homes to the north in Fieldcreek Ranch (e.g., fencing, berms, lowering the travel lanes).
20. The minimum pavement structural section shall be 5 inches of asphalt over 8 inches of aggregate base for minor arterials, 4 inches of asphalt over 6 inches of granular base for roadways (private and public) for collector streets, and 3 inches of asphalt over 6 inches of granular base for roadways for local streets. The County Engineer shall be responsible for determining compliance with this condition.
21. Prior to or upon approval of the CC&Rs, the developer shall have a street maintenance program approved by the County Engineer and the Department of Development Review. Maintenance of private streets shall be performed by the homeowners association and shall be perpetually funded.
22. The following roadway sections shall be applicable to the public and private on-site streets shown on the tentative map. A traffic report shall be submitted with each tentative map and shall identify the ultimate average daily traffic on each street and shall make recommendations for geometric design (e.g., left turn storage capacity, site distance, minimum required turning radius, etc.). The County Engineer shall be responsible for determining compliance with this condition.
- a. Private Common Driveways - Serving 4 or less lots, pavement width 20 feet; serving 5 or more lots, pavement width 22 feet; no parking either side. Curb returns shall have a minimum face of curb radius of 20 feet on local streets and 25 feet on collector streets. Private common driveway locations will be shown on all tentative maps. Private common driveways will line up with proposed street intersections where possible and will comply with street intersection offset requirements. Single lot driveway access will not be allowed onto streets on which the average daily traffic exceeds 2000 trips. (Refer to street sections.)
  - b. Rural Private - 60 foot minimum ROW (maximum 200 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations

of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)

- c. Local Private - 60 foot minimum ROW (200 - 500 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)
- d. Collector Private - 60 foot minimum ROW (500 ADT to 2000 ADT): minimum 24-foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to Street Sections.)
- e. Collector Private - 60 foot minimum ROW (2000 ADT to 8000 ADT): minimum 24-foot pavement width with an additional 12-foot left turn lane at intersections where warranted; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking on either side. A minimum 8-foot path on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. No residential driveway access will be allowed. Access for private common driveways will be allowed. (Refer to street sections.)
- f. Collector Private - 120 foot minimum ROW collector street (up to 9600 ADT): A minimum 27-foot center median from curb face to curb face, 19-foot pavement width on either side of the median; curb and gutter on both sides or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side except during special events; a minimum 8-foot meandering asphalt path both sides; no residential driveway access allowed. (Refer to street sections.)
- g. Minor Arterial, Private - 120 foot minimum ROW (more than 10,800 ADT): A minimum 27-foot center median from curb face to curb face,

24-foot pavement width on either side of the median; County Engineer-approved concrete header with roadside ditch; no parking either side; a minimum 8-foot meandering asphalt path both sides; no residential driveway access allowed. A gate may be installed at the point where Whites Creek Lane becomes a private road. (Refer to street sections.)

- h. **Minor Arterial, Public - 120-foot minimum ROW (more than 10,800 ADT):** A minimum 27-foot center median from curb face to curb face, 29.5-foot roadway section on either side of the median; curb and gutter on both sides; a minimum 6-foot concrete sidewalk on both sides; no residential driveway access is allowed. (Refer to street sections.) A gate may be installed at the point where Whites Creek Lane becomes a private road. A public turn-around is required on the public side of the gate.

23. **All roadway grades shall be limited to the maximum allowable grades for each street classification as provided in the Washoe County Standards. The County Engineer shall be responsible for determining compliance with this condition.**

24. **Construction near fault lines shall be as follows:**

- a. **Buildings for human occupancy shall be set back from the centerline of fault traces. Setback distances shall be determined by a geotechnical investigation prepared by a Nevada Registered Civil Engineer experienced in geotechnical engineering. The minimum setback shall be 50 feet on each side of the fault line.**
- b. **Roadway construction in fault zones and along fault traces shall be reviewed by a Nevada Registered Civil Engineer experienced in geotechnical engineering. Any recommended special construction requirements (e.g., flexible joint connections for utilities) shall be complied with.**

**The County Engineer shall be responsible for determining compliance with this condition.**

25. **All cul-de-sacs shall be a minimum pavement radius of 43.5 feet to front face of curb or 45 feet to edge of pavement. The County Engineer shall be responsible for determining compliance with this condition.**

26. **Landscaped medians shall be designed in accordance with AASHTO site distance and safety guidelines. The County Engineer and the Department of Development Review shall be responsible for determining compliance with this part of the condition. Maintenance of median landscaping shall be by the homeowners association as provided for in a separate maintenance agreement to be approved**

by the County Engineer and the District Attorney's Office prior to approval of the CC&Rs.

27. Temporary county standard turnarounds shall be constructed on all phased roadways which extend more than one lot depth beyond a maintained public or private street. The County Engineer shall be responsible for determining compliance with this condition.
28. All-weather emergency access roads shall be constructed at the end of all cul-de-sacs that are longer than 1,500 feet. These roads shall have a 30-foot access easement with a minimum 20-foot width and 2.5 inches of asphalt concrete pavement on an engineered gravel base. The roads shall be controlled by emergency access gates and shall be posted with signs stating "For Emergency Vehicles Only". The County Engineer and the applicable fire protection agency shall be responsible for determining compliance with this condition.
29. Prior to final map approval, the developer shall provide all weather emergency access easements and road improvements at the locations shown on the tentative map, terminating at public or privately-maintained streets. The County Engineer shall be responsible for determining compliance with this condition.
30. Meandering asphalt paths will be acceptable provided that:
  - a. Pedestrian easements are included for portions of the paths located outside the county right-of-way.
  - b. Landscaping between the back of the curb and the path shall be designed in accordance with AASHTO site distance and safety guidelines. The County Engineer shall be responsible for determining compliance with the provisions of this condition.
  - c. Maintenance of the asphalt paths and landscaping shall be the responsibility of the developer and, when created, by the homeowners association as provided for in a separate maintenance agreement and to be approved by the County Engineer and the District Attorney's office prior to approval of the final Development Agreement.
31. Asphalt paths or gravel shoulders, located adjacent to private streets shall be privately maintained and funded. The County Engineer shall be responsible for determining compliance with this condition.
32. Street lights shall be installed at major intersections. The County Engineer shall be responsible for determining compliance with this condition.

33. No at-grade golf cart crossings shall be allowed across any street with 500 ADT or greater. Where possible, crossings should be below the grade of public streets. The County Engineer shall be responsible for determining compliance with this condition.
34. Off-site parking areas shall be provided within 500 feet of homes that have lots ranging in size between 12,000 square feet and one-half acre. One space shall be provided for every three homes. Parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the tentative map(s). The Department of Development Review shall be responsible for determining compliance with this condition.
35. Project streets that are designed with security gates at points intersecting with public streets shall have adequate on-site stacking space. The specific type and size of the stacking areas must be approved by the County Engineer and constructed as approved.
36. Regulatory signs must be installed at the juncture of all public streets with a private street and at intersections along the primary loop road. Said sign shall state: "PRIVATE STREET NOT MAINTAINED BY COUNTY." All regulatory signs shall meet the Manual of Uniform Traffic Control Device standards. The County Engineer shall be responsible for determining compliance with this condition.
37. Street names shall be reviewed and approved by the Regional Street Naming Coordinator. The tentative map shall indicate street names for identification purposes.

#### **DRAINAGE AND GRADING**

38. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of a tentative map for any phase, a preliminary hydrology report shall be submitted to the County Engineer for approval. This preliminary hydrology report shall be prepared in accordance with county requirements for tentative maps, in conformance with the general concept-level storm drain master plan, and be applicable to the specific tentative map or special use permit being approved.

The report shall include, as a minimum, the locations, points of entry and discharge, flow rates and flood limits of all 10- and 100-year storm flows impacting both on-site and off-site areas and the methods for handling these flows as well as the proposed methods for handling storm water increases due to development. Proposed mitigation measures shall be included for any impacts on existing on-site and off-site properties and facilities. The County Engineer shall be responsible for determining compliance with this condition.

39. Prior to the submittal of any final map or issuance of any grading permit, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted to the County Engineer for approval. The report shall be in substantial compliance with the general concept-level storm drain master plan and contain all final storm drain pipe, ditch and retention pond sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed, constructed, and approved by the District Health Department and the County Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.
40. A maintenance plan of all drainage facilities, to be owned by the homeowners association, shall be provided prior to approval of the CC&Rs. All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe County water treatment plant, and associated Steamboat Ditch conveyance system. All runoff from improved areas which runs into the Steamboat Ditch shall be pre-treated for silt and petrochemicals and shall be routed through a "wet" detention facility or approved alternative. The Utility Division and the Department of Development Review shall be responsible for determining compliance with this condition.
41. The 100-year floodplain boundaries and flood elevations shall appear on each final map. If the floodplain boundary has been changed by a Federal Emergency Management Agency (FEMA) Conditional Letter of Map Amendment or Conditional Letter of Map Revision, the date of that letter and a note to that effect shall appear on the final map. Grading or building permits shall not be issued for areas currently shown as "A" zones on the FEMA floodplain maps until a Letter of Map Amendment or Revision is submitted or until conformance with Washoe County flood construction standards is determined by the County Engineer. The County Engineer shall be responsible for determining compliance with this condition.
42. Prior to approval of the final map, the developer shall obtain a Stormwater Discharge Permit from the Nevada Division of Environmental Protection. If required, point discharge permit for each proposed detention pond will be obtained from the Nevada Division of Environmental Protection and copy shall be submitted to the County Engineer.
43. The developer shall provide pretreatment for petrochemicals, nutrients and other chemicals used for landscaping, and silt for all storm drainage from the site. Systematic cleaning of the streets, parking lots, and catch basins, and control of salt and sanding activities shall to be delineated in the maintenance plan. The County Engineer shall be responsible for determining compliance with this condition.

44. Prior to issuance of a grading permit for the golf course and/or final map, a final wetlands determination must be made and approved by the US Army Corps of Engineers and the approval letter provided to the Department of Development Review.
45. Prior to issuance of a grading permit for the golf course or approval of a final map, the developer shall obtain from the Army Corps of Engineers a 404 permit for wetland and dredge and fill for all roadway crossing of Thomas and Dry Creeks, or a letter from the COE indicating that a 404 permit is not required and a copy submitted to the County Engineer.
46. All street crossings of Thomas and Dry Creeks shall be designed to pass the 100 year flood flows without obstruction or overtopping of the roadway. Erosion protection shall be provided based upon the recommendation of the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.
47. Standard reinforced concrete headwalls or other approved alternatives shall be placed on the inlet and outlet of all drainage structures and rip-rap shall be used to prevent erosion at the inlets and outlets of all pipe culverts. The District Health Department and the County Engineer shall be responsible for determining compliance with this condition.
48. The stormwater discharges from this development that flow to Dry Creek shall be controlled to pre-development flow conditions and will be controlled to prevent water quality degradation of Steamboat Ditch. The developer shall provide drainage structures under Steamboat Ditch that would pass the 10-year frequency storm or demonstrate that there will not be any water quality degradation in Steamboat Ditch. The County Engineer shall be responsible for determining compliance with this condition.

The developer shall contact the Division of Water Resources, State of Nevada, to determine whether the proposed flood detention facilities will require permits. If required, copies shall be submitted to the County Engineer.

49. Prior to the approval of a grading permit or approval of a final map, a detailed dust control plan shall be prepared and submitted to Air Quality Management of the District Health Department and to the Department of Development Review. The dust control plan shall address, as a minimum, "phased grading" and stabilization methods that include the revegetation, application of palliatives or other District approved methods prior to any grading of new phases, as well as effective street cleaning for any mud or soil tracking to existing paved surfaces, and dust controls on any screening methods or storage piles located on the site.

50. Prior to approval of the first final map, an erosion control and soil stabilization plan and a grading plan shall be approved by the Washoe-Storey Conservation District. A copy of the approval shall be submitted to the District Health Department, Department of Development Review, and County Engineer.
51. A buffer shall be provided next to riparian vegetation. The size of the buffer shall be mutually agreeable to Washoe County and the developer. A minimum 50-foot buffer shall be provided from any structures. The Department of Development Review shall be responsible for determining compliance with this condition.
52. Individual lot drainage shall not be allowed to drain onto neighboring properties without proper reciprocal drainage easements and the individual lot drainage swales shall be designed to handle the 100-year flows and lined. The County Engineer shall be responsible for determining compliance with this condition.

#### WATER AND WASTEWATER

53. The developer shall construct or provide the financial assurances for the construction of the water and sewer system facilities. The financial assurances must be in a form and amount that is satisfactory to the Utility Division.
54. Fees for plan checking and inspection shall be paid in accordance with Washoe County ordinance. The Utility Division shall be responsible for determining compliance with this condition.
55. Easements for all water and sewer utilities shall be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
56. No "certificate of occupancy" shall be issued until the water and sewer facilities have been completed and accepted for operation and maintenance. The Utility Division shall be responsible for determining compliance with this condition.
57. The sanitary sewer collection system and water system facilities, with the exception of the golf course and common area irrigation systems, must be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
58. The Nevada Division of Environmental Protection must submit a letter to the District Health Department certifying their approval of the final map.
59. The developer shall deposit with the Utility Division the sum of \$50.00 per lot prior to recordation of all or part of the final map. This fee shall represent the prorated share of the completed water and wastewater facilities plan for the South Truckee Meadows for this development.

60. In accordance with the Washoe County Utility Division policies for the Southwest Truckee Meadows, water rights shall be dedicated to Washoe County. Prior to acceptance, the water rights must be in good standing with the State of Nevada Division of Water Resources and must reflect a point of diversion, place and manner of use acceptable to the Utility Division.
61. All minor infrastructure for potable water distribution shall be designed, constructed, inspected, and approved by the District Health Department and the Utility Division. The developer shall coordinate with the Utility Division to ensure the major infrastructure design can be accomplished prior to the approval of the final map.
62. Responsibility for design of wells, pump structure, controls, telemetry, and appurtenances, storage tanks, and transmission lines to the edge of the subdivision, all necessary to provide water service to the project, will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
63. Prior to final map approval, a letter of approval from the Division of Water Resources for the water rights serving this proposal must be submitted. A water "will-serve" letter for a final map will not be issued until the production wells have been determined to have adequate water resource. The Utility Division shall be responsible for determining compliance with this condition.
64. Before approval of the final map will be considered, a letter from the water purveyor committing adequate water service to this proposal must be submitted to the District Health Department. This letter shall indicate that the facility will not be brought beyond its permitted capacity by this service.
65. Prior to the approval of a final map by the District Health Department, the production wells that will serve any phase of this development must be constructed, pump tested and sampled to ensure the proposed water system has sufficient quality and quantity.
66. Water quality results from a state-certified laboratory for new water sources shall be submitted to the Utility Division. The water quality sampling and testing shall be in compliance with the current State of Nevada Regulations for Public Water Systems, NAC 445.

67. If the water quality of the wells does not meet the secondary or the primary standards, as defined by NAC 445, water treatment facilities must be on-line and functioning prior to issuance of any building permits. The Utility Division shall be responsible for determining compliance with this condition.
68. If a supplemental water source is required, evidence that an adequate source has been procured by the developer/water purveyor shall be submitted to the Utility Division for their review and approval.
69. Any wells on the property not in use for production or monitoring purposes, shall be properly abandoned in accordance with State Regulations governing Water Wells and Related Drilling. The Utility Division shall be responsible for determining compliance with this condition.
70. The developer shall provide access to the existing monitoring wells. In the event access is no longer available, the developer shall construct new wells. The Utility Division shall be responsible for determining compliance with this condition.
71. The tentative maps shall show the maintenance roads for the existing and proposed water tanks. The location of these roads shall be mutually agreeable to the Department of Public Works and the developer.
72. The final map owner's certificate shall contain language indicating that the developer and his assignees agree to the use of residential water meters. The Department of Development Review shall be responsible for determining compliance with this condition.
73. Pursuant to Section 278.340 of the State of Nevada Regulations Governing Review of Plans for Subdivisions, Condominiums, and Planned Unit Developments, no grading permit shall be issued prior to District Health Department approval of the referenced final map. This condition does not apply to the construction of production wells required in Condition 68.

The developer may seek relief from the District Board of Health for this requirement or may choose to create a separate parcel for the first 18-hole golf course.

74. The Department of Development Review shall be responsible for determining compliance with this condition. The final map shall contain the following note:

**NOTE**

No Certificate of Occupancy shall be issued until the water facilities have been completed and accepted by Washoe County.

75. Responsibility for design of any pump stations and interceptors to provide sewer service to the project will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
76. All minor infrastructure for sewer collection shall be designed, constructed, inspected, and approved by the District Health Department and the Utility Division.
77. The sewer "privilege connection fee" must be paid for each lot when required by the Washoe County Utility Division since it is not anticipated that there will be any additional major infrastructure needed to serve this development. The Utility Division shall be responsible for determining compliance with this condition.
78. All sewer hookup fees for the area within the final map will be paid to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
79. The final subdivision map shall show a dedicated, all-weather easement, with access, over the developments sanitary sewer lines. The Utility Division shall be responsible for determining compliance with this condition.
80. Proper easements shall be shown for off-site sewage and drainage systems. The Utility Division and the County Engineer shall be responsible for determining compliance with this condition.
81. Prior to final map approval, a letter, which can be a will-serve letter, from the Utility Division committing sewer service, must be submitted to the District Health Department. This letter shall indicate that the treatment facility will not be brought beyond its permitted capacity by this service.

#### **FIRE PROTECTION**

82. The plans submitted with a building permit application shall show evidence of compliance with the recommendations of the applicable fire protection agency. Those concerns are fire flows, fire hydrant number and location, access, sequential phasing of firebreaks during development, permanent firebreaks, minimum defensible space, use of fire resistant construction and/or roof material, sprinklering of structures, and spark arrestors in chimneys. Access and fire flows

shall be addressed to the satisfaction of the fire protection agency prior to the approval of a final map.

83. The developer shall minimize grading to the maximum extent possible in the area around the critical mule deer habitat in order to preserve the existing browse shrubs. The Department of Development Review, in conjunction with the applicable fire protection agency, shall be responsible for determining compliance with this condition.

**OTHER**

84. A minimum 25-foot landscape buffer shall be installed between the homes and the collector and the arterial streets. The homeowners association shall be required to perpetually maintain these areas. The Department of Development Review shall be responsible for determining compliance with this condition.
85. Prior to acceptance of the first final map, the telephone easement Doc. No. 415899, which runs through the middle of many lots, shall be realigned with appropriate abandonment and relocation easements, or the proposed lots realigned. The County Engineer shall be responsible for determining compliance with this condition.

\* \* \* \* \*

**CONDITIONS**  
**FOR**  
**SPECIAL USE PERMIT CASE NO. \_\_\_\_\_**

(As recommended by Department of Development Review and attached to Staff Report dated \_\_\_\_\_)

**UNLESS OTHERWISE SPECIFIED, ALL CONDITIONS MUST BE MET OR FINANCIAL ASSURANCES MUST BE PROVIDED TO SATISFY THE CONDITIONS PRIOR TO SUBMITTAL FOR A BUILDING PERMIT. THE AGENCY RESPONSIBLE FOR DETERMINING COMPLIANCE WITH A SPECIFIC CONDITION SHALL DETERMINE WHETHER THE CONDITION MUST BE FULLY COMPLETED OR WHETHER THE DEVELOPER SHALL BE OFFERED THE OPTION OF PROVIDING FINANCIAL ASSURANCES. ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL HAVE A COPY FILED WITH THE COUNTY ENGINEER AND THE DEPARTMENT OF DEVELOPMENT REVIEW.**

**COMPLIANCE WITH THE CONDITIONS OF THIS SPECIAL USE PERMIT IS THE RESPONSIBILITY OF THE DEVELOPER, HIS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY AND THEIR SUCCESSORS IN INTEREST. FAILURE TO COMPLY WITH ANY CONDITIONS IMPOSED IN THE ISSUANCE OF THE SPECIAL USE PERMIT MAY RESULT IN THE INSTITUTION OF REVOCATION PROCEDURES.**

**WASHOE COUNTY RESERVES THE RIGHT TO REVIEW AND REVISE THE CONDITIONS OF THIS APPROVAL SHOULD THEY DETERMINE THAT A SUBSEQUENT LICENSE OR PERMIT ISSUED BY WASHOE COUNTY VIOLATES THE INTENT OF THIS APPROVAL.**

### **GENERAL CONDITIONS**

1. As part of every special use permit application, the developer shall include a completed "statement of compliance" that demonstrates how the development will be or is consistent with the recorded final Development Agreement. The Department of Development Review shall be responsible for determining compliance with this condition.
2. Prior to ground-disturbing activity, the developer shall submit an archaeological/historical survey to the Department of Development Review. The Department of Development Review shall submit the survey to the State Historic Preservation Office of the Department of Museums, Library and Arts for review. Following that review, the State Historic Preservation Office shall submit a letter to the Department of Development Review that indicates the survey was acceptable.
3. A note shall be placed on all grading plans and construction drawings stating:

#### **NOTE**

Should any prehistoric or historic remains/artifacts be discovered during site development, work shall temporarily be halted at the specific site and the State Historic Preservation Office of the Department of Museums, Library and Arts, shall be notified to record and photograph the site. The period of temporary delay shall be limited to a maximum of two (2) working days from the date of notification.

4. Prior to acceptance of public improvements and release of any financial assurances, the developer shall furnish to the Utility Division and/or Engineering Division a complete set of reproducible 'as built' construction drawings prepared by a civil engineer registered in the State of Nevada.
5. The developer shall be required to participate in any applicable General Improvement District or Special Assessment District formed by Washoe County.

The applicable division of the Department of Public Works shall be responsible for determining compliance with this condition.

6. All new utilities shall be placed underground. The County Engineer shall be responsible for determining compliance with this condition.
7. An animal waste management plan shall be prepared prior to the issuance of any building permit for a facility that might require such a plan. The plan must document how the migration of bacteria, nutrients, and other animal waste by-products to surface and ground waters will be prevented. The Department of Development Review shall be responsible for determining compliance with this condition.

### STREETS AND TRAFFIC

8. All street construction shall comply, at a minimum, with the requirements for a subdivision within this project. The County Engineer shall be responsible for determining compliance with this condition.
9. The developer shall submit a detailed geotechnical analysis and report for pavement design recommendations to the County Engineer for review and approval. The report shall be based on the estimated traffic loadings for a 20-year design life and shall include assumptions concerning the distribution of trucks, to include project construction truck traffic. The resultant pavement thickness in the geotechnical analysis must be used if the report indicates a structural section that is stronger than minimum is required. The County Engineer shall be responsible for determining compliance with this condition.
10. The minimum pavement structural section shall be 5 inches of asphalt over 8 inches of aggregate base for minor arterials, 4 inches of asphalt over 6 inches of granular base for roadways (private and public) for collector streets, and 3 inches of asphalt over 6 inches of granular base for roadways for local streets. The County Engineer shall be responsible for determining compliance with this condition.
11. Prior to the issuance of the first building permit, two lanes of Whites Creek Lane shall be constructed, to two-lane minor arterial standards as a minimum, from Thomas Creek Road to the project site. The County Engineer shall be responsible for determining compliance with this condition.
12. Prior to the issuance of the first building permit, a second access shall be constructed to the project site to emergency standards. The applicable fire protection agency shall be responsible for determining compliance with this condition.

13. Construction near fault lines shall be as follows:
- a. Buildings for human occupancy shall be set back from the centerline of fault traces. Setback distances shall be determined by a geotechnical investigation prepared by a Nevada Registered Civil Engineer experienced in geotechnical engineering. The minimum setback shall be 50 feet on each side of the fault line.
  - b. Roadway construction in fault zones and along fault traces shall be reviewed by a Nevada Registered Civil Engineer experienced in geotechnical engineering. Any recommended special construction requirements (e.g., flexible joint connections for utilities) shall be complied with.

The County Engineer shall be responsible for determining compliance with this condition.

14. Asphalt paths or gravel shoulders, located adjacent to private streets shall be privately maintained and funded. The County Engineer shall be responsible for determining compliance with this condition.
15. No at-grade golf cart crossings shall be allowed across any street with 500 ADT or greater. Where possible, crossings should be below the grade of public streets. The County Engineer shall be responsible for determining compliance with this condition.

#### **GRADING AND DRAINAGE**

16. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of any special use permit, a preliminary hydrology report shall be submitted to the County Engineer for approval. This preliminary hydrology report shall be prepared in accordance with county requirements for tentative maps, in conformance with the general concept-level storm drain master plan, and be applicable to the specific tentative map or special use permit being approved.

The report shall include, as a minimum, the locations, points of entry and discharge, flow rates and flood limits of all 10- and 100-year storm flows impacting both on-site and off-site areas and the methods for handling these flows as well as the proposed methods for handling storm water increases due to development. Proposed mitigation measures shall be included for any impacts on existing on-site and off-site properties and facilities. The County Engineer shall be responsible for determining compliance with this condition.

17. Prior to the submittal of any final map or issuance of any grading permit, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted to the County Engineer for approval. The report shall be in substantial compliance with the general concept-level storm drain master plan and contain all final storm drain pipe, ditch and retention pond sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed, constructed, and by the District Health Department and the County Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.

Prior to the issuance of a grading permit, the developer shall provide a letter granting a blanket drainage and construction easement to the Southwest Pointe Subdivision that allows the subdivision to drain onto the golf course and to construct detention facilities necessary to accommodate the subdivision-generated stormwaters in mutually agreed-upon locations. The easement shall be submitted with the plans for the final golf course improvements. The County Engineer shall be responsible for determining compliance with this condition.

18. Prior to the approval of a grading permit, a detailed dust control plan shall be prepared and submitted to Air Quality Management of the District Health Department and to the Department of Development Review. The dust control plan shall address, as a minimum, "phased grading" and stabilization methods that include the revegetation, application of palliatives or other District approved methods prior to any grading of new phases, as well as effective street cleaning for any mud or soil tracking to existing paved surfaces, and dust controls on any screening methods or storage piles located on the site.
19. For all projects larger than 5 acres, the developer shall obtain a Stormwater Discharge Permit from the Nevada Division of Environmental Protection and submit a copy to the County Engineer prior to ground-disturbing activity.
20. The developer shall provide pretreatment for petrochemicals, nutrients and other chemicals used for landscaping, and silt for all storm drainage from the site. Systematic cleaning of the streets, parking lots, and catch basins, and control of salt and sanding activities shall to be delineated in the maintenance plan. The County Engineer shall be responsible for determining compliance with this condition.
21. The stormwater discharges from this development that flow to Dry Creek shall be controlled to pre-development flow conditions and will be controlled to prevent water quality degradation of Steamboat Ditch. The developer shall provide drainage structures under Steamboat Ditch that would pass the 10-year frequency storm or demonstrate that there will not be any water quality degradation in

Steamboat Ditch. The County Engineer shall be responsible for determining compliance with this condition.

22. All street crossings of Thomas and Dry Creeks shall be designed to pass the 100 year flood flows without obstruction or overtopping of the roadway. Erosion protection shall be provided based upon the recommendation of the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.
23. Standard reinforced concrete headwalls or other approved alternatives shall be placed on the inlet and outlet of all drainage structures and rip-rap shall be used to prevent erosion at the inlets and outlets of all pipe culverts. The District Health Department and the County Engineer shall be responsible for determining compliance with this condition.
24. Prior to issuance of a grading permit for the golf course and/or final map, a final wetlands determination must be made and approved by the Army Corps of Engineers and the approval letter provided to the Department of Development Review.
25. Prior to issuance of a grading permit for the golf course or approval of the final map, the developer shall obtain from the United States Army Corps of Engineers a 404 permit for wetland and dredge and fill for all roadway crossing of Thomas and Dry Creeks, or a letter from the COE indicating that a 404 permit is not required and a copy submitted to the County Engineer.
26. The developer shall submit to the District Health Department a letter approving the proposed methods of erosion control and soil stabilization from the Washoe-Storey Conservation District.
27. Prior to the issuance of a grading permit for the golf course, a golf course management plan shall be prepared that documents how the migration of fertilizers, pesticides, herbicides, and fungicides to surface and ground waters will be prevented. A surface and ground water sampling program shall be implemented to demonstrate that migration is not occurring and commits to modifying practices in the event that any of the above materials are detected. The Department of Development Review shall be responsible for determining compliance with this condition.

### **WATER AND WASTEWATER**

28. The sanitary sewer collection system and water system facilities, with the exception of the golf course and common area irrigation systems, must be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.

29. The developer shall construct or provide the financial assurances for the construction of the water and sewer system facilities. The financial assurances must be in a form and amount that is satisfactory to the Utility Division.
30. Fees for plan checking and inspection shall be paid in accordance with Washoe County ordinance. The Utility Division shall be responsible for determining compliance with this condition.
31. Easements for all water and sewer utilities shall be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
32. No "certificate of occupancy" shall be issued until the water and sewer facilities have been completed and accepted for operation and maintenance. The Utility Division shall be responsible for determining compliance with this condition.
33. If required and in accordance with the Washoe County Utility Division policies for the Southwest Truckee Meadows, water rights shall be dedicated to Washoe County. Prior to acceptance, the water rights must be in good standing with the State of Nevada Division of Water Resources and must reflect a point of diversion, place and manner of use acceptable to the Utility Division.
34. Responsibility for design of wells, pump structure, controls, telemetry, and appurtenances, storage tanks, and transmission lines to the edge of the subdivision, all necessary to provide water service to the project, will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
35. Water quality results from a State of Nevada-certified laboratory for new water sources shall be submitted to the Utility Division. The water quality sampling and testing shall be in compliance with the current State of Nevada Regulations for Public Water Systems, NAC 445.
36. If the water quality of the wells does not meet the secondary or the primary standards, as defined by NAC 445, water treatment facilities must be on-line and functioning prior to issuance of any building permits. The Utility Division shall be responsible for determining compliance with this condition.

37. If a supplemental water source is required, evidence that an adequate source has been procured by the developer/water purveyor shall be submitted to the Utility Division for their review and approval.
38. Any wells on the property not in use for production or monitoring purposes, shall be properly abandoned in accordance with State Regulations governing Water Wells and Related Drilling. The Utility Division shall be responsible for determining compliance with this condition.
39. The developer shall provide access to the existing monitoring wells. In the event access is no longer available, the developer shall construct new wells. The Utility Division shall be responsible for determining compliance with this condition.
40. Responsibility for design of any pump stations and interceptors to provide sewer service to the project will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
41. The sewer "privilege connection fee" must be paid for each lot when required by the Washoe County Utility Division since it is not anticipated that there will be any additional major infrastructure needed to serve this development. The Utility Division shall be responsible for determining compliance with this condition.

### **FIRE PROTECTION**

42. The plans submitted with a building permit application shall show evidence of compliance with the recommendations of the applicable fire protection agency. Those concerns are fire flows, fire hydrant number and location, access, sequential phasing of firebreaks during development, permanent firebreaks, minimum defensible space, use of fire resistant construction and/or roof material, sprinklering of structures, and spark arrestors in chimneys. Access and fire flows shall be addressed prior to the introduction of any combustible materials to the site. The fire protection agency shall be responsible for determining compliance with this condition.
43. The developer shall minimize grading to the maximum extent possible in the area around the critical mule deer habitat in order to preserve the existing browse shrubs. The Department of Development Review, in conjunction with the

applicable fire protection agency, shall be responsible for determining compliance with this condition.

### **LANDSCAPING**

44. Detailed landscaping and irrigation plans for the village commercial center, club house, golf course, golf driving range, equestrian center, or other non-residential uses requiring special use permit review shall be submitted prior to the issuance of a building permit for the particular use.
45. A buffer shall be provided between the fairways/greens and all creeks. The setback of the buffer shall comply with 100.200(e) of the Uniform Building Code Section 7011 amended. The Department of Development Review shall be responsible for determining compliance with this condition.

### **96-735      SPARKS CONSTABLE - COMPENSATION AND SALARY SCHEDULE**

County Manager John MacIntyre provided background information and responded to questions raised at Caucus concerning the salary of the Sparks Constable.

Legal Counsel Madelyn Shipman explained that the Board of County Commissioners of each county sets the compensation package for their county's various constables in July of each election year when Constables are being elected; and that the Washoe Board did so on July 26, 1994 establishing a base salary for the Reno, Sparks and Incline Village Constables of \$10,000 plus net revenues (fees collected minus expenses) up to \$55,000 and thereafter the net revenues would be split 50-50 between the County and the Constables. She further explained that when the Finance Division discovered that Sparks Constable John Langon surpassed the \$55,000, they requested that the additional funds be paid to the County, and Constable Langon refused to do so.

Ms. Shipman stated that the District Attorney's office has a conflict in this matter in that they cannot represent and advise both the Board and the Constable should court action be necessary to resolve this; and that the Board and Constable Langon may have to hire their own outside counsel.

Pursuant to questions raised at Caucus, Brian Mirch of the Finance Division provided additional information to the Board regarding this matter as well as the amount of other financial support provided by the County to the Constables for office space, staff, supplies, etc.

Sparks Constable John Langon contended that the Board only has the authority per Nevada Revised Statutes to set the minimum salary for the Constables; that what their prior action does, in fact, is set a maximum salary; and that according to the statutes, the Constables are entitled to the fees.

Ms. Shipman stated that another avenue towards resolving this conflict would be to seek an Attorney General's opinion if Mr. Langon would agree to abide by that opinion, whatever it may be.

Following further discussion, on motion by Commissioner Bond, seconded by Commissioner Mouliot, which motion duly carried, Chairman Bradhurst ordered that:

1. The Board reaffirm its understanding of the July 26, 1994, Commission action establishing the salary of the Sparks Constable as \$10,000 base salary with a 50%-50% split of net revenue generated above a combined total of \$55,000;
2. Staff be directed to ascertain, in writing, whether Mr. Langon would agree to abide by an Attorney General opinion regarding whether the Board action establishing the salary for the Constables was appropriate, and, if so, request an Attorney General opinion;
3. If Mr. Langon is not willing to abide by an Attorney General opinion, staff be directed and authorized to seek outside counsel and take appropriate action to obtain compliance with the salary established by the Board and collect the fees that Mr. Langon owes to Washoe County.

**96-736      RESOLUTION - ADOPTING THE AMENDED SPANISH SPRINGS  
AREA PLAN - COMPREHENSIVE PLAN AMENDMENT CASE  
NO. CPA95-SS-01**

Dean Diederich, Department of Comprehensive Planning, reviewed the history and background of the development of the Spanish Springs Area Plan, including infrastructure for water, sewer, roads, etc., and stated that the targeted number of residential units is approximately 3,000. Mr. Diederich then answered questions of the Board stating that the real tightening has come through the Regional Transportation Commission traffic modeling relating to road impacts; that back in 1992, the region committed to this general development pattern and have been working to provide the necessary infrastructure to support it since then; and any other developers will be encouraged to request Comprehensive Plan Amendments so that these kinds of impacts can be addressed and mitigated.

Following further discussion, on motion by Commissioner Bond, Commissioner Sims, which motion duly carried, it was ordered that the following resolution be adopted, based on the approval of the Truckee Meadows Regional Plan Amendment and the finding of conformance, and Chairman Bradhurst authorized to execute on behalf of Washoe County:

SUMMARY: An ordinance approving the Final Development Agreement for Southwest Pointe, a residential community of 1,090 homesites with golf courses, and recreational and commercial facilities in the Southwest Truckee Meadows planning area.

BILL NO. 1198

ORDINANCE NO. 963

AN ORDINANCE PURSUANT TO NEVADA REVISED STATUTES 278.0201 THROUGH 278.0207 APPROVING THE FINAL DEVELOPMENT AGREEMENT FOR SOUTHWEST POINTE. THE AGREEMENT FACILITATES THE DEVELOPMENT OF A RESIDENTIAL COMMUNITY WHICH INCLUDES 1,090 HOMESITES WITH COMMON OPEN SPACE, A WATER DELIVERY SYSTEM, TWO GOLF COURSES WITH RELATED RECREATIONAL FACILITIES, A DAY CARE FACILITY, AN EQUESTRIAN CENTER, AND A COMMERCIAL VILLAGE CENTER. THE PROJECT HAS A TOTAL ACREAGE OF  $\pm 3,271.6$  ACRES AND IS LOCATED NORTH OF MOUNT ROSE HIGHWAY (SR 431) AND WEST OF THOMAS CREEK ROAD. THE PROPERTY IS DESIGNATED LOW DENSITY SUBURBAN (LDS), LOW DENSITY RURAL (LDR), MEDIUM DENSITY RURAL (MDR), HIGH DENSITY RURAL (HDR) AND GENERAL RURAL (GR) IN THE SOUTHWEST TRUCKEE MEADOWS AREA PLAN AND IS SITUATED WITHIN PORTIONS OF SECTIONS 3, 10, 13, 14, 15, 22, 23, 24, 26 AND 27, T18N, R19E, MDM, WASHOE COUNTY, NEVADA. (APN: 41-030-12, 49-010-04, AND 49-010-10)

THE BOARD OF COUNTY COMMISSIONERS OF THE COUNTY OF WASHOE DO ORDAIN:

SECTION 1. The Final Development Agreement for Southwest Pointe, including its attached exhibits and references, is an acceptable document with which to bind the future development of the described property for a period of time not to exceed fifteen years.

Proposed on the 9th day of JULY, 1996.

Proposed by Commissioners JOANNE BOND.

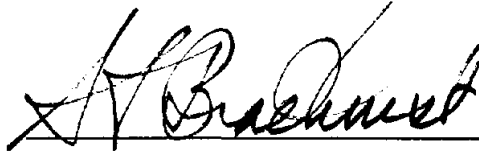

Passed on the 23rd day of JULY, 1996.

Vote:

Ayes: JOANNE BOND, STEVE Bradhurst,  
Mike Mouliot, Grant Sims

Nays:

Absent: Jim Shaw

Chairman  
Washoe County Commission

ATTEST:

  
\_\_\_\_\_  
County Clerk

This ordinance shall be in force and effect from and after  
the 12TH day of August, 1996.

WASHOE COUNTY  
DEVELOPMENT REVIEW

Bob Katai  
Department of Development Review  
Washoe County, Nevada

I, Judi Bailey, County Clerk and Clerk of the Board of County Commissioners, Washoe County, Nevada, do hereby certify that at a regular meeting of the Board of County Commissioners held on June 11, 1996 Chairman Bradhurst issued the following order:

**96-535      DEVELOPMENT AGREEMENT CASE NO. DA9-1-93 -**  
**SOUTHWEST POINTE/REDFIELD LAND COMPANY**  
**APN: (49-010-04, 49-010-10 AND 41-030-12)**

**7:00 p.m.** This was the time set in Notice of Public Hearing mailed to all affected property owners on May 29, 1996 and published in the Reno-Gazette Journal on May 31, 1996 to consider the recommendation of the Washoe County Planning Commission to conditionally approve Amendment to Development Case No. DA9-1-93 for Southwest Pointe which agreement facilitates the development of a residential community including 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities, a day care facility, an equestrian center, and a commercial village center. The amendment allows the applicant to modify portions of the agreement pertaining to streets, access, drainage, parks and other portions. The total acreage of the project is  $\pm 3,171.6$  acres and located north of Mount Rose Highway (SR 431) and west of Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR), and General Rural (GR), in the Southwest Truckee Meadows Area Plan and is situated within portions of Sections 3, 10, 13, 14, 15, 22, 23, 24, 26, and 27, T18N, R19E, MDM, Washoe County, Nevada. Proof was made that due and legal notice had been given.

Bob Katai, Department of Development Review, reviewed history of the project and proposed amendments to the Development Agreement submitted by the applicant, advising that the amendments are modifications to the conceptual plan adopted as part of the preliminary development agreement. He further advised that the applicant had requested that the percentage of 12,000 square-foot lots increase up to 50% of the lot totals; that the percentage of lots between one-half and one-acre increase up to 40%; that the applicant's current proposal is that no more than 40% of the lot mix to be 12,000 lots; that no more than 35% of the lot mix being half-acre to one-acre lots; that the remaining

lots are one acre or greater; that the original lot number of 1,090 has not been increased; that smaller lots would allow reconfiguration of the golf course and increase open space areas; and that smaller lots would not increase the density of the project.

Chairman Bradhurst opened the public hearing and called on those wishing to speak.

Brita Tryggvi, CFA, Inc., representing applicant, discussed a comparison between the conceptual plan presented to the Board in 1993 and the proposal being presented today. She reviewed maps illustrating the changes and stated that the difference in the lot mix is due to an increase in the number of half-acre lots and a decrease in the number of one-acre lots; that the revised proposal leaves the number of 12,000-square-foot lots the same; that they are still planning an elementary school site, a potential middle school site, a community park, and a fire station site; that the main entry road is proposed to become private at Thomas Creek; that vehicular access would be slightly reduced; that access to the public will not be reduced; and that it is intended that the public have access to the trail system to the project along the roadways; and that they have always proposed connections for the regional trail system and that would remain unchanged. Ms. Tryggvi further advised that they are proposing a gate or a gate house to the development; that the road becomes private at the creek; and that they have met with the Nevada Division of Forestry, the agency responsible for fire protection in this area and this proposal complies with their requirements for a 20 foot area that is clear and unobstructed.

Mike Mohler, Project Manager, stated that they are unclear whether they will be constructing gates to the development; and that they are utilizing this concept in the initial sales phase of the project.

Russ Carpenter, a resident of Pleasant Valley and Chairman of the Mt. Rose/Geiger Grade Citizens Advisory Board, spoke in opposition to the gate concept stating that the neighborhood has not reached a point where gated communities are necessary.

There being no one else wishing to speak, Chairman Bradhurst closed the public hearing.

Mr. Katai advised that the Southwest Truckee Meadows Citizens Advisory Board has recommended approval of amendments to the Development Agreement.

Chairman Bradhurst stated that with two public golf courses and a possible commercial area, it would be difficult to have a gate operation; that it may be used for marketing purposes initially, but if the intent is to encourage individuals to use the golf courses, a gate could be a detriment.

Ms. Tryggvi explained that conditions of approval allow retention of public access to the golf course; that public access to the trails and non-residential uses will all be retained; that the original plan, off the primary loop road, included several gates; and that they have now opted for one gate location.

Following discussion, on motion by Commissioner Sims, seconded by Commissioner Mouliot, which motion duly carried, Chairman Bradhurst ordered that Amendment to Development Agreement Case No. DA9-1-93 for Southwest Pointe/Redfield Land Company be approved subject to the following Development Agreement conditions and the Template conditions:

**CONDITIONS**  
**for**  
**DEVELOPMENT AGREEMENT CASE NO. DA9-1-93**  
**for**  
**SOUTHWEST POINTE**

**UNLESS OTHERWISE STATED, PRIOR TO APPROVAL OF THE FINAL DEVELOPMENT AGREEMENT, ALL CONDITIONS MUST BE MET. A COPY OF ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL BE FILED WITH THE DEPARTMENT OF PUBLIC WORKS AND/OR DEPARTMENT OF DEVELOPMENT REVIEW.**

**COMPLIANCE WITH THE APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES AND WITH THE CONDITIONS OF APPROVAL OF THIS TENTATIVE MAP IS THE RESPONSIBILITY OF THE DEVELOPER, ITS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY, AND THEIR SUCCESSORS IN INTEREST.**

GENERAL CONDITIONS

1. Unless specifically stated in the final Development Agreement, all uses, densities and standards shall be consistent with the Washoe County Development Code and with the goals and policies in the Comprehensive Plan and the Southwest Truckee Meadows Area Plan. Unless specifically stated in the final Development Agreement, the allowed uses, densities, and standards of the land subject to the Development Agreement shall be those in effect at the time the final agreement is approved.
2. The final Development Agreement shall specify any time frames that have been extended beyond those specified by Washoe County Code or Nevada Revised Statutes. The Department of Development Review shall be responsible for determining compliance with this condition.

3. A "statement of compliance" format or formats for both residential and non-residential projects shall be made a part of the final Development Agreement. The Department of Development Review shall be responsible for determining compliance with this condition.
4. The developer and all successors shall direct any potential purchaser of the site, or portions thereof (other than individual single-family lots), to meet with the Department of Development Review to review the Development Agreement and the conditions of approval prior to the final sale of the site. Any subsequent purchasers of the site shall notify the Department of Development Review of the name, address, telephone number, and contact person of the new purchaser within 30 days of the final sale.
5. Prior to submittal to the Washoe County Board of County Commissioners, the final Development Agreement shall be reviewed and approved by the Office of the District Attorney of Washoe County.
6. The final Development Agreement will be submitted to the Washoe County Board of County Commissioners within three months of submission of a completed agreement with all accompanying exhibits, provided the Department of Development Review does not delay the submission in order to approve provisions of the agreement to its satisfaction. Extension of any of these time frames may be requested if mutually agreeable to Washoe County and the developer.
7. The developer shall provide the Department of Development Review staff with a quarterly report indicating the number of building permits issued and other building activity, once residential construction has started.
8. The developer shall define a process to ensure that the maintenance and replacement of the streets, parking areas, lighting, landscaping, recreational facilities, utilities, and other private infrastructure shall be performed by the homeowners associations and shall be perpetually funded. The County Engineer and the Department of Development Review shall be responsible for determining compliance with this condition.

#### STREETS AND TRAFFIC

9. A Level of Service C, or the current Washoe County standard, shall be used as a basis for evaluating transportation needs and traffic impact mitigation requirements.
10. The final Development Agreement shall not be approved until the right-of-way (ROW) of all necessary off-site accesses from the project to Thomas Creek Road are obtained. Preliminary golf course and roadway grading may commence before such approval has been obtained so long as such construction is done in accordance with Condition 21 for tentative maps. An approved and recorded ROW document shall be provided to the County Engineer and the District Attorney's Office.

11. Prior to final approval of the Development Agreement, the developer for Southwest Pointe shall petition the Washoe County Board of County Commissioners to create a Special Assessment District for the purpose of financing the construction of Whites Creek Lane from the project site to Wedge Parkway and other roads as defined in the SAD agreement. In the event that a special assessment district is not created, the developer shall construct Whites Creek Lane, as outlined in Conditions 17 and 19 for tentative maps, from the project site to Wedge Parkway. The County Engineer shall be responsible for determining compliance with this condition.
12. A Construction Traffic Haul Route Plan shall be submitted to the County Engineer for review and approval. The primary construction haul route shall be Whites Creek Lane. However, as part of Phase I development, Zolezzi Lane may be used, for construction mobilization only, for completion of the first 18-hole golf course and for the extension of utilities into the project site.

Prior to approval of any final map or prior to the issuance of the first building permit for the first final map, all construction traffic will be diverted to Whites Creek Lane. No construction traffic will be allowed on Thomas Creek Road between Whites Creek Lane and Zolezzi Lane. Access to Whites Creek Lane will be from the Mt. Rose Highway to Thomas Creek Road. When the 35th building permit is issued, all construction traffic will be required to use Whites Creek Lane from Wedge Parkway. Construction traffic will use Whites Creek Lane from Wedge Parkway if this segment is completed prior to the issuance of the 35th building permit. Thomas Creek Road from Mt. Rose Highway to the proposed Whites Creek Lane may be considered for a haul route provided the developer submits a traffic analysis and intersection design prepared by a licensed Nevada Civil Engineer which addresses and provides, as a minimum, recommendations regarding:

- a. site distance requirements;
- b. left turn storage capacity and design;
- c. intersection location and alignment;
- d. proximity to existing intersections and recommended separate distances;
- e. existing center median and landscaping concerns;
- f. determination of adequacy of existing Thomas Creek Road roadway geometric section; and
- g. determination of adequacy of existing structural section and load bearing capability.

The submitted report shall be evaluated and accepted by the County Engineer prior to any approval of the use of Thomas Creek Road as a haul route. Once Whites Creek Lane is connected to Wedge Parkway, this road shall become the primary construction haul route.

Any existing or proposed roads that will be used as construction haul routes and are not designated truck routes must be evaluated by a geotechnical study to determine the existing structural section and its load supporting capability. If the pavement section is inadequate to support the proposed construction loadings, the roadway must be redesigned or reconstructed as needed to provide a 20-year design life in accordance with the AASHTO Interim Guide for Flexible Pavements.

13. The developer shall provide a schematic pedestrian circulation plan. The Department of Development Review shall be responsible for determining compliance with this condition. The "statement of compliance" shall require that a detailed pedestrian circulation plan will be submitted as part of each tentative map and approved by the Department of Development Review.
14. Unless specifically stated in these conditions of approval or in the final Development Agreement, all public and private street design and construction is to be done in accordance with the Washoe County standards that are in effect at the time the final Development Agreement is recorded. The County Engineer shall be responsible for determining compliance with this condition.
15. Unless otherwise stated in these conditions of approval or in the final Development Agreement, all roadway improvements necessary (including but not limited to, curb, gutter, sidewalk, signing and striping, driveway access, and street lighting) to serve the project shall be designed and constructed to county standards and specifications and/or financial assurances in an appropriate form and amount shall be provided. The County Engineer shall be responsible for determining compliance with this condition.
16. All private roadways shall be depicted on the final maps and identified on the tentative map as either private access easements over individual adjacent lots or, if identified as separate parcels, as either common areas with equal fractional ownership by all of the lots within the development or common areas owned by the homeowners association. The County Engineer shall be responsible for determining compliance with this condition.

#### GRADING AND DRAINAGE

17. A general concept-level storm drain master plan shall be submitted to the County Engineer for approval prior to acceptance of the final Development Agreement. The general concept-level storm drain master plan shall address in general terms proposed methods for handling the existing and increased flows for the 10- and 100-year storms including detention and other proposed mitigation measures for both on-site and off-site areas. This master plan shall include a drawing which shows the existing drainage basins within the development and indicate how they may be impacted. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of a tentative map for any phase or approval of any special use permit, a preliminary hydrology report shall be submitted to the County Engineer for approval. The County Engineer shall be responsible for determining compliance with this condition.
18. Detention/retention facilities are to be maintained by a homeowners association and perpetually funded unless Washoe County agrees to accept maintenance and financial responsibilities. Regional facilities would be maintained by Washoe County. The County Engineer shall be responsible for determining compliance with this condition.

19. A maintenance plan of all drainage facilities to be owned by the homeowners association shall be provided prior to approval of the conditions, covenants, and restrictions (CC&Rs). All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe County water treatment plant and associated Steamboat Ditch conveyance system. The County Engineer shall be responsible for determining compliance with this condition.
20. The off-stream detention/debris basin recommended in the 1990 Kennedy, Jenks, Chilton report shall be reserved based on the following timetable:
  - a. Washoe County will have three years to obtain the necessary permits for construction of the off-stream detention basin. This three years shall commence upon the approval of the final Development Agreement. If Washoe County fails to obtain the necessary permits, the property for the detention site shall be offered by the developer or his successors, for dedication to the Washoe County School District for a middle school or revert to open space.
  - b. If Washoe County does obtain the necessary permits within three years, construction of the project shall commence within 5 years of the approval of the final Development Agreement. If construction is not started by that date, the property for the detention site shall be offered by the developer or his successors, for dedication to the Washoe County School District for a middle school or revert to open space.
  - c. If an alternative solution or site becomes available for flood control, this property will immediately become available for dedication to the Washoe County School District for a middle school or revert to open space.
  - d. If the detention basin is constructed, Washoe County shall pay fair market value for the property.
21. The increase in development-caused runoff from the 100-year storm, including drainages which run directly into the Steamboat Ditch, shall be detained/retained on-site because of the limited capacity of the flood control facilities in the area of South Virginia Street and the Steamboat Ditch Company. The County Engineer shall be responsible for determining compliance with this condition.
22. A geotechnical report shall be prepared, which considers the effects of earthquake forces and faulting in the area. The siting and design of detention/retention facilities shall be addressed based on the findings and recommendations provided in the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.
23. The development shall comply with the requirements of the Hillside Ordinance of the Development Code, as applicable. The Department of Development Review shall be responsible for determining compliance with this condition.

#### WATER AND WASTEWATER

24. A schematic water system plan for the referenced proposal must be submitted to the Utility Division and the District Health Department. Prior to a final map approval, the plan must show that the water system will conform to the State of Nevada Water Supply Regulations, NAC Chapter 445, and the State of Nevada Regulations Governing Review of Plans for Subdivisions, Condominiums, and Planned Unit Developments, NAC 278.400 through 278.410.

25. Prior to the approval of the final Development Agreement, a complete water analysis from at least one monitoring well must be submitted to the District Health Department. The analysis must demonstrate the water conforms to the existing and proposed drinking water standards.
26. The developer shall utilize treated wastewater from the South Truckee Meadows Wastewater Treatment Plant. As part of the initial construction, the developer shall provide the necessary on-site easements needed to construct the infrastructure. When this resource becomes available to irrigate the golf course, the developer shall construct the necessary on-site infrastructure. The Utility Division shall be responsible for determining compliance with this condition.

#### FIRE PROTECTION

27. If requested by the applicable fire protection agency, a minimum one-acre site for a fire station shall be offered for dedication prior to recordation of the first final map. The developer shall enter into talks with the applicable fire protection agency for any other requirements, such as, a fire station site, manpower and equipment needs, or for coordination with other developments that have similar requirements and the results of those discussions, as they relate to the entire project, shall be incorporated into the Development Agreement.

#### PARKS/RECREATION/OPEN SPACE

28. An open space management plan and map shall be prepared that specifies the ownership of open spaces, type of uses allowed and who is responsible for maintenance. This plan shall address the provisions of Section 110.408.45 of the Development Code. Common areas shall be maintained by the homeowners association and provisions be made for perpetual funding for maintenance.

Prior to approval of the final Development Agreement, a government entity (e.g. United States Forest Service, Washoe County Parks Department, etc.) or a non-profit organization (e.g. Washoe Parks Foundation) shall be identified that will accept the dedication of the open space buffers identified on the Concept Plan, which consists of approximately 1,500 acres. The Parks and Recreation Department and the Department of Development Review shall be responsible for determining compliance with this condition.

29. The final Development Agreement shall include a provision for the public open space that prohibits the sale of any open space without the consent of Washoe County. The Department of Development Review shall be responsible for determining compliance with this condition.
30. A minimum 10-acre public park site shall be offered for dedication to the county. A sketch plan will be included in the final Development Agreement. The final park design shall be mutually agreeable to the county and the developer. The developer will construct the recreation facilities in the park and then be reimbursed for the cost of the construction from the Residential Construction Tax. The responsibility of park maintenance shall be negotiated by the developer and Washoe County prior to the approval of the final Development Agreement. The Parks and Recreation Department and Department of Development Review shall be responsible for determining compliance with this condition.

31. The developer will work with the Department of Parks and Recreation to locate the proposed regional public trails to the satisfaction of Washoe County and the developer. The Parks and Recreation Department and Department of Development Review shall be responsible for determining compliance with this condition.

LANDSCAPING/ARCHITECTURAL DESIGN

32. Prior to approval of the final Development Agreement, the developer shall submit a Development Standards Handbook for the entire project to the Design Review Committee for its review and approval. These guidelines shall address, but not be limited to, type and color of building material, general architectural design, fencing, landscaping material (if plant material: type, size at time of planting, maturation size at full growth, period of time between planting and full growth), landscaping location, landscaping irrigation system, and financial assurances that landscaping will be planted and maintained.

The Design Review Committee shall also review the design of Whites Creek Lane, specifically to address Condition 19.c. for tentative maps. The Department of Development Review shall be responsible for determining compliance with this condition.

<p><b>CONDITIONS</b> for <b>TENTATIVE SUBDIVISION MAP CASE NO. _____</b> for _____ <b>SUBDIVISION</b></p>
---

**UNLESS OTHERWISE STATED, PRIOR TO FINALIZATION OF ANY PORTION OF THE TENTATIVE SUBDIVISION MAP, ALL CONDITIONS MUST BE MET OR FINANCIAL ASSURANCES TO ENSURE COMPLETION OF THE CONDITIONS MUST BE PROVIDED. THE AGENCY RESPONSIBLE FOR DETERMINING COMPLIANCE WITH A SPECIFIC CONDITION SHALL DETERMINE WHETHER THE CONDITION MUST BE FULLY COMPLETED OR WHETHER THE DEVELOPER SHALL BE OFFERED THE OPTION OF PROVIDING FINANCIAL ASSURANCES.**

**A COPY OF ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL BE FILED WITH THE DEPARTMENT OF PUBLIC WORKS AND/OR DEPARTMENT OF DEVELOPMENT REVIEW.**

**THE DEVELOPER SHALL MEET WITH THE ENGINEERING DIVISION AND THE DEPARTMENT OF DEVELOPMENT REVIEW AT LEAST SIXTY (60) DAYS BEFORE THE ANTICIPATED DATE OF APPROVAL BY THE PLANNING COMMISSION TO REVIEW SCHEDULING, REQUIREMENTS, FINAL CONSTRUCTION DRAWINGS, AND DOCUMENTATION NECESSARY TO ADEQUATELY COMPLY WITH THE CONDITIONS OF APPROVAL AND THE APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES. NO FINAL MAP WILL BE SCHEDULED FOR A PLANNING COMMISSION MEETING DATE THAT IS LESS THAN SIXTY (60) DAYS FROM THE DATE OF THIS MANDATORY MEETING.**

**A REQUEST FOR AN EXTENSION OF TIME FOR THE RECORDING OF A FINAL MAP MUST BE SUBMITTED TO THE DEPARTMENT OF DEVELOPMENT REVIEW AT LEAST SIXTY (60) DAYS PRIOR TO THE EXPIRATION DATE OF THE TENTATIVE SUBDIVISION MAP. SAID EXPIRATION IS TWO YEARS FROM THE DATE OF APPROVAL OF THE TENTATIVE MAP OR A SUBSEQUENT FINAL MAP BY THE BOARD OF COUNTY COMMISSIONERS OR, WHEN APPLICABLE, BY THE PLANNING COMMISSION.**

**COMPLIANCE WITH THE DEVELOPMENT AGREEMENT, APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES AND WITH THE CONDITIONS OF APPROVAL OF THIS TENTATIVE MAP IS THE RESPONSIBILITY OF THE DEVELOPER, ITS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY, AND THEIR SUCCESSORS IN INTEREST.**

#### GENERAL CONDITIONS

1. The subdivider shall present to the planning commission a final map, prepared in accordance with the tentative map, for the entire area for which a tentative map has been approved, or one of a series of final maps, each covering a portion of the approved tentative map, within two (2) years after the date of approval of the tentative map.

Prior to the expiration of a tentative map, the planning commission or, upon appeal, the governing body may grant a two (2) year extension for the presentation of the entire final map or next successive final map. The effective date of the extension shall be two (2) years from the date upon which the map would have expired.

If the subdivider fails to record a final map for any portion of the tentative map or obtain an extension within two years after the date of approval of the tentative map, all proceedings concerning the subdivision are terminated.

2. Unless specifically stated in the final Development Agreement, final maps and final construction drawings shall comply with all applicable statutes, ordinances, rules, regulations, and policies in effect at the time of approval of the final map or any subsequent extension date. The Department of Development Review shall be responsible for determining compliance with this condition.

3. Final maps shall be in substantial compliance with all plans and documents submitted with and made part of this tentative map request, as may be amended by action of the final approving authority. Substantial compliance shall be determined by the applicable agency and the Department of Development Review.
4. As part of every tentative map and final map application, the developer shall include a completed "statement of compliance" that demonstrates how the development will be or is consistent with the recorded final Development Agreement. The "statement of compliance" for the final map shall incorporate a description of how the conditions of approval have been met. The Department of Development Review shall be responsible for determining compliance with this condition.
5. Conditions, covenants, and restrictions (CC&Rs) shall be reviewed and approved by the District Attorney's Office, County Engineer, and the Department of Development Review prior to final map approval or prior to issuance of a certificate of occupancy for a non-residential use. Washoe County shall be made a party to the applicable provisions of the CC&Rs to the satisfaction of the District Attorney's office. If the CC&Rs are not recorded on the entire property, subsequent phases will be annexed to the previously recorded CC&Rs. Said CC&Rs shall specifically address the ability of the county to enforce certain provisions against the property and the individual property owner's responsibilities for the perpetual funding, maintenance and replacement, of the following items, at a minimum:
  - a. Private roads within the subdivision.
  - b. Equestrian center.
  - c. Staffing of maintenance and security forces.
  - d. Common area landscaping.
  - e. Entrance gates.
  - f. Snow removal and storage areas.
  - g. Common area landscaping including along streets or landscaping along Whites Creek Lane.
  - h. Fire and fuelbreaks.
  - i. Detention basins and the accumulated sediment.
  - j. Equestrian/pedestrian trails.
  - k. Bicycle and pedestrian paths.
  - m. Golf cart crossings.
  - n. Off-site residential parking areas.

At a minimum, the CC&Rs shall also specifically address the following items:

- a. Requirement to abide by Architectural/Community Design Guidelines.
- b. All homes must have a garage with space for a minimum of two cars.
- c. Specifications on the limitation of turf area for single-family homes.
- d. Retention of public access to the golf course, bike paths, (i.e., 8-foot meandering paths along minor arterials and some collectors; refer to street sections), public trails, and non-residential uses.

- e. Notice of requirement to pay future sewer user fees.
  - f. Requirement to adhere to National Electric Safety Code setbacks for existing overhead power lines.
  - g. Potential for conservation easements or dedication of open space.
  - h. Prohibition of motorized vehicles in open space.
  - i. Areas with potential for equestrian traffic.
  - j. Access to open space for pedestrian and bicycle traffic.
  - k. Notice of pedestrian easements to abutting properties.
  - l. Minimum defensible space requirements.
  - m. Snow storage areas.
6. Prior to ground-disturbing activity or prior to finalization of any portion of the tentative map, the developer shall submit an archaeological/historical survey to the Department of Development Review. The Department of Development Review shall submit the survey to the State Historic Preservation Office of the Department of Museums, Library and Arts for review. Following that review, the State Historic Preservation Office shall submit a letter to the Department of Development Review that indicates the survey was acceptable.
  7. A note shall be placed on all grading plans and construction drawings stating:

NOTE

Should any prehistoric or historic remains/artifacts be discovered during site development, work shall temporarily be halted at the specific site and the State Historic Preservation Office of the Department of Museums, Library and Arts, shall be notified to record and photograph the site. The period of temporary delay shall be limited to a maximum of two (2) working days from the date of notification.
  8. The developer shall be required to participate in any applicable General Improvement District or Special Assessment District formed by Washoe County. The applicable division of the Department of Public Works shall be responsible for determining compliance with this condition.
  9. Prior to acceptance of public improvements and release of any financial assurances, the developer shall furnish to the Utility Division and/or Engineering Division a complete set of reproducible 'as built' construction drawings prepared by a civil engineer registered in the State of Nevada.
  10. A complete set of construction improvement drawings, including an on-site grading plan, shall be submitted to the Engineering Division for approval prior to finalization of any portion of the subdivision. Grading shall comply with best management practices and shall include detailed plans for grading and drainage on each lot, erosion control, slope stabilization, mosquito abatement. Placement or disposal of any excavated material shall be indicated on the grading plan.
  11. All soil boring logs must be included as part of the construction drawings. The County Engineer shall be responsible for determining compliance with this condition.
  12. All new utilities shall be placed underground. The County Engineer shall be responsible for determining compliance with this condition.

13. The developer is to provide written approval from the US Postal Service for the plans for the installation of mail delivery facilities. The system, other than individual mail boxes, must be shown on the project construction plans and installed as part of the on-site improvements. The County Engineer shall be responsible for determining compliance with this condition.
14. The final map shall designate faults, by distance and bearings, that have been active during the Holocene epoch of geological time and shall contain the following note.

NOTE

No habitable structures shall be located on a fault that has been active during the Holocene epoch of geological time. The faults have been located by Civil Engineer Registered in Nevada and experienced in Geotechnical Engineering and field surveyed by a Nevada Registered Land Surveyor.

The Department of Development Review shall be responsible for determining compliance with this condition.

15. The Washoe County Planning Commission certificate on the final map shall be approved by the County Engineer and the Department of Development Review.

STREETS AND TRAFFIC

16. The developer shall submit a detailed geotechnical analysis and report for pavement design recommendations to the County Engineer for review and approval. The report shall be based on the estimated traffic loadings for a 20-year design life and shall include assumptions concerning the distribution of trucks, to include project construction truck traffic. The resultant pavement thickness in the geotechnical analysis must be used if the report indicates a structural section that is stronger than minimum is required. The County Engineer shall be responsible for determining compliance with this condition.
17. Prior to the issuance of the first building permit, two lanes of Whites Creek Lane shall be constructed, to two-lane minor arterial standards as a minimum, from Thomas Creek Road to the project site. The County Engineer shall be responsible for determining compliance with this condition.
18. Prior to the issuance of the first building permit, a second access shall be constructed to the project site to emergency standards to the satisfaction of the applicable fire protection agency.
19. The County Engineer shall be responsible for determining compliance with this condition. Prior to the issuance of the 35th building permit, the following roadway improvements shall be constructed:
  - a. The remaining two lanes of Whites Creek Lane from Thomas Creek Road to the project site if warranted by projected traffic demands.
  - b. Two (2) lanes of Whites Creek Lane from Thomas Creek Road to Wedge Parkway with 100 feet of right-of-way. These two lanes will be constructed so that an additional two lanes may be added in the future if warranted by projected traffic volumes.

- c. Whites Creek Lane will be designed in a manner that minimizes any impacts on the adjacent homes to the north in Fieldcreek Ranch (e.g., fencing, berms, lowering the travel lanes).
20. The minimum pavement structural section shall be 5 inches of asphalt over 8 inches of aggregate base for minor arterials, 4 inches of asphalt over 6 inches of granular base for roadways (private and public) for collector streets, and 3 inches of asphalt over 6 inches of granular base for roadways for local streets. The County Engineer shall be responsible for determining compliance with this condition.
21. Prior to or upon approval of the CC&Rs, the developer shall have a street maintenance program approved by the County Engineer and the Department of Development Review. Maintenance of private streets shall be performed by the homeowners association and shall be perpetually funded.
22. The following roadway sections shall be applicable to the public and private on-site streets shown on the tentative map. A traffic report shall be submitted with each tentative map and shall identify the ultimate average daily traffic on each street and shall make recommendations for geometric design (e.g., left turn storage capacity, site distance, minimum required turning radius, etc.). The County Engineer shall be responsible for determining compliance with this condition.
  - a. Private Common Driveways - Serving 4 or less lots, pavement width 20 feet; serving 5 or more lots, pavement width 22 feet; no parking either side. Curb returns shall have a minimum face of curb radius of 20 feet on local streets and 25 feet on collector streets. Acceleration/deceleration tapers will be provided on streets with average daily traffic exceeding 2000 trips. Private common driveway locations will be shown on all tentative maps. Private common driveways will line up with proposed street intersections where possible and will comply with street intersection offset requirements. Single lot driveway access will not be allowed onto streets on which the average daily traffic exceeds 2000 trips. (Refer to street sections.)
  - b. Rural Private - 60 foot minimum ROW (maximum 200 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)

- c. Local Private - 60 foot minimum ROW (200 - 500 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)
- d. Collector Private - 60 foot minimum ROW (500 ADT to 2000 ADT): minimum 24-foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to Street Sections.)
- e. Collector Private - 60 foot minimum ROW (2000 ADT to 8000 ADT): minimum 24-foot pavement width with an additional 12-foot left turn lane at intersections where warranted; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking on either side. A minimum 8-foot path on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. No residential driveway access will be allowed. Access for private common driveways will be allowed. (Refer to street sections.)
- f. Collector Private - 120 foot minimum ROW collector street (up to 9600 ADT): A minimum 27-foot center median from curb face to curb face, 19-foot pavement width on either side of the median; curb and gutter on both sides or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side except during special events; a minimum 8-foot meandering asphalt path both sides; no residential driveway access allowed. (Refer to street sections.)
- g. Minor Arterial, Private - 120 foot minimum ROW (more than 10,800 ADT): A minimum 27-foot center median from curb face to curb face, 24-foot pavement width on either side of the median; County Engineer-approved concrete header with roadside ditch; no parking either side; a minimum 8-foot meandering asphalt path both sides; no residential driveway access allowed. A gate may be installed at the point where Whites Creek Lane becomes a private road. (Refer to street sections.)

- h. Minor Arterial, Public - 120-foot minimum ROW (more than 10,800 ADT): A minimum 27-foot center median from curb face to curb face, 29.5-foot roadway section on either side of the median; curb and gutter on both sides; a minimum 6-foot concrete sidewalk on both sides; no residential driveway access is allowed. (Refer to street sections.) A gate may be installed at the point where Whites Creek Lane becomes a private road. A public turn-around is required on the public side of the gate.
  - 23. All roadway grades shall be limited to the maximum allowable grades for each street classification as provided in the Washoe County Standards. The County Engineer shall be responsible for determining compliance with this condition.
  - 24. Construction near fault lines shall be as follows:
    - a. Buildings for human occupancy shall be set back from the centerline of fault traces. Setback distances shall be determined by a geotechnical investigation prepared by a Nevada Registered Civil Engineer experienced in geotechnical engineering. The minimum setback shall be 50 feet on each side of the fault line.
    - b. Roadway construction in fault zones and along fault traces shall be reviewed by a Nevada Registered Civil Engineer experienced in geotechnical engineering. Any recommended special construction requirements (e.g., flexible joint connections for utilities) shall be complied with.
- The County Engineer shall be responsible for determining compliance with this condition.
- 25. All cul-de-sacs shall be a minimum pavement radius of 43.5 feet to front face of curb or 45 feet to edge of pavement. The County Engineer shall be responsible for determining compliance with this condition.
  - 26. Landscaped medians shall be designed in accordance with AASHTO site distance and safety guidelines. The County Engineer and the Department of Development Review shall be responsible for determining compliance with this part of the condition. Maintenance of median landscaping shall be by the homeowners association as provided for in a separate maintenance agreement to be approved by the County Engineer and the District Attorney's Office prior to approval of the CC&Rs.
  - 27. Temporary county standard turnarounds shall be constructed on all phased roadways which extend more than one lot depth beyond a maintained public or private street. The County Engineer shall be responsible for determining compliance with this condition.
  - 28. All-weather emergency access roads shall be constructed at the end of all cul-de-sacs that are longer than 1,500 feet. These roads shall have a 30-foot access easement with a minimum 20-foot width and 2.5 inches of asphalt concrete pavement on an engineered gravel base. The roads shall be controlled by emergency access gates and shall be posted with signs stating "For Emergency Vehicles Only". The County Engineer and the applicable fire protection agency shall be responsible for determining compliance with this condition.

29. Prior to final map approval, the developer shall provide all weather emergency access easements and road improvements at the locations shown on the tentative map, terminating at public or privately-maintained streets. The County Engineer shall be responsible for determining compliance with this condition.
30. Meandering asphalt paths will be acceptable provided that:
  - a. Pedestrian easements are included for portions of the paths located outside the county right-of-way.
  - b. Landscaping between the back of the curb and the path shall be designed in accordance with AASHTO site distance and safety guidelines. The County Engineer shall be responsible for determining compliance with the provisions of this condition.
  - c. Maintenance of the asphalt paths and landscaping shall be the responsibility of the developer and, when created, by the homeowners association as provided for in a separate maintenance agreement and to be approved by the County Engineer and the District Attorney's office prior to approval of the final Development Agreement.
31. Asphalt paths or gravel shoulders, located adjacent to private streets shall be privately maintained and funded. The County Engineer shall be responsible for determining compliance with this condition.
32. Street lights shall be installed at major intersections. The County Engineer shall be responsible for determining compliance with this condition.
33. No at-grade golf cart crossings shall be allowed across any street with 500 ADT or greater. Where possible, crossings should be below the grade of public streets. The County Engineer shall be responsible for determining compliance with this condition.
34. Off-site parking areas shall be provided within 500 feet of homes that have lots ranging in size between 12,000 square feet and one-half acre. One space shall be provided for every three homes. Parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the tentative map(s). The Department of Development Review shall be responsible for determining compliance with this condition.
35. Project streets that are designed with security gates at points intersecting with public streets shall have adequate on-site stacking space. The specific type and size of the stacking areas must be approved by the County Engineer and constructed as approved.
36. Regulatory signs must be installed at the juncture of all public streets with a private street and at intersections along the primary loop road. Said sign shall state: "PRIVATE STREET NOT MAINTAINED BY COUNTY." All regulatory signs shall meet the Manual of Uniform Traffic Control Device standards. The County Engineer shall be responsible for determining compliance with this condition.
37. Street names shall be reviewed and approved by the Regional Street Naming Coordinator. The tentative map shall indicate street names for identification purposes.

## DRAINAGE AND GRADING

38. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of a tentative map for any phase, a preliminary hydrology report shall be submitted to the County Engineer for approval. This preliminary hydrology report shall be prepared in accordance with county requirements for tentative maps, in conformance with the general concept-level storm drain master plan, and be applicable to the specific tentative map or special use permit being approved.

The report shall include, as a minimum, the locations, points of entry and discharge, flow rates and flood limits of all 10- and 100-year storm flows impacting both on-site and off-site areas and the methods for handling these flows as well as the proposed methods for handling storm water increases due to development. Proposed mitigation measures shall be included for any impacts on existing on-site and off-site properties and facilities. The County Engineer shall be responsible for determining compliance with this condition.

39. Prior to the submittal of any final map or issuance of any grading permit, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted to the County Engineer for approval. The report shall be in substantial compliance with the general concept-level storm drain master plan and contain all final storm drain pipe, ditch and retention pond sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed, constructed, and approved by the District Health Department and the County Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.

40. A maintenance plan of all drainage facilities, to be owned by the homeowners association, shall be provided prior to approval of the CC&Rs. All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe County water treatment plant, and associated Steamboat Ditch conveyance system. All runoff from improved areas which runs into the Steamboat Ditch shall be pre-treated for silt and petrochemicals and shall be routed through a "wet" detention facility or approved alternative. The Utility Division and the Department of Development Review shall be responsible for determining compliance with this condition.

41. The 100-year floodplain boundaries and flood elevations shall appear on each final map. If the floodplain boundary has been changed by a Federal Emergency Management Agency (FEMA) Conditional Letter of Map Amendment or Conditional Letter of Map Revision, the date of that letter and a note to that effect shall appear on the final map. Grading or building permits shall not be issued for areas currently shown as "A" zones on the FEMA floodplain maps until a Letter of Map Amendment or Revision is submitted or until conformance with Washoe County flood construction standards is determined by the County Engineer. The County Engineer shall be responsible for determining compliance with this condition.

42. Prior to approval of the final map, the developer shall obtain a Stormwater Discharge Permit from the Nevada Division of Environmental Protection. If required, point discharge permit for each proposed detention pond will be obtained from the Nevada Division of Environmental Protection and copy shall be submitted to the County Engineer.
43. The developer shall provide pretreatment for petrochemicals, nutrients and other chemicals used for landscaping, and silt for all storm drainage from the site. Systematic cleaning of the streets, parking lots, and catch basins, and control of salt and sanding activities shall to be delineated in the maintenance plan. The County Engineer shall be responsible for determining compliance with this condition.
44. Prior to issuance of a grading permit for the golf course and/or final map, a final wetlands determination must be made and approved by the US Army Corps of Engineers and the approval letter provided to the Department of Development Review.
45. Prior to issuance of a grading permit for the golf course or approval of a final map, the developer shall obtain from the Army Corps of Engineers a 404 permit for wetland and dredge and fill for all roadway crossing of Thomas and Dry Creeks, or a letter from the COE indicating that a 404 permit is not required and a copy submitted to the County Engineer.
46. All street crossings of Thomas and Dry Creeks shall be designed to pass the 100 year flood flows without obstruction or overtopping of the roadway. Erosion protection shall be provided based upon the recommendation of the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.
47. Standard reinforced concrete headwalls or other approved alternatives shall be placed on the inlet and outlet of all drainage structures and rip-rap shall be used to prevent erosion at the inlets and outlets of all pipe culverts. The District Health Department and the County Engineer shall be responsible for determining compliance with this condition.
48. The stormwater discharges from this development that flow to Dry Creek shall be controlled to pre-development flow conditions and will be controlled to prevent water quality degradation of Steamboat Ditch. The developer shall provide drainage structures under Steamboat Ditch that would pass the 10-year frequency storm or demonstrate that there will not be any water quality degradation in Steamboat Ditch. The County Engineer shall be responsible for determining compliance with this condition.

The developer shall contact the Division of Water Resources, State of Nevada, to determine whether the proposed flood detention facilities will require permits. If required, copies shall be submitted to the County Engineer.

49. Prior to the approval of a grading permit or approval of a final map, a detailed dust control plan shall be prepared and submitted to Air Quality Management of the District Health Department and to the Department of Development Review. The dust control plan shall address, as a minimum, "phased grading" and stabilization methods that include the revegetation, application of palliatives or other District approved methods prior to any grading of new phases, as well as effective street cleaning for any mud or soil tracking to existing paved surfaces, and dust controls on any screening methods or storage piles located on the site.
50. Prior to approval of the first final map, an erosion control and soil stabilization plan and a grading plan shall be approved by the Washoe-Storey Conservation District. A copy of the approval shall be submitted to the District Health Department, Department of Development Review, and County Engineer.
51. A buffer shall be provided next to riparian vegetation. The size of the buffer shall be mutually agreeable to Washoe County and the developer. A minimum 50-foot buffer shall be provided from any structures. The Department of Development Review shall be responsible for determining compliance with this condition.
52. Individual lot drainage shall not be allowed to drain onto neighboring properties without proper reciprocal drainage easements and the individual lot drainage swales shall be designed to handle the 100-year flows and lined. The County Engineer shall be responsible for determining compliance with this condition.

#### WATER AND WASTEWATER

53. The developer shall construct or provide the financial assurances for the construction of the water and sewer system facilities. The financial assurances must be in a form and amount that is satisfactory to the Utility Division.
54. Fees for plan checking and inspection shall be paid in accordance with Washoe County ordinance. The Utility Division shall be responsible for determining compliance with this condition.
55. Easements for all water and sewer utilities shall be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
56. No "certificate of occupancy" shall be issued until the water and sewer facilities have been completed and accepted for operation and maintenance. The Utility Division shall be responsible for determining compliance with this condition.
57. The sanitary sewer collection system and water system facilities, with the exception of the golf course and common area irrigation systems, must be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
58. The Nevada Division of Environmental Protection must submit a letter to the District Health Department certifying their approval of the final map.

59. The developer shall deposit with the Utility Division the sum of \$50.00 per lot prior to recordation of all or part of the final map. This fee shall represent the prorated share of the completed water and wastewater facilities plan for the South Truckee Meadows for this development.

#### WATER

60. In accordance with the Washoe County Utility Division policies for the Southwest Truckee Meadows, water rights shall be dedicated to Washoe County. Prior to acceptance, the water rights must be in good standing with the State of Nevada Division of Water Resources and must reflect a point of diversion, place and manner of use acceptable to the Utility Division.
61. All minor infrastructure for potable water distribution shall be designed, constructed, inspected, and approved by the District Health Department and the Utility Division. The developer shall coordinate with the Utility Division to ensure the major infrastructure design can be accomplished prior to the approval of the final map.
62. Responsibility for design of wells, pump structure, controls, telemetry, and appurtenances, storage tanks, and transmission lines to the edge of the subdivision, all necessary to provide water service to the project, will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
63. Prior to final map approval, a letter of approval from the Division of Water Resources for the water rights serving this proposal must be submitted. A water "will-serve" letter for a final map will not be issued until the production wells have been determined to have adequate water resource. The Utility Division shall be responsible for determining compliance with this condition.
64. Before approval of the final map will be considered, a letter from the water purveyor committing adequate water service to this proposal must be submitted to the District Health Department. This letter shall indicate that the facility will not be brought beyond its permitted capacity by this service.
65. Prior to the approval of a final map by the District Health Department, the production wells that will serve any phase of this development must be constructed, pump tested and sampled to ensure the proposed water system has sufficient quality and quantity.
66. Water quality results from a state-certified laboratory for new water sources shall be submitted to the Utility Division. The water quality sampling and testing shall be in compliance with the current State of Nevada Regulations for Public Water Systems, NAC 445.

67. If the water quality of the wells does not meet the secondary or the primary standards, as defined by NAC 445, water treatment facilities must be on-line and functioning prior to issuance of any building permits. The Utility Division shall be responsible for determining compliance with this condition.
68. If a supplemental water source is required, evidence that an adequate source has been procured by the developer/water purveyor shall be submitted to the Utility Division for their review and approval.
69. Any wells on the property not in use for production or monitoring purposes, shall be properly abandoned in accordance with State Regulations governing Water Wells and Related Drilling. The Utility Division shall be responsible for determining compliance with this condition.
70. The developer shall provide access to the existing monitoring wells. In the event access is no longer available, the developer shall construct new wells. The Utility Division shall be responsible for determining compliance with this condition.
71. The tentative maps shall show the maintenance roads for the existing and proposed water tanks. The location of these roads shall be mutually agreeable to the Department of Public Works and the developer.
72. The final map owner's certificate shall contain language indicating that the developer and his assignees agree to the use of residential water meters. The Department of Development Review shall be responsible for determining compliance with this condition.
73. Pursuant to Section 278.340 of the State of Nevada Regulations Governing Review of Plans for Subdivisions, Condominiums, and Planned Unit Developments, no grading permit shall be issued prior to District Health Department approval of the referenced final map. This condition does not apply to the construction of production wells required in Condition 68.  
  
The developer may seek relief from the District Board of Health for this requirement or may choose to create a separate parcel for the first 18-hole golf course.
74. The Department of Development Review shall be responsible for determining compliance with this condition. The final map shall contain the following note:

NOTE

No Certificate of Occupancy shall be issued until the water facilities have been completed and accepted by Washoe County.

## SEWER

75. Responsibility for design of any pump stations and interceptors to provide sewer service to the project will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
76. All minor infrastructure for sewer collection shall be designed, constructed, inspected, and approved by the District Health Department and the Utility Division.
77. The sewer "privilege connection fee" must be paid for each lot when required by the Washoe County Utility Division since it is not anticipated that there will be any additional major infrastructure needed to serve this development. The Utility Division shall be responsible for determining compliance with this condition.
78. All sewer hookup fees for the area within the final map will be paid to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
79. The final subdivision map shall show a dedicated, all-weather easement, with access, over the developments sanitary sewer lines. The Utility Division shall be responsible for determining compliance with this condition.
80. Proper easements shall be shown for off-site sewage and drainage systems. The Utility Division and the County Engineer shall be responsible for determining compliance with this condition.
81. Prior to final map approval, a letter, which can be a will-serve letter, from the Utility Division committing sewer service, must be submitted to the District Health Department. This letter shall indicate that the treatment facility will not be brought beyond its permitted capacity by this service.

## FIRE PROTECTION

82. The plans submitted with a building permit application shall show evidence of compliance with the recommendations of the applicable fire protection agency. Those concerns are fire flows, fire hydrant number and location, access, sequential phasing of firebreaks during development, permanent firebreaks, minimum defensible space, use of fire resistant construction and/or roof material, sprinklering of structures, and spark arrestors in chimneys. Access and fire flows shall be addressed to the satisfaction of the fire protection agency prior to the approval of a final map.

83. The developer shall minimize grading to the maximum extent possible in the area around the critical mule deer habitat in order to preserve the existing browse shrubs. The Department of Development Review, in conjunction with the applicable fire protection agency, shall be responsible for determining compliance with this condition.

OTHER

84. A minimum 25-foot landscape buffer shall be installed between the homes and the collector and the arterial streets. The homeowners association shall be required to perpetually maintain these areas. The Department of Development Review shall be responsible to determining compliance with this condition.
85. Prior to acceptance of the first map, the telephone easement Doc. No. 415899, which runs through the middle of many lots, shall be realigned with appropriate abandonment and relocation easements, or the proposed lots realigned. The County Engineer shall be responsible for determining compliance with this condition.

**CONDITIONS FOR SPECIAL USE PERMIT CASE NO. \_\_\_\_\_**

**UNLESS OTHERWISE SPECIFIED, ALL CONDITIONS MUST BE MET OR FINANCIAL ASSURANCES MUST BE PROVIDED TO SATISFY THE CONDITIONS PRIOR TO SUBMITTAL FOR A BUILDING PERMIT. THE AGENCY RESPONSIBLE FOR DETERMINING COMPLIANCE WITH A SPECIFIC CONDITION SHALL DETERMINE WHETHER THE CONDITION MUST BE FULLY COMPLETED OR WHETHER THE DEVELOPER SHALL BE OFFERED THE OPTION OF PROVIDING FINANCIAL ASSURANCES. ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL HAVE A COPY FILED WITH THE COUNTY ENGINEER AND THE DEPARTMENT OF DEVELOPMENT REVIEW.**

**COMPLIANCE WITH THE CONDITIONS OF THIS SPECIAL USE PERMIT IS THE RESPONSIBILITY OF THE DEVELOPER, HIS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY AND THEIR SUCCESSORS IN INTEREST. FAILURE TO COMPLY WITH ANY CONDITIONS IMPOSED IN THE ISSUANCE OF THE SPECIAL USE PERMIT MAY RESULT IN THE INSTITUTION OF REVOCATION PROCEDURES.**

**WASHOE COUNTY RESERVES THE RIGHT TO REVIEW AND REVISE THE CONDITIONS OF THIS APPROVAL SHOULD THEY DETERMINE THAT A SUBSEQUENT LICENSE OR PERMIT ISSUED BY WASHOE COUNTY VIOLATES THE INTENT OF THIS APPROVAL.**

## GENERAL CONDITIONS

1. As part of every special use permit application, the developer shall include a completed "statement of compliance" that demonstrates how the development will be or is consistent with the recorded final Development Agreement. The Department of Development Review shall be responsible for determining compliance with this condition.
2. Prior to ground-disturbing activity, the developer shall submit an archaeological/historical survey to the Department of Development Review. The Department of Development Review shall submit the survey to the State Historic Preservation Office of the Department of Museums, Library and Arts for review. Following that review, the State Historic Preservation Office shall submit a letter to the Department of Development Review that indicates the survey was acceptable.
3. A note shall be placed on all grading plans and construction drawings stating:

### NOTE

Should any prehistoric or historic remains/artifacts be discovered during site development, work shall temporarily be halted at the specific site and the State Historic Preservation Office of the Department of Museums, Library and Arts, shall be notified to record and photograph the site. The period of temporary delay shall be limited to a maximum of two (2) working days from the date of notification.

4. Prior to acceptance of public improvements and release of any financial assurances, the developer shall furnish to the Utility Division and/or Engineering Division a complete set of reproducible 'as built' construction drawings prepared by a civil engineer registered in the State of Nevada.
5. The developer shall be required to participate in any applicable General Improvement District or Special Assessment District formed by Washoe County. The applicable division of the Department of Public Works shall be responsible for determining compliance with this condition.
6. All new utilities shall be placed underground. The County Engineer shall be responsible for determining compliance with this condition.
7. An animal waste management plan shall be prepared prior to the issuance of any building permit for a facility that might require such a plan. The plan must document how the migration of bacteria, nutrients, and other animal waste by-products to surface and ground waters will be prevented. The Department of Development Review shall be responsible for determining compliance with this condition.

## STREETS AND TRAFFIC

8. All street construction shall comply, at a minimum, with the requirements for a subdivision within this project. The County Engineer shall be responsible for determining compliance with this condition.

9. The developer shall submit a detailed geotechnical analysis and report for pavement design recommendations to the County Engineer for review and approval. The report shall be based on the estimated traffic loadings for a 20-year design life and shall include assumptions concerning the distribution of trucks, to include project construction truck traffic. The resultant pavement thickness in the geotechnical analysis must be used if the report indicates a structural section that is stronger than minimum is required. The County Engineer shall be responsible for determining compliance with this condition.
10. The minimum pavement structural section shall be 5 inches of asphalt over 8 inches of aggregate base for minor arterials, 4 inches of asphalt over 6 inches of granular base for roadways (private and public) for collector streets, and 3 inches of asphalt over 6 inches of granular base for roadways for local streets. The County Engineer shall be responsible for determining compliance with this condition.
11. Prior to the issuance of the first building permit, two lanes of Whites Creek Lane shall be constructed, to two-lane minor arterial standards as a minimum, from Thomas Creek Road to the project site. The County Engineer shall be responsible for determining compliance with this condition.
12. Prior to the issuance of the first building permit, a second access shall be constructed to the project site to emergency standards. The applicable fire protection agency shall be responsible for determining compliance with this condition.
13. Construction near fault lines shall be as follows:
  - a. Buildings for human occupancy shall be set back from the centerline of fault traces. Setback distances shall be determined by a geotechnical investigation prepared by a Nevada Registered Civil Engineer experienced in geotechnical engineering. The minimum setback shall be 50 feet on each side of the fault line.
  - b. Roadway construction in fault zones and along fault traces shall be reviewed by a Nevada Registered Civil Engineer experienced in geotechnical engineering. Any recommended special construction requirements (e.g., flexible joint connections for utilities) shall be complied with.

The County Engineer shall be responsible for determining compliance with this condition.

14. Asphalt paths or gravel shoulders, located adjacent to private streets shall be privately maintained and funded. The County Engineer shall be responsible for determining compliance with this condition.
15. No at-grade golf cart crossings shall be allowed across any street with 500 ADT or greater. Where possible, crossings should be below the grade of public streets. The County Engineer shall be responsible for determining compliance with this condition.

## GRADING AND DRAINAGE

16. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of any special use permit, a preliminary hydrology report shall be submitted to the County Engineer for approval. This preliminary hydrology report shall be prepared in accordance with county requirements for tentative maps, in conformance with the general concept-level storm drain master plan, and be applicable to the specific tentative map or special use permit being approved.

The report shall include, as a minimum, the locations, points of entry and discharge, flow rates and flood limits of all 10- and 100-year storm flows impacting both on-site and off-site areas and the methods for handling these flows as well as the proposed methods for handling storm water increases due to development. Proposed mitigation measures shall be included for any impacts on existing on-site and off-site properties and facilities. The County Engineer shall be responsible for determining compliance with this condition.

17. Prior to the submittal of any final map or issuance of any grading permit, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted to the County Engineer for approval. The report shall be in substantial compliance with the general concept-level storm drain master plan and contain all final storm drain pipe, ditch and retention pond sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed, constructed, and by the District Health Department and the County Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.

Prior to the issuance of a grading permit, the developer shall provide a letter granting a blanket drainage and construction easement to the Southwest Pointe Subdivision that allows the subdivision to drain onto the golf course and to construct detention facilities necessary to accommodate the subdivision-generated stormwaters in mutually agreed-upon locations. The easement shall be submitted with the plans for the final golf course improvements. The County Engineer shall be responsible for determining compliance with this condition.

18. Prior to the approval of a grading permit, a detailed dust control plan shall be prepared and submitted to Air Quality Management of the District Health Department and to the Department of Development Review. The dust control plan shall address, as a minimum, "phased grading" and stabilization methods that include the revegetation, application of palliatives or other District approved methods prior to any grading of new phases, as well as effective street cleaning for any mud or soil tracking to existing paved surfaces, and dust controls on any screening methods or storage piles located on the site.
19. For all projects larger than 5 acres, the developer shall obtain a Stormwater Discharge Permit from the Nevada Division of Environmental Protection and submit a copy to the County Engineer prior to ground-disturbing activity.

20. The developer shall provide pretreatment for petrochemicals, nutrients and other chemicals used for landscaping, and silt for all storm drainage from the site. Systematic cleaning of the streets, parking lots, and catch basins, and control of salt and sanding activities shall to be delineated in the maintenance plan. The County Engineer shall be responsible for determining compliance with this condition.
21. The stormwater discharges from this development that flow to Dry Creek shall be controlled to pre-development flow conditions and will be controlled to prevent water quality degradation of Steamboat Ditch. The developer shall provide drainage structures under Steamboat Ditch that would pass the 10-year frequency storm or demonstrate that there will not be any water quality degradation in Steamboat Ditch. The County Engineer shall be responsible for determining compliance with this condition.
22. All street crossings of Thomas and Dry Creeks shall be designed to pass the 100 year flood flows without obstruction or overtopping of the roadway. Erosion protection shall be provided based upon the recommendation of the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.
23. Standard reinforced concrete headwalls or other approved alternatives shall be placed on the inlet and outlet of all drainage structures and rip-rap shall be used to prevent erosion at the inlets and outlets of all pipe culverts. The District Health Department and the County Engineer shall be responsible for determining compliance with this condition.
24. Prior to issuance of a grading permit for the golf course and/or final map, a final wetlands determination must be made and approved by the Army Corps of Engineers and the approval letter provided to the Department of Development Review.
25. Prior to issuance of a grading permit for the golf course or approval of the final map, the developer shall obtain from the United States Army Corps of Engineers a 404 permit for wetland and dredge and fill for all roadway crossing of Thomas and Dry Creeks, or a letter from the COE indicating that a 404 permit is not required and a copy submitted to the County Engineer.
26. The developer shall submit to the District Health Department a letter approving the proposed methods of erosion control and soil stabilization from the Washoe-Storey Conservation District.
27. Prior to the issuance of a grading permit for the golf course, a golf course management plan shall be prepared that documents how the migration of fertilizers, pesticides, herbicides, and fungicides to surface and ground waters will be prevented. A surface and ground water sampling program shall be implemented to demonstrate that migration is not occurring and commits to modifying practices in the event that any of the above materials are detected. The Department of Development Review shall be responsible for determining compliance with this condition.

## WATER AND WASTEWATER

28. The sanitary sewer collection system and water system facilities, with the exception of the golf course and common area irrigation systems, must be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
29. The developer shall construct or provide the financial assurances for the construction of the water and sewer system facilities. The financial assurances must be in a form and amount that is satisfactory to the Utility Division.
30. Fees for plan checking and inspection shall be paid in accordance with Washoe County ordinance. The Utility Division shall be responsible for determining compliance with this condition.
31. Easements for all water and sewer utilities shall be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
32. No "certificate of occupancy" shall be issued until the water and sewer facilities have been completed and accepted for operation and maintenance. The Utility Division shall be responsible for determining compliance with this condition.
33. If required and in accordance with the Washoe County Utility Division policies for the Southwest Truckee Meadows, water rights shall be dedicated to Washoe County. Prior to acceptance, the water rights must be in good standing with the State of Nevada Division of Water Resources and must reflect a point of diversion, place and manner of use acceptable to the Utility Division.
34. Responsibility for design of wells, pump structure, controls, telemetry, and appurtenances, storage tanks, and transmission lines to the edge of the subdivision, all necessary to provide water service to the project, will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
35. Water quality results from a State of Nevada-certified laboratory for new water sources shall be submitted to the Utility Division. The water quality sampling and testing shall be in compliance with the current State of Nevada Regulations for Public Water Systems, NAC 445.
36. If the water quality of the wells does not meet the secondary or the primary standards, as defined by NAC 445, water treatment facilities must be on-line and functioning prior to issuance of any building permits. The Utility Division shall be responsible for determining compliance with this condition.

37. If a supplemental water source is required, evidence that an adequate source has been procured by the developer/water purveyor shall be submitted to the Utility Division for their review and approval.
38. Any wells on the property not in use for production or monitoring purposes, shall be properly abandoned in accordance with State Regulations governing Water Wells and Related Drilling. The Utility Division shall be responsible for determining compliance with this condition.
39. The developer shall provide access to the existing monitoring wells. In the event access is no longer available, the developer shall construct new wells. The Utility Division shall be responsible for determining compliance with this condition.
40. Responsibility for design of any pump stations and interceptors to provide sewer service to the project will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
41. The sewer "privilege connection fee" must be paid for each lot when required by the Washoe County Utility Division since it is not anticipated that there will be any additional major infrastructure needed to serve this development. The Utility Division shall be responsible for determining compliance with this condition.

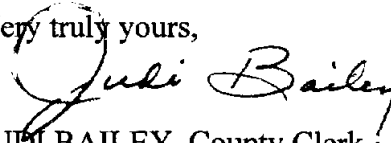

#### FIRE PROTECTION

42. The plans submitted with a building permit application shall show evidence of compliance with the recommendations of the applicable fire protection agency. Those concerns are fire flows, fire hydrant number and location, access, sequential phasing of firebreaks during development, permanent firebreaks, minimum defensible space, use of fire resistant construction and/or roof material, sprinklering of structures, and spark arrestors in chimneys. Access and fire flows shall be addressed prior to the introduction of any combustible materials to the site. The fire protection agency shall be responsible for determining compliance with this condition.
43. The developer shall minimize grading to the maximum extent possible in the area around the critical mule deer habitat in order to preserve the existing browse shrubs. The Department of Development Review, in conjunction with the applicable fire protection agency, shall be responsible for determining compliance with this condition.

LANDSCAPING

44. Detailed landscaping and irrigation plans for the village commercial center, club house, golf course, golf driving range, equestrian center, or other non-residential uses requiring special use permit review shall be submitted prior to the issuance of a building permit for the particular use.
45. A buffer shall be provided between the fairways/greens and all creeks. The setback of the buffer shall comply with 100.200(e) of the Uniform Building Code Section 7011 amended. The Department of Development Review shall be responsible for determining compliance with this condition.

Very truly yours,

JUDI BAILEY, County Clerk  
and Clerk of the Board of  
Washoe County Commissioners

**JUDI BAILEY**  
County Clerk

July 2, 1996

Southwest Pointe Partners/Redfield Land Company  
P. O. Box 345  
Genoa, Nevada 89411

I, Judi Bailey, County Clerk and Clerk of the Board of County Commissioners, Washoe County, Nevada, do hereby certify that at a regular meeting of the Board of County Commissioners held on June 11 1996, Chairman Bradhurst issued the following order:

**96-535      DEVELOPMENT AGREEMENT CASE NO. DA9-1-93 -**  
**SOUTHWEST POINTE/REDFIELD LAND COMPANY**  
**APN: (49-010-04, 49-010-10 AND 41-030-12)**

**7:00 p.m.** This was the time set in Notice of Public Hearing mailed to all affected property owners on May 29, 1996 and published in the Reno-Gazette Journal on May 31, 1996 to consider the recommendation of the Washoe County Planning Commission to conditionally approve Amendment to Development Case No. DA9-1-93 for Southwest Pointe which agreement facilitates the development of a residential community including 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities, a day care facility, an equestrian center, and a commercial village center. The amendment allows the applicant to modify portions of the agreement pertaining to streets, access, drainage, parks and other portions. The total acreage of the project is  $\pm 3,171.6$  acres and located north of Mount Rose Highway (SR 431) and west of Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR), and General Rural (GR), in the Southwest Truckee Meadows Area Plan and is situated within portions of Sections 3, 10, 13, 14, 15, 22, 23, 24, 26, and 27, T18N, R19E, MDM, Washoe County, Nevada. Proof was made that due and legal notice had been given.

Bob Katai, Department of Development Review, reviewed history of the project and proposed amendments to the Development Agreement submitted by the applicant, advising that the amendments are modifications to the conceptual plan adopted as part of the preliminary development agreement. He further advised that the applicant had requested that the percentage of 12,000 square-foot lots increase up to 50% of the lot totals; that the percentage of lots between one-half and one-acre increase up to 40%; that the applicant's current proposal is that no more than 40% of the lot mix to be 12,000 lots;

that no more than 35% of the lot mix being half-acre to one-acre lots; that the remaining lots are one acre or greater; that the original lot number of 1,090 has not been increased; that smaller lots would allow reconfiguration of the golf course and increase open space areas; and that smaller lots would not increase the density of the project.

Chairman Bradhurst opened the public hearing and called on those wishing to speak.

Brita Tryggvi, CFA, Inc., representing applicant, discussed a comparison between the conceptual plan presented to the Board in 1993 and the proposal being presented today. She reviewed maps illustrating the changes and stated that the difference in the lot mix is due to an increase in the number of half-acre lots and a decrease in the number of one-acre lots; that the revised proposal leaves the number of 12,000-square-foot lots the same; that they are still planning an elementary school site, a potential middle school site, a community park, and a fire station site; that the main entry road is proposed to become private at Thomas Creek; that vehicular access would be slightly reduced; that access to the public will not be reduced; and that it is intended that the public have access to the trail system to the project along the roadways; and that they have always proposed connections for the regional trail system and that would remain unchanged. Ms. Tryggvi further advised that they are proposing a gate or a gate house to the development; that the road becomes private at the creek; and that they have met with the Nevada Division of Forestry, the agency responsible for fire protection in this area and this proposal complies with their requirements for a 20 foot area that is clear and unobstructed.

Mike Mohler, Project Manager, stated that they are unclear whether they will be constructing gates to the development; and that they are utilizing this concept in the initial sales phase of the project.

Russ Carpenter, a resident of Pleasant Valley and Chairman of the Mt. Rose/Geiger Grade Citizens Advisory Board, spoke in opposition to the gate concept stating that the neighborhood has not reached a point where gated communities are necessary.

There being no one else wishing to speak, Chairman Bradhurst closed the public hearing.

Mr. Katai advised that the Southwest Truckee Meadows Citizens Advisory Board has recommended approval of amendments to the Development Agreement.

Chairman Bradhurst stated that with two public golf courses and a possible commercial area, it would be difficult to have a gate operation; that it may be used for marketing purposes initially, but if the intent is to encourage individuals to use the golf courses, a gate could be a detriment.

Ms. Tryggvi explained that conditions of approval allow retention of public access to the golf course; that public access to the trails and non-residential uses will all be retained; that the original plan, off the primary loop road, included several gates; and that they have now opted for one gate location.

Following discussion, on motion by Commissioner Sims, seconded by Commissioner Mouliot, which motion duly carried, Chairman Bradhurst ordered that Amendment to Development Agreement Case No. DA9-1-93 for Southwest Pointe/Redfield Land Company be approved subject to the following Development Agreement conditions and the Template conditions:

**CONDITIONS**  
for  
**DEVELOPMENT AGREEMENT CASE NO. DA9-1-93**  
for  
**SOUTHWEST POINTE**

(As amended by the Washoe County Planning Commission  
on May 7, 1996)

**\*\*\* IMPORTANT – PLEASE READ \*\*\***

**UNLESS OTHERWISE STATED, PRIOR TO APPROVAL OF THE FINAL DEVELOPMENT AGREEMENT, ALL CONDITIONS MUST BE MET. A COPY OF ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL BE FILED WITH THE DEPARTMENT OF PUBLIC WORKS AND/OR DEPARTMENT OF DEVELOPMENT REVIEW.**

**COMPLIANCE WITH THE APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES AND WITH THE CONDITIONS OF APPROVAL OF THIS TENTATIVE MAP IS THE RESPONSIBILITY OF THE DEVELOPER, ITS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY, AND THEIR SUCCESSORS IN INTEREST.**

GENERAL CONDITIONS

1. Unless specifically stated in the final Development Agreement, all uses, densities and standards shall be consistent with the Washoe County Development Code and with the goals and policies in the Comprehensive Plan and the Southwest Truckee Meadows Area Plan. Unless specifically stated in the final Development Agreement, the allowed uses, densities, and standards of the land subject to the Development Agreement shall be those in effect at the time the final agreement is approved.

2. The final Development Agreement shall specify any time frames that have been extended beyond those specified by Washoe County Code or Nevada Revised Statutes. The Department of Development Review shall be responsible for determining compliance with this condition.
3. A "statement of compliance" format or formats for both residential and non-residential projects shall be made a part of the final Development Agreement. The Department of Development Review shall be responsible for determining compliance with this condition.
4. The developer and all successors shall direct any potential purchaser of the site, or portions thereof (other than individual single-family lots), to meet with the Department of Development Review to review the Development Agreement and the conditions of approval prior to the final sale of the site. Any subsequent purchasers of the site shall notify the Department of Development Review of the name, address, telephone number, and contact person of the new purchaser within 30 days of the final sale.
5. Prior to submittal to the Washoe County Board of County Commissioners, the final Development Agreement shall be reviewed and approved by the Office of the District Attorney of Washoe County.
6. The final Development Agreement will be submitted to the Washoe County Board of County Commissioners within three months of submission of a completed agreement with all accompanying exhibits, provided the Department of Development Review does not delay the submission in order to approve provisions of the agreement to its satisfaction. Extension of any of these time frames may be requested if mutually agreeable to Washoe County and the developer.
7. The developer shall provide the Department of Development Review staff with a quarterly report indicating the number of building permits issued and other building activity, once residential construction has started.
8. The developer shall define a process to ensure that the maintenance and replacement of the streets, parking areas, lighting, landscaping, recreational facilities, utilities, and other private infrastructure shall be performed by the homeowners associations and shall be perpetually funded. The County Engineer and the Department of Development Review shall be responsible for determining compliance with this condition.

#### STREETS AND TRAFFIC

9. A Level of Service C, or the current Washoe County standard, shall be used as a basis for evaluating transportation needs and traffic impact mitigation requirements.

10. The final Development Agreement shall not be approved until the right-of-way (ROW) of all necessary off-site accesses from the project to Thomas Creek Road are obtained. Preliminary golf course and roadway grading may commence before such approval has been obtained so long as such construction is done in accordance with Condition 21 for tentative maps. An approved and recorded ROW document shall be provided to the County Engineer and the District Attorney's Office.
11. Prior to final approval of the Development Agreement, the developer for Southwest Pointe shall petition the Washoe County Board of County Commissioners to create a Special Assessment District for the purpose of financing the construction of Whites Creek Lane from the project site to Wedge Parkway and other roads as defined in the SAD agreement. In the event that a special assessment district is not created, the developer shall construct Whites Creek Lane, as outlined in Conditions 17 and 19 for tentative maps, from the project site to Wedge Parkway. The County Engineer shall be responsible for determining compliance with this condition.
12. A Construction Traffic Haul Route Plan shall be submitted to the County Engineer for review and approval. The primary construction haul route shall be Whites Creek Lane. However, as part of Phase I development, Zolezzi Lane may be used, for construction mobilization only, for completion of the first 18-hole golf course and for the extension of utilities into the project site.

Prior to approval of any final map or prior to the issuance of the first building permit for the first final map, all construction traffic will be diverted to Whites Creek Lane. No construction traffic will be allowed on Thomas Creek Road between Whites Creek Lane and Zolezzi Lane. Access to Whites Creek Lane will be from the Mt. Rose Highway to Thomas Creek Road. When the 35th building permit is issued, all construction traffic will be required to use Whites Creek Lane from Wedge Parkway. Construction traffic will use Whites Creek Lane from Wedge Parkway if this segment is completed prior to the issuance of the 35th building permit. Thomas Creek Road from Mt. Rose Highway to the proposed Whites Creek Lane may be considered for a haul route provided the developer submits a traffic analysis and intersection design prepared by a licensed Nevada Civil Engineer which addresses and provides, as a minimum, recommendations regarding:

- a. site distance requirements;
- b. left turn storage capacity and design;
- c. intersection location and alignment;
- d. proximity to existing intersections and recommended separate distances;
- e. existing center median and landscaping concerns;
- f. determination of adequacy of existing Thomas Creek Road roadway geometric section; and
- g. determination of adequacy of existing structural section and load bearing capability.

The submitted report shall be evaluated and accepted by the County Engineer prior to any approval of the use of Thomas Creek Road as a haul route. Once Whites Creek Lane is connected to Wedge Parkway, this road shall become the primary construction haul route.

Any existing or proposed roads that will be used as construction haul routes and are not designated truck routes must be evaluated by a geotechnical study to determine the existing structural section and its load supporting capability. If the pavement section is inadequate to support the proposed construction loadings, the roadway must be redesigned or reconstructed as needed to provide a 20-year design life in accordance with the AASHTO Interim Guide for Flexible Pavements.

13. The developer shall provide a schematic pedestrian circulation plan. The Department of Development Review shall be responsible for determining compliance with this condition. The "statement of compliance" shall require that a detailed pedestrian circulation plan will be submitted as part of each tentative map and approved by the Department of Development Review.
14. Unless specifically stated in these conditions of approval or in the final Development Agreement, all public and private street design and construction is to be done in accordance with the Washoe County standards that are in effect at the time the final Development Agreement is recorded. The County Engineer shall be responsible for determining compliance with this condition.
15. Unless otherwise stated in these conditions of approval or in the final Development Agreement, all roadway improvements necessary (including but not limited to, curb, gutter, sidewalk, signing and striping, driveway access, and street lighting) to serve the project shall be designed and constructed to county standards and specifications and/or financial assurances in an appropriate form and amount shall be provided. The County Engineer shall be responsible for determining compliance with this condition.
16. All private roadways shall be depicted on the final maps and identified on the tentative map as either private access easements over individual adjacent lots or, if identified as separate parcels, as either common areas with equal fractional ownership by all of the lots within the development or common areas owned by the homeowners association. The County Engineer shall be responsible for determining compliance with this condition.

#### GRADING AND DRAINAGE

17. A general concept-level storm drain master plan shall be submitted to the County Engineer for approval prior to acceptance of the final Development Agreement. The general concept-level storm drain master plan shall address in general terms proposed methods for handling the existing and increased flows for the 10- and 100-year storms including detention and other proposed mitigation measures for both on-site and off-site areas. This master plan shall include a drawing which shows the existing drainage basins within the development and indicate how they may be impacted. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of a tentative map for any phase or approval of any special use permit, a preliminary hydrology report shall be submitted to the County Engineer for approval. The County Engineer shall be responsible for determining compliance with this condition.

18. Detention/retention facilities are to be maintained by a homeowners association and perpetually funded unless Washoe County agrees to accept maintenance and financial responsibilities. Regional facilities would be maintained by Washoe County. The County Engineer shall be responsible for determining compliance with this condition.
19. A maintenance plan of all drainage facilities to be owned by the homeowners association shall be provided prior to approval of the conditions, covenants, and restrictions (CC&Rs). All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe County water treatment plant and associated Steamboat Ditch conveyance system. The County Engineer shall be responsible for determining compliance with this condition.
20. The off-stream detention/debris basin recommended in the 1990 Kennedy, Jenks, Chilton report shall be reserved based on the following timetable:
  - a. Washoe County will have three years to obtain the necessary permits for construction of the off-stream detention basin. This three years shall commence upon the approval of the final Development Agreement. If Washoe County fails to obtain the necessary permits, the property for the detention site shall be offered by the developer or his successors, for dedication to the Washoe County School District for a middle school or revert to open space.
  - b. If Washoe County does obtain the necessary permits within three years, construction of the project shall commence within 5 years of the approval of the final Development Agreement. If construction is not started by that date, the property for the detention site shall be offered by the developer or his successors, for dedication to the Washoe County School District for a middle school or revert to open space.
  - c. If an alternative solution or site becomes available for flood control, this property will immediately become available for dedication to the Washoe County School District for a middle school or revert to open space.
  - d. If the detention basin is constructed, Washoe County shall pay fair market value for the property.
21. The increase in development-caused runoff from the 100-year storm, including drainages which run directly into the Steamboat Ditch, shall be detained/retained on-site because of the limited capacity of the flood control facilities in the area of South Virginia Street and the Steamboat Ditch Company. The County Engineer shall be responsible for determining compliance with this condition.
22. A geotechnical report shall be prepared, which considers the effects of earthquake forces and faulting in the area. The siting and design of detention/retention facilities shall be addressed based on the findings and recommendations provided in the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.
23. The development shall comply with the requirements of the Hillside Ordinance of the Development Code, as applicable. The Department of Development Review shall be responsible for determining compliance with this condition.

## WATER AND WASTEWATER

24. A schematic water system plan for the referenced proposal must be submitted to the Utility Division and the District Health Department. Prior to a final map approval, the plan must show that the water system will conform to the State of Nevada Water Supply Regulations, NAC Chapter 445, and the State of Nevada Regulations Governing Review of Plans for Subdivisions, Condominiums, and Planned Unit Developments, NAC 278.400 through 278.410.
25. Prior to the approval of the final Development Agreement, a complete water analysis from at least one monitoring well must be submitted to the District Health Department. The analysis must demonstrate the water conforms to the existing and proposed drinking water standards.
26. The developer shall utilize treated wastewater from the South Truckee Meadows Wastewater Treatment Plant. As part of the initial construction, the developer shall provide the necessary on-site easements needed to construct the infrastructure. When this resource becomes available to irrigate the golf course, the developer shall construct the necessary on-site infrastructure. The Utility Division shall be responsible for determining compliance with this condition.

## FIRE PROTECTION

27. If requested by the applicable fire protection agency, a minimum one-acre site for a fire station shall be offered for dedication prior to recordation of the first final map. The developer shall enter into talks with the applicable fire protection agency for any other requirements, such as, a fire station site, manpower and equipment needs, or for coordination with other developments that have similar requirements and the results of those discussions, as they relate to the entire project, shall be incorporated into the Development Agreement.

## PARKS/RECREATION/OPEN SPACE

28. An open space management plan and map shall be prepared that specifies the ownership of open spaces, type of uses allowed and who is responsible for maintenance. This plan shall address the provisions of Section 110.408.45 of the Development Code. Common areas shall be maintained by the homeowners association and provisions be made for perpetual funding for maintenance.  
  
Prior to approval of the final Development Agreement, a government entity (e.g. United States Forest Service, Washoe County Parks Department, etc.) or a non-profit organization (e.g. Washoe Parks Foundation) shall be identified that will accept the dedication of the open space buffers identified on the Concept Plan, which consists of approximately 1,500 acres. The Parks and Recreation Department and the Department of Development Review shall be responsible for determining compliance with this condition.
29. The final Development Agreement shall include a provision for the public open space that prohibits the sale of any open space without the consent of Washoe County. The Department of Development Review shall be responsible for determining compliance with this condition.

30. A minimum 10-acre public park site shall be offered for dedication to the county. A sketch plan will be included in the final Development Agreement. The final park design shall be mutually agreeable to the county and the developer. The developer will construct the recreation facilities in the park and then be reimbursed for the cost of the construction from the Residential Construction Tax. The responsibility of park maintenance shall be negotiated by the developer and Washoe County prior to the approval of the final Development Agreement. The Parks and Recreation Department and Department of Development Review shall be responsible for determining compliance with this condition.
31. The developer will work with the Department of Parks and Recreation to locate the proposed regional public trails to the satisfaction of Washoe County and the developer. The Parks and Recreation Department and Department of Development Review shall be responsible for determining compliance with this condition.

**LANDSCAPING/ARCHITECTURAL DESIGN**

32. Prior to approval of the final Development Agreement, the developer shall submit a Development Standards Handbook for the entire project to the Design Review Committee for its review and approval. These guidelines shall address, but not be limited to, type and color of building material, general architectural design, fencing, landscaping material (if plant material: type, size at time of planting, maturation size at full growth, period of time between planting and full growth), landscaping location, landscaping irrigation system, and financial assurances that landscaping will be planted and maintained.

The Design Review Committee shall also review the design of Whites Creek Lane, specifically to address Condition 19.c. for tentative maps. The Department of Development Review shall be responsible for determining compliance with this condition.

<p><b>CONDITIONS</b>  for  <b>TENTATIVE SUBDIVISION MAP CASE NO. _____</b>  for  _____ <b>SUBDIVISION</b></p>
---

(As recommended by Department of Development Review  
and attached to Staff Report dated \_\_\_\_\_)

**\*\*\* IMPORTANT -- PLEASE READ \*\*\***

**UNLESS OTHERWISE STATED, PRIOR TO FINALIZATION OF ANY PORTION OF THE TENTATIVE SUBDIVISION MAP, ALL CONDITIONS MUST BE MET OR FINANCIAL ASSURANCES TO ENSURE COMPLETION**

OF THE CONDITIONS MUST BE PROVIDED. THE AGENCY RESPONSIBLE FOR DETERMINING COMPLIANCE WITH A SPECIFIC CONDITION SHALL DETERMINE WHETHER THE CONDITION MUST BE FULLY COMPLETED OR WHETHER THE DEVELOPER SHALL BE OFFERED THE OPTION OF PROVIDING FINANCIAL ASSURANCES.

A COPY OF ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL BE FILED WITH THE DEPARTMENT OF PUBLIC WORKS AND/OR DEPARTMENT OF DEVELOPMENT REVIEW.

THE DEVELOPER SHALL MEET WITH THE ENGINEERING DIVISION AND THE DEPARTMENT OF DEVELOPMENT REVIEW AT LEAST SIXTY (60) DAYS BEFORE THE ANTICIPATED DATE OF APPROVAL BY THE PLANNING COMMISSION TO REVIEW SCHEDULING, REQUIREMENTS, FINAL CONSTRUCTION DRAWINGS, AND DOCUMENTATION NECESSARY TO ADEQUATELY COMPLY WITH THE CONDITIONS OF APPROVAL AND THE APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES. NO FINAL MAP WILL BE SCHEDULED FOR A PLANNING COMMISSION MEETING DATE THAT IS LESS THAN SIXTY (60) DAYS FROM THE DATE OF THIS MANDATORY MEETING.

A REQUEST FOR AN EXTENSION OF TIME FOR THE RECORDING OF A FINAL MAP MUST BE SUBMITTED TO THE DEPARTMENT OF DEVELOPMENT REVIEW AT LEAST SIXTY (60) DAYS PRIOR TO THE EXPIRATION DATE OF THE TENTATIVE SUBDIVISION MAP. SAID EXPIRATION IS TWO YEARS FROM THE DATE OF APPROVAL OF THE TENTATIVE MAP OR A SUBSEQUENT FINAL MAP BY THE BOARD OF COUNTY COMMISSIONERS OR, WHEN APPLICABLE, BY THE PLANNING COMMISSION.

COMPLIANCE WITH THE DEVELOPMENT AGREEMENT, APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES AND WITH THE CONDITIONS OF APPROVAL OF THIS TENTATIVE MAP IS THE RESPONSIBILITY OF THE DEVELOPER, ITS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY, AND THEIR SUCCESSORS IN INTEREST.

#### GENERAL CONDITIONS

1. The subdivider shall present to the planning commission a final map, prepared in accordance with the tentative map, for the entire area for which a tentative map has been approved, or one of a series of final maps, each covering a portion of the approved tentative map, within two (2) years after the date of approval of the tentative map.

Prior to the expiration of a tentative map, the planning commission or, upon appeal, the governing body may grant a two (2) year extension for the presentation of the entire final map or next successive final map. The effective date of the extension shall be two (2) years from the date upon which the map would have expired.

If the subdivider fails to record a final map for any portion of the tentative map or obtain an extension within two years after the date of approval of the tentative map, all proceedings concerning the subdivision are terminated.

2. Unless specifically stated in the final Development Agreement, final maps and final construction drawings shall comply with all applicable statutes, ordinances, rules, regulations, and policies in effect at the time of approval of the final map or any subsequent extension date. The Department of Development Review shall be responsible for determining compliance with this condition.
3. Final maps shall be in substantial compliance with all plans and documents submitted with and made part of this tentative map request, as may be amended by action of the final approving authority. Substantial compliance shall be determined by the applicable agency and the Department of Development Review.
4. As part of every tentative map and final map application, the developer shall include a completed "statement of compliance" that demonstrates how the development will be or is consistent with the recorded final Development Agreement. The "statement of compliance" for the final map shall incorporate a description of how the conditions of approval have been met. The Department of Development Review shall be responsible for determining compliance with this condition.
5. Conditions, covenants, and restrictions (CC&Rs) shall be reviewed and approved by the District Attorney's Office, County Engineer, and the Department of Development Review prior to final map approval or prior to issuance of a certificate of occupancy for a non-residential use. Washoe County shall be made a party to the applicable provisions of the CC&Rs to the satisfaction of the District Attorney's office. If the CC&Rs are not recorded on the entire property, subsequent phases will be annexed to the previously recorded CC&Rs. Said CC&Rs shall specifically address the ability of the county to enforce certain provisions against the property and the individual property owner's responsibilities for the perpetual funding, maintenance and replacement, of the following items, at a minimum:
  - a. Private roads within the subdivision.
  - b. Equestrian center.
  - c. Staffing of maintenance and security forces.
  - d. Common area landscaping.
  - e. Entrance gates.
  - f. Snow removal and storage areas.
  - g. Common area landscaping including along streets or landscaping along Whites Creek Lane.
  - h. Fire and fuelbreaks.
  - i. Detention basins and the accumulated sediment.
  - j. Equestrian/pedestrian trails.

- k. Bicycle and pedestrian paths.
- m. Golf cart crossings.
- n. Off-site residential parking areas.

At a minimum, the CC&Rs shall also specifically address the following items:

- a. Requirement to abide by Architectural/Community Design Guidelines.
  - b. All homes must have a garage with space for a minimum of two cars.
  - c. Specifications on the limitation of turf area for single-family homes.
  - d. Retention of public access to the golf course, bike paths, (i.e., 8-foot meandering paths along minor arterials and some collectors; refer to street sections), public trails, and non-residential uses.
  - e. Notice of requirement to pay future sewer user fees.
  - f. Requirement to adhere to National Electric Safety Code setbacks for existing overhead power lines.
  - g. Potential for conservation easements or dedication of open space.
  - h. Prohibition of motorized vehicles in open space.
  - i. Areas with potential for equestrian traffic.
  - j. Access to open space for pedestrian and bicycle traffic.
  - k. Notice of pedestrian easements to abutting properties.
  - l. Minimum defensible space requirements.
  - m. Snow storage areas.
6. Prior to ground-disturbing activity or prior to finalization of any portion of the tentative map, the developer shall submit an archaeological/historical survey to the Department of Development Review. The Department of Development Review shall submit the survey to the State Historic Preservation Office of the Department of Museums, Library and Arts for review. Following that review, the State Historic Preservation Office shall submit a letter to the Department of Development Review that indicates the survey was acceptable.
7. A note shall be placed on all grading plans and construction drawings stating:
- NOTE
- Should any prehistoric or historic remains/artifacts be discovered during site development, work shall temporarily be halted at the specific site and the State Historic Preservation Office of the Department of Museums, Library and Arts, shall be notified to record and photograph the site. The period of temporary delay shall be limited to a maximum of two (2) working days from the date of notification.
8. The developer shall be required to participate in any applicable General Improvement District or Special Assessment District formed by Washoe County. The applicable division of the Department of Public Works shall be responsible for determining compliance with this condition.
9. Prior to acceptance of public improvements and release of any financial assurances, the developer shall furnish to the Utility Division and/or Engineering Division a complete set of reproducible 'as built' construction drawings prepared by a civil engineer registered in the State of Nevada.

10. A complete set of construction improvement drawings, including an on-site grading plan, shall be submitted to the Engineering Division for approval prior to finalization of any portion of the subdivision. Grading shall comply with best management practices and shall include detailed plans for grading and drainage on each lot, erosion control, slope stabilization, mosquito abatement. Placement or disposal of any excavated material shall be indicated on the grading plan.
11. All soil boring logs must be included as part of the construction drawings. The County Engineer shall be responsible for determining compliance with this condition.
12. All new utilities shall be placed underground. The County Engineer shall be responsible for determining compliance with this condition.
13. The developer is to provide written approval from the US Postal Service for the plans for the installation of mail delivery facilities. The system, other than individual mail boxes, must be shown on the project construction plans and installed as part of the on-site improvements. The County Engineer shall be responsible for determining compliance with this condition.
14. The final map shall designate faults, by distance and bearings, that have been active during the Holocene epoch of geological time and shall contain the following note.

#### NOTE

No habitable structures shall be located on a fault that has been active during the Holocene epoch of geological time. The faults have been located by Civil Engineer Registered in Nevada and experienced in Geotechnical Engineering and field surveyed by a Nevada Registered Land Surveyor.

The Department of Development Review shall be responsible for determining compliance with this condition.

15. The Washoe County Planning Commission certificate on the final map shall be approved by the County Engineer and the Department of Development Review.

#### STREETS AND TRAFFIC

16. The developer shall submit a detailed geotechnical analysis and report for pavement design recommendations to the County Engineer for review and approval. The report shall be based on the estimated traffic loadings for a 20-year design life and shall include assumptions concerning the distribution of trucks, to include project construction truck traffic. The resultant pavement thickness in the geotechnical analysis must be used if the report indicates a structural section that is stronger than minimum is required. The County Engineer shall be responsible for determining compliance with this condition.
17. Prior to the issuance of the first building permit, two lanes of Whites Creek Lane shall be constructed, to two-lane minor arterial standards as a minimum, from Thomas Creek Road to the project site. The County Engineer shall be responsible for determining compliance with this condition.

18. Prior to the issuance of the first building permit, a second access shall be constructed to the project site to emergency standards to the satisfaction of the applicable fire protection agency.
19. The County Engineer shall be responsible for determining compliance with this condition. Prior to the issuance of the 35th building permit, the following roadway improvements shall be constructed:
  - a. The remaining two lanes of Whites Creek Lane from Thomas Creek Road to the project site if warranted by projected traffic demands.
  - b. Two (2) lanes of Whites Creek Lane from Thomas Creek Road to Wedge Parkway with 100 feet of right-of-way. These two lanes will be constructed so that an additional two lanes may be added in the future if warranted by projected traffic volumes.
  - c. Whites Creek Lane will be designed in a manner that minimizes any impacts on the adjacent homes to the north in Fieldcreek Ranch (e.g., fencing, berms, lowering the travel lanes).
20. The minimum pavement structural section shall be 5 inches of asphalt over 8 inches of aggregate base for minor arterials, 4 inches of asphalt over 6 inches of granular base for roadways (private and public) for collector streets, and 3 inches of asphalt over 6 inches of granular base for roadways for local streets. The County Engineer shall be responsible for determining compliance with this condition.
21. Prior to or upon approval of the CC&Rs, the developer shall have a street maintenance program approved by the County Engineer and the Department of Development Review. Maintenance of private streets shall be performed by the homeowners association and shall be perpetually funded.
22. The following roadway sections shall be applicable to the public and private on-site streets shown on the tentative map. A traffic report shall be submitted with each tentative map and shall identify the ultimate average daily traffic on each street and shall make recommendations for geometric design (e.g., left turn storage capacity, site distance, minimum required turning radius, etc.). The County Engineer shall be responsible for determining compliance with this condition.
  - a. Private Common Driveways - Serving 4 or less lots, pavement width 20 feet; serving 5 or more lots, pavement width 22 feet; no parking either side. Curb returns shall have a minimum face of curb radius of 20 feet on local streets and 25 feet on collector streets. Acceleration/deceleration tapers will be provided on streets with average daily traffic exceeding 2000 trips. Private common driveway locations will be shown on all tentative maps. Private common driveways will line up with proposed street intersections where possible and will comply with street intersection offset requirements. Single lot driveway access will not be allowed onto streets on which the average daily traffic exceeds 2000 trips. (Refer to street sections.)

- b. Rural Private - 60 foot minimum ROW (maximum 200 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)
- c. Local Private - 60 foot minimum ROW (200 - 500 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)
- d. Collector Private - 60 foot minimum ROW (500 ADT to 2000 ADT): minimum 24-foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to Street Sections.)
- e. Collector Private - 60 foot minimum ROW (2000 ADT to 8000 ADT): minimum 24-foot pavement width with an additional 12-foot left turn lane at intersections where warranted; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking on either side. A minimum 8-foot path on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. No residential driveway access will be allowed. Access for private common driveways will be allowed. (Refer to street sections.)

- f. Collector Private - 120 foot minimum ROW collector street (up to 9600 ADT): A minimum 27-foot center median from curb face to curb face, 19-foot pavement width on either side of the median; curb and gutter on both sides or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side except during special events; a minimum 8-foot meandering asphalt path both sides; no residential driveway access allowed. (Refer to street sections.)
  - g. Minor Arterial, Private - 120 foot minimum ROW (more than 10,800 ADT): A minimum 27-foot center median from curb face to curb face, 24-foot pavement width on either side of the median; County Engineer-approved concrete header with roadside ditch; no parking either side; a minimum 8-foot meandering asphalt path both sides; no residential driveway access allowed. A gate may be installed at the point where Whites Creek Lane becomes a private road. (Refer to street sections.)
  - h. Minor Arterial, Public - 120-foot minimum ROW (more than 10,800 ADT): A minimum 27-foot center median from curb face to curb face, 29.5-foot roadway section on either side of the median; curb and gutter on both sides; a minimum 6-foot concrete sidewalk on both sides; no residential driveway access is allowed. (Refer to street sections.) A gate may be installed at the point where Whites Creek Lane becomes a private road. A public turn-around is required on the public side of the gate.
23. All roadway grades shall be limited to the maximum allowable grades for each street classification as provided in the Washoe County Standards. The County Engineer shall be responsible for determining compliance with this condition.
24. Construction near fault lines shall be as follows:
- a. Buildings for human occupancy shall be set back from the centerline of fault traces. Setback distances shall be determined by a geotechnical investigation prepared by a Nevada Registered Civil Engineer experienced in geotechnical engineering. The minimum setback shall be 50 feet on each side of the fault line.
  - b. Roadway construction in fault zones and along fault traces shall be reviewed by a Nevada Registered Civil Engineer experienced in geotechnical engineering. Any recommended special construction requirements (e.g., flexible joint connections for utilities) shall be complied with.
- The County Engineer shall be responsible for determining compliance with this condition.
25. All cul-de-sacs shall be a minimum pavement radius of 43.5 feet to front face of curb or 45 feet to edge of pavement. The County Engineer shall be responsible for determining compliance with this condition.

26. Landscaped medians shall be designed in accordance with AASHTO site distance and safety guidelines. The County Engineer and the Department of Development Review shall be responsible for determining compliance with this part of the condition. Maintenance of median landscaping shall be by the homeowners association as provided for in a separate maintenance agreement to be approved by the County Engineer and the District Attorney's Office prior to approval of the CC&Rs.
27. Temporary county standard turnarounds shall be constructed on all phased roadways which extend more than one lot depth beyond a maintained public or private street. The County Engineer shall be responsible for determining compliance with this condition.
28. All-weather emergency access roads shall be constructed at the end of all cul-de-sacs that are longer than 1,500 feet. These roads shall have a 30-foot access easement with a minimum 20-foot width and 2.5 inches of asphalt concrete pavement on an engineered gravel base. The roads shall be controlled by emergency access gates and shall be posted with signs stating "For Emergency Vehicles Only". The County Engineer and the applicable fire protection agency shall be responsible for determining compliance with this condition.
29. Prior to final map approval, the developer shall provide all weather emergency access easements and road improvements at the locations shown on the tentative map, terminating at public or privately-maintained streets. The County Engineer shall be responsible for determining compliance with this condition.
30. Meandering asphalt paths will be acceptable provided that:
  - a. Pedestrian easements are included for portions of the paths located outside the county right-of-way.
  - b. Landscaping between the back of the curb and the path shall be designed in accordance with AASHTO site distance and safety guidelines. The County Engineer shall be responsible for determining compliance with the provisions of this condition.
  - c. Maintenance of the asphalt paths and landscaping shall be the responsibility of the developer and, when created, by the homeowners association as provided for in a separate maintenance agreement and to be approved by the County Engineer and the District Attorney's office prior to approval of the final Development Agreement.
31. Asphalt paths or gravel shoulders, located adjacent to private streets shall be privately maintained and funded. The County Engineer shall be responsible for determining compliance with this condition.
32. Street lights shall be installed at major intersections. The County Engineer shall be responsible for determining compliance with this condition.
33. No at-grade golf cart crossings shall be allowed across any street with 500 ADT or greater. Where possible, crossings should be below the grade of public streets. The County Engineer shall be responsible for determining compliance with this condition.

34. Off-site parking areas shall be provided within 500 feet of homes that have lots ranging in size between 12,000 square feet and one-half acre. One space shall be provided for every three homes. Parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the tentative map(s). The Department of Development Review shall be responsible for determining compliance with this condition.
35. Project streets that are designed with security gates at points intersecting with public streets shall have adequate on-site stacking space. The specific type and size of the stacking areas must be approved by the County Engineer and constructed as approved.
36. Regulatory signs must be installed at the juncture of all public streets with a private street and at intersections along the primary loop road. Said sign shall state: "PRIVATE STREET NOT MAINTAINED BY COUNTY." All regulatory signs shall meet the Manual of Uniform Traffic Control Device standards. The County Engineer shall be responsible for determining compliance with this condition.
37. Street names shall be reviewed and approved by the Regional Street Naming Coordinator. The tentative map shall indicate street names for identification purposes.

#### DRAINAGE AND GRADING

38. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of a tentative map for any phase, a preliminary hydrology report shall be submitted to the County Engineer for approval. This preliminary hydrology report shall be prepared in accordance with county requirements for tentative maps, in conformance with the general concept-level storm drain master plan, and be applicable to the specific tentative map or special use permit being approved.  
  
The report shall include, as a minimum, the locations, points of entry and discharge, flow rates and flood limits of all 10- and 100-year storm flows impacting both on-site and off-site areas and the methods for handling these flows as well as the proposed methods for handling storm water increases due to development. Proposed mitigation measures shall be included for any impacts on existing on-site and off-site properties and facilities. The County Engineer shall be responsible for determining compliance with this condition.
39. Prior to the submittal of any final map or issuance of any grading permit, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted to the County Engineer for approval. The report shall be in substantial compliance with the general concept-level storm drain master plan and contain all final storm drain pipe, ditch and retention pond sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed, constructed, and approved by the District Health Department and the County Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.

40. A maintenance plan of all drainage facilities, to be owned by the homeowners association, shall be provided prior to approval of the CC&Rs. All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe County water treatment plant, and associated Steamboat Ditch conveyance system. All runoff from improved areas which runs into the Steamboat Ditch shall be pre-treated for silt and petrochemicals and shall be routed through a "wet" detention facility or approved alternative. The Utility Division and the Department of Development Review shall be responsible for determining compliance with this condition.
41. The 100-year floodplain boundaries and flood elevations shall appear on each final map. If the floodplain boundary has been changed by a Federal Emergency Management Agency (FEMA) Conditional Letter of Map Amendment or Conditional Letter of Map Revision, the date of that letter and a note to that effect shall appear on the final map. Grading or building permits shall not be issued for areas currently shown as "A" zones on the FEMA floodplain maps until a Letter of Map Amendment or Revision is submitted or until conformance with Washoe County flood construction standards is determined by the County Engineer. The County Engineer shall be responsible for determining compliance with this condition.
42. Prior to approval of the final map, the developer shall obtain a Stormwater Discharge Permit from the Nevada Division of Environmental Protection. If required, point discharge permit for each proposed detention pond will be obtained from the Nevada Division of Environmental Protection and copy shall be submitted to the County Engineer.
43. The developer shall provide pretreatment for petrochemicals, nutrients and other chemicals used for landscaping, and silt for all storm drainage from the site. Systematic cleaning of the streets, parking lots, and catch basins, and control of salt and sanding activities shall to be delineated in the maintenance plan. The County Engineer shall be responsible for determining compliance with this condition.
44. Prior to issuance of a grading permit for the golf course and/or final map, a final wetlands determination must be made and approved by the US Army Corps of Engineers and the approval letter provided to the Department of Development Review.
45. Prior to issuance of a grading permit for the golf course or approval of a final map, the developer shall obtain from the Army Corps of Engineers a 404 permit for wetland and dredge and fill for all roadway crossing of Thomas and Dry Creeks, or a letter from the COE indicating that a 404 permit is not required and a copy submitted to the County Engineer.
46. All street crossings of Thomas and Dry Creeks shall be designed to pass the 100 year flood flows without obstruction or overtopping of the roadway. Erosion protection shall be provided based upon the recommendation of the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.

47. Standard reinforced concrete headwalls or other approved alternatives shall be placed on the inlet and outlet of all drainage structures and rip-rap shall be used to prevent erosion at the inlets and outlets of all pipe culverts. The District Health Department and the County Engineer shall be responsible for determining compliance with this condition.
48. The stormwater discharges from this development that flow to Dry Creek shall be controlled to pre-development flow conditions and will be controlled to prevent water quality degradation of Steamboat Ditch. The developer shall provide drainage structures under Steamboat Ditch that would pass the 10-year frequency storm or demonstrate that there will not be any water quality degradation in Steamboat Ditch. The County Engineer shall be responsible for determining compliance with this condition.

The developer shall contact the Division of Water Resources, State of Nevada, to determine whether the proposed flood detention facilities will require permits. If required, copies shall be submitted to the County Engineer.

49. Prior to the approval of a grading permit or approval of a final map, a detailed dust control plan shall be prepared and submitted to Air Quality Management of the District Health Department and to the Department of Development Review. The dust control plan shall address, as a minimum, "phased grading" and stabilization methods that include the revegetation, application of palliatives or other District approved methods prior to any grading of new phases, as well as effective street cleaning for any mud or soil tracking to existing paved surfaces, and dust controls on any screening methods or storage piles located on the site.
50. Prior to approval of the first final map, an erosion control and soil stabilization plan and a grading plan shall be approved by the Washoe-Storey Conservation District. A copy of the approval shall be submitted to the District Health Department, Department of Development Review, and County Engineer.
51. A buffer shall be provided next to riparian vegetation. The size of the buffer shall be mutually agreeable to Washoe County and the developer. A minimum 50-foot buffer shall be provided from any structures. The Department of Development Review shall be responsible for determining compliance with this condition.
52. Individual lot drainage shall not be allowed to drain onto neighboring properties without proper reciprocal drainage easements and the individual lot drainage swales shall be designed to handle the 100-year flows and lined. The County Engineer shall be responsible for determining compliance with this condition.

#### WATER AND WASTEWATER

53. The developer shall construct or provide the financial assurances for the construction of the water and sewer system facilities. The financial assurances must be in a form and amount that is satisfactory to the Utility Division.
54. Fees for plan checking and inspection shall be paid in accordance with Washoe County ordinance. The Utility Division shall be responsible for determining compliance with this condition.

55. Easements for all water and sewer utilities shall be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
56. No "certificate of occupancy" shall be issued until the water and sewer facilities have been completed and accepted for operation and maintenance. The Utility Division shall be responsible for determining compliance with this condition.
57. The sanitary sewer collection system and water system facilities, with the exception of the golf course and common area irrigation systems, must be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
58. The Nevada Division of Environmental Protection must submit a letter to the District Health Department certifying their approval of the final map.
59. The developer shall deposit with the Utility Division the sum of \$50.00 per lot prior to recordation of all or part of the final map. This fee shall represent the prorated share of the completed water and wastewater facilities plan for the South Truckee Meadows for this development.

#### WATER

60. In accordance with the Washoe County Utility Division policies for the Southwest Truckee Meadows, water rights shall be dedicated to Washoe County. Prior to acceptance, the water rights must be in good standing with the State of Nevada Division of Water Resources and must reflect a point of diversion, place and manner of use acceptable to the Utility Division.
61. All minor infrastructure for potable water distribution shall be designed, constructed, inspected, and approved by the District Health Department and the Utility Division. The developer shall coordinate with the Utility Division to ensure the major infrastructure design can be accomplished prior to the approval of the final map.
62. Responsibility for design of wells, pump structure, controls, telemetry, and appurtenances, storage tanks, and transmission lines to the edge of the subdivision, all necessary to provide water service to the project, will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
63. Prior to final map approval, a letter of approval from the Division of Water Resources for the water rights serving this proposal must be submitted. A water "will-serve" letter for a final map will not be issued until the production wells have been determined to have adequate water resource. The Utility Division shall be responsible for determining compliance with this condition.

64. Before approval of the final map will be considered, a letter from the water purveyor committing adequate water service to this proposal must be submitted to the District Health Department. This letter shall indicate that the facility will not be brought beyond its permitted capacity by this service.
65. Prior to the approval of a final map by the District Health Department, the production wells that will serve any phase of this development must be constructed, pump tested and sampled to ensure the proposed water system has sufficient quality and quantity.
66. Water quality results from a state-certified laboratory for new water sources shall be submitted to the Utility Division. The water quality sampling and testing shall be in compliance with the current State of Nevada Regulations for Public Water Systems, NAC 445.
67. If the water quality of the wells does not meet the secondary or the primary standards, as defined by NAC 445, water treatment facilities must be on-line and functioning prior to issuance of any building permits. The Utility Division shall be responsible for determining compliance with this condition.
68. If a supplemental water source is required, evidence that an adequate source has been procured by the developer/water purveyor shall be submitted to the Utility Division for their review and approval.
69. Any wells on the property not in use for production or monitoring purposes, shall be properly abandoned in accordance with State Regulations governing Water Wells and Related Drilling. The Utility Division shall be responsible for determining compliance with this condition.
70. The developer shall provide access to the existing monitoring wells. In the event access is no longer available, the developer shall construct new wells. The Utility Division shall be responsible for determining compliance with this condition.
71. The tentative maps shall show the maintenance roads for the existing and proposed water tanks. The location of these roads shall be mutually agreeable to the Department of Public Works and the developer.
72. The final map owner's certificate shall contain language indicating that the developer and his assignees agree to the use of residential water meters. The Department of Development Review shall be responsible for determining compliance with this condition.
73. Pursuant to Section 278.340 of the State of Nevada Regulations Governing Review of Plans for Subdivisions, Condominiums, and Planned Unit Developments, no grading permit shall be issued prior to District Health Department approval of the referenced final map. This condition does not apply to the construction of production wells required in Condition 68.

The developer may seek relief from the District Board of Health for this requirement or may choose to create a separate parcel for the first 18-hole golf course.

74. The Department of Development Review shall be responsible for determining compliance with this condition. The final map shall contain the following note:

NOTE

No Certificate of Occupancy shall be issued until the water facilities have been completed and accepted by Washoe County.

SEWER

75. Responsibility for design of any pump stations and interceptors to provide sewer service to the project will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
76. All minor infrastructure for sewer collection shall be designed, constructed, inspected, and approved by the District Health Department and the Utility Division.
77. The sewer "privilege connection fee" must be paid for each lot when required by the Washoe County Utility Division since it is not anticipated that there will be any additional major infrastructure needed to serve this development. The Utility Division shall be responsible for determining compliance with this condition.
78. All sewer hookup fees for the area within the final map will be paid to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
79. The final subdivision map shall show a dedicated, all-weather easement, with access, over the developments sanitary sewer lines. The Utility Division shall be responsible for determining compliance with this condition.
80. Proper easements shall be shown for off-site sewage and drainage systems. The Utility Division and the County Engineer shall be responsible for determining compliance with this condition.
81. Prior to final map approval, a letter, which can be a will-serve letter, from the Utility Division committing sewer service, must be submitted to the District Health Department. This letter shall indicate that the treatment facility will not be brought beyond its permitted capacity by this service.

FIRE PROTECTION

- 82. The plans submitted with a building permit application shall show evidence of compliance with the recommendations of the applicable fire protection agency. Those concerns are fire flows, fire hydrant number and location, access, sequential phasing of firebreaks during development, permanent firebreaks, minimum defensible space, use of fire resistant construction and/or roof material, sprinklering of structures, and spark arrestors in chimneys. Access and fire flows shall be addressed to the satisfaction of the fire protection agency prior to the approval of a final map.
- 83. The developer shall minimize grading to the maximum extent possible in the area around the critical mule deer habitat in order to preserve the existing browse shrubs. The Department of Development Review, in conjunction with the applicable fire protection agency, shall be responsible for determining compliance with this condition.

OTHER

- 84. A minimum 25-foot landscape buffer shall be installed between the homes and the collector and the arterial streets. The homeowners association shall be required to perpetually maintain these areas. The Department of Development Review shall be responsible to determining compliance with this condition.
- 85. Prior to acceptance of the first map, the telephone easement Doc. No. 415899, which runs through the middle of many lots, shall be realigned with appropriate abandonment and relocation easements, or the proposed lots realigned. The County Engineer shall be responsible for determining compliance with this condition.

**CONDITIONS FOR SPECIAL USE PERMIT CASE NO. \_\_\_\_\_**

(As recommended by Department of Development  
Review and attached to Staff Report dated \_\_\_\_\_ )

**\*\*\* IMPORTANT -- PLEASE READ \*\*\***

**UNLESS OTHERWISE SPECIFIED, ALL CONDITIONS MUST BE MET OR FINANCIAL ASSURANCES MUST BE PROVIDED TO SATISFY THE CONDITIONS PRIOR TO SUBMITTAL FOR A BUILDING PERMIT. THE AGENCY RESPONSIBLE FOR DETERMINING COMPLIANCE WITH A SPECIFIC CONDITION SHALL DETERMINE WHETHER THE CONDITION MUST BE FULLY COMPLETED OR WHETHER THE DEVELOPER SHALL BE OFFERED THE OPTION OF PROVIDING FINANCIAL ASSURANCES. ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL HAVE A COPY FILED WITH THE COUNTY ENGINEER AND THE DEPARTMENT OF DEVELOPMENT REVIEW.**

**COMPLIANCE WITH THE CONDITIONS OF THIS SPECIAL USE PERMIT IS THE RESPONSIBILITY OF THE DEVELOPER, HIS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY AND THEIR SUCCESSORS IN INTEREST. FAILURE TO COMPLY WITH ANY CONDITIONS IMPOSED IN THE ISSUANCE OF THE SPECIAL USE PERMIT MAY RESULT IN THE INSTITUTION OF REVOCATION PROCEDURES.**

**WASHOE COUNTY RESERVES THE RIGHT TO REVIEW AND REVISE THE CONDITIONS OF THIS APPROVAL SHOULD THEY DETERMINE THAT A SUBSEQUENT LICENSE OR PERMIT ISSUED BY WASHOE COUNTY VIOLATES THE INTENT OF THIS APPROVAL.**

### GENERAL CONDITIONS

1. As part of every special use permit application, the developer shall include a completed "statement of compliance" that demonstrates how the development will be or is consistent with the recorded final Development Agreement. The Department of Development Review shall be responsible for determining compliance with this condition.
2. Prior to ground-disturbing activity, the developer shall submit an archaeological/historical survey to the Department of Development Review. The Department of Development Review shall submit the survey to the State Historic Preservation Office of the Department of Museums, Library and Arts for review. Following that review, the State Historic Preservation Office shall submit a letter to the Department of Development Review that indicates the survey was acceptable.
3. A note shall be placed on all grading plans and construction drawings stating:

#### NOTE

Should any prehistoric or historic remains/artifacts be discovered during site development, work shall temporarily be halted at the specific site and the State Historic Preservation Office of the Department of Museums, Library and Arts, shall be notified to record and photograph the site. The period of temporary delay shall be limited to a maximum of two (2) working days from the date of notification.

4. Prior to acceptance of public improvements and release of any financial assurances, the developer shall furnish to the Utility Division and/or Engineering Division a complete set of reproducible 'as built' construction drawings prepared by a civil engineer registered in the State of Nevada.
5. The developer shall be required to participate in any applicable General Improvement District or Special Assessment District formed by Washoe County. The applicable division of the Department of Public Works shall be responsible for determining compliance with this condition.
6. All new utilities shall be placed underground. The County Engineer shall be responsible for determining compliance with this condition.

7. An animal waste management plan shall be prepared prior to the issuance of any building permit for a facility that might require such a plan. The plan must document how the migration of bacteria, nutrients, and other animal waste by-products to surface and ground waters will be prevented. The Department of Development Review shall be responsible for determining compliance with this condition.

### STREETS AND TRAFFIC

8. All street construction shall comply, at a minimum, with the requirements for a subdivision within this project. The County Engineer shall be responsible for determining compliance with this condition.
9. The developer shall submit a detailed geotechnical analysis and report for pavement design recommendations to the County Engineer for review and approval. The report shall be based on the estimated traffic loadings for a 20-year design life and shall include assumptions concerning the distribution of trucks, to include project construction truck traffic. The resultant pavement thickness in the geotechnical analysis must be used if the report indicates a structural section that is stronger than minimum is required. The County Engineer shall be responsible for determining compliance with this condition.
10. The minimum pavement structural section shall be 5 inches of asphalt over 8 inches of aggregate base for minor arterials, 4 inches of asphalt over 6 inches of granular base for roadways (private and public) for collector streets, and 3 inches of asphalt over 6 inches of granular base for roadways for local streets. The County Engineer shall be responsible for determining compliance with this condition.
11. Prior to the issuance of the first building permit, two lanes of Whites Creek Lane shall be constructed, to two-lane minor arterial standards as a minimum, from Thomas Creek Road to the project site. The County Engineer shall be responsible for determining compliance with this condition.
12. Prior to the issuance of the first building permit, a second access shall be constructed to the project site to emergency standards. The applicable fire protection agency shall be responsible for determining compliance with this condition.
13. Construction near fault lines shall be as follows:
  - a. Buildings for human occupancy shall be set back from the centerline of fault traces. Setback distances shall be determined by a geotechnical investigation prepared by a Nevada Registered Civil Engineer experienced in geotechnical engineering. The minimum setback shall be 50 feet on each side of the fault line.
  - b. Roadway construction in fault zones and along fault traces shall be reviewed by a Nevada Registered Civil Engineer experienced in geotechnical engineering. Any recommended special construction requirements (e.g., flexible joint connections for utilities) shall be complied with.

The County Engineer shall be responsible for determining compliance with this condition.

14. Asphalt paths or gravel shoulders, located adjacent to private streets shall be privately maintained and funded. The County Engineer shall be responsible for determining compliance with this condition.
15. No at-grade golf cart crossings shall be allowed across any street with 500 ADT or greater. Where possible, crossings should be below the grade of public streets. The County Engineer shall be responsible for determining compliance with this condition.

### GRADING AND DRAINAGE

16. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of any special use permit, a preliminary hydrology report shall be submitted to the County Engineer for approval. This preliminary hydrology report shall be prepared in accordance with county requirements for tentative maps, in conformance with the general concept-level storm drain master plan, and be applicable to the specific tentative map or special use permit being approved.

The report shall include, as a minimum, the locations, points of entry and discharge, flow rates and flood limits of all 10- and 100-year storm flows impacting both on-site and off-site areas and the methods for handling these flows as well as the proposed methods for handling storm water increases due to development. Proposed mitigation measures shall be included for any impacts on existing on-site and off-site properties and facilities. The County Engineer shall be responsible for determining compliance with this condition.

17. Prior to the submittal of any final map or issuance of any grading permit, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted to the County Engineer for approval. The report shall be in substantial compliance with the general concept-level storm drain master plan and contain all final storm drain pipe, ditch and retention pond sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed, constructed, and by the District Health Department and the County Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.

Prior to the issuance of a grading permit, the developer shall provide a letter granting a blanket drainage and construction easement to the Southwest Pointe Subdivision that allows the subdivision to drain onto the golf course and to construct detention facilities necessary to accommodate the subdivision-generated stormwaters in mutually agreed-upon locations. The easement shall be submitted with the plans for the final golf course improvements. The County Engineer shall be responsible for determining compliance with this condition.

18. Prior to the approval of a grading permit, a detailed dust control plan shall be prepared and submitted to Air Quality Management of the District Health Department and to the Department of Development Review. The dust control plan shall address, as a minimum, "phased grading" and stabilization methods that include the revegetation, application of palliatives or other District approved methods prior to any grading of new phases, as well as effective street cleaning for any mud or soil tracking to existing paved surfaces, and dust controls on any screening methods or storage piles located on the site.
19. For all projects larger than 5 acres, the developer shall obtain a Stormwater Discharge Permit from the Nevada Division of Environmental Protection and submit a copy to the County Engineer prior to ground-disturbing activity.
20. The developer shall provide pretreatment for petrochemicals, nutrients and other chemicals used for landscaping, and silt for all storm drainage from the site. Systematic cleaning of the streets, parking lots, and catch basins, and control of salt and sanding activities shall to be delineated in the maintenance plan. The County Engineer shall be responsible for determining compliance with this condition.
21. The stormwater discharges from this development that flow to Dry Creek shall be controlled to pre-development flow conditions and will be controlled to prevent water quality degradation of Steamboat Ditch. The developer shall provide drainage structures under Steamboat Ditch that would pass the 10-year frequency storm or demonstrate that there will not be any water quality degradation in Steamboat Ditch. The County Engineer shall be responsible for determining compliance with this condition.
22. All street crossings of Thomas and Dry Creeks shall be designed to pass the 100 year flood flows without obstruction or overtopping of the roadway. Erosion protection shall be provided based upon the recommendation of the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.
23. Standard reinforced concrete headwalls or other approved alternatives shall be placed on the inlet and outlet of all drainage structures and rip-rap shall be used to prevent erosion at the inlets and outlets of all pipe culverts. The District Health Department and the County Engineer shall be responsible for determining compliance with this condition.
24. Prior to issuance of a grading permit for the golf course and/or final map, a final wetlands determination must be made and approved by the Army Corps of Engineers and the approval letter provided to the Department of Development Review.
25. Prior to issuance of a grading permit for the golf course or approval of the final map, the developer shall obtain from the United States Army Corps of Engineers a 404 permit for wetland and dredge and fill for all roadway crossing of Thomas and Dry Creeks, or a letter from the COE indicating that a 404 permit is not required and a copy submitted to the County Engineer.
26. The developer shall submit to the District Health Department a letter approving the proposed methods of erosion control and soil stabilization from the Washoe-Storey Conservation District.

27. Prior to the issuance of a grading permit for the golf course, a golf course management plan shall be prepared that documents how the migration of fertilizers, pesticides, herbicides, and fungicides to surface and ground waters will be prevented. A surface and ground water sampling program shall be implemented to demonstrate that migration is not occurring and commits to modifying practices in the event that any of the above materials are detected. The Department of Development Review shall be responsible for determining compliance with this condition.

### WATER AND WASTEWATER

28. The sanitary sewer collection system and water system facilities, with the exception of the golf course and common area irrigation systems, must be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
29. The developer shall construct or provide the financial assurances for the construction of the water and sewer system facilities. The financial assurances must be in a form and amount that is satisfactory to the Utility Division.
30. Fees for plan checking and inspection shall be paid in accordance with Washoe County ordinance. The Utility Division shall be responsible for determining compliance with this condition.
31. Easements for all water and sewer utilities shall be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
32. No "certificate of occupancy" shall be issued until the water and sewer facilities have been completed and accepted for operation and maintenance. The Utility Division shall be responsible for determining compliance with this condition.
33. If required and in accordance with the Washoe County Utility Division policies for the Southwest Truckee Meadows, water rights shall be dedicated to Washoe County. Prior to acceptance, the water rights must be in good standing with the State of Nevada Division of Water Resources and must reflect a point of diversion, place and manner of use acceptable to the Utility Division.
34. Responsibility for design of wells, pump structure, controls, telemetry, and appurtenances, storage tanks, and transmission lines to the edge of the subdivision, all necessary to provide water service to the project, will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.

35. Water quality results from a State of Nevada-certified laboratory for new water sources shall be submitted to the Utility Division. The water quality sampling and testing shall be in compliance with the current State of Nevada Regulations for Public Water Systems, NAC 445.
36. If the water quality of the wells does not meet the secondary or the primary standards, as defined by NAC 445, water treatment facilities must be on-line and functioning prior to issuance of any building permits. The Utility Division shall be responsible for determining compliance with this condition.
37. If a supplemental water source is required, evidence that an adequate source has been procured by the developer/water purveyor shall be submitted to the Utility Division for their review and approval.
38. Any wells on the property not in use for production or monitoring purposes, shall be properly abandoned in accordance with State Regulations governing Water Wells and Related Drilling. The Utility Division shall be responsible for determining compliance with this condition.
39. The developer shall provide access to the existing monitoring wells. In the event access is no longer available, the developer shall construct new wells. The Utility Division shall be responsible for determining compliance with this condition.
40. Responsibility for design of any pump stations and interceptors to provide sewer service to the project will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
41. The sewer "privilege connection fee" must be paid for each lot when required by the Washoe County Utility Division since it is not anticipated that there will be any additional major infrastructure needed to serve this development. The Utility Division shall be responsible for determining compliance with this condition.

#### FIRE PROTECTION

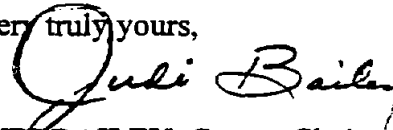

42. The plans submitted with a building permit application shall show evidence of compliance with the recommendations of the applicable fire protection agency. Those concerns are fire flows, fire hydrant number and location, access, sequential phasing of firebreaks during development, permanent firebreaks, minimum defensible space, use of fire resistant construction and/or roof material, sprinklering of structures, and spark arrestors in chimneys. Access and fire flows shall be addressed prior to the introduction of any combustible materials to the site. The fire protection agency shall be responsible for determining compliance with this condition.

43. The developer shall minimize grading to the maximum extent possible in the area around the critical mule deer habitat in order to preserve the existing browse shrubs. The Department of Development Review, in conjunction with the applicable fire protection agency, shall be responsible for determining compliance with this condition.

#### LANDSCAPING

44. Detailed landscaping and irrigation plans for the village commercial center, club house, golf course, golf driving range, equestrian center, or other non-residential uses requiring special use permit review shall be submitted prior to the issuance of a building permit for the particular use.
45. A buffer shall be provided between the fairways/greens and all creeks. The setback of the buffer shall comply with 100.200(e) of the Uniform Building Code Section 7011 amended. The Department of Development Review shall be responsible for determining compliance with this condition.

Very truly yours,

## NOTICE OF FINAL ACTION

*Bob*  
Dear Mr. Sader:

Washoe County Ordinance No. 963, approving the Final Development Agreement for Southwest Point, was adopted by the Washoe County Board of County Commissioners on July 23, 1996.

Very truly yours,

*Judi Bailey*  
JUDI BAILEY, County Clerk  
and Clerk of the Board of  
Washoe County Commissioners

**Re:** Tentative Subdivision Map Case No. TM11-12-96 with Common Open Space for ArrowCreek

**Date:** February 7, 1997 **Prepared By:** DSY

**GENERAL INFORMATION SUMMARY**

**Applicant/Property Owner:** Southwest Pointe Associates/Redfield Land Company

**Requested Action:** To review the fencing details, planting plan, and grading and revegetation plan for ArrowCreek, a subdivision within Southwest Pointe. ArrowCreek is a request to develop a 470-lot single-family residential, common open space subdivision on a  $\pm 947$  acre portion of a  $\pm 3,272$  acre site. Lots will range in size from  $\pm 12,000$  square feet to over 1 acre. A common open space of  $\pm 209$  acres will include public trails, emergency access roads, and similar uses. This is the first tentative map presented as part of the Southwest Pointe project (DA9-1-93). The proposed subdivision is located north of the Mount Rose Highway (SR 431) and west of Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) in the Southwest Truckee Meadows Area Plan and is situated in portions of Sections 3, 10, 13, 14, 15, 22, 23, 24, 26 and 27, T18N, R19E, MDM, Washoe County, Nevada. (APN: 152-020-01 through 03 and a portion of 152-020-05)

**ISSUES AND CONDITIONS**

At the May 19, 1996 Design Review Committee meeting that reviewed and approved the Development Standards Handbook for Southwest Pointe, action was taken that required further review of tentative maps submitted to Washoe County for review and approval. The attached Development Review letter of 6/19/96, specifically page 2, describes the items to be reviewed by the DRC.

MEMORANDUM

**To:** Washoe County Board of County Commissioners

**From:** Michael A. Harper, AICP, Director

**Re:** Final Development Agreement for Southwest Pointe (Development Agreement Case No. DA9-1-93)

**Date:** July 1, 1996 **Initialed By:** \_\_\_\_\_

**GENERAL INFORMATION SUMMARY**

**Applicant/Property Owner:** Southwest Pointe/Redfield Trust

**Requested Action:** An Ordinance pursuant to Nevada Revised Statutes 278.0205 approving the Final Development Agreement for Southwest Pointe. The agreement facilitates the development of a residential community which includes 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities, a day care facility, an equestrian center, and a commercial village center. The project has a total acreage of  $\pm 3,171.6$  acres and is located north of Mount Rose Highway (SR 431) and west of Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) in the Southwest Truckee Meadows Area Plan and is situated within portions of Sections 3, 10, 13, 14, 15, 22, 23, 24, 26 and 27, T18N, R19E, MDM, Washoe County, Nevada. (APN: 49-010-04, 49-010-10 and 49-030-12)

**RECOMMENDATION/FINDINGS**

It is recommended that the Board of County Commissioners introduce the attached ordinance and bill to approve and adopt the Final Development Agreement for Southwest Pointe, Development Agreement Case No. DA9-1-93, and conduct the appropriate hearings to determine if it is an acceptable document with which to bind the future development of the described property for a period of time not to exceed fifteen years.

Pursuant to Washoe County Code 110.814, Development Agreements, the Director of Department of Development Review finds that the attached Final Development Agreement for Southwest Pointe, including its attached exhibits and references, is in substantial compliance with the preliminary Development Agreement, as amended and approved by the Washoe County Planning Commission and the Board of County Commissioners. The recommendation for approval is based upon those findings and upon comments received, staff analysis, and site inspection.

### **COUNTY COMMISSION OPTIONS**

The Washoe County Board of County Commissioners has the following options and resultant consequences available on Final Development Agreement for Southwest Pointe, Development Agreement Case No. DA9-1-93:

- Approve the request as recommended by the Director of the Department of Development Review. The applicant will be able to develop the property in accordance with the terms of the approved Development Agreement.
- Defer the request to enable the applicant to reconcile any differences found by the board between the presented Final Development Agreement with the approved preliminary Development Agreement.
- Deny the request. The applicant will have to develop the property in accordance with the Comprehensive Plan in effect at the time and subject to the requirements of the Development Code..

### **BACKGROUND AND ANALYSIS**

The Final Development Agreement for Southwest Pointe would allow, over the next fifteen years, development of a 1,090-lot residential community with golf courses, and recreational and commercial facilities on  $\pm 3,171.6$  acres in the Southwest Truckee Meadows. The preliminary Development Agreement for Southwest Pointe was initially approved by the Washoe County Board of County Commissioners on February 8, 1994. It was amended by the Board of County Commissioners on November 8, 1994 and again on June 11, 1996.

Final Development Agreements are presented directly to the Board of County Commissioners by the Director of the Department of Development Review upon being found in compliance with the approved preliminary Development Agreement. Pursuant to WCC 110.814.80(c), the Director determines substantial compliance by applying the following criteria:

- (1) The proposed gross residential density or intensity of use is not changed;
- (2) The proposed ratio of residential to nonresidential use is not changed;
- (3) The area set aside for common open space is not reduced or the area is not substantially relocated;
- (4) The floor area proposed for nonresidential use is not increased;
- (5) The total ground area covered by buildings and the height of buildings is not increased; and
- (6) The plan provisions are consistent with the adopted preliminary development agreement.

The Director has been able to determine that the submitted Final Development Agreement for Southwest Pointe, including its attached exhibits and references, is in substantial compliance with the site plan in the approved preliminary Development Agreement and that it is recommended for approval.

**APPLICABLE REGULATIONS**

Nevada Revised Statutes Chapter 278.0201, 278.0203, 278.0205, 278.0207; Washoe County Code Chapter 110, Article 814.

## GENERAL INFORMATION SUMMARY

**Applicant/Property Owner:** Southwest Pointe/Redfield Trust

**Requested Action:** An Ordinance pursuant to Nevada Revised Statutes 278.0205 approving the Final Development Agreement for Southwest Pointe. The agreement facilitates the development of a residential community which includes 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities, a day care facility, an equestrian center, and a commercial village center. The project has a total acreage of  $\pm 3,171.6$  3272 acres and is located north of Mount Rose Highway (SR 431) and west of Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) in the Southwest Truckee Meadows Area Plan and is situated within portions of Sections 3, 10, 13, 14, 15, 22, 23, 24, 26 and 27, T18N, R19E, MDM, Washoe County, Nevada. (APN: 41-030-12, 49-010-04, and 49-010-10)

## BACKGROUND AND ANALYSIS

Good morning. My name is Don Young, a planner with the Department of Development Review.

The Final Development Agreement for Southwest Pointe is the first legislatively-enabled Final Development Agreement to be presented to Washoe County for adoption. The positive attributes of a properly-constructed Development Agreement accrue to both sides. The county is presented a long-term, large-scale project that provides assurances that all phases of the development will maintain a unity of theme and be constructed to the high standards required by the Development Standards Handbook and the Development Agreement. Additional county benefits result from the long-term comprehensive planning, the more efficient, less burdensome financing of infrastructure, and in this particular case, reduced administrative costs for future phases because of the compliance checklists and the defined standards.

*Presentation  
& overheads  
for 7/23/96  
BCC hearing*

On the other side, the developer receives vested development rights under the terms expressed by the agreement. A Development Agreement provides protection against future changes in an increasingly complex and uncertain land development process. This feature serves to enhance the ability of the developer to obtain the financial backing necessary to commence and complete the project. A Development Agreement should and can be a "win-win" proposition for both parties.

The Final Development Agreement for Southwest Pointe would allow, over the next fifteen years, development of a 1,090-lot residential community with two 18-hole golf courses, and recreational and commercial facilities on more than 3,200 acres in the Southwest Truckee Meadows. The preliminary Development Agreement for Southwest Pointe was initially approved by the Washoe County Board of County Commissioners on February 8, 1994. It was amended by the Board of County Commissioners on November 8, 1994 and again on June 11, 1996.

The Final Development Agreement for Southwest Pointe specifically allows subsequent approvals, especially those that would typically require public hearings, to be approved as a consent item by Washoe County. The Development Agreement also allows a longer time frame for the life of a tentative map than normally allowed by NRS.

The Ordinance provided you this morning includes the clarification to the NRS citation that was requested at caucus yesterday. The Development Agreement that is to be signed today includes the clarification to the nonpotable water agreement in Section 4.6 that was also presented at caucus and contained in the letter from Bob Sader. That clarification avoids "any circumstance in which the county might be deemed to have committed to effluent water service when a reliable supply of effluent is simply not available or in which the developer could not get nonpotable water from the county even though it is prepared to dedicate the creek water rights and build its share of the nonpotable water system facilities."

The Director of the Department of Development Review has forwarded the Final Development Agreement to the Board of County Commissioners. The Director has determined that the findings required by Article 814 of the Development Code can be made. Those findings and the rationale for supporting them follows:

- The proposed gross residential density or intensity of use is not changed:

- The number of dwelling units (d.u.) permitted by the preliminary Development Agreement approved by the BCC on November 8, 1994, 1090 1084, equals the number in the Final Development Agreement that is being presented for approval.

- That number is the same as when the Development Agreement was first proposed in September 1993 and is based upon figures provided by Washoe County which were developed from existing zoning on the Southwest Truckee Meadows Area Plan. Those figures are:

307 acres were zoned Low Density Suburban (LDS) which permits a density of 1.00 d.u. per acre and yielded 307 residential lots.

1,800 acres were zoned High Density Rural (HDR) which permits a density of 0.40 d.u. per acre and yielded 720 residential lots.

70 acres were zoned Medium Density Rural (MDR) which permits a density of 0.20 d.u. per acre and yielded 14 residential lots.

228 acres were zoned Low Density Rural (LDR) which permits a density of 0.10 d.u. per acre and yielded 28 residential lots.

867 acres were zoned General Rural (GR) which permits a density of d.u. per acre and yielded 21 residential lots.

For more than four years the applicant has relied upon a density of 28 units for the LDR acreage. These figures were provided by Washoe County in February 1992. In actuality the correct count is 22, a difference of six units.

$$307 + 1800 + 70 + 228 + 867 = 3272$$

$$21 + 22 + 14 + 720 + 307 = 1084$$

In all prior actions the Development Agreement has always been found in conformance with the Comprehensive Plan and the Southwest Truckee Meadows Area Plan.

- The residential densities have been removed from all developed and undeveloped open space areas, golf courses and related recreational and ancillary facilities, and public and commercial areas. These areas will remain nonresidential.

- The proposed ratio of residential to nonresidential use is not changed;
  - The proposed public facilities and commercial site are located within the same area and are of the same size as those previously approved by Washoe County.
  - All undeveloped open space areas and developed common areas are located within the same areas and are of the same size as those previously approved by Washoe County.
  - All golf courses and related recreational and ancillary facilities are located within the same areas and are of the same size as those previously approved by Washoe County.
  
- The area set aside for common open space is not reduced or the area is not substantially relocated;
  - All undeveloped open space areas and developed common areas are located within the same areas and are of the same size as those previously approved by Washoe County.
  - The proposed system of trails corresponds to the system adopted by Washoe County and includes approximately six miles of public trails.
  - Approximately 1500 acres of undisturbed, natural open space will be dedicated to Washoe County as the development of Southwest Pointe progresses.

- The floor area proposed for nonresidential use is not increased;
  - The nonresidential uses will comply with all requirements of the Washoe County Code, including parking and landscaping. No waivers were requested or granted.
  - Specific uses, when established, will determine the ratio of floor area to lot size. No deviation from code requirements has been requested and none is being permitted by the Final Development Agreement.
  
- The total ground area covered by buildings and the height of buildings is not increased; and
  - Southwest Pointe is primarily a residential project with ancillary recreational amenities and public facilities. The ground area covered by the residential structures will correspond to developments of similar nature and quality.
  - As referenced in the finding on floor area, no deviation from code requirements has been requested and none is being permitted by the Final Development Agreement.
  - The height of residential and nonresidential structures will comply with the adopted Development Standards Handbook. No blanket variances have been requested or are being granted.

- The plan provisions are consistent with the adopted preliminary development agreement.
  - Among the provisions the site plans include are:
    - Lot and block layouts and locations
    - Street patterns, elevations, and grades
    - Delineation of common areas
    - Location of project entry
    - Layouts and location of the golf courses and associated clubhouse and maintenance facilities
    - Sites for recreational amenities
    - School sites
    - Nevada Division of Forestry fire station site
    - Public and private trails and connections to the regional trail system
    - Perimeter residential lot fencing
    - Community fencing
    - Earthquake faults
    - Some private common driveways
    - Emergency access
    - Proposed and existing wells and water storage tanks
    - Wetlands, Maps Flood Zone "A" of the Flood Insurance Rate, and Waters of the USA
    - Locations of cut and fill slopes along the perimeter
  - All of these plan provisions are consistent with the preliminary Development Agreement approved by Washoe County.
  - The plan provisions satisfy the requirements specified in the Conditions of Approval specified by Washoe County for the preliminary Development Agreement.

(DA193F&P)

**278.0201 Agreement with governing body concerning development of land: Applicability of ordinances, resolutions and regulations adopted after agreement made; restrictions on subsequent action by governing body.**

1. In the manner prescribed by ordinance, a governing body may, upon application of any person having a legal or equitable interest in land, enter into an agreement with that person concerning the development of that land. This agreement must describe the land which is the subject of the agreement and specify the duration of the agreement, the permitted uses of the land, the density or intensity of its use, the maximum height and size of the proposed buildings and any provisions for the dedication of any portion of the land for public use. The agreement may fix the period within which construction must commence and provide for an extension of that deadline.

2. Unless the agreement otherwise provides, the ordinances, resolutions or regulations applicable to that land and governing the permitted uses of that land, density and standards for design, improvements and construction are those in effect at the time the agreement is made.

3. This section does not prohibit the governing body from adopting new ordinances, resolutions or regulations applicable to that land which do not conflict with those ordinances, resolutions and regulations in effect at the time the agreement is made, except that any subsequent action by the governing body must not prevent the development of the land as set forth in the agreement. The governing body is not prohibited from denying or conditionally approving any other plan for development pursuant to any ordinance, resolution or regulation in effect at the time of that denial or approval.

4. The provisions of NRS 278.350 and 278.360 do not apply if an agreement entered into pursuant to this section contains provisions which are contrary to the respective sections.

**278.0205 Agreement with governing body concerning development of land: Amendment or cancellation; review of development by governing body; notice; approval of amendment; filing and recording of amendment.**

1. The agreement for development of land may be amended or canceled, in whole or in part, by mutual consent of the parties to the agreement or their successors in interest, except that if the governing body determines, upon a review of the development of the land held at least once every 24 months, that the terms or conditions of the agreement are not being complied with, it may cancel or amend the agreement without the consent of the breaching party.

2. Notice of intention to amend or cancel any portion of the agreement must be given by publication in a newspaper of general circulation in the applicable city or county. The governing body may approve any amendment to the agreement by ordinance if the amendment is consistent with the master plan. The original of the amendment must be filed for recording with the county recorder or the recorder of Carson City.

June 11, 1996, BCC Meeting, Item 17B

In 1994, the county approved a preliminary development agreement subject to a number of conditions. Upon fulfillment of these conditions, the agreement could have been finalized and executed by the applicant and the county.

At this time, the applicant has submitted a request to amend those conditions. The amendments stem from modifications to the conceptual plan which was adopted as part of the preliminary agreement and from needed clarifications to a complex agreement. *I note that this was the first development agreement submitted to the county so that it is not totally surprising that* During caucus questions about the workings of the proposed private roadway system were raised. The applicant's representative will be reviewing the changes in the conceptual plan, ~~and how it is envisioned to work.~~

Also at caucus, a question came up as to how to compare the requested changes to the approved preliminary agreement. The CFA letter, dated April 30, 1996, in your packets comprehensively covers all changes and the revised list of conditions, in effect, can be considered as the revised preliminary development agreement. Therefore, the letter proposing condition modifications serves as a current and proposed comparison. *revisions and functions are being requested*

As noted in caucus, the Planning Commission minutes and staff report refer to a compromise regarding the increase in smaller lots. This compromise refers to earlier presented amendments which requested that the percentage of 12,000 square foot lots increase up to 50% of the total number of lots and that the percentage of lots between 1/2 acre and 1 acre increase up to 40% of the total number of lots. Following ~~input~~ *input* from the CAB, the applicant reduced these percentages to the current mix -- 12,000 square foot lots at 40%, 1/2 acre to 1 acre lots at 35%, and 1 acre and larger lots at 25%. *Comments*

That completes my presentation and Brita Tryggvi is here to present the conceptual plan comparisons. Are there any questions that I may answer at this time?

**Southwest Pointe Associates  
Attn: Mike Mohler  
P. O. Box 12460  
Reno, NV 89510-2460**

Dear Applicant:

At its regular meeting of March 18, 1997, the Washoe County Planning Commission conditionally approved (8 conditions) the following:

**Special Use Permit Case No. SPW1-3-97 for the ArrowCreek Temporary Aggregate Operation: To establish an on-premise, site-specific, temporary aggregate operation with an ancillary, portable, rock crushing facility on a +3.0 acre portion entirely within the boundaries of the +3271.6-acre Southwest Pointe development. The project, now known as ArrowCreek, is located within the residential and recreational project formerly known as Southwest Pointe (Development Agreement DA9-1-93) and is north of the Mount Rose Highway (SR 431) and west of Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) in the Southwest Truckee Meadows Area Plan and is within Sections 3, 10, 13, 14, 15, 22, 23, 24, 26, and 27, T18N, R19E, MDM, Washoe County, Nevada. (APN: 152-010-05)**

The conditional approval for the special use permit was based on the following findings:

1. That this Special Use Permit is substantially consistent with the policies, action programs, standards and maps of the Comprehensive Plan and the Southwest Truckee Meadows Area Plan;
2. That adequate utilities, roadway improvements, sanitation, water supply, drainage, and other necessary infrastructure will be provided, the proposed use is properly related to proposed roadways, and an adequate public facilities determination has been made in accordance with Division Seven;
3. That the site is physically suited to the type and the intensity of the requested development and that it is proximate to both the source and the points of use of material that would otherwise have to be transported over public streets;
4. That the reduction of off-site trips by heavy transport vehicles will attenuate the impacts of traffic within the area. will enhance safety on the public streets, will lessen noise and air pollution, and will lengthen the life of the streets that will be spared;

John B. Hester, AICP  
Director

Jess S. Traver, P.E.  
County Building  
Official

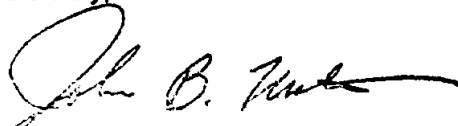

**COMMUNITY  
DEVELOPMENT**

5. That due to the care in siting and to the surrounding landscaping required by the conditions of approval for Development Agreement DA9-1-93, the issuance of the permit will not be injurious to the property or improvements of adjacent properties; nor detrimental to the character of the surrounding area; nor unduly detrimental to surrounding properties, land uses and the environment in general;
6. That, due to the care in siting, the proposed development will not unduly block scenic views or degrade any surrounding scenic resources;
7. That the proposed development will reclaim the site and all affected areas at the conclusion of the operation; and
8. That the Commissioners gave reasoned consideration to the information contained within the staff report and information received during the meeting.

As no appeals have been filed in the time period stipulated in the Washoe County Development Code, the decision by the Planning Commission is final.

Yours truly,

**John B. Hester, AICP**  
**Community Development Director and**  
**Secretary to the Planning Commission**

**CONDITIONS  
FOR  
SPECIAL USE PERMIT CASE NO. SPW1-3-97  
FOR  
ARROWCREEK TEMPORARY AGGREGATE OPERATION**

(As approved by the Washoe County Planning Commission at their March 18, 1997 meeting)

**UNLESS OTHERWISE SPECIFIED, ALL CONDITIONS MUST BE MET OR FINANCIAL ASSURANCES MUST BE PROVIDED TO SATISFY THE CONDITIONS PRIOR TO SUBMITTAL FOR A BUILDING PERMIT. THE AGENCY RESPONSIBLE FOR DETERMINING COMPLIANCE WITH A SPECIFIC CONDITION SHALL DETERMINE WHETHER THE CONDITION MUST BE FULLY COMPLETED OR WHETHER THE APPLICANT SHALL BE OFFERED THE OPTION OF PROVIDING FINANCIAL ASSURANCES. ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL HAVE A COPY FILED WITH THE COUNTY ENGINEER AND THE DEPARTMENT OF COMMUNITY DEVELOPMENT.**

**COMPLIANCE WITH THE CONDITIONS OF THIS SPECIAL USE PERMIT IS THE RESPONSIBILITY OF THE APPLICANT, HIS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY AND THEIR SUCCESSORS IN INTEREST. FAILURE TO COMPLY WITH ANY CONDITIONS IMPOSED IN THE ISSUANCE OF THE SPECIAL USE PERMIT MAY RESULT IN THE INSTITUTION OF REVOCATION PROCEDURES.**

**WASHOE COUNTY RESERVES THE RIGHT TO REVIEW AND REVISE THE CONDITIONS OF THIS APPROVAL SHOULD THEY DETERMINE THAT A SUBSEQUENT LICENSE OR PERMIT ISSUED BY WASHOE COUNTY VIOLATES THE INTENT OF THIS APPROVAL.**

**GENERAL CONDITIONS**

1. The applicant shall demonstrate substantial conformance to the plans approved as part of this special use permit. The Department of Community Development shall be responsible for determining compliance with this condition.
2. The applicant shall cease operation of the temporary aggregate facility and its ancillary features within five years from the date of approval by Washoe County. If the process required by the Development Code is followed, up to three one-year extensions of the Special Use Permit may be granted. Any cessation of activity at the aggregate operation that extends for a period of more than twelve (12) months or more shall constitute an invalidation of this Special Use Permit approval.
3. A copy of the Final Order stating conditional approval of this special use permit shall be attached to all applications for administrative permits issued by Washoe County.

4. A note shall be placed on all construction drawings and grading plans stating:

**NOTE**

Should any prehistoric or historic remains/artifacts be discovered during site development, work shall temporarily be halted at the specific site and the State Historic Preservation Office of the Department of Museums, Library and Arts, shall be notified to record and photograph the site. The period of temporary delay shall be limited to a maximum of two (2) working days from the date of notification.

5. Upon verifiable unresolved complaint from surrounding property owner(s) of excessive noise, Washoe County may secure the services of a qualified noise consultant. The applicant shall be obliged to compensate the county for all costs incurred in completing two 24-hour monitorings of the operation to assure compliance with noise standards. If improvements or changes in operation are needed to assure compliance, the applicant shall be responsible for implementation and any associated costs. The Washoe County Department of Community Development shall be responsible for determining compliance with this condition.
6. The applicant shall submit a detailed mining plan to the County Engineer and the Department of Community Development. That mining plan shall address safety and environmental concerns, including but not limited to storm drainage, topsoil stockpiling, erosion control, slope stabilization, and phased reclamation of the site.
7. The hours of operation shall be limited to the hours between 7:00 AM and 5:00 PM, with no operation on Sundays or State/Federal holidays. The hours of equipment maintenance shall be limited to the hours between 6:00 AM and 11:00 PM, with no operation on Sundays or State/Federal holidays. Quiet dust control activities may occur at all hours. Any vehicles operated after dusk and before dawn shall be equipped with visual, rather than audible, back-up alarms.
8. The applicant and any successors shall direct any potential purchaser/operator of the site and/or the special use permit to meet with the Department of Community Development to review conditions of approval prior to the final sale of the site and/or the special use permit. Any subsequent purchaser/operator of the site and/or the special use permit shall notify the Department of Community Development of the name, address, telephone number, and contact person of the new purchaser/-operator within 30 days of the final sale.

**Subject: Action of the Design Review Committee for Development Agreement  
DA9-1-93 (Arrowcreek Lane Wall)**

Dear Britta:

The Design Review Committee evaluated the design of Arrowcreek Lane for any impacts on the adjacent homes to the north in Fieldcreek Ranch such as fencing, berms, and lowering travel lanes at its regular meeting on May 8, 1997. The Committee took the following action regarding your project:

1. APPROVED the project with the following modifications.
  - a. The fencing is to be a 6 foot high solid wall.
  - b. Materials for wall shall be reviewed at the next DRC meeting on June 12, 1997. The applicant shall consider the options of masonry, concrete panel, rock groupings along slope area, and dry stacking/mortar. Wood, brick and sheet panels are not permitted. The homeowners side of the wall shall be sandblasted finish or a textured finish such as split face.
  - c. A temporary cyclone fence shall be temporarily installed during construction
  - d. The landscaping shall be transitional planting that will feather from the beginning of the roadway to the end of the roadway and shall be natural vegetation plantings. An irrigation analysis shall be conducted by Public Works.
  - e. The fence shall be extended as much as possible to the Colfer lot. However, the fence shall stop at the point where the terrain requires the fence to slope or turn.

This approval is valid after 10 days of the action by the Design Review Committee. During this time an aggrieved party may file an appeal in writing to the Director of the Community Development Department. If you have any questions or require any assistance, please contact me at 328-3613.

Sincerely,

**DESIGN REVIEW COMMITTEE  
STAFF REPORT**

**To:** Members of the Design Review Committee

**Re:** Tentative Subdivision Map Case No. TM11-12-96 with Common Open Space for ArrowCreek

**Date:** December 31, 1996 **Prepared By:** DSY

**GENERAL INFORMATION SUMMARY**

**Applicant/Property Owner:** Southwest Pointe Associates/Redfield Land Company

**Requested Action:** To review the fencing details, planting plan, and grading and revegetation plan for ArrowCreek, a subdivision within Southwest Pointe. ArrowCreek is a request to develop a 470-lot single-family residential, common open space subdivision on a  $\pm 947$  acre portion of a  $\pm 3,272$  acre site. Lots will range in size from  $\pm 12,000$  square feet to over 1 acre. A common open space of  $\pm 209$  acres will include public trails, emergency access roads, and similar uses. This is the first tentative map presented as part of the Southwest Pointe project (DA9-1-93). The proposed subdivision is located north of the Mount Rose Highway (SR 431) and west of Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) in the Southwest Truckee Meadows Area Plan and is situated in portions of Sections 3, 10, 13, 14, 15, 22, 23, 24, 26 and 27, T18N, R19E, MDM, Washoe County, Nevada. (APN: 152-020-01 through 03 and a portion of 152-020-05)

**ISSUES AND CONDITIONS**

At the May 19, 1996 Design Review Committee meeting that reviewed and approved the Development Standards Handbook for Southwest Pointe, action was taken that required further review of tentative maps submitted to Washoe County for review and approval. The attached Development Review letter of 6/19/96, specifically page 2, describes the items to be reviewed by the DRC.

**Subject: Action of the Design Review Committee on Final Development Agreement  
Case No. DA9-1-93 (Southwest Pointe Subdivision).**

Dear Britta:

The Design Review Committee evaluated the Draft Development Standards Handbook for the development for Southwest Pointe Subdivision at their May 9, 1996 meeting. The Committee took the following action regarding your project:

**CONDITIONALLY APPROVED** the Design Standards Handbook with modifications:

**The following shall be incorporated into the Development Standards Handbook and submitted to the Development Review staff for approval:**

1. External public/private interfacing or edge conditions to be amended:
  - a. Trail system
    - 1) Define the way the public and private trails interface, their location and how they will be posted. Define the relationship between the public trail system and the golf course and minor arterial and collector roads. Reference should be made to the Open Space Management Plan as it relates to the public trail issues.
    - 2.) Define the trail system along collector streets. Show which trails will meander and how they will relate to the street right-of-way and fencing.

b. Fencing

1) Define the type of fencing permitted adjacent to or abutting the exterior trails. Define all perimeter fencing or fencing that will be visible from the exterior part of the property.

c. Grading and drainage

1) Provide specific details for the treatments of areas which will be visible from the exterior of the project including drainage's and culverts. The cut and fill areas should blend with natural contouring. Identify which areas are to be revegetated and provide planting time frames.

2. Accessory buildings shall be defined further.

**The following information shall be shown on the Tentative Map and reviewed by the Design Review Committee:**

1. Specific fencing details with types, materials and locations. Include fencing details for the rear lot lines.
2. Planting plan with types, materials, density, and location of plants including common areas and street scapes.
3. Grading plan and specific standards for how revegetation will be handled; i.e., time frames for the establishment of plants, how the slopes will be treated, etc.
4. Establish building envelopes, especially the peripheral lots abutting the U.S. Forest Service land. Emphasis should be given to retaining as much area as possible in a natural state, creating a natural transition at the fence line.

If you have any questions or require any assistance, please contact your staff planner, Don Young at 328-3620.

Sincerely,

Cheryl D. Ryan, Planner  
Design Review Committee Facilitator

Don,

4/16/98

ArrowCreek had some minor revisions to the Loop Rd Landscape Plans. You have probably signed off on them already - Permit #98-0961. Engineering changes were specifying ditch sections & I believe Utilities had some irrigation changes. Anyway they will be resubmitting and they DEMAND approval ASAP. You will probably need to check the revised plans. Kris

RE: Mitigation Report for ArrowCreek Phase 2, Mount Rose Fan, Washoe County.

Dear Mr. Young:

The Nevada State Historic Preservation Office (SHPO) reviewed the subject document. The SHPO concurs with Washoe County's determination that this report is adequate to mitigate the adverse effects of the proposed development and will prove to be a significant contribution to the archaeological record of Washoe County. The SHPO does not recommend any changes to this document.

The SHPO reminds Washoe County that the petroglyphs identified within the development's boundaries should remain protected from project construction by the avoidance measures outlined in the Treatment Plan. When a final subdivision map is available for this development, please do not hesitate to call on this office to review the long-term petroglyph avoidance plans for this development.

Again, the SHPO appreciates the opportunity to review this document.

If you have any questions concerning this correspondence, please feel free to contact me by phone at (702) 687-5138 or by e-mail at rlpalmer@clan.lib.nv.us.

**Subject:** Mitigation Report for ArrowCreek Phase 2  
(fka Southwest Pointe) (DA9-1-93)

Dear Mr. James:

Enclosed is the ArrowCreek mitigation report from Kautz Environmental Consultants, Inc. A separate copy has also been forwarded to William Dancingfeather at the Washoe Tribe. This report has been required in accordance with the Truckee Meadows Regional Plan. The cover letter from Kautz Environmental Consultants has been included. Please let me know if there are concerns with the mitigation report.

The mitigation report is relevant to the following case description:

**Applicant/Property Owner:** Southwest Pointe Partners/Redfield Land Company

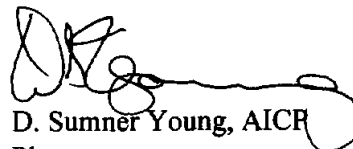

**Request:** Approve a development agreement that facilitates the development of a residential community including 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities, a day care facility, an equestrian center, and a commercial village center. The amendment allows the applicant to modify portions of the agreement pertaining to streets, access, drainage, parks and other portions. The total acreage of the project is  $\pm 3,171.6$  acres and it is located north of Mount Rose Highway (SR 431) and west of Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) in the Southwest Truckee Meadows Area Plan and is situated within portions of Sections 3, 10, 13, 14, 15, 22, 23, 24, 26 and 27, T18N, R19E, MDM, Washoe County, Nevada. ## AVIGATION EASEMENT

This indenture made this 10<sup>th</sup> day of September, 1997, between SOUTHWEST POINTE ASSOCIATES, L.L.C., a Delaware limited liability company; and NELL J. REDFIELD TRUST, (hereinafter referred to as "Grantor"), and the AIRPORT AUTHORITY OF WASHOE COUNTY, a quasi-municipal corporation of the State of Nevada, (hereinafter referred to as "Grantee").

The Grantor, for and in consideration of ONE AND NO/100 DOLLARS (\$1.00) and other good and valuable consideration, paid by the Grantee to the Grantor, the receipt and sufficiency of which are hereby acknowledged, does hereby grant to the Grantee, his successors and assigns, a perpetual and assignable easement over the following described parcel of land in which the Grantor holds a fee simple estate, designated on the attached Exhibit "A", attached hereto, and by this reference made a part hereto, and referred to hereinafter as "the Property".

Grantor agrees that it, its heirs, successors, representatives, executors, administrators, and assigns, shall not hereafter erect, or permit the erection or growth of, any structure, tree or other object within 200 feet above the property height.

The Grantor further agrees that the easement and rights hereby granted to the Grantee in and over the Property are for the purpose of granting an easement in the airspace above said Property for the passage of aircraft as now or hereafter may be necessary or desirable and ensuring that the Property shall remain free and clear of any structure, tree, or other object which is or would constitute an obstruction or hazard to the flight of aircraft in landing and taking off at the Reno/Tahoe International Airport (hereinafter referred to as the "Airport"); that these rights shall include, but not be limited to the following:

1. The continuing and perpetual right, at Grantor's expense, to trim or top trees, bushes, shrubs, or any other perennial growth or undergrowth extending into, or which in the future could infringe upon or extend into the approach surface at an elevation of 200 feet above the property height.
2. The right to prohibit the future erection of buildings or other structures which would infringe upon or extend into the approach surface at an elevation of 200 feet above the property height.
3. The right to prohibit use of the Property which would result in the creation of electrical interference or unusual lighting that would interfere with operation of the Airport or aircraft utilizing the Airport.
4. The right, at Grantor's expense, to mark and light as obstructions to air navigation, any and all structures, trees or other objects that may at any time project or extend above the approach surface at an elevation of 200 feet above the property height.

5. The right of ingress to and egress from, and passage over the land of the Grantor within the Property, for the above purposes.
6. For the use and benefit of the public, the right of flight for the passage of aircraft in the airspace above the Property, together with the right to cause in the airspace such noise, vibrations, fumes, dust, turbulence, fuel particles and similar activity as may be inherent in the operation of aircraft, now known or hereafter used for navigation of or flight in air, using the airspace or landing at, taking off from or operating on Reno/Tahoe International Airport.

TO HAVE AND TO HOLD said easement and all rights appertaining thereto unto the Grantee, his successors and assigns, until said Reno/Tahoe International Airport shall be abandoned and shall cease to be used for public airport purposes.

IT IS UNDERSTOOD AND AGREED that these covenants and agreements shall run with the land and shall be binding upon the heirs, representatives, administrators, executors, successors, and assigns of the Grantor, and that for the purpose of this instrument, the Property shall be the servient tenement and said Reno/Tahoe International Airport shall be the dominant tenement.

RE: Proposed Arrow Creek Parkway, Mount Rose Fan, Washoe County.

Dear Mr. Young:

The Nevada State Historic Preservation Office (SHPO) reviewed the proposed project. The SHPO concurs with the consultant's findings that the *portions of the following sites* within the proposed parkway corridor are not regionally-significant:

- |                        |                          |
|------------------------|--------------------------|
| 26Wa2033 (Locus 16-3); | 26Wa6266 (Loci D and E); |
| 26Wa6304;              | 26Wa6305;                |
| 26Wa6306;              | 26Wa6307;                |
| 26Wa6308.              |                          |

The portions of these sites outside of the corridor will remain unevaluated. The subject inventory was sufficiently wide to ensure that the unevaluated portions will not be affected by the parkway construction.

The SHPO notes that a segment of the Steamboat Ditch is located in the path of the parkway. In order to determine what effect construction of the parkway might have on this regionally-significant ditch, the SHPO requests construction plans when available.

RE: Proposed Historic Properties Treatment Plan for Site 26Wa5461, Montreux  
Joint Venture, Carson Range, Washoe County.

Dear Mr. Young:

The Nevada State Historic Preservation Office (SHPO) reviewed proposed Historic Properties Treatment Plan. The SHPO has the following comments on this Plan:

1. The Plan proposes to excavate several 1m x 1m units (minimum of 5) within a rock-walled feature and shovel probe within feature 3. What percentage of these features does the consultant estimate the units and probes will sample?
2. A metal detector sweep of the site could prove useful in recovering some of the site's data potential. If the detector identifies a significant deposit in this area, additional excavation units could be used to uncover the find.

Please note that the SHPO did not review this project for federal agency compliance with Section 106 of the National Historic Preservation Act of 1966, as amended. If federal funds or a federal permit are required for the completion of this project, federal agency consultation with this office is necessary for compliance with Section 106 of the Nation Historic Preservation Act of 1966, as amended.

Subject: Historic Preservation Treatment Plan for Montreux  
(TM1-1-96 and SPW7-12-92)  
Cultural Resources Inventory of the Proposed ArrowCreek Parkway  
(fka Southwest Pointe) (DA9-1-93)

Dear Mr. Dancingfeather:

Please find enclosed the subject documents. Separate copies have also been forwarded to the State Historic Preservation Office, Department of Museums, Library and Arts.

The Historic Preservation Treatment Plan is relevant to the following case description:

Applicant/Property Owners: Montreux Joint Venture/Jaksick, Reimers, Jasmine  
Requested Action: To develop a 558-lot, single-family residential, common open space subdivision on a  $\pm 629.8$  acre site. Lots will range in size from a minimum 8,000 square feet to  $\pm 1$  acre and will average  $\pm 25,324$  square feet. Common open space of  $\pm 54.8$  acres will include wetlands and landscaped areas. Additionally,  $\pm 202$  acres will be utilized for a previously-approved 18-hole golf course and related facilities. The project consists of five parcels totaling  $\pm 629.8$  acres which are designated Low Density Suburban (LDS) and General Rural (GR) in the Forest Area Plan. The property is located south of the Mount Rose Highway (SR 431) at treeline. The parcels are situated in portions of Sections 2, 3 and 11, T17N, R19E, MDM, Washoe County, Nevada. (APN at time of approval: 047-040-48, 047-040-51 formerly 047-040-49, 047-170-11 & 12, and 047-210-02)

Please note that this report has been in the hands of this department for more than one month. It had been misplaced within the case file and only discovered when Richard Adkins of Summit Envirosolutions had contacted us about the outcome of the survey. If there is any way to shorten the review times noted at the last paragraph of this letter, it would be appreciated. Since this apparently is an historic site, perhaps that will facilitate review.

The improvement of the ArrowCreek Parkway was a requirement of the Development Agreement for Southwest Pointe and the Cultural Resources Inventory of the Proposed ArrowCreek Parkway is relevant to the following case description:

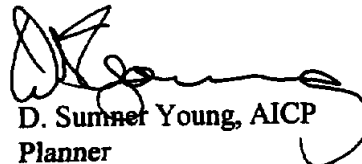

Letter to: William Dancingfeather  
Subject: Archaeological Reports  
September 4, 1997  
Page 2

**Applicant/Property Owner: Southwest Pointe Partners/Redfield Land Company**

**Requested Action:** To approve a development agreement that facilitates the development of a residential community including 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities, a day care facility, an equestrian center, and a commercial village center. The amendment allows the applicant to modify portions of the agreement pertaining to streets, access, drainage, parks and other portions. The total acreage of the project is  $\pm 3,171.6$  acres and it is located north of Mount Rose Highway (SR 431) and west of Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) in the Southwest Truckee Meadows Area Plan and is situated within portions of Sections 3, 10, 13, 14, 15, 22, 23, 24, 26 and 27, T18N, R19E, MDM, Washoe County, Nevada. (APN at time of approval: 49-010-04, 49-010-10 and 49-030-12)

Please let us know within six weeks from the date of this letter whether the Cultural Resources Inventory of the Proposed ArrowCreek Parkway has been found to be acceptable or not. Please let us know within four weeks from the date of this letter whether the Historic Preservation Treatment Plan for Montreux has been found to be acceptable or not. After those times, Washoe County will assume no response to be an acceptance of the reports and with the understanding that permits may be issued. If you have any question, please contact Don Young at the letterhead address or by telephone at (702) 328-3620.

Sincerely,

D. Sumner Young, AICP  
Planner

CONDITIONAL DUST PLAN APPROVAL #D96032

FOR

Southwest Pointe (aka Arrow Creek)

**\*\*\*PHASED GRADING\*\*\* 130 ACRES MAXIMUM ALLOWABLE DISTURBANCE FOR THIS PHASE**

**Property Owner: Southwest Pointe Associates L.L.C.**

The following requirements are special conditions of approval for this dust control plan in addition to the standard conditions noted in the plan application. The special conditions noted below must be followed in all activities covered in this plan application.

1. PHASE GRADING NOT TO EXCEED ONE HUNDRED THIRTY ACRES WILL INCLUDE THE FOLLOWING AREAS:

Phased grading is to proceed as follows as per the dust control application materials submitted November 21, 1996:

Phase 1: Palmer Holes 1, 2, 8, 9, 10, 11, 12 and Driving Range. Start Date January 5, 1996/Complete Date January 29, 1997 (acreage disturbed 46 acres); Phase 2: Palmer Holes 13, 14, 15, 16, 17, 18 Start date January 29, 1997/Complete Date February 9, 1997 (22 acres); Phase 3: Palmer Holes 3, 4, 5, 6, 7 Start date February 9, 1997/Complete date March 2, 1997 (30 acres). Phase 4: Harbottle Holes 1, 2, 15, 16, 17, 18 Start date March 2, 1997 /Complete date March 23, 1997 (47 acres). Phase 5: Harbottle Holes 3, 4, 5, 6, 7, 8, 9 Start date March 23, 1997/Complete date April 13, 1997 (42 acres). Phase 6: Harbottle Holes 10, 11, 12, 13, 14 Start date April 13, 1997/Complete date April 27, 1997 (29 acres).

The operator shall complete and stabilize acreage sufficient to insure that no more than 130 acres are open and unstabilized at any one time. Stabilization methods shall include but not be limited to: revegetation, application of palliatives, paving, sprinkler coverage and wind fences. Complete date Contractor will provide notification to A.Q.M.D. prior to starting any new phase. In the event that any start/completion date is exceeded, the contractor shall provide written notification to A.Q.M.D.

CONDITIONAL DUST CONTROL PLAN APPROVAL NUMBER D96032  
Southwest Springs \*\*\*\*PHASED GRADING\*\*\* 130 ACRES

page 2

2. AT LEAST ONE (1) WATER TRUCK FOR EACH TWENTY (20) ACRES ARE TO BE PROVIDED, OPERATIONAL AND IN USE ASSIGNED TO THIS PHASE OF THE PROJECT. GRADING IS NOT TO EXCEED AREAS OUTLINED IN CONDITION NUMBER ONE OF THIS PLAN. Water trucks shall apply appropriate dust control to prevent fugitive dust emissions resulting from grading activity and/or gusty wind conditions 24 HOURS PER DAY 7 DAYS PER WEEK. During summer months with high winds and excessive heat, watering should continue until the early evening (at least until 7:00 p.m.). CESSATION OF OPERATIONS IS REQUIRED IF FUGITIVE DUST CANNOT BE CONTROLLED AS A RESULT OF EQUIPMENT OPERATIONS AND/OR GUSTY WIND CONDITIONS. CONTINUED WATERING OF THE PROJECT IS REQUIRED IF CESSATION OF OPERATIONS OCCURS.
3. If violations of 040.030 of the Washoe County District Board of Health Regulations occur, the applicant shall be required to perform additional mitigation of excessive dust such as cessation of grading operations pending the application of an approved dust palliative that is environmentally safe and does not cause noxious odors or pose a ground water contamination threat; revegetation; portable sprinkler systems and/or other District approved dust control measures.  
  
Additional mitigation shall be implemented no later than 48 hours from the date of notification of violation.
4. Dust control of the 3:1 slopes is the responsibility of the developer and/or contractor. Effective control of this portion of the project may not be achieved solely by the use of water trucks alone. Therefore, additional measures such as water cannons or portable sprinkler systems or other approved methods shall be used during slope disturbance. Slopes are to be revegetated or stabilized within 45 days of the completion of slope grading.

Southwest Pointe (aka Arrow Creek)  
CONDITIONAL DUST CONTROL PLAN APPROVAL NUMBER D96032

page 3

5. The applicant shall be required to provide notification to A.Q.M.D. staff once areas addressing this dust control plan have been stabilized. A.Q.M.D. staff will inspect the areas for stabilization. If stabilization meets staff criteria, the applicant shall be allowed to proceed with additional grading. Prior to any additional grading activity an amendment of this dust control plan must be filed and approved by A.Q.M.D. staff.
6. The applicant is required to notify A.Q.M.D. staff in writing should any portion of property addressed in this plan be sold to a new owner. A new dust control plan shall be filed by all new owners prior to disturbance of soil.
7. When paved road surfaces are installed, any soil tracked onto adjoining paved roadways will be promptly removed by wet broom or washing. Regular vacuum or wet sweeping will be performed at least weekly and more often if necessary or ordered by the Control Officer.
8. Any soil or fill storage piles operated or maintained as a part of this phased project covered or wetted down sufficiently to prevent wind blown dust. Screening activities shall be controlled for fugitive dust by the use of water application or other control methods sufficient to mitigate dust emissions.
9. Dust emissions generated on any entrance or exit haul roads due to equipment operations or gusty wind conditions must be controlled by the use of water application or an appropriate dust palliative 24 hours per day 7 days per week.
10. The applicant shall implement additional dust control measures such as extra water trucks, revegetation, palliatives wind fencing etc., should the aforementioned fail to control fugitive dust emissions from this project.

CONDITIONAL DUST CONTROL PLAN APPROVAL D96032  
Southwest Pointe (aka Arrow Creek)

11. All operators who clear more than five (5) acres may also need an NPDES permit addressing water quality issues related to storm run-off from the Nevada Division of Environmental Protection. Contact Robert Saunders, Bureau of Water Pollution Control, at (702) 687-5065 for further information.
12. ANY CHANGES MADE TO THIS DUST CONTROL PLAN shall be submitted to the District and must receive approval from the Control Officer prior to enactment.
13. All project managers/supervisors for any contractor involved in work on this project shall be required to have a copy of this dust control plan on site and familiar with all provisions. The copy shall be made available to the A.Q.M.D. control officer upon request.

WASHOE COUNTY DOES NOT DISCRIMINATE ON THE BASIS OF SEX, RACE, COLOR, AGE, RELIGION, DISABILITY OR NATIONAL ORIGIN IN THE ACTIVITIES AND/OR SERVICES WHICH IT PROVIDES. IF YOU HAVE ANY QUESTIONS, PLEASE CALL WASHOE COUNTY PERSONNEL DIVISION - 328-2080; TDD #328-3685.

**"CONDITIONS OF PLAN"**

1. The Applicant presents and agrees to implement an acceptable method to prevent particulate matter from becoming airborne, i.e. application of water with water truck or sprinklers, wind screens, speed limits, etc.
2. The Applicant presents and agrees to implement an acceptable method of soil stabilization when the project is finished.
3. The Applicant agrees in writing to take additional precautions as may be reasonably prescribed by the Air Quality Management Division, consistent with the provisions of Section 040.030 of the District Board of Health Regulations Governing Air Quality Management.
4. The Applicant agrees in writing to suspend all or part of his activities which are related to or which may contribute to a violation of Section 040.030 of the Air Quality Regulations, if he cannot provide satisfactory control of airborne particulate, or upon request of the Air Quality Management Division. (i.e. High and/or adverse wind conditions)
5. Other conditions or areas which will require particular attention:
  - a. Unimproved access roads used for entrance to or exit from the construction site;
  - b. Areas in and around building(s) being constructed;
  - c. Dirt and mud deposited on adjacent improved streets and roads as a result of the construction which could result in a dust problem;
  - d. Restricting use of vehicles on and around the construction site, and limiting the speed of vehicles to prevent the generation of airborne dust;
  - e. Roads which are disturbed, removed, etc., as a result of the construction.
6. The Applicant is responsible for all dust control 24 hours a day, 7 days a week including weekends and holidays, from commencement of project to final completion.
7. The Applicant presents and agrees to prevent any open burning which shall include, but is not limited to, open fires for disposal of trash, hand warming, etc.
8. This plan must be available on-site, and the site is subject to the right of inspection by the an Air Pollution Investigator at any time. If the Investigator ascertains that a present or potential sand or dust particulate problem exists, additional conditions may be specified.
9. Upon notification by the Air Quality Management Division that an Air Pollution Emergency Episode condition exists, the Applicant agrees to suspend all or part of his activities until the Emergency Episode condition is terminated.
10. Dust Control Plans are valid for eighteen (18) months from the date the Plan is approved. If the project is not complete, and the remaining land disturbance is one acre or greater, the Plan must be renewed and approved prior to the expiration date.
11. Once "final grade" has been completed, the area must be stabilized by construction/landscaping, revegetation, chemical sealant, or other approved method(s) of dust suppression.
12. If required, Applicant must obtain and NPDES permit addressing water quality issues related to storm runoff. This permit is issued by the Nevada Division of Environmental Protection - Contact Robert Suanders at (702) 687-5065 for further information.

Problem areas or potential problem areas which may be pointed out by the Air Pollution Control Investigator must be controlled as soon as possible after being brought to the attention of a responsible individual in the employment of the Applicant, Prime Contractor, or Grading and Excavating Contractor.

## SOUTHWEST POINTE GOLF COURSE GRADING DUST CONTROL PLAN

### OBJECTIVE

To minimize the impacts to adjacent properties and surrounding area from wind blown dust as a result of construction/grading activities.

### PROJECT DESCRIPTION

The entire Southwest Pointe project consist of 1090 residential single family lots, two 18-hole golf courses, clubhouse, and a swim/tennis facility. Initial construction phase is for the grading of the two golf courses and incidental improvements necessary for the grading operation. Construction of the golf courses involves mass grading operations, screening of materials for topsoil production, shaping, irrigation system installation, and seeding.

Golf Course #1 - Design golf course architect is Palmer Course Design, therefore this course will typically be referred to as the Palmer Course. This is the lower of the two courses in elevation. The routing is generally along Thomas Creek in the eastern portion of the project.

Golf Course #2 - The golf course architect is John Harbottle, hence, this course will frequently be called the Harbottle Course. This course is generally at the higher elevations on the site along Dry Creek.

Incidental Improvements - To gain access to the site a construction access road will be constructed from Thomas Creek Road to the project. This is within the alignment of future White's Creek Lane. There is a bridge crossing to be constructed over Thomas Creek at the project entrance. For dust control purposes, the County water production well TH1 is being developed. This well will be used to fill either an adjacent lake or temporary water storage tanks with adequate storage.

### SCHEDULE AND PHASING

The grading construction schedule is anticipated to take approximately four and one-half (4-1/2) months. Phasing is proposed as follows:

Phase 1 - Golf holes 1, 2, 8, 9, 10, 11 and 12 of The Palmer Course, along with the driving range. Total disturbance is 46 acres and approximately 123,000 cubic yards. Duration would be about 3-1/2 weeks.

Phase 2 - Golf holes 13 through 18 of The Palmer Course. Total disturbance is 22 acres and approximately 52,000 cubic yards. Duration would be 1-1/2 weeks.

Phase 3 - Golf holes 3 through 7 on The Palmer Course. This would finish the first golf course. Total disturbance is 30 acres and 116,000 cubic yards. Duration would be 3 weeks.

Phase 4 - Golf holes 1, 2, 15, 16, 17 and 18 of The Harbottle Course. This includes 47 acres of disturbance and 113,000 cubic yards. Duration will be three weeks.

Phase 5 - Golf holes 3 through 9 of The Harbottle Course. Disturbance is 42 acres and 106,000 cubic yards. Duration would be 3 weeks.

Phase 6 - Golf holes 10 through 14 of The Harbottle Course. Disturbance is 29 acres and 80,000 cubic yards. Duration would be 2 weeks. This will complete the second golf course.

total disturbed acreage = 216 acres  
total earthwork volume = 590,000 cubic yards  
total construction duration = 16 weeks

This schedule and phasing plan is based on moving 6,000 CY per day. If 20 gallons of water is needed for each cubic yard of dirt moved, then water requirement is 120,000 gallons per day. Water well TH1 produces 350 gallons/minute, or 126,000 gallons in six hours. This is therefore adequate production for dust control purposes.

#### PROPOSED DUST CONTROL MITIGATION

Water trucks will be used to control dust based on one truck for every twenty-five (25) acres of disturbed area. Water consumption will be 120,000 gallons per day. The first phase of construction will have a maximum of 46 acres disturbed at any given time, therefore, two water trucks will be used. In addition, one backup water truck will be on site at all times. The maximum area left disturbed at any given time will be 100 acres, or 4 water trucks.

As the holes are graded subsequent phases of construction will commence. This includes drainage, irrigation, shaping, etc. For this phase of construction one water truck for every 60 acres will be used to maintain the dust control effort. If holes are to be left for an extended length of time (30 days), dust palliatives or seeding with rough grasses would substitute for water trucks.

It is anticipated that by grading both courses during the winter months (December, January and February), the dust hazard potential will be at the lowest. For this reason, it is advantageous to complete all the grading by March or April.

**SOUTHWEST POINTE GOLF COURSES  
GRADING CONSTRUCTION PHASING PLAN**

Incidental Projects

- Phase 1
- Phase 2
- Phase 3
- Phase 4
- Phase 5
- Phase 6

Construction Phase	Course Name	Graded Holes	Disturbed Area	Earthwork Volume	Construction Duration
1	Palmer	1, 2, 8, 9, 10, 11, 12, and Driving Range	46 Acres	128,000 CY	9 1/2 Weeks
2	Palmer	13, 14, 15, 16, 17, 18	22 Acres	52,000 CY	1 1/2 Weeks
3	Palmer	3, 4, 5, 6, 7	30 Acres	116,000 CY	9 Weeks
4	Harbottle	1, 2, 15, 16, 17, 18	47 Acres	113,000 CY	9 Weeks
5	Harbottle	3, 4, 5, 6, 7, 8, 9	42 Acres	106,000 CY	9 Weeks
6	Harbottle	10, 11, 12, 13, 14	29 Acres	80,000 CY	2 Weeks
			216 Acres	690,000 CY	16 Weeks

**Subject: Action of the Design Review Committee for Development  
Agreement DA9-1-93 (Arrowcreek Subdivision - Whites  
Creek Lane Extension)**

Dear Britta:

The Design Review Committee evaluated the design of Whites Creek Lane for any impacts on the adjacent homes to the north of Fieldcreek Ranch such as fencing, berms, and lowering travel lanes at its regular meeting on July 10, 1997. The Committee took the following action regarding your project:

1. APPROVED the project with the following modifications.

**Fencing**

- a. Fencing material shall be the "Woodcreef" pre-cast fencing, as presented, and in the color known as San Diego Buff and shall be generally six feet in height.
- b. The height of the fencing shall be six feet and shall be transitioned from six feet to four feet at both ends.

**Landscaping**

- c. Native species with temporary seasonal irrigation shall be provided through hydroseeding, including Bitterbrush, Desert Peach and Rabbit Brush.
- d. The landscaping shall incorporate clustering of boulders, approximately fifty percent below ground, to soften the effect of the slope cut, incorporating random large plant material.

RE: Historic Preservation Treatment Plan for ArrowCreek (Southwest Pointe) Golf Course (Phase 2), Southwest Pointe Partners/Redfield Land Company, Mount Rose Fan, Washoe County.

Dear Mr. Young:

The Nevada State Historic Preservation Office (SHPO) reviewed the proposed Historic Preservation Treatment Plan. The SHPO concurs with Washoe County's determination that the plan outlined in this document will recover the values of regional significance identified for the following properties:

26Wa5897;      26Wa5908;      26Wa5914;      26Wa5924;  
26Wa5929;      26Wa5937;      26Wa5944;      26Wa5949;  
26Wa5950;      26Wa6225.

This data recovery proposal does not include the petroglyph components of 26Wa5929 and 26Wa5949 which are addressed below.

The following regionally-significant properties or portions of properties will be avoided by all project activities:

26Wa5923;      26Wa5929;      26Wa5949.

Depending on the nature of the proposed development in the vicinity of these properties, an avoidance plan could be successfully implemented for this proposed subdivision.

If you have any questions concerning this correspondence, please feel free to call me at (702) 687-5138

Sincerely,  
  
Rebecca Lynn Palmer  
Archaeologist

RE: Historic Preservation Treatment Plan for ArrowCreek Golf Course (Phase 2), formerly known as Southwest Pointe

Dear Rebecca:

Enclosed is the subject treatment plan from Kautz Environmental Consultants, Inc. A separate copy has also been forwarded to William Dancingfeather at the Washoe Tribe. In accordance with the Truckee Meadows Regional Plan, the proposed mitigation measures must be approved for the project to avoid review as a Project of Regional Significance.

The treatment plan is relevant to the following case description:

**Applicant/Property Owner:** Southwest Pointe Partners/Redfield Land Company

**Request:** Approve a development agreement that facilitates the development of a residential community including 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities, a day care facility, an equestrian center, and a commercial village center. The amendment allows the applicant to modify portions of the agreement pertaining to streets, access, drainage, parks and other portions. The total acreage of the project is +3,171.6 acres and it is located north of Mount Rose Highway (SR 431) and west of Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) in the Southwest Truckee Meadows Area Plan and is situated within portions of Sections 3, 10, 13, 14, 15, 22, 23, 24, 26 and 27, T18N, R19E, MDM, Washoe County, Nevada. (APN: 49-010-04, 49-010-10 and 49-030-12)

Please let us know whether the mitigation measures proposed by this plan appear to be reasonable. If you have any question, please contact Don Young at the letterhead address or by telephone at 328-3620.

Sincerely,

D. Sumner Young, AICP

Don,

We had a preliminary meeting with SW Pointe and CFA yesterday to discuss engineering issues on the portion of Whites Creek Lane east of Thomas Creek Road. Wetlands delineation, an archaeological study and what type of permit would be required to construct the roadway were discussed. We decided that a wetlands delineation would be required, but weren't sure on the other two. Will the roadway require a special use permit, or something else that would require County wide review and generate conditions? If so, I'm guessing that your standard archaeological condition would apply. Does the fact that the road will be built through an assessment district waive any of the standard County permit requirements? Let me know if/when you have a few minutes to discuss. Thanks.

Status: Called

Message: Spoke with Nancy at 1120. Joe Livak, NDEP, has been out to SWP because of complaints about const vehicles using an unapproved creek crossing. Joe did not find enough problem to shut them down but did note that they needed some large cobble and filter fabric to solve the problem. She was going to try to contact Ty Arndt with the landscaping firm.

Called at 1235 and has spoken with CFA. Landscape Unlimited (C-702.750.5010) of Nebraska will not use the undeveloped crossing which was existing maint. road. They will put up const fencing to limit access to that crossing. They will also try to find a way to use the RR car as a temp bridge for access.

Reno, Nevada 89502

Dear Mr. Sprague:

This concerns the proposed Southwest Pointe aka Arrow Creek project along Thomas and Dry Creeks. This residential and golf course development proposal is located in southwest Reno within Section 10, 14, 15, 22, 23, 24, 26, and 27, Township 18 North Range 19 East M.D.M.&.M., Washoe County, Nevada.

We have reviewed the construction drawings and site plans specific to proposed creek and drainage crossings dated November 1996 and your project narrative dated December 11, 1996. The submittals described four major roadway crossings across Thomas and Dry Creeks. The bridges are designed to clear-span waters of the United States, including wetlands. Utilities would be incorporated within the bridge structure. We understand that other minor crossings and 8 golf cart crossings across these creeks other smaller unnamed drainage will also clear span waters of the United States. During construction, barrier fences around sensitive areas will be utilized to limit construction access and in many cases the fences will be constructed to serve as silt barriers.

Based on the information you provided, we have determined that the proposed work will not involve the discharge of dredged or fill material into waters of the United States. Therefore, a Department of the Army Permit is not required for this work. However, should there be any future changes to the project design or future development proposals that may affect waters of the United States, you (or the appropriate agent for Southwest Pointe aka Arrow Creek development) will need to notify this office. We can then advise you of any necessary permitting requirements.

We appreciate your coordination with this office regarding the project. We have issued identification number 199400905 to this action. Please refer to this number in any future correspondence concerning this project.

If you have any questions, please write to our Nevada Field Office, **C. Clifton Young Federal Building, 300 Booth Street, Room 2002, Reno, Nevada, 89509**, or telephone (702) 784-5304.

Sincerely,

Nancy Kang

RE: Wellhead Protection of the County Well #2 at Arrowcreek  
(formerly known as Southwest Pointe)

Dear Brita:

It came to my attention that the location of the County's well is being considered for the golf course maintenance yard. In the interest of protecting this well from potential contamination, maintenance facilities near the well site are not acceptable. The maintenance yard may include pesticide and fertilizer storage, pesticide mixing, maintenance facilities and potentially fuel storage for mowers and the like.

A wellhead protection area (WHPA) is being delineated for this well. Based upon the results of the WHPA, acceptable sites can be considered.

If you have any questions, please do not hesitate to contact me.

Sincerely,

E. Terri Svetich

Don - I talked with Sader and he says that everything seems to have been worked out. He asked that I let you know that it is okay to sign, e.g., Harper, as long as he agrees with what he is signing. At this stage, it is difficult to see where the developer may be in default, but that is for Harper to decide. This does not have to go to the board...there is a provision in the agreement regarding successors and notice...I think this falls in an administrative realm. If you have questions, please call.

Dear Ms. Shrake:

I am in receipt of your July 26, 1996 fax, requesting a copy of the of the final conditions of approval for Southwest Pointe. These conditions have been faxed to you this date.

For your information, I have been advised by Washoe County staff that all Fieldcreek property owners along Whites Creek Lane will have their mitigation needs considered.

If I can be of further assistance, please let me know.

Sincerely,

I would suggest the following clarification the Bob's language. On the second line following the words County Utility Division, place a period and insert the following words, "The County will" and delete the word "be". The paragraph would read "The parties agree that OWNERS shall dedicat Thomas Creek water rights and supplemental groundwater rights acceptable to the County Utility Divison. The County will provide a water supply to be used in the nonpotable ....."

If you have any questions please call.

John C.

## MEMORANDUM

**To:** Washoe County Board of County Commissioners

**From:** Michael A. Harper, AICP, Director

**Re:** Final Development Agreement for Southwest Pointe (Development Agreement Case No. DA9-1-93)

**Date:** July 2, 1996

**Initialed By:**

### GENERAL INFORMATION SUMMARY

**Applicant/Property Owner:** Southwest Pointe/Redfield Trust

**Requested Action:** An Ordinance pursuant to Nevada Revised Statutes 278.0205 approving the Final Development Agreement for Southwest Pointe. The agreement facilitates the development of a residential community which includes 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities, a day care facility, an equestrian center, and a commercial village center. The project has a total acreage of  $\pm 3,171.6$  acres and is located north of Mount Rose Highway (SR 431) and west of Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) in the Southwest Truckee Meadows Area Plan and is situated within portions of Sections 3, 10, 13, 14, 15, 22, 23, 24, 26 and 27, T18N, R19E, MDM, Washoe County, Nevada. (APN: 49-010-04, 49-010-10 and 49-030-12)

### RECOMMENDATION/FINDINGS

It is recommended that the Board of County Commissioners introduce the attached ordinance and bill to approve and adopt the Final Development Agreement for Southwest Pointe, Development Agreement Case No. DA9-1-93, and conduct the appropriate hearings to determine if it is an acceptable document with which to bind the future development of the described property for a period of time not to exceed fifteen years.

Pursuant to Washoe County Code 110.814, Development Agreements, the Director of Department of Development Review finds that the attached Final Development Agreement for Southwest

Pointe, including its attached exhibits and references, is in substantial compliance with the preliminary Development Agreement, as amended and approved by the Washoe County Planning Commission and the Board of County Commissioners. The recommendation for approval is based upon those findings and upon comments received, staff analysis, and site inspection.

### **COUNTY COMMISSION OPTIONS**

The Washoe County Board of County Commissioners has the following options and resultant consequences available on Final Development Agreement for Southwest Pointe, Development Agreement Case No. DA9-1-93:

- Approve the request as recommended by the Director of the Department of Development Review. The applicant will be able to develop the property in accordance with the terms of the approved Development Agreement.
- Defer the request to enable the applicant to reconcile any differences found by the board between the presented Final Development Agreement with the approved preliminary Development Agreement.
- Deny the request. The applicant will have to develop the property in accordance with the Comprehensive Plan in effect at the time and subject to the requirements of the Development Code..

### **BACKGROUND AND ANALYSIS**

The Final Development Agreement for Southwest Pointe would allow, over the next fifteen years, development of a 1,090-lot residential community with golf courses, and recreational and commercial facilities on  $\pm 3,171.6$  acres in the Southwest Truckee Meadows. The preliminary Development Agreement for Southwest Pointe was initially approved by the Washoe County Board of County Commissioners on February 8, 1994. It was amended by the Board of County Commissioners on November 8, 1994 and again on June 11, 1996.

Final Development Agreements are presented directly to the Board of County Commissioners by the Director of the Department of Development Review upon being found in compliance with the approved preliminary Development Agreement. Pursuant to WCC 110.814.80(c), the Director determines substantial compliance by applying the following criteria:

- (1) The proposed gross residential density or intensity of use is not changed;
- (2) The proposed ratio of residential to nonresidential use is not changed;
- (3) The area set aside for common open space is not reduced or the area is not substantially relocated;
- (4) The floor area proposed for nonresidential use is not increased;
- (5) The total ground area covered by buildings and the height of buildings is

not increased; and

- (6) The plan provisions are consistent with the adopted preliminary development agreement.

*The Director has been able to determine that the submitted Final Development Agreement for Southwest Pointe, including its attached exhibits and references, is in substantial compliance with the site plan in the approved preliminary Development Agreement and, therefore, recommends its approval.*

**APPLICABLE REGULATIONS**

Nevada Revised Statutes Chapter 278.0201, 278.0203, 278.0205, 278.0207; Washoe County Code Chapter 110, Article 814.

Looks okay to me. An ordinance doesn't have to have more than one section  
- even if it looks funny.

Don - I am okay with the proposed new 5.2 language. What I told Bob Sader was that this provision, in my opinion, could not be utilized to deviate from code requirements beyond that authorized in code, e.g., for example, if administrator specifically authorized by code to vary footprint by 10%, the provision couldn't be used to allow a 15% variation. He agreed and said that the intent is to deal with basically substantial conformance issues where there are no specific code requirements. So.. we're okay.

**Subject: Action of the Design Review Committee on Final Development Agreement  
Case No. DA9-1-93 (Southwest Pointe Subdivision).**

Dear Britta:

The Design Review Committee evaluated the Draft Development Standards Handbook for the development for Southwest Pointe Subdivision at their May 9, 1996 meeting. The Committee took the following action regarding your project:

**CONDITIONALLY APPROVED** the Design Standards Handbook with modifications:

**The following shall be incorporated into the Development Standards Handbook and submitted to the Development Review staff for approval:**

1. External public/private interfacing or edge conditions to be amended:
  - a. Trail system
    - 1) Define the way the public and private trails interface, their location and how they will be posted. Define the relationship between the public trail system and the golf course and minor arterial and collector roads. Reference should be made to the Open Space Management Plan as it relates to the public trail issues.
    - 2.) Define the trail system along collector streets. Show which trails will meander and how they will relate to the street right-of-way and fencing.

b. Fencing

1) Define the type of fencing permitted adjacent to or abutting the exterior trails. Define all perimeter fencing or fencing that will be visible from the exterior part of the property.

c. Grading and drainage

1) Provide specific details for the treatments of areas which will be visible from the exterior of the project including drainage's and culverts. The cut and fill areas should blend with natural contouring. Identify which areas are to be revegetated and provide planting time frames.

2. Accessory buildings shall be defined further.

**The following information shall be shown on the Tentative Map and reviewed by the Design Review Committee:**

1. Specific fencing details with types, materials and locations. Include fencing details for the rear lot lines.
2. Planting plan with types, materials, density, and location of plants including common areas and street scapes.
3. Grading plan and specific standards for how revegetation will be handled; i.e., time frames for the establishment of plants, how the slopes will be treated, etc.
4. Establish building envelopes, especially the peripheral lots abutting the U.S. Forest Service land. Emphasis should be given to retaining as much area as possible in a natural state, creating a natural transition at the fence line.

If you have any questions or require any assistance, please contact your staff planner, Don Young at 328-3620.

Sincerely,

Cheryl D. Ryan, Planner  
Design Review Committee Facilitator

Don

All the items Engineering commented on have been adequately addressed with the exception of:

Grading pg 3-2. This works fine from an engineering standpoint, but you may want additional requirements to address the aesthetics of a 30 foot high slope that is seeded and has no benches.

Railroad Flatcar Bridges pg 7-1. Engineering has specifically NOT APPROVED the use of railroad flatcar bridges (see D. Price's 6/12/96 letter to Bryan Sprague). CFA is working on providing additional information for us to review, but I'm not sure they can convince us to accept them. I suggest a revision that references a bridge acceptable to the County and not a railroad flatcar.

I'll leave the Handbook on your chair.

RE: Southwest Pointe Concept-Level Storm Drain Master Plan (DA9-1-93)

Dear Brita:

The Southwest Pointe Concept-Level Storm Drain Master Plan prepared by your office, dated June 1996, is approved. This is a conceptual approval and should not be construed as final approval of the drainage facilities shown on the Master Plan. Final approval will occur during the final map review and will be based upon a final hydrology/hydraulic report.

RE: Southwest Pointe Construction Traffic Haul Route Plan (DA9-1-93)

Dear Bryan:

The Southwest Pointe Construction Traffic Haul Route Plan proposed in your May 9, 1996, letter is acceptable with the addition of an overlay on a portion of Thomas Creek Road. The overlay is required to mitigate the increased wear on Thomas Creek Road due to the proposed construction traffic. The overlay shall be placed on the portion of Thomas Creek Road between Saddlehorn Drive and the northern boundary of the Saddlehorn Subdivision, prior to use as a haul route. Placement of the overlay shall conform to the following:

1. Remove all existing alligatored areas including any base areas which are found to have an over optimum moisture content.
2. Prevent median irrigation water from saturating the base materials.
3. Patch the removed areas.
4. Place a one inch thick overlay on the entire section of Thomas Creek Road between Saddlehorn Drive and the northern boundary of the Saddlehorn Subdivision.
5. Washoe County Road Division will perform Items 1 through 3 and any other pavement preparations needed prior to placing the overlay.
6. Southwest Pointe will be responsible for Item 4, the one inch overlay.

RE: Historic Preservation Treatment Plan for Phase I, Southwest Pointe Project,  
Dingman Investments, Carson Range at Mount Rose Fan, Washoe County.

Dear Mr. Young:

The Nevada State Historic Preservation Office (SHPO) reviewed the Treatment Plan for the following regionally-significant sites:

26Wa99;                    26Wa2016;                    26Wa3124;                    26Wa3125;  
26Wa5825;                    26Wa5826;                    26Wa5915.

With the exception of the petroglyphs contained in sites 26Wa3124 and 26Wa3125, this plan will recover the values of regional significance identified within the sites and should be adequate treatment.

The consultant developed an avoidance plan for the following sites, or portions of sites, within Phase I:

26Wa99;                    26Wa3124;                    26Wa3125;                    26Wa5822;  
26Wa5830.

When implemented, this avoidance plan should provide adequate protection for the above regionally-significant sites.

If you have any questions concerning this correspondence, please feel free to call me at (702) 687-5138.

Sincerely,

Rebecca Lynn Palmer  
Archaeologist

Don,  
Is the SW Pointe Development Agreement definitely being turned in Friday for BCC approval? I'm concerned that I haven't reviewed the revisions I requested. In fact, the only item that has been resubmitted to me at this point is the site plan. Brita was not intending on having me check the Hydro Report revisions, but I think I've convinced her that I should. Anyway, I will try to get whatever they submit reviewed, but I may not get it done by Friday since it will be submitted so late, and I'm already booked up with comments for agency review. CFA is pushing quite hard, and I'm beginning to feel like Engineering isn't getting adequate review time. Can revisions be made after the documents are submitted to the BCC but before the final approval?

Subject: Redfield Properties in the Southwest Truckee Meadows

Dear Brita:

This letter is in response to your January 17, 1992 letter requesting the Washoe County Department of Comprehensive Planning confirm the density that is allowed on the Redfield properties based on the land use plan map in the Southwest Truckee Meadows Area Plan. Your letter included incorrect acreage estimates since you included lands with slopes between 15.1 and 20 percent at densities greater than 1 du per 40 acres. Based on your second letter, dated February 3, 1992, which had acreage estimates reflecting the County policy of 1 du per 40 acres on slopes of 15 percent or greater, the number of acres within each land use category on the Redfield properties was estimated. The calculations can be found in the following table. These figures represent the density allowed on the Redfield properties.

Land Use Designation	Acres	Density	Units
Assessor's parcels 49-010-04, 49-010-10, 41-030-12 (3,272 acres).			
Location: West of Zolezzi Lane, on the Thomas and White's Creeks fan.			
Low Density Suburban	307	1 du/ac	307
High Density Rural	1,800	1 du/2.5 ac	720
Medium Density Rural	70	1 du/5 ac	14
Low Density Rural	228	1 du/10 ac	28
General Rural	<u>867</u>	1 du/40 ac	<u>21</u>
Subtotal	3,272		1,090

Letter to: Ms. Brita Tryon, Senior Planner  
Subject: Redfield Properties in the Southwest Truckee Meadows  
February 19, 1992  
Page 3

These calculations were prepared by Skip Canfield so please feel free to contact him if you have any questions. In addition to calculating the density on the Redfield properties, you also asked for clarification of Washoe County's position on two items.

1. The Redfield Land Company may desire to convert commercially designated property to residential. Is this possible and would a conversion rate comparable to the density represented by the Medium Density Urban designation (14-21 du/ac) be allowed?

In response to this question, Washoe County does not have a policy regarding the conversion of commercial to residential. An area plan amendment would be required and this would entail either a policy amendment or map amendment, or both.

2. What is the procedure and policy for transferring development rights between non-contiguous parcels owned by the same property owner and within the same planning area?

Washoe County does not have a procedure or policy for non-contiguous, single owner TDR. A policy amendment or a map amendment to the area plan would be required.

If you have any further questions, please feel free to contact Skip Canfield at 328-3626 or me.

Sincerely,

John B. Hester, AICP

RECEIVED  
DEC 10 1998  
OFFICE OF  
WASHOE COUNTY ENGINEER

**Subject: ArrowCreek (Case No. DA9-1-93)**

Dear Don and Kris:

This letter summarizes the modifications we would like to make to Condition #22. The revised street sections, which are attached, will be used in Units 6 and 8 in Phase I, Phase II, and all subsequent phases. The production builders in Phase I (i.e., Ryder Homes, Silver Star, and New Cities) are using different street sections, which the Washoe County Engineering Division determined to be in compliance with the tentative map conditions. These three builders will continue to use these street sections in their future phases located in Phase I.

22. The following roadway sections shall be applicable to the public and private on site streets shown on the tentative map. A traffic report shall be submitted with each tentative map and shall identify the ultimate average daily traffic on each street and shall make recommendations for geometric design (e.g., left turn storage capacity, site distance minimum required turning radius, etc.). The County Engineer shall be responsible for determining compliance with this condition.

a. Private Common Driveway - No change.

b. Rural Private -

**Option 1:** 24-foot ROW (maximum 200 ADT): minimum 22 foot pavement width; curb and gutter; no parking either side. When a rural private street provides a connection between neighborhoods, a minimum 4-foot asphalt or decomposed granite path on one side of the street will be provided unless alternate provisions or locations for pedestrian paths can be provided and shown in the

Principal

Pedestrian Circulation Plan. When a connection between neighborhoods is not provided, no paths will be constructed. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)

**Option 2:** 27 foot ROW (maximum 200 ADT): minimum 22 foot pavement width; County Engineer-approved concrete header with roadside ditch both sides; no parking either side. When a rural private street provides a connection between neighborhoods, a minimum 4-foot asphalt or decomposed granite path on one side of the street will be provided unless alternate provisions or locations for pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. When a connection between neighborhoods is not provided, no paths will be constructed. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)

c. Local Private -

**Option 1:** 24-foot minimum ROW (200 - 500 ADT): minimum 22 foot pavement width; curb and gutter; no parking either side. A minimum 4-foot asphalt or decomposed granite path on one side of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)

**Option 2:** 27-foot minimum ROW (200 - 500 ADT): minimum 22 foot pavement width; County Engineer-approved concrete header with roadside ditch both sides; no parking either side. A minimum 4-foot asphalt or decomposed granite path on one side of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)

d. Collector Private -

**Option 1:** 26-foot minimum ROW (500 to 2000 ADT): minimum 24-foot pavement width; curb and gutter; no parking either side. A minimum 5-foot asphalt or decomposed granite path on one side of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to Street Sections.)

Option 2: 29 foot minimum ROW (500 to 2000 ADT): minimum 24-foot pavement width; County Engineer approved concrete header with roadside ditch both sides; no parking either side. A minimum 5-foot asphalt or decomposed granite path on one side of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to Street Sections.)

- e. Collector Private - No change.
- f. Collector Private - No change.
- g. Minor Arterial, Private - No change.
- h. Minor Arterial, Public - No change.

Additionally, we would like to make one change to Exhibit E in the Development Standards Handbook. On page 2-15, under the heading *Street and Median Guidelines*, the sixth sentence reads as follows: "The developer is also responsible for installation and maintenance of all median landscaping and all landscaping along the edge of the minor arterial and collector streets." The proposed change would be modified to read: "The developer is responsible for installation and the Homeowners' Association is responsible for maintenance of all common area median landscaping and all common area landscaping along ArrowCreek Parkway." (The CC&Rs address maintenance and correspondence from Bob Sader is attached. Bob's letter addresses maintenance of all landscaping along ArrowCreek Parkway and maintenance of the ditches along rural, local, and collector streets.)

As you know, it was anticipated that the Development Agreement would periodically need to be amended and updated, and we provided examples of modifications that would be considered to be in substantial compliance with the overall character and design of the project. Such modifications can be approved by staff. Modifications to the street standards were among the changes that were considered to be in substantial compliance with the overall character of the project.

If you are in agreement with the preceding statements, please acknowledge by signing in the space provided. If you have any questions or need additional information, please contact me.

**Re: ArrowCreek (Case No. DA9-1-93) Proposed Revision to Conditions**

**Dear Kris:**

Brita Tryggvi of CFA, Inc. recently provided me your notes to Brita's letter of November 3, 1998 for a response relating to the questions you have raised concerning homeowners association maintenance of drainage facilities and landscaping.

Specifically, you requested verification of the responsibility of the ArrowCreek Homeowners Association for maintenance of some ditches which would no longer be in the right-of-way but instead be within lots, and landscaping along the edge of minor arterial and collector streets, as well as landscaping along ArrowCreek Parkway.

The ArrowCreek Declaration of Covenants, Conditions and Restrictions (CC&Rs) recorded as Document No. 2145699 authorized the association to maintain drainage ditches on lots, as well as landscaping areas along subdivision streets and ArrowCreek Parkway. Subsection I.2.g. defines common areas, among other things, as easements for drainage ways and facilities, and landscaping. Subsection II.1.a. authorizes the association to own easements for common area within the subdivision. Subsection II.1.d. authorizes the association to own or maintain off-site common area landscaping along Whites Creek Lane (the former name for what is now ArrowCreek Parkway).

The common practice is for the developer to create landscaping or drainage easements on final maps or by separately recorded easements for areas within the subdivision. Landscaping along the edge of right-of-ways will not require separate easements, since all streets within the subdivision are private and will be owned by the homeowners association after improvements are constructed. This will include streetscapes along those right-of-ways. Similarly, landscaping and medians will be part of the right-of-ways owned and maintained by the association. Since ArrowCreek Parkway (fka Whites Creek Lane) will be owned by the county outside the boundaries of the project, the usual county form of landscape maintenance agreement between the county and the association will need to be executed in order to authorize the association to maintain landscaping along this public right-of-way.

Kristine Klien  
December 9, 1998  
Page 2

Enclosed please find copies of the pages of the CC&Rs on which the subsections cited above are located. If you have any questions, please do not hesitate to contact me. I trust that this explanation of the CC&Rs resolves the questions raised on authorizing and requiring the ArrowCreek Homeowners Association to maintain drainage facilities on lots and landscaping areas along streets.

Sincerely,

ROBERT M. SADER, ESQ.

**ARROWCREEK**

**DECLARATION OF COVENANTS, CONDITIONS  
AND RESTRICTIONS**

BK5016PC 993

f.

"Committee" means the ArrowCreek Design Review Committee.

I.2.8

"Common Area" or "common elements" means all of the real property designated as such in this Declaration or pursuant to final maps recorded within the Subdivision; and all real property interests (e.g., fee title or easements) acquired by the Association, whether from Declarant or otherwise, together in each instance with all improvements which may at any time be located or constructed thereon and owned by the Association, including, but not limited to the following types of improvements in the Common Area: swim and tennis facility, fencing, recreational and community facilities, recreational vehicle parking area, lakes, parks, paths, sidewalks, trails, open space, fences, gates, gatehouses, signs, entry ways, drainage ways and drainage facilities, private streets and curbs, private security, lighting, snow removal and storage areas, landscaping, fire and fuelbreaks, golf cart crossings, residential parking areas and surface water retention areas.

As also specified in Article XII, Section 10, an area of the Subdivision of approximately 1,500 acres (or as otherwise approved by Washoe County) is required to be dedicated to an entity approved by the County as public open space. Upon said dedication, which will probably be conveyed incrementally as residential development occurs, areas so dedicated shall not be (or shall cease to be) Common Area and this Declaration shall be terminated as to such areas. Said dedication may be subject to conservation easements or covenants against uses which are not compatible with open space imposed by Declarant.

- h. "Declarant", when used herein, means collectively the Southwest Pointe and the Redfield Trust, unless an individual Declarant is specified. All rights and obligations of Declarant hereunder or pursuant to law are hereby assigned and assumed (except the right to withdraw real estate) by Southwest Pointe, including all voting power in the Association, all financial obligations and all requirements of consent and approval.
- i. "Declaration" means this Declaration and any future amendments hereto.
- j. "Equivalent Lots" shall define the allocated interests in the Association (voting power, assessment obligations and other rights and responsibilities) of the Nonresidential Areas Owners, as specified in subsection (ee) of this Section and Article VII, Section 2.

Equivalent Lots are created on the date the Assessment Threshold for each Nonresidential Area is reached (as specified in subsection (ee) of this Section), and prior to that date Nonresidential Areas Owners have no membership in the Association, nor any allocated interests.

BK501 105X 106901

- c. For Lots delineated on a final map, if two or more adjacent Lots are purchased by a person or developed by Declarant with the intent of constructing only one single family dwelling on the Lots, then upon notice of said intent to Association, said Lots shall be considered as one Lot for the purpose of allocated interests in voting and assessments under subsection (dd) of Section 2 of this Article.

**Section 4. Lot Subdivision.** A Lot not delineated on a final map may be subdivided into two or more Lots by Declarant at the time it is delineated on a final map, so long as each Lot in the Subdivision contains the minimum square footage required by tentative map and the total Lots in the Subdivision do not exceed 1090 (or additional Lots as allowed herein), without following the procedure prescribed in NRS 116.2113 and without any approval by the Association.

**Section 5. Modification.** The provisions of this Article I may not be modified, amended, terminated or abridged without the consent of Declarant.

**ARTICLE II  
ARROWCREEK HOMEOWNERS ASSOCIATION**

**Section 1. Purpose.** The purpose of the Association shall be to:

- a. Own and maintain all easements and deeded real property for Common Area within the Subdivision; including without limitation the funding, operation and maintenance of the following common elements: recreational and community facilities; lakes; parks; paths; sidewalks; trails; open space; fences; landscaping; gates; gatehouses; signs; entry ways; drainage ways and drainage facilities; private streets and curbs; private security, recreational vehicle storage, snow removal and storage areas, landscaping, fire and fuelbreaks, golf cart crossings, residential parking areas, lighting, and surface water detention areas.
- b. Provide for removal of ice and snow from roads and parking areas owned by the Association at any time when such a condition may restrain access within the Subdivision. The Association shall either contract for snow and ice removal or acquire equipment and hire personnel to effect the provisions of this subsection. In the event that snow removal operations require exporting of snow or ice from roads or parking areas, said material may be exported outside the perimeter of the Subdivision to a suitable location, said material may be deposited within the perimeter of the Subdivision on an appropriate easement, open area or Common Area in such a manner as to not unreasonably restrict access or create a unreasonable hazard to any road, parking area or common walkway.
- c. Maintain controlled access at the entrance gate. Security personnel may be employed as deemed necessary by the Board.

BK50 PG0907

II. 1. d.

Enforce and administer any provisions of this Declaration pertaining to Association's rights, obligations, powers and duties as required by Washoe County; including, at a minimum but without limitation, the funding of the maintenance, replacement and perpetuation of the following Subdivision amenities, if and when constructed:

- (1) Private roads within the Subdivision.
- (2) Swim and Tennis Club.
- (3) Staffing of maintenance and security forces, if any.
- (4) Common Area landscaping and lighting.
- (5) Entrance gates.
- (6) Snow removal and storage areas.
- (7) Common Area landscaping including along private streets, or landscaping along Whites Creek Lane.
- (8) Fire and fuelbreaks.
- (9) Detention basins and the accumulated sediment.
- (10) Equestrian/pedestrian trails.
- (11) Bicycle and pedestrian paths.
- (12) Golf cart crossings.
- (13) Off-site residential parking areas.

The Association shall have no other purpose than those specified herein, and shall expressly be prohibited from representing the Owners and residents of Lots within the Subdivision on issues of land use, planning, municipal annexation, master plan amendments, growth, area development or similar matters.

The Association shall purchase any and all equipment, materials and supplies necessary to undertake its duties imposed by this Declaration, its Articles and By-Laws. The Association may purchase any equipment, materials and supplies from the Declarant provided the purchase price shall be the fair market value thereof.

The Association may, but shall not be obligated, to maintain or support certain activities within the Subdivision designed to make the Subdivision safer than it otherwise might be. Neither the Association nor the Declarant shall in any way be considered insurers or guarantors of security within the Subdivision, nor shall any of them be held liable for any loss or damage by reason of failure to provide adequate security or of ineffectiveness of security measures undertaken. No representation or warranty is made that any fire protection system, burglar alarm system, security personnel or other security system cannot be compromised or circumvented, nor that any such systems or security measures undertaken will in all cases prevent loss or provide the detection or protection for which the system is designed or intended. Each Owner acknowledges, understands and covenants to inform its tenants that the Association and the Declarant, are not insurers or liable to persons living in or visiting the Subdivision for conduct resulting from acts of third parties.

**Section 2. Formation and Management Under Article 3 of NRS Chapter 116**

The Association shall be a nonprofit Nevada corporation formed under Chapter 82 of the Nevada Revised Statutes. The Association is not authorized to have and shall not issue any capital

Fieldcreek Homeowners Association  
c/o Premier Properties  
255 W. Moana Lane, Suite 108  
Reno, Nevada 89509

*Don - FYI*

**RE: ARROWCREEK PARKWAY SAD #23**

Dear Mr. Gajewski:

We have been informed by the Washoe County Public Works Department and the Regional Transportation Commission that the Fieldcreek homeowners with property abutting Arrowcreek Parkway do not like the color scheme chosen for the soundwall (ie., "San Diego Buff"). The color scheme was presented to the Washoe County Design Review Committee and approved per the committee letter dated July 16, 1997. It has further been brought to our attention that several homeowners do not wish to have the side of the fence facing their property painted. This is in conflict with the plans approved by Washoe County.

At the request of Washoe County and the Regional Transportation Commission, we are hereby asking the Homeowners Association to attempt to reach a consensus with the homeowners who own property abutting the soundwall. Either the entire wall on the homeowners side should be painted "San Diego Buff" or it should remain unpainted. If some homeowners want the wall to remain unpainted and others want the wall to be painted, the result would be a checker board appearance. This appearance would be visible to all the homeowners abutting the soundwall as there are no solid screening fences between the lots.

As time is of the essence and the contractor wishes to complete this project as soon as possible, your prompt attention to this matter is greatly appreciated. Please notify me in writing by November 30<sup>th</sup> of the consensus that has been reached.

RECEIVED  
NOV 04 1998  
WASHOE COUNTY  
COMMUNITY DEVELOPMENT

**Subject: ArrowCreek (Case No. DA9-1-93)**

Dear Don and Kris:

This letter summarizes the modifications we would like to make to Condition #22. The revised street sections, which are attached, will be used in Units 6 and 8 in Phase I, Phase II, and all subsequent phases. The production builders in Phase I (i.e., Ryder Homes, Silver Star, and New Cities) are using different street sections, which were approved by the Washoe County Engineering Division. These three builders will continue to use these street sections in their future phases located in Phase I.

22. The following roadway sections shall be applicable to the public and private on site streets shown on the tentative map. A traffic report shall be submitted with each tentative map and shall identify the ultimate average daily traffic on each street and shall make recommendations for geometric design (e.g., left turn storage capacity, site distance minimum required turning radius, etc.). The County Engineer shall be responsible for determining compliance with this condition.

- a. Private Common Driveway - No change.
- b. Rural Private - ~~48 or 44~~ ~~24 or 27~~ foot ROW (maximum 200 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. When a rural private street provides a connection between neighborhoods, a minimum 4-foot asphalt or decomposed granite path on one side of the street will be provided unless alternate provisions or locations for pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. ~~The right-of-way for this street section is 48 feet.~~ When a connection between neighborhoods is not provided, no paths will be constructed. ~~The right-of-way for this section is~~

Michael J. Miller, P.L.S.  
Principal

~~44 feet~~. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)

- c. Local Private - 48 ~~24 or 27~~ foot minimum ROW (200 - 500 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot asphalt or decomposed granite path on one side of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)
- d. Collector Private - 51 ~~25 or 29~~ foot minimum ROW (500 to 2000 ADT): minimum 24-foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 5-foot asphalt or decomposed granite path on one side of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to Street Sections.)
- e. Collector Private - No change.
- f. Collector Private - No change.
- g. Minor Arterial, Private - No change.
- h. Minor Arterial, Public - No change.

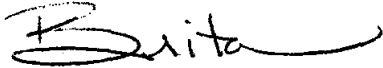

Additionally, we would like to make one change to Exhibit E in the Development Standards Handbook. On page 2-15, under the heading Street and Median Guidelines, the sixth sentence reads as follows: "The developer is also responsible for installation and maintenance of all median landscaping and all landscaping along the edge of the minor arterial and collector streets." The proposed change would be modified to read: "The developer is also responsible for installation and the Homeowners' Association is responsible for maintenance of all common area median landscaping and all common area landscaping along ArrowCreek Parkway."

As you know, it was anticipated that the Development Agreement would periodically need to be amended and updated, and we provided examples of modifications that would be considered to be in substantial compliance with the overall character and design of the project. Such modifications can be approved by staff. Modifications to the street

standards were among the changes that were considered to be in substantial compliance with the overall character of the project.

If you are in agreement with the preceding statements, please acknowledge by signing in the space provided. If you have any questions or need additional information, please contact me.

Sincerely,

Brita Tryggvi, AICP  
Principal

Message: [REDACTED] O/S dedication 1025 10/16

Spoke with KM and BT before calling Bob. We need to establish some type of phasing schedule for the O/S since we have or are recording more than a third of the lots but have only a much smaller proportion of O/S. BT will be checking with G Smith and A/C to see if they have any problems with that idea. Bob thinks that it could work as long as we avoid areas adjacent to potential subdivisions or the golf courses to give them the flexibility they need there. 1100 10/20 DY

RE: XXXXXXXXXXXXXXXXXXXX PARKWAY (SAD#23)

Dear Dave:

As you are aware, the Wolf Run Golf Course recently opened for use. With the construction of the Arrowcreek Parkway SAD #23, it has become apparent that the portion of the golf course that parallels the parkway has created a serious safety concern for vehicles utilizing the road. On several occasions, errant golf balls have come dangerously close to individuals involved with construction of the parkway. Just imagine the consequences of an errant golf ball striking the windshield of a westbound vehicle once the roadway is opened to the public.

Currently, this portion of Arrowcreek Parkway is tentatively scheduled to be opened to the public around November, 1998. The possibility of an errant golf ball striking a vehicle and/or pedestrian utilizing Arrowcreek Parkway will be an ever-present life safety issue unless it is addressed prior to the opening of the roadway.

Please don't hesitate to call me if you would like to discuss this matter further.

Sincerely,

Re: ArrowCreek Open Space Dedication

Dear Karen and Don:

Some time ago Brita Tryggvi and I met with you to discuss the procedures for incremental dedication of ±1,500 acres of open space to Washoe County as development progresses at ArrowCreek. We agreed that a deed and a restrictive covenant regarding land uses would best effectuate the development agreement required for phased dedications and future use restrictions.

We believe the first two parcels of open space adjacent to existing final mapped areas should now be dedicated. Enclosed please find drafts of a deed and restrictive covenant for this purpose, as well as a site map showing you the location of these parcels. Parcel 1 (13.01 acres) has been created by a final map. Parcel 2 will be created by a record of survey, which has been submitted to the County Engineer for approval.

Please review these documents and confirm they are in order. I will then supply originals to one of you (you choose) for agendizing acceptance by the BBC.

Sincerely,

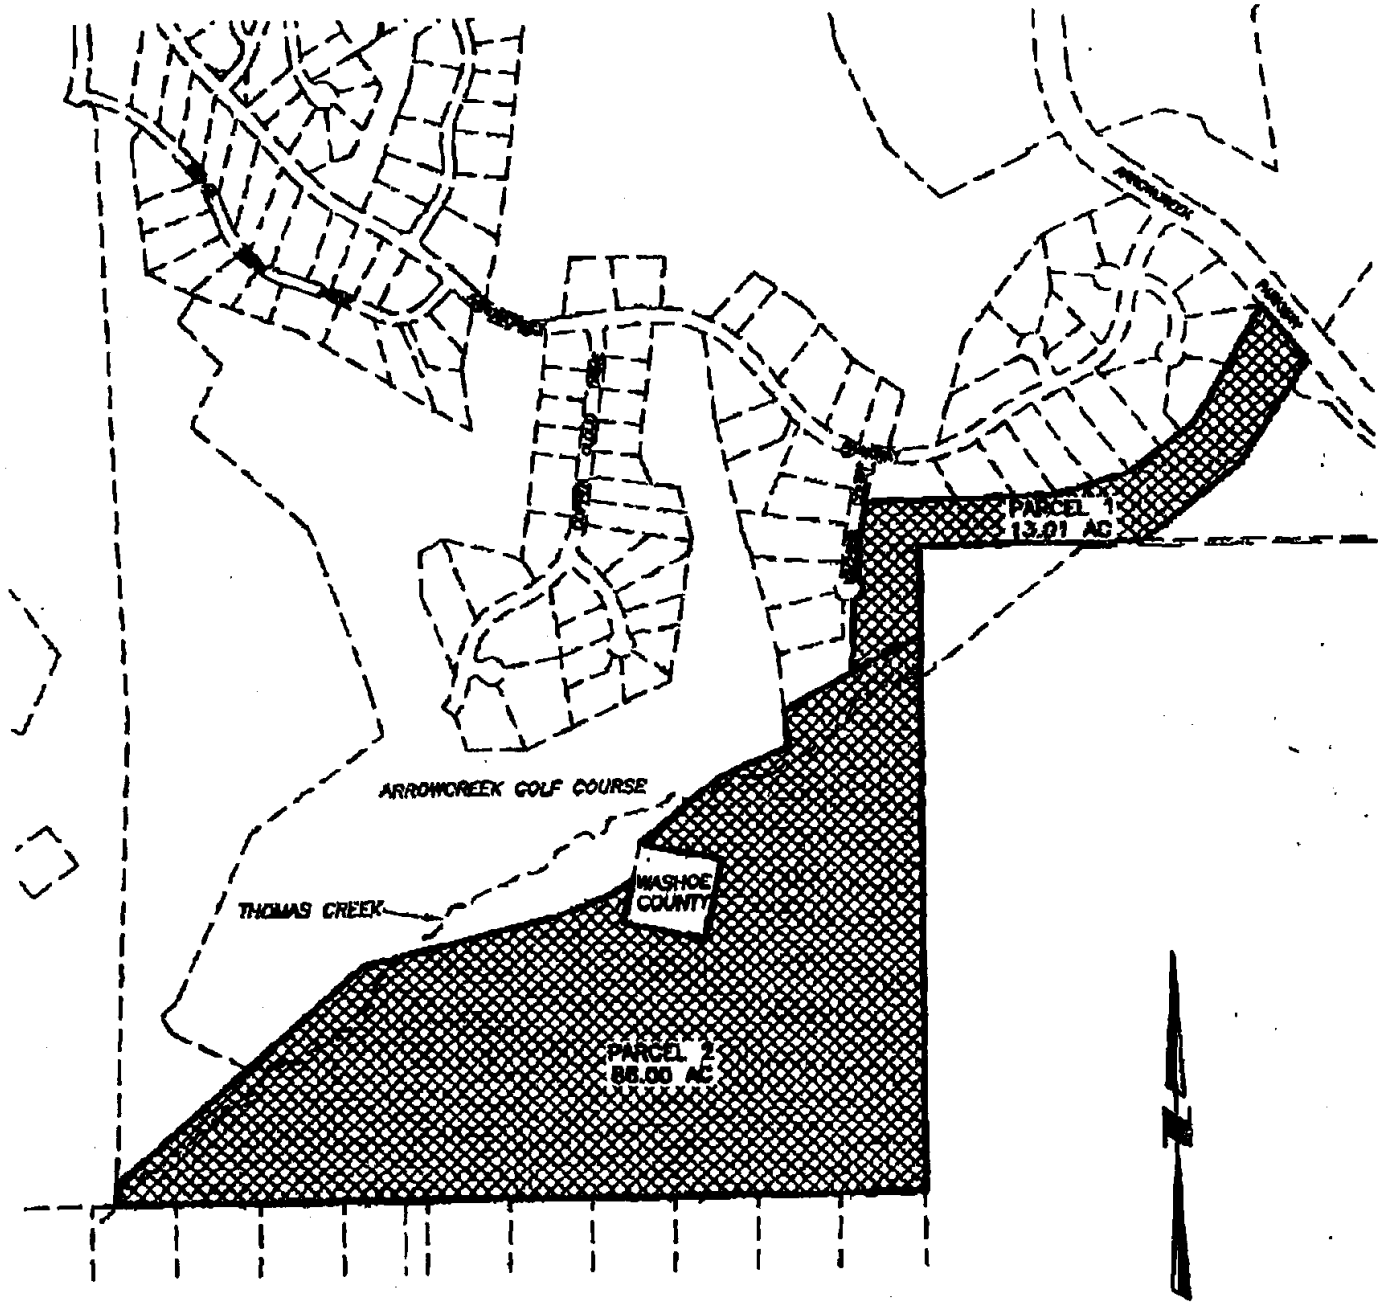

ROBERT M. SADER

## EXHIBIT "A"

## DESCRIPTION

Parcel 1:

A parcel of land situate within Sections 23, 24 and 26, T18N, R19E, MDM, Washoe County, Nevada; more particularly described as follows:

Parcel A of Arrowcreek Subdivision, Unit 1, as shown on the plat thereof, recorded October 17, 1997, as Tract Map 3461, Document No. 2145697, Official Records of Washoe County, Nevada.

Containing 13.01 acres, more or less.

Parcel 2:

A parcel of land situate within the north one-half of Section 26, T18N, R19E, MDM, Washoe County, Nevada, being a portion of Parcel 4 of Parcel Map 3301, as shown on the plat thereof, recorded February 27, 1998, as Document No. 2183717, Official Records of Washoe County, Nevada; more particularly described as follows:

Commencing at the northeast corner of said Section 26;  
 thence along the east line of said Section 26, S 00°41'04" W, 362.35 feet to the POINT OF BEGINNING;  
 thence along the boundary line of said Parcel 4 the following twelve (12) courses and distances:  
 S 61°56'16" W, 620.58 feet;  
 S 04°56'53" E, 145.42 feet;  
 S 66°19'53" W, 311.03 feet;  
 S 49°29'09" W, 415.08 feet;  
 S 77°46'57" E, 330.00 feet;  
 S 12°13'03" W, 330.00 feet;  
 N 77°46'57" W, 330.00 feet;  
 N 12°13'03" E, 172.70 feet;  
 S 56°29'11" W, 92.43 feet;  
 S 68°59'35" W, 258.26 feet;  
 S 75°39'35" W, 778.91 feet;  
 S 48°28'07" W, 621.79 feet;  
 thence continuing S 48°28'07" W, 695.68 feet to a point on the said boundary line of Parcel 4;  
 thence along said boundary line the following three (3) courses and distances:  
 S 02°15'30" W, 82.82 feet to a point on the east-west centerline of said Section 26;  
 along said east-west centerline N 89°58'50" E, 3203.90 feet to the east one-quarter corner of said Section 26;  
 along said east line of Section 26, N 00°41'04" E, 2276.96 feet to the point of beginning.

Containing 86.00 acres, more or less.

## 6 RESTRICTIVE COVENANT

7 THIS RESTRICTIVE COVENANT ("Covenant") is made as of this \_\_\_\_\_ day of  
 8 \_\_\_\_\_, 1998, by SOUTHWEST POINT ASSOCIATES, L.L.C., a Delaware  
 9 limited liability company ("SPA").

### 10 1. GENERAL.

11 1.1 SPA is the owner and developer of certain real property located in Washoe County,  
 12 Nevada known as a portion of ArrowCreek (ArrowCreek is described in Washoe County Case No.  
 13 DA9-1-93).

14 1.2 A portion of ArrowCreek owned by SPA is certain land more particularly described  
 15 in Exhibit "1", attached hereto and incorporated herein, (the "Restricted Parcel")

16 1.3 SPA intends hereby to restrict any owner's or occupant's right to use all or any portion  
 17 of the Restricted Parcel as specified herein.

18 1.4 The covenants and restrictions on the Restricted Parcel specified herein are for the  
 19 benefit of SPA personally and for the owners of property in ArrowCreek, as represented by the  
 20 ArrowCreek Homeowner's Association, a Nevada nonprofit corporation ("HOA"). The right to  
 21 enforce this Restrictive Covenant shall be granted only to SPA or HOA, or a successor by an express  
 22 assignment, recorded against Exhibit "1", of SPA's or HOA's rights hereunder.

23 1.5 SPA intends to convey all its right, title and interest in the Restricted Parcel to Washoe  
 24 County, a political subdivision of the State of Nevada, ("County"). County agrees, by accepting this  
 25 Covenant, to comply with all use restrictions specified herein, as well as other provisions hereof.

### 26 2. USE RESTRICTIONS.

27 2.1 Use of the Restricted Parcel shall be restricted, except as otherwise provided in this  
 28 Section 2, to only those uses allowed in the Open Space land use regulatory zone of the Washoe  
 County Development Code (Section 110.106.70), but excluding therefrom any active recreation  
 facilities (parks, playgrounds, sports fields and courts) except as allowed in Subsection 2.2 below.  
 Notwithstanding the foregoing, installation and maintenance of utility facilities and access roads  
 thereto (e.g., sewer, water, gas, telephone, electric, storm drainage, cable TV) and the creation and  
 maintenance of any firebreaks required by state or local agencies shall be allowed, as well as any  
 ancillary or associated uses to ArrowCreek allowed by County.

2.2 Limited use of the Restricted Parcel for either of two public trails is allowed, Thomas  
 Creek Trail or the McKay Flume Trail, as delineated on the Washoe County Regional Trail And Park  
 Plan, provided the use of each trail is limited to the following activities.

(a) Construction, repair and maintenance of a trail for recreational uses, including,  
 but not limited to, public hiking, bicycle riding, jogging, horseback riding and  
 other pedestrian and equestrian uses. Motorized vehicles of all kinds shall be

24  
25  
26  
27  
28

prohibited and blocked from using the trail, except for County-authorized vehicles used for construction, maintenance or repair of the easement area.

(b) Use of the trail by the general public for recreational purposes, subject to any regulations of public use imposed by County, however, common park facilities shall not be allowed, including, but not limited to, community or neighborhood parks, children's playgrounds, ballfields, tennis courts, basketball courts, group picnic access, swimming pools, and other active recreational uses other than fishing and use of the walking-jogging-equestrian path or trail.

(c) Installation, maintenance and repair of landscaping, turf or gardens, if any.

3. **RESTRICTIONS RUN WITH THE LAND.**

The use restrictions on the Restricted Parcel set forth in this Covenant shall be burdens on the Restricted Parcel and shall run with the land.

4. **SUCCESSORS AND ASSIGNS.**

This Covenant and the restrictions created hereby shall be binding upon any party owning any interest in all or any portion of the Restricted Parcel, its heirs, personal representatives, successors and assigns; provided, however, that if any such party transfers all or any portion of its interest in such Restricted Parcel, such party shall thereupon be released and discharged from any and all obligations as owner in connection with the interest transferred by it arising under this Covenant after the transfer.

5. **DURATION AND TERMINATION.**

Except as otherwise provided herein, the term of this Covenant shall be for ninety-nine (99) years from the date hereof, after which time this Covenant shall have no further force and effect.

6. **INJUNCTIVE OR ENFORCEMENT RELIEF.**

In the event of any violation or threatened violation by any person of any of the restrictions contained in this Covenant, those parties entitled to enforce this Covenant shall have the right to enjoin such violation or threatened violation or otherwise enforce the provisions hereof in a court of competent jurisdiction. The right of injunction shall be in addition to all other remedies set forth in this Covenant or provided by law.

7. **MODIFICATION AND TERMINATION.**

This Covenant may not be modified in any respect whatsoever or terminated, in whole or in part, except with the written consent of SPA or HOA, as specified in Subsection 1.4 above, which consent must be recorded in the office of the Recorder of Washoe County.

8. **WAIVER.**

The failure to insist upon strict performance of any of the restrictions or other terms and conditions contained herein shall not be deemed a waiver of any rights or remedies, and shall not be deemed a waiver of any subsequent breach or default in the performance of any of the restrictions, or other terms and conditions contained herein.

1 9. ATTORNEY'S FEES.

2 In the event a party entitled to enforce this Covenant initiates or defends any legal action or  
3 proceeding to enforce or interpret any of the terms of this Covenant, the prevailing party in any such  
4 action or proceeding shall be entitled to recover from the losing party in any such action or  
proceeding its reasonable costs and attorney's fees (including its reasonable costs and attorney's fees  
on any appeal).

5 10. SEVERABILITY.

6 If any term or provision of this Covenant or the application of it to any person or circumstance  
7 shall to any extent be invalid or unenforceable, the remainder of this Covenant or the application of  
8 such term or provision to persons or circumstances, other than those as to which it is invalid or  
unenforceable, shall not be affected thereby, and each term and provision of this Covenant shall be  
valid and shall be enforced to the extent permitted by law.

9 11. CAPTIONS AND HEADINGS.

10 The captions and headings in this Covenant are for reference only and shall not be deemed  
11 to define or limit the scope or intent of any of the terms, covenants, conditions or agreements  
contained herein.

12 12. CONSTRUCTION.

13 In construing the provisions of this Covenant and whenever the context so requires, the use  
14 of a gender shall include all other genders, the use of the singular shall include the plural, and the use  
of the plural shall include the singular.

15 13. RECORDATION.

16 This Covenant shall be recorded against the Restricted Parcel in the office of the Washoe  
17 County Recorder.

18 EXECUTED as of the day and year first above written.

## EXHIBIT "A"

## DESCRIPTION

Parcel 1:

A parcel of land situate within Sections 23, 24 and 26, T18N, R19E, MDM. Washoe County, Nevada; more particularly described as follows:

Parcel A of Arrowcreek Subdivision, Unit 1, as shown on the plat thereof, recorded October 17, 1997, as Tract Map 3461, Document No. 2145697, Official Records of Washoe County, Nevada.

Containing 13.01 acres, more or less.

Parcel 2:

A parcel of land situate within the north one-half of Section 26, T18N, R19E, MDM. Washoe County, Nevada, being a portion of Parcel 4 of Parcel Map 3301, as shown on the plat thereof, recorded February 27, 1998, as Document No. 2183717, Official Records of Washoe County, Nevada; more particularly described as follows:

Commencing at the northeast corner of said Section 26;

thence along the east line of said Section 26, S 00°41'04" W, 362.35 feet to the POINT OF BEGINNING;

thence along the boundary line of said Parcel 4 the following twelve (12) courses and distances:

S 61°56'16" W, 620.58 feet;

S 04°56'53" E, 145.42 feet;

S 66°19'53" W, 311.03 feet;

S 49°29'09" W, 415.08 feet;

S 77°46'57" E, 330.00 feet;

S 12°13'03" W, 330.00 feet;

N 77°46'57" W, 330.00 feet;

N 12°13'03" E, 172.70 feet;

S 56°29'11" W, 92.43 feet;

S 68°59'35" W, 258.26 feet;

S 75°39'35" W, 778.91 feet;

S 48°28'07" W, 621.79 feet;

thence continuing S 48°28'07" W, 695.68 feet to a point on the said boundary line of Parcel 4;

thence along said boundary line the following three (3) courses and distances:

S 02°15'30" W, 82.82 feet to a point on the east-west centerline of said Section 26;

along said east-west centerline N 89°58'50" E, 3203.90 feet to the east one-quarter corner of said Section 26;

along said east line of Section 26, N 00°41'04" E, 2276.96 feet to the point of beginning.

Containing 86.00 acres, more or less.

RE: Arrow Creek

Dear Don:

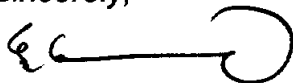

Attach is the proposed sign program for the street front signage at Arrow Creek. This will replace any previous submittals, and reflects the current plan for sign design and locations.

I offer the following comments in general:

- The rocks and boulders visible in the drawings will be gathered from the site.
- Sign number 3 will be located at the beginning of the median as you approach the gatehouse area.
- Sign number 7 is shown flanking the entry portals at most individual developments. As the landscape plan evolves, there may not be a need for two (2) signs at each entry. The location plan represents the maximum number of signs, with a reduction in quantity seen as probable.
- As my scope of services continues, submittals for the golf facility and tennis/swim club will be forthcoming. Those sign programs will be compatible with the design direction established here.

After reviewing this document, please call me with any questions or comments.

Sincerely,

Gary Underwood

Subject: ARROWCREEK LOOP ROAD LANDSCAPING

Brenda,  
I'm working today until about 1 or 2, so you can call me if you get this. I'm reviewing the permit for the loop road landscape plans. The sight triangle letter and exhibits you submitted are great!! But, it looks like Dale may be putting quite a bit of stuff - shrubs and boulders - into the ditches. (See sheet L13, section F/L-13.) Did you take this into account when choosing a Manning's n for the ditch calcs? Also, it looks like the ditch gets narrower on the landscape plans. The section calls for a 5-20' ditch area, but you plans have a 9-10' ditch area. I want to make sure we are not losing ditch capacity due to landscaping. Please verify the ditch capacity, and then Engineering will sign off. I'll fax you a turn-down for this and send the plans to Building for continued review. Also, these plans show the path outside the right-of-way in quite a few places. I suggest getting the proper easements for the Homeowners Assoc. in these areas.

Kris Klein, Washoe County Engineering  
kklein@smtp.co.washoe.nv.us  
phone: 702-328-2046

Talked to Bryan Sprague 3/19/98.  
He believes this has been addressed. He went over ditches w/ Dale before landscape design was done. Bryan will double check the final landscape plans. Told Bryan we need something on the landscape plans to I.D. <sup>identify</sup> minimum ditch width, depth, etc.

Message: ?s on AC. Would like temp sales office. 1345/1350 1/15

Depends on type of sales office:

Comml coach requires setup, electric, and sewer permits. The review and fees seem to be dependent upon the type of fndn. Soft-set is definitely temporary; 8-point or perimeter may be considered permanent. It would require reinspection every 6 months if B&S considers it temporary. Unclear with comml coach on 8-pt or perimeter.

If a comml version of a modular structure is used, it would be considered permanent and not need re-review. Planning would still consider it as a temporary in regard to WCC 110. 1610 DY

LOT 133 off Iowa Court, 20 parking spaces  
of modular prefab for snow loading  
Needs to be ADA accessible  
Mfr determines whether soft-set is permissible.  
Letter of intent from A/C  
Will need set-up permit, separate permits  
for ramps, <sup>irrigation</sup> awnings, decks, etc.  
Fit-set will require retaining wall  
Hooked up to sewer/water initially

Re: Avoidance of petroglyphs and other untreated sites at ArrowCreek.

Dear Mr. Mohler:

I recently received a copy of a letter from the Nevada State Historic Preservation Office (SHPO) confirming the adequacy of the archaeological mitigation measures we performed on behalf of Southwest Pointe Associates at the ArrowCreek development (please see attachments). Thank you once again for selecting Kautz Environmental Consultants to do the work!

The SHPO letter expresses some concern about the continuing need to avoid the petroglyphs within the ArrowCreek project area. We identified all sites to be avoided in our letter of March 28, 1997 (please see attachments). If the need arises, we would be happy to assist with development of long term avoidance measures and/or monitoring of construction activities. Please feel free to call for a brief, no-cost consultation whenever there are questions or concerns regarding the petroglyphs and other untreated sites in the ArrowCreek project area.

Sincerely,

James Hutchins, Ph.D.  
Principal Investigator

## ACKNOWLEDGMENTS

For the duration of the project, both Phases I and II, invaluable assistance was provided by Rich Baines, Construction Manager for Southwest Pointe Associates, and Ty Arndt, Job Superintendent for Landscapes Unlimited. Their sensitivity to cultural resources issues and historic preservation values greatly facilitated timely completion of the field phases of data recovery operations.

The many tasks and interdependencies involved in producing the full report, Parts I and II plus appendices, were skillfully managed by Carrie Corcoran. The superb illustrations were drawn by Jerry Oothoudt and Sandra Hedicke.

**Subject: ArrowCreek (Case No. DA9-1-93)**

Dear Don and Kris:

This letter summarizes the modifications to Condition #22 which we discussed at our meeting on October 8. It also incorporates the subsequent suggestions that Kris gave me regarding the right-of-way widths. This letter supersedes and replaces my letter dated October 8, 1997. Revised street sections and a map of Phase I, which identifies where each street section would be used, are attached.

22. The following roadway sections shall be applicable to the public and private on site streets shown on the tentative map. A traffic report shall be submitted with each tentative map and shall identify the ultimate average daily traffic on each street and shall make recommendations for geometric design (e.g., left turn storage capacity, site distance minimum required turning radius, etc.). The County Engineer shall be responsible for determining compliance with this condition.

- a. Private Common Driveway - No change.
- b. Rural Private - ~~60~~ ~~48~~ or ~~44~~ foot minimum ROW (maximum 200 ACT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. ~~When a rural private street provides a connection between neighborhoods, A a minimum 4-foot asphalt or decomposed granite path or gravel shoulder on both sides on one side of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The right-of-way for this street section is 48 feet. When a connection between neighborhoods is not provided, no paths will be constructed. The right-of-way for this section is 44 feet.~~ The County

Samuel Chacón, P.E.  
President

Bryan Sprague, P.E.  
Vice President

Brita Tryggvi, A.I.C.P.  
Principal

Greg Doerr, A.I.C.P.  
Principal

Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)

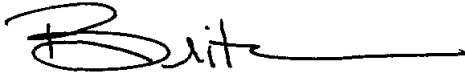

- c. Local Private - ~~60~~ ~~40~~ foot minimum ROW (200 - 500 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot ~~asphalt or decomposed granite~~ path on ~~both sides~~ ~~one side~~ of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)
- d. Collector Private - ~~60~~ ~~51~~ foot minimum ROW (500 ADT to 2000 ADT): minimum 24-foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4 ~~5~~-foot ~~asphalt or decomposed granite~~ path on ~~both sides~~ ~~one side~~ of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to Street Sections.)
- e. Collector Private - No change, except for the 8-foot path which will be constructed of asphalt or decomposed granite.
- f. Collector Private - No change.
- g. Minor Arterial, Private - No change.
- h. Minor Arterial, Public - No change.

As you know, it was anticipated that the Development Agreement would periodically need to be amended and updated, and we provided examples of modifications that would be considered to be in substantial compliance with the overall character and design of the project. Such modifications can be approved by staff. Modifications to the street standards were among the changes that were considered to be in substantial compliance with the overall character of the project.

At our meeting on October 8, there was agreement that the suggested modifications were acceptable. Further, based on my conversation with Kris on October 14, if we decide to construct paths on both sides of the street, thereby requiring wider rights-of-way, such a modification would automatically be acceptable to Washoe County.

If you are in agreement with the preceding statements, please acknowledge by signing below. If you have any questions or need additional information, please contact me.

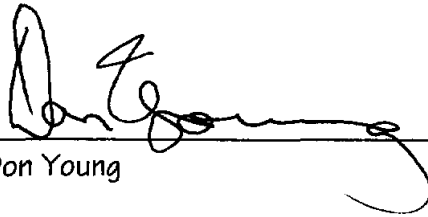

Sincerely,

Brita Tryggvi, AICP  
Principal

RE: Revisions to ArrowCreek Street Sections, Condition 22  
Brita,

I believe your 10/8/97 letter reflects the path revisions we discussed, but I'm not sure I have a good idea of what the street sections will look like based on the new widths in your letter. I actually come up with narrower minimum widths than you are proposing. Please provide revised street sections for the sections defined by condition 22b., 22c., and 22d. Also, attached is a section of your map that shows a cul-de-sac with no path, but it looks like the cul-de-sac will be extended in the future. Will it ultimately require a path?

Kris

Will THIS CUL-DE-SAC  
 BE A THROUGH  
 STREET IN THE  
 FUTURE? Will IT  
 ULTIMATELY REQUIRE  
 A PATH?

(Refer to street sections.)
- c. **Local Private -** 60 foot minimum ROW (200 - 500 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path on ~~both sides~~ one side of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)

- 5 d. [REDACTED] - 50 foot minimum ROW (500 ADT to 2000 ADT): minimum 24-foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path on ~~both sides~~ one side of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to Street Sections.)

As you know, it was anticipated that the Development Agreement would periodically need to be amended and updated, and we provided examples of modifications that would be considered to be in substantial compliance with the overall character and design of the project. Such modifications can be approved by staff. Modifications to the street standards were among the changes that were considered to be in substantial compliance with the overall character of the project.

At our September 17 meeting there was general agreement that the suggested modifications were acceptable; however, we felt that a follow-up meeting with Kris Klein was necessary. This meeting is scheduled for October 8 at 10:00. At that meeting, we hope to obtain concurrence from both you and Kris that the suggested modifications are acceptable.

Sincerely,

Brita Tryggvi, AICP  
Principal

**HAND DELIVERED:**

**Re: CC & R's/ArrowCreek (fka Southwest Pointe) DA9-1-93**

Dear Rusty:

On May 14, 1997 I sent you the CC&Rs for ArrowCreek, which require your review prior to recording with the first final map. Since then approval of the map was delayed by the developer in order to allow preparations for SAD 23 to catch up.

The first final map should now be before the Planning Commission in September. Kris Klein has given me some comments and revisions, which are incorporated into the enclosed draft.

This revised draft supercedes the previous CC&R document provided to you. Please let me know if you have any comments. The enclosed letter of May 14, 1997 outlines the issues of county concern.

Sincerely,

ROBERT M. SADER

August 26, 1997

Don Young  
Washoe County Development Review  
P.O. Box 11130  
Reno, Nevada 89520

Dear Mr. Young:

Enclosed are two copies of the report, *Cultural Resources Inventory of the Proposed Arrow Creek Parkway, Washoe County, Nevada*. Both copies contain complete site records, but only one copy contains original photographs and is intended to be part of your submittal to the Nevada State Historic Preservation Office; the other is for your files.

By way of summary, three previously documented and five new cultural resource locations were crossed by the alignment (26Wa2033, -4583, -6266, -6404 to -6408). Both prehistoric and historic components are represented. Only the Steamboat Ditch (26Wa4583) is considered important under criteria of the Truckee Meadows Regional Plan. However, project-related effects on 26Wa4583 are extremely limited, and no further study or mitigation is recommended.

Copies of the report with site location maps but without site records are being provided to CFA, Inc., the engineers for the project, and to the project proponent.

Please call me with any questions. Thank you.

Sincerely,

Thomas D. Burke

**Subject:** ArrowCreek Parkway

Dear Dave:

This letter summarizes the understandings reached at our meeting on June 25, 1997.

- a. An archaeological survey will be prepared for the ArrowCreek Parkway right-of-way from the western corner of Field Creek Ranch to the southern boundary of Wedge Parkway and for the Wedge Parkway right-of-way from Whites Creek Lane to ArrowCreek Parkway. Preparation of the archaeological survey will not delay the SAD schedule for approval of the improvement plans for ArrowCreek Parkway (scheduled for July 9) nor will it impact the county's ability to issue a construction permit. The survey must be completed and any resultant mitigation plan must be approved by the appropriate parties prior to bond sales.
- b. Jim Gale will try to obtain slope easements on the Dwyer, Graham, Anderson, and Wolf Pack Golf Course properties before July 15. If this does not occur, the county staff will proceed with eminent domain and will schedule the first action required by the BCC for their meeting on August 12. Acquisition of these easements will not impact the county's ability to approve the improvement plans, issue a construction permit, or sell the bonds for the SAD. It may be necessary to modify the improvement plans by change order if these easements are not acquired.
- c. Jim Gale will attempt to acquire the Saddlehorn Homeowners' Association median property in Thomas Creek Road to cut a left-turn pocket. If he is unable to obtain an agreement by July 15, eminent domain proceedings will be initiated and will be scheduled for the August 12 BCC meeting. Acquisition of these easements will not impact the county's ability to approve the improvement plans, issue a construction permit, or sell the bonds for the SAD. It may be necessary to modify the improvement plans by change order if these easements are not acquired.

Re: Mitigation Report for ArrowCreek (Southwest Pointe) Development, Phase 1  
Southwest Pointe Partners / Redfield Land Company, Mt. Rose Fan, Washoe County

Dear Mr. Young:

Enclosed are two complete copies of the report on our data recovery operations for Phase 1 of ArrowCreek, *In the Shadow of Mt. Rose, Part I: the Archaeology of Lower Thomas Creek, Washoe County, Nevada*<sup>1</sup>. Please note that each complete copy of the report consists of two volumes, labeled *Report* and *Appendices*. Contingent upon your approval of the enclosed report, please forward one copy to the State Historic Preservation Office, and one copy to the Washoe Tribe.

Please call me if you have any questions, or wish to discuss any aspect of the report.

Sincerely,

James Hutchins, Ph.D.  
Principal Investigator

<sup>1</sup> Part II of the report will cover data recovery operations for Phase 2 of ArrowCreek, and will include a synthesis of the recovered information from both phases.

**Subject: ArrowCreek (DA9-1-93)**

Dear Don:

Last week Mike Mohler met with Jack Holmes and Margaret Spicher to discuss the street name for ArrowCreek Parkway. During their meeting and in the context of how addresses would be assigned, Jack suggested that some of the lots in Units 1 and 2 (i.e., Lots 107, 108, 109, 110, 111, 119, 120, and 121 in Unit 1 and Lots 201 and 202 in Unit 2) could have direct driveway access onto ArrowCreek Parkway. Please confirm whether or not this suggestion is acceptable to the Engineering and Community Development Departments. If so, we will change the final maps accordingly.

Call me if you need further information.

Sincerely,

A handwritten signature in black ink, appearing to read 'Brita', is written above the typed name.

**Re: CC&Rs/ArrowCreek (fka Southwest Pointe)/DA9-1-93**

Dear Rusty,

Enclosed please find the original CC&Rs for ArrowCreek, formerly known as Southwest Pointe. Unit 1 of this project has been submitted for review and is anticipated to be approved in late May or early June.

As with other CC&Rs I have drafted for county review, you will find most of the matters of County concern identified in one article, Article IX. However, this is a complicated set of CC&Rs due to the numerous requirements of the final development agreement conditions, and the nature of this common interest community as a high-end, closed-gate community with significant common area amenities. Please note that these CC&Rs will be recorded against the entire project rather than just Unit 1, so there will be no need to review or record CC&Rs on subsequent phases to satisfy conditions of DA9-1-93.

Listed below are all conditions of approval requiring treatment in the CC&Rs, with a reference regarding where in the document you will find relevant language. As you review these matters, please note that several conditions in the project approval require HOA ownership (or control) and permanent, perpetual funding of infrastructure (streets, landscaping, drainage facilities, etc.). By identifying these improvements as Common Area and establishing the duty of maintenance and lot assessment, the CC&Rs generally, read as a whole, satisfy these conditions.

Russell S. Nash, Esq.  
Deputy District Attorney, Civil Division  
Washoe County District Attorney's Office  
May 14, 1997  
Page 2

**General Conditions**

8	Process for maintenance	see CC&Rs as a whole
16	Streets	Article II.7
18	Detention/retention facilities	Articles II.1 and II
28	Open space	Articles I.2.g.; II.1; III; IV.41, 46, and 47; and XI.6.

**Tentative Map Conditions**

5(a-n)	CC&Rs requirements	Article XI
5a	Design Guidelines	Article V (particularly V.2)
b	Two car garages	Article IV.20
c	Turf limitation	Article IV.29
d	Public access	Articles VII.3.h. and XI.4
e	Sewer user fees	Article XI.8
f	Setbacks for power lines	Article XI.9
g	Dedication of open space	Article XI.10
h	No vehicles in open space	Article IV.41
i	Equestrian traffic	Article IV.35
j	Access to open space	Article XI.4 and 10

Russell S. Nash, Esq.  
Deputy District Attorney, Civil Division  
Washoe County District Attorney's Office  
May 14, 1997  
Page 3

**Tentative Map Conditions (continued)**

k	Pedestrian easements	Article XI.11
l	Minimum defensible space	Article IV.24
m	Snow storage	Article II.1.b
21	Street maintenance funding	Articles II.1.a and III
26	Street landscaping maintenance	Articles II.1.a and III
30.c	Path/landscaping maintenance	Articles II.1.a and III
31	Path/shoulder maintenance	Articles II.1.a and III
40	Arterial landscape buffer	Articles II.1.a and III

If you have any questions regarding your review of these CC&Rs, please do not hesitate to contact me. If I do not hear from you, I will assume that your review of the CC&Rs has resulted in approval by your office.

Sincerely,

Robert M. Sader

Don - This is except I mentioned to you.

5/30/97

- Develop a mix of lot sizes within the following parameters: 20 percent one acre and larger, 40 percent 1/2 acre and larger, and 40 percent with a minimum size of 12,000 square feet. All residential units are single-family dwellings; no other housing types are proposed. Primary lot orientation should be to the golf courses and/or the panoramic views.

As shown on the Site Plan on the following page, the land use pattern clusters residential neighborhoods within enclaves created by the golf course fairways. All edges of the proposed development reserve substantial areas of natural open space, ranging from the entire "panhandle" to a minimum of 200 feet to the nearest existing lot. Table 1-1 presents a break down of the proposed land uses. Tables 1-2 and 1-3 present a summary of the various lot types.

Table 1-1  
**Land Use Summary**  
(acres are approximate)

Land Use	Acreage
Residential	845 (26%)
Golf Course/Roads/Common Area	827 (25%)
Civic Uses	62 (2%)
Village Center	27 (1%)
Open Space	1510 (46%)
<b>TOTAL</b>	<b>3,272 (100%)</b>

Table 1-2  
**Lot Summary**

Lot Type	Number of Lots
12,000 s.f.	436 (40%)
1/2 acre and larger	382 (35%)
1 acre and larger	272 (25%)
<b>Total:</b>	<b>1090</b>

Note: The percentage of lots in each category may vary by 10% (i.e. 10% of 40% equals 4%), either up or down. The total remains unchanged.

Dear Don:

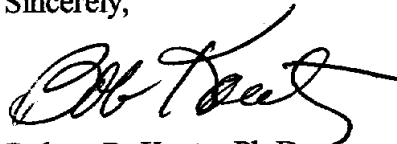

WASHOE COUNTY  
COMMUNITY DEVELOPMENT

Enclosed, please find two copies of the Historic Preservation Treatment Plan (HPTP) for the second phase (golf course) of the ArrowCreek development in southwest Reno.

As previously, I have sent two copies so that you can send one on to Rebecca Palmer at the SHPO and the other is for the Washoe Tribe (Mr. William Dancingfeather is their new Cultural Resources Representative).

As always, time is really pressing the ArrowCreek people. Should you need anything further, please let me know.

Sincerely,

Robert R. Kautz, Ph.D.  
President

Reno, NV 89502

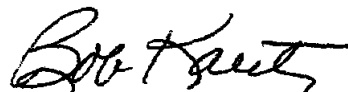

Dear Rich:

Enclosed, please find 5 copies of a list and a map of the archaeological sites you have asked us to commit you to avoiding during construction and subsequent use of your Arrow Creek Project. Please feel free to distribute them to your construction and recreation managers.

Whenever your construction activities get to within 50 meters of one of these sites, you should call Dr. Jim Hutchins at this office (please provide us several days notice) and he will supply a monitor to insure that the significant archaeological remains remain undisturbed for the short time the crews will be working in close proximity to the sites. Alternatively, you may wish to call the Washoe Tribe (702-883-1446), they may also be able to provide a monitor.

If you have any questions, please give Jim or myself a call. Thank you for your help in this matter.

Sincerely,

Robert R. Kautz, Ph.D.  
President

RECEIVED  
FEB - 6 1997  
WASHOE COUNTY  
COMMUNITY DEVELOPMENT  
1:34 pm

Dear Mr Young:

Enclosed, please find two copies of a Class III cultural resources inventory report titled, *Arrow Creek Golf Course Extension: An Addendum to A Cultural Resources Inventory of the Dry Creek Fan, Washoe County, Nevada*. The archaeological survey area is on the Mt. Rose Fan near the foot of the Carson Range and was conducted by personnel from my firm in 1996. The land is privately owned and is proposed for additional development as a golf course and residential area. The Intermountain Antiquities Computer System forms (IMACS) for the sites recorded in this area are also included in one copy of the report. As usual, we appreciate it that you will be forwarding this copy of the report to Ms. Rebecca Palmer at SHPO. The second copy of the report is for the Washoe Tribe, which can be sent to Ms. Janelle Conway, the Cultural Resources Coordinator for the Tribe lacks the IMACS forms.

The current report provides the survey results for one large block of land which adjoins an area previously inventoried in 1995. As such, the background information for the two areas is essentially the same, allowing for the current inventory and report to serve as an addendum. The blocks of land from both surveys (1995 and 1996) are part of the same overall project development. The results from the earlier inventory were previously submitted to your office in March 1996 in a report titled *A Cultural Resources Inventory of the Dry Creek Fan, Washoe County, Nevada*, and subsequently received and accepted by SHPO.

If you have any questions or concerns, or if there is anything further we can do, please call me.

Sincerely,

Robert R. Kautz, Ph.D.  
President

RE: ArrowCreek

I propose adding the following wording to the Final Development Agreement, page 2-23, under the heading Collector Streets:

The collectors through Neighborhoods F and P, which intersect the loop road at Intersections B and C, are estimated (based on average daily trips) to be on the borderline between a B-1 and a C-1 collector. (Refer to Figure 2-11.) A B-1 collector will be constructed in both locations and, prior to preparation of a tentative map for Phase III, traffic will be monitored. Should the traffic on these two streets exceed 2,000 ADT, based on actual counts and estimates for Phase III, the lot layout and/or road configuration in Phase III will be modified.

*According to our engineers, the drainage area is greater than 5,000 acres.*

**FAX FAX FAX FAX FAX FAX FAX**

- c. Design calculations of runoff and hydraulic computation for channels, conduits and other drainage structures shall be submitted along with the detailed plans. All drainage designs shall make provisions for the discharge of drainage water into natural drainage channels at the discharge point of any improvements. Drainage improvements will not be permitted to discharge into irrigation ditches except under conditions acceptable to the building official.

(f) Engineering Geology Report. The engineering geology report required by subsection (c) shall include an adequate description of the geology of the site, conclusions and recommendations regarding the effect of geologic conditions on the proposed development, and opinions and recommendations covering the adequacy of sites to be developed by the proposed grading.

Recommendations included in the report and approved by the building official shall be incorporated in the grading plans or specifications.

[\$39, Ord. No. 707]

100.200 U.B.C. Section 7011 amended: Setbacks from drainage channels. Section 7011 of the Uniform Building Code is hereby amended by adding:

(e) Setbacks from Drainage Channels. In all cases the following minimum setbacks shall be maintained from the centerline of drainage channels and major irrigation ditches:

1. 15 feet from the centerline of incidental drainage channels (drainage area less than 1,000 acres).
2. 25 feet from the centerline of secondary drainage channels (drainage area 1,000 to 5,000 acres).
3. 50 feet from the centerline of major drainage channels (drainage area greater than 5,000 acres).

The setbacks may be modified upon submission of plans for construction of any improvements to drainage channels in question. Improvements shall provide capacity within drainage channels for the free and unobstructed passage of the required flood flow quantity as determined under Section 7006 of this chapter, as amended.

The building official may require that any such improvement conform to any master plan of drainage as may be presently or hereafter adopted by Washoe County.  
[§40, Ord. No. 707]

100.205 U.B.C. Chapter 70 amended: Rainfall intensity tables.  
Chapter 70 of the Uniform Building Code is hereby amended by adding two tables designated Tables 70-C and 70-D which shall follow Section 7015 and shall read as follows:

Project No. 88-003.24

Reno, NV 89520

**Subject: ArrowCreek Tentative Map (Case No. TM11-12-96)**

Dear Bob:

Please reschedule this case for the January 21<sup>st</sup> Planning Commission meeting. There are a few items, primarily traffic related, in the conditions of approval that we want to discuss with Don Young and Clara Lawson. These items are minor in nature and we are confident that we can resolve these issues over the next week or two.

I apologize for any inconvenience this late request for postponement may cause.

Sincerely,

A handwritten signature in black ink, appearing to read 'Brita', with a long horizontal flourish extending to the right.

**Subject: ArrowCreek (Case No. DA9-1-93)**

Dear Mike:

The purpose of this letter is to request clarification on two conditions of approval that are repeated for the special use permits and tentative maps for ArrowCreek. The conditions read as follows:

Prior to the issuance of the first building permit, two lanes of Whites Creek Lane shall be constructed to two-lane minor arterial standards as a minimum from Thomas Creek Road to the project site. The County Engineer shall be responsible for determining compliance with this condition.

Prior to issuance of the first building permit, a second access shall be constructed to the project site to emergency standards. The applicable fire protection agency shall be responsible for determining compliance with this condition.

My interpretation of these conditions is that they are intended to apply to building permits issued for permanent rather than temporary structures and they are not intended to apply to utility and maintenance buildings (e.g., pump and well houses) or bridges. The reason I am requesting your opinion is that we will soon need a building permit to construct a bridge across Thomas Creek and a well and pump house for the first well to irrigate the golf course. Also, we will have temporary on-site construction/sales offices that will require either a building permit or a set-up permit.

Samuel Chacón, P.E.  
President

Bryan Sprague, P.E.  
Vice President

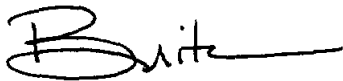

Brita Tryggvi, A.I.C.P.  
Principal

Greg Doerr, A.I.C.P.  
Principal

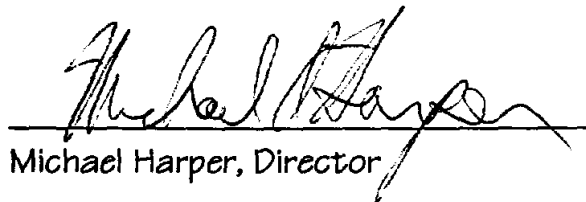

Based on numerous conversations with county staff and the testimony presented at the public hearings, it is my belief that these conditions are triggered when a building permit is issued for a permanent residential or non-residential structure (e.g., golf course clubhouse, swim and tennis club) generating traffic.

If you agree with my interpretation, please sign below, keep the original for your files, and return a copy to me. Thank you for your attention to this matter. If you have any questions, please give me a call.

Sincerely,

Brita Tryggvi, AICP

**Subject:** ArrowCreek (Case No. DA9-1-93)

Dear Rich:

Thank you for taking the time to meet with Rich Baines and I last week. The main topic discussed was the Condition of Approval which requires a second access to be constructed to emergency standards prior to the issuance of the first building permit. To satisfy this condition, we agreed that the following improvements will be constructed:

1. Two lanes of Whites Creek Lane will be constructed from Thomas Creek Road to the first intersection west of Thomas Creek. These two lanes will be paved.
2. Along this same segment of roadway, the remaining two lanes of Whites Creek will be graded. I assume that if Southwest Pointe Partners decided to construct the emergency access to Zolezzi Lane rather than grading the remaining two lanes of Whites Creek Lane, this alternative would be acceptable.
3. The emergency access to Zolezzi Lane will probably be required when building permits are issued in either Neighborhood A, Block T, Lots 19 through 51 or Neighborhoods L and M. (Refer to Tentative Map for ArrowCreek Phase I.) We also discussed that the fire hazard will be greatly reduced as the golf course and other improvements are constructed. Therefore, there may be some flexibility in this timing.

Samuel Chacón, P.E.  
President

Bryan Sprague, P.E.

WASHOE COUNTY  
DEVELOPMENT REVIEW

Dear Don:

Enclosed, please find the revision to the HPTP for the Arrow Creek Development that I promised you after our meeting last week. The revisions were dictated by changes imposed by the developer and they result in an avoidance of two petroglyph sites and the increased work at the huge site along Thomas Creek, 26Wa99. I have passed a copy of this document along to Rebecca Palmer at SHPO so in case you wish to call her to discuss the changes, she will have her own copy.

Thank you once again for your clear direction at the meeting we all attended last week. I have reviewed the information on site burial that Alice Baldrice kindly sent me, and after sharing the gist of them with the developer, I believe he is back on track to complete the mitigation as originally proposed.

If you have any comments or questions, please feel free to call at any time.

Sincerely,

Robert R. Kautz, Ph.D.  
President

WASHOE COUNTY  
DEVELOPMENT REVIEW

November 20, 1996

DBG  
F  
SWP

Mr. Mike Mohler  
Arrow Creek  
1150 Corporate Blvd.  
Reno, NV 89502

Dear Mike:

At the behest of Jeff Dingman and yourself, I have reviewed the material sent from Carson City by Mrs. Baldrice of the Nevada SHPO, regarding site burial protocols. Mrs. Baldrice sent over six studies, all coordinated by the US Army Corps, and all related to variables used to measure the effectiveness of various site burial strategies.

Unfortunately, the studies really don't specifically apply to the present project. Some tend to be analytical in nature with very little in the way of practical suggestions or empirical results. The others tend to address specific applications such as the use of gunite at stream edge or the construction of highway embankments up to 75 ft higher than the cultural resource!

They were useful, however, in that they provided a general framework for evaluating the kinds of site materials most favorable for site burial (stone, exclusively), and the variables that would most impact the remaining site components such as faunal and floral elements or intact features by means of compression, moisture, soil pH, vertical and horizontal displacement, micro/macro organisms, and freeze-thaw cycles.

From a common sense standpoint, I believe I can state the following as it pertains to the Arrow Creek Project:

If you had a buried site containing only stone tools and debitage and largely lacking in features, I believe site burial could be implemented relatively easily. The imperatives are that: the HPTP would have to be revised and accepted by the SHPO and County, we would have to establish that the site is composed exclusively of those materials (stone artifacts) by means of intensive testing, we would (at the same time) establish a baseline for understanding site composition prior to its burial, and we would establish certain basic environmental parameters impacting site decay such as pH and soil moisture. Then we would jacket the site with something like a 2 inch gravel or dg cap followed by a 2 foot layer of soil followed by the planting of a specific kind of vegetative cover. We would also have to implement a regular interval monitoring schedule such as revisits to the site every 5 years to measure site degradation. Finally, your lawyers would have to create an archaeological easement for the entire site area that excludes all forms of intrusion in perpetuity, or until the site can be mitigated.

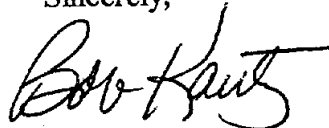

The problem is that once you have done all those things, you will probably have expended nearly as much effort, if not more, than you would have if you had gone ahead and mitigated, but you would lack access to the land and would have imposed very unattractive CC&Rs on the project.

Site 26Wa5825 is a surface manifestation of exclusively stone objects and so would comprise a candidate for burial given the above parameters. Yet, this is precisely the kind of site that can most efficiently be mitigated given the practical methods we are employing at Arrow Creek. An example of this effect is at site 26Wa5915, where we have just completed the field phase of the mitigation at approximately 60% of the estimated, proposed cost for this phase of work. As these costs tend to proportionately resonate down all the following phases of project activities, it is likely that we will completely mitigate this site for somewhere slightly over half the cost of our original estimate. In order to have provided the baseline information preparatory to site capping, we would have had to have done at least this much. That, together with all the other tasks involved with site capping, make it a very expensive alternative.

To summarize, Mrs. Baldrice was truthful when she said that burial of archaeological sites was one possible mitigation strategy. However, she was also correct to warn us that this strategy entails new and often onerous obligations that include budget, schedule, legal considerations as well as the potential loss of property to the development. I believe this is why the site burial alternative is so rarely employed by developments that deal with cultural resource properties, such as your own.

If you, or anyone you so designate, would like to review the articles related to site capping, they are in my office and I will share them at any time. In the meantime, progress with the mitigation is proceeding as rapidly as possible. We have integrated the new grading plan provided by Rich Baines into our work schedule and as a result all work along the creek should be done very shortly. Jim Hutchins and I are revising the HPTP to reflect the new grading plan and to keep both the County and SHPO informed of our revised work. Should you have any questions, please call or come by at any time.

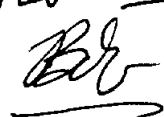

Sincerely,

Robert R. Kautz, Ph.D.  
President

Reno, NV 89502**

**November 1996**

## I. INTRODUCTION

An *Historic Preservation Treatment Plan* (HPTP, Kautz 1996) was prepared for the first phase of the construction for a residential and recreational development called Arrow Creek (formerly, Southwest Pointe Subdivision) located on privately owned land atop the Mt. Rose fan adjacent to Thomas and Dry Creeks. Cultural resource surveys (Hutchins and Kautz 1995, Kautz et al. 1995, 1996) were secured in accordance with provisions specified in the conservation element of the *Truckee Meadows Regional Plan* (Regional Planning Commission 1991[as revised 6/10/93]:78-79) and had identified a total of nine cultural properties, all deemed significant under National Register Criterion D; for their ability to yield important information about history or prehistory.

Due to changes in the mapped location of project construction, the impact of the project on cultural resources has changed somewhat. Therefore, the document that follows is intended to revise that earlier version of the HPTP to reflect these changes, adding areas of investigation and removing areas where the project avoids impacting sites.

## II. PROPOSED CHANGES

Two sites, 26Wa3124 and 26Wa3125, were recommended for mitigation in the original HPTP. Both these sites are now outside the areas where they would have received a direct impact from project construction. By moving golf fairways number 4 and 5 to the east, both these petroglyph sites were avoided and it is now recommended that their appropriate management option be changed from mitigation to avoidance.

In contrast, areas within site 26Wa99, the Lower Thomas Creek Site (Aikens 1972:23), that were formerly projected for avoidance, will be impacted due to changes in the planned golf and recreation complex. Although the recommended management option for this site, partial mitigation and partial

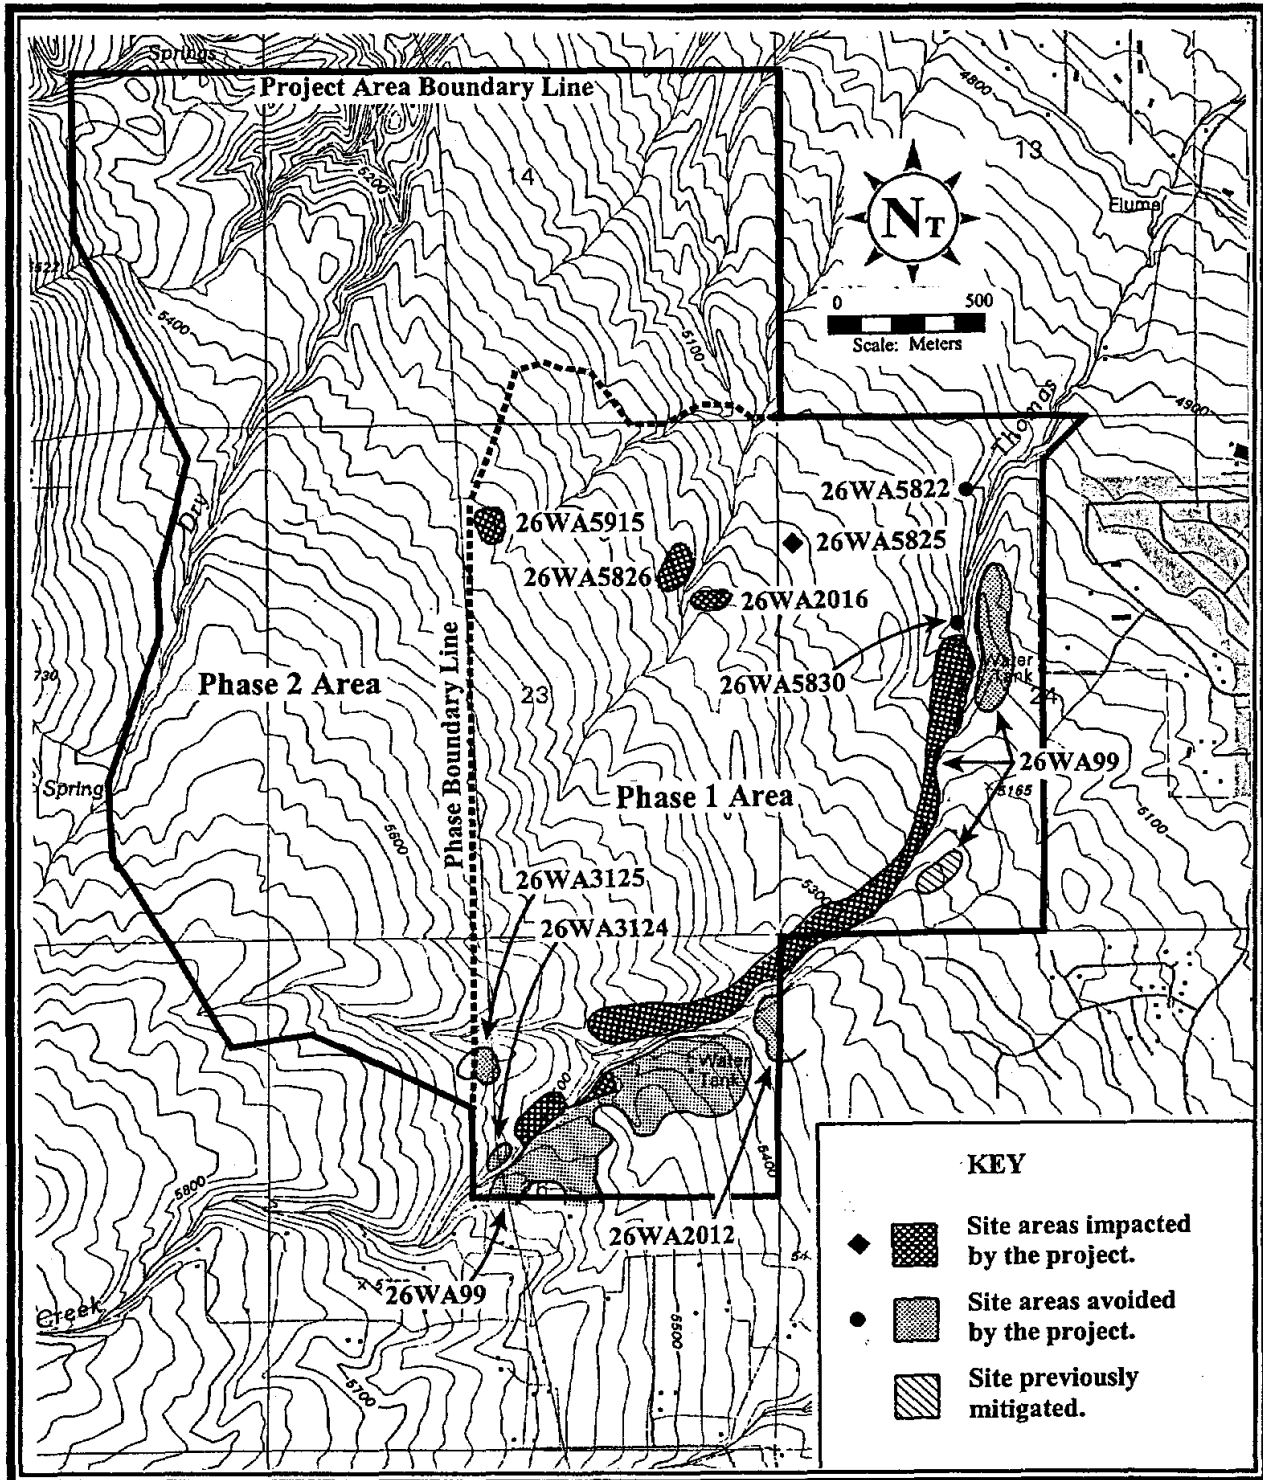

avoidance will not change, the total area impacted by the project will be larger. It is recommended that all areas that are slated to be impacted by the construction be mitigated using the same strategy and field methods as those proposed in the original HPTP.

### III. CHANGES TO SAMPLE SIZE

All mitigation work proposed in the original HPTP at 26Wa3124 and 3125 will be eliminated.

The areal size of the effected portion of Site 26Wa99 is revised from 53,321 sq m to a new total of 168,668 sq m. A systematic program of very extensive probing and sample unit excavation, however, has clearly demonstrated that the vast majority of this area is composed of a surface scatter of cultural materials containing smaller circumscribed areas where cultural materials have mixed, post-depositionally, with non-culturally effected soils. One exception to this generalization that suggests a lack of cultural stratigraphy was discovered in an area referred to as Locus 4. Locus 4 is situated where soil has accumulated due to its fortuitous location in an area where the migration of the stream has trapped alluvial and colluvial sediments behind overbank sediments. The area of Locus 4 is computed to be 7,068 sq m. Extensive probing and excavation has produced an average depth at this locus of 27.6 cm. Therefore, the site volume for 26Wa99 is computed to be 1,951 cubic meters.

The figure that follows (Figure 3.1) provides a map of those areas being impacted by project construction and is intended to replace the original HPTP site map (Kautz 1996:Figure 1.4).

**Figure 3.1** Location of Significant Sites within the Phase I Block. Base Map, Mt. Rose NE, Nev., USGS Topo Quad (1994). T18N R19E. Arrow Creek Project. November 1996.

Re: Estoppel Certificate

Dear John:

Southwest Pointe Partners is forming an L.L.C. to be the development entity for the Southwest Point project. A major financial investor is a member of the new entity.

The investor is requesting an "estoppel certificate" regarding all important agreements (public and private) relating to development. The agreement in question allows assignment to the L.L.C.

Will you sign this form? Please let me know at your earliest convenience.

Sincerely,

ROBERT M. SADER

Commissioner Grant Sims  
Board of County Commissioners

Via Fax: 328-2037; In re: Southwest Pointe: Whites Creek Lane/Fieldcreek Lane

Dear Commissioner Sims,

The residents of upper Fieldcreek Lane request the promises made to us by both the DOCC and Southwest Pointe in the past become part of the permanent conditions of approval, to-wit:

- a) that both a sound wall and berm be constructed;
- b) that Southwest Pointe work with individual homeowners in designing and providing landscaping for a visual screen of the road and wall; and,
- c) that no existing homes be assessed for the cost of the above.

We still firmly believe that in the interest of safety an additional access should be required from Southwest Pointe directly to the Mt. Rose Highway. The reasons behind the safety issue are detailed in Tom Shrake's 3/4/94 memo to Chris Schenk and Scott Nebeski, a copy of which we would be more than happy to provide at a moment's notice.

Thank you for your assistance.

Sincerely,

Anne Shrake

**MEMORANDUM**

**TO: Maddy Shipman  
Don Young**  
**FROM: Robert M. Sader**  
**RE: Clean-up revision to Southwest Pointe Final Development Agreement  
(DA9-1-93)**  
**DATE: July 22, 1996**

An issue has arisen regarding language of the Southwest Pointe Final Development Agreement regarding County service of nonpotable water. Condition 25 of DA9-1-93 (Exhibit "B" to the Agreement) requires the use of effluent for golf course irrigation from the South Truckee Meadows Wastewater Treatment Plant. The phasing schedule, which is contained in the Design Standards Handbook (Exhibit "E" to the Agreement), calls for construction of at least one 18-hole golf course commencing in the summer or fall of 1996.

The project potable water system will be capable of supplying construction and irrigation water for an interim period of time, but there is no way of predicting at this time how many years in the future it will be before the sewer plant has sufficient effluent for the project irrigation needs (750-800 acre feet at buildout).

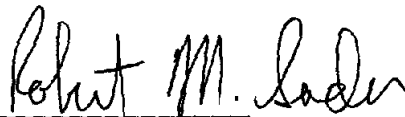

The County and the developer intend to provide for the construction of nonpotable water facilities and the dedication of Thomas Creek surface water rights (with back-up supplemental groundwater) to the County for interim water supply, in a separate agreement on the nonpotable water system (Section 4.6 of the Agreement).

Pending Commissioner approval of this nonpotable water agreement, it would seem prudent for both the County and the developer to specify in the Final Development Agreement how the interim water supply will be provided (i.e., developer dedication for County use of Thomas Creek water rights, and initial use of water from the potable system) in order to avoid any circumstance in which the County might be deemed to have committed to effluent water service when a reliable supply of effluent is simply not available, or in which the developer could not get nonpotable water from the County even though it is prepared to dedicate the creek water rights and build its share of the nonpotable water system facilities. Both parties are protected by a minor change in the Agreement to add language to this effect in Section 4.6. The language would read as follows:

The parties agree that OWNERS shall dedicate Thomas Creek water rights and supplemental groundwater rights acceptable to the County Utility Division. The County will provide a water supply to be used in the nonpotable water system for irrigation of golf course and common areas until such time as the effluent supply from South Truckee Meadows Wastewater Treatment Plant is sufficient to meet the Project irrigation needs. If OWNERS require irrigation water prior to the time the nonpotable water system facilities have been completed, water from the potable water system may be utilized to the extent it is not being used pursuant to a County will-serve letter for Project potable water demands.

If the addition of the foregoing language is acceptable, I am authorized by the "OWNERS" under the Agreement to substitute pages in the Agreement incorporating the language changes without the need to reacquire "OWNERS" signatures.

Robert M. Sader, Esq.

This is what I plan to hand out at BCC Caucus. Any comments?

**FAX FAX FAX FAX FAX FAX FAX**

Ms. Tryggvi explained that conditions of approval allow retention of public access to the golf course; that public access to the trails and non-residential uses will all be retained; that the original plan, off the primary loop road, included several gates; and that they have now opted for one gate location.

Following discussion, on motion by Commissioner Sims, seconded by Commissioner Mouliot, which motion duly carried, Chairman Bradhurst ordered that Amendment to Development Agreement Case No. DA9-1-93 for Southwest Pointe/Redfield Land Company be approved subject to the following Development Agreement conditions and the Template conditions:

**CONDITIONS**  
for  
**DEVELOPMENT AGREEMENT CASE NO. DA9-1-93**  
for  
**SOUTHWEST POINTE**

(As amended by the Washoe County Planning Commission  
on May 7, 1996)

**\*\*\* IMPORTANT - PLEASE READ \*\*\***

**UNLESS OTHERWISE STATED, PRIOR TO APPROVAL OF THE FINAL DEVELOPMENT AGREEMENT, ALL CONDITIONS MUST BE MET. A COPY OF ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL BE FILED WITH THE DEPARTMENT OF PUBLIC WORKS AND/OR DEPARTMENT OF DEVELOPMENT REVIEW.**

**COMPLIANCE WITH THE APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES AND WITH THE CONDITIONS OF APPROVAL OF THIS TENTATIVE MAP IS THE RESPONSIBILITY OF THE DEVELOPER, ITS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY, AND THEIR SUCCESSORS IN INTEREST.**

**GENERAL CONDITIONS**

1. Unless specifically stated in the final Development Agreement, all uses, densities and standards shall be consistent with the Washoe County Development Code and with the goals and policies in the Comprehensive Plan and the Southwest Truckee Meadows Area Plan. Unless specifically stated in the final Development Agreement, the allowed uses, densities, and standards of the land subject to the Development Agreement shall be those in effect at the time the final agreement is approved.

Exhibit E  
Dev. Stand.  
Handbook

2. The final Development Agreement shall specify any time frames that have been extended beyond those specified by Washoe County Code or Nevada Revised Statutes. The Department of Development Review shall be responsible for determining compliance with this condition. **Exhibit B**  
**Dev. Agreement**
3. A "statement of compliance" format or formats for both residential and non-residential projects shall be made a part of the final Development Agreement. The Department of Development Review shall be responsible for determining compliance with this condition. **Exhibit E**  
**Dev. Standards Handbook**
4. The developer and all successors shall direct any potential purchaser of the site, or portions thereof (other than individual single-family lots), to meet with the Department of Development Review to review the Development Agreement and the conditions of approval prior to the final sale of the site. Any subsequent purchasers of the site shall notify the Department of Development Review of the name, address, telephone number, and contact person of the new purchaser within 30 days of the final sale. **No Action Necessary**
5. Prior to submittal to the Washoe County Board of County Commissioners, the final Development Agreement shall be reviewed and approved by the Office of the District Attorney of Washoe County. **Reviewed & approved by Madelyn Shepman**
6. The final Development Agreement will be submitted to the Washoe County Board of County Commissioners within three months of submission of a completed agreement with all accompanying exhibits, provided the Department of Development Review does not delay the submission in order to approve provisions of the agreement to its satisfaction. Extension of any of these time frames may be requested if mutually agreeable to Washoe County and the developer. **No Action Necessary**
7. The developer shall provide the Department of Development Review staff with a quarterly report indicating the number of building permits issued and other building activity, once residential construction has started. **Exhibit E**  
**Dev. Standards Handbook**
8. The developer shall define a process to ensure that the maintenance and replacement of the streets, parking areas, lighting, landscaping, recreational facilities, utilities, and other private infrastructure shall be performed by the homeowners associations and shall be perpetually funded. The County Engineer and the Department of Development Review shall be responsible for determining compliance with this condition. **Correspondence from Bob Seder to Don Young & Kris Klein dated 5/10/96**

### STREETS AND TRAFFIC

9. A Level of Service C, or the current Washoe County standard, shall be used as a basis for evaluating transportation needs and traffic impact mitigation requirements. **No Action Necessary**

10. The final Development Agreement shall not be approved until the right-of-way (ROW) of all necessary off-site accesses from the project to Thomas Creek Road are obtained. Preliminary golf course and roadway grading may commence before such approval has been obtained so long as such construction is done in accordance with Condition 21 for tentative maps. An approved and recorded ROW document shall be provided to the County Engineer and the District Attorney's Office.

Exhibit H

11. Prior to final approval of the Development Agreement, the developer for Southwest Pointe shall petition the Washoe County Board of County Commissioners to create a Special Assessment District for the purpose of financing the construction of Whites Creek Lane from the project site to Wedge Parkway and other roads as defined in the SAD agreement. In the event that a special assessment district is not created, the developer shall construct Whites Creek Lane, as outlined in Conditions 17 and 19 for tentative maps, from the project site to Wedge Parkway. The County Engineer shall be responsible for determining compliance with this condition.

Petition  
Submitted  
June 1996What action  
is fair?

12. A Construction Traffic Haul Route Plan shall be submitted to the County Engineer for review and approval. The primary construction haul route shall be Whites Creek Lane. However, as part of Phase I development, Zolezzi Lane may be used, for construction mobilization only, for completion of the first 18-hole golf course and for the extension of utilities into the project site.

Exhibit I

Approved  
by County  
Engineer

on 8/17/96

Prior to approval of any final map or prior to the issuance of the first building permit for the first final map, all construction traffic will be diverted to Whites Creek Lane. No construction traffic will be allowed on Thomas Creek Road between Whites Creek Lane and Zolezzi Lane. Access to Whites Creek Lane will be from the Mt. Rose Highway to Thomas Creek Road. When the 35th building permit is issued, all construction traffic will be required to use Whites Creek Lane from Wedge Parkway. Construction traffic will use Whites Creek Lane from Wedge Parkway if this segment is completed prior to the issuance of the 35th building permit. Thomas Creek Road from Mt. Rose Highway to the proposed Whites Creek Lane may be considered for a haul route provided the developer submits a traffic analysis and intersection design prepared by a licensed Nevada Civil Engineer which addresses and provides, as a minimum, recommendations regarding:

- a. site distance requirements;
- b. left turn storage capacity and design;
- c. intersection location and alignment;
- d. proximity to existing intersections and recommended separate distances;
- e. existing center median and landscaping concerns;
- f. determination of adequacy of existing Thomas Creek Road roadway geometric section; and
- g. determination of adequacy of existing structural section and load bearing capability.

The submitted report shall be evaluated and accepted by the County Engineer prior to any approval of the use of Thomas Creek Road as a haul route. Once Whites Creek Lane is connected to Wedge Parkway, this road shall become the primary construction haul route.

Any existing or proposed roads that will be used as construction haul routes and are not designated truck routes must be evaluated by a geotechnical study to determine the existing structural section and its load supporting capability. If the pavement section is inadequate to support the proposed construction loadings, the roadway must be redesigned or reconstructed as needed to provide a 20-year design life in accordance with the AASHTO Interim Guide for Flexible Pavements.

13. The developer shall provide a schematic pedestrian circulation plan. The Department of Development Review shall be responsible for determining compliance with this condition. The "statement of compliance" shall require that a detailed pedestrian circulation plan will be submitted as part of each tentative map and approved by the Department of Development Review.
14. Unless specifically stated in these conditions of approval or in the final Development Agreement, all public and private street design and construction is to be done in accordance with the Washoe County standards that are in effect at the time the final Development Agreement is recorded. The County Engineer shall be responsible for determining compliance with this condition.
15. Unless otherwise stated in these conditions of approval or in the final Development Agreement, all roadway improvements necessary (including but not limited to, curb, gutter, sidewalk, signing and striping, driveway access, and street lighting) to serve the project shall be designed and constructed to county standards and specifications and/or financial assurances in an appropriate form and amount shall be provided. The County Engineer shall be responsible for determining compliance with this condition.
16. All private roadways shall be depicted on the final maps and identified on the tentative map as either private access easements over individual adjacent lots or, if identified as separate parcels, as either common areas with equal fractional ownership by all of the lots within the development or common areas owned by the homeowners association. The County Engineer shall be responsible for determining compliance with this condition.

#### GRADING AND DRAINAGE

17. A general concept-level storm drain master plan shall be submitted to the County Engineer for approval prior to acceptance of the final Development Agreement. The general concept-level storm drain master plan shall address in general terms proposed methods for handling the existing and increased flows for the 10- and 100-year storms including detention and other proposed mitigation measures for both on-site and off-site areas. This master plan shall include a drawing which shows the existing drainage basins within the development and indicate how they may be impacted. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of a tentative map for any phase or approval of any special use permit, a preliminary hydrology report shall be submitted to the County Engineer for approval. The County Engineer shall be responsible for determining compliance with this condition.

Exhibit J  
Approved by  
County Engineer  
6/18/96

18. Detention/retention facilities are to be maintained by a homeowners association and perpetually funded unless Washoe County agrees to accept maintenance and financial responsibilities. Regional facilities would be maintained by Washoe County. The County Engineer shall be responsible for determining compliance with this condition. *Referenced in Dev. Agreement. To be addressed in CC&Rs*
19. A maintenance plan of all drainage facilities to be owned by the homeowners association shall be provided prior to approval of the conditions, covenants, and restrictions (CC&Rs). All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe County water treatment plant and associated Steamboat Ditch conveyance system. The County Engineer shall be responsible for determining compliance with this condition.
20. The off-stream detention/debris basin recommended in the 1990 Kennedy, Jenks, Chilton report shall be reserved based on the following timetable:
- a. Washoe County will have three years to obtain the necessary permits for construction of the off-stream detention basin. This three years shall commence upon the approval of the final Development Agreement. If Washoe County fails to obtain the necessary permits, the property for the detention site shall be offered by the developer or his successors, for dedication to the Washoe County School District for a middle school or revert to open space. *Exhibit E Dev. Stand. Handbook*
  - b. If Washoe County does obtain the necessary permits within three years, construction of the project shall commence within 5 years of the approval of the final Development Agreement. If construction is not started by that date, the property for the detention site shall be offered by the developer or his successors, for dedication to the Washoe County School District for a middle school or revert to open space.
  - c. If an alternative solution or site becomes available for flood control, this property will immediately become available for dedication to the Washoe County School District for a middle school or revert to open space.
  - d. If the detention basin is constructed, Washoe County shall pay fair market value for the property.
21. The increase in development-caused runoff from the 100-year storm, including drainages which run directly into the Steamboat Ditch, shall be detained/retained on-site because of the limited capacity of the flood control facilities in the area of South Virginia Street and the Steamboat Ditch Company. The County Engineer shall be responsible for determining compliance with this condition. *Exhibit J*
22. A geotechnical report shall be prepared, which considers the effects of earthquake forces and faulting in the area. The siting and design of detention/retention facilities shall be addressed based on the findings and recommendations provided in the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition. *Exhibit K*
23. The development shall comply with the requirements of the Hillside Ordinance of the Development Code, as applicable. The Department of Development Review shall be responsible for determining compliance with this condition. *Not Applicable*

WATER AND WASTEWATER

24. A schematic water system plan for the referenced proposal must be submitted to the Utility Division and the District Health Department. Prior to a final map approval, the plan must show that the water system will conform to the State of Nevada Water Supply Regulations, NAC Chapter 445, and the State of Nevada Regulations Governing Review of Plans for Subdivisions, Condominiums, and Planned Unit Developments, NAC 278.400 through 278.410. *Exhibit L  
Approved by  
Utility Division  
6/13/96*
25. Prior to the approval of the final Development Agreement, a complete water analysis from at least one monitoring well must be submitted to the District Health Department. The analysis must demonstrate the water conforms to the existing and proposed drinking water standards. *Submitted  
to Washoe  
County 5/96*
26. The developer shall utilize treated wastewater from the South Truckee Meadows Wastewater Treatment Plant. As part of the initial construction, the developer shall provide the necessary on-site easements needed to construct the infrastructure. When this resource becomes available to irrigate the golf course, the developer shall construct the necessary on-site infrastructure. The Utility Division shall be responsible for determining compliance with this condition. *Exhibit E  
Dev. Standards  
Handbook*

FIRE PROTECTION

27. If requested by the applicable fire protection agency, a minimum one-acre site for a fire station shall be offered for dedication prior to recordation of the first final map. The developer shall enter into talks with the applicable fire protection agency for any other requirements, such as, a fire station site, manpower and equipment needs, or for coordination with other developments that have similar requirements and the results of those discussions, as they relate to the entire project, shall be incorporated into the Development Agreement. *Exhibit E  
Dev. Standards  
Handbook*

PARKS/RECREATION/OPEN SPACE

28. An open space management plan and map shall be prepared that specifies the ownership of open spaces, type of uses allowed and who is responsible for maintenance. This plan shall address the provisions of Section 110.408.45 of the Development Code. Common areas shall be maintained by the homeowners association and provisions be made for perpetual funding for maintenance. *Exhibit G  
Open Space  
Management  
Plan*
- Prior to approval of the final Development Agreement, a government entity (e.g. United States Forest Service, Washoe County Parks Department, etc.) or a non-profit organization (e.g. Washoe Parks Foundation) shall be identified that will accept the dedication of the open space buffers identified on the Concept Plan, which consists of approximately 1,500 acres. The Parks and Recreation Department and the Department of Development Review shall be responsible for determining compliance with this condition.
29. The final Development Agreement shall include a provision for the public open space that prohibits the sale of any open space without the consent of Washoe County. The Department of Development Review shall be responsible for determining compliance with this condition. *Approved  
by Parks &  
Rec. on  
6/12/96*

- 30. A minimum 10-acre public park site shall be offered for dedication to the county. A sketch plan will be included in the final Development Agreement. The final park design shall be mutually agreeable to the county and the developer. The developer will construct the recreation facilities in the park and then be reimbursed for the cost of the construction from the Residential Construction Tax. The responsibility of park maintenance shall be negotiated by the developer and Washoe County prior to the approval of the final Development Agreement. The Parks and Recreation Department and Department of Development Review shall be responsible for determining compliance with this condition.
- 31. The developer will work with the Department of Parks and Recreation to locate the proposed regional public trails to the satisfaction of Washoe County and the developer. The Parks and Recreation Department and Department of Development Review shall be responsible for determining compliance with this condition.

Exhibit G

LANDSCAPING/ARCHITECTURAL DESIGN

- 32. Prior to approval of the final Development Agreement, the developer shall submit a Development Standards Handbook for the entire project to the Design Review Committee for its review and approval. These guidelines shall address, but not be limited to, type and color of building material, general architectural design, fencing, landscaping material (if plant material: type, size at time of planting, maturation size at full growth, period of time between planting and full growth), landscaping location, landscaping irrigation system, and financial assurances that landscaping will be planted and maintained.

Reviewed by  
DRC on  
May 9, 1996  
Conditionally  
Approved

The Design Review Committee shall also review the design of Whites Creek Lane, specifically to address Condition 19.c. for tentative maps. The Department of Development Review shall be responsible for determining compliance with this condition.

Design of Whites  
Creek has not  
been prepared.

Re: Southwest Pointe Development Agreement

Dear Don:

Enclosed please find the original Final Development Agreement with all "Developer" signatures, ready for execution by County officials after approval on July 23, 1996.

The agreement itself will not be recorded. The Memorandum Of Final Development (Exhibit "M") must be recorded after execution. Please either return Exhibit "M" to me for recordation or record and immediately transmit to me a conformed copy of Exhibit "M".

Sincerely,

ROBERT M. SADER

## VIII. DEVELOPMENT PROCESSING

### Relationship to Other Ordinances

The provisions of this Handbook will govern the development of Southwest Pointe. However, where the provisions of the Handbook do not address a specific subject, the provisions of the Washoe County Development Code (Chapter 110) or other ordinances governing the development of land shall prevail, subject to the provisions of the final development agreement.

### Amendments to the Development Standards Handbook

It is anticipated that this Handbook, as well as other portions of the Development Agreement, will need to be periodically amended and updated. Section 110.814.50 of the Washoe County Development Code allows the Development Agreement to be modified. Amendments are defined as modifications that are not in substantial compliance with the overall character and design of the project. Amendments must be approved by the Board of County Commissioners. Modifications that are in substantial compliance with the overall character and design of the project may be requested by Southwest Pointe Partners or its successor and approved by the Director of Development Review. The Director of Development Review will be responsible for determining whether or not a proposed modification is in substantial compliance with the overall project character.

Some examples may help to clarify the intent of the term substantial compliance. Modifications that would be considered to be in substantial compliance with the overall character of the project include changes to the building setbacks, modifications to the street standards, changes in fencing type and/or location, changes in the site plan or golf course routing plan, or changes to the phasing plan. Modifications that would not be in substantial compliance with the overall character of the project include a substantial reduction (i.e., 20 percent or greater) in the amount of open space identified in Table 1-1 on page 1-5 or changes of more than 10 percent in the number of lots in each category identified in Table 1-2 on page 1-5.

During the design and construction phase of the project, it will be the responsibility of Southwest Pointe Partners or its successor to initiate the amendment request. This responsibility will eventually be assumed by the Homeowners' Association.

### Approval Process

Tentative Maps, Final Maps and Special Use Permits - A statement of compliance must accompany all tentative map, final map and special use permits. (Refer to Appendices C and D.) The compliance statement for tentative maps and special use permits will be completed by the applicant and approved by Southwest Pointe Partners prior to an application being submitted to Washoe County. The statement of compliance for final maps is a checklist to ensure compliance with the Conditions of Approval. It will be completed by the applicant and submitted with all final maps. It does not need to be approved by Southwest Pointe Partners.

A completed tentative map application, accompanied by the statement of compliance, will be submitted to the Department of Development Review. The application will follow county's procedures outlined in Article 608 of the Washoe County Development Code. The tentative map will be presented to the Southwest Truckee Meadows Citizens Advisory Board by Southwest Pointe Partners or their representative. The Director of the Department of Development Review has the authority to approve, conditionally approve, or deny the tentative map. The decision of the Director may be appealed to the Planning Commission by Southwest Pointe Partners or their representative within the time frames outlined in Article 608.

Building Permits - Design review will be required of each Lot Developer. Southwest Pointe Partners will provide each Lot Developer with a copy of the approved Development Standards Handbook and CC&Rs. These documents should be reviewed carefully by each Lot Developer.

The Architectural and Landscape Control Committee (ALCC) will review all preliminary and final construction drawings for structures and landscaping prior

to their submission to Washoe County. The purpose of this initial plan review is to insure compliance with the Development Standards Handbook and the CC&Rs. Any development plans submitted to Washoe County must be accompanied by verification from the ALCC stating that the plans have been approved by that Committee. Minor variations from the Development Standards may be approved by the ALCC providing that these variation are in conformance with county regulations and the intent of these Development Standards.

Approval by the ALCC does not imply that the plans are in compliance with all applicable county codes, ordinances, or other regulations. Each Lot Developer is responsible for submittal and processing of all plans and permits required by the county prior to the commencement of construction.

Once residential construction has started, Southwest Pointe Partners or its successor will be responsible for preparing a quarterly report indicating the number of building permits issued and explaining other building activity. (Development Agreement Condition #7.)

### Financial Assurances for Development of Property

Financial assurances for the construction of capital improvements shall be provided as required by Washoe County Code or pursuant to subdivision improvement agreements under tentative maps, subject to the provisions of the final development agreement.

Re: Amendment Clause To Southwest Pointe Development Agreement

Dear Don:

Enclosed please find a new Subsection 5.2 of the agreement to deal with minor amendments. I agree with Brita that administration of a large project permitted by a development agreement will be unduly restricted if the developer and staff cannot deal with minor amendments in some fashion other than the involved process provided by NRS Chapter 278. The need for such changes will invariably occur in a project this big.

I thought a "substantial compliance" standard would be better than a "minor/major" guideline, since staff is used to using it in regards to subdivision changes on final maps.

Sincerely,

ROBERT M. SADER

RMS/mw

exact location and parcel configuration shall be mutually agreed by the parties. The deed for the fire station site shall restrict use to a fire station and ancillary purposes. Owners and representatives of the Nevada Division of Forestry have entered into discussions regarding the free dedication of the fire station site and other possible needs for fire protection, and no other commitments were made except Owner's agreement herein to dedicate the fire station site.

**5. TERM OF AGREEMENT AND AMENDMENTS.**

**5.1 Term.** The term of this Agreement shall be fifteen (15) years from the date hereof; provided that all applicable terms of this Agreement shall remain binding and enforceable regarding permits, construction or development on any portion of the Real Property subject to a tentative map, a recorded final map or a special use permit in existence at the time of expiration of this Agreement.

**5.2 Amendments.** Amendments to this Agreement shall be defined as changes which are not in substantial compliance with the overall Project character and design. Amendments, if any, shall be approved as provided in NRS 278.0205. Changes hereto which are in substantial compliance with the overall Project character and design may be requested by Owners and approved or denied by the Director of Development Review. The Director of Development Review shall also decide whether or not a proposed change is in substantial compliance with the overall Project character or design. The Owners may appeal an adverse decision by the Director of Development Review under this Subsection 5.2 to the Board Of County Commissioners by written notice filed with the Director of Development Review, if filed within twenty (20) days of receipt of the notice of the adverse decision.

### III. SITE DEVELOPMENT GUIDELINES & STANDARDS

The purpose of the site development guidelines is to present methods for integrating homes into the natural setting through sensitive design. These guidelines are intended to apply to individual residences; whereas, the guidelines presented in the previous chapter apply to community buildings and other features.

#### Building Setbacks

Each residential lot will have building setbacks that define where and how structures can be built. The underlying objective is to encourage articulated building forms, one- and two-story massing, unobstructed views, privacy, and varied setback on the street, golf course, and between residences. The minimum setback and yard dimensions are described below:

Lot Size	Front Yard	Side Yard	Back Yard
1 acre +	30'	12'	30'
1/2 acre +	25'*	10'	20'
12,000 sq. ft.	20'	8'	20'

\* Reduced to 20' with side-entry garage.

Projections, such as chimneys, covered porches, decks, roof overhangs, canopies, eaves, or other similar architectural features may extend into a required side, front, or back yard setback not to exceed 2 feet. Some lots may have varying setbacks which relate to unusual property features or configuration and these will be specified by the Residential Lot Declarations. Detached garages are allowed on one acre and larger lots and must be located behind the required front yard setback.

Setbacks from potentially active fault traces have been recommended by the geotechnical engineers. The fault traces that were trenched and staked are judged to be fault traces having relatively high risk of ground rupture during an

earthquake. Buildings for human occupancy should not be sited over these faults and a setback is recommended for each side of the fault. The setbacks for each surveyed fault are shown on the site plan and will be identified on tentative and final maps.

### Minimum Lot Width

All residential lots shall comply with the following minimum average width requirements: 1 acre and larger lot, 120 feet; 1/2 acre to under 1-acre lots, 100 feet; and 12,000 square foot lots, 80 feet.

### Grading, Drainage, and Erosion Control

All construction will require some resculpting of the earth's surface. However, the placement of the home, driveway, and other site elements should minimize disruption of the natural topography as much as possible. Where grading is required, the slopes will be gently rounded to blend into the natural contours of the land. Site grading design should also complement and reinforce the architectural and landscape character by screening undesirable views of parking and storage areas and by helping to reduce the perceived height and mass of the architecture.

- All slopes flatter than 2.5:1 will be revegetated.
- All slopes steeper than 2.5:1 will be mechanically stabilized, probably with native rock riprap.
- Cut/fill slopes will generally be less than 10 feet in height and a landscape treatment will be provided (i.e., seeding with native grasses and shrubs). Although none are anticipated, if there are slopes greater than 30 feet in height, benching will be provided. Trees and shrubs will be planted along the toe of the slope and the benches.
- Slopes shall be contoured to appear natural. Slopes will undulate and meander to avoid long continuous horizontal conditions or flat planes. Landscape pockets consisting of native vegetation and rocks shall be

placed along visible slopes. Landscape pockets will occupy at least 10 percent of the disturbed area. Slopes 5 feet or less in height are exempt from this landscape requirement.

The individual lot purchaser or builder will present drawings to the ALCC for review that are creative and sensitive as to the individual footprint, setting on the lot, and natural grade. To minimize grading, the house pad should step down the hillside rather than sitting on a flat plane. The builder/architect is encouraged to minimize the amount of grading on each lot. This same concept should be carried forth in the design of the hardscape and landscape areas adjacent to the building structure. Every effort should be made to achieve a final design which fits the shape of the lot and the land around it.

The control of water run-off and potential erosion should be a consideration both during construction and in the final design of the home site. Natural surface drainage patterns should be preserved whenever possible. Avoid concentrating surface drainage to reduce the erosion potential.

The preservation of existing vegetation cover minimizes the potential for erosion. Construction equipment should be limited to areas intended for specific site improvements in order to minimize damage to existing vegetative cover. Protective temporary fencing shall be placed around areas to remain undisturbed. A program of temporary erosion control should be put into effect immediately after site grading is complete. This program should include at least one of the following techniques for stabilizing soil and preventing wind and water erosion: hydro-mulching, wood chip mulch, netting, straw mulch, gravel mulch (suited to vehicle paths), or tacking agents. A program of permanent erosion control measures would, at a minimum, include slope stabilization structures (retaining walls, slope terraces), runoff control structures (diversion dikes, infiltration trenches), or runoff collection features (retention basins, catch basins). (Revegetation and erosion control are also discussed in Chapter V, Landscape Design Guidelines).

Streams and surface water features will be protected against sediment buildup through the use of best management practices in accordance with the current Lake Tahoe Basin Water Quality Management Plan, Best Management Practices.

Dust control methods will comply with the requirements of the Washoe County District Health Department, Air Quality Management. A detailed dust control plan must be prepared prior to issuance of a grading permit for the golf course or approval of a final map (Tentative Map Condition #49 and Special Use Permit Condition #18). The dust control plan will address phased grading and stabilization methods including revegetation, application of palliatives, street cleaning, and dust controls on any storage piles located on the site.

**Production Lot Grading** - For residential neighborhoods designated as production lots (mostly 12,000 square foot and some 1/2 acre lots), the lots shall be mass graded. Pads for housing construction will be essentially level with street grades for a distance of 20-40 feet behind the house. All lots within cut areas, and most lots in fill areas, will be graded to drain to the street. On some fill lots, it may be beneficial to design rear yard drainage to reduce the extent of the fill. In a typical situation, the top or toe of any backyard slopes will be approximately 100-120 feet into the lot from the street. Assuming the existing ground has an average 6 percent slope, the typical cut or fill at the worst location would be 6 to 7 feet. (Refer to Figure 3-1.)

**Custom Lot Grading** - For neighborhoods designated as custom lots (all 1 acre and some 1/2 acre and 12,000 square foot lots), the lots will not be mass graded, only streets will be constructed as described above. Custom lots will be sold to the individual buyers. It will be the responsibility of each buyer to design and construct a house that fits on the lot with a minimal amount of grading. For custom lots where the existing slope is in the 6 to 8 percent range (or less), similar techniques to the level-pad concept described for production lots could be utilized. Also, small landscape retaining walls could be used to reduce the cuts and fill. For lots where the existing ground exceeds 8 percent and cuts/fills may be in excess of 10 feet, a better approach is to use a split level, or daylight basement, house design. Generally a single split in a house can offset a 9-foot elevation change in grade. (Refer to Figure 3-1.)

TYPICAL GRADING FOR PRODUCTION LOTS

TYPICAL GRADING FOR CUSTOM LOTS  
NOT TO SCALE ( VERTICAL SCALE EXAGGERATED )

FIGURE 3 - 1  
RESIDENTIAL LOT GRADING

### Driveways and Parking

To create a streetscape that blends with the rural setting, driveway widths should be minimized. Slopes on driveways will not exceed 14 percent. Provide culverts for driveways that cross landscaped drainage swales. Circular drives may be allowed on 1-acre lots. Large expanses of asphalt or gravel are discouraged, as are large areas of untextured and uncolored concrete. Dirt parking areas on residential lots is prohibited. The visual impacts of paved areas will be reduced by tucking them into the topography and/or screening with landscaping.

On-street parking is prohibited throughout Southwest Pointe. Each lot must provide off-street guest parking to accommodate two cars. Additionally, the Conditions of Approval (Tentative Map Condition #34) require that guest parking be provided within 500 feet of homes that have lots ranging in size between 12,000 square feet and 1/2 acre. One space shall be provided for every three homes. The parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the tentative map.

### Auxiliary Structures and Site Utilities

Auxiliary structures, such as gazebos, utility sheds, etc., must be designed in a manner that is integrated with the main structure and harmonizes with the natural setting. Auxiliary structures should be situated so as not to interfere with the views and enjoyment of adjacent properties. Plans for such structures must be submitted to the ALCC for review and approval.

All solar and mechanical equipment must be screened. All utility meters and appliances must also be screened. Trash and utility areas shall be located to avoid direct views from streets or adjacent properties. These areas should be enclosed with fencing or screens that match residential architectural detailing and materials.

## Fences and Walls

Appropriate design and placement of fences and walls on residential lots is important in maintaining a high quality, rural atmosphere. It is essential that the materials, patterns and textures complement the surrounding architecture wherever possible.

Perimeter lot fencing is the same type of fencing as the community screening fence shown in Figure 2-6. The fence is 5 to 6 feet tall with or without stone pilasters. Fencing is either metal balusters or wood members. All exposed wood surfaces will be lightly stained or treated with preservatives for longevity. When a change in elevation occurs, the wall or fence should be stepped in equal intervals. Plant materials or berming will be used to soften a continuous wall or fence. All fencing must be submitted to the ALCC for review and approval. The proposed locations for lot perimeter fencing are shown on a separate exhibit within the Final Development Agreement -- Exhibit F, Sheet 1 entitled Site Plan Layout.

Perimeter lot fencing in neighborhoods that are anticipated to be production lot sales (e.g., Neighborhood A) will be mandatory and will be installed by the home builder prior to issuance of a certificate of occupancy. This fencing can either be the 5-6 foot high screen fence or the 3-foot high split-rail fence <sup>but</sup> the perimeter fencing type must be consistent throughout the neighborhood.

In neighborhoods that are planned to be custom lot sales, two different situations arise. The first involves perimeter lot fencing that is visible from adjacent existing and planned developments (e.g., Neighborhoods E, F, G and L). In those cases, the perimeter fencing will be the 3-foot high split-rail fence. This fence is mandatory and will be installed by the homeowner prior to issuance of a certificate of occupancy. The second situation involves perimeter fencing that is not visible from adjacent development (e.g., Neighborhood DD, X). In those instances, perimeter lot fencing is optional and can be either the split-rail fence ~~or~~ or the screen fence.

Special consideration will be taken when installing walls so as not to obstruct views from adjacent homes. Any privacy walls and fences will be installed by the homeowner or builder and maintained by the homeowner.

When retaining walls are necessary, they should become an integral part of the design, not an afterthought. The use of several 2- or 3-foot high walls rather than a single taller wall is encouraged. No single retaining wall shall exceed 5 feet in height. Not only should the retaining walls be designed with careful consideration for strength and provisions for surface and underground drainage, but they should be configured to sensitively fit with the natural terrain and be constructed or faced with materials that blend with the setting.

Freestanding walls are appropriate when used as an extension of the residence, to define key outdoor spaces, and to protect from climatic extremes. Wall materials shall be consistent with or compliment the architectural style of the house.

### Exterior Lighting

All exterior lighting must be approved by the Architectural and Landscape Control Committee. Homeowners are encouraged to utilize landscape lighting -- to subtly highlight unique architectural features, trees, and focal landscape areas. Lighting levels should also be provided which insure safe passage along walks to building entries. Lighting of patio and deck areas to provide for nighttime usage is also allowed.

Landscape lighting should be integrated into the overall design of the site. Downlights can be recessed into arbors and soffits. Ground-mounted landscape bollards may also be used. Pole lights and monoliths with lights higher than 48 inches are not allowed. Light sources should not be directly visible. Light trespass and glare onto adjacent properties is not allowed. Lighting should endeavor to highlight special features and use areas rather than a uniform glow across the property.

### Energy Conservation

All residential units shall include site design and building design or construction features and devices which promote the conservation of energy. Measures encouraged in the design of all residential structures are:

- Double glazing.
- Size and placement of windows and other major openings shall take into account prevailing breezes during the summer season and protection from stronger winds during the winter season.
- Appropriate design features to deflect sunlight or allow it to enter the residence, depending on seasonal needs.
- Strategically locate and select plant materials in areas adjacent to the residence to reduce temperature buildup and sun penetration during the summer season.

Building construction requires sufficient insulation and insulated glass to meet State of Nevada energy standards. Other building construction energy conservation features are encouraged, such as high efficiency mechanical equipment, high efficiency glass (non reflective), etc.

Mr. Dave Price, P.E., County Engineer  
Washoe County Department of Public Works  
P.O. Box 11130  
Reno, NV 89520

**Subject: Seismic Related Recommendations for  
Earthen Retention and Detention Structures  
Southwest Pointe  
Washoe County, Nevada**

**Reference: "Geotechnical Investigation, Southwest Pointe, Phase I, Reno,  
Nevada," by Harding Lawson Associates, dated August 16, 1993**

Dear Dave,

This letter addresses Condition 22 of the Conditions of Approval for Southwest Pointe (Case No. DA9-1-93). Condition 22 reads:

"A geotechnical report shall be prepared, which considers the effects of earthquake forces and faulting in the area. The siting and design of detention/retention facilities shall be addressed based on the findings and recommendations provided in the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition."

The development will involve construction of a golf course which will include numerous excavated ponds and ponds behind earthen dikes. Harding Lawson Associates performed a geotechnical investigation/geologic fault study in order to identify and locate active faults at the site. Several active faults do trend through the project site. We understand that the building setbacks shown on numerous project documents were established by the above referenced report.

With regard to the seismic-related recommendations for earthen retention/detention structures, we recommend that these improvements meet the following criteria:

- Where ponds and lakes are constructed in a cut situation, no special considerations shall apply.

DSG  
6/6/96

- Where ponds and lakes are constructed in a fill situation by use of a berm or embankment and all portions of the berm or embankment are outside designated earthquake fault setback zones, then no special considerations shall apply.
- Where detention facilities (temporary storm water storage) are constructed in a fill situation by use of a berm and are located within a designated earthquake fault setback zone, the height of the berm within the setback zone shall not exceed 4 feet and the detention volume shall not exceed 3 acre-feet.
- Where a pond or lake is designed to permanently hold water (retention), is constructed by a berm in a fill situation, and portions of the berm are within designated earthquake setback zones, special design considerations shall apply. Consideration shall be given to the life safety issue downstream of the retention facility. A hydraulic analysis shall be prepared by a Nevada licensed civil engineer to demonstrate that in the event of a failure of the berm, as a result of fault rupture, downstream flow channels shall have adequate capacity to handle the resultant flow. No residential structures shall be located downstream in the flow path of a potential breakout.

The intent of this recommendation is to limit, but not eliminate, damage which could occur as a result of fault movement under the earthen dike.

We trust this provides the information you need at this time. If we can be of further service, or if you have any questions regarding this letter, please contact the undersigned in our Reno office.

Very truly yours,

KLEINFELDER, INC.

Neighborhood Park.....	2
Multi-Purpose Trails.....	4
Open Space.....	7
 <b>Figures</b>	
Conceptual Park Plan.....	3
Trail System.....	5
 <b>Appendix</b>	
Letter from Washoe County Dept. of Parks and Recreation .....	A-1

## Open Space Management Plan

This plan has been prepared to comply with the Conditions of Approval for Southwest Pointe (Case No. DA9-1-93). Specifically, the following conditions are relevant:

28. Prior to the approval of the final development agreement, an open space management plan and map shall be prepared that specifies the ownership of open spaces, type of uses allowed, phasing of open space dedication, phasing of trail construction and who is responsible for maintenance. This plan shall address the provisions of Section 110.408.45 of the Development Code. Common areas shall be maintained by the homeowner's association and provisions be made for perpetual funding for maintenance. Prior to approval of the final development agreement, a government entity (e.g., United States Forest Service, Washoe County Parks Department, etc.) or a non-profit organization (e.g., Washoe Parks Foundation) shall be identified that will accept the dedication of the open space buffers identified on the Concept Plan, which consists of approximately 1,500 acres.
29. The final development agreement shall include a provision for public open space that prohibits the sale of any open space without the consent of Washoe County.
30. A minimum 10-acre public park site shall be offered for dedication to the county. A sketch plan will be included in the final development agreement. The final park design shall be mutually agreeable to the county and the developer. The developer will construct the recreational facilities in the park and then be reimbursed for the cost of the construction from the Residential Construction Tax. The responsibility of park maintenance shall be negotiated by the developer and Washoe County prior to the approval of the final development agreement.
31. The developer will work together with staff from the Department of Parks and Recreation to locate the proposed regional public trails to the satisfaction of Washoe County and the developer.

This Open Space Management Plan has been prepared to address these conditions. This document was approved by Karen Mullen, Assistant Director of the Washoe County Department of Parks and Recreation. (Refer to attached letter.)

## Neighborhood Park

A neighborhood park is planned near the entrance to Southwest Pointe. As shown in Figure 1, the park will be constructed on the south side of Whites Creek Lane and on the east side of Thomas Creek. If the Washoe County Parks Commission and the Board of County Commissioners will allow the developer to construct the park pursuant to a construction and dedication agreement acceptable to the county and the developer, then the park will be dedicated to Washoe County after the improvements have been completed; however, the land will be placed in escrow prior to commencement of construction. Southwest Pointe Partners or its successor will be reimbursed for the cost of the improvements from fees collected in Southwest Pointe from the Residential Construction Tax. All funds collected from the Residential Construction Tax from this project will be dedicated to reimbursement of the developer to the extent of the costs incurred, subject to the limitations of NRS Chapter 278.

It is important to ensure that recreational facilities are developed in a time frame that coincides with the demands created by development. A construction agreement will be negotiated and construction on the neighborhood park will commence at approximately the time of issuance of the 400<sup>th</sup> building permit and the park will be completed prior to issuance of the 650<sup>th</sup> building permit. Southwest Pointe Partners or its successor will be responsible for preparing a parcel map or final map to create the park parcel.

A conceptual plan of the park is presented in Figure 1. The park is located on the east side of Thomas Creek and on the south side of Whites Creek Lane. This segment of Whites Creek Lane is a public road. The park consists of approximately 15 acres. The area to the east is generally undeveloped with the developed portion of the park located on the western half of the site to take

RE: Southwest Pointe  
Railroad Flatcars for Use as Roadway Bridge Structures

Dear Mr. Sprague:

We have reviewed your submittals which propose to incorporate used railroad flatcars as the superstructure of roadway bridges designed for standard HS-20 loadings.

Review of the submittals shows that there are no guarantees of the structural strength/fatigue life of the steel members comprising the flatcar, i.e.:

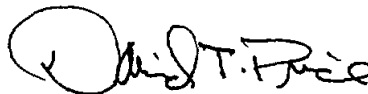

1. "All flatcars sold "AS IS", without warranty as to condition of flatcar or fitness of flatcar for buyer's intended use" (from Skip Gibbs, supplier's letter).
2. "The railcars will be removed directly from service as railcars, and existing condition of the railcars will be GENERALLY reviewed VISUALLY by Morris Engineering personnel..." (from Morris Engineering Page 2 of 10).
3. "The bridge is expected to be designed generally based on AASHTO Bridge Design standards as they apply to railcar bridge design...." (Morris Engineering Page 4 of 10).

We expect that the fatigue life of used flatcars could be limited because a) improper loading, both total load and unbalanced loadings on the car, could result in partial failure of steel members, b) dynamic loading from passing over rail joints can cause member damage, and c) we understand older cars were not constructed to current standards. A survey of flatcar use in Nevada shows that they have been used for canal crossing and that there was a failure in the Fallon area due to concrete truck loadings.

RE: Southwest Pointe  
Railroad Flatcars for Use as Roadway Bridge Structures  
June 12, 1996  
Page Two

Washoe County requires that subdivision bridge structures have life and safety expectations that can be provided by both current design standards and new material properties. We expect that, even if all critical members, welds and other connections could be tested, the members of a used flatcar will not compare to the strengths and fatigue life of a bridge constructed with new materials which can be shown by appropriate laboratory testing to be in compliance with standard materials specifications.

Based on the above, the use of railroad flatcars as a portion of a roadway bridge superstructure is not approved. Please call if you have any questions about these findings.

RE: Inventory of the Dry Creek Fan, Southwest Pointe Project, Dingman Investments, Carson Range at Mount Rose Fan, Washoe County.

Dear Mr. Young:

The Nevada State Historic Preservation Office (SHPO) reviewed the cultural resources inventory report. The SHPO concurs with the consultant's recommendation that the following sites are not significant:

26Wa5894	26Wa5895	26Wa5898	26Wa5899
26Wa5900	26Wa5902	26Wa5903	26Wa5904
26Wa5905	26Wa5906	26Wa5910	26Wa5911
26Wa5912	26Wa5916	26Wa5917	26Wa5918
26Wa5919	26Wa5920	26Wa5922	26Wa5925
26Wa5926	26Wa5927	26Wa5930	26Wa5931
26Wa5933	26Wa5934	26Wa5935	26Wa5936
26Wa5938	26Wa5939	26Wa5940	26Wa5941
26Wa5942	26Wa5945	26Wa5951	26Wa5952
26Wa5953	26Wa5954	26Wa5955	26Wa5956
26Wa5957	26Wa5958	26Wa5959	26Wa5960
26Wa5961	26Wa5962	26Wa6065	

Mr. Don Young, AICP  
June 11, 1996  
Page 2 of 3

The SHPO concurs with the consultant's recommendation that the following sites are regionally significant:

26Wa5897	26Wa5908	26Wa5914
*26Wa5915	*26Wa5923	26Wa5924
26Wa5928	26Wa5929	26Wa5937
26Wa5949	26Wa5950	#26Wa99
#26Wa2012	#26Wa3124	#26Wa3125

\*Site contains a non-significant historic component.  
#Previously-recorded site.

The consultant determined that these sites contains data that could address regional research questions concerning prehistoric resource procurement, cultural adaptations and change, and ecological diversity outlined in the research design for the Southern Truckee Meadows Prehistoric Archaeological District (Elston et al. 1995). In addition, some of these sites contain petroglyphs. Such features have long been recognized as important features in the aesthetic, cultural, and ritual life of the Native American groups that created them. As a result, the SHPO concurs with the consultant's finding that the sites are regionally significant.

The consultant has deferred their recommendations for the following sites, pending further study:

*26Wa5986	26Wa5901	*26Wa5907
26Wa5909	*26Wa5913	26Wa5921
26Wa5932	*26Wa5943	26Wa5944
26Wa5946	26Wa5947	26Wa5948

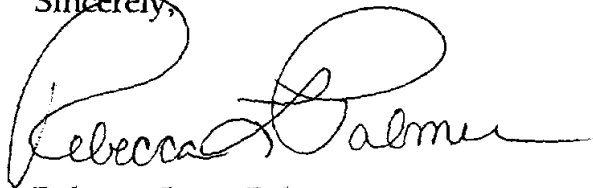

\*Site contains a non-significant historic component.

The SHPO thanks you for providing us with an opportunity to comment on this inventory.

RE: Southwest Pointe Subdivision  
Tentative Map Condition No. 21 - Thomas Creek Road Structural Section  
Evaluation

This letter serves as our evaluation of the Geotechnical Investigation Report prepared by Kleinfelder dated May 7, 1996. A purpose of the Kleinfelder geotechnical investigation was to evaluate the load supporting capability of any existing County roadways proposed as truck routes (Condition No. 21). The Kleinfelder report in part states that the portion of Thomas Creek Road north of Saddlehorn Drive is essentially failed and projected construction traffic will have minimum adverse impact on this section of roadway. Our response to these findings are as follows:

## **PAVEMENT CONDITION INDEX (PCI)**

The PCI rating system (Paver Program) is Washoe County's standard procedure for evaluating the remaining life of asphalt pavement and is in common use by agencies throughout the country that are responsible for pavement maintenance. A pavement rating survey performed in May 1996 resulted in a PCI of 67 for the subject section of Thomas Creek Road between Saddlehorn Drive and the north boundary of the Saddlehorn Subdivision, and a PCI of 95 for the section of Thomas Creek Road south of Saddlehorn Drive. A PCI of 40 or less represents failure under the paver rating system.

Based on a PCI of 67 (67 falls within the paver classification system good range) inclusion of the roadway section in the County's overlay program would not be considered again until 1999, when the alligatored portions would be removed and patched, and the entire section sealed. We expect this would provide a life of 5 years before further maintenance would be required (a 2 inch overlay).

RE: Southwest Pointe Subdivision  
Tentative Map Condition No. 21 - Thomas Creek Road Structural Section Evaluation  
June 12, 1996  
Page Two

### **PAVEMENT LIFE**

Based on the above PCI analysis the existing pavement has about three years useful life (assuming normal, nonconstruction traffic loadings) and perhaps another 8 years of life, prior to overlay, assuming minor maintenance is performed in about 3 years. We cannot, therefore, agree with Kleinfelders statement that "the section of Thomas Creek Road north of Saddlehorn Drive to the Saddlehorn Subdivision boundary is essentially failed under current and past traffic," and "requires extensive rehabilitation and/or reconstruction". It is our opinion that the construction traffic loads will accelerate the normally expected maintenance schedule (as discussed above) such that significantly more alligatored areas will appear and thus could require the County to remove all the pavement and perform a total reconstruction of the pavement within three years.

The subject portion of Thomas Creek Road was constructed in 1989 with an expected design life of 20 years. Although there are some locations which are alligatored (reaching failure or in a poor condition, i.e., PCI = 40 or less, we feel with proper maintenance such as crack sealing, removal of alligatored areas and patching, and slurry or chip sealing that 5 to 7 more years can be gained prior to placing a two inch (2") overlay. With these treatments we therefore expect that the 20 year design life can be achieved before a total reconstruction is required. This assumes normal traffic loadings over the pavement life.

### **CONCLUSIONS**

As shown by the PCI survey, the section of Thomas Creek Road between the northern Saddlehorn Subdivision boundary and Saddlehorn Drive has considerable service life remaining prior to requiring reconstruction.

We expect, however, that the construction truck loadings will eliminate the possibility of achieving the 20 year design life as discussed above, and that a total reconstruction, or at least an overlay with alligator area removal, would be required after the proposed hauling activities to Southwest Pointe Subdivision are completed.

RE: Southwest Pointe Subdivision  
Tentative Map Condition No. 21 - Thomas Creek Road Structural Section  
Evaluation

June 12, 1996

Page Three

To remedy this situation we require the following in order to strengthen the structural section prior to use as a haul route:

1. Remove all existing alligatored areas including any base areas which are found to have an over optimum moisture content.
2. Prevent median irrigation water from saturating the base materials.
3. Patch the removed areas.
4. Place a one inch (1") thick overlay on the entire section of Thomas Creek Road between Saddlehorn Drive and the northern boundary of the Saddlehorn Subdivision.
5. Washoe County Road Division would perform Items 1 through 3 above and any other pavement preparations needed prior to placing the overlay.
6. Southwest Pointe would be responsible for the one inch overlay.

Sincerely,

---

WASHOE COUNTY  
DEVELOPMENT REVIEW

Bob Katai  
Department of Development Review  
Washoe County, Nevada

I, Judi Bailey, County Clerk and Clerk of the Board of County Commissioners, Washoe County, Nevada, do hereby certify that at a regular meeting of the Board of County Commissioners held on June 11, 1996 Chairman Bradhurst issued the following order:

**96-535            DEVELOPMENT AGREEMENT CASE NO. DA9-1-93 -**  
**SOUTHWEST POINTE/REDFIELD LAND COMPANY**  
**APN: (49-010-04, 49-010-10 AND 41-030-12)**

**7:00 p.m.** This was the time set in Notice of Public Hearing mailed to all affected property owners on May 29, 1996 and published in the Reno-Gazette Journal on May 31, 1996 to consider the recommendation of the Washoe County Planning Commission to conditionally approve Amendment to Development Case No. DA9-1-93 for Southwest Pointe which agreement facilitates the development of a residential community including 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities, a day care facility, an equestrian center, and a commercial village center. The amendment allows the applicant to modify portions of the agreement pertaining to streets, access, drainage, parks and other portions. The total acreage of the project is  $\pm 3,171.6$  acres and located north of Mount Rose Highway (SR 431) and west of Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR), and General Rural (GR), in the Southwest Truckee Meadows Area Plan and is situated within portions of Sections 3, 10, 13, 14, 15, 22, 23, 24, 26, and 27, T18N, R19E, MDM, Washoe County, Nevada. Proof was made that due and legal notice had been given.

Bob Katai, Department of Development Review, reviewed history of the project and proposed amendments to the Development Agreement submitted by the applicant, advising that the amendments are modifications to the conceptual plan adopted as part of the preliminary development agreement. He further advised that the applicant had requested that the percentage of 12,000 square-foot lots increase up to 50% of the lot totals; that the percentage of lots between one-half and one-acre increase up to 40%; that the applicant's current proposal is that no more than 40% of the lot mix to be 12,000 lots; that no more than 35% of the lot mix being half-acre to one-acre lots; that the remaining

lots are one acre or greater; that the original lot number of 1,090 has not been increased; that smaller lots would allow reconfiguration of the golf course and increase open space areas; and that smaller lots would not increase the density of the project.

Chairman Bradhurst opened the public hearing and called on those wishing to speak.

Brita Tryggvi, CFA, Inc., representing applicant, discussed a comparison between the conceptual plan presented to the Board in 1993 and the proposal being presented today. She reviewed maps illustrating the changes and stated that the difference in the lot mix is due to an increase in the number of half-acre lots and a decrease in the number of one-acre lots; that the revised proposal leaves the number of 12,000-square-foot lots the same; that they are still planning an elementary school site, a potential middle school site, a community park, and a fire station site; that the main entry road is proposed to become private at Thomas Creek; that vehicular access would be slightly reduced; that access to the public will not be reduced; and that it is intended that the public have access to the trail system to the project along the roadways; and that they have always proposed connections for the regional trail system and that would remain unchanged. Ms. Tryggvi further advised that they are proposing a gate or a gate house to the development; that the road becomes private at the creek; and that they have met with the Nevada Division of Forestry, the agency responsible for fire protection in this area and this proposal complies with their requirements for a 20 foot area that is clear and unobstructed.

Mike Mohler, Project Manager, stated that they are unclear whether they will be constructing gates to the development; and that they are utilizing this concept in the initial sales phase of the project.

Russ Carpenter, a resident of Pleasant Valley and Chairman of the Mt. Rose/Geiger Grade Citizens Advisory Board, spoke in opposition to the gate concept stating that the neighborhood has not reached a point where gated communities are necessary.

There being no one else wishing to speak, Chairman Bradhurst closed the public hearing.

Mr. Katai advised that the Southwest Truckee Meadows Citizens Advisory Board has recommended approval of amendments to the Development Agreement.

Chairman Bradhurst stated that with two public golf courses and a possible commercial area, it would be difficult to have a gate operation; that it may be used for marketing purposes initially, but if the intent is to encourage individuals to use the golf courses, a gate could be a detriment.

Ms. Tryggvi explained that conditions of approval allow retention of public access to the golf course; that public access to the trails and non-residential uses will all be retained; that the original plan, off the primary loop road, included several gates; and that they have now opted for one gate location.

Following discussion, on motion by Commissioner Sims, seconded by Commissioner Mouliot, which motion duly carried, Chairman Bradhurst ordered that Amendment to Development Agreement Case No. DA9-1-93 for Southwest Pointe/Redfield Land Company be approved subject to the following Development Agreement conditions and the Template conditions:

**CONDITIONS  
for  
DEVELOPMENT AGREEMENT CASE NO. DA9-1-93  
for  
SOUTHWEST POINTE**

**UNLESS OTHERWISE STATED, PRIOR TO APPROVAL OF THE FINAL DEVELOPMENT AGREEMENT, ALL CONDITIONS MUST BE MET. A COPY OF ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL BE FILED WITH THE DEPARTMENT OF PUBLIC WORKS AND/OR DEPARTMENT OF DEVELOPMENT REVIEW.**

**COMPLIANCE WITH THE APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES AND WITH THE CONDITIONS OF APPROVAL OF THIS TENTATIVE MAP IS THE RESPONSIBILITY OF THE DEVELOPER, ITS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY, AND THEIR SUCCESSORS IN INTEREST.**

GENERAL CONDITIONS

1. Unless specifically stated in the final Development Agreement, all uses, densities and standards shall be consistent with the Washoe County Development Code and with the goals and policies in the Comprehensive Plan and the Southwest Truckee Meadows Area Plan. Unless specifically stated in the final Development Agreement, the allowed uses, densities, and standards of the land subject to the Development Agreement shall be those in effect at the time the final agreement is approved.
2. The final Development Agreement shall specify any time frames that have been extended beyond those specified by Washoe County Code or Nevada Revised Statutes. The Department of Development Review shall be responsible for determining compliance with this condition.

3. A "statement of compliance" format or formats for both residential and non-residential projects shall be made a part of the final Development Agreement. The Department of Development Review shall be responsible for determining compliance with this condition.
4. The developer and all successors shall direct any potential purchaser of the site, or portions thereof (other than individual single-family lots), to meet with the Department of Development Review to review the Development Agreement and the conditions of approval prior to the final sale of the site. Any subsequent purchasers of the site shall notify the Department of Development Review of the name, address, telephone number, and contact person of the new purchaser within 30 days of the final sale.
5. Prior to submittal to the Washoe County Board of County Commissioners, the final Development Agreement shall be reviewed and approved by the Office of the District Attorney of Washoe County.
6. The final Development Agreement will be submitted to the Washoe County Board of County Commissioners within three months of submission of a completed agreement with all accompanying exhibits, provided the Department of Development Review does not delay the submission in order to approve provisions of the agreement to its satisfaction. Extension of any of these time frames may be requested if mutually agreeable to Washoe County and the developer.
7. The developer shall provide the Department of Development Review staff with a quarterly report indicating the number of building permits issued and other building activity, once residential construction has started.
8. The developer shall define a process to ensure that the maintenance and replacement of the streets, parking areas, lighting, landscaping, recreational facilities, utilities, and other private infrastructure shall be performed by the homeowners associations and shall be perpetually funded. The County Engineer and the Department of Development Review shall be responsible for determining compliance with this condition.

#### STREETS AND TRAFFIC

9. A Level of Service C, or the current Washoe County standard, shall be used as a basis for evaluating transportation needs and traffic impact mitigation requirements.
10. The final Development Agreement shall not be approved until the right-of-way (ROW) of all necessary off-site accesses from the project to Thomas Creek Road are obtained. Preliminary golf course and roadway grading may commence before such approval has been obtained so long as such construction is done in accordance with Condition 21 for tentative maps. An approved and recorded ROW document shall be provided to the County Engineer and the District Attorney's Office.

11. Prior to final approval of the Development Agreement, the developer for Southwest Pointe shall petition the Washoe County Board of County Commissioners to create a Special Assessment District for the purpose of financing the construction of Whites Creek Lane from the project site to Wedge Parkway and other roads as defined in the SAD agreement. In the event that a special assessment district is not created, the developer shall construct Whites Creek Lane, as outlined in Conditions 17 and 19 for tentative maps, from the project site to Wedge Parkway. The County Engineer shall be responsible for determining compliance with this condition.
12. A Construction Traffic Haul Route Plan shall be submitted to the County Engineer for review and approval. The primary construction haul route shall be Whites Creek Lane. However, as part of Phase I development, Zolezzi Lane may be used, for construction mobilization only, for completion of the first 18-hole golf course and for the extension of utilities into the project site.

Prior to approval of any final map or prior to the issuance of the first building permit for the first final map, all construction traffic will be diverted to Whites Creek Lane. No construction traffic will be allowed on Thomas Creek Road between Whites Creek Lane and Zolezzi Lane. Access to Whites Creek Lane will be from the Mt. Rose Highway to Thomas Creek Road. When the 35th building permit is issued, all construction traffic will be required to use Whites Creek Lane from Wedge Parkway. Construction traffic will use Whites Creek Lane from Wedge Parkway if this segment is completed prior to the issuance of the 35th building permit. Thomas Creek Road from Mt. Rose Highway to the proposed Whites Creek Lane may be considered for a haul route provided the developer submits a traffic analysis and intersection design prepared by a licensed Nevada Civil Engineer which addresses and provides, as a minimum, recommendations regarding:

- a. site distance requirements;
- b. left turn storage capacity and design;
- c. intersection location and alignment;
- d. proximity to existing intersections and recommended separate distances;
- e. existing center median and landscaping concerns;
- f. determination of adequacy of existing Thomas Creek Road roadway geometric section; and
- g. determination of adequacy of existing structural section and load bearing capability.

The submitted report shall be evaluated and accepted by the County Engineer prior to any approval of the use of Thomas Creek Road as a haul route. Once Whites Creek Lane is connected to Wedge Parkway, this road shall become the primary construction haul route.

Any existing or proposed roads that will be used as construction haul routes and are not designated truck routes must be evaluated by a geotechnical study to determine the existing structural section and its load supporting capability. If the pavement section is inadequate to support the proposed construction loadings, the roadway must be redesigned or reconstructed as needed to provide a 20-year design life in accordance with the AASHTO Interim Guide for Flexible Pavements.

13. The developer shall provide a schematic pedestrian circulation plan. The Department of Development Review shall be responsible for determining compliance with this condition. The "statement of compliance" shall require that a detailed pedestrian circulation plan will be submitted as part of each tentative map and approved by the Department of Development Review.
14. Unless specifically stated in these conditions of approval or in the final Development Agreement, all public and private street design and construction is to be done in accordance with the Washoe County standards that are in effect at the time the final Development Agreement is recorded. The County Engineer shall be responsible for determining compliance with this condition.
15. Unless otherwise stated in these conditions of approval or in the final Development Agreement, all roadway improvements necessary (including but not limited to, curb, gutter, sidewalk, signing and striping, driveway access, and street lighting) to serve the project shall be designed and constructed to county standards and specifications and/or financial assurances in an appropriate form and amount shall be provided. The County Engineer shall be responsible for determining compliance with this condition.
16. All private roadways shall be depicted on the final maps and identified on the tentative map as either private access easements over individual adjacent lots or, if identified as separate parcels, as either common areas with equal fractional ownership by all of the lots within the development or common areas owned by the homeowners association. The County Engineer shall be responsible for determining compliance with this condition.

#### GRADING AND DRAINAGE

17. A general concept-level storm drain master plan shall be submitted to the County Engineer for approval prior to acceptance of the final Development Agreement. The general concept-level storm drain master plan shall address in general terms proposed methods for handling the existing and increased flows for the 10- and 100-year storms including detention and other proposed mitigation measures for both on-site and off-site areas. This master plan shall include a drawing which shows the existing drainage basins within the development and indicate how they may be impacted. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of a tentative map for any phase or approval of any special use permit, a preliminary hydrology report shall be submitted to the County Engineer for approval. The County Engineer shall be responsible for determining compliance with this condition.
18. Detention/retention facilities are to be maintained by a homeowners association and perpetually funded unless Washoe County agrees to accept maintenance and financial responsibilities. Regional facilities would be maintained by Washoe County. The County Engineer shall be responsible for determining compliance with this condition.

19. A maintenance plan of all drainage facilities to be owned by the homeowners association shall be provided prior to approval of the conditions, covenants, and restrictions (CC&Rs). All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe County water treatment plant and associated Steamboat Ditch conveyance system. The County Engineer shall be responsible for determining compliance with this condition.
20. The off-stream detention/debris basin recommended in the 1990 Kennedy, Jenks, Chilton report shall be reserved based on the following timetable:
  - a. Washoe County will have three years to obtain the necessary permits for construction of the off-stream detention basin. This three years shall commence upon the approval of the final Development Agreement. If Washoe County fails to obtain the necessary permits, the property for the detention site shall be offered by the developer or his successors, for dedication to the Washoe County School District for a middle school or revert to open space.
  - b. If Washoe County does obtain the necessary permits within three years, construction of the project shall commence within 5 years of the approval of the final Development Agreement. If construction is not started by that date, the property for the detention site shall be offered by the developer or his successors, for dedication to the Washoe County School District for a middle school or revert to open space.
  - c. If an alternative solution or site becomes available for flood control, this property will immediately become available for dedication to the Washoe County School District for a middle school or revert to open space.
  - d. If the detention basin is constructed, Washoe County shall pay fair market value for the property.
21. The increase in development-caused runoff from the 100-year storm, including drainages which run directly into the Steamboat Ditch, shall be detained/retained on-site because of the limited capacity of the flood control facilities in the area of South Virginia Street and the Steamboat Ditch Company. The County Engineer shall be responsible for determining compliance with this condition.
22. A geotechnical report shall be prepared, which considers the effects of earthquake forces and faulting in the area. The siting and design of detention/retention facilities shall be addressed based on the findings and recommendations provided in the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.
23. The development shall comply with the requirements of the Hillside Ordinance of the Development Code, as applicable. The Department of Development Review shall be responsible for determining compliance with this condition.

#### WATER AND WASTEWATER

24. A schematic water system plan for the referenced proposal must be submitted to the Utility Division and the District Health Department. Prior to a final map approval, the plan must show that the water system will conform to the State of Nevada Water Supply Regulations, NAC Chapter 445, and the State of Nevada Regulations Governing Review of Plans for Subdivisions, Condominiums, and Planned Unit Developments, NAC 278.400 through 278.410.

25. Prior to the approval of the final Development Agreement, a complete water analysis from at least one monitoring well must be submitted to the District Health Department. The analysis must demonstrate the water conforms to the existing and proposed drinking water standards.
26. The developer shall utilize treated wastewater from the South Truckee Meadows Wastewater Treatment Plant. As part of the initial construction, the developer shall provide the necessary on-site easements needed to construct the infrastructure. When this resource becomes available to irrigate the golf course, the developer shall construct the necessary on-site infrastructure. The Utility Division shall be responsible for determining compliance with this condition.

### FIRE PROTECTION

27. If requested by the applicable fire protection agency, a minimum one-acre site for a fire station shall be offered for dedication prior to recordation of the first final map. The developer shall enter into talks with the applicable fire protection agency for any other requirements, such as, a fire station site, manpower and equipment needs, or for coordination with other developments that have similar requirements and the results of those discussions, as they relate to the entire project, shall be incorporated into the Development Agreement.

### PARKS/RECREATION/OPEN SPACE

28. An open space management plan and map shall be prepared that specifies the ownership of open spaces, type of uses allowed and who is responsible for maintenance. This plan shall address the provisions of Section 110.408.45 of the Development Code. Common areas shall be maintained by the homeowners association and provisions be made for perpetual funding for maintenance.  

Prior to approval of the final Development Agreement, a government entity (e.g. United States Forest Service, Washoe County Parks Department, etc.) or a non-profit organization (e.g. Washoe Parks Foundation) shall be identified that will accept the dedication of the open space buffers identified on the Concept Plan, which consists of approximately 1,500 acres. The Parks and Recreation Department and the Department of Development Review shall be responsible for determining compliance with this condition.
29. The final Development Agreement shall include a provision for the public open space that prohibits the sale of any open space without the consent of Washoe County. The Department of Development Review shall be responsible for determining compliance with this condition.
30. A minimum 10-acre public park site shall be offered for dedication to the county. A sketch plan will be included in the final Development Agreement. The final park design shall be mutually agreeable to the county and the developer. The developer will construct the recreation facilities in the park and then be reimbursed for the cost of the construction from the Residential Construction Tax. The responsibility of park maintenance shall be negotiated by the developer and Washoe County prior to the approval of the final Development Agreement. The Parks and Recreation Department and Department of Development Review shall be responsible for determining compliance with this condition.

31. The developer will work with the Department of Parks and Recreation to locate the proposed regional public trails to the satisfaction of Washoe County and the developer. The Parks and Recreation Department and Department of Development Review shall be responsible for determining compliance with this condition.

LANDSCAPING/ARCHITECTURAL DESIGN

32. Prior to approval of the final Development Agreement, the developer shall submit a Development Standards Handbook for the entire project to the Design Review Committee for its review and approval. These guidelines shall address, but not be limited to, type and color of building material, general architectural design, fencing, landscaping material (if plant material: type, size at time of planting, maturation size at full growth, period of time between planting and full growth), landscaping location, landscaping irrigation system, and financial assurances that landscaping will be planted and maintained.

The Design Review Committee shall also review the design of Whites Creek Lane, specifically to address Condition 19.c. for tentative maps. The Department of Development Review shall be responsible for determining compliance with this condition.

**CONDITIONS**  
for  
**TENTATIVE SUBDIVISION MAP CASE NO. \_\_\_\_\_**  
for  
\_\_\_\_\_ **SUBDIVISION**

**UNLESS OTHERWISE STATED, PRIOR TO FINALIZATION OF ANY PORTION OF THE TENTATIVE SUBDIVISION MAP, ALL CONDITIONS MUST BE MET OR FINANCIAL ASSURANCES TO ENSURE COMPLETION OF THE CONDITIONS MUST BE PROVIDED. THE AGENCY RESPONSIBLE FOR DETERMINING COMPLIANCE WITH A SPECIFIC CONDITION SHALL DETERMINE WHETHER THE CONDITION MUST BE FULLY COMPLETED OR WHETHER THE DEVELOPER SHALL BE OFFERED THE OPTION OF PROVIDING FINANCIAL ASSURANCES.**

**A COPY OF ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL BE FILED WITH THE DEPARTMENT OF PUBLIC WORKS AND/OR DEPARTMENT OF DEVELOPMENT REVIEW.**

**THE DEVELOPER SHALL MEET WITH THE ENGINEERING DIVISION AND THE DEPARTMENT OF DEVELOPMENT REVIEW AT LEAST SIXTY (60) DAYS BEFORE THE ANTICIPATED DATE OF APPROVAL BY THE PLANNING COMMISSION TO REVIEW SCHEDULING, REQUIREMENTS, FINAL CONSTRUCTION DRAWINGS, AND DOCUMENTATION NECESSARY TO ADEQUATELY COMPLY WITH THE CONDITIONS OF APPROVAL AND THE APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES. NO FINAL MAP WILL BE SCHEDULED FOR A PLANNING COMMISSION MEETING DATE THAT IS LESS THAN SIXTY (60) DAYS FROM THE DATE OF THIS MANDATORY MEETING.**

**A REQUEST FOR AN EXTENSION OF TIME FOR THE RECORDING OF A FINAL MAP MUST BE SUBMITTED TO THE DEPARTMENT OF DEVELOPMENT REVIEW AT LEAST SIXTY (60) DAYS PRIOR TO THE EXPIRATION DATE OF THE TENTATIVE SUBDIVISION MAP. SAID EXPIRATION IS TWO YEARS FROM THE DATE OF APPROVAL OF THE TENTATIVE MAP OR A SUBSEQUENT FINAL MAP BY THE BOARD OF COUNTY COMMISSIONERS OR, WHEN APPLICABLE, BY THE PLANNING COMMISSION.**

**COMPLIANCE WITH THE DEVELOPMENT AGREEMENT, APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES AND WITH THE CONDITIONS OF APPROVAL OF THIS TENTATIVE MAP IS THE RESPONSIBILITY OF THE DEVELOPER, ITS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY, AND THEIR SUCCESSORS IN INTEREST.**

#### GENERAL CONDITIONS

1. The subdivider shall present to the planning commission a final map, prepared in accordance with the tentative map, for the entire area for which a tentative map has been approved, or one of a series of final maps, each covering a portion of the approved tentative map, within two (2) years after the date of approval of the tentative map.

Prior to the expiration of a tentative map, the planning commission or, upon appeal, the governing body may grant a two (2) year extension for the presentation of the entire final map or next successive final map. The effective date of the extension shall be two (2) years from the date upon which the map would have expired.

If the subdivider fails to record a final map for any portion of the tentative map or obtain an extension within two years after the date of approval of the tentative map, all proceedings concerning the subdivision are terminated.

2. Unless specifically stated in the final Development Agreement, final maps and final construction drawings shall comply with all applicable statutes, ordinances, rules, regulations, and policies in effect at the time of approval of the final map or any subsequent extension date. The Department of Development Review shall be responsible for determining compliance with this condition.

3. Final maps shall be in substantial compliance with all plans and documents submitted with and made part of this tentative map request, as may be amended by action of the final approving authority. Substantial compliance shall be determined by the applicable agency and the Department of Development Review.
4. As part of every tentative map and final map application, the developer shall include a completed "statement of compliance" that demonstrates how the development will be or is consistent with the recorded final Development Agreement. The "statement of compliance" for the final map shall incorporate a description of how the conditions of approval have been met. The Department of Development Review shall be responsible for determining compliance with this condition.
5. Conditions, covenants, and restrictions (CC&Rs) shall be reviewed and approved by the District Attorney's Office, County Engineer, and the Department of Development Review prior to final map approval or prior to issuance of a certificate of occupancy for a non-residential use. Washoe County shall be made a party to the applicable provisions of the CC&Rs to the satisfaction of the District Attorney's office. If the CC&Rs are not recorded on the entire property, subsequent phases will be annexed to the previously recorded CC&Rs. Said CC&Rs shall specifically address the ability of the county to enforce certain provisions against the property and the individual property owner's responsibilities for the perpetual funding, maintenance and replacement, of the following items, at a minimum:
  - a. Private roads within the subdivision.
  - b. Equestrian center.
  - c. Staffing of maintenance and security forces.
  - d. Common area landscaping.
  - e. Entrance gates.
  - f. Snow removal and storage areas.
  - g. Common area landscaping including along streets or landscaping along Whites Creek Lane.
  - h. Fire and fuelbreaks.
  - i. Detention basins and the accumulated sediment.
  - j. Equestrian/pedestrian trails.
  - k. Bicycle and pedestrian paths.
  - m. Golf cart crossings.
  - n. Off-site residential parking areas.

At a minimum, the CC&Rs shall also specifically address the following items:

- a. Requirement to abide by Architectural/Community Design Guidelines.
- b. All homes must have a garage with space for a minimum of two cars.
- c. Specifications on the limitation of turf area for single-family homes.
- d. Retention of public access to the golf course, bike paths, (i.e., 8-foot meandering paths along minor arterials and some collectors; refer to street sections), public trails, and non-residential uses.

- e. Notice of requirement to pay future sewer user fees.
  - f. Requirement to adhere to National Electric Safety Code setbacks for existing overhead power lines.
  - g. Potential for conservation easements or dedication of open space.
  - h. Prohibition of motorized vehicles in open space.
  - i. Areas with potential for equestrian traffic.
  - j. Access to open space for pedestrian and bicycle traffic.
  - k. Notice of pedestrian easements to abutting properties.
  - l. Minimum defensible space requirements.
  - m. Snow storage areas.
6. Prior to ground-disturbing activity or prior to finalization of any portion of the tentative map, the developer shall submit an archaeological/historical survey to the Department of Development Review. The Department of Development Review shall submit the survey to the State Historic Preservation Office of the Department of Museums, Library and Arts for review. Following that review, the State Historic Preservation Office shall submit a letter to the Department of Development Review that indicates the survey was acceptable.

7. A note shall be placed on all grading plans and construction drawings stating:

NOTE

Should any prehistoric or historic remains/artifacts be discovered during site development, work shall temporarily be halted at the specific site and the State Historic Preservation Office of the Department of Museums, Library and Arts, shall be notified to record and photograph the site. The period of temporary delay shall be limited to a maximum of two (2) working days from the date of notification.

8. The developer shall be required to participate in any applicable General Improvement District or Special Assessment District formed by Washoe County. The applicable division of the Department of Public Works shall be responsible for determining compliance with this condition.
9. Prior to acceptance of public improvements and release of any financial assurances, the developer shall furnish to the Utility Division and/or Engineering Division a complete set of reproducible 'as built' construction drawings prepared by a civil engineer registered in the State of Nevada.
10. A complete set of construction improvement drawings, including an on-site grading plan, shall be submitted to the Engineering Division for approval prior to finalization of any portion of the subdivision. Grading shall comply with best management practices and shall include detailed plans for grading and drainage on each lot, erosion control, slope stabilization, mosquito abatement. Placement or disposal of any excavated material shall be indicated on the grading plan.
11. All soil boring logs must be included as part of the construction drawings. The County Engineer shall be responsible for determining compliance with this condition.
12. All new utilities shall be placed underground. The County Engineer shall be responsible for determining compliance with this condition.

13. The developer is to provide written approval from the US Postal Service for the plans for the installation of mail delivery facilities. The system, other than individual mail boxes, must be shown on the project construction plans and installed as part of the on-site improvements. The County Engineer shall be responsible for determining compliance with this condition.
14. The final map shall designate faults, by distance and bearings, that have been active during the Holocene epoch of geological time and shall contain the following note.

NOTE

No habitable structures shall be located on a fault that has been active during the Holocene epoch of geological time. The faults have been located by Civil Engineer Registered in Nevada and experienced in Geotechnical Engineering and field surveyed by a Nevada Registered Land Surveyor.

The Department of Development Review shall be responsible for determining compliance with this condition.

15. The Washoe County Planning Commission certificate on the final map shall be approved by the County Engineer and the Department of Development Review.

STREETS AND TRAFFIC

16. The developer shall submit a detailed geotechnical analysis and report for pavement design recommendations to the County Engineer for review and approval. The report shall be based on the estimated traffic loadings for a 20-year design life and shall include assumptions concerning the distribution of trucks, to include project construction truck traffic. The resultant pavement thickness in the geotechnical analysis must be used if the report indicates a structural section that is stronger than minimum is required. The County Engineer shall be responsible for determining compliance with this condition.
17. Prior to the issuance of the first building permit, two lanes of Whites Creek Lane shall be constructed, to two-lane minor arterial standards as a minimum, from Thomas Creek Road to the project site. The County Engineer shall be responsible for determining compliance with this condition.
18. Prior to the issuance of the first building permit, a second access shall be constructed to the project site to emergency standards to the satisfaction of the applicable fire protection agency.
19. The County Engineer shall be responsible for determining compliance with this condition. Prior to the issuance of the 35th building permit, the following roadway improvements shall be constructed:
  - a. The remaining two lanes of Whites Creek Lane from Thomas Creek Road to the project site if warranted by projected traffic demands.
  - b. Two (2) lanes of Whites Creek Lane from Thomas Creek Road to Wedge Parkway with 100 feet of right-of-way. These two lanes will be constructed so that an additional two lanes may be added in the future if warranted by projected traffic volumes.

- c. Whites Creek Lane will be designed in a manner that minimizes any impacts on the adjacent homes to the north in Fieldcreek Ranch (e.g., fencing, berms, lowering the travel lanes).
20. The minimum pavement structural section shall be 5 inches of asphalt over 8 inches of aggregate base for minor arterials, 4 inches of asphalt over 6 inches of granular base for roadways (private and public) for collector streets, and 3 inches of asphalt over 6 inches of granular base for roadways for local streets. The County Engineer shall be responsible for determining compliance with this condition.
21. Prior to or upon approval of the CC&Rs, the developer shall have a street maintenance program approved by the County Engineer and the Department of Development Review. Maintenance of private streets shall be performed by the homeowners association and shall be perpetually funded.
22. The following roadway sections shall be applicable to the public and private on-site streets shown on the tentative map. A traffic report shall be submitted with each tentative map and shall identify the ultimate average daily traffic on each street and shall make recommendations for geometric design (e.g., left turn storage capacity, site distance, minimum required turning radius, etc.). The County Engineer shall be responsible for determining compliance with this condition.
  - a. Private Common Driveways - Serving 4 or less lots, pavement width 20 feet; serving 5 or more lots, pavement width 22 feet; no parking either side. Curb returns shall have a minimum face of curb radius of 20 feet on local streets and 25 feet on collector streets. Acceleration/deceleration tapers will be provided on streets with average daily traffic exceeding 2000 trips. Private common driveway locations will be shown on all tentative maps. Private common driveways will line up with proposed street intersections where possible and will comply with street intersection offset requirements. Single lot driveway access will not be allowed onto streets on which the average daily traffic exceeds 2000 trips. (Refer to street sections.)
  - b. Rural Private - 60 foot minimum ROW (maximum 200 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)

- c. Local Private - 60 foot minimum ROW (200 - 500 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)
- d. Collector Private - 60 foot minimum ROW (500 ADT to 2000 ADT): minimum 24-foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to Street Sections.)
- e. Collector Private - 60 foot minimum ROW (2000 ADT to 8000 ADT): minimum 24-foot pavement width with an additional 12-foot left turn lane at intersections where warranted; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking on either side. A minimum 8-foot path on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. No residential driveway access will be allowed. Access for private common driveways will be allowed. (Refer to street sections.)
- f. Collector Private - 120 foot minimum ROW collector street (up to 9600 ADT): A minimum 27-foot center median from curb face to curb face, 19-foot pavement width on either side of the median; curb and gutter on both sides or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side except during special events; a minimum 8-foot meandering asphalt path both sides; no residential driveway access allowed. (Refer to street sections.)
- g. Minor Arterial, Private - 120 foot minimum ROW (more than 10,800 ADT): A minimum 27-foot center median from curb face to curb face, 24-foot pavement width on either side of the median; County Engineer-approved concrete header with roadside ditch; no parking either side; a minimum 8-foot meandering asphalt path both sides; no residential driveway access allowed. A gate may be installed at the point where Whites Creek Lane becomes a private road. (Refer to street sections.)

- h. **Minor Arterial, Public - 120-foot minimum ROW (more than 10,800 ADT):** A minimum 27-foot center median from curb face to curb face, 29.5-foot roadway section on either side of the median; curb and gutter on both sides; a minimum 6-foot concrete sidewalk on both sides; no residential driveway access is allowed. (Refer to street sections.) A gate may be installed at the point where Whites Creek Lane becomes a private road. A public turn-around is required on the public side of the gate.
- 23. All roadway grades shall be limited to the maximum allowable grades for each street classification as provided in the Washoe County Standards. The County Engineer shall be responsible for determining compliance with this condition.
- 24. Construction near fault lines shall be as follows:
  - a. Buildings for human occupancy shall be set back from the centerline of fault traces. Setback distances shall be determined by a geotechnical investigation prepared by a Nevada Registered Civil Engineer experienced in geotechnical engineering. The minimum setback shall be 50 feet on each side of the fault line.
  - b. Roadway construction in fault zones and along fault traces shall be reviewed by a Nevada Registered Civil Engineer experienced in geotechnical engineering. Any recommended special construction requirements (e.g., flexible joint connections for utilities) shall be complied with.

The County Engineer shall be responsible for determining compliance with this condition.
- 25. All cul-de-sacs shall be a minimum pavement radius of 43.5 feet to front face of curb or 45 feet to edge of pavement. The County Engineer shall be responsible for determining compliance with this condition.
- 26. Landscaped medians shall be designed in accordance with AASHTO site distance and safety guidelines. The County Engineer and the Department of Development Review shall be responsible for determining compliance with this part of the condition. Maintenance of median landscaping shall be by the homeowners association as provided for in a separate maintenance agreement to be approved by the County Engineer and the District Attorney's Office prior to approval of the CC&Rs.
- 27. Temporary county standard turnarounds shall be constructed on all phased roadways which extend more than one lot depth beyond a maintained public or private street. The County Engineer shall be responsible for determining compliance with this condition.
- 28. All-weather emergency access roads shall be constructed at the end of all cul-de-sacs that are longer than 1,500 feet. These roads shall have a 30-foot access easement with a minimum 20-foot width and 2.5 inches of asphalt concrete pavement on an engineered gravel base. The roads shall be controlled by emergency access gates and shall be posted with signs stating "For Emergency Vehicles Only". The County Engineer and the applicable fire protection agency shall be responsible for determining compliance with this condition.

29. Prior to final map approval, the developer shall provide all weather emergency access easements and road improvements at the locations shown on the tentative map, terminating at public or privately-maintained streets. The County Engineer shall be responsible for determining compliance with this condition.
30. Meandering asphalt paths will be acceptable provided that:
  - a. Pedestrian easements are included for portions of the paths located outside the county right-of-way.
  - b. Landscaping between the back of the curb and the path shall be designed in accordance with AASHTO site distance and safety guidelines. The County Engineer shall be responsible for determining compliance with the provisions of this condition.
  - c. Maintenance of the asphalt paths and landscaping shall be the responsibility of the developer and, when created, by the homeowners association as provided for in a separate maintenance agreement and to be approved by the County Engineer and the District Attorney's office prior to approval of the final Development Agreement.
31. Asphalt paths or gravel shoulders, located adjacent to private streets shall be privately maintained and funded. The County Engineer shall be responsible for determining compliance with this condition.
32. Street lights shall be installed at major intersections. The County Engineer shall be responsible for determining compliance with this condition.
33. No at-grade golf cart crossings shall be allowed across any street with 500 ADT or greater. Where possible, crossings should be below the grade of public streets. The County Engineer shall be responsible for determining compliance with this condition.
34. Off-site parking areas shall be provided within 500 feet of homes that have lots ranging in size between 12,000 square feet and one-half acre. One space shall be provided for every three homes. Parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the tentative map(s). The Department of Development Review shall be responsible for determining compliance with this condition.
35. Project streets that are designed with security gates at points intersecting with public streets shall have adequate on-site stacking space. The specific type and size of the stacking areas must be approved by the County Engineer and constructed as approved.
36. Regulatory signs must be installed at the juncture of all public streets with a private street and at intersections along the primary loop road. Said sign shall state: "PRIVATE STREET NOT MAINTAINED BY COUNTY." All regulatory signs shall meet the Manual of Uniform Traffic Control Device standards. The County Engineer shall be responsible for determining compliance with this condition.
37. Street names shall be reviewed and approved by the Regional Street Naming Coordinator. The tentative map shall indicate street names for identification purposes.

## DRAINAGE AND GRADING

38. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of a tentative map for any phase, a preliminary hydrology report shall be submitted to the County Engineer for approval. This preliminary hydrology report shall be prepared in accordance with county requirements for tentative maps, in conformance with the general concept-level storm drain master plan, and be applicable to the specific tentative map or special use permit being approved.

The report shall include, as a minimum, the locations, points of entry and discharge, flow rates and flood limits of all 10- and 100-year storm flows impacting both on-site and off-site areas and the methods for handling these flows as well as the proposed methods for handling storm water increases due to development. Proposed mitigation measures shall be included for any impacts on existing on-site and off-site properties and facilities. The County Engineer shall be responsible for determining compliance with this condition.

39. Prior to the submittal of any final map or issuance of any grading permit, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted to the County Engineer for approval. The report shall be in substantial compliance with the general concept-level storm drain master plan and contain all final storm drain pipe, ditch and retention pond sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed, constructed, and approved by the District Health Department and the County Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.

40. A maintenance plan of all drainage facilities, to be owned by the homeowners association, shall be provided prior to approval of the CC&Rs. All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe County water treatment plant, and associated Steamboat Ditch conveyance system. All runoff from improved areas which runs into the Steamboat Ditch shall be pre-treated for silt and petrochemicals and shall be routed through a "wet" detention facility or approved alternative. The Utility Division and the Department of Development Review shall be responsible for determining compliance with this condition.

41. The 100-year floodplain boundaries and flood elevations shall appear on each final map. If the floodplain boundary has been changed by a Federal Emergency Management Agency (FEMA) Conditional Letter of Map Amendment or Conditional Letter of Map Revision, the date of that letter and a note to that effect shall appear on the final map. Grading or building permits shall not be issued for areas currently shown as "A" zones on the FEMA floodplain maps until a Letter of Map Amendment or Revision is submitted or until conformance with Washoe County flood construction standards is determined by the County Engineer. The County Engineer shall be responsible for determining compliance with this condition.

42. Prior to approval of the final map, the developer shall obtain a Stormwater Discharge Permit from the Nevada Division of Environmental Protection. If required, point discharge permit for each proposed detention pond will be obtained from the Nevada Division of Environmental Protection and copy shall be submitted to the County Engineer.
43. The developer shall provide pretreatment for petrochemicals, nutrients and other chemicals used for landscaping, and silt for all storm drainage from the site. Systematic cleaning of the streets, parking lots, and catch basins, and control of salt and sanding activities shall to be delineated in the maintenance plan. The County Engineer shall be responsible for determining compliance with this condition.
44. Prior to issuance of a grading permit for the golf course and/or final map, a final wetlands determination must be made and approved by the US Army Corps of Engineers and the approval letter provided to the Department of Development Review.
45. Prior to issuance of a grading permit for the golf course or approval of a final map, the developer shall obtain from the Army Corps of Engineers a 404 permit for wetland and dredge and fill for all roadway crossing of Thomas and Dry Creeks, or a letter from the COE indicating that a 404 permit is not required and a copy submitted to the County Engineer.
46. All street crossings of Thomas and Dry Creeks shall be designed to pass the 100 year flood flows without obstruction or overtopping of the roadway. Erosion protection shall be provided based upon the recommendation of the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.
47. Standard reinforced concrete headwalls or other approved alternatives shall be placed on the inlet and outlet of all drainage structures and rip-rap shall be used to prevent erosion at the inlets and outlets of all pipe culverts. The District Health Department and the County Engineer shall be responsible for determining compliance with this condition.
48. The stormwater discharges from this development that flow to Dry Creek shall be controlled to pre-development flow conditions and will be controlled to prevent water quality degradation of Steamboat Ditch. The developer shall provide drainage structures under Steamboat Ditch that would pass the 10-year frequency storm or demonstrate that there will not be any water quality degradation in Steamboat Ditch. The County Engineer shall be responsible for determining compliance with this condition.

The developer shall contact the Division of Water Resources, State of Nevada, to determine whether the proposed flood detention facilities will require permits. If required, copies shall be submitted to the County Engineer.

49. Prior to the approval of a grading permit or approval of a final map, a detailed dust control plan shall be prepared and submitted to Air Quality Management of the District Health Department and to the Department of Development Review. The dust control plan shall address, as a minimum, "phased grading" and stabilization methods that include the revegetation, application of palliatives or other District approved methods prior to any grading of new phases, as well as effective street cleaning for any mud or soil tracking to existing paved surfaces, and dust controls on any screening methods or storage piles located on the site.
50. Prior to approval of the first final map, an erosion control and soil stabilization plan and a grading plan shall be approved by the Washoe-Storey Conservation District. A copy of the approval shall be submitted to the District Health Department, Department of Development Review, and County Engineer.
51. A buffer shall be provided next to riparian vegetation. The size of the buffer shall be mutually agreeable to Washoe County and the developer. A minimum 50-foot buffer shall be provided from any structures. The Department of Development Review shall be responsible for determining compliance with this condition.
52. Individual lot drainage shall not be allowed to drain onto neighboring properties without proper reciprocal drainage easements and the individual lot drainage swales shall be designed to handle the 100-year flows and lined. The County Engineer shall be responsible for determining compliance with this condition.

#### WATER AND WASTEWATER

53. The developer shall construct or provide the financial assurances for the construction of the water and sewer system facilities. The financial assurances must be in a form and amount that is satisfactory to the Utility Division.
54. Fees for plan checking and inspection shall be paid in accordance with Washoe County ordinance. The Utility Division shall be responsible for determining compliance with this condition.
55. Easements for all water and sewer utilities shall be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
56. No "certificate of occupancy" shall be issued until the water and sewer facilities have been completed and accepted for operation and maintenance. The Utility Division shall be responsible for determining compliance with this condition.
57. The sanitary sewer collection system and water system facilities, with the exception of the golf course and common area irrigation systems, must be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
58. The Nevada Division of Environmental Protection must submit a letter to the District Health Department certifying their approval of the final map.

59. The developer shall deposit with the Utility Division the sum of \$50.00 per lot prior to recordation of all or part of the final map. This fee shall represent the prorated share of the completed water and wastewater facilities plan for the South Truckee Meadows for this development.

#### WATER

60. In accordance with the Washoe County Utility Division policies for the Southwest Truckee Meadows, water rights shall be dedicated to Washoe County. Prior to acceptance, the water rights must be in good standing with the State of Nevada Division of Water Resources and must reflect a point of diversion, place and manner of use acceptable to the Utility Division.
61. All minor infrastructure for potable water distribution shall be designed, constructed, inspected, and approved by the District Health Department and the Utility Division. The developer shall coordinate with the Utility Division to ensure the major infrastructure design can be accomplished prior to the approval of the final map.
62. Responsibility for design of wells, pump structure, controls, telemetry, and appurtenances, storage tanks, and transmission lines to the edge of the subdivision, all necessary to provide water service to the project, will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
63. Prior to final map approval, a letter of approval from the Division of Water Resources for the water rights serving this proposal must be submitted. A water "will-serve" letter for a final map will not be issued until the production wells have been determined to have adequate water resource. The Utility Division shall be responsible for determining compliance with this condition.
64. Before approval of the final map will be considered, a letter from the water purveyor committing adequate water service to this proposal must be submitted to the District Health Department. This letter shall indicate that the facility will not be brought beyond its permitted capacity by this service.
65. Prior to the approval of a final map by the District Health Department, the production wells that will serve any phase of this development must be constructed, pump tested and sampled to ensure the proposed water system has sufficient quality and quantity.
66. Water quality results from a state-certified laboratory for new water sources shall be submitted to the Utility Division. The water quality sampling and testing shall be in compliance with the current State of Nevada Regulations for Public Water Systems, NAC 445.

67. If the water quality of the wells does not meet the secondary or the primary standards, as defined by NAC 445, water treatment facilities must be on-line and functioning prior to issuance of any building permits. The Utility Division shall be responsible for determining compliance with this condition.
68. If a supplemental water source is required, evidence that an adequate source has been procured by the developer/water purveyor shall be submitted to the Utility Division for their review and approval.
69. Any wells on the property not in use for production or monitoring purposes, shall be properly abandoned in accordance with State Regulations governing Water Wells and Related Drilling. The Utility Division shall be responsible for determining compliance with this condition.
70. The developer shall provide access to the existing monitoring wells. In the event access is no longer available, the developer shall construct new wells. The Utility Division shall be responsible for determining compliance with this condition.
71. The tentative maps shall show the maintenance roads for the existing and proposed water tanks. The location of these roads shall be mutually agreeable to the Department of Public Works and the developer.
72. The final map owner's certificate shall contain language indicating that the developer and his assignees agree to the use of residential water meters. The Department of Development Review shall be responsible for determining compliance with this condition.
73. Pursuant to Section 278.340 of the State of Nevada Regulations Governing Review of Plans for Subdivisions, Condominiums, and Planned Unit Developments, no grading permit shall be issued prior to District Health Department approval of the referenced final map. This condition does not apply to the construction of production wells required in Condition 68.  
The developer may seek relief from the District Board of Health for this requirement or may choose to create a separate parcel for the first 18-hole golf course.
74. The Department of Development Review shall be responsible for determining compliance with this condition. The final map shall contain the following note:

#### NOTE

No Certificate of Occupancy shall be issued until the water facilities have been completed and accepted by Washoe County.

## SEWER

75. Responsibility for design of any pump stations and interceptors to provide sewer service to the project will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
76. All minor infrastructure for sewer collection shall be designed, constructed, inspected, and approved by the District Health Department and the Utility Division.
77. The sewer "privilege connection fee" must be paid for each lot when required by the Washoe County Utility Division since it is not anticipated that there will be any additional major infrastructure needed to serve this development. The Utility Division shall be responsible for determining compliance with this condition.
78. All sewer hookup fees for the area within the final map will be paid to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
79. The final subdivision map shall show a dedicated, all-weather easement, with access, over the developments sanitary sewer lines. The Utility Division shall be responsible for determining compliance with this condition.
80. Proper easements shall be shown for off-site sewage and drainage systems. The Utility Division and the County Engineer shall be responsible for determining compliance with this condition.
81. Prior to final map approval, a letter, which can be a will-serve letter, from the Utility Division committing sewer service, must be submitted to the District Health Department. This letter shall indicate that the treatment facility will not be brought beyond its permitted capacity by this service.

## FIRE PROTECTION

82. The plans submitted with a building permit application shall show evidence of compliance with the recommendations of the applicable fire protection agency. Those concerns are fire flows, fire hydrant number and location, access, sequential phasing of firebreaks during development, permanent firebreaks, minimum defensible space, use of fire resistant construction and/or roof material, sprinklering of structures, and spark arrestors in chimneys. Access and fire flows shall be addressed to the satisfaction of the fire protection agency prior to the approval of a final map.

83. The developer shall minimize grading to the maximum extent possible in the area around the critical mule deer habitat in order to preserve the existing browse shrubs. The Department of Development Review, in conjunction with the applicable fire protection agency, shall be responsible for determining compliance with this condition.

OTHER

84. A minimum 25-foot landscape buffer shall be installed between the homes and the collector and the arterial streets. The homeowners association shall be required to perpetually maintain these areas. The Department of Development Review shall be responsible to determining compliance with this condition.
85. Prior to acceptance of the first map, the telephone easement Doc. No. 415899, which runs through the middle of many lots, shall be realigned with appropriate abandonment and relocation easements, or the proposed lots realigned. The County Engineer shall be responsible for determining compliance with this condition.

**CONDITIONS FOR SPECIAL USE PERMIT CASE NO. \_\_\_\_\_**

**UNLESS OTHERWISE SPECIFIED, ALL CONDITIONS MUST BE MET OR FINANCIAL ASSURANCES MUST BE PROVIDED TO SATISFY THE CONDITIONS PRIOR TO SUBMITTAL FOR A BUILDING PERMIT. THE AGENCY RESPONSIBLE FOR DETERMINING COMPLIANCE WITH A SPECIFIC CONDITION SHALL DETERMINE WHETHER THE CONDITION MUST BE FULLY COMPLETED OR WHETHER THE DEVELOPER SHALL BE OFFERED THE OPTION OF PROVIDING FINANCIAL ASSURANCES. ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL HAVE A COPY FILED WITH THE COUNTY ENGINEER AND THE DEPARTMENT OF DEVELOPMENT REVIEW.**

**COMPLIANCE WITH THE CONDITIONS OF THIS SPECIAL USE PERMIT IS THE RESPONSIBILITY OF THE DEVELOPER, HIS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY AND THEIR SUCCESSORS IN INTEREST. FAILURE TO COMPLY WITH ANY CONDITIONS IMPOSED IN THE ISSUANCE OF THE SPECIAL USE PERMIT MAY RESULT IN THE INSTITUTION OF REVOCATION PROCEDURES.**

**WASHOE COUNTY RESERVES THE RIGHT TO REVIEW AND REVISE THE CONDITIONS OF THIS APPROVAL SHOULD THEY DETERMINE THAT A SUBSEQUENT LICENSE OR PERMIT ISSUED BY WASHOE COUNTY VIOLATES THE INTENT OF THIS APPROVAL.**

## GENERAL CONDITIONS

1. As part of every special use permit application, the developer shall include a completed "statement of compliance" that demonstrates how the development will be or is consistent with the recorded final Development Agreement. The Department of Development Review shall be responsible for determining compliance with this condition.
2. Prior to ground-disturbing activity, the developer shall submit an archaeological/historical survey to the Department of Development Review. The Department of Development Review shall submit the survey to the State Historic Preservation Office of the Department of Museums, Library and Arts for review. Following that review, the State Historic Preservation Office shall submit a letter to the Department of Development Review that indicates the survey was acceptable.
3. A note shall be placed on all grading plans and construction drawings stating:

### NOTE

Should any prehistoric or historic remains/artifacts be discovered during site development, work shall temporarily be halted at the specific site and the State Historic Preservation Office of the Department of Museums, Library and Arts, shall be notified to record and photograph the site. The period of temporary delay shall be limited to a maximum of two (2) working days from the date of notification.

4. Prior to acceptance of public improvements and release of any financial assurances, the developer shall furnish to the Utility Division and/or Engineering Division a complete set of reproducible 'as built' construction drawings prepared by a civil engineer registered in the State of Nevada.
5. The developer shall be required to participate in any applicable General Improvement District or Special Assessment District formed by Washoe County. The applicable division of the Department of Public Works shall be responsible for determining compliance with this condition.
6. All new utilities shall be placed underground. The County Engineer shall be responsible for determining compliance with this condition.
7. An animal waste management plan shall be prepared prior to the issuance of any building permit for a facility that might require such a plan. The plan must document how the migration of bacteria, nutrients, and other animal waste by-products to surface and ground waters will be prevented. The Department of Development Review shall be responsible for determining compliance with this condition.

## STREETS AND TRAFFIC

8. All street construction shall comply, at a minimum, with the requirements for a subdivision within this project. The County Engineer shall be responsible for determining compliance with this condition.

9. The developer shall submit a detailed geotechnical analysis and report for pavement design recommendations to the County Engineer for review and approval. The report shall be based on the estimated traffic loadings for a 20-year design life and shall include assumptions concerning the distribution of trucks, to include project construction truck traffic. The resultant pavement thickness in the geotechnical analysis must be used if the report indicates a structural section that is stronger than minimum is required. The County Engineer shall be responsible for determining compliance with this condition.
10. The minimum pavement structural section shall be 5 inches of asphalt over 8 inches of aggregate base for minor arterials, 4 inches of asphalt over 6 inches of granular base for roadways (private and public) for collector streets, and 3 inches of asphalt over 6 inches of granular base for roadways for local streets. The County Engineer shall be responsible for determining compliance with this condition.
11. Prior to the issuance of the first building permit, two lanes of Whites Creek Lane shall be constructed, to two-lane minor arterial standards as a minimum, from Thomas Creek Road to the project site. The County Engineer shall be responsible for determining compliance with this condition.
12. Prior to the issuance of the first building permit, a second access shall be constructed to the project site to emergency standards. The applicable fire protection agency shall be responsible for determining compliance with this condition.
13. Construction near fault lines shall be as follows:
  - a. Buildings for human occupancy shall be set back from the centerline of fault traces. Setback distances shall be determined by a geotechnical investigation prepared by a Nevada Registered Civil Engineer experienced in geotechnical engineering. The minimum setback shall be 50 feet on each side of the fault line.
  - b. Roadway construction in fault zones and along fault traces shall be reviewed by a Nevada Registered Civil Engineer experienced in geotechnical engineering. Any recommended special construction requirements (e.g., flexible joint connections for utilities) shall be complied with.

The County Engineer shall be responsible for determining compliance with this condition.
14. Asphalt paths or gravel shoulders, located adjacent to private streets shall be privately maintained and funded. The County Engineer shall be responsible for determining compliance with this condition.
15. No at-grade golf cart crossings shall be allowed across any street with 500 ADT or greater. Where possible, crossings should be below the grade of public streets. The County Engineer shall be responsible for determining compliance with this condition.

## GRADING AND DRAINAGE

16. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of any special use permit, a preliminary hydrology report shall be submitted to the County Engineer for approval. This preliminary hydrology report shall be prepared in accordance with county requirements for tentative maps, in conformance with the general concept-level storm drain master plan, and be applicable to the specific tentative map or special use permit being approved.

The report shall include, as a minimum, the locations, points of entry and discharge, flow rates and flood limits of all 10- and 100-year storm flows impacting both on-site and off-site areas and the methods for handling these flows as well as the proposed methods for handling storm water increases due to development. Proposed mitigation measures shall be included for any impacts on existing on-site and off-site properties and facilities. The County Engineer shall be responsible for determining compliance with this condition.

17. Prior to the submittal of any final map or issuance of any grading permit, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted to the County Engineer for approval. The report shall be in substantial compliance with the general concept-level storm drain master plan and contain all final storm drain pipe, ditch and retention pond sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed, constructed, and by the District Health Department and the County Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.

Prior to the issuance of a grading permit, the developer shall provide a letter granting a blanket drainage and construction easement to the Southwest Pointe Subdivision that allows the subdivision to drain onto the golf course and to construct detention facilities necessary to accommodate the subdivision-generated stormwaters in mutually agreed-upon locations. The easement shall be submitted with the plans for the final golf course improvements. The County Engineer shall be responsible for determining compliance with this condition.

18. Prior to the approval of a grading permit, a detailed dust control plan shall be prepared and submitted to Air Quality Management of the District Health Department and to the Department of Development Review. The dust control plan shall address, as a minimum, "phased grading" and stabilization methods that include the revegetation, application of palliatives or other District approved methods prior to any grading of new phases, as well as effective street cleaning for any mud or soil tracking to existing paved surfaces, and dust controls on any screening methods or storage piles located on the site.
19. For all projects larger than 5 acres, the developer shall obtain a Stormwater Discharge Permit from the Nevada Division of Environmental Protection and submit a copy to the County Engineer prior to ground-disturbing activity.

20. The developer shall provide pretreatment for petrochemicals, nutrients and other chemicals used for landscaping, and silt for all storm drainage from the site. Systematic cleaning of the streets, parking lots, and catch basins, and control of salt and sanding activities shall to be delineated in the maintenance plan. The County Engineer shall be responsible for determining compliance with this condition.
21. The stormwater discharges from this development that flow to Dry Creek shall be controlled to pre-development flow conditions and will be controlled to prevent water quality degradation of Steamboat Ditch. The developer shall provide drainage structures under Steamboat Ditch that would pass the 10-year frequency storm or demonstrate that there will not be any water quality degradation in Steamboat Ditch. The County Engineer shall be responsible for determining compliance with this condition.
22. All street crossings of Thomas and Dry Creeks shall be designed to pass the 100 year flood flows without obstruction or overtopping of the roadway. Erosion protection shall be provided based upon the recommendation of the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.
23. Standard reinforced concrete headwalls or other approved alternatives shall be placed on the inlet and outlet of all drainage structures and rip-rap shall be used to prevent erosion at the inlets and outlets of all pipe culverts. The District Health Department and the County Engineer shall be responsible for determining compliance with this condition.
24. Prior to issuance of a grading permit for the golf course and/or final map, a final wetlands determination must be made and approved by the Army Corps of Engineers and the approval letter provided to the Department of Development Review.
25. Prior to issuance of a grading permit for the golf course or approval of the final map, the developer shall obtain from the United States Army Corps of Engineers a 404 permit for wetland and dredge and fill for all roadway crossing of Thomas and Dry Creeks, or a letter from the COE indicating that a 404 permit is not required and a copy submitted to the County Engineer.
26. The developer shall submit to the District Health Department a letter approving the proposed methods of erosion control and soil stabilization from the Washoe-Storey Conservation District.
27. Prior to the issuance of a grading permit for the golf course, a golf course management plan shall be prepared that documents how the migration of fertilizers, pesticides, herbicides, and fungicides to surface and ground waters will be prevented. A surface and ground water sampling program shall be implemented to demonstrate that migration is not occurring and commits to modifying practices in the event that any of the above materials are detected. The Department of Development Review shall be responsible for determining compliance with this condition.

## WATER AND WASTEWATER

28. The sanitary sewer collection system and water system facilities, with the exception of the golf course and common area irrigation systems, must be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
29. The developer shall construct or provide the financial assurances for the construction of the water and sewer system facilities. The financial assurances must be in a form and amount that is satisfactory to the Utility Division.
30. Fees for plan checking and inspection shall be paid in accordance with Washoe County ordinance. The Utility Division shall be responsible for determining compliance with this condition.
31. Easements for all water and sewer utilities shall be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
32. No "certificate of occupancy" shall be issued until the water and sewer facilities have been completed and accepted for operation and maintenance. The Utility Division shall be responsible for determining compliance with this condition.
33. If required and in accordance with the Washoe County Utility Division policies for the Southwest Truckee Meadows, water rights shall be dedicated to Washoe County. Prior to acceptance, the water rights must be in good standing with the State of Nevada Division of Water Resources and must reflect a point of diversion, place and manner of use acceptable to the Utility Division.
34. Responsibility for design of wells, pump structure, controls, telemetry, and appurtenances, storage tanks, and transmission lines to the edge of the subdivision, all necessary to provide water service to the project, will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
35. Water quality results from a State of Nevada-certified laboratory for new water sources shall be submitted to the Utility Division. The water quality sampling and testing shall be in compliance with the current State of Nevada Regulations for Public Water Systems, NAC 445.
36. If the water quality of the wells does not meet the secondary or the primary standards, as defined by NAC 445, water treatment facilities must be on-line and functioning prior to issuance of any building permits. The Utility Division shall be responsible for determining compliance with this condition.

37. If a supplemental water source is required, evidence that an adequate source has been procured by the developer/water purveyor shall be submitted to the Utility Division for their review and approval.
38. Any wells on the property not in use for production or monitoring purposes, shall be properly abandoned in accordance with State Regulations governing Water Wells and Related Drilling. The Utility Division shall be responsible for determining compliance with this condition.
39. The developer shall provide access to the existing monitoring wells. In the event access is no longer available, the developer shall construct new wells. The Utility Division shall be responsible for determining compliance with this condition.
40. Responsibility for design of any pump stations and interceptors to provide sewer service to the project will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
41. The sewer "privilege connection fee" must be paid for each lot when required by the Washoe County Utility Division since it is not anticipated that there will be any additional major infrastructure needed to serve this development. The Utility Division shall be responsible for determining compliance with this condition.

#### FIRE PROTECTION

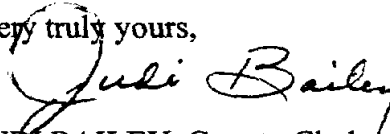

42. The plans submitted with a building permit application shall show evidence of compliance with the recommendations of the applicable fire protection agency. Those concerns are fire flows, fire hydrant number and location, access, sequential phasing of firebreaks during development, permanent firebreaks, minimum defensible space, use of fire resistant construction and/or roof material, sprinklering of structures, and spark arrestors in chimneys. Access and fire flows shall be addressed prior to the introduction of any combustible materials to the site. The fire protection agency shall be responsible for determining compliance with this condition.
43. The developer shall minimize grading to the maximum extent possible in the area around the critical mule deer habitat in order to preserve the existing browse shrubs. The Department of Development Review, in conjunction with the applicable fire protection agency, shall be responsible for determining compliance with this condition.

LANDSCAPING

44. Detailed landscaping and irrigation plans for the village commercial center, club house, golf course, golf driving range, equestrian center, or other non-residential uses requiring special use permit review shall be submitted prior to the issuance of a building permit for the particular use.
45. A buffer shall be provided between the fairways/greens and all creeks. The setback of the buffer shall comply with 100.200(e) of the Uniform Building Code Section 7011 amended. The Department of Development Review shall be responsible for determining compliance with this condition.

Very truly yours,

JUDI BAILEY, County Clerk  
and Clerk of the Board of  
Washoe County Commissioners

March 4, 1994

JUDI BAILEY  
County Clerk

Jeff Dingman  
Dingman Investments  
1597 Esmeralda Avenue  
Minden, NV 89423

Dear Mr. Dingman:

I, Judi Bailey, County Clerk and Clerk of the Board of County Commissioners, Washoe County, Nevada, do hereby certify that at a regular meeting of the Board of County Commissioners, held on February 8, 1994, Chairman Cornwall issued the following order:

94-86      DEVELOPMENT AGREEMENT CASE NO. DA9-1-93 - DINGMAN INVESTMENTS  
SOUTHWEST POINTE (APN: 49-010-04, 49-010-10 AND 41-030-12)

6:00 p.m. This was the time set in a Notice of Hearing published in the Reno Gazette-Journal on January 27, 1994, to consider Development Agreement Case No. DA9-1-93, a request by Dingman Investments to develop a residential community including 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities, a day care facility, an equestrian center and a commercial village center. The total acreage of the project is ±3,171.6 acres. The project entrance is proposed west of the intersection of Zolezzi Lane and Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR), is located in the Southwest Truckee Meadows Planning Area, and situated in Sections 3, 10, 13, 14, 15, 22, 23, 24, 26, and 27, T18N, R19E, MDM, Washoe County, Nevada. Proof was made that due and legal notice had been given.

Jeff Murphree, Planner, Department of Development Review, described the proposed project and stated that the purpose of a Development Agreement is to provide a mechanism for comprehensive review of a large scale development, to insure that adequate public facilities and services are provided consistent with the development, and to provide assurances that the master plan will not be changed during the course of the agreement, which in this case is 15 years. He explained the process stating that, if approved by this Board tonight, this preliminary development agreement, which is basically a conceptual plan, will be sent to the Regional Planning Commission as a project of regional significance for their review; that the applicant will then have six months to meet the conditions of approval; that it will then come back to staff for review; and that when all conditions have been met, staff will then bring the final development agreement to the Board of County Commissioners for final approval.

Mr. Murphree also reviewed the history of the subject agreement at the Planning Commission level and stated that the major outstanding issue is the traffic impacts that will be created by this development. He stated that the primary access for this development will be via White's Creek Lane with Zolezzi Lane serving as a gated, emergency access only; that staff was concerned about the project not having two resident accesses; and that the Planning Commission felt that White's Creek Lane as proposed by the developer will meet the needs. Mr. Murphree stated that the residents in Field Creek who will be adjacent to White's Creek Lane are very concerned about this, although White's Creek Lane first appeared as a major street in the 1984 master plan; that there were some changes when the area plan was adopted in 1989; and that when Field Creek Ranch Subdivision was approved, prior to the 1989 area plan, the developer was required to dedicate a 100-foot wide corridor for a future street--White's Creek Lane. In response to Commissioner Beck, Mr. Murphree stated that White's Creek Lane will be constructed as a 4-lane road from Thomas Creek Road west into the subject property only; that from Thomas Creek Road east to Wedge Parkway it will be constructed as a 2-lane minor arterial; and that when warranted in the future, that portion will be widened to 4 lanes also, but that won't be for many years as it will not be necessary until complete buildout of all the projects in the area.

Mr. Murphree stated that the other major issue at the Planning Commission was the flood detention facilities, which has been resolved through negotiations. He then answered specific questions of the Board.

Brita Tryggvi, CFA, Inc., representing applicant, stated that the proposed development is consistent with the Southwest Truckee Meadows Area Plan for both density and the proposed roadway system; and that they propose to cluster all of the development in the center of the project thereby creating wide open space buffers, retaining the existing vegetation, and preserving the muledeer habitat. Using maps, she located wide buffers between this project and the surrounding developments, showing that approximately 1500 acres, 48 percent of the site, will be open space, which will eventually be dedicated to a public entity or a nonprofit organization such as the Washoe Parks Foundation. Ms. Tryggvi also explained how they are planning different, distinct neighborhoods separated by golf courses and common open space, some with 12,000 square foot lots, some with half-acre lots, and some with one acre lots, the two 18-hole golf courses, one of which will be constructed in the first phase, the commercial center, and the recreational facilities they are planning.

Ms. Tryggvi then discussed the developer's proposal for constructing White's Creek Lane and stated that their idea is to create a special assessment district involving all the developers who will benefit and that that would get this entire road constructed much sooner than originally proposed, which will relieve the traffic problems in Thomas Creek Estates and on Zolezzi Lane. She stated that there are some residents in Field Creek who are going to be impacted by White's Creek Lane, cited alternatives roads that have been proposed and considered, and explained the problems with each of them. Ms. Tryggvi then described the mitigation measures that can be taken to minimize the impacts to those Field Creek residents and stated that they will work with those homeowners to come up with the best possible solutions. Ms. Tryggvi then answered questions from the Board.

Chairman Cornwall opened the public hearing and called on those wishing to speak regarding the proposed project.

The following area residents spoke in support of the project and overwhelmingly supported the construction of White's Creek Lane, some of them stating that they feel it should be constructed as soon as possible to relieve traffic in their neighborhoods: Cory Kristie, Cathy Bush, Elaine Walker, Jim Lucas, Robert Archie, Randy Jackson, Robert Duvall, Wendy Foyer, Thomas Bower, Beverly Sindlinger, and Patty Beers. Ms. Walker also submitted a petition signed by many of her neighbors in support of the project; and a letter of support from Mr. Walker was placed on file with the Clerk, along with the petition.

The following residents of the Field Creek Subdivision spoke in opposition to the project and the construction of White's Creek Lane, citing how they will be adversely impacted, such as the road being too close to their homes creating noise and danger, their views being obstructed, and their property values being affected: John Gulick, Pat and Doug Powell, Bruno Menicucci, Thomas Shrake, Wayne Avery, Randy Moore, Brad Swenson, Robert Young, Lee Parker, and John Zidich. Mr. Shrake submitted a petition signed by his neighbors supporting accessing this project from the Mt. Rose Highway, which was placed on file with the Clerk.

Pat and Doug Powell, 13440 Field Creek, also explained that Mr. Powell had gone to the County Planning offices before purchasing their property trying to learn what was planned for the area and no one told them about a 4-lane road going in their backyard. Randy Moore, 13560 Field Creek also stated that he went to the County offices to view the subdivision plans, which did not even show the easement through the area.

Buck Metcalf, Washoe County Planning Commission; Bruce Arkell, formerly with the Nevada Department of Transportation; and Greg Krause, Regional Transportation Commission; each discussed the complexities involved in developing the master plan, including the transportation element therein, and urged the Commission to follow the master plan and not to change the proposed construction of White's Creek Lane.

Keith Kellison, Chairman, Southwest Truckee Meadows Citizens Advisory Board, stated that Southwest Pointe is a quality project that will benefit the entire area; that no one spoke against the project at the numerous meetings they held regarding the project; and that on behalf of the CAB he is requesting that the Board approve the project. Nick Stosic, CAB member, stated that he was also on the CAB when the master plan was adopted and urged the Board to follow the plan and approve the project as it is in conformance with the plan. Steven Walther, former CAB member stated that a line has been drawn indicating this road since February, 1983; that the plan is fragile and should be carefully followed, which this project does; and that he believes that the deer herd and wildlife habitat will be protected by all the open space that is planned.

Dick Heikka, Chief of the Galena Volunteer Fire Department, answered some of the questions that had been raised regarding emergency access and fire protection, stating that their response time would be

good, and described the numerous pieces of equipment that the Department currently has, assuring the Board that there would be adequate fire protection. He also stated that the open space planned in this project will protect the wildlife habitat and the resident muledeer in the area; and that with all the development in the area, White's Creek Lane will have to be built someday just on the basis of good planning.

Sandra Wilson, 13350 Fieldcreek, stated that the construction vehicles should use the Mt. Rose Highway; and that when White's Creek Lane is constructed, it should include walking paths and bike lanes so that it will be conducive to the rural life of the area.

Chris Spandow stated that he does not live in the project area, but does use the streets there and urged the Board to maintain the integrity of the area plan and allocate the traffic fairly to all streets.

Nancy Maddox, 4045 LaMay Lane, stated that her concern is the water; that she lives on the north end of the project; and that she and her neighbors are all on private wells and are concerned that their wells will be impacted.

There being no one else wishing to speak, Chairman Cornwall closed the public hearing. She then asked Mr. Murphree to clarify the issues of construction traffic and the approximate time when White's Creek Lane will be constructed.

Mr. Murphree stated that construction traffic will initially use Zolezzi Lane during construction of the golf course, but that that will not be in and out traffic; and that when the first building permit is issued, the construction traffic will use Mt. Rose to Thomas Creek to White's Creek. He further stated that they had planned to require construction of White's Creek Lane by the 85th residential permit, but the applicant desires to do it before that time.

Ms. Tryggvi stated that the developer has no objection to moving it up to the 35th building permit as someone suggested since they hope to construct White's Creek Lane much sooner through the special assessment district. Ms. Tryggvi and the Board then discussed, at length, possible mitigation measures that can be taken to alleviate the impacts on those residents living on Field Creek Lane, such as placing the lanes as far to the south as possible, lowering the road, fencing and installing sound walls. Ms. Tryggvi stated that they will work with those homeowners, even meeting with them individually if necessary, to come up with acceptable solutions to minimize the impacts on them.

In regard to the concern expressed concerning water, Commissioner Bradhurst asked if there has been an analysis of whether this project might impact private wells. Ms. Tryggvi stated that they have not yet done that but are working with the Utility Division to determine this.

Commissioner McDowell asked if the Board is going to add or change any conditions. Mike Harper, Director of Development Review, reminded the Board that this is a Preliminary Development Agreement; that if

the Commission modifies the agreement, the changes must go back through the Planning Commission process; and that the Board's input would certainly be taken into consideration when preparing the Final Development Agreement for the Board's approval.

Commissioner Bradhurst then asked questions about the open space dedication and the trails system, which were answered by Gene Sullivan, Parks and Recreation Director.

Chairman Cornwall stated that she definitely wants the residents on Field Creek Lane who will be impacted by the construction of White's Creek Lane to be involved in the design process regarding the mitigation measures used to alleviate those problems; that she does want the condition regarding construction traffic clarified to include how that issue will be enforced; and that she does not believe the residents in this area want street lights in the neighborhood.

Legal Counsel Maureen Griswold stated that she feels those changes are acceptable; that since the developer has agreed to change the 85th building permit to the 35th, she sees no problem with that; and that she does not believe that these clarifications would require resubmittal to the Washoe County Planning Commission.

On motion by Commissioner McDowell, seconded by Commissioner Bradhurst, which motion duly carried, Chairman Cornwall ordered that the preliminary development agreement in Development Agreement Case No. DA9-1-93 be approved subject to the following conditions as clarified by the Board at this meeting:

GENERAL CONDITIONS  
for  
DEVELOPMENT AGREEMENT CASE NO. DA9-1-93  
for  
SOUTHWEST POINTE

COMPLIANCE WITH THE CONDITIONS OF THIS DEVELOPMENT AGREEMENT IS THE RESPONSIBILITY OF THE DEVELOPER, ITS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY AND THEIR SUCCESSORS IN INTEREST.

A COPY OF ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL BE FILED WITH THE DEVELOPMENT REVIEW STAFF.

GENERAL CONDITIONS

1. All uses, densities and standards shall be consistent with the Washoe County Development Code and with the goals and policies in the Comprehensive Plan and the Southwest Truckee Meadows Area Plan. Unless specifically stated in the final development agreement, the allowed uses, densities, and standards of the land subject to the development agreement shall be those in effect at the time the final agreement is approved.

2. As part of every tentative map and special use permit application, the developer shall include a "statement of compliance" that demonstrates how the development application is consistent with the recorded final development agreement. The "statement of compliance" format(s) shall be made a part of the final development agreement. For the phase I applications, including the tentative map, special use permit and administrative waiver, a "draft statement of compliance" shall be provided to staff prior to the public hearing. When the final development agreement is approved, a revised statement of compliance for the Phase I tentative map and special use permit applications shall be submitted to Department of Development Review staff.
3. The recorded final development agreement shall be effective for a period not-more-than 15 years. An extension of this approval may be granted if mutually agreed to by the developer and Washoe County.
4. Conditions, covenants, and restrictions (CC&Rs) shall be reviewed and approved by the District Attorney's office and the development review staff. Washoe County shall be made a party to the applicable provisions of the CC&Rs to the satisfaction of the District Attorney's office. Said CC&Rs shall specifically address the potential for liens against the property and the individual property owner's responsibilities for the perpetual funding, maintenance and replacement, of the following items, at a minimum.
  - a. Private roads within the subdivision.
  - b. Equestrian center.
  - c. Staffing of maintenance and security forces.
  - d. Common area landscaping.
  - e. Entrance gates.
  - f. Snow removal and storage areas.
  - g. Landscaping along streets.
  - h. Fire and fuelbreaks on open space.
  - i. Detention basins and the accumulated sediment.
  - j. Equestrian/pedestrian trails.
  - k. Bicycle and pedestrian paths.
  - l. Private streets and utilities.
  - m. Golf cart crossings.
  - n. Off-site residential parking areas
  - o. Public park center.

At a minimum, the CC&Rs shall also specifically address the following items:

- a. Requirement to abide by Architectural/Community Design Guidelines.
- b. Specifications on the limitation of turf area for single family homes.
- c. Notice of requirement to pay future sewer user fees
- d. Minimum defensible space requirements.
- e. Snow storage areas.

- f. Requirement to adhere to National Electric Safety Code setbacks for existing overhead power lines.
  - g. Potential for conservation easements or dedication of open space.
  - h. Prohibition of motorized vehicles in open space.
  - i. Areas with potential for equestrian traffic.
  - j. Requirement of open space remaining open to pedestrian and bicycle traffic.
  - k. Notice of pedestrian easements to abutting properties.
5. Prior to ground disturbing activity, the developer shall provide an archaeological/historical survey for review by the Department of Conservation and Natural Resources, Division of Historic Preservation and Archeology.
  6. The developer shall participate in any applicable General Improvement District or Special Assessment District formed by Washoe County to the satisfaction of the applicable division of Public Works.
  7. All new utilities shall be placed underground to the satisfaction of the County Engineer.
  8. Prior to final map approval, the developer is to provide written approval of the plans for the installation of mail delivery facilities from the US Postal Service. The system must be shown on the project construction plans and installed as part of the on-site improvements to the satisfaction of the County Engineer and the US Postal Service.
  9. The developer and all successors shall direct any potential purchaser of the site, or portions thereof, to meet with the development review staff to review conditions of approval prior to the final sale of the site. Any subsequent purchasers of the site shall notify the development review staff of the name, address, telephone number, and contact person of the new purchaser within 30 days of the final sale.
  10. Prior to submittal to the Washoe County Board of County Commissioners, the final development agreement shall be reviewed and approved by the Washoe County District Attorney's Office.
  11. Within six months of the approval of the preliminary development agreement, a draft final development agreement that conforms with the provisions of section 814 of the Washoe County Development Code shall be completed and submitted to the Washoe County Department of Development Review. Washoe County Department of Development Review will provide comments on the draft final agreement. The final development agreement will then be submitted to the Washoe County Board of County Commissioners within three months. Extensions of any of these time frames may be requested if mutually agreeable to Washoe County and the developer.

## PHASING

12. The project shall be developed in three phases. Phase I includes a tentative map for 436 lots, an 18-hole golf course, the village center and driving range. Phase II will include an additional nine holes, the equestrian center and a tentative map for approximately 220 dwelling units. Phase III includes the remaining 434 lots and the last nine holes of golf. Modification to the proposed phasing plan may be made if mutually agreeable the developer and Washoe County. These modifications may include the commercial portion of the project and the second 18-hole golf course, which may be constructed during phase II or phase III.
13. The subdivider shall present to the governing body or planning commission a final map, prepared in accordance with the tentative map, for the entire area for which a tentative map has been approved, or one of a series of final maps, each covering a portion of the approved tentative map, within two (2) years after the date of approval of the tentative map.

If the subdivider fails to record a final map for any portion of the tentative map within two years after the date of approval of the tentative map, all proceedings concerning the subdivision are terminated.

The governing body or planning commission may grant an extension of not more than two (2) years for the presentation of any final map after the two (2) year period for presenting the entire final map or next successive final map has expired.

14. The developer shall provide Department of Development Review staff with a monthly report indicating the number of building permits issued, once residential construction has started.

## TRAFFIC

15. A LOS C, or the current Washoe County standard, shall be used as a basis for evaluating transportation needs and traffic impact mitigation requirements.
16. Prior to the issuance of the first building permit, two lanes of Whites Creek Lane shall be constructed, to two-lane minor arterial standards as a minimum, from Thomas Creek Road to the project site, to the satisfaction of the County Engineer.
17. Prior to the issuance of the first building permit, a second access shall be constructed to the project site to emergency standards to the satisfaction of the applicable fire protection agency.
18. Prior to the issuance of the 35th building permit, the following roadway improvements shall be constructed to the satisfaction of the County Engineer:

- A. The remaining two lanes of Whites Creek Lane from Thomas Creek Road to the project site if warranted by projected traffic demands.
  - B. Two (2) lanes of Whites Creek Lane from Thomas Creek Road to Wedge Parkway with 100 feet of right-of-way. These two lanes will be constructed so that an additional two lanes may be added in the future if warranted by projected traffic volumes.
  - C. Whites Creek Lane will be designed in a manner that minimizes any impacts on the adjacent homes to the north in Fieldcreek Ranch (e.g., fencing, berms, lowering the travel lanes).
19. The final development agreement shall not be approved until the right-of-way of all necessary off-site accesses from the project to Thomas Creek Road are obtained. A recorded right-of-way document shall be provided to the satisfaction of the County Engineer and the District Attorney's Office.
20. Prior to the final approval of the development agreement, the developer for Southwest Pointe shall petition the Washoe County Board of County Commissioners to create a Special Assessment District (SAD) for the purpose of financing the construction of Whites Creek Lane from the project site to Wedge Parkway and other roads as defined in the SAD agreement. In the event that a special assessment district is not created, the developer shall construct Whites Creek Lane, as outlined in Condition No.'s 16 and 18, from the project site to Wedge Parkway, to the satisfaction of the County Engineer.

Unless substituted by Washoe County Board of County Commissioner action, each final map shall contain the following note to the satisfaction of the development review staff:

NOTE

An off-site road construction fee is applicable to all parcels created by this map. Any applicant for a permit to construct or otherwise use this land shall either (1) enter into an agreement with Washoe County, requiring financial assurances and approval by the District Attorney's Office, to pay the future off-site road impact fee upon its adoption or (2) pay any interim fee imposed by Washoe County, be released from the responsibility of the future impact fee, and be eligible for a refund should the future impact fee charge less than the interim fee. All options to pay existing interim fees expire upon the subsequent adoption of a replacement interim fee or an impact fee.

21. Prior to approval of the final development agreement, a proposed Construction Traffic Haul Route Plan shall be submitted to the County Engineer for review and approval. The primary construction shall be Whites Creek Lane. As part of Phase I development, however, Zolezzi Lane may be used, for construction mobilization only, for completion of the first 18-hole golf course and for the extension of utilities into the project site.

Prior to the issuance of the first building permit, all construction traffic will be diverted to Whites Creek Lane. Access to Whites Creek Lane will be from the Mt. Rose Highway to Thomas Creek Road. When the 35th building permit is issued, all construction traffic will be required to use Whites Creek Lane from Wedge Parkway. Construction traffic will use Whites Creek Lane from Wedge Parkway if this segment is completed prior to the issuance of the 35th building permit. Thomas Creek Road from Mt. Rose Highway to the proposed Whites Creek Lane may be considered for a haul route provided the developer submit a traffic analysis and intersection design prepared by a licensed Nevada Civil Engineer which addresses and provides, as a minimum, recommendations regarding:

- a) site distance requirements;
- b) left turn storage capacity and design;
- c) intersection location and alignment;
- d) proximity to existing intersections and recommended separate distances;
- e) existing center median and landscaping concerns
- f) determination of adequacy of existing Thomas Creek Road roadway geometric section; and
- g) determination of adequacy of existing structural section and load bearing capability.

The submitted report shall be evaluated and accepted by the County Engineer prior to any approval of the use of Thomas Creek Road as a haul route. Once Whites Creek Lane is connected to Wedge Parkway, this road shall become the primary construction haul route.

Any existing or proposed roads that will be used as construction haul routes and are not designated truck routes must be evaluated by a geotechnical study to determine the existing structural section and its load supporting capability. If the pavement section is inadequate to support the proposed construction loadings, the roadway must be redesigned or reconstructed as needed to provide a 20-year design life in accordance with the AASHTO Interim Guide for Flexible Pavements.

Enforcement of the approved construction haul routes shall be the responsibility of the applicant and the County Engineer. Failure of construction vehicles to follow approved roads, will result in cessation of building permits and/or certificate-of-occupancies.

22. Prior to approval of the final development agreement, the developer shall provide a street maintenance program to the satisfaction of the County Engineer and the Department of Development Review. Street maintenance of private streets shall be performed by the homeowner's association and shall be perpetually funded.
23. Prior to the approval of the final development agreement, a schematic pedestrian circulation plan. As part of each tentative map, a detailed pedestrian circulation plan will be submitted and approved by the Department of Development Review.

24. All roadway grades shall be limited to the maximum allowable grades for each street classification as provided in the Washoe County Standards, to the satisfaction of the County Engineer.
25. Unless specifically stated in the final development agreement, all (public and private) street design and construction is to be done in accordance with the Washoe County Standards that are approved at the time the final development agreement is recorded, to the satisfaction of the County Engineer.
26. The following roadway sections shall be applicable to the private on-site streets shown on the tentative map. A traffic report shall be submitted prior to approval of the first final map which identifies the ultimate average daily traffic on each street.
  - A. Private - 41 foot ROW cul-de-sac street (maximum 200 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum four (4) foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer.
  - B. Private - 50 foot ROW local street (maximum 500 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum four (4) foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer.
  - C. Private - 50 foot ROW collector street (500 ADT to 2000 ADT): minimum 24 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum four (4) foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer.
  - D. Private - 60 foot ROW collector street (2000 ADT to 8000 ADT): minimum 36 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking permitted both sides. A minimum five (5) foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. No residential driveway access will be allowed.

- E. Public - 60 foot ROW collector street (2000 ADT to 9,600 ADT): minimum 36 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides; parking prohibited both sides; minimum four (4) foot meandering asphalt one side, residential driveway access not allowed. Where proposed, center medians shall be limited to a minimum of 11 feet from curb face to curb face.
  - F. Public - 80 foot ROW minor arterial street (9,600 ADT to 10,830 ADT): A minimum 11 foot center median from curb face to curb face, 29 1/2 foot roadway section curb face to curb face on either side of the median; curb and gutter on both sides; no parking either side; four (4) foot meandering asphalt path, both sides; no residential driveway access allowed.
  - G. Public - 100 ROW major arterial street (more than 10,830 ADT).
27. Landscaped medians shall be designed in accordance with AASHTO site distance and safety guidelines to the satisfaction of the County Engineer, Washoe County Department of Development Review and the developer. Maintenance of median landscaping shall be by the Homeowners Association as provided for in a separate maintenance agreement and to be approved by the County Engineer and the District Attorney's office prior approval of the final development agreement.
28. Meandering asphalt paths will be acceptable provided:
- A. Pedestrian easements are included for portions of the paths located outside the County r.o.w.
  - B. Landscaping between the back of the curb and the path shall be designed in accordance with AASHTO site distance and safety guidelines to the satisfaction of the County Engineer.
  - C. Maintenance of the asphalt paths and landscaping shall be the responsibility of the developer and, when created, by the Homeowners Association as provided for in a separate maintenance agreement and to be approved by the County Engineer and the District Attorney's office prior approval of the final development agreement.
29. Proposed roadways (public or private) are not to be centered along fault lines. Faultlines shall be located behind the curblines, on the up-thrown side, to the satisfaction of the County Engineer. Roads may cross fault lines. If fault lines are more accurately located in the field, the setback excluding construction for buildings for human occupancy may be reduced, to the satisfaction of the County Engineer.
30. Asphalt paths or gravel shoulders, located adjacent to private streets shall be privately maintained and funded.

31. All cul-de-sacs shall be a minimum pavement radius of 43.5 feet to front face of curb or 45 feet to edge of pavement, to the satisfaction of the County Engineer.
32. Temporary County Standard turnarounds shall be constructed on all phased roadways which extend more than one lot depth beyond a maintained public or private street, to the satisfaction of the County Engineer.
33. All-weather emergency access roads shall be constructed at the end of all cul-de-sacs that are longer than 500 feet to the satisfaction of the County Engineer and the applicable fire protection agency. These roads shall have a 30-foot access easement with a minimum 20-foot width of 6 inches of Type 2 Class B aggregate base. The roads shall be controlled by emergency access gates and shall be posted with signs stating "For Emergency Vehicles Only" to the satisfaction of the applicable fire protection agency and the County Engineer.
34. Prior to final map approval, the developer shall provide all weather emergency access easements and road improvements at the locations shown on the tentative map, terminating at public or privately maintained streets, to the satisfaction of the County Engineer. The emergency access road shall be constructed within a 30 foot access easement to a minimum 20 foot width with 4 inches of Type 2 Class B aggregate base.
35. Street lights shall be installed at major intersections to the satisfaction of the County Engineer.
36. Unless otherwise stated in the final development agreement, all roadway improvements necessary (including but not limited to, curb, gutter, sidewalk, signing and striping, driveway access, and street lighting) to serve the project shall be designed and constructed to county standards and specifications and/or financial assurances in an appropriate form and amount shall be provided to the satisfaction of the County Engineer.
37. The minimum pavement structural section shall be 4 inches of asphalt over 6 inches of granular base for roadways (private and public) for collector-classified streets and shall be 3 inches of asphalt over 6 inches of granular base for roadways for local streets to the satisfaction of the County Engineer.
38. The applicant shall submit a detailed geotechnical analysis and report for pavement design recommendations to the County Engineer for review and approval. The report shall be based on the estimated traffic loadings for a 20-year design life and shall include assumptions concerning the distribution of trucks, to include project construction truck traffic. The resultant pavement thickness in the geotechnical analysis must be used if the report indicates a structural section that is stronger than minimum is required.

39. No at-grade crossing golf cart crossings shall be allowed across any street with 500 ADT or greater, to the satisfaction of the County Engineer. Where possible, crossings should be below the grade of public streets.
40. Off-site parking areas shall be provided within 300 feet of homes that have 12,000 square foot lot sizes. One space shall be provided for every three homes. Parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the revised tentative maps for phase I and subsequent tentative map applications for phases II and III, to the satisfaction of Washoe County Department of Development Review and the developer.
41. All private roadways shall be depicted on the final maps and identified in the final development agreement as either private access easements over individual adjacent lots or, if identified as separate parcels, as common areas with equal fractional ownership by all of the lots within the development to the satisfaction of the County Engineer.
42. Project streets that are designed with security gates at points intersecting with public streets shall have adequate on-site stacking space. The specific type and size of the stacking areas must be approved and constructed to the satisfaction of the County Engineer.
43. Regulatory signs must be installed at the juncture of all public streets with a private street to the satisfaction of the County Engineer. Said sign shall state: "PRIVATE STREET NOT MAINTAINED BY COUNTY." All regulatory signs shall meet the Manual of Uniform Traffic Control Device standards.
44. Street names shall be reviewed and approved by the Regional Street Naming Coordinator. The tentative map shall indicate street names for identification purposes.

#### AIR QUALITY MANAGEMENT

45. Prior to the approval of the final development agreement, a detailed dust control plan shall be prepared and submitted to Air Quality Management and to Washoe County Department of Development Review staff. The dust control plan shall address, as a minimum, "phased grading" and stabilization methods that include the revegetation, application of palliatives or other District approved methods prior to any grading of new phases, as well as effective street cleaning for any mud or soil tracking to existing paved surfaces, and dust controls on any screening methods or storage piles located on the site.

#### DRAINAGE

46. Detention/retention facilities are to be maintained by a homeowner's association and perpetually funded unless the County agrees to accept maintenance and financial responsibilities. Regional facilities would be maintained by Washoe County.

47. A general concept level storm drain master plan shall be submitted and approved prior to acceptance of the final development agreement to the satisfaction of the County Engineer. The report shall include, as a minimum, the locations, points of entry and discharge, flow rates and flood limits of all 10 and 100 year storm flows impacting both on-site and off-site areas and the methods for handling these flows as well as the proposed methods for handling storm water increases due to development. Proposed mitigation measures shall be included for any impacts on existing on-site and off-site properties and facilities.
48. Prior to recordation of any final map, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted and approved by the County Engineer. The report shall be in substantial compliance with the general storm drain master plan and contain all final storm drain pipe, ditch and retention pond sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed and constructed to the satisfaction of the District Health Department and the County Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.
49. A maintenance plan of all drainage facilities, to be owned by the homeowner's association, shall be provided prior to approval of the final development agreement. All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe county water treatment plant, and associated Steamboat Ditch conveyance system. All runoff from improved areas which runs into the Steamboat Ditch shall be pre-treated for silt and petrochemicals and shall be routed through a "wet" detention facility or approved alternative, to the satisfaction of the Utility Division and the Department of Development Review.
50. The developer shall provide pretreatment for petrochemicals, nutrients and other chemicals used for landscaping, and silt for all storm drainage from the site to the satisfaction of the County Engineer. Systematic cleaning of the streets, parking lots, and catch basins, and control of salt and sanding activities shall to be delineated in the maintenance plan.
51. The off-stream detention/debris basin recommended in the 1990 Kennedy/Jenks/Chilton report shall be reserved based on the following timetable:
  - A. Washoe County will have three years to obtain the necessary permits for construction of the off-stream detention basin. This three years shall commence upon the approval of the final development agreement. If Washoe County fails to obtain the necessary permits, the property for the detention site shall be offered by the applicant or his successors, for dedication to

the Washoe County School District for a middle school, the Washoe County parks and Recreation Department for a neighborhood park, or revert to open space.

- B. If Washoe County does obtain the necessary permits within three years, construction of the project shall commence within five (5) years of the approval of the final development agreement. If construction is not started within by that date, the property for the detention site shall be offered by the applicant or his successors, for dedication to the Washoe County School District for a middle school, the Washoe County parks and Recreation Department for a neighborhood park, or revert to open space.
- C. If an alternative solution or site becomes available for flood control, this property will immediately become available for dedication to the Washoe County School District for a middle school, the Washoe County parks and Recreation Department for a neighborhood park, or revert to open space.
- D. If the detention basin is constructed, Washoe County shall pay fair market value for the property.

52. The increase in development-caused runoff from the 100 year storm, including drainages which run directly into the Steamboat Ditch, shall be detained/retained On-site because of the limited capacity of the flood control facilities in the area of South Virginia Street and the Steamboat Ditch Company, to the satisfaction of the County Engineer.

53. Prior to the approval of the final development agreement, a geotechnical report shall be prepared, which considers the effects of earthquake forces and faulting in the area, to the satisfaction of the County Engineer.

The siting and design of detention/retention facilities shall be addressed based on the findings and recommendations provided in the geotechnical report.

54. All street crossings of Thomas and Dry Creeks shall be designed to pass the 100 year flood flows without obstruction or overtopping of the roadway, to the satisfaction of the County Engineer. Erosion protection shall be provided based upon the recommendation of the geotechnical report.

55. A buffer shall be provided between the fairways/greens and all creeks. The setback of the buffer shall comply with 100.200 (e) of the Uniform Building Code Section 7011 amended.

56. A buffer shall be provided next to riparian vegetation. The size of the buffer shall be mutually agreeable to Washoe County and the developer. A minimum 50-foot buffer shall be provided between property lines of single family residences and riparian vegetation.

57. The stormwater discharges from this development that flow to Dry Creek shall be controlled to pre-development flow conditions and will be controlled to prevent water quality degradation of Steamboat Ditch. The applicant shall provide drainage structures under Steamboat Ditch that would pass the 10-year frequency storm or demonstrate that there will not be any water quality degradation in Steamboat Ditch.
58. Prior to approval of the final map, the developer shall obtain a Stormwater Discharge Permit from the Nevada Division of Environmental Protection. If required, point discharge permit for each proposed detention pond will be obtained from the Nevada Division of Environmental Protection and copy submitted to the Engineering Division.

The applicant shall contact the Division of Water Resources, State of Nevada, to determine whether the proposed flood detention facilities will require a permit.

59. Prior to approval of the final development agreement, a final wetlands determination must be made and approved by the Army Corps of Engineers and the approval letter provided to the Department of Development Review.
60. Prior to approval of the final map, the developer shall obtain from the United States Army Corps of Engineers a 404 permit for wetland and dredge and fill for all roadway crossing of Thomas and Dry Creeks, or a letter from the COE indicating that a 404 permit is not required and a copy submitted to the County Engineer.
61. Prior to approval of the final development agreement, a golf course management plan shall be prepared that documents how the migration of fertilizers, pesticides, herbicides, and fungicides to surface and ground waters will be prevented. A service and ground water sampling program shall be implemented to demonstrate that migration is not occurring, and commits to modifying practices in the event that any of the above materials are detected.
62. An animal waste management plan for the equestrian center shall be prepared prior to the issuance of a building permit for that facility, that documents how the migration of bacteria, nutrients and other animal waste by-products to surface and ground waters will be prevented.
63. Individual lot drainage shall not be allowed to drain onto neighboring properties without proper reciprocal drainage easements and the individual lot drainage swales shall be designed to handle the 100 year flows and lined, to the satisfaction of the County Engineer.

#### WATER

64. Prior to the approval of the final development agreement, the applicant shall provide staff with a phasing schedule for the dedication

of water rights. Permitted or certificated groundwater rights in the amount of 1.12 acre feet must be dedicated to Washoe County for each lot of a final map. Prior to acceptance, the water rights must be in good standing with the State of Nevada Division of Water Resources and must reflect a point of diversion, place and manner of use acceptable to the Utility Division.

65. Prior to the approval of the final map, the developer shall demonstrate how compliance with NRS 278.349, that requires the availability of water meet applicable health standards and is sufficient in quantity to serve the foreseeable needs of the subdivision, shall be met to the satisfaction of the District Health Department and Washoe County Department of Development Review.
66. Prior to the approval of the final development agreement, a complete water analysis from at least one monitoring well must be submitted to the District Health Office. The analysis must demonstrate the water conforms to the existing and proposed drinking water standards.
67. Prior to the approval of the final development agreement, a schematic water system plan for the referenced proposal must be submitted to the Utility Division and the District Health Department. Prior to final map approval, the plan must show that the water system will conform to the State of Nevada Water Supply Regulations, NAC Chapter 445, and the State of Nevada Regulations Governing Review of Plans for Subdivisions, Condominiums, and Planned Unit Developments, NAC 278.400 through 278.410.
68. Prior to final map approval, a letter of approval for the water rights serving this proposal must be submitted from the Division of Water Resources. A water "will-serve" letter for a final map will not be issued until the production wells have been determined to have adequate water resource to the satisfaction of the Utility Division.
69. The developer shall provide adequate assurance that the sewage, water and drainage systems will be satisfactorily maintained and operated
70. The final map owner's certificate shall contain language indicating that the developer and his assignees agree to the use of residential water meters.
71. Water quality results from a State certified laboratory for new water sources shall be submitted to the Utility Division. The water quality sampling and testing shall be in compliance with the current State of Nevada Regulations for Public Water Systems, NAC 445.
72. If the water quality of the wells does not meet the secondary or the primary standards, as defined by NAC 445, water treatment facilities must be on-line and functioning prior to issuance of any building permits.

73. Any wells on the property not in use for production or monitoring purposes, shall be properly abandoned in accordance with State Regulations governing Water Wells and Related Drilling.
74. If a supplemental water source is required, evidence that an adequate source has been procured by the developer/water purveyor shall be submitted to the Utility Division for their review and approval. The water source shall meet both primary and secondary standards of the Safe Drinking Water Act.
75. The tentative maps shall show the maintenance roads for the existing and proposed water tanks. The location of these roads shall be mutually agreeable to Washoe County and the developer.
76. The developer shall provide access to the existing monitoring wells to the satisfaction of the Utility Division. In the event access is no longer available, the developer shall construct new wells to the satisfaction of the Utility Division.
77. The developer shall utilize treated wastewater from the South Truckee Meadows Wastewater Treatment Plant. As part of the initial construction, the developer shall provide the necessary on-site easements needed to construct the infrastructure. When this resource becomes available to irrigate the golf course, the developer shall construct the necessary on-site infrastructure.

#### WASTEWATER

78. Responsibility for design of any pump stations and interceptors to provide sewer service to the project will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
79. The project shall be designed to accommodate a gravity flow sanitary sewer system within the boundaries of the subdivision. Such design shall be to the satisfaction of the Utility Division.
80. The final subdivision map shall show a dedicated, all-weather easement, with access, over the developments sanitary sewer lines, to the satisfaction of the Utility Division.
81. All minor infrastructure for potable water distribution shall be designed, constructed, and inspected to the satisfaction of the District Health Department and the Utility Division. The developer shall coordinate with the Utility Division to ensure the major infra-

structure design can be accomplished prior to the approval of the final map.

82. Responsibility for design of wells, pump structure, controls, telemetry, and appurtenances, storage tanks, and transmission lines to the edge of the subdivision, all necessary to provide water service to the project, will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
83. The sanitary sewer collection system and water system facilities must be offered for dedication to Washoe County.
84. The developer shall construct or provide the financial assurances for the construction of the water and sewer system facilities. The financial assurances must be in a form and amount that is satisfactory to the Utility Division.
85. No "certificate of occupancy" shall be issued until the water and sewer facilities have been completed and accepted for operation and maintenance to the satisfaction of the Utility Division.
86. The sewer "privilege connection fee" must be paid for each lot when required by the Washoe County Utility Division since it is not anticipated that there will be any additional major infrastructure needed to serve this development.
87. Fees for plan checking and inspection shall be paid in accordance with Washoe County ordinance.
88. Easements for all water and sewer utilities shall be offered for dedication to the satisfaction of the Utility Division.

#### GRADING

89. The development shall comply with the requirements of the Hillside Development Ordinance, as applicable.

#### SCHOOLS

90. Should the proposed "off-stream" location for the flood detention facility proposed in the 1990 Kennedy/Jenks report not be dedicated for this purpose, a minimum ten acre site for an elementary school and a minimum 25 acre site for a middle school shall be offered for dedication.

If the "off-stream" flood control facility is dedicated to Washoe County, a 10 acre site for the elementary school shall be offered for dedication.

If the area for the "off-stream" facility is dedicated, but the County has not complied with Condition No. 51, the use for the area shall revert back to a school site and/or a park site (if requested by Washoe County) as proposed by the developer. If a school or park site is not requested by Washoe County, this area shall remain as an open space buffer.

#### FIRE PROTECTION

91. The plans submitted with a building permit application shall show evidence of compliance with the recommendations of the applicable fire protection agency. Those concerns are fire flows, fire hydrant number and location, access, sequential phasing of firebreaks during development, permanent firebreaks, minimum defensible space, use of fire resistant construction and/or roof material, sprinklering of structures, and spark arrestors in chimneys. Access and fire flows shall be addressed to the satisfaction of the fire protection agency prior to the introduction of any combustible materials to the site.
92. A minimum one-acre site shall be offered for dedication, if requested by the applicable fire protection agency, for a fire station. The developer shall enter into talks with the applicable fire protection agency for any other requirements, such as, a fire station site, manpower and equipment needs, or for coordination with other developments that have similar requirements.

#### PARKS/RECREATION/OPEN SPACE

93. Prior to the approval of the final development agreement, an open space management plan and map shall be prepared that specifies the ownership of open spaces, type of uses allowed, phasing of open space dedication, phasing of trail construction and who is responsible for maintenance. This plan shall address the provisions of Section 110.408.45 of the Development Code. Common areas shall be maintained by the homeowner's association and provisions be made for perpetual funding for maintenance.

Prior to approval of the final development agreement, a government entity (e.g. United States Forest Service, Washoe County Parks Department, etc.) or a non-profit organization (e.g. Washoe Parks Foundation) shall be identified that will accept the dedication of the open space buffers identified on the Concept Plan, which consists of approximately 1,500 acres.

94. The final development agreement shall include a provision for the public open space that prohibits the sale of any open space without the consent of Washoe County.
95. Unless the off-stream site is dedicated to the County, a minimum 10-acre public park site shall be offered for dedication to the

County. A sketch plan has been submitted, which if conceptually approved by the County, should be included in the final development agreement. The final park design shall be mutually agreeable to the County and the developer. The developer will construct the recreational facilities in the park and then be reimbursed for the cost of the construction from the Residential Construction Tax. The responsibility of park maintenance shall be negotiated by the developer and Washoe County prior to the approval of the final development agreement.

96. The developer will work together with staff from the Department of Parks and Recreation to locate the proposed regional public trails to the satisfaction of Washoe County and the developer.

#### LANDSCAPING/ARCHITECTURAL DESIGN

97. Prior to the approval of the final development agreement, the developer shall submit schematic landscaping and architectural design guidelines of the entire project to the Design Review Committee (DRC) for its review and approval. These guidelines shall address, but not be limited to, type and color of building material, general architectural design, fencing, landscaping material (if plant material: type, size at time of planting, maturation size at full growth, period of time between planting and full growth), landscaping location, landscaping irrigation system, and financial assurances that landscaping will be planted and maintained.

The Design Review Committee shall also review the design of Whites Creek Lane, specifically to address Condition No. 18C.

98. The developer shall minimize grading to the maximum extent possible in the area around the critical mule deer habitat in order to preserve the existing browse shrubs.
99. Homes located on 12,000 square foot lots shall have a minimum 160 square foot storage space added in their garages, if only one garage space is provided.
100. A minimum 25 foot landscape buffer shall be installed between the homes and the collector and secondary loop streets. The homeowners association shall be required to perpetually maintain these areas.

#### OTHER

101. Prior to acceptance of the first final map, the telephone easement Doc. No. 415899, which runs through the middle of many lots, shall be realigned with appropriate abandonment and relocation easements, or the proposed lots realigned, to the satisfaction of the County Engineer.

\* \* \* \* \*

TENTATIVE MAP CONDITIONS  
for  
DEVELOPMENT AGREEMENT CASE NO. DA9-1-93  
for  
SOUTHWEST POINTE

1. All uses, densities and standards shall be consistent with the Washoe County Development Code and with the goals and policies in the Comprehensive Plan and the Southwest Truckee Meadows Area Plan. Unless specifically stated in the final development agreement, the allowed uses, densities, and standards of the land subject to the development agreement shall be those in effect at the time the final agreement is approved.
2. As part of every tentative map and special use permit application, the developer shall include a "statement of compliance" that demonstrates how the development application is consistent with the recorded final development agreement. The "statement of compliance" format(s) shall be made a part of the final development agreement. For the phase I applications, including the tentative map, special use permit and administrative waiver, a "draft statement of compliance" shall be provided to staff prior to the public hearing. When the final development agreement is approved, a revised statement of compliance for the Phase I tentative map and special use permit applications shall be submitted to Department of Development Review staff.
3. The subdivider shall present to the governing body or planning commission a final map, prepared in accordance with the tentative map, for the entire area for which a tentative map has been approved, or one of a series of final maps, each covering a portion of the approved tentative map, within two (2) years after the date of approval of the tentative map.  
  
If the subdivider fails to record a final map for any portion of the tentative map within two years after the date of approval of the tentative map, all proceedings concerning the subdivision are terminated.  
  
The governing body or planning commission may grant an extension of not more than two (2) years for the presentation of any final map after the two (2) year period for presenting the entire final map or next successive final map has expired.
4. The developer shall provide Department of Development Review staff with a monthly report indicating the number of building permits issued, once residential construction has started.
5. Unless specifically stated in the final development agreement, all (public and private) street design and construction is to be done in accordance with the Washoe County Standards that are approved at the time the final development agreement is recorded, to the satisfaction of the County Engineer.

6. The roadway structural sections for the proposed 80 foot public right-of-way shall have as a minimum 5 inches of asphalt on 8 inches of aggregate base. A final geotechnical report must be prepared, however, prior to final map approval to determine if additional structural capacity above the minimum is required. On-site construction haul route traffic and school traffic is to be considered in the pavement analysis. The proposed on-site private road right-of-way widths are acceptable as shown for the tentative map of Phase I.
7. The following roadway sections shall be applicable to the private on-site streets shown on the tentative map. A traffic report shall be submitted prior to approval of the first final map which identifies the ultimate average daily traffic on each street.
  - A. Private - 41 foot ROW cul-de-sac street (maximum 200 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum four (4) foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer.
  - B. Private - 50 foot ROW local street (maximum 500 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum four (4) foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer.
  - C. Private -50 foot ROW collector street (500 ADT to 2000 ADT): minimum 24 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum four (4) foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer.
  - D. Private - 60 foot ROW collector street (2000 ADT to 8000 ADT): minimum 36 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking permitted both sides. A minimum five (5) foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. No residential driveway access will be allowed.

- E. Public - 60 foot ROW collector street (2000 ADT to 9,600 ADT): minimum 36 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides; parking prohibited both sides; minimum four (4) foot asphalt meandering one side, residential driveway access not allowed. Where proposed, center medians shall be limited to a minimum of 11 feet from curb face to curb face.
- F. Public - 80 foot ROW minor arterial street (9,600 ADT to 10,830 ADT): A minimum 11 foot center median from curb face to curb face, 29 1/2 foot roadway section curb face to curb face on either side of the median; curb and gutter on both sides; no parking either side; four (4) foot meandering asphalt path, both sides; no residential driveway access allowed.
- G. Public - 100 ROW major arterial street (more than 10,830 ADT).
8. No at-grade crossing golf cart crossings shall be allowed across any street with 500 ADT or greater, to the satisfaction of the County Engineer. Where possible, crossings should be below the grade of public streets.
9. Off-site parking areas shall be provided within 300 feet of homes that have 12,000 square foot lot sizes. One space shall be provided for every three homes. Parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the revised tentative maps for phase I and subsequent tentative map applications for phases II and III, to the satisfaction of Washoe County Department of Development Review and the developer.
10. All private roadways shall be depicted on the final maps and identified in the final development agreement as either private access easements over individual adjacent lots or, if identified as separate parcels, as common areas with equal fractional ownership by all of the lots within the development to the satisfaction of the County Engineer.
11. Unless substituted by Washoe County Board of County Commissioner action, each final map shall contain the following note to the satisfaction of the development review staff:

#### NOTE

An off-site road construction fee is applicable to all parcels created by this map. Any applicant for a permit to construct or otherwise use this land shall either (1) enter into an agreement with Washoe County, requiring financial assurances and approval by the District Attorney's Office, to pay the future off-site road impact fee upon its adoption or (2) pay any interim fee imposed by Washoe County, be released from the responsibility of the future impact fee, and be eligible for a refund should the future impact fee charge less than the interim fee. All options to pay existing interim fees expire upon the subsequent adoption of a replacement interim fee or an impact fee.

12. Project streets that are designed with security gates at points intersecting with public streets shall have adequate on-site stacking space. The specific type and size of the stacking areas must be approved and constructed to the satisfaction of the County Engineer.
13. Regulatory signs must be installed at the juncture of all public streets with a private street to the satisfaction of the County Engineer. Said sign shall state: "PRIVATE STREET NOT MAINTAINED BY COUNTY." All regulatory signs shall meet the Manual of Uniform Traffic Control Device standards.
14. Street names shall be reviewed and approved by the Regional Street Naming Coordinator. The tentative map shall indicate street names for identification purposes.

#### AIR QUALITY MANAGEMENT

15. Prior to the approval of the final development agreement, a detailed dust control plan shall be prepared and submitted to Air Quality Management and to Washoe County Department of Development Review staff. The dust control plan shall address, as a minimum, "phased grading" and stabilization methods that include the revegetation, application of palliatives or other District approved methods prior to any grading of new phases, as well as effective street cleaning for any mud or soil tracking to existing paved surfaces, and dust controls on any screening methods or storage piles located on the site.

#### DRAINAGE

16. Detention/retention facilities are to be maintained by a homeowner's association and perpetually funded unless the County agrees to accept maintenance and financial responsibilities. Regional facilities would be maintained by Washoe County.

The developer shall provide pretreatment for petrochemicals, nutrients and other chemicals used for landscaping, and silt for all storm drainage from the site to the satisfaction of the County Engineer. Systematic cleaning of the streets, parking lots, and catch basins, and control of salt and sanding activities shall to be delineated in the maintenance plan.

17. The off-stream detention/debris basin recommended in the 1990 Kennedy/Jenks/Chilton report shall be reserved based on the following timetable:
  - A. Washoe County will have three years to obtain the necessary permits for construction of the off-stream detention basin. This three years shall commence upon the approval of the final development agreement. If Washoe County fails to obtain the necessary permits, the property for the detention site shall be offered by the applicant or his successors, for dedication to the Washoe County School District for a middle school, the

Washoe County parks and Recreation Department for a neighborhood park, or revert to open space.

- B. If Washoe County does obtain the necessary permits within three years, construction of the project shall commence within five (5) years of the approval of the final development agreement. If construction is not started within by that date, the property for the detention site shall be offered by the applicant or his successors, for dedication to the Washoe County School District for a middle school, the Washoe County parks and Recreation Department for a neighborhood park, or revert to open space.
  - C. If an alternative solution or site becomes available for flood control, this property will immediately become available for dedication to the Washoe County School District for a middle school, the Washoe County parks and Recreation Department for a neighborhood park, or revert to open space.
  - D. If the detention basin is constructed, the property shall be dedicated to Washoe County.
- 18. The increase in development-caused runoff from the 100 year storm, including drainages which run directly into the Steamboat Ditch, shall be detained/retained On-site because of the limited capacity of the flood control facilities in the area of South Virginia Street and the Steamboat Ditch Company, to the satisfaction of the County Engineer.
  - 19. All street crossings of Thomas and Dry Creeks shall be designed to pass the 100 year flood flows without obstruction or overtopping of the roadway, to the satisfaction of the County Engineer. Erosion protection shall be provided based upon the recommendation of the geotechnical report.
  - 20. A buffer shall be provided between the fairways/greens and all creeks. The setback of the buffer shall comply with 100.200 (e) of the Uniform Building Code Section 7011 amended.
  - 21. A buffer shall be provided next to riparian vegetation. The size of the buffer shall be mutually agreeable by Washoe County and the developer. A minimum 50-foot buffer shall be provided between property lines of single family residences and riparian vegetation.
  - 22. Individual lot drainage shall not be allowed to drain onto neighboring properties without proper reciprocal drainage easements and the individual lot drainage swales shall be designed to handle the 100 year flows and lined, to the satisfaction of the County Engineer.

#### WASTEWATER

- 23. The final subdivision map shall show a dedicated, all-weather easement, with access, over the developments sanitary sewer lines, to the satisfaction of the Utility Division.

PARKS AND RECREATION

24. The developer will work together with staff from the Department of Parks and Recreation to locate the proposed regional public trails to the satisfaction of Washoe County and the developer.

LANDSCAPING

25. A minimum 25 foot landscape buffer shall be installed between the homes and the collector and secondary loop streets. The homeowners association shall be required to perpetually maintain these areas.

OTHER

26. All new utilities shall be placed underground to the satisfaction of the County Engineer.

\* \* \* \* \*

FINAL MAP CONDITIONS

for

DEVELOPMENT AGREEMENT CASE NO. DA9-1-93

for

SOUTHWEST POINTE

ALL CONDITIONS MUST BE MET OR FINANCIAL ASSURANCES SHALL BE PROVIDED IN AN APPROPRIATE FORM AND AMOUNT, TO THE SATISFACTION OF THE PUBLIC WORKS DEPARTMENT PRIOR TO RECORDATION OF THE FINAL MAP, UNLESS OTHERWISE STATED.

PRIOR TO FILING A FINAL MAP FOR RECORDATION, THE DEVELOPER SHALL MEET WITH THE ENGINEERING DIVISION AND THE DEVELOPMENT REVIEW STAFF AT LEAST FOUR (4) WEEKS BEFORE THE ANTICIPATED RECORDATION DATE TO REVIEW REQUIREMENTS, FINAL CONSTRUCTION DRAWINGS, AND DOCUMENTATION NECESSARY TO ADEQUATELY COMPLY WITH THE CONDITIONS OF APPROVAL.

A REQUEST FOR AN EXTENSION OF TIME FOR THE RECORDING OF A FINAL MAP, WHICH PERMITS THE ADDITION, DELETION, OR AMENDMENT OF CONDITIONS, MUST BE SUBMITTED TO THE DEVELOPMENT REVIEW STAFF AT LEAST 60 DAYS PRIOR TO THE EXPIRATION DATE OF THE TENTATIVE SUBDIVISION MAP; SAID EXPIRATION BEING ONE YEAR FROM THE DATE OF THE BOARD OF COUNTY COMMISSIONERS APPROVAL OF THE TENTATIVE MAP OR A SUBSEQUENT FINAL MAP.

GENERAL CONDITIONS

1. Unless specifically stated in the final development agreement, final maps and final construction drawings shall comply with all applicable statutes, ordinances, rules, regulations, and policies in effect at the time of approval of the final map or any subsequent extension date.
2. Final maps shall be in substantial compliance with all plans and documents submitted with and made part of this tentative map request, as may be amended by action of the final approving authority. All documentation necessary to satisfy the conditions noted

below shall accompany the final map when submitted to the Engineering Division and the development review staff.

3. Conditions, covenants, and restrictions (CC&Rs) shall be reviewed and approved by the District Attorney's office and the development review staff. Washoe County shall be made a party to the applicable provisions of the CC&Rs to the satisfaction of the District Attorney's office. Said CC&Rs shall specifically address the potential for liens against the property and the individual property owner's responsibilities for the perpetual funding, maintenance and replacement of the following items, at a minimum:

- a. Private roads within the subdivision.
- b. Equestrian center.
- c. Staffing of maintenance and security forces.
- d. Common area landscaping.
- e. Entrance gates.
- f. Snow removal and storage areas.
- g. Landscaping along streets.
- h. Fire and fuelbreaks on open space.
- i. Detention basins and the accumulated sediment.
- j. Equestrian/pedestrian trails.
- k. Bicycle and pedestrian paths.
- l. Private streets and utilities.
- m. Golf cart crossings.
- n. Off-site residential parking areas.
- o. Public park center.

At a minimum, the CC&Rs shall also specifically address the following items:

- a. Requirement to abide by Architectural/Community Design Guidelines.
- b. Specifications on the limitation of turf area for single family dwellings.
- c. Notice of requirement to pay future sewer user fees
- d. Minimum defensible space requirements.
- e. Snow storage areas.
- f. Requirement to adhere to National Electric Safety Code setbacks for existing overhead power lines.
- g. Potential for conservation easements or dedication of open space.
- h. Prohibition of motorized vehicles in open space.
- i. Areas with potential for equestrian traffic.
- j. Requirement of open space remaining open to pedestrian and bicycle traffic.
- k. Notice of pedestrian easements to abutting properties.

4. The subdivider shall present to the governing body or planning commission a final map, prepared in accordance with the tentative map, for the entire area for which a tentative map has been approved, or one of a series of final maps, each covering a portion of the approved tentative map, within two (2) years after the date of approval of the tentative map.

If the subdivider fails to record a final map for any portion of the tentative map within two years after the date of approval of the tentative map, all proceedings concerning the subdivision are terminated.

The governing body or planning commission may grant an extension of not more than two (2) years for the presentation of any final map after the two (2) year period for presenting the entire final map or next successive final map has expired.

5. The developer shall provide Department of Development Review staff with a monthly report indicating the number of building permits issued, once residential construction has started.
6. A note shall be placed on all construction drawings stating:

NOTE:

Should any prehistoric or historic remains/artifacts be discovered during site development, work shall temporarily be halted at the specific site and the Department of Conservation and Natural Resources, Division of Historic Preservation and Archeology, shall be notified to record and photograph the site. The period of temporary delay shall be limited to a maximum of two (2) working days from the date of notification.

7. Prior to acceptance of public improvements and release of any financial assurances, the developer shall furnish to the Utility Division and/or Engineering Division a complete set of reproducible 'as built' construction drawings prepared by a civil engineer registered in the State of Nevada, when field conditions mandate construction other than that shown in the original drawing.
8. The final map shall designate faults, by distance and bearings, that have been active during the Holocene epoch of geological time and shall contain the following note to the satisfaction of the development review staff:

NOTE

No habitable structures shall be located on a fault that has been active during the Holocene epoch of geological time. The faults have been located by Civil Engineer Registered in Nevada and experienced in Geotechnical Engineering and field surveyed by a Nevada Registered Land Surveyor.

9. A complete set of construction improvement drawings, including an on-site grading plan, shall be submitted to the Engineering Division for approval prior to finalization of any portion of the subdivision. Grading shall comply with best management practices and shall include detailed plans for grading and drainage on each lot, erosion control, slope stabilization, mosquito abatement. Placement or disposal of any excavated material shall be indicated on the grading plan.

10. All soil boring logs must be included as part of the construction drawings to the satisfaction of the County Engineer.
11. All new utilities shall be placed underground to the satisfaction of the County Engineer.
12. The developer and all successors shall direct any potential purchaser of the site, or portions thereof, to meet with the development review staff to review conditions of approval prior to the final sale of the site. Any subsequent purchasers of the site shall notify the development review staff of the name, address, telephone number, and contact person of the new purchaser within 30 days of the final sale.
13. The Washoe County Planning Commission certificate on the final map shall be to the satisfaction of the County Engineer and the Department of Development Review.

#### TRAFFIC

14. Prior to approval of the final development agreement, a proposed Construction Traffic Haul Route Plan shall be submitted to the County Engineer for review and approval. The primary construction haul route shall be Whites Creek Lane. As part of Phase I development, however, Zolezzi Lane may be used, for construction mobilization only, for completion of the first 18-hole golf course and for the extension of utilities into the project site.

Prior to the issuance of the first building permit, all construction traffic will be diverted to Whites Creek Lane. Access to Whites Creek Lane will be from the Mt. Rose Highway to Thomas Creek Road. When the 35th building permit is issued, all construction traffic will be required to use Whites Creek Lane from Wedge Parkway. Construction traffic will use Whites Creek Lane from Wedge Parkway if this segment is completed prior to the issuance of the 35th building permit. Thomas Creek Road from Mt. Rose Highway to the proposed Whites Creek Lane may be considered for a haul route provided the developer submit a traffic analysis and intersection design prepared by a licensed Nevada Civil Engineer which addresses and provides, as a minimum, recommendations regarding:

- a) site distance requirements;
- b) left turn storage capacity and design;
- c) intersection location and alignment;
- d) proximity to existing intersections and recommended separate distances;
- e) existing center median and landscaping concerns;
- f) determination of adequacy of existing Thomas Creek Road roadway geometric section; and
- g) determination of adequacy of existing structural section and load bearing capability.

The submitted report shall be evaluated and accepted by the County Engineer prior to any approval of the use of Thomas Creek Road as a

haul route. Once Whites Creek Lane is connected to Wedge Parkway, this road shall become the primary construction haul route.

Any existing or proposed roads that will be used as construction haul routes and are not designated truck routes must be evaluated by a geotechnical study to determine the existing structural section and its load supporting capability. If the pavement section is inadequate to support the proposed construction loadings, the roadway must be redesigned or reconstructed as needed to provide a 20-year design life in accordance with the AASHTO Interim Guide for Flexible Pavements.

Enforcement of the approved construction haul routes shall be the responsibility of the applicant and the County Engineer. Failure of construction vehicles to follow approved roads, will result in cessation of building permits and/or certificate-of-occupancies.

15. Prior to approval of the final development agreement, the developer shall provide a street maintenance program to the satisfaction of the County Engineer and the Department of Development Review. Street maintenance of private streets shall be performed by the homeowner's association and shall be perpetually funded.
16. All roadway grades shall be limited to the maximum allowable grades for each street classification as provided in the Washoe County Standards, to the satisfaction of the County Engineer.
17. The roadway structural sections for the proposed 80 foot public right-of-way shall have as a minimum 5 inches of asphalt on 8 inches of aggregate base. However, a final geotechnical report must be prepared prior to final map approval to determine if additional structural capacity above the minimum is required. On-site construction haul route traffic and school traffic is to be considered in the pavement analysis. The proposed on-site private road right-of-way widths are acceptable as shown for the tentative map of Phase 1. Public right-of-way will not be evaluated until the recommended transportation study is completed.
18. Unless specifically stated in the final development agreement, all (public and private) street design and construction is to be done in accordance with the Washoe County Standards that are approved at the time the final development agreement is recorded, to the satisfaction of the County Engineer.
19. The following roadway sections shall be applicable to the private on-site streets shown on the tentative map. A traffic report shall be submitted prior to approval of the first final map which identifies the ultimate average daily traffic on each street.
  - A. Private - 41 foot ROW cul-de-sac street (maximum 200 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A *minimum*

four (4) foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer.

- B. Private - 50 foot ROW local street (maximum 500 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum four (4) foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer.
- C. Private - 50 foot ROW collector street (500 ADT to 2000 ADT): minimum 24 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum four (4) foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer.
- D. Private - 60 foot ROW collector street (2000 ADT to 8000 ADT): minimum 36 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking permitted both sides. A minimum five (5) foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. No residential driveway access will be allowed.
- E. Public - 60 foot ROW collector street (2000 ADT to 9,600 ADT): minimum 36 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides; parking prohibited both sides; minimum four (4) foot meandering asphalt one side, residential driveway access not allowed. Where proposed, center medians shall be limited to a minimum of 11 feet from curb face to curb face.
- F. Public - 80 foot ROW minor arterial street (9,600 ADT to 10,830 ADT): A minimum 11 foot center median from curb face to curb face, 29 1/2 foot roadway section curb face to curb face on either side of the median; curb and gutter on both sides; no parking either side; four (4) foot meandering asphalt path, both sides; no residential driveway access allowed.
- G. Public - 100 ROW major arterial street (more than 10,830 ADT).

20. Medians shall be designed in accordance with AASHTO site distance and safety guidelines to the satisfaction of the County Engineer. Maintenance of median landscaping shall be by the Homeowners Association as provided for in a separate maintenance agreement and to be approved by the County Engineer and the District Attorney's office prior approval of the final development agreement.
21. Meandering asphalt paths are acceptable provided pedestrian easements are included in portions of the paths located outside the County right-of-way. Landscaping between the back of the curb and the paths shall be designed in accordance with AASHTO site distance and safety guidelines to the satisfaction of the County Engineer. Maintenance of median landscaping and pedestrian paths shall be by the Homeowners Association as provided for in a separate maintenance agreement and to be approved by the County Engineer and the District Attorney's office prior approval of the final development agreement.
22. Proposed roadways (public or private) are not to be centered along fault lines. Faultlines shall be located behind the curblines, on the up-thrown side, to the satisfaction of the County Engineer. Roads may cross fault lines. If fault lines are more accurately located in the field, the setback, excluding construction for buildings for human occupancy, may be reduced to the satisfaction of the County Engineer.
23. Asphalt paths or gravel shoulders, located adjacent to private streets shall be privately maintained and funded.
24. All cul-de-sacs shall be a minimum pavement radius of 43.5 feet to front face of curb or 45 feet to edge of pavement, to the satisfaction of the County Engineer.
25. Temporary County Standard turnarounds shall be constructed on all phased roadways which extend more than one lot depth beyond a maintained public or private street, to the satisfaction of the County Engineer.
26. All-weather emergency access roads shall be constructed at the end of all cul-de-sacs serving ten or more lots to the satisfaction of the County Engineer. These roads shall have a 30-foot access easement with a minimum 20-foot width of 6 inches of Type 2 Class B aggregate base. The roads shall be controlled by emergency access gates and shall be posted with signs stating "For Emergency Vehicles Only" to the satisfaction of the applicable fire protection agency and the County Engineer.
27. Prior to final map approval, the developer shall provide all weather emergency access easements and road improvements at the locations shown on the tentative map, terminating at public or privately maintained streets, to the satisfaction of the County Engineer. The emergency access road shall be constructed within a 30 foot access easement to a minimum 20 foot width with 4 inches of Type 2 Class B aggregate base.

28. Street lights shall be installed at major intersections to the satisfaction of the County Engineer.
29. Unless specifically stated in the final development agreement, all roadway improvements necessary (including but not limited to, curb, gutter, sidewalk, signing and striping, driveway access, and street lighting) to serve the project shall be designed and constructed to county standards and specifications and/or financial assurances in an appropriate form and amount shall be provided to the satisfaction of the County Engineer.
30. The minimum pavement structural section shall be 4 inches of asphalt over 6 inches of granular base for roadways (public and private) with a right-of-way of 60 feet in width and shall be 3 inches of asphalt over 6 inches of granular base for roadways with a right-of-way of 50 feet in width to the satisfaction of the County Engineer.
31. The applicant shall submit a detailed geotechnical analysis and report for pavement design recommendations to the County Engineer for review and approval. The report shall be based on the estimated traffic loadings for a 20-year design life and shall include assumptions concerning the distribution of trucks, to include project construction truck traffic. The resultant pavement thickness in the geotechnical analysis must be used if the report indicates a structural section that is stronger than minimum is required.
32. Off-site parking areas shall be provided within 300 feet of homes that have 12,000 square foot lot sizes. One space shall be provided for every three homes. Parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the revised tentative maps for phase I and subsequent tentative map applications for phases II and III, to the satisfaction of Washoe County Department of Development Review and the developer.
33. All private roadways shall be depicted on the final maps and identified in the final development agreement as either private access easements over individual adjacent lots or, if identified as separate parcels, as common areas with equal fractional ownership by all of the lots within the development to the satisfaction of the County Engineer.
34. Unless substituted by Washoe County Board of County Commissioner action, each final map shall contain the following note to the satisfaction of the development review staff:

NOTE

An off-site road construction fee is applicable to all parcels created by this map. Any applicant for a permit to construct or otherwise use this land shall either (1) enter into an agreement with Washoe County, requiring financial assurances and approval by the District Attorney's Office, to pay the future off-site road impact

fee upon its adoption or (2) pay any interim fee imposed by Washoe County, be released from the responsibility of the future impact fee, and be eligible for a refund should the future impact fee charge less than the interim fee. All options to pay existing interim fees expire upon the subsequent adoption of a replacement interim fee or an impact fee.

35. Project streets that are designed with security gates at points intersecting shall have adequate on-site stacking space. The specific type and size of the stacking areas must be approved and constructed to the satisfaction of the County Engineer.
36. Regulatory signs must be installed at the juncture of all public streets with a private street to the satisfaction of the County Engineer. Said sign shall state: "PRIVATE STREET NOT MAINTAINED BY COUNTY." All regulatory signs shall meet the Manual of Uniform Traffic Control Device standards.

#### DRAINAGE

37. Prior to recordation of any portion of the subdivision, a final, detailed hydrology/hydraulic report for that phase, prepared by a registered engineer, shall be submitted to the County Engineer for approval. The report shall include the locations, points of entry and discharge, flow rates and flood limits of all 10 and 100 year storm flows impacting both the site and off-site areas and the methods for handling those flows. The report shall include all storm drain pipe and ditch sizing calculations and a discussion of and mitigation measures for any impacts on existing off-site drainage facilities and properties.
38. Prior to recordation of any final map, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted and approved by the County Engineer. The report shall be in substantial compliance with the general storm drain master plan and contain all final storm drain pipe, ditch and retention pond sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed and constructed to the satisfaction of the District Health Department and the County Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.
39. The 100-year floodplain boundaries and flood elevations shall appear on each final map to the satisfaction of the County Engineer. If the floodplain boundary has been changed by a Federal Emergency Management Agency (FEMA) Conditional Letter of Map Amendment or Conditional Letter of Map Revision, the date of that letter and a note to that effect shall appear on the final map to the satisfaction of the County Engineer. Grading or building permits shall not be issued for areas currently shown as "A" zones on the FEMA floodplain maps until a Letter of Map Amendment or Revision is submitted

or until conformance with Washoe County flood construction standards is determined by the County Engineer.

40. Standard reinforced concrete headwalls or other approved alternatives shall be placed on the inlet and outlet of all drainage structures and rip-rap shall be used to prevent erosion at the inlets and outlets of all pipe culverts to the satisfaction of the District Health Department and the County Engineer.
41. The developer shall submit to the District Health Department a letter approving the proposed methods of erosion control and soil stabilization from the Washoe-Storey Conservation District.

#### WATER

42. Prior to the approval of a final map by the District Health Department, the production wells that will serve any phase of this development must be constructed, pump tested and sampled to ensure the proposed water system has sufficient quality and quantity.
43. Before approval of the final map will be considered, a letter from the water purveyor committing adequate water service to this proposal must be submitted District Health Department.
44. Prior to final map approval, a letter of approval for the water rights serving this proposal must be submitted from the Division of Water Resources. A water "will-serve" letter for a final map will not be issued until the production wells have been determined to have adequate water resource to the satisfaction of the Utility Division.
45. The developer shall provide adequate assurance that the sewage, water and drainage systems will be satisfactorily maintained and operated.
46. Pursuant to Section 278.340 of the State of Nevada Regulations Governing Review of Plans for Subdivisions, Condominiums, and Planned Unit Developments, no grading permit shall be issued prior to District Health Department approval of the referenced final map. This condition does not apply to the construction of production wells required in condition Number 48.

The applicant may seek relief from the District Board of Health for this requirement or may choose to create a separate parcel for the first 18-hole golf course.

47. The final map owner's certificate shall contain language indicating that the developer and his assignees agree to the use of residential water meters.
48. If the water quality of the wells does not meet the secondary or the primary standards, as defined by NAC 445, water treatment facilities must be on-line and functioning prior issuance of any building permits.

49. A letter, which can be a will-serve letter, from the appropriate provider committing water service must be submitted to the District Health Department and Utility Division. This letter shall indicate that the facility will not be brought beyond its permitted capacity by this service.
50. The final map shall contain the following note to the satisfaction of the development review staff:

NOTE

No Certificate of Occupancy shall be issued until the water facilities have been completed and accepted by resolution of the Board of County Commissioners.

51. The developer shall provide access to the existing monitoring wells to the satisfaction of the Utility Division. In the event access is no longer available, the developer shall construct new wells to the satisfaction of the Utility Division.
52. The developer shall utilize treated wastewater from the South Truckee Meadows Wastewater Treatment Plant. As part of the initial construction, the developer shall provide the necessary on-site easements needed to construct the infrastructure. When this resource becomes available to irrigate the golf course, the developer shall construct the necessary on-site infrastructure.

WASTEWATER

53. Proper easements shall be shown for off-site sewage and drainage systems to the satisfaction of the Utility Division and the County Engineer.
54. The Nevada Division of Environmental Protection must submit a letter to the District Health Department certifying their approval of the final map.
55. All minor infrastructure for sewer collection shall be designed, constructed, and inspected to the satisfaction of the District Health Department and the Utility Division.
56. Responsibility for design of any pump stations and interceptors to provide sewer service to the project will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.

57. The final subdivision map shall show a dedicated, all-weather easement, with access, over the developments sanitary sewer lines, to the satisfaction of the Utility Division.
58. All hookup fees for the area within the final map will be paid to the satisfaction of the Utility Division.
59. The developer shall deposit with the Utility Division the sum of \$50.00 per lot prior to recordation of all or part of the final map. This fee shall represent the development's prorated share of the completed water and wastewater facilities plan for the south Truckee Meadows.
60. Prior to final map approval, a letter, which can be a will-serve letter, from the Utility Division committing sewer service, must be submitted to the District Health Department. This letter shall indicate that the treatment facility will not be brought beyond its permitted capacity by this service.
61. All minor infrastructure for potable water distribution shall be designed, constructed, and inspected to the satisfaction of the District Health Department and the Utility Division. The developer shall coordinate with the Utility Division to ensure the major infrastructure design can be accomplished prior to the approval of the final map.
62. The sewer "privilege connection fee" must be paid for each lot when required by the Washoe County Utility Division since it is not anticipated that there will be any additional major infrastructure needed to serve this development.

#### GRADING

63. Prior to approval of the first final map, an erosion control/soil stabilization plan and grading plan shall be approved by the Washoe-Storey Conservation District. A copy of the approval shall be submitted to the District Health Department, Department of Development Review and Washoe County Engineer.

#### LANDSCAPING

64. Detailed landscaping and irrigation plans for the village commercial center, club house, golf courses, golf driving range and equestrian center shall be submitted prior to the issuance of a building permit for the particular use.

\* \* \* \* \*

Agenda Item No:  
Staff Recommendation:

11  
**CONDITIONAL  
APPROVAL**

**WASHOE COUNTY PLANNING COMMISSION  
STAFF REPORT**

**To:** Members of the Washoe County Planning Commission  
**Re:** Amendment to Development Agreement Case No. DA9-1-93 for Southwest Pointe  
**Date:** April 30, 1996 **Prepared By:** DSY

**GENERAL INFORMATION SUMMARY**

**Applicant/Property Owner:** Southwest Pointe Partners/Redfield Land Company

**Requested Action:** To amend the development agreement that facilitates the development of a residential community including 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities, a day care facility, an equestrian center, and a commercial village center. The amendment allows the applicant to modify portions of the agreement pertaining to streets, access, drainage, parks and other portions. The total acreage of the project is  $\pm 3,171.6$  acres and it is located north of Mount Rose Highway (SR 431) and west of Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) in the Southwest Truckee Meadows Area Plan and is situated within portions of Sections 3, 10, 13, 14, 15, 22, 23, 24, 26 and 27, T18N, R19E, MDM, Washoe County, Nevada. (APN: 49-010-04, 49-010-10 and 49-030-12)

**ISSUES**

**CONCEPTUAL PLAN:** The conceptual plan presented in 1994 has been modified sufficiently to warrant review and approval by the Planning Commission. The layout and relationship of the golf courses with the homes has been altered to reflect a redesign related to the known archaeological/cultural resources and the water features and delineated wetlands. More of the homesites are now in close proximity to the open spaces associated with the golf courses. The emphasis of the entire project has been changed from a project containing separate gated neighborhoods to a gated community with the gate at the project entrance. Additionally, a change in the product mix to provide more market flexibility and to reduce the number of larger lots has been requested.

CONDITIONS OF APPROVAL: The previously-approved conditions, which were often duplicative or not applicable, are being clarified, rearranged, consolidated, and in some instances amended or deleted. The development agreement conditions are those required to present and obtain approval for the final Development Agreement. The tentative map and special use permit condition lists provide the "boilerplate" conditions to be applied to subsequent requests. Project specific conditions may still be applied to all future tentative maps and special use permits.

**RECOMMENDATION/FINDINGS**

Based upon the staff analysis, comments received, and the site inspection, staff recommends approval of the request with the attached conditions and offers the following motion for your consideration:

The Washoe County Planning Commission conditionally approves the Amendment to Development Agreement Case No. DA9-1-93 for Southwest Pointe, having made the findings:

1. That requested amendments do not alter the following findings originally made to support this project.
2. That this request conforms to the goals and policies of the adopted Southwest Truckee Meadows Area Plan;
3. That the requested subdivision is consistent with the density provisions and lot size regulations of the Washoe County Development Code;
4. The requested development agreement is consistent with the provisions of Section 814 of the Washoe County Development Code;
5. The physical design of the project and the manner in which the design does make adequate provision for public services;
6. The site is particularly suitable for the density and type of residential development proposed;
7. The amount, purpose and location of common open space provided in the proposed project is adequate as related to the proposed density and type of residential development;
8. The proposed maintenance and conservation of common open space is adequate to serve the proposed project;
9. The terms and conditions of this development agreement are sufficient to protect the interests of the public, residents, and the owners of the land subject to the development agreement in the integrity of the plan;
10. The conditions of approval ensure consideration of the items cited in NRS 278.349; and
11. That the Commissioners gave reasoned consideration to the information contained within the staff report and information received during the meeting.

ANALYSIS

The developer of the Southwest Pointe project in the Southwest Truckee Meadows planning area has requested amendments to the approved preliminary Development Agreement. The modifications cover three broad categories. The first is an actual change in the layout of the project in which the golf courses, proposed subdivisions, and streets have been altered slightly and the ratio of the product mix has been changed. The second is a change to the orientation of the entire project from having some public components to being a gated community in its entirety. The third change is a reorganization, clarification, and, where necessitated by the other changes, amendment of the conditions. The attached April 30 CFA letter from Brita Tryggvi explains the requested amendments and provides the rationale for them.

The changes to the layout of the project have resulted from a number of factors. As the project approached a more detailed design and the results of items such as the cultural resources survey, the wetlands, delineation, and precise location of faultlines were incorporated, adjustments were necessary. As a result of reorienting the golf courses into a more linear design, more homes have been allowed to benefit from the perceived open space and both the residents and the developer receive benefits. A marketing study suggested a change in the product mix to decrease the ratio of large lots. The lot size ratios in the attached letter have been accepted by the Southwest Truckee Meadows Citizens Advisory Board. Staff supports the increase in the number of smaller lots, without a change to the overall number of lots, 1090. is portion of the request. This change reduces the area of the property that must be disturbed and decreases the amount of impervious surface.

The project originally planned for a loop road that would have been public and would have provided access to the golf courses and to the individual gated subdivisions. The requested modification would allow a gate to be constructed at the entrance to Southwest Pointe. The issues related to the public access to the golf courses and the public trails and bikeways has been resolved.

The last change is the one that has been the most difficult but it is also the one that will allow subsequent actions, both administrative and discretionary, to be much less demanding. For the most part, the changes proposed in the attached letter have been accepted by the county staff, for the reasons cited. The condition numbers in the following discussion refer to the original condition lists and to those in the letter, not those attached to this report.

Condition 14 which requires a quarterly report to be submitted to the Department of Development Review has been moved to the Development Agreement since staff wants to receive a single consolidated report and not a potentially large number of dissimilar reports with little information and the attendant enforcement difficulties when they are not received.

Condition 22 has also been added to the Development Agreement requirements in an altered form that requires the process be specified, but not the actual conditions, covenants, and restrictions (CC&Rs). That process shall ensure that the maintenance and replacement of the streets, parking areas, lighting, landscaping, recreational facilities, utilities, and other private infrastructure shall be performed by the homeowners associations and shall be perpetually funded.

Condition 92 has been left with the Development Agreement requirements but the time for dedication of a site has been accepted. The condition as written could possibly have been

Washoe County Planning Commission  
re: Amendment to DA9-1-93 (Southwest Pointe)  
April 30, 1996 -- page 4

interpreted to place the requirement upon a single subdivision within the project.

Staff has also added a condition to the Development Agreement that requires specification of any time frames within the Nevada Revised Statutes or the Washoe County Code that have been extended. These must be a part of the Development Agreement to be recognized.

The comments and changes of the reviewing agencies have been incorporated into the attached conditions. Project specific conditions may still be applied to all future tentative maps and special use permits. The special use permit conditions are directly applicable to the proposed and previously-approved golf courses and will be applied in part to future requests that require a special use permit. The tentative map and special use permit condition lists provide the potential "boilerplate" conditions.

Staff is recommending approval of this request to amend the preliminary Development Agreement requirements, to the changes to the plan and orientation of the project, and to the reorganization of the conditions of approval. The recommendation of the Planning Commission will be forwarded to the Board of County Commissioners for final action. The final Development Agreement will not be presented to the Planning Commission. Upon review and approval by the District Attorney and the Department of Development Review, it will be forwarded directly to the County Commission.

CITIZENS ADVISORY BOARD COMMENTS: Staff has not received written correspondence from the Southwest Truckee Meadows Citizens Advisory Board but has spoken with a representative. They will have members in attendance at the meeting to express their views.

**CONDITIONS  
for  
DEVELOPMENT AGREEMENT CASE NO. DA9-1-93  
for  
SOUTHWEST POINTE**

(As recommended by Department of Development Review and  
attached to Staff Report dated April 30, 1996)

**\*\*\* IMPORTANT -- PLEASE READ \*\*\***

UNLESS OTHERWISE STATED, PRIOR TO APPROVAL OF THE FINAL DEVELOPMENT AGREEMENT, ALL CONDITIONS MUST BE MET. A COPY OF ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL BE FILED WITH THE DEPARTMENT OF PUBLIC WORKS AND/OR DEPARTMENT OF DEVELOPMENT REVIEW.

COMPLIANCE WITH THE APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES AND WITH THE CONDITIONS OF APPROVAL OF THIS TENTATIVE MAP IS THE RESPONSIBILITY OF THE DEVELOPER, ITS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY, AND THEIR SUCCESSORS IN INTEREST.

GENERAL CONDITIONS

1. Unless specifically stated in the final Development Agreement, all uses, densities and standards shall be consistent with the Washoe County Development Code and with the goals and policies in the Comprehensive Plan and the Southwest Truckee Meadows Area Plan. Unless specifically stated in the final Development Agreement, the allowed uses, densities, and standards of the land subject to the Development Agreement shall be those in effect at the time the final agreement is approved.
2. The final Development Agreement shall specify any time frames that have been extended beyond those specified by Washoe County Code or Nevada Revised Statutes. The Department of Development Review shall be responsible for determining compliance with this condition.
3. A "statement of compliance" format or formats for both residential and non-residential projects shall be made a part of the final Development Agreement. The Department of Development Review shall be responsible for determining compliance with this condition.
4. The developer and all successors shall direct any potential purchaser of the site, or portions thereof (other than individual single-family lots), to meet with the Department of Development Review to review the Development Agreement and the conditions of approval prior to the final sale of the site. Any subsequent purchasers of the site shall notify the Department of Development Review of the name, address, telephone number, and contact person of the new purchaser within 30 days of the final sale.

5. Prior to submittal to the Washoe County Board of County Commissioners, the final Development Agreement shall be reviewed and approved by the Office of the District Attorney of Washoe County.
6. The final Development Agreement will be submitted to the Washoe County Board of County Commissioners within three months of submission of a completed agreement with all accompanying exhibits, provided the Department of Development Review does not delay the submission in order to approve provisions of the agreement to its satisfaction. Extension of any of these time frames may be requested if mutually agreeable to Washoe County and the developer.
7. The developer shall provide the Department of Development Review staff with a quarterly report indicating the number of building permits issued and other building activity, once residential construction has started.
8. The developer shall define a process to ensure that the maintenance and replacement of the streets, parking areas, lighting, landscaping, recreational facilities, utilities, and other private infrastructure shall be performed by the homeowners associations and shall be perpetually funded. The County Engineer and the Department of Development Review shall be responsible for determining compliance with this condition.

#### STREETS AND TRAFFIC

9. A Level of Service C, or the current Washoe County standard, shall be used as a basis for evaluating transportation needs and traffic impact mitigation requirements.
10. The final Development Agreement shall not be approved until the right-of-way (ROW) of all necessary off-site accesses from the project to Thomas Creek Road are obtained. Preliminary golf course and roadway grading may commence before such approval has been obtained so long as such construction is done in accordance with Condition 21 for tentative maps. An approved and recorded ROW document shall be provided to the County Engineer and the District Attorney's Office.
11. Prior to final approval of the Development Agreement, the developer for Southwest Pointe shall petition the Washoe County Board of County Commissioners to create a Special Assessment District for the purpose of financing the construction of Whites Creek Lane from the project site to Wedge Parkway and other roads as defined in the SAD agreement. In the event that a special assessment district is not created, the developer shall construct Whites Creek Lane, as outlined in Conditions 17 and 19 for tentative maps, from the project site to Wedge Parkway. The County Engineer shall be responsible for determining compliance with this condition.
12. A Construction Traffic Haul Route Plan shall be submitted to the County Engineer for review and approval. The primary construction haul route shall be Whites Creek Lane. However, as part of Phase I development, Zolezzi Lane may be used, for construction mobilization only, for completion of the first 18-hole golf course and for the extension of utilities into the project site.

13. The developer shall provide a schematic pedestrian circulation plan. The Department of Development Review shall be responsible for determining compliance with this condition. The "statement of compliance" shall require that a detailed pedestrian circulation plan will be submitted as part of each tentative map and approved by the Department of Development Review.
14. Unless specifically stated in the conditions of approval or in the final Development Agreement, all public and private street design and construction is to be done in accordance with the Washoe County standards that are in effect at the time the final Development Agreement is recorded. The County Engineer shall be responsible for determining compliance with this condition.
15. Unless otherwise stated in these conditions of approval or in the final Development Agreement, all roadway improvements necessary (including but not limited to, curb, gutter, sidewalk, signing and striping, driveway access, and street lighting) to serve the project shall be designed and constructed to county standards and specifications and/or financial assurances in an appropriate form and amount shall be provided. The County Engineer shall be responsible for determining compliance with this condition.
16. All private roadways shall be depicted on the final maps and identified on the tentative map as either private access easements over individual adjacent lots or, if identified as separate parcels, as either common areas with equal fractional ownership by all of the lots within the development or common areas owned by the homeowners association. The County Engineer shall be responsible for determining compliance with this condition.

#### GRADING AND DRAINAGE

17. A general concept-level storm drain master plan shall be submitted to the County Engineer for approval prior to acceptance of the final Development Agreement. The general concept-level storm drain master plan shall address in general terms proposed methods for handling the existing and increased flows for the 10- and 100-year storms including detention and other proposed mitigation measures for both on-site and off-site areas. This master plan shall include a drawing which shows the existing drainage basins within the development and indicate how they may be impacted. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of a tentative map for any phase or approval of any special use permit, a preliminary hydrology report shall be submitted to the County Engineer for approval. The County Engineer shall be responsible for determining compliance with this condition.
18. Detention/retention facilities are to be maintained by a homeowners association and perpetually funded unless Washoe County agrees to accept maintenance and financial responsibilities. Regional facilities would be maintained by Washoe County. The County Engineer shall be responsible for determining compliance with this condition.
19. A maintenance plan of all drainage facilities to be owned by the homeowners association shall be provided prior to approval of the conditions, covenants, and restrictions (CC&Rs). All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe County water treatment plant and associated Steamboat Ditch conveyance system. The County Engineer shall be responsible for determining compliance with this condition.

20. The off-stream detention/debris basin recommended in the 1990 Kennedy, Jenks, Chilton report shall be reserved based on the following timetable:
  - a. Washoe County will have three years to obtain the necessary permits for construction of the off-stream detention basin. This three years shall commence upon the approval of the final Development Agreement. If Washoe County fails to obtain the necessary permits, the property for the detention site shall be offered by the developer or his successors, for dedication to the Washoe County School District for a middle school or revert to open space.
  - b. If Washoe County does obtain the necessary permits within three years, construction of the project shall commence within 5 years of the approval of the final Development Agreement. If construction is not started by that date, the property for the detention site shall be offered by the developer or his successors, for dedication to the Washoe County School District for a middle school or revert to open space.
  - c. If an alternative solution or site becomes available for flood control, this property will immediately become available for dedication to the Washoe County School District for a middle school or revert to open space.
  - d. If the detention basin is constructed, Washoe County shall pay fair market value for the property.
21. The increase in development-caused runoff from the 100-year storm, including drainages which run directly into the Steamboat Ditch, shall be detained/retained on-site because of the limited capacity of the flood control facilities in the area of South Virginia Street and the Steamboat Ditch Company. The County Engineer shall be responsible for determining compliance with this condition.
22. A geotechnical report shall be prepared, which considers the effects of earthquake forces and faulting in the area. The siting and design of detention/retention facilities shall be addressed based on the findings and recommendations provided in the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.
23. The development shall comply with the requirements of the Hillside Ordinance of the Development Code, as applicable. The Department of Development Review shall be responsible for determining compliance with this condition.

#### WATER AND WASTEWATER

24. A schematic water system plan for the referenced proposal must be submitted to the Utility Division and the District Health Department. Prior to a final map approval, the plan must show that the water system will conform to the State of Nevada Water Supply Regulations, NAC Chapter 445, and the State of Nevada Regulations Governing Review of Plans for Subdivisions, Condominiums, and Planned Unit Developments, NAC 278.400 through 278.410.
25. Prior to the approval of the final Development Agreement, a complete water analysis from at least one monitoring well must be submitted to the District Health Department. The analysis must demonstrate the water conforms to the existing and proposed drinking water standards.

26. The developer shall utilize treated wastewater from the South Truckee Meadows Wastewater Treatment Plant. As part of the initial construction, the developer shall provide the necessary on-site easements needed to construct the infrastructure. When this resource becomes available to irrigate the golf course, the developer shall construct the necessary on-site infrastructure. The Utility Division shall be responsible for determining compliance with this condition.

FIRE PROTECTION

27. If requested by the applicable fire protection agency, a minimum one-acre site for a fire station shall be offered for dedication prior to recordation of the first final map. The developer shall enter into talks with the applicable fire protection agency for any other requirements, such as, a fire station site, manpower and equipment needs, or for coordination with other developments that have similar requirements and the results of those discussions, as they relate to the entire project, shall be incorporated into the Development Agreement.

PARKS/RECREATION/OPEN SPACE

28. An open space management plan and map shall be prepared that specifies the ownership of open spaces, type of uses allowed and who is responsible for maintenance. This plan shall address the provisions of Section 110.408.45 of the Development Code. Common areas shall be maintained by the homeowners association and provisions be made for perpetual funding for maintenance.
- Prior to approval of the final Development Agreement, a government entity (e.g. United States Forest Service, Washoe County Parks Department, etc.) or a non-profit organization (e.g. Washoe Parks Foundation) shall be identified that will accept the dedication of the open space buffers identified on the Concept Plan, which consists of approximately 1,500 acres. The Parks and Recreation Department and the Department of Development Review shall be responsible for determining compliance with this condition.
29. The final Development Agreement shall include a provision for the public open space that prohibits the sale of any open space without the consent of Washoe County. The Department of Development Review shall be responsible for determining compliance with this condition.
30. A minimum 10-acre public park site shall be offered for dedication to the county. A sketch plan will be included in the final Development Agreement. The final park design shall be mutually agreeable to the county and the developer. The developer will construct the recreation facilities in the park and then be reimbursed for the cost of the construction from the Residential Construction Tax. The responsibility of park maintenance shall be negotiated by the developer and Washoe County prior to the approval of the final Development Agreement. The Parks and Recreation Department and Department of Development Review shall be responsible for determining compliance with this condition.

31. The developer will work with the Department of Parks and Recreation to locate the proposed regional public trails to the satisfaction of Washoe County and the developer. The Parks and Recreation Department and Department of Development Review shall be responsible for determining compliance with this condition.

LANDSCAPING/ARCHITECTURAL DESIGN

32. Prior to approval of the final Development Agreement, the developer shall submit a Development Standards Handbook for the entire project to the Design Review Committee for its review and approval. These guidelines shall address, but not be limited to, type and color of building material, general architectural design, fencing, landscaping material (if plant material: type, size at time of planting, maturation size at full growth, period of time between planting and full growth), landscaping location, landscaping irrigation system, and financial assurances that landscaping will be planted and maintained.

The Design Review Committee shall also review the design of Whites Creek Lane, specifically to address Condition 19.c. for tentative maps. The Department of Development Review shall be responsible for determining compliance with this condition.

<p><b>CONDITIONS</b> for <b>TENTATIVE SUBDIVISION MAP CASE NO. _____</b> for _____ <b>SUBDIVISION</b></p>
---

(As recommended by Department of Development Review and  
attached to Staff Report dated \_\_\_\_\_ )

**\*\*\* IMPORTANT -- PLEASE READ \*\*\***

UNLESS OTHERWISE STATED, PRIOR TO FINALIZATION OF ANY PORTION OF THE TENTATIVE SUBDIVISION MAP, ALL CONDITIONS MUST BE MET OR FINANCIAL ASSURANCES TO ENSURE COMPLETION OF THE CONDITIONS MUST BE PROVIDED. THE AGENCY RESPONSIBLE FOR DETERMINING COMPLIANCE WITH A SPECIFIC CONDITION SHALL DETERMINE WHETHER THE CONDITION MUST BE FULLY COMPLETED OR WHETHER THE DEVELOPER SHALL BE OFFERED THE OPTION OF PROVIDING FINANCIAL ASSURANCES.

A COPY OF ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL BE FILED WITH THE DEPARTMENT OF PUBLIC WORKS AND/OR DEPARTMENT OF DEVELOPMENT REVIEW.

THE DEVELOPER SHALL MEET WITH THE ENGINEERING DIVISION AND THE DEPARTMENT OF DEVELOPMENT REVIEW AT LEAST SIXTY (60) DAYS BEFORE THE ANTICIPATED DATE OF APPROVAL BY THE PLANNING COMMISSION TO REVIEW SCHEDULING, REQUIREMENTS, FINAL CONSTRUCTION DRAWINGS, AND DOCUMENTATION NECESSARY TO ADEQUATELY COMPLY WITH THE CONDITIONS OF APPROVAL AND THE APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES. NO FINAL MAP WILL BE SCHEDULED FOR A PLANNING COMMISSION MEETING DATE THAT IS LESS THAN SIXTY (60) DAYS FROM THE DATE OF THIS MANDATORY MEETING.

A REQUEST FOR AN EXTENSION OF TIME FOR THE RECORDING OF A FINAL MAP MUST BE SUBMITTED TO THE DEPARTMENT OF DEVELOPMENT REVIEW AT LEAST SIXTY (60) DAYS PRIOR TO THE EXPIRATION DATE OF THE TENTATIVE SUBDIVISION MAP. SAID EXPIRATION IS TWO YEARS FROM THE DATE OF APPROVAL OF THE TENTATIVE MAP OR A SUBSEQUENT FINAL MAP BY THE BOARD OF COUNTY COMMISSIONERS OR, WHEN APPLICABLE, BY THE PLANNING COMMISSION.

COMPLIANCE WITH THE DEVELOPMENT AGREEMENT, APPLICABLE STATUTES, ORDINANCES, RULES, REGULATIONS, AND POLICIES AND WITH THE CONDITIONS OF APPROVAL OF THIS TENTATIVE MAP IS THE RESPONSIBILITY OF THE DEVELOPER, ITS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY, AND THEIR SUCCESSORS IN INTEREST.

GENERAL CONDITIONS

1. The subdivider shall present to the planning commission a final map, prepared in accordance with the tentative map, for the entire area for which a tentative map has been approved, or one of a series of final maps, each covering a portion of the approved tentative map, within two (2) years after the date of approval of the tentative map.  
  
Prior to the expiration of a tentative map, the planning commission or, upon appeal, the governing body may grant a two (2) year extension for the presentation of the entire final map or next successive final map. The effective date of the extension shall be two (2) years from the date upon which the map would have expired.  
  
If the subdivider fails to record a final map for any portion of the tentative map or obtain an extension within two years after the date of approval of the tentative map, all proceedings concerning the subdivision are terminated.
2. Unless specifically stated in the final Development Agreement, final maps and final construction drawings shall comply with all applicable statutes, ordinances, rules, regulations, and policies in effect at the time of approval of the final map or any subsequent extension date. The Department of Development Review shall be responsible for determining compliance with this condition.
3. Final maps shall be in substantial compliance with all plans and documents submitted with and made part of this tentative map request, as may be amended by action of the final approving authority. Substantial compliance shall be determined by the applicable agency and the Department of Development Review.
4. As part of every tentative map and final application, the developer shall include a completed "statement of compliance" that demonstrates how the development will be or is consistent with the recorded final Development Agreement. The "statement of compliance" for the final map shall incorporate a description of how the conditions of approval have been met. The Department of Development Review shall be responsible for determining compliance with this condition.
5. Conditions, covenants, and restrictions (CC&Rs) shall be reviewed and approved by the District Attorney's Office, County Engineer, and the Department of Development Review prior to final map approval or prior to issuance of a certificate of occupancy for a non-residential use. Washoe County shall be made a party to the applicable provisions of the CC&Rs to the satisfaction of the District Attorney's office. If the CC&Rs are not recorded on the entire property, subsequent phases will be annexed to the previously recorded CC&Rs. Said CC&Rs shall specifically address the ability of the county to enforce certain provisions against the property and the individual property owner's responsibilities for the perpetual funding, maintenance and replacement, of the following items, at a minimum:
  - a. Private roads within the subdivision.
  - b. Equestrian center.
  - c. Staffing of maintenance and security forces.
  - d. Common area landscaping.
  - e. Entrance gates.
  - f. Snow removal and storage areas.
  - g. Common area landscaping including along streets or landscaping along Whites Creek Lane.

- h. Fire and fuelbreaks.
- i. Detention basins and the accumulated sediment.
- j. Equestrian/pedestrian trails.
- k. Bicycle and pedestrian paths.
- m. Golf cart crossings.
- n. Off-site residential parking areas.

At a minimum, the CC&Rs shall also specifically address the following items:

- a. Requirement to abide by Architectural/Community Design Guidelines.
  - b. All homes must have a garage with space for a minimum of two cars.
  - c. Specifications on the limitation of turf area for single-family homes.
  - d. Retention of public access to the golf course, bike paths, (i.e., 8-foot meandering paths along minor arterials and some collectors; refer to street sections), public trails, and non-residential uses.
  - e. Notice of requirement to pay future sewer user fees.
  - f. Requirement to adhere to National Electric Safety Code setbacks for existing overhead power lines.
  - g. Potential for conservation easements or dedication of open space.
  - h. Prohibition of motorized vehicles in open space.
  - i. Areas with potential for equestrian traffic.
  - j. Access to open space for pedestrian and bicycle traffic.
  - k. Notice of pedestrian easements to abutting properties.
  - l. Minimum defensible space requirements.
  - m. Snow storage areas.
6. Prior to ground-disturbing activity or prior to finalization of any portion of the tentative map, the developer shall submit an archaeological/historical survey to the Department of Development Review. The Department of Development Review shall submit the survey to the State Historic Preservation Office of the Department of Museums, Library and Arts for review. Following that review, the State Historic Preservation Office shall submit a letter to the Department of Development Review that indicates the survey was acceptable.
7. A note shall be placed on all grading plans and construction drawings stating:
- NOTE
- Should any prehistoric or historic remains/artifacts be discovered during site development, work shall temporarily be halted at the specific site and the State Historic Preservation Office of the Department of Museums, Library and Arts, shall be notified to record and photograph the site. The period of temporary delay shall be limited to a maximum of two (2) working days from the date of notification.*
8. The developer shall be required to participate in any applicable General Improvement District or Special Assessment District formed by Washoe County. The applicable division of the Department of Public Works shall be responsible for determining compliance with this condition.

9. Prior to acceptance of public improvements and release of any financial assurances, the developer shall furnish to the Utility Division and/or Engineering Division a complete set of reproducible 'as built' construction drawings prepared by a civil engineer registered in the State of Nevada.
10. A complete set of construction improvement drawings, including an on-site grading plan, shall be submitted to the Engineering Division for approval prior to finalization of any portion of the subdivision. Grading shall comply with best management practices and shall include detailed plans for grading and drainage on each lot, erosion control, slope stabilization, mosquito abatement. Placement or disposal of any excavated material shall be indicated on the grading plan.
11. All soil boring logs must be included as part of the construction drawings. The County Engineer shall be responsible for determining compliance with this condition.
12. All new utilities shall be placed underground. The County Engineer shall be responsible for determining compliance with this condition.
13. The developer is to provide written approval from the US Postal Service for the plans for the installation of mail delivery facilities. The system, other than individual mail boxes, must be shown on the project construction plans and installed as part of the on-site improvements. The County Engineer shall be responsible for determining compliance with this condition.
14. The final map shall designate faults, by distance and bearings, that have been active during the Holocene epoch of geological time and shall contain the following note.

**NOTE**

No habitable structures shall be located on a fault that has been active during the Holocene epoch of geological time. The faults have been located by Civil Engineer Registered in Nevada and experienced in Geotechnical Engineering and field surveyed by a Nevada Registered Land Surveyor.

The Department of Development Review shall be responsible for determining compliance with this condition.

15. The Washoe County Planning Commission certificate on the final map shall be approved by the County Engineer and the Department of Development Review.

**STREETS AND TRAFFIC**

16. The developer shall submit a detailed geotechnical analysis and report for pavement design recommendations to the County Engineer for review and approval. The report shall be based on the estimated traffic loadings for a 20-year design life and shall include assumptions concerning the distribution of trucks, to include project construction truck traffic. The resultant pavement thickness in the geotechnical analysis must be used if the report indicates a structural section that is stronger than minimum is required. The County Engineer shall be responsible for determining compliance with this condition.

17. Prior to the issuance of the first building permit, two lanes of Whites Creek Lane shall be constructed, to two-lane minor arterial standards as a minimum, from Thomas Creek Road to the project site. The County Engineer shall be responsible for determining compliance with this condition.
18. Prior to the issuance of the first building permit, a second access shall be constructed to the project site to emergency standards to the satisfaction of the applicable fire protection agency.
19. The County Engineer shall be responsible for determining compliance with this condition. Prior to the issuance of the 35th building permit, the following roadway improvements shall be constructed:
  - a. The remaining two lanes of Whites Creek Lane from Thomas Creek Road to the project site if warranted by projected traffic demands.
  - b. Two (2) lanes of Whites Creek Lane from Thomas Creek Road to Wedge Parkway with 100 feet of right-of-way. These two lanes will be constructed so that an additional two lanes may be added in the future if warranted by projected traffic volumes.
  - c. Whites Creek Lane will be designed in a manner that minimizes any impacts on the adjacent homes to the north in Fieldcreek Ranch (e.g., fencing, berms, lowering the travel lanes).
20. The minimum pavement structural section shall be 5 inches of asphalt over 8 inches of aggregate base for minor arterials, 4 inches of asphalt over 6 inches of granular base for roadways (private and public) for collector streets, and 3 inches of asphalt over 6 inches of granular base for roadways for local streets. The County Engineer shall be responsible for determining compliance with this condition.
21. Prior to approval of any final map or prior to the issuance of the first building permit for the first final map, all construction traffic will be diverted to Whites Creek Lane. Access to Whites Creek Lane will be from the Mt. Rose Highway to Thomas Creek Road. When the 35th building permit is issued, all construction traffic will be required to use Whites Creek Lane from Wedge Parkway. Construction traffic will use Whites Creek Lane from Wedge Parkway if this segment is completed prior to the issuance of the 35th building permit. Thomas Creek Road from Mt. Rose Highway to the proposed Whites Creek Lane may be considered for a haul route provided the developer submits a traffic analysis and intersection design prepared by a licensed Nevada Civil Engineer which addresses and provides, as a minimum, recommendations regarding:
  - a. site distance requirements;
  - b. left turn storage capacity and design;
  - c. intersection location and alignment;
  - d. proximity to existing intersections and recommended separate distances;
  - e. existing center median and landscaping concerns;
  - f. determination of adequacy of existing Thomas Creek Road roadway geometric section; and
  - g. determination of adequacy of existing structural section and load bearing capability.

The submitted report shall be evaluated and accepted by the County Engineer prior to any approval of the use of Thomas Creek Road as a haul route. Once Whites Creek Lane is connected to Wedge Parkway, this road shall become the primary construction haul route.

Any existing or proposed roads that will be used as construction haul routes and are not designated truck routes must be evaluated by a geotechnical study to determine the existing structural section and its load supporting capability. If the pavement section is inadequate to support the proposed construction loadings, the roadway must be redesigned or reconstructed as needed to provide a 20-year design life in accordance with the AASHTO Interim Guide for Flexible Pavements.

22. Prior to or upon approval of the CC&Rs, the developer shall have a street maintenance program approved by the County Engineer and the Department of Development Review. Maintenance of private streets shall be performed by the homeowners association and shall be perpetually funded.
23. The following roadway sections shall be applicable to the public and private on-site streets shown on the tentative map. A traffic report shall be submitted with each tentative map and shall identify the ultimate average daily traffic on each street and shall make recommendations for geometric design (e.g., left turn storage capacity, site distance, minimum required turning radius, etc.). The County Engineer shall be responsible for determining compliance with this condition.
  - a. Private Common Driveways - Serving 4 or less lots, pavement width 20 feet; serving 5 or more lots, pavement width 22 feet; no parking either side. Curb returns shall have a minimum face of curb radius of 20 feet on local streets and 25 feet on collector streets. Private common driveway locations will be shown on all tentative maps. Private common driveways will line up with proposed street intersections where possible and will comply with street intersection offset requirements. Single lot driveway access will not be allowed onto streets on which the average daily traffic exceeds 2000 trips. (Refer to street sections.)
  - b. Rural Private - 60 foot minimum ROW (maximum 200 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)
  - c. Local Private - 60 foot minimum ROW (200 - 500 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4-foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to street sections.)
  - d. Collector Private - 60 foot minimum ROW (500 ADT to 2000 ADT): minimum 24-foot pavement width; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. a minimum 4-foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. (Refer to Street Sections.)

- e. Collector Private - 60 foot minimum ROW (2000 ADT to 8000 ADT): minimum 24-foot pavement width with an additional 12-foot left turn lane at intersections where warranted; curb and gutter or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking on either side. A minimum 8-foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan. The County Engineer shall be responsible for determining compliance with the provisions of this condition. No residential driveway access will be allowed. Access for private common driveways will be allowed. (Refer to street sections.)
  - f. Collector Private - 120 foot minimum ROW collector street (up to 9600 ADT): A minimum 27-foot center median from curb face to curb face, 19-foot pavement width on either side of the median; curb and gutter on both sides or County Engineer-approved concrete header with roadside ditch both sides (developer's discretion); no parking either side except during special events; a minimum 8-foot meandering asphalt path both sides; no residential driveway access allowed. (Refer to street sections.)
  - g. Minor Arterial, Private - 120 foot minimum ROW (more than 10,800 ADT): A minimum 27-foot center median from curb face to curb face, 24-foot pavement width on either side of the median; County Engineer-approved concrete header with roadside ditch; no parking either side; a minimum 8-foot meandering asphalt path both sides. A gate may be installed at the point where Whites Creek Lane becomes a private road. (Refer to street sections.)
  - h. Minor Arterial, Public - 120-foot minimum ROW (more than 10,800 ADT): A minimum 27-foot center median from curb face to curb face, 29.5-foot roadway section on either side of the median; curb and gutter on both sides; a minimum 6-foot concrete sidewalk on both sides; no residential driveway access is allowed. (Refer to street sections.) A gate may be installed at the point where Whites Creek Lane becomes a private road. A public turn-around is required on the public side of the gate.
24. All roadway grades shall be limited to the maximum allowable grades for each street classification as provided in the Washoe County Standards. The County Engineer shall be responsible for determining compliance with this condition.
25. Construction near fault lines shall be as follows:
- a. Buildings for human occupancy shall be set back from the centerline of fault traces. Setback distances shall be determined by a geotechnical investigation prepared by a Nevada Registered Civil Engineer experienced in geotechnical engineering. The minimum setback shall be 50 feet on each side of the fault line.
  - b. Roadway construction in fault zones and along fault traces shall be reviewed by a Nevada Registered Civil Engineer experienced in geotechnical engineering. Any recommended special construction requirements (e.g., flexible joint connections for utilities) shall be complied with.
- The County Engineer shall be responsible for determining compliance with this condition.
26. All cul-de-sacs shall be a minimum pavement radius of 43.5 feet to front face of curb or 45 feet to edge of pavement. The County Engineer shall be responsible for determining compliance with this condition.

27. Landscaped medians shall be designed in accordance with AASHTO site distance and safety guidelines. The County Engineer and the Department of Development Review shall be responsible for determining compliance with this part of the condition. Maintenance of median landscaping shall be by the homeowners association as provided for in a separate maintenance agreement to be approved by the County Engineer and the District Attorney's Office prior to approval of the CC&Rs.
28. Temporary county standard turnarounds shall be constructed on all phased roadways which extend more than one lot depth beyond a maintained public or private street. The County Engineer shall be responsible for determining compliance with this condition.
29. All-weather emergency access roads shall be constructed at the end of all cul-de-sacs that are longer than 1,500 feet. These roads shall have a 30-foot access easement with a minimum 20-foot width and 2.5 inches of asphalt concrete pavement on an engineered gravel base. The roads shall be controlled by emergency access gates and shall be posted with signs stating "For Emergency Vehicles Only". The County Engineer and the applicable fire protection agency shall be responsible for determining compliance with this condition.
30. Prior to final map approval, the developer shall provide all weather emergency access easements and road improvements at the locations shown on the tentative map, terminating at public or privately-maintained streets. The County Engineer shall be responsible for determining compliance with this condition.
31. Meandering asphalt paths will be acceptable provided that:
  - a. Pedestrian easements are included for portions of the paths located outside the county right-of-way.
  - b. Landscaping between the back of the curb and the path shall be designed in accordance with AASHTO site distance and safety guidelines. The County Engineer shall be responsible for determining compliance with the provisions of this condition.
  - c. Maintenance of the asphalt paths and landscaping shall be the responsibility of the developer and, when created, by the homeowners association as provided for in a separate maintenance agreement and to be approved by the County Engineer and the District Attorney's office prior to approval of the final Development Agreement.
32. Asphalt paths or gravel shoulders, located adjacent to private streets shall be privately maintained and funded. The County Engineer shall be responsible for determining compliance with this condition.
33. Street lights shall be installed at major intersections. The County Engineer shall be responsible for determining compliance with this condition.
34. No at-grade crossing golf cart crossings shall be allowed across any street with 500 ADT or greater. Where possible, crossings should be below the grade of public streets. The County Engineer shall be responsible for determining compliance with this condition.

35. Off-site parking areas shall be provided within 500 feet of homes that have lots ranging in size between 12,000 square feet and one-half acre. One space shall be provided for every three homes. Parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the tentative map(s). The Department of Development Review shall be responsible for determining compliance with this condition.
36. Project streets that are designed with security gates at points intersecting with public streets shall have adequate on-site stacking space. The specific type and size of the stacking areas must be approved by the County Engineer and constructed as approved.
37. Regulatory signs must be installed at the juncture of all public streets with a private street and at intersections along the primary loop road. Said sign shall state: "PRIVATE STREET NOT MAINTAINED BY COUNTY." All regulatory signs shall meet the Manual of Uniform Traffic Control Device standards. The County Engineer shall be responsible for determining compliance with this condition.
38. Street names shall be reviewed and approved by the Regional Street Naming Coordinator. The tentative map shall indicate street names for identification purposes.

#### DRAINAGE AND GRADING

39. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of a tentative map for any phase, a preliminary hydrology report shall be submitted to the County Engineer for approval. This preliminary hydrology report shall be prepared in accordance with county requirements for tentative maps, in conformance with the general concept-level storm drain master plan, and be applicable to the specific tentative map or special use permit being approved.  
  
The report shall include, as a minimum, the locations, points of entry and discharge, flow rates and flood limits of all 10- and 100-year storm flows impacting both on-site and off-site areas and the methods for handling these flows as well as the proposed methods for handling storm water increases due to development. Proposed mitigation measures shall be included for any impacts on existing on-site and off-site properties and facilities. The County Engineer shall be responsible for determining compliance with this condition.
40. Prior to the submittal of any final map or issuance of any grading permit, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted to the County Engineer for approval. The report shall be in substantial compliance with the general concept-level storm drain master plan and contain all final storm drain pipe, ditch and retention pond sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed, constructed, and approved by the District Health Department and the County Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.

41. A maintenance plan of all drainage facilities, to be owned by the homeowners association, shall be provided prior to approval of the CC&Rs. All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe County water treatment plant, and associated Steamboat Ditch conveyance system. All runoff from improved areas which runs into the Steamboat Ditch shall be pre-treated for silt and petrochemicals and shall be routed through a "wet" detention facility or approved alternative. The Utility Division and the Department of Development Review shall be responsible for determining compliance with this condition.
42. The 100-year floodplain boundaries and flood elevations shall appear on each final map. If the floodplain boundary has been changed by a Federal Emergency Management Agency (FEMA) Conditional Letter of Map Amendment or Conditional Letter of Map Revision, the date of that letter and a note to that effect shall appear on the final map. Grading or building permits shall not be issued for areas currently shown as "A" zones on the FEMA floodplain maps until a Letter of Map Amendment or Revision is submitted or until conformance with Washoe County flood construction standards is determined by the County Engineer. The County Engineer shall be responsible for determining compliance with this condition.
43. Prior to approval of the final map, the developer shall obtain a Stormwater Discharge Permit from the Nevada Division of Environmental Protection. If required, point discharge permit for each proposed detention pond will be obtained from the Nevada Division of Environmental Protection and copy shall be submitted to the County Engineer.
44. The developer shall provide pretreatment for petrochemicals, nutrients and other chemicals used for landscaping, and silt for all storm drainage from the site. Systematic cleaning of the streets, parking lots, and catch basins, and control of salt and sanding activities shall to be delineated in the maintenance plan. The County Engineer shall be responsible for determining compliance with this condition.
45. Prior to issuance of a grading permit for the golf course and/or final map, a final wetlands determination must be made and approved by the US Army Corps of Engineers and the approval letter provided to the Department of Development Review.
46. Prior to issuance of a grading permit for the golf course or approval of a final map, the developer shall obtain from the Army Corps of Engineers a 404 permit for wetland and dredge and fill for all roadway crossing of Thomas and Dry Creeks, or a letter from the COE indicating that a 404 permit is not required and a copy submitted to the County Engineer.
47. All street crossings of Thomas and Dry Creeks shall be designed to pass the 100 year flood flows without obstruction or overtopping of the roadway. Erosion protection shall be provided based upon the recommendation of the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.
48. Standard reinforced concrete headwalls or other approved alternatives shall be placed on the inlet and outlet of all drainage structures and rip-rap shall be used to prevent erosion at the inlets and outlets of all pipe culverts. The District Health Department and the County Engineer shall be responsible for determining compliance with this condition.

49. The stormwater discharges from this development that flow to Dry Creek shall be controlled to pre-development flow conditions and will be controlled to prevent water quality degradation of Steamboat Ditch. The developer shall provide drainage structures under Steamboat Ditch that would pass the 10-year frequency storm or demonstrate that there will not be any water quality degradation in Steamboat Ditch. The County Engineer shall be responsible for determining compliance with this condition.

The developer shall contact the Division of Water Resources, State of Nevada, to determine whether the proposed flood detention facilities will require permits. If required, copies shall be submitted to the County Engineer.

50. Prior to the approval of a grading permit or approval of a final map, a detailed dust control plan shall be prepared and submitted to Air Quality Management of the District Health Department and to the Department of Development Review. The dust control plan shall address, as a minimum, "phased grading" and stabilization methods that include the revegetation, application of palliatives or other District approved methods prior to any grading of new phases, as well as effective street cleaning for any mud or soil tracking to existing paved surfaces, and dust controls on any screening methods or storage piles located on the site.
51. Prior to approval of the first final map, an erosion control and soil stabilization plan and a grading plan shall be approved by the Washoe-Storey Conservation District. A copy of the approval shall be submitted to the District Health Department, Department of Development Review, and County Engineer.
52. A buffer shall be provided next to riparian vegetation. The size of the buffer shall be mutually agreeable to Washoe County and the developer. A minimum 50-foot buffer shall be provided from any structures. The Department of Development Review shall be responsible for determining compliance with this condition.
53. Individual lot drainage shall not be allowed to drain onto neighboring properties without proper reciprocal drainage easements and the individual lot drainage swales shall be designed to handle the 100-year flows and lined. The County Engineer shall be responsible for determining compliance with this condition.

#### WATER AND WASTEWATER

54. The developer shall construct or provide the financial assurances for the construction of the water and sewer system facilities. The financial assurances must be in a form and amount that is satisfactory to the Utility Division.
55. Fees for plan checking and inspection shall be paid in accordance with Washoe County ordinance. The Utility Division shall be responsible for determining compliance with this condition.
56. Easements for all water and sewer utilities shall be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.

57. No "certificate of occupancy" shall be issued until the water and sewer facilities have been completed and accepted for operation and maintenance. The Utility Division shall be responsible for determining compliance with this condition.
58. The sanitary sewer collection system and water system facilities, with the exception of the golf course and common area irrigation systems, must be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
59. No "certificate of occupancy" shall be issued until the water and sewer facilities have been completed and accepted for operation and maintenance. The Utility Division shall be responsible for determining compliance with this condition.
60. The Nevada Division of Environmental Protection must submit a letter to the District Health Department certifying their approval of the final map.
61. The developer shall deposit with the Utility Division the sum of \$50.00 per lot prior to recordation of all or part of the final map. This fee shall represent the prorated share of the completed water and wastewater facilities plan for the South Truckee Meadows for this development.
62. In accordance with the Washoe County Utility Division policies for the Southwest Truckee Meadows, water rights shall be dedicated to Washoe County. Prior to acceptance, the water rights must be in good standing with the State of Nevada Division of Water Resources and must reflect a point of diversion, place and manner of use acceptable to the Utility Division.
64. All minor infrastructure for potable water distribution shall be designed, constructed, inspected, and approved by the District Health Department and the Utility Division. The developer shall coordinate with the Utility Division to ensure the major infrastructure design can be accomplished prior to the approval of the final map.
65. Responsibility for design of wells, pump structure, controls, telemetry, and appurtenances, storage tanks, and transmission lines to the edge of the subdivision, all necessary to provide water service to the project, will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
66. Prior to final map approval, a letter of approval from the Division of Water Resources for the water rights serving this proposal must be submitted. A water "will-serve" letter for a final map will not be issued until the production wells have been determined to have adequate water resource. The Utility Division shall be responsible for determining compliance with this condition.

67. Before approval of the final map will be considered, a letter from the water purveyor committing adequate water service to this proposal must be submitted to the District Health Department. This letter shall indicate that the facility will not be brought beyond its permitted capacity by this service.
68. Prior to the approval of a final map by the District Health Department, the production wells that will serve any phase of this development must be constructed, pump tested and sampled to ensure the proposed water system has sufficient quality and quantity.
69. Water quality results from a state-certified laboratory for new water sources shall be submitted to the Utility Division. The water quality sampling and testing shall be in compliance with the current State of Nevada Regulations for Public Water Systems, NAC 445.
70. If the water quality of the wells does not meet the secondary or the primary standards, as defined by NAC 445, water treatment facilities must be on-line and functioning prior to issuance of any building permits. The Utility Division shall be responsible for determining compliance with this condition.
71. If a supplemental water source is required, evidence that an adequate source has been procured by the developer/water purveyor shall be submitted to the Utility Division for their review and approval.
72. Any wells on the property not in use for production or monitoring purposes, shall be properly abandoned in accordance with State Regulations governing Water Wells and Related Drilling. The Utility Division shall be responsible for determining compliance with this condition.
73. The developer shall provide access to the existing monitoring wells. In the event access is no longer available, the developer shall construct new wells. The Utility Division shall be responsible for determining compliance with this condition.
74. The tentative maps shall show the maintenance roads for the existing and proposed water tanks. The location of these roads shall be mutually agreeable to the Department of Public Works and the developer.
75. The final map owner's certificate shall contain language indicating that the developer and his assignees agree to the use of residential water meters. The Department of Development Review shall be responsible for determining compliance with this condition.
76. Pursuant to Section 278.340 of the State of Nevada Regulations Governing Review of Plans for Subdivisions, Condominiums, and Planned Unit Developments, no grading permit shall be issued prior to District Health Department approval of the referenced final map. This condition does not apply to the construction of production wells required in Condition 68.

The developer may seek relief from the District Board of Health for this requirement or may choose to create a separate parcel for the first 18-hole golf course.

77. The Department of Development Review shall be responsible for determining compliance with this condition. The final map shall contain the following note:

**NOTE**

No Certificate of Occupancy shall be issued until the water facilities have been completed and accepted by Washoe County.

78. Responsibility for design of any pump stations and interceptors to provide sewer service to the project will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
79. All minor infrastructure for sewer collection shall be designed, constructed, inspected, and approved by the District Health Department and the Utility Division.
80. The sewer "privilege connection fee" must be paid for each lot when required by the Washoe County Utility Division since it is not anticipated that there will be any additional major infrastructure needed to serve this development. The Utility Division shall be responsible for determining compliance with this condition.
81. All sewer hookup fees for the area within the final map will be paid to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
82. The final subdivision map shall show a dedicated, all-weather easement, with access, over the developments sanitary sewer lines. The Utility Division shall be responsible for determining compliance with this condition.
83. Proper easements shall be shown for off-site sewage and drainage systems. The Utility Division and the County Engineer shall be responsible for determining compliance with this condition.
84. Prior to final map approval, a letter, which can be a will-serve letter, from the Utility Division committing sewer service, must be submitted to the District Health Department. This letter shall indicate that the treatment facility will not be brought beyond its permitted capacity by this service.

FIRE PROTECTION

85. The plans submitted with a building permit application shall show evidence of compliance with the recommendations of the applicable fire protection agency. Those concerns are fire flows, fire hydrant number and location, access, sequential phasing of firebreaks during development, permanent firebreaks, minimum defensible space, use of fire resistant construction and/or roof material, sprinklering of structures, and spark arrestors in chimneys. Access and fire flows shall be addressed to the satisfaction of the fire protection agency prior to the approval of a final map.
86. The developer shall minimize grading to the maximum extent possible in the area around the critical mule deer habitat in order to preserve the existing browse shrubs. The Department of Development Review, in conjunction with the applicable fire protection agency, shall be responsible for determining compliance with this condition.

OTHER

87. A minimum 25-foot landscape buffer shall be installed between the homes and the collector and secondary loop streets. The homeowners association shall be required to perpetually maintain these areas. The Department of Development Review shall be responsible for determining compliance with this condition.
88. Prior to acceptance of the first final map, the telephone easement Doc. No. 415899, which runs through the middle of many lots, shall be realigned with appropriate abandonment and relocation easements, or the proposed lots realigned. The County Engineer shall be responsible for determining compliance with this condition.

**CONDITIONS  
FOR  
SPECIAL USE PERMIT CASE NO. \_\_\_\_\_**

(As recommended by Department of Development Review and  
attached to Staff Report dated \_\_\_\_\_ )

UNLESS OTHERWISE SPECIFIED, ALL CONDITIONS MUST BE MET OR FINANCIAL ASSURANCES MUST BE PROVIDED TO SATISFY THE CONDITIONS PRIOR TO SUBMITTAL FOR A BUILDING PERMIT. THE AGENCY RESPONSIBLE FOR DETERMINING COMPLIANCE WITH A SPECIFIC CONDITION SHALL DETERMINE WHETHER THE CONDITION MUST BE FULLY COMPLETED OR WHETHER THE DEVELOPER SHALL BE OFFERED THE OPTION OF PROVIDING FINANCIAL ASSURANCES. ALL AGREEMENTS, EASEMENTS, OR OTHER DOCUMENTATION REQUIRED BY THESE CONDITIONS SHALL HAVE A COPY FILED WITH THE COUNTY ENGINEER AND THE DEPARTMENT OF DEVELOPMENT REVIEW.

COMPLIANCE WITH THE CONDITIONS OF THIS SPECIAL USE PERMIT IS THE RESPONSIBILITY OF THE DEVELOPER, HIS SUCCESSOR IN INTEREST, AND ALL OWNERS, ASSIGNEES, AND OCCUPANTS OF THE PROPERTY AND THEIR SUCCESSORS IN INTEREST. FAILURE TO COMPLY WITH ANY CONDITIONS IMPOSED IN THE ISSUANCE OF THE SPECIAL USE PERMIT MAY RESULT IN THE INSTITUTION OF REVOCATION PROCEDURES.

WASHOE COUNTY RESERVES THE RIGHT TO REVIEW AND REVISE THE CONDITIONS OF THIS APPROVAL SHOULD THEY DETERMINE THAT A SUBSEQUENT LICENSE OR PERMIT ISSUED BY WASHOE COUNTY VIOLATES THE INTENT OF THIS APPROVAL.

GENERAL CONDITIONS

1. As part of every special use permit application, the developer shall include a completed "statement of compliance" that demonstrates how the development will be or is consistent with the recorded final Development Agreement. The Department of Development Review shall be responsible for determining compliance with this condition.
2. Prior to ground-disturbing activity, the developer shall submit an archaeological/historical survey to the Department of Development Review. The Department of Development Review shall submit the survey to the State Historic Preservation Office of the Department of Museums, Library and Arts for review. Following that review, the State Historic Preservation Office shall submit a letter to the Department of Development Review that indicates the survey was acceptable.

3. A note shall be placed on all grading plans and construction drawings stating:

NOTE

Should any prehistoric or historic remains/artifacts be discovered during site development, work shall temporarily be halted at the specific site and the State Historic Preservation Office of the Department of Museums, Library and Arts, shall be notified to record and photograph the site. The period of temporary delay shall be limited to a maximum of two (2) working days from the date of notification.

4. Prior to acceptance of public improvements and release of any financial assurances, the developer shall furnish to the Utility Division and/or Engineering Division a complete set of reproducible 'as built' construction drawings prepared by a civil engineer registered in the State of Nevada.
5. The developer shall be required to participate in any applicable General Improvement District or Special Assessment District formed by Washoe County. The applicable division of the Department of Public Works shall be responsible for determining compliance with this condition.
6. All new utilities shall be placed underground. The County Engineer shall be responsible for determining compliance with this condition.
7. An animal waste management plan shall be prepared prior to the issuance of any building permit for a facility that might require such a plan. The plan must document how the migration of bacteria, nutrients, and other animal waste by-products to surface and ground waters will be prevented. The Department of Development Review shall be responsible for determining compliance with this condition.

STREETS AND TRAFFIC

8. All street construction shall comply, at a minimum, with the requirements for a subdivision within this project. The County Engineer shall be responsible for determining compliance with this condition.
9. The developer shall submit a detailed geotechnical analysis and report for pavement design recommendations to the County Engineer for review and approval. The report shall be based on the estimated traffic loadings for a 20-year design life and shall include assumptions concerning the distribution of trucks, to include project construction truck traffic. The resultant pavement thickness in the geotechnical analysis must be used if the report indicates a structural section that is stronger than minimum is required. The County Engineer shall be responsible for determining compliance with this condition.
10. The minimum pavement structural section shall be 5 inches of asphalt over 8 inches of aggregate base for minor arterials, 4 inches of asphalt over 6 inches of granular base for roadways (private and public) for collector streets, and 3 inches of asphalt over 6 inches of granular base for roadways for local streets. The County Engineer shall be responsible for determining compliance with this condition.

11. Prior to the issuance of the first building permit, two lanes of Whites Creek Lane shall be constructed, to two-lane minor arterial standards as a minimum, from Thomas Creek Road to the project site. The County Engineer shall be responsible for determining compliance with this condition.
12. Prior to the issuance of the first building permit, a second access shall be constructed to the project site to emergency standards. The applicable fire protection agency shall be responsible for determining compliance with this condition.
13. Prior to the issuance of the first building permit, all construction traffic will be diverted to Whites Creek Lane. Access to Whites Creek Lane will be from the Mt. Rose Highway to Thomas Creek Road. When the 35th building permit is issued, all construction traffic will be required to use Whites Creek Lane from Wedge Parkway. Construction traffic will use Whites Creek Lane from Wedge Parkway if this segment is completed prior to the issuance of the 35th building permit. Thomas Creek Road from Mt. Rose Highway to the proposed Whites Creek Lane may be considered for a haul route provided the developer submits a traffic analysis and intersection design prepared by a licensed Nevada Civil Engineer which addresses and provides, as a minimum, recommendations regarding:
  - a. site distance requirements;
  - b. left turn storage capacity and design;
  - c. intersection location and alignment;
  - d. proximity to existing intersections and recommended separate distances;
  - e. existing center median and landscaping concerns;
  - f. determination of adequacy of existing Thomas Creek Road roadway geometric section; and
  - g. determination of adequacy of existing structural section and load bearing capability.

The submitted report shall be evaluated and accepted by the County Engineer prior to any approval of the use of Thomas Creek Road as a haul route. Once Whites Creek Lane is connected to Wedge Parkway, this road shall become the primary construction haul route.

Any existing or proposed roads that will be used as construction haul routes and are not designated truck routes must be evaluated by a geotechnical study to determine the existing structural section and its load supporting capability. If the pavement section is inadequate to support the proposed construction loadings, the roadway must be redesigned or reconstructed as needed to provide a 20-year design life in accordance with the AASHTO Interim Guide for Flexible Pavements.

14. Construction near fault lines shall be as follows:
  - a. Buildings for human occupancy shall be set back from the centerline of fault traces. Setback distances shall be determined by a geotechnical investigation prepared by a Nevada Registered Civil Engineer experienced in geotechnical engineering. The minimum setback shall be 50 feet on each side of the fault line.
  - b. Roadway construction in fault zones and along fault traces shall be reviewed by a Nevada Registered Civil Engineer experienced in geotechnical engineering. Any recommended special construction requirements (e.g., flexible joint connections for utilities) shall be complied with.

The County Engineer shall be responsible for determining compliance with this condition.

15. Asphalt paths or gravel shoulders, located adjacent to private streets shall be privately maintained and funded. The County Engineer shall be responsible for determining compliance with this condition.
16. No at-grade crossing golf cart crossings shall be allowed across any street with 500 ADT or greater. Where possible, crossings should be below the grade of public streets. The County Engineer shall be responsible for determining compliance with this condition.

#### GRADING AND DRAINAGE

17. After approval of the general concept-level storm drain master plan and the final Development Agreement, and prior to approval of any special use permit, a preliminary hydrology report shall be submitted to the County Engineer for approval. This preliminary hydrology report shall be prepared in accordance with county requirements for tentative maps, in conformance with the general concept-level storm drain master plan, and be applicable to the specific tentative map or special use permit being approved.

The report shall include, as a minimum, the locations, points of entry and discharge, flow rates and flood limits of all 10- and 100-year storm flows impacting both on-site and off-site areas and the methods for handling these flows as well as the proposed methods for handling storm water increases due to development. Proposed mitigation measures shall be included for any impacts on existing on-site and off-site properties and facilities. The County Engineer shall be responsible for determining compliance with this condition.

18. Prior to the submittal of any final map or issuance of any grading permit, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted to the County Engineer for approval. The report shall be in substantial compliance with the general concept-level storm drain master plan and contain all final storm drain pipe, ditch and retention pond sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed, constructed, and by the District Health Department and the County Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.

Prior to the issuance of a grading permit, the developer shall provide a letter granting a blanket drainage and construction easement to the Southwest Pointe Subdivision that allows the subdivision to drain onto the golf course and to construct detention facilities necessary to accommodate the subdivision-generated stormwaters in mutually agreed-upon locations. The easement shall be submitted with the plans for the final golf course improvements. The County Engineer shall be responsible for determining compliance with this condition.

19. Prior to the approval of a grading permit, a detailed dust control plan shall be prepared and submitted to Air Quality Management of the District Health Department and to the Department of Development Review. The dust control plan shall address, as a minimum, "phased grading" and stabilization methods that include the revegetation, application of palliatives or other District approved methods prior to any grading of new phases, as well as effective street cleaning for any mud or soil tracking to existing paved surfaces, and dust controls on any screening methods or storage piles located on the site.

20. For all projects larger than 5 acres, the developer shall obtain a Stormwater Discharge Permit from the Nevada Division of Environmental Protection and submit a copy to the County Engineer prior to ground-disturbing activity.
21. The developer shall provide pretreatment for petrochemicals, nutrients and other chemicals used for landscaping, and silt for all storm drainage from the site. Systematic cleaning of the streets, parking lots, and catch basins, and control of salt and sanding activities shall to be delineated in the maintenance plan. The County Engineer shall be responsible for determining compliance with this condition.
22. The stormwater discharges from this development that flow to Dry Creek shall be controlled to pre-development flow conditions and will be controlled to prevent water quality degradation of Steamboat Ditch. The developer shall provide drainage structures under Steamboat Ditch that would pass the 10-year frequency storm or demonstrate that there will not be any water quality degradation in Steamboat Ditch. The County Engineer shall be responsible for determining compliance with this condition.
23. All street crossings of Thomas and Dry Creeks shall be designed to pass the 100 year flood flows without obstruction or overtopping of the roadway. Erosion protection shall be provided based upon the recommendation of the geotechnical report. The County Engineer shall be responsible for determining compliance with this condition.
24. Standard reinforced concrete headwalls or other approved alternatives shall be placed on the inlet and outlet of all drainage structures and rip-rap shall be used to prevent erosion at the inlets and outlets of all pipe culverts. The District Health Department and the County Engineer shall be responsible for determining compliance with this condition.
25. Prior to issuance of a grading permit for the golf course and/or final map, a final wetlands determination must be made and approved by the Army Corps of Engineers and the approval letter provided to the Department of Development Review.
26. Prior to issuance of a grading permit for the golf course or approval of the final map, the developer shall obtain from the United States Army Corps of Engineers a 404 permit for wetland and dredge and fill for all roadway crossing of Thomas and Dry Creeks, or a letter from the COE indicating that a 404 permit is not required and a copy submitted to the County Engineer.
27. The developer shall submit to the District Health Department a letter approving the proposed methods of erosion control and soil stabilization from the Washoe-Storey Conservation District.
28. Prior to the issuance of a grading permit for the golf course, a golf course management plan shall be prepared that documents how the migration of fertilizers, pesticides, herbicides, and fungicides to surface and ground waters will be prevented. A surface and ground water sampling program shall be implemented to demonstrate that migration is not occurring and commits to modifying practices in the event that any of the above materials are detected. The Department of Development Review shall be responsible for determining compliance with this condition.

WATER AND WASTEWATER

29. The sanitary sewer collection system and water system facilities, with the exception of the golf course and common area irrigation systems, must be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
30. The developer shall construct or provide the financial assurances for the construction of the water and sewer system facilities. The financial assurances must be in a form and amount that is satisfactory to the Utility Division.
31. Fees for plan checking and inspection shall be paid in accordance with Washoe County ordinance. The Utility Division shall be responsible for determining compliance with this condition.
32. Easements for all water and sewer utilities shall be offered for dedication to Washoe County. The Utility Division shall be responsible for determining compliance with this condition.
33. No "certificate of occupancy" shall be issued until the water and sewer facilities have been completed and accepted for operation and maintenance. The Utility Division shall be responsible for determining compliance with this condition.
34. If required and in accordance with the Washoe County Utility Division policies for the Southwest Truckee Meadows, water rights shall be dedicated to Washoe County. Prior to acceptance, the water rights must be in good standing with the State of Nevada Division of Water Resources and must reflect a point of diversion, place and manner of use acceptable to the Utility Division.
35. Responsibility for design of wells, pump structure, controls, telemetry, and appurtenances, storage tanks, and transmission lines to the edge of the subdivision, all necessary to provide water service to the project, will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
36. Water quality results from a State of Nevada-certified laboratory for new water sources shall be submitted to the Utility Division. The water quality sampling and testing shall be in compliance with the current State of Nevada Regulations for Public Water Systems, NAC 445.
37. If the water quality of the wells does not meet the secondary or the primary standards, as defined by NAC 445, water treatment facilities must be on-line and functioning prior to issuance of any building permits. The Utility Division shall be responsible for determining compliance with this condition.

38. If a supplemental water source is required, evidence that an adequate source has been procured by the developer/water purveyor shall be submitted to the Utility Division for their review and approval.
39. Any wells on the property not in use for production or monitoring purposes, shall be properly abandoned in accordance with State Regulations governing Water Wells and Related Drilling. The Utility Division shall be responsible for determining compliance with this condition.
40. The developer shall provide access to the existing monitoring wells. In the event access is no longer available, the developer shall construct new wells. The Utility Division shall be responsible for determining compliance with this condition.
41. Responsibility for design of any pump stations and interceptors to provide sewer service to the project will rest with the Utility Division. The Utility Division may either, provide such design in-house, or select an outside consultant. When an outside consultant is to be selected, the Utility Division and the developer shall jointly select that engineer. Funding of design and infrastructure in excess of the minimum requirements or that to serve the development as determined by generally accepted engineering calculations, shall be the responsibility of Washoe County. Washoe County shall either participate monetarily at the time of design and/or shall credit an appropriate number of service hookups to the developer at the time of recordation of the final map.
42. The sewer "privilege connection fee" must be paid for each lot when required by the Washoe County Utility Division since it is not anticipated that there will be any additional major infrastructure needed to serve this development. The Utility Division shall be responsible for determining compliance with this condition.

#### FIRE PROTECTION

43. The plans submitted with a building permit application shall show evidence of compliance with the recommendations of the applicable fire protection agency. Those concerns are fire flows, fire hydrant number and location, access, sequential phasing of firebreaks during development, permanent firebreaks, minimum defensible space, use of fire resistant construction and/or roof material, sprinklering of structures, and spark arrestors in chimneys. Access and fire flows shall be addressed prior to the introduction of any combustible materials to the site. The fire protection agency shall be responsible for determining compliance with this condition.
44. The developer shall minimize grading to the maximum extent possible in the area around the critical mule deer habitat in order to preserve the existing browse shrubs. The Department of Development Review, in conjunction with the applicable fire protection agency, shall be responsible for determining compliance with this condition.

LANDSCAPING

45. Detailed landscaping and irrigation plans for the village commercial center, club house, golf course, golf driving range, equestrian center, or other non-residential uses requiring special use permit review shall be submitted prior to the issuance of a building permit for the particular use.
46. A buffer shall be provided between the fairways/greens and all creeks. The setback of the buffer shall comply with 100.200(e) of the Uniform Building Code Section 7011 amended. The Department of Development Review shall be responsible for determining compliance with this condition.

Project No. 88-003.20  
March 29, 1996  
Revised April 30, 1996

Mr. Don Young, Planner  
Department of Development Review  
P. O. Box 11130  
Reno, NV 89520

**Subject: Southwest Pointe**

Dear Don:

This letter incorporates all previous correspondence pertaining to clarifications and modifications to the Conditions of Approval for Southwest Pointe. Those changes are summarized below. Deletions are ~~struck thru~~ and additions are in *italic*. One of the more significant modifications has to do with Condition #26, which pertains to street standards for public and private roads. We are requesting that the primary loop road, which will have either an 80-foot or a 60-foot right-of-way, be private rather than public and that we have the option of installing a gate at the point where Whites Creek Lane becomes a private road.

One change that does not deal with a condition, but rather with the concept plan, is the number of 12,000 square foot, 1/2 acre, and 1 acre lots. We are proposing to modify the percentage of lots in each category as outlined below.

<u>Lot Size</u>	<u>As Approved</u>	<u>Proposed</u>
12,000 sq. ft.	40%	40%
1/2 acre & larger	15%	35%
1 acre & larger	45%	25%

Samuel Chacón, P.E.  
President  
Bryan Sprague, P.E.  
Vice President  
Brita Tryggvi, A.I.C.P.  
Principal  
Greg Doerr, A.I.C.P.  
Principal

The biggest change occurs in the number of 1/2-acre lots which has been increased and the number of 1-acre lots which has been decreased. The rationale for this change is based on a marketing study performed by Whitney Research Group in February 1996. This study identified a greater demand for 1/2 acre lots. Their

reasoning is based on demographic aging trends which suggest that as consumers grow older (i.e., aging baby boomers), they do not want the upkeep of a large custom homesite. The older consumer desires freedom to travel and not be tied down to a large custom home and lot requiring extensive maintenance upkeep. Further, we are requesting a range, rather than a specific percentage, to permit some flexibility in site planning and to minimize the need for future revisions.

**Conditions for Development Agreement Case No. DA9-1-93**

1. *Unless specifically stated in the final development agreement, all uses, densities and standards shall be consistent with the Washoe County Development Code and with the goals and policies in the Comprehensive Plan and the Southwest Truckee Meadows Area Plan. Unless specifically stated in the final development agreement, the allowed uses, densities, and standards of the land subject to the development agreement shall be those in effect at the time the final agreement is approved.*

**Reason for Modification:** Different standards may be proposed in the final development agreement; therefore, the wording of this condition needs to reflect this possibility.

2. As part of every tentative map and special use permit application, the developer shall include a "statement of compliance" that demonstrates how the development application is consistent with the recorded final development agreement. ~~The A "statement of compliance" format shall be made a part of the final development agreement. For the Phase I applications, including the tentative map, special use permit and administrative waiver, a "draft statement of compliance" shall be provided to staff prior to the public hearing. When the final development agreement is approved, a revised statement of compliance for the Phase I tentative map and special use permit applications shall be submitted to Department of Development Review staff.~~

**Reason for Modification:** The second sentence should become a separate condition because it refers to the development agreement. The first sentence should also be a separate condition because it deals with the tentative maps and special use permits. The proposed deletions simply reflect the fact that

there is no reason to prepare a draft statement of compliance because the Phase I applications will not be submitted before the final development agreement is approved.

- ~~3. The recorded final development agreement shall be effective for a period not more than 15 years. An extension of this approval may be granted if mutually agreed to by the developer and Washoe County.~~

**Reason for Modification:** Article 814, Section 110.814.75 requires a development schedule as part of the final development agreement. Therefore, this condition is unnecessary because it simply repeats the requirements of the Washoe County Development Code.

4. Conditions, covenants, and restrictions (CC&Rs) shall be reviewed and approved by the District Attorney's Office, *County Engineer*, and the Department of Development Review *prior to final map approval or prior to issuance of a certificate of occupancy for a non-residential use*. Washoe County shall be made a party to the applicable provisions of the CC&Rs to the satisfaction of the District Attorney's office. *If the CC&Rs are not recorded on the entire property, subsequent phases will be annexed to the previously recorded CC&Rs.* Said CC&Rs shall specifically address the ~~potential for liens~~ *county's ability to enforce certain provisions* against the property and the individual property owner's responsibilities for the perpetual funding, maintenance and replacement, of the following items, at a minimum.

- g. *Common area landscaping including along streets or landscaping along Whites Creek Lane*
- h. *Fire and fuelbreaks on open space*
- ~~l. Private streets and utilities~~
- ~~e. Public park center~~

. . . At a minimum, the CC&Rs shall also specifically address the following items:

- ~~j. Requirement of Access to open space remaining open to for pedestrian and bicycle traffic.~~
- l. *Retention of public access to the golf course, bike paths, (i.e., 8-foot meandering paths along minor arterials and some collectors; refer to street sections), public trails, and non-residential uses.*

**Reason for Modifications:** The first change more accurately reflects the county's interest in enforcement. The second changes clarifies that this condition does not pertain to landscaping on private property along streets but is strictly limited to landscaping in common areas. Fire and fuelbreaks may be located on property other than open space, therefore, the reference to open space should be deleted. Private streets are listed in an earlier item. (i.e., Item A). The developer will not be maintaining the public park and, therefore, this reference should be deleted. Lastly, some open space, such as wetlands, may not be open to pedestrian and bicycle traffic, therefore, this wording should be clarified.

11. ~~Within six months of the approval of the preliminary development agreement, a draft final development agreement that conforms with the provisions of Section 814 of the Washoe County Development Code shall be completed and submitted to the Washoe County Department of Development Review. Washoe County Department of Development Review will provide comments on the draft final agreement. The final development agreement will then be submitted to the Washoe County Board of County Commissioners within three months of submission of a completed agreement with all accompanying exhibits, provided the Department of Development Review does not delay the submission in order to approve provisions of the agreement to its satisfaction. Extension of any of these time frames may be requested if mutually agreeable to Washoe County and the developer.~~

**Reason for Modification:** A draft of the final development agreement has already been submitted, therefore, the proposed deletions simply reflect the current status. The proposed addition provides for delay in the submission.

12. ~~The project shall be developed in three phases. Phase I includes a tentative map for 436 lots, an 18-hole golf course, the village center, and driving range. Phase II will include an additional nine holes, the equestrian center and a tentative map for approximately 220 dwelling units. Phase III includes the remaining 434 lots and the last nine holes of golf. Modifications to the proposed phasing plan may be made if mutually agreeable to the developer and Washoe County. These modifications may include the commercial portion of the project and the second 18-hole golf course, which may be constructed during Phase II or Phase III.~~

**Reason for Modification:** Section 110.814.75 states that the final development agreement must include a development schedule that indicates the phases in which the land subject to the development agreement will be built and the approximate dates for the completion of each phase.

13. The subdivider shall present to the governing body or planning commission a final map, prepared in accordance with the tentative map, for the entire area for which a tentative map has been approved, or one of a series of final maps, each covering a portion of the approved tentative map, within two (2) years after the date of approval of the tentative map.

The governing body or planning commission may grant an extension of not more than two (2) years for the presentation of any final map after the two (2) year period for presenting the entire final map or next successive final map has expired.

If the subdivider fails to record a final map for any portion of the tentative map or obtain an extension within two years after the date of approval of the tentative map, all proceedings concerning the subdivision are terminated.

**Reason for Modification:** For clarification, the order of the second and third paragraphs was reversed and the phrase regarding an extension was added.

14. The developer shall provide the Department of Development Review staff with a ~~monthly~~ quarterly report indicating the number of building permits issued and other building activity, once residential construction has started.

**Reason for Modification:** Monthly is too frequent, and quarterly should be often enough. The scope of the report was broadened to include all building activity (e.g., golf course, infrastructure) rather than simply an inventory of building permits.

20. Prior to final approval of the development agreement, the developer for Southwest Pointe shall petition the Washoe County Board of County Commissioners to create a Special Assessment District for the purpose of financing the construction of Whites Creek Lane from the project site to

Wedge Parkway and other roads as defined in the SAD agreement. In the event that a special assessment district is not created, the developer shall construct Whites Creek Lane, as outlined in Condition No. 16 and 18, from the project site to Wedge Parkway, to the satisfaction of the County Engineer.

~~Unless substituted by Washoe County Board of County Commissioner action, each final map shall contain the following not to the satisfaction of the Development Review staff.~~

#### NOTE

~~An off-site road construction fee is applicable to all parcels created by this map. Any applicant for a permit to construct or otherwise use this land shall either (1) enter into an agreement with Washoe County requiring financial assurances and approval by the District Attorney's Office, to pay the future off-site road impact fee upon its adoption or (2) pay any interim fee imposed by Washoe County, be released from the responsibility of the future impact fee, and be eligible for a refund should the future impact fee charge be less than the interim fee. All options to pay existing interim fees expire upon the subsequent adoption of a replacement interim fee or an impact fee.~~

**Reason for Modification:** The county has approved the Regional Road Impact Fee, which goes into effect this month. As a result, the second half of this condition is no longer necessary.

21. Prior to approval of the final development agreement, a proposed Construction Traffic Haul Route Plan shall be submitted to the County Engineer for review and approval. The primary construction haul route shall be Whites Creek Lane. As part of Phase I development, however, Zolezzi Lane may be used, for construction mobilization only, for completion of the first 18-hole golf course and for the extension of utilities into the project site.

Prior to the issuance of the first building permit, all construction traffic will be diverted to Whites Creek Lane. Access to Whites Creek Lane will be from the Mt. Rose Highway to Thomas Creek Road. When the 35th building permit is issued, all construction traffic will be required to use Whites Creek Lane from Wedge Parkway. Construction traffic will use Whites Creek Lane from Wedge Parkway if this segment is completed prior to the issuance of the 35th building permit. Thomas Creek Road from Mt. Rose Highway to the proposed Whites Creek Lane may be considered for a haul route provided the developer submit a traffic analysis and intersection design prepared by a licensed Nevada Civil Engineer which addresses and provides, as a minimum, recommendations regarding:

- a) site distance requirements;
- b) left turn storage capacity and design;
- c) intersection location and alignment;
- d) proximity to existing intersections and recommended separate distances;
- e) existing center median and landscaping concerns;
- f) determination of adequacy of existing Thomas Creek Road roadway geometric section; and
- g) determination of adequacy of existing structural section and load bearing capability.

The submitted report shall be evaluated and accepted by the County Engineer prior to any approval of the use of Thomas Creek Road as a haul route. Once Whites Creek Lane is connected to Wedge Parkway, this road shall become the primary construction haul route.

Any existing or proposed roads that will be used as construction haul routes and are not designated truck routes must be evaluated by a geotechnical study to determine the existing structural section and its load supporting capability. If the pavement section is inadequate to support the proposed construction loadings, the roadway must be redesigned or reconstructed as needed to provide a 20-year design life in accordance with the AASHTO Interim Guide for Flexible Pavements.

**Reason for Modification:** This condition should be divided into two conditions because the first paragraph deals with the development agreement and the remainder refers to the tentative maps and special use permits.

22. Prior to *or upon* approval of the ~~final development agreement~~ CC&Rs, the developer shall provide a street maintenance program to the satisfaction of the County Engineer and the Department of Development Review. Street maintenance of private streets shall be performed by the homeowner's association and shall be perpetually funded.

**Reason for Modification:** The Homeowners' Association will be responsible for street maintenance, therefore, this topic is more accurately addressed in the CC&Rs.

23. Prior to approval of the final development agreement, *the developer shall provide* a schematic pedestrian circulation plan. As part of each tentative map, a detailed pedestrian circulation plan will be submitted and approved by the Department of Development Review.

**Reason for Modification:** The condition was incomplete.

25. Unless specifically stated *in these Conditions of Approval or in the final development agreement*, all (public and private) street design and construction is to be done in accordance with the Washoe County Standards that are approved at the time the final development agreement is recorded, to the satisfaction of the County Engineer.

**Reason for Modification:** The conditions of approval are separate from the final development agreement and may include some items that are not in the development agreement.

26. The following roadway sections shall be applicable to the public and private on-site streets shown on the tentative map. A traffic report shall be submitted ~~prior to approval of the first final~~ *with each tentative map* which identifies the ultimate average daily traffic on each street *and make recommendations for geometric design (e.g., left turn storage capacity, site distance, minimum required turning radius)*

- a. *Private Common Driveways - Serving 4 or less lots, pavement width 20 feet; serving 5 or more lots, pavement width 22 feet; no parking either side. Curb returns shall have a minimum face of curb radius of 20 feet on local streets and 25 feet on collector streets. Private common driveway locations will be shown on all tentative maps. Private common driveways will line up with proposed street intersections where possible and will comply with street intersection offset requirements. Single lot driveway access will not be allowed onto streets on which the average daily traffic exceeds 2000. (Refer to street sections.)*
  
- a. b. *Rural Private - ~~41~~ 60 foot minimum ROW ~~eul-de-sac rural~~ street (maximum 200 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4 foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. (Refer to street sections.)*
  
- b. c. *Local Private - ~~50~~ 60 foot minimum ROW ~~local~~ street (200 - 500 ADT): minimum 22 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. A minimum 4 foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. (Refer to street sections.)*
  
- e. d. *Collector Private - ~~50~~ 60 foot minimum ROW ~~collector~~ street (500 ADT to 2000 ADT): minimum 24 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side. a minimum 4 foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. (Refer to Street Sections.)*

- d. ~~e. Collector Private - 60 foot minimum ROW collector street (2000 ADT to 8000 ADT): minimum 36 24-foot pavement width with an additional 12-foot left turn lane at intersections where warranted; curb and gutter or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking permitted on both on either side. A minimum five (5) eight (8) foot path or gravel shoulder on both sides of the street will be provided unless alternate provisions or locations of pedestrian paths can be provided and shown in the Pedestrian Circulation Plan to the satisfaction of the County Engineer. No residential driveway access will be allowed. Access for private common driveways will be allowed. (Refer to street sections.)~~
- e. ~~Public - 60 foot ROW collector street (2000 ADT to 9600 ADT): minimum 36 foot pavement width; curb and gutter or County Engineer approved concrete header with roadside ditch both sides; parking prohibited both sides; minimum four (4) foot meandering asphalt path one side, residential driveway access not allowed. Where proposed, center medians shall be limited to a minimum of 11 feet from curb face to curb face.~~
- f. ~~Public-Collector Private - 80 120 foot minimum ROW minor arterial collector street (up to 9600 ADT to 10,830 ADT): A minimum 11 27 foot center median from curb face to curb face, 29.5 19 foot roadway section curb face to curb face pavement width on either side of the median; curb and gutter on both sides or County Engineer approved concrete header with roadside ditch both sides (developer's discretion); no parking either side except during special events; a minimum four (4) eight (8) foot meandering asphalt path both sides; no residential driveway access allowed. (Refer to street sections.)~~
- g. ~~Minor Arterial, Private - 120 foot minimum ROW (more than 10,800 ADT): A minimum 27 foot center median from curb face to curb face, 24 foot pavement width on either side of the median; County Engineer approved concrete header with roadside ditch; no parking either side; a minimum 8 foot meandering asphalt path both sides. A gate may be installed at the point where Whites Creek Lane becomes a private road. (Refer to street sections.)~~

- h. Minor Arterial, Public - 120 foot minimum ROW (more than 10,800 ADT): A minimum 27 foot center median from curb face to curb face, 29.5 foot roadway section on either side of the median; curb and gutter on both sides; a minimum 6 foot concrete sidewalk on both sides; no residential driveway access is allowed. (Refer to street sections.) A gate may be installed at the point where Whites Creek Lane becomes a private road. A public turn-around is required on the public side of the gate.*

**Reason for Modification:** To be consistent with Washoe County Street Design Standards, to create a hierarchy of paths, and to change some of the public streets to private streets.

27. Landscaped medians shall be designed in accordance with AASHTO site distance and safety guidelines to the satisfaction of the County Engineer, Washoe County Department of Development Review and the developer. Maintenance of median landscaping shall be by the Homeowners' Association as provided for in a separate maintenance agreement to be approved by the County Engineer and the District Attorney's Office prior to approval of the ~~final development agreement~~ CC&Rs.

**Reason for Modification:** The Homeowners' Association will be responsible for the maintenance of median landscaping, therefore, this topic is more accurately addressed in the CC&Rs.

28. Meandering asphalt paths will be acceptable provided . . .

- c. Maintenance of the asphalt paths and landscaping shall be the responsibility of the developer and, when created, by the Homeowners' Association as provided for in a separate maintenance agreement and be approved by the County Engineer and the District Attorney's office prior to approval of the ~~final development agreement~~ CC&Rs.*

**Reason for Modification:** The Homeowners' Association will be responsible for the maintaining the asphalt paths and the landscaping between the road and the path, therefore, this topic is more accurately addressed in the CC&Rs.

29. ~~Proposed roadways (public or private) are not to be centered along fault lines. Fault lines shall be located behind the curb line, on the up-thrown side, to the satisfaction of the County Engineer. Roads may cross fault lines. If fault lines are more accurately located in the field, the setback excluding construction for buildings for human occupancy may be reduced, to the satisfaction of the County Engineer.~~

*Construction near fault lines shall be as follows:*

- a. *Buildings for human occupancy shall be set back from the centerline of fault traces. Setback distances shall be determined by a geotechnical investigation prepared by a Nevada Registered Civil Engineer experienced in geotechnical engineering. The minimum setback shall be 50 feet on each side of the fault line.*
- b. *Roadway construction in fault zones and along fault traces shall be reviewed by a Nevada Registered Civil Engineer experienced in geotechnical engineering. Any recommended special construction requirements (e.g., flexible joint connections for utilities) shall be complied with.*

**Reason for Modification** There was confusion over how the original condition should be interpreted. The proposed wording was developed in conjunction with the staff of the Engineering Division, Kleinfelder, and Harding Lawson.

33. All-weather emergency access roads shall be constructed at the end of all cul-de-sacs that are longer than 500 1,500 feet to the satisfaction of the County Engineer and the applicable fire protection agency. These roads shall have a 30-foot access easement with a minimum 20-foot width of ~~6 inches of Type 2 Class B aggregate base. 2.5 inches of asphalt concrete pavement on an engineered gravel base.~~ The roads shall be controlled by emergency access gates and shall be posted with signs stating "For emergency Vehicles Only" to the satisfaction of the applicable fire protection agency and the County Engineer.

**Reason for Modification:** The county has adopted new standards for emergency access roads since this project was approved. The proposed change is consistent with the new standards.

34. Prior to final map approval, the developer shall provide all weather emergency access easements and road improvements at the locations shown on the tentative map, terminating at public or privately maintained streets, to the satisfaction of the County Engineer. ~~The emergency access road shall be constructed within a 30-foot access easement to a minimum 20-foot width with 4 inches of Type 2 Class B aggregate base.~~

**Reason for Modification:** The last sentence repeats Condition #33.

36. Unless otherwise stated *in these conditions of approval or in the final development agreement*, all roadway improvements necessary (including but not limited to, curb, gutter, sidewalk, signing and striping, driveway access, and street lighting) to serve the project shall be designed and constructed to county standards and specifications and/or financial assurances in an appropriate form and amount shall be provided to the satisfaction of the County Engineer.

**Reason for Modification:** The conditions of approval are separate from the final development agreement and may include some items that are not in the development agreement.

37. The minimum pavement structural section shall be *5 inches of asphalt over 8 inches of aggregate base for minor arterials*, 4 inches of asphalt over 6 inches of granular base for roadways (private and public) for collector streets, and 3 inches of asphalt over 6 inches of granular base for roadways for local streets to the satisfaction of the County Engineer.

**Reason for Modification:** No structural section for minor arterials had been identified.

40. Off-site parking areas shall be provided within ~~300~~ 500 feet of homes that have *lots ranging in size between 12,000 square feet and 0.5 acre*. One space shall be provided for every three homes. Parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the tentative map(s), to the satisfaction of Washoe County Department of Development Review and the Developer.

**Reason for Modification:** To avoid having a multitude of guest parking areas with 1 or 2 spaces, the spacing requirement was increased to 500 feet so that the guest parking areas will consist of 4 or 5 spaces. Guest parking areas will be added to the neighborhoods with 0.5 acre lots because on-street parking will be prohibited on the private streets and the front yard setback can be reduced with side-entry and detached garages.

41. All private roadways shall be depicted on the final maps and identified ~~in the final development agreement~~ *on the tentative map* as either private access easements over individual adjacent lots or, if identified as separate parcels, as *either* common areas with equal fractional ownership by all of the lots within the development *or common areas owned by the Homeowners' Association* to the satisfaction of the County Engineer.

**Reason for Modification:** NRS Chapter 116 (Uniform Common Interest Ownership Act) requires a corporation to be formed for the Homeowners' Association. The corporation owns the common areas.

43. Regulatory signs must be installed at the juncture of all public streets with a private street *and at intersections along the primary loop road* to the satisfaction of the County Engineer. Said sign shall state: "PRIVATE STREET NOT MAINTAINED BY COUNTY." All regulatory signs shall meet the Manual of Uniform Traffic Control Device standards.

**Reason for Modification:** Since there is only one location where a public street intersects with a private street (i.e., at the main project entrance), there would only be one sign. The county staff wants signs at additional locations and, therefore, the suggested wording to add "at intersections along the primary loop road."

48. Prior to the submittal of any final map or issuance of any grading permit, a final detailed hydrology/hydraulic report for that phase, prepared by a Nevada Registered Engineer, shall be submitted and approved by the County Engineer. The report shall be in substantial compliance with the general storm drain master plan and contain all final storm drain pipe, ditch and retention pond sizing calculations and mitigation measures for any impacts on existing on-site and off-site properties and facilities. All drainage improvements shall be designed and constructed to the satisfaction of the District Health Department and the County Engineer. The developer shall arrange for financial assurances, acceptable to the County Engineer, for all or part of these improvements.

Prior to the issuance of a grading permit, the applicant shall provide a letter granting a blanket drainage and construction easement to the Southwest Pointe Subdivision that allows the subdivision to drain onto the golf course and to construct detention facilities necessary to accommodate the subdivision-generated stormwaters in mutually agreed upon locations to the satisfaction of the County Engineer. The easement shall be submitted with the plans for the final golf course improvements.

**Reason for Modification:** The first paragraph pertains to tentative maps and special use permits; whereas, the second paragraph only refers to the special use permit for the golf course. Therefore, only the first paragraph should appear with the tentative map conditions and both paragraphs should appear with the special use permit conditions.

49. A maintenance plan of all drainage facilities to be owned by the homeowners' association shall be provided prior to approval of the ~~final development agreement~~ CC&Rs. All treatment of stormwater, including snow storage runoff and storm water facilities design, is to consider the future planned Washoe County water treatment plant and associated Steamboat Ditch conveyance system . . .

**Reason for Modification:** The Homeowners' Association will be responsible for the maintaining the asphalt paths and the landscaping between the road and the path, therefore, this topic is more accurately addressed in the CC&Rs.

51. The off-stream detention/debris basin recommended in the 1990 Kennedy/Jenks/Chilton report shall be reserved based on the following timetable:
- a. Washoe County will have three years to obtain the necessary permits for construction of the off-stream detention basin. This three years shall commence upon the approval of the final development agreement. If Washoe County fails to obtain the necessary permits, the property for the detention site shall be offered by the applicant or his successors, for dedication to the Washoe County School District for a middle school, ~~the Washoe County Parks and Recreation Department for a neighborhood park,~~ or revert to open space.
  - b. If Washoe County does obtain the necessary permits within three years, construction of the project shall commence within 5 years of the approval of the final development agreement. If construction is not started by that date, the property for the detention site shall be offered by the applicant or his successors, for dedication to the Washoe County School District for a middle school, ~~the Washoe County Parks and Recreation Department for a neighborhood park,~~ or revert to open space.
  - c. If an alternative solution or site becomes available for flood control, this property will immediately become available for dedication to the Washoe County School District for a middle school, ~~the Washoe County Parks and Recreation Department for a neighborhood park,~~ or revert to open space.
  - d. If the detention basin is constructed, Washoe County shall pay fair market value for the property.

**Reason for Modification:** We have been working with Karen Mullens, Washoe County Parks and Recreation Department, to identify a neighborhood park that is not adjacent to the school. The preferred location is adjacent to Thomas Creek on the south side of Whites Creek Lane.

56. A buffer shall be provided next to riparian vegetation. The size of the buffer shall be mutually agreeable to Washoe County and the developer. A minimum 50-foot buffer shall be provided ~~between property lines of single-family residences and riparian vegetation from any structures.~~

**Reason for Modification:** It would be difficult and impractical to implement the original wording because it would result in long, thin parcels along riparian areas that would become a "no man's land". The suggested wording is consistent with the intent of this condition and avoids the creation of unusable parcels.

- ~~64. Prior to the approval of the final development agreement, the applicant shall provide staff with a phasing schedule for the dedication of water rights. Permitted or certificated groundwater rights in the amount of 1.12 acre feet must be dedicated to Washoe County for each lot of a final map. Water rights, in accordance with the Washoe County Utility Division policies for the Southwest Truckee Meadows, shall be dedicated to Washoe County. Prior to acceptance, the water rights must be in good standing with the State of Nevada Division of Water Resources and must reflect a point of diversion, place and manner of use acceptable to the Utility Division.~~

**Reason for Modification:** Current county policy requires that sufficient water rights will be dedicated prior to recordation of each final map. A phasing schedule is typically not necessary. The required number of water rights for each lot may change in the future because the county is evaluating SPPCo water rights dedication requirement which is based on lot size. If the requirement changes, we do not want to be constrained by this condition.

- ~~65. Prior to the approval of the final map, the developer shall demonstrate how compliance with NRS 278.349, that requires the availability of water meet applicable health standards and is sufficient in quantity to serve the foreseeable needs of the subdivision, shall be met to the satisfaction of the District Health Department and Washoe County Department of Development Review.~~

**Reason for Modification:** Condition #67 addresses this topic, therefore, this condition is repetitive.

~~69. The developer shall provide adequate assurance that the sewage, water, and drainage systems will be satisfactorily maintained and operated.~~

**Reason for Modification:** The developer is not responsible for maintaining the sewage and water systems. These facilities are maintained Washoe County. Maintenance of the drainage system has already been addressed in Condition #49.

74. If a supplemental water source is required, evidence that an adequate source has been procured by the developer/water purveyor shall be submitted to the Utility Division for their review and approval. ~~The water source shall meet both primary and secondary standards of the Safe Drinking Water Act.~~

**Reason for Modification:** The last sentence repeats federal, state, and local law. A subsequent condition (i.e., #77) requires the developer to use treated wastewater which will not meet drinking water standards. Therefore, the two conditions contradict one another.

~~79. The project shall be designed to accommodate a gravity flow sanitary sewer system within the boundaries of the subdivision. Such design shall be to the satisfaction of the Utility Division.~~

**Reason for Modification:** According to Terri Svetich, Washoe County Utility Division, this is not a Utility Division condition and can be deleted.

83. The sanitary sewer collection system and water system facilities, *with the exception of the golf course and common area irrigation systems*, must be offered for dedication to Washoe County.

**Reason for Modification:** Washoe County does not want to be responsible for golf course and common area irrigation systems, therefore, these systems should remain private.

~~90. Should the proposed "off stream" location for the flood detention facility proposed in the 1990 Kennedy/Jenks report not be dedicated for this purpose, a minimum ten acre site for an elementary and a minimum 25 acre site for a middle school shall be offered for dedication. If the "off stream"~~

~~flood control facility is dedicated to Washoe County, a 10-acre site for the elementary school shall be offered for dedication. If the area for the "off-stream" facility is dedicated, but the county has not complied with Condition No. 51, the use for the area shall revert back to a school site and/or a park site (if requested by Washoe County) as proposed by the developer. If a school or park site is not requested by Washoe County, this area shall remain as an open space buffer.~~

**Reason for Modification:** The special use permit for the elementary school has already been approved. The elementary school will be located on a 17-acre parcel on the north side of Whites Creek Lane. This elementary school site is not impacted by the flood control facility. A neighborhood park site has also been proposed on the south side of Whites Creek Lane.

92. A minimum one-acre site shall be offered for dedication *prior to approval of a final map*, if requested by the applicable fire protection agency, for a fire station. The developer shall enter into talks with the applicable fire protection agency for any other requirements, such as, a fire station site, manpower and equipment needs, or for coordination with other developments that have similar requirements.

**Reason for Modification:** To clarify when the fire station site must be dedicated.

95. ~~Unless the off-stream site is dedicated to the county,~~ A minimum 10-acre public park site shall be offered for dedication to the county. A sketch plan ~~has been submitted, which if conceptually approved by the county, should~~ *will* be included in the final development agreement. The final park design shall be mutually agreeable to the county and the developer. The developer will construct the recreation facilities in the park and then be reimbursed for the cost of the construction from the Residential Construction Tax. The responsibility of park maintenance shall be negotiated by the developer and Washoe County prior to the approval of the final development agreement.

**Reason for Modification:** The park site has nothing to do with the off-stream detention facility, therefore, this reference is inaccurate. The sketch

plan that is referred to in this condition has been changed and the park site has been moved, therefore, this reference is also inaccurate.

97. Prior to approval of the final development agreement, the developer shall submit ~~schematic landscaping and architectural design guidelines~~ *a Development Standards Handbook* for the entire project to the Design Review Committee for its review and approval. These guidelines shall address, but not be limited to, type and color of building material, general architectural design, fencing, landscaping material (if plant material: type, size at time of planting, maturation size at full growth, period of time between planting and full growth), landscaping location, landscaping irrigation system, and financial assurances that landscaping will be planted and maintained.

**Reason for Modification:** To make the wording consistent with Article 814, Development Agreements.

- ~~99. Homes located on 12,000 square foot lots shall have a minimum 160 square foot storage space added in their garages, if only one garage space is provided. All homes will have a minimum two car garage.~~

**Reason for Modification:** No homes will be constructed with one garage space.

**Tentative Map Conditions for Development Agreement Case No. DA9-1-93**

**Final Map Conditions for Development Agreement Case No. DA9-1-93**

**Special Use Permit Application and Construction Conditions for Development Agreement Case No. DA9-1-93**

Currently, there are numerous repetitive conditions under each of these headings, and there are also conditions that pertain to the tentative map that appear under the development agreement and vice versa. I have reorganized the conditions under three headings -- development agreement conditions, tentative map conditions, and special use permit conditions. I think this format will be easier for everyone to work with.

Thank you for your consideration of this request. Please call me if I can provide you with additional information or answer any questions.

Sincerely,

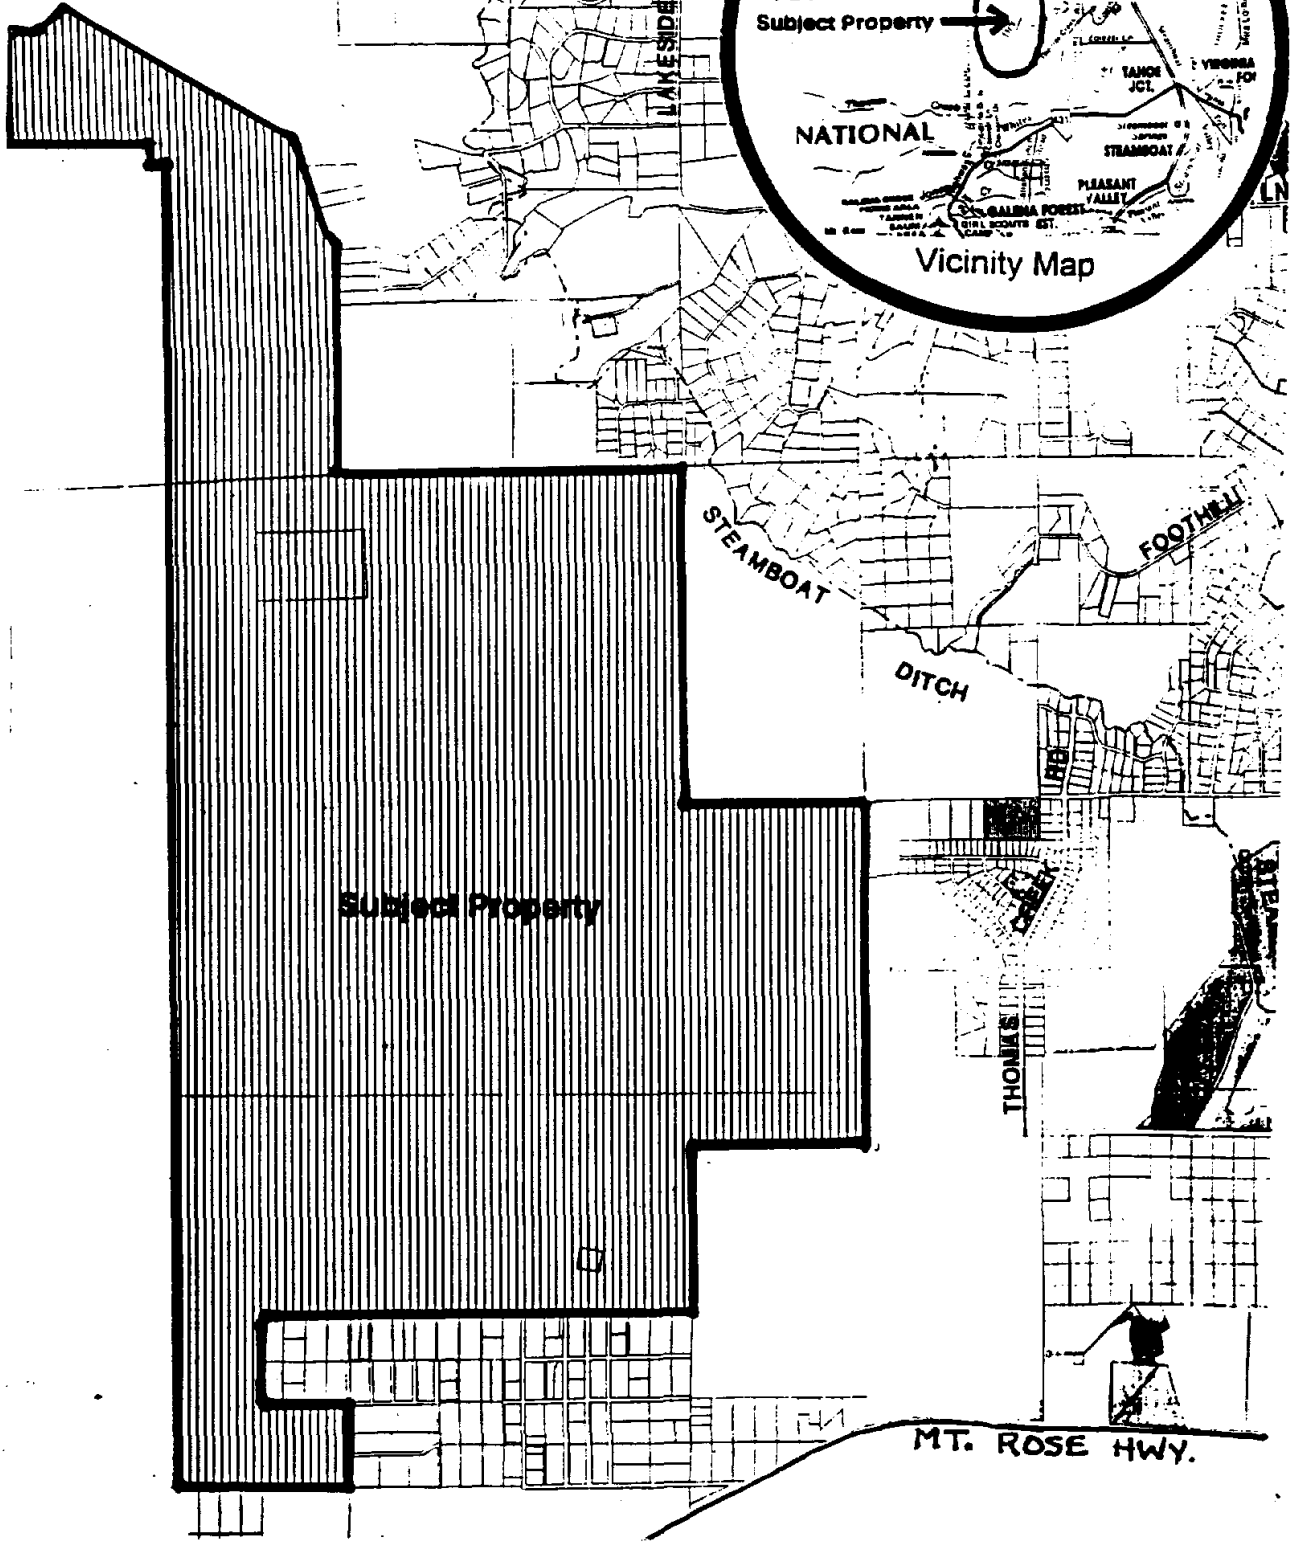

Brita Tryggvi, AICP  
Principal

EASEMENT

This Easement is made this 12th day of July, 1994 by and between TMS Associates, a limited partnership ("TMS") and Betty Alyce Jones, Helen Jeanne Jones, Iris G. Brewerton, Kenneth G. Walker and Gerald C. Smith, surviving trustees of the Nell J. Redfield Trust (collectively referred to herein as the "Trust").

RECITALS:

This Easement is made with reference to the following facts:

1. On or about July 1, 1980 Nell J. Redfield and TMS Associates entered into an agreement wherein TMS would provide to Redfield the location of an easement over a portion of the properties owned by TMS more particularly described in Exhibit "A" attached hereto (the "TMS Property") for use in conjunction with certain real property then owned by Ms. Redfield.

2. The Trust, successor-in-interest of Nell J. Redfield, owns that certain real property described in Exhibit "B" (the "Trust Property") and wishes to obtain an easement for the purposes described hereinafter.

NOW THEREFORE, it is hereby agreed between the parties as follows:

A. Easement Over The Easement Property.

1. Grant of Easement: TMS hereby grants to the Trust, for the benefit of the Trust Property and the mortgagees, holders of security interest, tenants, lessees, sublessees, employees and agents of the Trust an easement for the ingress and egress of vehicles to the Trust Property over that portion of the TMS Property described on Exhibit "C" attached hereto (hereinafter the "Easement Property").

2. Purpose of Easement: The easement granted hereby shall be for the purpose of allowing the ingress and egress of vehicles from Zolezzi Lane to the Trust Property and providing for underground utilities.

BK414PG0118

B. Non-Exclusive Easement. This Easement is non-exclusive and may be used by TMS, its mortgagees, holders of security interest, tenants, lessees, sub-lessees, grantees, employees, agents, licensees, visitors and invitees for any purpose, including general unrestricted access to the TMS Property. TMS may, at TMS's sole discretion, pave the road constructed on the Easement Property (the "Road"), widen it and move it to another location on the TMS Property so long as access is still provided to the Trust Property to the satisfaction of Washoe County and the Nevada Division of Forestry. TMS may, at TMS's sole discretion, relocate the roadway and utilities, if so placed within the Easement Property, with the consent of the Trust which consent will not be unreasonably withheld. The Trust agrees to provide TMS with no less than sixty days notice prior to the placement of any utilities within the Easement Property. The Trust agrees to withhold any and all objections to TMS tying into utilities placed within the Easement Property. TMS agrees to fund its proportionate share of the utility construction cost if TMS ties into the utilities placed within the Easement Property.

C. Road Design: Bridges. The Road shall be constructed at the expense of the Trust and/or the County of Washoe and under no circumstances at the expense of TMS. The Road design, method of construction, any bridges constructed thereon, culverts and all other matters in connection with the design and construction of the Road on the Easement Property must comply with all ordinances and requirements of all governmental agencies for such a road and must be approved by TMS, which approval shall not be unreasonably withheld.

D. Maintenance. The Trust shall maintain the Road at all times, all culverts and bridges constructed thereon or associated therewith and all slopes and shall grade the Road, keep it free of debris and vegetation and keep it passable at all times as shall be reasonably required and approved by TMS and in conformance with all regulations of Washoe County.

E. Easement Runs With The Land. The easement granted hereby shall run with the land, benefit the Trust Property, burden the TMS Property and shall bind and inure to the benefit of the respective heirs, executors, administrators, successors and assigns of both TMS and the Trust in ownership of their respective properties described herein. Neither the benefits nor the burdens of the easement granted hereby shall run with any other land or to the benefit of any other entity or person whatsoever. No other person or entity is intended to nor shall any such person or entity be the beneficiary of any provision of this document.

F. Indemnity. The Trust shall indemnify and hold TMS harmless from any liability, claims, causes of action, damages or costs, including attorneys fees, which TMS may incur in connection with or relative to the easement granted hereby and to the

011000111111

construction, use and maintenance of the Road, arising from any act or failure to act, except the intentional act, failure to act or negligence of TMS. The Trust shall protect, indemnify and hold harmless TMS, its partners, officers, agents, employees, attorneys, successors and assigns from and against any loss, damage, claim, expense or liability (including attorneys fees) directly or indirectly arising out of or attributable to the use, presence, generation, production, release, discharge or disposal of a hazardous substance (as defined in any statute, ordinance or governmental regulation) on or about the Easement Property caused in any way by the Trust or its successors and assigns or anyone using the Easement Property granted hereby, or any replacement thereof, for access to the Trust Property.

G. Prior Agreements. This Easement supersedes any and all prior understandings and agreements between TMS and the Trust of any kind whatsoever, including but not limited to the agreement of July 1, 1980 described in recital 1 above, and shall be deemed to be in complete satisfaction of and in complete compliance with all such agreements and understandings.

H. Attorneys Fees. Either party may enforce this instrument by appropriate action and the prevailing party shall be entitled to recover costs, including reasonable attorneys fees.

I. Law. This Easement shall be governed by Nevada law.

**ATTORNEY GENERAL'S OPINIONS.**

**Power to regulate airport hazards by zoning is within jurisdiction of political subdivision wherein airport is located.** Under ch. 205, Stats. 1947 (cf. NRS 497.040), when airport is not owned by state or controlled by state under agreement, power to regulate airport hazards by zoning is within jurisdiction of political subdivision wherein airport is located. AGO 915 (5-1-1950)

**Ordinance which provides that governing body of county must review and affirm, modify or reverse recommendations of regional**

**planning commission on zoning matters is not invalid.** Ordinance which provides that governing body of county must review and affirm, modify or reverse recommendations of regional planning commission on zoning matters is authorized by NRS 278.020 and 278.260 and is not invalid. Under such ordinance, governing body has authority to act on proposal even where planning commission has failed to recommend it (see NRS 278.210), but action of governing body is subject to provisions of NRS 278.220 relating to necessity for report from planning commission. AGO 79-14 (7-17-1979)

**278.0201 Agreement with governing body concerning development of land: Applicability of ordinances, resolutions and regulations adopted after agreement made; restrictions on subsequent action by governing body.**

1. In the manner prescribed by ordinance, a governing body may, upon application of any person having a legal or equitable interest in land, enter into an agreement with that person concerning the development of that land. This agreement must describe the land which is the subject of the agreement and specify the duration of the agreement, the permitted uses of the land, the density or intensity of its use, the maximum height and size of the proposed buildings and any provisions for the dedication of any portion of the land for public use. The agreement may fix the period within which construction must commence and provide for an extension of that deadline.

2. Unless the agreement otherwise provides, the ordinances, resolutions or regulations applicable to that land and governing the permitted uses of that land, density and standards for design, improvements and construction are those in effect at the time the agreement is made.

3. This section does not prohibit the governing body from adopting new ordinances, resolutions or regulations applicable to that land which do not conflict with those ordinances, resolutions and regulations in effect at the time the agreement is made, except that any subsequent action by the governing body must not prevent the development of the land as set forth in the agreement. The governing body is not prohibited from denying or conditionally approving any other plan for development pursuant to any ordinance, resolution or regulation in effect at the time of that denial or approval.

4. The provisions of NRS 278.350 and 278.360 do not apply if an agreement entered into pursuant to this section contains provisions which are contrary to the respective sections.

**278.0205 Agreement with governing body concerning development of land: Amendment or cancellation; review of development by governing body; notice; approval of amendment; filing and recording of amendment.**

1. The agreement for development of land may be amended or canceled, in whole or in part, by mutual consent of the parties to the agreement or their successors in interest, except that if the governing body determines, upon a review of the development of the land held at least once every 24 months, that the terms or conditions of the agreement are not being complied with, it may cancel or amend the agreement without the consent of the breaching party.

2. Notice of intention to amend or cancel any portion of the agreement must be given by publication in a newspaper of general circulation in the applicable city or county. The governing body may approve any amendment to the agreement by ordinance if the amendment is consistent with the master plan. The original of the amendment must be filed for recording with the county recorder or the recorder of Carson City.

110.814.95	Amendment or Cancellation of Development Agreement

**Section 110.814.00 Purpose.** The purpose of this article, Article 814, Development Agreements, is to allow for any person having a legal or equitable interest in land to enter into an agreement with Washoe County concerning the development of that land, as provided in NRS 278.

**Section 110.814.05 Applicability.** A development agreement may be approved by ordinance for land which is to be developed as a single entity provided that the development, including uses and development standards, is consistent with the Comprehensive Plan, including the area plans, and any specific plan, if applicable.

**Section 110.814.10 Requirements for Application.** A development agreement may be initiated by the property owner or by the property owner's authorized agent. Applications for a development agreement shall be filed with the Department of Development Review.

**Section 110.814.15 Allowed Uses, Densities and Standards.**

- (a) **Laws in Effect.** The allowed uses, densities and standards of the land subject to the development agreement shall be those in effect at the time the agreement is made, provided that all such uses, densities and standards are

consistent with the Comprehensive Plan, including the area plans, and any specific plan, if applicable.

- (b) Subsequent Actions. A development agreement shall not prevent the County, in subsequent actions applicable to the property, from adopting new ordinances, resolutions or regulations that conflict with those ordinances, resolutions and regulations in effect at the time the development agreement is made, except that any subsequent action by the County shall not prevent the development of the land as set forth in the development agreement.
- (c) Emergency Situations. The County may suspend the issuance of building permits for the development project after a noticed public hearing if it finds in good faith that a clear and present emergency requires the suspension.
- (d) State or Federal Restrictions. In the event that state or federal laws or regulations enacted after a development agreement has been entered into, prevent or preclude compliance with one (1) or more of the provisions of the development agreement, such provisions shall be modified or suspended as may be necessary to comply with the new state or federal laws or regulations. Any such action shall be taken by the Board of County Commissioners after a noticed public hearing.

**Section 110.814.20 Review and Approval Process.** The development agreement process consists of two steps as set forth in this section. Under no circumstances shall development of the land subject to the development agreement be allowed to proceed until after the final development agreement has been approved and filed for record pursuant to this article.

- (a) Step One: Preliminary Development Agreement. The applicant shall submit the text of the proposed development agreement accompanied by either a concept plan or a site plan and other information required by this article. The applicant has the option of submitting either plan and the Director of Development Review may request a site plan.
- (b) Step Two: Final Development Agreement. Subsequent to approval of the preliminary development agreement, the applicant shall submit a final development agreement for approval as set forth herein.
  - (1) If a site plan was approved at the first step of the process, the final development agreement shall contain a final site plan.
  - (2) If a concept plan was approved at the first phase of the process, the final development agreement shall include the site plan.
  - (3) The submittal shall include other information as required by this article.
  - (4) The site plan and other applicable materials from the final development agreement shall be recorded pursuant to this article.

**Section 110.814.25 Concurrent Processing of Other Approvals.** Applications for all discretionary approvals may accompany the preliminary development agreement or may be substituted at a later date. If they are submitted at a later date, the conditions, terms,

restrictions and requirements for subsequent actions on these approvals shall be included in the preliminary development agreement.

**Section 110.814.30 Professional Assistance.** Preparation of the preliminary development agreement and final development agreement shall require, at a minimum, the services of a Nevada civil engineer who is a registered professional engineer, or registered land surveyor. Depending on the complexity of the development, the services of an American Institute of Certified Planners (AICP) recognized planner, a licensed architect, and a Nevada registered landscape architect may also be required by the Director of Development Review.

**Section 110.814.35 Contents of Preliminary Development Agreement.** The application shall include the provisions of this section.

- (a) **Development Agreement.** A development agreement containing the following:
  - (1) A legal description of the land subject to the development agreement;
  - (2) The proposed duration of the development agreement;
  - (3) The permitted uses of the land;
  - (4) The density and/or intensity of uses;
  - (5) The maximum height and size of the proposed buildings;
  - (6) Any provisions for the dedication of any portion of the land for public use;
  - (7) A provision that the materials listed in this article under "Contents of Final Development Agreement" are automatically incorporated into the development agreement by reference when these materials are approved by the Planning Commission; and
  - (8) A provision that the development agreement does not bind the parties, or their successors in interest, until such time as the development agreement is recorded pursuant to this article.
- (b) **Interest in Land.** The nature of the landowner's and the applicant's legal interest in the land proposed for development in the application.
- (c) **Open Space Management.** The form and name, if available, of the organization proposed to own and maintain any common open space.
- (d) **Use Ratio.** The ratios of the land areas in residential to land areas in nonresidential uses and the ratio of square feet of residential to nonresidential uses.
- (e) **Utilities.** The proposed system, including a feasibility analysis, for disposition of sanitary waste and storm water.
- (f) **Circulation.** The plan for vehicular traffic, pedestrian traffic and transit facilities. This plan shall include the provisions for parking of vehicles and the location and width of proposed streets and public rights-of-way.

- (g) **Modifications.** The listing of required modifications to the standards imposed by other articles of this Development Code.
- (h) **Plan.** A concept plan prepared pursuant to this article, or a site plan prepared pursuant to this article.
- (i) **Legal Agreements.** The substance of covenants, grants or easements, or other restrictions proposed to be imposed upon the use of the land, buildings and structures, including proposed easements or grants for public utilities.
- (j) **Schedule.** A schedule showing:
  - (1) The proposed times within which the final development agreement must be filed; and
  - (2) The proposed times within which all other applications for final approval of all portions of the land subject to the development agreement are intended to be filed, or in the case of a plan which provides for development over a period of years, the periods within which application for final approval of each part thereof is intended to be filed.

**Section 110.814.40 Concept Plan.** A concept plan shall include the information required by this section.

- (a) Name of project, boundary, and vicinity maps showing the location and acreage of the land subject to the development agreement, date, north arrow and scale of plan.
- (b) All existing lot lines, easements and rights-of-way.
- (c) Proposed land uses, including areas proposed to be dedicated or reserved as common open spaces or for public or semi-public uses, with estimates of the acreage for each type of land use, the densities and/or intensities of development, and the general allocation of the densities and/or intensities of development to the various parts of the site.
- (d) Approximate location and arrangement of all structures or outlines of areas within which buildings or structures may be located.

**Section 110.814.45 Site Plan.** A site plan and supporting maps, if applicable, shall include the information required by this subsection.

- (a) Name of project, boundary, and vicinity maps showing the location and acreage of the land subject to the development agreement, date, north arrow and scale of plan.
- (b) Name and address of the owner of record, developer, planner and seal of the engineer, architect or landscape architect.
- (c) Existing and proposed topography at a two (2) foot contour interval, or at a contour interval appropriate for the site, as determined by the Director of Development Review. All elevations shall refer to the nearest United States Coastal and Geodetic Bench Mark. If any portion of the land subject to the

development agreement is within the 100-year floodplain, the area will be shown and base flood elevations given. Indicate areas within the site and within fifty (50) feet of its perimeter boundary, where ground removal or filling is required.

- (d) Regulatory zone boundaries within five hundred (500) feet of the perimeter of the land subject to the development agreement.
- (e) The location and use of structures within three hundred (300) feet of the perimeter of the land subject to the development agreement.
- (f) All existing lot lines, easements and rights-of-way within the land subject to the development agreement, and within those parcels within five hundred (500) feet of the perimeter of the land subject to the development agreement.
- (g) Proposed traffic flow patterns, entrances and exits, loading and unloading areas, emergency access areas, and curb cuts on the site.
- (h) The location of all present and proposed public and private ways, parking areas, driveways, ramps, curbs, walls, fences, bicycle and pedestrian ways, and landscaping. If determined appropriate by the Director of Development Review, proposed locations of the listed facilities and features may be indicated by typical locations.
- (i) Proposed land uses, including areas proposed to be dedicated or reserved as common open spaces or for public or semi-public uses, with estimates of the acreage for each type of land use, the densities and/or intensities of development, and the general allocation of the densities and/or intensities of development to the various parts of the site.
- (j) Approximate arrangement of individual lots.
- (k) Approximate location and arrangement of all structures or outlines of areas within which buildings or structures may be located.
- (l) Preliminary elevations and/or perspective drawings of all typical proposed buildings or other structures, including proposed maximum heights and floor areas.
- (m) A general landscaping plan.
- (n) A general grading plan.

**Section 110.814.50 Optional Contents.** In addition to the required contents of a development agreement, as set forth in this article under "Contents of Preliminary Development Agreement", the development agreement may contain the provisions listed in this section.

- (a) **Key Dates.** A date upon which construction must commence and a date when the project or any phase of the project must be complete. If either date is specified, a process for extension of the date shall be included.

- (b) Financing. Terms and conditions relating to applicant financing of necessary public facilities with or without subsequent reimbursement over time.
- (c) Assignability. Restrictions on the assignability of the agreement by the applicant and, if assignable, provisions ensuring that the successor in interest assumes the obligations under the development agreement.
- (d) Minor Modifications. Provisions for minor modifications of the development agreement.
- (e) Other. Other terms and conditions related to the proposed project, including any of the materials required by Section 110.814.75 with the exception of the final site plan, which are mutually agreeable to the parties.

**Section 110.814.55 Planning Commission Review of Preliminary Development Agreement.**

The preliminary development agreement shall be reviewed by the Planning Commission and final action shall be taken by the Board of County Commissioners. Approval of a preliminary development agreement does not authorize development or the issuance of any building permits.

- (a) General Provisions. The Planning Commission shall conduct at least one (1) public hearing relative to the application within ninety (90) days from the date the complete application was accepted. Notice shall be provided as set forth in this article.
- (b) Time Period for Action. The Planning Commission may take action on the proposed development agreement at the conclusion of the public hearing, but shall take action no later than one hundred and eighty (180) days after the complete application was accepted. An extension of time for Planning Commission action may be granted if mutually agreed upon between the applicant and the Director of Development Review.
- (c) Failure to Act. Failure of the Planning Commission to hold a public hearing or take action within the time frames provided in Subsections (a) and (b) of this section shall constitute a recommendation of approval.
- (d) Planning Commission Action. Following the conclusion of the public hearing, the Planning Commission shall take one of the following actions:
  - (1) Recommend approval of the development agreement and accompanying plan;
  - (2) Recommend approval subject to specified conditions not included in the agreement and plan as submitted; or
  - (3) Deny approval of the development agreement and accompanying plan. Denial of either of these items shall constitute denial of the preliminary development agreement.
- (e) Findings. The recommendation of approval or the denial of the preliminary development agreement shall be accompanied by findings on the degree the development agreement or accompanying plan would or would not be in the public interest including, but not limited to, findings on the provisions of this subsection.

- (1) The extent to which the accompanying plan is consistent with the Comprehensive Plan policies and the area plan(s).
  - (2) The reasons why departures from Development Code regulations are or are not deemed to be in the public interest.
  - (3) The purpose, location and amount of the common open space in the proposed project, the reliability of the proposals for maintenance and conservation of the common open space, and the adequacy or inadequacy of the amount and purpose of the common open space as related to the proposed density and type of residential development.
  - (4) The physical design of the project and the manner in which the design does or does not make adequate provision for public services.
  - (5) The relationship, beneficial or adverse, of the proposed project to the neighborhood in which it is proposed to be established.
  - (6) In the case of a development agreement and accompanying plan which propose development over a period of years, the sufficiency of the terms and conditions intended to protect the interests of the public, residents and owners of the land subject to the development agreement in the integrity of the plan.
- (f) Effect of Planning Commission Denial. In the event the Planning Commission denies a preliminary development agreement, that action is final unless appealed to the Board of County Commissioners pursuant to this article.
- (g) Planning Commission Report. Within forty (40) days of the action by the Planning Commission, a report describing the discussion at the public hearing, and recommendation and vote of the Planning Commission, along with a copy of the preliminary development agreement, shall be transmitted to the Board of County Commissioners. If the Planning Commission does not recommend approval, it should state why it could not make the findings in Subsection (e) of this section.

**Section 110.814.60 Notice.** Notice for all public hearings required by this article shall be given in accordance with the provisions of this section.

- (a) Notice of Property Owners by Mail. A notice setting forth the time, place, purpose of hearing, and map or physical description of the land involved shall be sent by mail at least ten (10) days before the meeting to the following persons:
- (1) All owners of real property that are the subject of the development agreement;
  - (2) Advisory boards created by the Board of County Commissioners for the area in which the property that is the subject of the development agreement is located;
  - (3) All owners of real property within three hundred (300) feet of the property which is the subject of the development agreement;

- (4) All tenants of any mobile home park that is located within three hundred (300) feet of the property which is the subject of the development agreement; and
  - (5) All General Improvement Districts (GID) for the area in which the property that is the subject of the development agreement is located.
- (b) Number of Notices. If the number of notices sent pursuant to this section does not total thirty (30) or more, the County shall send out additional notices to make the total number at least thirty (30). These notices shall be sent to owners of real property that are closest to the property in question, not including those owners provided notice pursuant to Subsection (a) of this section.
- (c) Notice in the Newspaper. A notice setting forth the date, time and place of the public hearing shall be published in a newspaper of general circulation in Washoe County not less than ten (10) days prior to the public hearing date.

**Section 110.814.65 Appeal of Denial.** A denial action of the Planning Commission may be appealed in accordance with the provisions of this section.

- (a) Appeal Period. An appeal of the Planning Commission's denial of a preliminary development agreement may be made to the Board of County Commissioners within fifteen (15) days after the date of the decision. If the end of the appeal period falls on a non-business day, the appeal period shall be extended to include the next business day.
- (b) Who Can Appeal. Appeals may be filed by the Board of County Commissioners, applicant, or applicant's authorized agent.
- (c) Appeal by Applicant or Applicant's Agent. An appeal by the applicant or the applicant's authorized agent shall be filed with the Director of Development Review, accompanied by a filing fee. The appeal shall be in writing and state the basis of the appeal by citing the inadequacy of the findings made by the Planning Commission. Such reasons shall be based upon the evidence presented to the Planning Commission at the original hearing. Failure of the appellant to present such reasons shall be deemed cause for denial of the appeal.
- (d) Action on Appeal. The appeal of the Planning Commission's denial of a preliminary development agreement shall be processed pursuant to this article.

**Section 110.814.70 Action by Board.** The Board of County Commissioners shall review a preliminary development agreement in accordance with the provisions of this section.

- (a) Time Period for Hearing. The Clerk of the Board of County Commissioners shall schedule a public hearing before the Board of County Commissioners on the appeal of a denial or recommendation of approval by the Planning Commission within thirty (30) days of the filing of the appeal or receipt of the Planning Commission's action.
- (b) Notice of Hearing. The public hearing shall be noticed as required by this article.

- (c) Actions to be Taken by Board. The Board shall take action on the development agreement and accompanying plan provided, however, that the development agreement shall not be adopted prior to adoption of the accompanying plan and tentative subdivision map, if required.
- (d) Board of County Commissioners' Action.
- (1) If the Board of County Commissioners is considering an appeal from a denial of a preliminary development agreement, it may use the record and any additional evidence relative to the application and may confirm or reverse the denial based upon its interpretation of the findings required and the evidence submitted.
  - (2) If the Board of County Commissioners is considering a recommendation of approval, it may take action to approve the preliminary development agreement as recommended by the Planning Commission if no modification of the Planning Commission's recommendation is proposed.
  - (3) If the Board of County Commissioners proposes to modify the recommendation of approval from the Planning Commission, the proposed modification shall be referred to the Planning Commission for consideration. The Planning Commission shall not be required to hold a public hearing on the modification. The Planning Commission shall submit a report on the proposed modification to the Board of County Commissioners within ninety (90) days from the date of referral by the Board of County Commissioners. Failure to report shall be deemed a recommendation of approval. Prior to making a final decision, the Board of County Commissioners shall be required to conduct a public hearing and notice this hearing pursuant to this article.

**Section 110.814.75 Contents of Final Development Agreement.** The final development agreement shall include, but shall not be limited to, the information as required by this section. If a site plan was approved as part of the development agreement, the final development agreement shall consist of a final site plan which substantially complies with the adopted site plan. If a site plan was not included as part of the development agreement, a site plan prepared pursuant to this article shall be required. If any of the other information required by this section was adopted as part of the preliminary development agreement pursuant to this article, it shall be included in the final development agreement as approved therein.

- (a) Development Agreement. The development agreement as described in this article under "Contents of a Preliminary Development Agreement," and approved pursuant to this article under "Action by Board".
- (b) Legal Agreements. The substance of covenants, grants or easements, or other restrictions proposed to be imposed upon the use of the land, buildings and structures, including proposed easements or grants for public utilities approved pursuant to this article.
- (c) Plan. A final site plan that is consistent with the approved site plan or, if no site plan has been approved, an original site plan, either of which shall comply with the provisions of this article.

- (d) Installation and Maintenance. A program for the installation and maintenance of parking areas, lighting, landscaping, infrastructure, utilities and recreational facilities.
- (e) Open Space Resources. A program for the protection of open space resources.
- (f) Development Schedule. A development schedule indicating:
  - (1) The approximate date for the start of construction; and
  - (2) The phases, if any, in which the land subject to the development agreement will be built and the approximate dates for the completion of each phase.
- (g) Development Standards Handbook. A development standards handbook that provides development standards for the following:
  - (1) Architectural style;
  - (2) Energy supply and conservation;
  - (3) Land grading, erosion and flood control;
  - (4) Natural hazards;
  - (5) Fire protection, security services and medical services;
  - (6) Housing supply;
  - (7) Water supply, treatment, storage, conservation and reuse;
  - (8) Wastewater treatment;
  - (9) Maintenance and enhancement of air quality;
  - (10) Wildlife and fisheries preservation;
  - (11) Historic, cultural and archaeological resources preservation;
  - (12) Recreational amenities;
  - (13) Open space provision and maintenance;
  - (14) Financial assurances for the development of the property and provision of services;
  - (15) Phasing of development;
  - (16) Procedures for the implementation of the development standards and amendment of the development standards handbook;
  - (17) Documentation verifying the development agreement approval, including reductions of all maps/drawings approved by the Board of

County Commissioners as part of the approval of the preliminary development agreement; and

- (18) Such other information which may be required by the Director of Development Review.
- (h) Other. Any optional contents included in the preliminary development agreement pursuant to this article, and any additional material required pursuant to any terms or conditions of approval of the preliminary development agreement.

**Section 110.814.80 Approval Procedures for Final Development Agreement.** The final development agreement shall be approved in accordance with this section. In order to approve a final application, the Director of Development Review shall find that the final development agreement is in substantial compliance with the approved preliminary development agreement. If it is not in substantial compliance, the proposed final development agreement must be modified to bring it into compliance or the development agreement shall be amended pursuant to this article. The Director of Development Review shall find that the development agreement required in Section 110.814.80(a) is the same development agreement as approved pursuant to Section 110.814.70 and has not changed.

- (a) Application. An application for final development agreement approval may be submitted for all the land included in a development agreement or for a portion of the land, if so provided in the approved preliminary development agreement. The application must be completed and submitted to the Department of Development Review within the time limit established as part of the approval of the preliminary development agreement.
- (b) Process. The final development agreement shall be reviewed by the Director of Development Review and executed by the Board of County Commissioners. Any action by the Director of Development Review may be appealed pursuant to this article.
- (c) Plan in Substantial Compliance. If the applicant submits a final development agreement containing a site plan purporting to be in substantial compliance with the approved site plan, the Director of Development Review shall determine if it is in substantial compliance with the site plan in the approved preliminary development agreement. In making this determination, the following criteria shall be used to determine if the second site plan is in substantial compliance with the approved site plan:
  - (1) The proposed gross residential density or intensity of use is not changed;
  - (2) The proposed ratio of residential to nonresidential use is not changed;
  - (3) The area set aside for common open space is not reduced or the area is not substantially relocated;
  - (4) The floor area proposed for nonresidential use is not increased;
  - (5) The total ground area covered by buildings and the height of buildings is not increased; and

- (6) The plan provisions are consistent with the adopted preliminary development agreement.

**Section 110.814.85 Recordation of Approved Final Documents.** A final development agreement which has been given approval by the County shall be certified without delay by the County and filed in the Office of the County Recorder before any development occurs in accordance therewith. Upon recordation, the development agreement binds all parties and their successors in interest for the duration of the agreement.

**Section 110.814.90 Periodic Review.** The Director of Development Review shall cause the development agreement to be reviewed every twenty-four (24) months on the anniversary date of its adoption, until such time as the development is complete. A more frequent review may be undertaken at the direction of the Planning Commission or Board of County Commissioners.

- (a) **Good Faith Compliance.** As part of the review, the applicant or successor in interest shall be required to demonstrate good faith compliance with the terms of the development agreement.
- (b) **Termination or Modification.** If the County finds and determines, on the basis of substantial evidence, that the applicant or successor in interest has not complied in good faith with the terms and/or conditions of the development agreement, the County may take action to terminate or modify the development agreement.
- (1) Action to terminate or modify a development agreement may be initiated only by the Planning Commission or Board of County Commissioners.
- (2) No action to terminate or modify a development agreement shall be taken without a public hearing noticed pursuant to this article.

**Section 110.814.95 Amendment or Cancellation of Development Agreement.** A development agreement may be amended or canceled, in whole or in part, by mutual consent of the parties to the agreement or their successors in interest, as set forth in this section.

- (a) **Notice of Intention.** Notice of intention to amend or cancel any portion of the development agreement must be published in a newspaper of general circulation in Washoe County.
- (b) **Approval of Amendment or Cancellation.** The Board of County Commissioners may approve an amendment to the development agreement by ordinance if the amendment is consistent with the Comprehensive Plan, including the area plans. The Board of County Commissioners may approve a cancellation of a development agreement if it determines that to do so is in the best interests of the County.
- (c) **Recordation of Amendment or Cancellation.** The original of the amendment or cancellation shall be certified without delay by the County and filed in the Office of the County Recorder.

### DECLARATION OF COVENANTS, CONDITIONS AND RESTRICTIONS

This Declaration is made this \_\_\_\_ day of \_\_\_\_\_, 1997 by **SOUTHWEST POINTE ASSOCIATES, L.L.C.**, a Delaware limited liability company ("Southwest Pointe"); and **BETTY ALYCE JONES, HELEN JEANE JONES, KENNETH G. WALKER, AND GERALD C. SMITH**, Trustees of The Nell J. Redfield Trust ("Redfield Trust"), hereinafter referred to collectively as "Declarant".

#### W I T N E S S E T H :

Whereas, Declarant holds title to certain real property in the County of Washoe ("County"), State of Nevada, as more particularly described in Exhibit "A" attached hereto and incorporated herein by this reference ("the Subdivision").

Now therefore, Declarant hereby declares that all of the real property in the Subdivision, together with any and all improvements thereon and appurtenances thereunto, shall be held, sold, and conveyed subject to the following covenants, conditions, and restrictions. These covenants, conditions and restrictions ("Declaration") are for the purpose of protecting the value and desirability of the real property in the Subdivision. This Declaration shall inure to the benefit and bind all parties having any right, title or interest in the real property or any part thereof, their heirs, executors, administrators, successors and assigns.

Portions of this Declaration, specifically Articles I to III and VII to XIII, apply to and bind the Nonresidential Areas (as hereinafter defined), as specified in Article VII hereof. The Nonresidential Areas are currently owned by Declarant and are more particularly described on Exhibits "B" (Golf Course) and "C" (Commercial Center), attached hereto and incorporated herein. The boundary lines between the Nonresidential Areas and the Subdivision may be adjusted in the future on one or more occasions by mutual consent of Declarant and the affected owner of a Nonresidential Area. No such adjustment shall affect the rights and obligations of any party hereto or any lot owner, and the "Subdivision" and the "Nonresidential Areas" shall mean the real property so defined herein, as adjusted by such boundary line adjustments.

The provisions of this Declaration are intended to create mutual equitable servitudes upon each of the lots and parcels in the Subdivision and the Nonresidential Areas (as applicable) in favor of each and all other lots and parcels; to create reciprocal rights between the respective owners of all such lots and parcels; to create a privity of contract and estate between the grantees of such lots and parcels, their heirs, successors and assigns; and shall, as to the owner of each lot or parcel, its heirs, successors or assigns operate as covenants running with the land for the benefit of each and all other lots and parcels in the Subdivision and Nonresidential Areas and their respective owners, present and future.

Southwest Pointe agrees to indemnify, defend and hold the Redfield Trust harmless from all liability for acts and omissions of Declarant hereunder assigned, assumed and performed by Southwest Pointe. Southwest Pointe and the Redfield Trust agree that at any time upon unilateral written notice by the Redfield Trust, the assignment of rights and assumption of obligations pursuant to this subsection 2 (h) of Article I shall terminate, effective upon recordation of said notice in the office of the Recorder of Washoe County, Nevada. No right to withdraw real estate is assigned or assumed, in any event, under this subsection 2 (h) of Article I, and Southwest Pointe and the Redfield Trust shall each have said right of withdrawal as to all or any portion of the real estate owned in fee simple by them.

## **ARTICLE I GENERAL PROVISIONS/COMPLIANCE WITH NRS CHAPTER 116**

**Section 1. Applicability.** This Declaration is made in compliance with the Uniform Common-Interest Ownership Act, Chapter 116 of the Nevada Revised Statutes (the "Act").

**Section 2. Definitions and Other Basic Provisions.** The following terms as used in this Declaration are defined as follows:

- a. "Assessment Threshold" means the date on which the obligation of each Owner for assessments, as provided in Article III of this Declaration, commences. The Assessment Threshold for the Nonresidential Areas shall be as provided in subsection 2 (ee) of this Section, and the Assessment Threshold for each lot shall be the earlier of the following:
  1. for all lots created by a particular final map within the Subdivision, the date the first lot acquired by a bona fide third party is deeded to that third party by the final map developer; or
  2. for each lot not created by a final map (if any), the date of issuance of a building permit for the single family dwelling.
- b. "Association" means ArrowCreek Homeowners Association, the property owners' association which is a Nevada nonprofit corporation.
- c. "Board" means the Board of Directors of the Association.
- d. "Builder" means any person who purchases one or more lots, but less than five contiguous lots in one transaction, for the purpose of construction of a dwelling and other improvements for later sale to homebuyers on parcels of land within the Subdivision." Tract Builder" means any person who purchases five or more contiguous lots in one transaction in order to construct dwellings thereon as a Subdivision tract.
- e. "Bylaws" means the Bylaws of the Association and "Articles" means the Articles of Incorporation of the Association.

- f. "Committee" means the ArrowCreek Design Review Committee.
- g. "Common Area" or "common elements" means all of the real property designated as such in this Declaration or pursuant to final maps recorded within the Subdivision; and all real property interests (e.g., fee title or easements) acquired by the Association, whether from Declarant or otherwise, together in each instance with all improvements which may at any time be located or constructed thereon and owned by the Association, including, but not limited to the following types of improvements in the Common Area: swim and tennis facility, fencing, recreational and community facilities, recreational vehicle parking area, lakes, parks, paths, sidewalks, trails, open space, fences, gates, gatehouses, signs, entry ways, drainage ways and drainage facilities, private streets and curbs, private security, lighting, snow removal and storage areas, landscaping, fire and fuelbreaks, golf cart crossings, residential parking areas and surface water retention areas.

As also specified in Article XII, Section 10, an area of the Subdivision of approximately 1,500 acres (or as otherwise approved by Washoe County) is required to be dedicated to an entity approved by the County as public open space. Upon said dedication, which will probably be conveyed incrementally as residential development occurs, areas so dedicated shall not be (or shall cease to be) Common Area and this Declaration shall be terminated as to such areas. Said dedication may be subject to conservation easements or covenants against uses which are not compatible with open space imposed by Declarant.

- h. "Declarant", when used herein, means collectively the Southwest Pointe and the Redfield Trust, unless an individual Declarant is specified. All rights and obligations of Declarant hereunder or pursuant to law are hereby assigned and assumed (except the right to withdraw real estate) by Southwest Pointe, including all voting power in the Association, all financial obligations and all requirements of consent and approval.
- i. "Declaration" means this Declaration and any future amendments hereto.
- j. "Equivalent Lots" shall define the allocated interests in the Association (voting power, assessment obligations and other rights and responsibilities) of the Nonresidential Areas Owners, as specified in subsection (ee) of this Section and Article VII, Section 2.

Equivalent Lots are created on the date the Assessment Threshold for each Nonresidential Area is reached (as specified in subsection (ee) of this Section), and prior to that date Nonresidential Areas Owners have no membership in the Association, nor any allocated interests.

- k. "Golf Course" means a 36 hole golf course adjacent to the Subdivision. The Golf Course includes all facilities located or operated on Exhibit "B", including without limitation the golf holes, driving range, cart paths, lakes and streams, clubhouse, restrooms, maintenance facilities, cart or caddy facilities, child care facilities, restaurants, parking lots and other recreational or ancillary facilities.
- l. "Improvements" means all buildings, outbuildings, garages, streets, roads, trails, pathways, driveways, parking areas, fences, retaining and other walls, decks, exterior air conditioning, signs, landscaping, light standards, antennae/satellite dishes, walls, tennis courts, swimming pools and any other structures of any type or kind.
- m. "Lot" means any single family lot shown on Exhibit "D", a tentative map or final map, and intended for improvement with a single family residence. The number and configuration of lots may change pursuant to the process of approval of tentative maps and final maps by Washoe County, or as otherwise specified herein.
- n. "Nonresidential Areas" when used herein shall mean collectively the Golf Course and the Commercial Center. "Nonresidential Area" shall mean either one of the two Nonresidential Areas.

Nonresidential Areas are not a part of the Subdivision, nor is any portion of the Nonresidential Areas also Common Area as defined herein. No right, title or interest whatsoever in the Nonresidential Areas is transferred to any Owner, or to any Lot, parcel or Common Area except through a separate and independent contract with the owner of each Nonresidential Area. The allocated interest and voting power of the Nonresidential Areas Owners shall be calculated and expressed as Equivalent Lots, as specified in Article VII, Section 2 and subsection (ee) of this Section. Owners of the Nonresidential Areas shall be referred to collectively as the "Nonresidential Areas Owners" and individually for each applicable Nonresidential Area as the "Course Owner" and "Commercial Center Owner", as the case may be.

- o. "Owner" means:
  - 1. Any person or legal entity, including Declarant, who holds fee simple title to any Lot within the Subdivision; or
  - 2. Any person or legal entity who has contracted to purchase fee title to a Lot pursuant to a written agreement recorded in the Washoe County, Nevada Recorder's Office, in which the seller under said agreement has transferred possession of the real estate subject to the purchase agreement to the purchaser under said agreement; or

3. Each Nonresidential Areas Owner, after that Nonresidential Area reaches its Assessment Threshold.

"Owner" does not include the Association. The term "Lot Owner" when used herein shall mean specifically the Owners of Lots, and not other Owners.

- p. "ArrowCreek" means the Southwest Pointe development project, as defined in that certain Final Development Agreement ("Final Development Agreement") dated July 23, 1996 (Washoe County Case No. DA9-1-93), which in large part is the Subdivision and the Nonresidential Areas.
- q. "Single Family Dwelling" means a residential structure, which dwelling is constructed on a Lot designated in this Declaration as a single family residential Lot.
- r. "Subdivision" means the real property described in Exhibit "A", development of which is regulated by Washoe County under the Final Development Agreement and other development approvals (special use permits, tentative maps) of Washoe County for ArrowCreek (under Chapter 278 of the Nevada Revised Statutes, the Washoe County Development Code and other laws and regulations), and residential real estate added to this Declaration pursuant to a development right. References to tentative maps and final maps refer to such maps under DA9-1-93, as amended, or said subsequent Washoe County approvals.

The following are other basic provisions:

- s. Except when not in conflict with a definition specified above in this Article, the terms used herein shall have the same meanings and definitions as are used in NRS Chapter 116.
- t. The name of the Subdivision shall be ArrowCreek Subdivision and the name of the association formed under Article II hereof to own and manage Common Area shall be ArrowCreek Homeowners Association ("Association"). The Subdivision is a planned community, as defined in NRS Chapter 116.
- u. The Subdivision is located entirely within Washoe County, Nevada.
- v. The real estate included in the Subdivision is described in Exhibit "A" and the Nonresidential Areas are described in Exhibits "B" and "C".
- w. The maximum number of units (Lots and Equivalent Lots) that Declarant has created by Final Development Agreement is 1090 Lots for single family dwellings complying with applicable Washoe County land use categories and the number of Equivalent Lots allocated to the Nonresidential Areas Owners

as specified in Article VIII, Section 2; however, more Lots may be created by parcel map, amendment to the Final Development Agreement or tentative map, if Washoe County so approves, and additional units may be created as otherwise specified herein. Lots may also be reduced by withdrawal of real estate or as otherwise specified herein.

- x. The depiction of the boundaries of each Lot created by the Declaration is described in the Site Plan (Exhibit "F" to the Final Development Agreement), as specified in Exhibit "D". Lot locations, Lot boundaries and the location and boundaries of Nonresidential Areas are subject to change.
- y. Real estate that is or must become common elements is described in the Final Development Agreement, excluding the equestrian center, which may not be built, and is nevertheless shown on Exhibit "D".
- z. Real estate may be allocated subsequently as limited common elements within areas of the Subdivision. Limited common elements may include gatehouses and entryways; recreation areas such as pools, tennis courts, community centers, playgrounds, clubhouses; and other uses defined herein for Common Area.
- aa. Declarant reserves all developmental rights and special declarant rights on real estate within the Subdivision, and on other real estate as provided below in this subsection, for a period of thirty (30) years from the date hereof, including without limitation, the rights:
  - 1. To create Lots or common elements, subdivide Lots or convert Lots into common elements, or withdraw real estate, within the Subdivision in all areas described on Exhibit "A" which are not subject to a recorded final map, and as otherwise specified herein, at any time within the term of this Declaration;
  - 2. To complete improvements indicated on plats and plans or in this Declaration on all areas described on Exhibit "A" at any time within the term of this Declaration;
  - 3. To exercise as a special declarant's right any development right reserved in subsections (aa) to (ee) of this subsection;
  - 4. To maintain sales offices, management offices, watchmen's quarters or security offices, construction offices, equipment and material storage areas, signs advertising the Subdivision or Nonresidential Areas, models, and to conduct other activities reasonably related to Subdivision development on all areas described on Exhibit "A" at any time within the term of this Declaration. The right of the Declarant to

decide the number, size, location and relocation thereof, shall be exercised in its sole discretion;

5. To use easements through the Subdivision, including common elements, for the purpose of making improvements within the Subdivision whether said easements exist now or are hereafter created, within the term of this Declaration;
  6. To make the Subdivision subject to a master association affecting all areas of Exhibit "A" at any time within the term of this Declaration;
  7. To merge or consolidate the Subdivision with another common-interest community on adjacent real property of the same form of Ownership at any time within the term of this Declaration; and
  8. To appoint or remove any officer of the Association or any member of its executive board during any period of Declarant's control (as hereinafter defined), affecting all areas described on Exhibit "A".
  9. To add real estate, and to exercise any developmental right or special declarant right (all of which are hereby reserved), consisting of any real property adjacent to the Subdivision.
  10. To not develop the following proposed amenities: the swim and tennis club; an equestrian center; and the Commercial Center, and instead to convert the areas of ArrowCreek designated for these uses to different uses of Declarant's choice, including but not limited to additional Lots.
- bb. As to any developmental right which may be exercised with regard to different parcels of real estate at different times:
1. Declarant makes no assurances regarding the boundaries of those parcels or the order in which those parcels may be subjected to the exercise of each development right; and
  2. Any developmental right exercised in any portion of the real estate subject to that developmental right does not require the exercise of that developmental right in any other portion of the remainder of the real estate.
- cc. There are no other conditions or limitations under which the rights described in subsection (aa) of this Section 2 may be exercised or will lapse.
- dd. Each of the 1090 Lots and Equivalent Lots described in Exhibit "B" shall have the following allocated interests:

1. A fraction or percentage of the common expenses of the Association equal to 1 divided by the total number of Lots and Equivalent Lots which have reached the Assessment Threshold. This allocation is established because during the phased construction of the Subdivision common expenses of the Association benefit fewer than all the Lots (i.e., the Lots which have dwellings capable of being occupied are benefitted by the expenses) and the Nonresidential Areas which are open for business and should be assessed exclusively against the Lots and Equivalent Lots benefitted; and
  2. One vote in the Association for each Lot, for a total of 1090 votes arising from Lots, plus one vote for each Equivalent Lot. The withdrawal of Lots by Declarant (election to create fewer than 1090 Lots) or other reduction of Lots does not affect the liability for common expenses of each remaining Lot and may increase the proportionate share of responsibility for common expenses of Lots and Equivalent Lots which have reached the Assessment Threshold; the withdrawal of real estate or reduction of Lots shall reduce the total number of votes in the Association by the number of Lots withdrawn or reduced, thereby changing the proportional voting power of each Lot accordingly.
- ee. The Nonresidential Areas shall have the allocated interests in common expenses and voting power provided in Section 2 of Article VII and their respective Assessment Thresholds shall be the date on which that Nonresidential Area is opened for business operation.
- ff. All restrictions on use and occupancy are stated in Articles IV, V and VI hereof.
- gg. The recording data where easements and licenses are recorded are contained in the records of the Washoe County Recorder, State of Nevada. Easements and other recorded matters are specified in Exhibit "E".

**Section 3. Lot Boundary Relocations.** Declarant may relocate boundaries:

- a. For Lots owned by Declarant or owned by another, with his consent, and subject to a recorded final map, by amendment to the final map, by parcel map or by boundary line adjustment pursuant to the procedures prescribed by Washoe County; or
- b. For Lots owned by Declarant and not delineated on a final map, by recordation of a final map delineating the Lots incorporating the boundary relocation.

- c. For Lots delineated on a final map, if two or more adjacent Lots are purchased by a person or developed by Declarant with the intent of constructing only one single family dwelling on the Lots, then upon notice of said intent to Association, said Lots shall be considered as one Lot for the purpose of allocated interests in voting and assessments under subsection (dd) of Section 2 of this Article.

**Section 4. Lot Subdivision.** A Lot not delineated on a final map may be subdivided into two or more Lots by Declarant at the time it is delineated on a final map, so long as each Lot in the Subdivision contains the minimum square footage required by tentative map and the total Lots in the Subdivision do not exceed 1090 (or additional Lots as allowed herein), without following the procedure prescribed in NRS 116.2113 and without any approval by the Association.

**Section 5. Modification.** The provisions of this Article I may not be modified, amended, terminated or abridged without the consent of Declarant.

## ARTICLE II ARROWCREEK HOMEOWNERS ASSOCIATION

**Section 1. Purpose.** The purpose of the Association shall be to:

- a. Own and maintain all easements and deeded real property for Common Area within the Subdivision; including without limitation the funding, operation and maintenance of the following common elements: recreational and community facilities; lakes; parks; paths; sidewalks; trails; open space; fences; landscaping; gates; gatehouses; signs; entry ways; drainage ways and drainage facilities; private streets and curbs; private security, recreational vehicle storage, snow removal and storage areas, landscaping, fire and fuelbreaks, golf cart crossings, residential parking areas, lighting, and surface water detention areas.
- b. Provide for removal of ice and snow from roads and parking areas owned by the Association at any time when such a condition may restrain access within the Subdivision. The Association shall either contract for snow and ice removal or acquire equipment and hire personnel to effect the provisions of this subsection. In the event that snow removal operations require exporting of snow or ice from roads or parking areas, said material may be exported outside the perimeter of the Subdivision to a suitable location, said material may be deposited within the perimeter of the Subdivision on an appropriate easement, open area or Common Area in such a manner as to not unreasonably restrict access or create a unreasonable hazard to any road, parking area or common walkway.
- c. Maintain controlled access at the entrance gate. Security personnel may be employed as deemed necessary by the Board.

- d. Enforce and administer any provisions of this Declaration pertaining to Association's rights, obligations, powers and duties as required by Washoe County; including, at a minimum but without limitation, the funding of the maintenance, replacement and perpetuation of the following Subdivision amenities, if and when constructed:
- (1) Private roads within the Subdivision.
  - (2) Swim and Tennis Club.
  - (3) Staffing of maintenance and security forces, if any.
  - (4) Common Area landscaping and lighting.
  - (5) Entrance gates.
  - (6) Snow removal and storage areas.
  - (7) Common Area landscaping including along private streets, or landscaping along Whites Creek Lane.
  - (8) Fire and fuelbreaks.
  - (9) Detention basins and the accumulated sediment.
  - (10) Equestrian/pedestrian trails.
  - (11) Bicycle and pedestrian paths.
  - (12) Golf cart crossings.
  - (13) Off-site residential parking areas.

The Association shall have no other purpose than those specified herein, and shall expressly be prohibited from representing the Owners and residents of Lots within the Subdivision on issues of land use, planning, municipal annexation, master plan amendments, growth, area development or similar matters.

The Association shall purchase any and all equipment, materials and supplies necessary to undertake its duties imposed by this Declaration, its Articles and By-Laws. The Association may purchase any equipment, materials and supplies from the Declarant provided the purchase price shall be the fair market value thereof.

The Association may, but shall not be obligated, to maintain or support certain activities within the Subdivision designed to make the Subdivision safer than it otherwise might be. Neither the Association nor the Declarant shall in any way be considered insurers or guarantors of security within the Subdivision, nor shall any of them be held liable for any loss or damage by reason of failure to provide adequate security or of ineffectiveness of security measures undertaken. No representation or warranty is made that any fire protection system, burglar alarm system, security personnel or other security system cannot be compromised or circumvented, nor that any such systems or security measures undertaken will in all cases prevent loss or provide the detection or protection for which the system is designed or intended. Each Owner acknowledges, understands and covenants to inform its tenants that the Association and the Declarant, are not insurers or liable to persons living in or visiting the Subdivision for conduct resulting from acts of third parties.

**Section 2. Formation and Management Under Article 3 of NRS Chapter 116.**

The Association shall be a nonprofit Nevada corporation formed under Chapter 82 of the Nevada Revised Statutes. The Association is not authorized to have and shall not issue any capital

stock. Not later than the date of recordation of this Declaration, Declarant shall cause the Articles of Incorporation to be filed with the Nevada Secretary of State. The Association shall be charged with the duties and invested with the powers set forth in the Articles, Bylaws, and this Declaration.

**Section 3. Association Powers and Membership.** The Association shall have all powers enumerated in NRS 116.3102 which do not conflict or are not inconsistent with the Section 1 of this Article. All Lot Owners in the Subdivision, and all Nonresidential Areas Owners who have Equivalent Lots shall be members.

**Section 4. Officers and Members of Board.** The governing body of the Association shall be called the Executive Board, the Board of Directors or the Board (all of which names shall refer to the same entity). The Board may act in all instances on behalf of the Association, subject to the provisions of this Declaration, the Association Articles, the Bylaws and the applicable provisions of Nevada law.

**Section 5. Declarant Control.** Subject to the provisions of NRS 116.31032 and during the maximum time period stated in NRS 116.31032, Declarant shall control the Association. During this period, Declarant, or persons designated by it, may appoint or remove the officers and members of the Board.

**Section 6. Budget.** The Board shall adopt a proposed budget for each calendar year based on the projected common expenses of the Association, which shall include a reasonable reserve. Within 30 days after adoption of any proposed budget for the Association, the Board shall provide a summary of the budget to the Owners, and shall set a date for a meeting of the Owners to consider ratification of the budget not less than 14 nor more than 30 days after mailing of the summary. Unless at that meeting 75% of all voting power of Owners rejects the budget, the budget is ratified, whether or not a quorum is present. If the proposed budget is rejected, the periodic budget last ratified by the Owners must be continued until such time as the Owners ratify a subsequent budget proposed by the Board (NRS 116.3103(3)).

**Section 7. Title to Common Area.** Within sixty (60) days of recordation of a final map for each phase of the Subdivision, the developer of the final map shall deed to Association all its right, title and interest to the easements for the Common Area designated by the final map, if the final map does not itself create said easements. Within one (1) year of recordation of a final map for each phase of the Subdivision, the developer of the final map shall deed to Association all its right, title and interest in fee ownership of Common Area delineated within the final map to be owned in fee by the Association. All land not within a Lot in the Subdivision and not dedicated to a public entity or utility purveyor shall be Common Area. No portion of the Nonresidential Areas shall be Common Area.

**Section 8. Meetings.** A meeting of Owners with voting power in the Association must be held at least once each year, or as otherwise specified by law. Special meetings of the Association may be called by the president, a majority of the Board or by Owners having twenty (20%) percent, or any lower percentage specified in the Bylaws, of the voting power in the Association. Not less than ten (10) nor more than sixty (60) days in advance of any meeting, the secretary or other officer specified in the Bylaws shall cause notice to be hand-delivered or sent prepaid by United States mail to the mailing address of each Lot or to any other mailing address designated in writing by Owners.

The notice of any meeting must state the time and place of the meeting and the items on the agenda, including the general nature of any proposed amendment to this Declaration or Bylaws, any budgetary changes and any proposal to remove an officer or member of the Executive Board (NRS 116.3108).

**Section 9. Quorums and Voting.** Quorums and voting at meetings shall be as specified in NRS 116.3109 and 116.3110, and as provided in the Bylaws. Only Owners of Lots and Equivalent Lots have voting power. Lessees of Lots may not, except by written proxy as specified in NRS 116.3110, exercise voting power.

**Section 10. Transfer of Voting Power.** Voting power in the Association is vested in each person or entity who owns a Lot or Equivalent Lot, and shall be appurtenant to the Lot or Nonresidential Areas (as the case may be), and shall not be assigned, transferred, pledged, hypothecated, conveyed, or alienated in any way except on a transfer of title to such real estate, and then only to the transferee. Any attempt to make a prohibited transfer shall be void. Any transfer of title or interest shall be operate automatically to transfer the appurtenant membership rights and obligations in the Association to the new Owner. Immediately after any transfer of title, either the transferring Owner or the acquiring Owner shall give notice to the Association of such transfer, including the name and address of the acquiring Owner and the date of transfer.

**Section 11. Inspection of Association Books and Records.** Any membership registers, financial and accounting records, and minutes of meetings of the Association, the Board, and committees of the Board, shall be made available for inspection and copying by any Owner, or his duly appointed representative, or any beneficiary of a deed of trust encumbering real estate in the Subdivision or Nonresidential Areas, at any reasonable time and for a purpose reasonably related to the affairs of the Association, at the office of the Association or at such other place as the Board prescribes. The Association may charge a reasonable fee for any copies made at an Owner's request.

**Section 12. Ownership of Common Area.** Owners and the Association shall make no attempt to divert or alter the platted configuration of any Common Area or change the equal voting power, as defined herein, of Owners, except as otherwise provided herein.

**Section 13. Notices.** All notices hereunder to the Association or its Board shall be sent by registered or certified mail to the Board at such places as the Board may designate from time to time by notice in writing to all members. All notices to any Owner shall be hand delivered or sent prepaid by mail to Lots improved by single family residences or to such other address as may be designated by an Owner from time to time, in writing, to the Board. All notices to other interested persons shall be mailed to such address as such person shall designate in writing to the Board. All notices shall be deemed to have been given when mailed or hand delivered except notices of change of address, which shall be deemed to have been given when received, unless as otherwise provided herein.

**Section 14. Insurance.** The insurance requirements and provisions of NRS 116.3113-116.31138 shall be complied with by the Association and shall be common expenses.

**Section 15. Fines.** The Association shall have the power to levy fines and other charges against Owners, as a monetary penalty and to reimburse the Association for the costs of enforcement

of any provisions of this Declaration, for the violation of any provisions of Articles IV, V and VI, including the violation of any rules or regulations promulgated by the Board or the Committee, and violations of Design Guidelines.

**Section 16. Rules and Regulations.** The Board may promulgate rules and regulations which elaborate on or add to the provisions of Article IV without first obtaining membership approval or consent.

**Section 17. Other CC & R's and Associations.** Nothing contained herein shall prohibit or impair the recordation of additional or supplemental covenants, conditions and restrictions (and the establishing of one or more homeowners associations related thereto) which apply to only a portion of the Subdivision, in order to establish rights and obligations regarding limited common elements allowed pursuant to Subsection 2(z) of Article I; provided all Owners subject thereto consent, and provided further that any conflict between the provisions of additional or supplemental covenants, conditions and restrictions and this Declaration shall be governed by the provisions hereof.

### ARTICLE III ASSESSMENTS

**Section 1. Agreement to Pay.** Declarant, for each Lot owned by it in the Subdivision and each Equivalent Lot in the Nonresidential Areas that is expressly made subject to assessment as set forth in this Declaration, and each Owner, by his acceptance of a deed for each Lot owned, covenants and agrees to pay to the Association such regular and special assessments as are established, made, and collected as provided in this Declaration. An Owner shall not be assessed for common expenses unless the Assessment Threshold for his real estate is reached. A Lot Owner shall nevertheless have all voting rights and other rights incident thereto as provided in this Declaration, the Articles and the Bylaws. Transfer fees, fines and all other sums charged or levied by the Association to an Owner pursuant to the provisions of this Declaration shall be deemed assessments for purposes of this Article.

**Section 2. Personal Obligations.** Each assessment, together with any late charge, interest, collection costs, and reasonable attorneys' fees, shall be the personal obligation of the person or entity who was an Owner subject to the assessment at the time such assessment or installment became due and payable. If more than one person or entity was the Owner, the personal obligation to pay such assessment or installment respecting such real estate shall be both joint and several. Subject to the provisions of Article IX, Section 2, a purchaser of a Lot shall be jointly and severally liable with the seller for all unpaid assessments against the real estate without prejudice to the purchaser's right to recover from the seller the amount paid by the purchaser for such assessments. Suit to recover a money judgment for such personal obligation shall be maintainable by the Association without foreclosure or waiver of the lien securing the same. No Owner may avoid or diminish such personal obligation by abandonment of his real estate.

**Section 3. Purpose and Amount of Assessments.** The assessments levied by the Association shall be determined by the Board and shall be the amount estimated to be required, on an annual basis, and shall be used exclusively, to promote the Association purposes specified in Article II, Section 1 for the performance of the duties of the Association as set forth in this

Declaration, and for the repair, maintenance and upkeep of Association property. Funds held by the Association shall be held, to the extent possible, in interest-bearing accounts.

**Section 4. Annual Assessments.** Not less than sixty (60) days before the beginning of each calendar year of the Association, the Board shall meet for the purpose of preparing the proposed operating statement or budget for the forthcoming calendar year (the calendar year shall be the fiscal year unless the Board specifies otherwise), and establishing the annual assessment for the forthcoming calendar year, subject to the power of disapproval of the Lot Owners, as specified in Section 6 of Article II; provided, however, the Board may not establish an annual assessment amount per Lot or Equivalent Lot for any calendar year which increases by more than fifteen (15) percent over the annual assessment per Lot or Equivalent Lot of the prior year (except the first such year if it should be less than twelve (12) months), without the approval by vote or written consent of Owners holding a majority of the voting rights.

**Section 5. Special Assessments.** If the Board of Directors determines that the estimated total amount of funds necessary to defray the common expenses of the Association for a given fiscal year is or will become inadequate to meet expenses for any reason, including, but not limited to, delinquencies in the payment of assessments, then the Board shall determine the approximate amount necessary to defray such expenses; and if the amount is approved by a majority vote of the Board, it shall become a special assessment; provided, however, the Board may not approve one or more special assessments in any calendar year which in the aggregate exceed fifteen (15) percent of the annual assessment per Lot for that calendar year, without the approval by vote or written consent of Owners holding a majority of the voting rights. The Board may, in its discretion, prorate such special assessment over the remaining months of the fiscal year or levy the assessment immediately against each Lot Owner. Additionally, the Association shall have the power to incur expenses for maintenance and repair of the improvements on any Lot and for other costs of remedying violations of provisions of this Declaration, when an Owner is in violation of provisions of this Declaration, provided the Lot Owner has failed or refused to cure the violation within thirty (30) days after written notice of the necessity of such cure has been delivered by the Board to such Lot Owner, or to commence to cure the violation within such thirty (30) day period, and diligently pursue the same to completion within a reasonable time thereafter, if more than thirty (30) days is reasonably required to cure. The Board shall levy a special assessment against an Owner to pay for all costs the Association incurs to enforce provisions of the Declaration caused by the conduct of an Owner in violation hereof.

**Section 6. Uniform Rate of Assessment.** Except for assessments related to limited common elements, or as otherwise specifically provided in this Declaration bylaw, annual and special assessments of the Association must be fixed at a uniform rate for all real estate subject to assessments.

**Section 7. Assessment Period.** The annual assessment period shall commence on January 1 of each year and shall terminate on December 31 of such year; and annual assessments shall be payable in advance monthly unless the Board adopts some other basis for collection. However, the initial annual assessment for each Lot shall be prorated for the calendar year in which the assessment becomes due and, if possible, shall be paid in escrow on the purchase of the Lot.

**Section 8. Notice of Assessments; Time for Payment.** The Association may, in its discretion, give written notice of assessments to each Owner, which notice shall specify the amount of the assessment and the date or dates of payment of the same. No payment shall be due fewer than fifteen (15) days after such written notice has been given. Each delinquent assessment shall bear interest at the rate of eighteen percent (18%) per annum from the date it becomes due together with a late charge of TWENTY-FIVE DOLLARS AND NO/100 (\$25.00) for each delinquent installment. An assessment payment is delinquent if not paid within thirty (30) days after its due date. Failure of the Association to give notice of the assessment shall not affect the liability of the Owner for such assessment, but the date when payment shall become due in such a case shall be deferred to a date fifteen (15) days after such notice shall have been given.

**Section 9. Statement of Account.** Upon payment of a reasonable fee, and upon written request of any Owner or any beneficiary of a deed of trust, prospective beneficiary, or prospective purchaser of Lots or Nonresidential Areas, the Association shall issue a written statement setting forth the amount of the unpaid assessments, if any, with respect to such real estate, the amount of the current periodic assessment, transfer fees, and the date that such assessment becomes or became due, credit for advanced payments or prepaid items, including, but not limited to, an Owner's share of prepaid insurance premiums, which statement shall be conclusive upon the Association in favor of persons who rely thereon in good faith. Unless such request for a statement of account shall be complied with within thirty (30) days, all unpaid assessments which became due prior to the date of making such request shall be subordinate to the lien of a deed of trust of the requesting beneficiary which acquired its interest subsequent to requesting such statement.

**Section 10. Collection of Assessments.** The right to collect and enforce assessments is vested in the Board acting for and on behalf of the Association. The Board of Directors or its authorized representative, including any manager, can enforce the obligations of the Owners to pay assessments provided for in this Declaration by commencement and maintenance of a suit at law or in equity; or the Board may enforce assessments by judicial proceedings or, to the extent permitted by NRS Chapter 116, through the exercise of the power of sale granted to the Board. Suit to recover a money judgment against an Owner for unpaid assessments together with all other amounts allowed by law or described in this Article shall be maintainable without first foreclosing against the real estate subject to the lien for such assessment or waiving the lien rights granted hereby.

**Section 11. Lien for Assessments; Priority.** All sums assessed pursuant to this Article, together with interest, fees, charges, fines and other expenses allowed by law shall be secured by a lien on Lots and Nonresidential Areas in favor of the Association as provided in NRS Chapter 116.

**Section 12. Exempt Property.** The following property shall be exempt from payment of assessments:

- (a) all Common Areas;
- (b) any property dedicated to and accepted by any government authority or public utility (including easements); and

- (c) all Lots and Nonresidential Areas not subject to assessments pursuant to Subsection 2.(a) of Article I.

**Section 13. Suspension of Owner's Rights.** The Association shall not be required to transfer memberships on its books or to allow the exercise of any rights or privileges of membership, including voting rights, to any Owner or to any person claiming under said Owner unless or until all assessments due on an Owner's real estate have been brought current, provided the Association complies with the provisions of Section 2 of Article XIII.

**Section 14. Fiscal Year.** The Board may adopt a fiscal year other than the calendar year.

**Section 15. Transfer Fees.** Each time a Lot subject to a final map in the Subdivision transfers ownership, a transfer fee shall be charged to the transferee by the Association. The initial transfer fee for each Lot shall be \$100.00, but the Board may set a different fee of uniform application to all Lots. Those transfers exempted from transfer tax under Nevada Revised Statutes 375.090 shall also be exempt from the Association transfer fee; and bulk transfers of five (5) or more lots at one time to a single entity shall also be exempt from the transfer fee.

#### **ARTICLE IV PROPERTY USAGE**

As more particularly specified in Article X, Section 2, Declarant is exempted from the provisions of this Article IV. Otherwise, all uses within the Subdivision shall comply with the conditions and restrictions of this Article IV.

**Section 1. Single-Family Only.** Except as provided in Section 2 of this Article, only single-family dwelling units used solely for residential purposes, including private garages used in connection with said residences, together with guest or servants' quarters and other outbuildings, only as expressly provided hereinafter, shall be permitted. For purposes of this restriction, a single family shall be defined as any number of persons related by blood, adoption, or marriage living with not more than two persons who are not so related as a single household unit, or no more than three persons who are not so related living together as a single household unit, and the household employees of either such household unit.

**Section 2. Business or Commercial Uses.** All business, trade, commercial garage sale, moving sale, rummage sale, or similar activity is prohibited, except that a Lot Owner or lessee may conduct business activities on a Lot so long as: (a) the existence or operation of the business activity is not apparent or detectable by sight, sound or smell from the outside the Lot; (b) the business activity conforms to all zoning requirements and other applicable laws for the Subdivision; (c) the business activity does not involve regular visitation of the Lot by clients, customers, suppliers, or other business invitees, or door-to-door or telephone solicitation of residents of the Subdivision; and (d) the business activity is consistent with the residential character of the Subdivision and does not constitute a nuisance, or a hazardous or offensive use, or threaten the security or safety of other residents of the Subdivision, as may be determined in the sole discretion of the Board.

**Section 3. No Group Homes.** No residence in the Subdivision may be used for a public boarding house, home for a group of unrelated persons operated or financed by a public or private institution, sanitarium, hospital, asylum, or institution of any kindred nature, or any use not permitted by local law.

**Section 4. Corner Lot View Obstruction.** No fence, wall, hedge, or shrub planting which obstructs sight lines at elevations between 2 and 8 feet above the roadways shall be placed or permitted to remain on any corner Lot within the triangular area formed by the street property lines and a line connecting them at points 25 feet from the intersection of the street lines, or in the case of a round property corner from the intersection of the street property lines extended. The same sight-line limitations shall apply on any Lot within 10 feet from the intersection of a street property line with the edge of a driveway or alley pavement. No tree shall be permitted to remain within such distances of such intersections unless the foliage line is maintained at sufficient height to prevent obstruction of such sight lines.

**Section 5. No Interference with Drainage.** Each Lot Owner agrees that he will accept the burden of, and not in any way interfere with, the established drainage pattern over his Lot from adjoining or other Lots in the Subdivision, or, in the event it is necessary to change the established drainage, that he will make adequate provisions for proper drainage over his Lot. No structure or other material shall be placed or permitted to remain which may damage, interfere with, obstruct, or retard the flow of water through drainage channels, or which may change the direction of flow of such channels. For the purposes hereof, "established" drainage is defined as the drainage which occurred at the time the overall grading of a Lot, including, if applicable, the landscaping of each Lot.

**Section 6. Slope Stabilization.** Each Lot Owner agrees that in the event any slopes located on his Lot have been planted to comply with local government or Committee requirements for stabilization of said slope or slopes, the Owner shall adequately water and continuously maintain said slope or slopes.

**Section 7. Maintenance of Fences and Walls.** Each Lot Owner upon which all or a portion of a wall or fence may be located, agrees at all times to maintain, paint or repair said wall or fence, unless the Association has assumed responsibility for maintenance as provided in Subsection 1(b) of Article VIII.

**Section 8. New Structures Only.** No existing, used, constructed, or partially constructed structure of any type or nature shall be moved from another place to the Subdivision for any purpose whatsoever.

**Section 9. Square Footage Minimums.** Except on Lots of a Tract Builder, no principal residential dwelling shall be constructed or maintained upon any parcel or Lot which shall have a total floor area of less than 2,400 square feet, exclusive of porches, patios, attached and detached garages, outbuildings, breezeways or walks. Detached servants' quarters and guest quarters, as defined below, shall have a ground floor area of not more than 1,500 square feet, and such servants' quarters and guest quarters cannot be occupied until the principal residential dwelling is completed and occupied.

**Section 10. Restriction on Number of Dwellings.** No building, structure or improvements shall be constructed, erected, altered, placed or permitted to remain on any Lot other than one (1) dwelling designed for principal residential occupation for not more than one (1) family, together with such related outbuildings and facilities pertinent to said single family residential use. The words "related outbuildings and facilities" shall include one additional dwelling for servants' quarters and one additional dwelling for guest quarters, subject to approval of the Committee.

**Section 11. No Water Pollution.** No use on any of the property described herein shall be allowed which in any manner or for any purpose would result in the drainage or dumping of any refuse, sewage or other material which might tend to pollute surface or subterranean waters.

**Section 12. No Garbage/Trash Receptacles.** No garbage, refuse, rubbish or obnoxious or offensive material shall be permitted to accumulate, be dumped or buried on any Lots, and Lot Owners shall cause garbage and other like material to be disposed of by and in accordance with accepted sanitary practice. Trash receptacles shall be kept hidden from public view at all times, except when placed out for collection. Trash for collection may be placed on the street right of way line for a period not to exceed twelve (12) hours prior and subsequent to the collection service pick-up time. The Association may designate an area at the intersection of a street with a common driveway (i.e., a driveway which serves more than one (1) Lot), which area may be within the street right-of-way or on a Lot, for the placement of trash receptacles for collection.

**Section 13. Repair of Damaged Structures.** No building or garage damaged by fire or otherwise damaged so that it becomes unsightly shall be permitted to remain on any Lot. Such structures shall either be promptly rebuilt, refinished, or torn down and removed, and in no case shall the unsightly damage remain longer than three (3) months. Any tear down or removal must have Committee approval.

**Section 14. Nuisances.** No use of any Lot or structure subject to this Declaration shall annoy or adversely affect the use, value, occupation, and enjoyment of any adjoining Lot or of residences in the Subdivision in general. No noxious, offensive or disturbing activity of any kind shall be permitted.

**Section 15. Excavation Restrictions.** No excavating or drilling for minerals, stone, gravel, oil or other hydrocarbons, or earth shall be made upon any Lot other than excavation for necessary construction purposes relating to dwelling units, retaining and perimeter walls, landscaping outbuildings and pools, contouring, shaping, fencing or generally improving any Lot.

**Section 16. Paints and Finishes.** The exterior portions of all houses, buildings, and structures erected or constructed on a Lot shall be painted with a finish coat of varnish, stain or paint approved by the Committee within thirty (30) days after completion or before occupancy. At no time will the exterior of any houses, building structures and fences be allowed to approach a state of aesthetic deterioration such that they become a visual nuisance. Repainting or restaining interior or exterior surfaces with the same color paint or stain shall not require approval of the Committee.

**Section 17. Storage Restrictions.** The storage of tools, household effects, inoperable vehicles, machinery and machinery parts, empty or filled containers of trash or other materials, boxes

or bags, trash, materials, or other items that shall in appearance detract from the aesthetic values of the property shall be so placed and stored to be concealed from public view.

**Section 18. Prohibition on Clothes Lines.** No exterior clothes line shall be installed on any Lot, or any portion of the Lot, unless completely concealed from view.

**Section 19. Sign and Flag Restrictions.** No sign, flag or billboard of any kind shall be displayed to the public view on any portion of any Lot, except a sign and sign location approved by the Committee, and provided further that one U.S. and one state flag no larger than 3' by 5' each may be displayed on each Lot on holidays without approval of the Committee. No freestanding flagpoles shall be allowed on any Lot.

All residences shall have a designated Lot number that is easily viewable from the road of such design that is consistent with the community and approved by the Committee.

Signs not meeting the standards of size, color and other specifications set forth by the Committee, or signs and flags not approved by the Committee may be removed by the Association from the premises where displayed. Removed signs will be held for fourteen (14) days in the administrative office of the Association to be claimed by the Lot Owner, after which time period they may be destroyed.

**Section 20. Garage Requirements.** Every single family dwelling unit constructed shall have on the same Lot enough enclosed automobile storage space for at least two (2) automobiles. Carports are prohibited. Garage doors shall be closed at all times except when entering or exiting the garage or cleaning the garage.

**Section 21. Separation of Ownerships.** No Lot may be subject to a deed, conveyance, agreement or other document which would effect or cause a separation into different ownerships of surface and subsurface rights, or any portion thereof. Nothing herein shall prevent the dedication or conveyance of all or a portion of any Lot for use by the public utilities or as a street, in which event the remaining portion of said Lot shall for the purpose of this provision be treated as a whole Lot.

**Section 22. No Occupancy without C of O.** No building, any part of which is designed for dwelling purposes, shall be in any manner occupied while in the course of original construction or until it is completed and the building has received a certificate of occupancy from the applicable government agency.

**Section 23. No Violation of Law.** Nothing shall be permitted to occur on a Lot which violates any law, ordinance, statute, rule or regulation of any local, county, state or federal entity.

**Section 24. Fire Control Maintenance.** Each Lot Owner shall be responsible for the maintenance of any fire fuel modification areas and firebreak areas located on the Lot, such as removal of certain trees, dead limbs and other dead vegetation. All barbeque appliances must be lidded. Minimum defensible space requirements of Washoe County and, if applicable, of the Nevada State Department of Forestry, shall be maintained.

**Section 25. Weeds.** No weeds, uncultivated, diseased or infected vegetation of any kind or character shall be placed or permitted to grow upon any Lot or portion thereof.

**Section 26. Subdividing and Land Use.** Except as otherwise provided herein, regardless of any action of any governmental agency, no Lot may be divided, subdivided or resubdivided to a size less than the size of the Lot created by a final map except by Declarant. The zoning and use of any of the Lots in the Subdivision may not be changed and amended to multiple residential use or commercial use.

**Section 27. Paved Surface Requirements.** All driveways, walkways, parking areas and other areas of similar nature shall be paved with a suitable "all-weather" material approved by the Committee such as asphalt, concrete, paving stones, bomanite, brick or other materials approved by the Committee, within thirty (30) days of the completion of construction of the principal residence. Gravel or loose rock is prohibited.

**Section 28. Parking and Storage of Vehicles.** Storage of trailers, campers, boats, recreational vehicles, machinery and motor vehicles, whether they are operative, under repair, junk, inoperative, or unlicensed, or other similar type objects, shall only be permitted on Lots if kept in a fully enclosed garage or if completely screened from view, except that this provision does not preclude operable, licensed passenger vehicles or trucks of up to one (1) ton in capacity which are routinely in use from being parked in private driveways. The intent of this Section is to allow only for the loading and unloading of trailers, campers, boats and recreational vehicles in public view on a Lot and out of a garage. Parking of any vehicle on a street is not allowed, except for collector streets with a minimum right-of-way width of 120 feet, where parking is only allowed during special events.

**Section 29. Water Usage/Landscaping Restrictions.** In order to conserve water usage on Subdivision Lots, the following restrictions shall apply to all Lots:

- a. Automatic sprinkler and irrigation systems shall be required for all Lot landscaping;
- b. The total square footage of turf area on any Lot shall not exceed 20% of the total square footage of the Lot minus the area of the building structures (e.g., main dwelling, garages, porches, gazebos, decks) and the driveway; but, in no event shall the turf area exceed 3,500 square feet. For example, if the Lot is 15,000 square feet in gross area and the combined building areas and driveway cover 5,000 square feet, then only 20% of the remaining 10,000 square feet (i.e., 2,000 square feet) is allowed to be turf; and
- c. Lots with gross areas of 20,000 square feet or more shall maintain in native vegetation a percentage of the total square footage of Lot minus the area of building structures (e.g., main dwelling, garages, porches, gazebos, decks) and the driveway, as follows:

- 20,000 - 30,000 sq. ft. 20%
- 30,000 - 40,000 sq. ft., 30%
- over 40,000 sq. ft. 40%

Permanent irrigation in these native vegetation areas shall not be allowed. Temporary irrigation to allow the plantings to become established is permitted.

- d. In addition to the criteria specified in subsections a, b, and c of this Section, the maximum total square footage of permanently irrigated landscaped area, including turf, shall be:

<u>Lot Size</u>	<u>Area of Irrigated Landscaping</u>
- Less than 20,000 sq. ft.	10,000 sq. ft.
- 20,000- 29,999 sq. ft.	15,000 sq. ft.
- 30,000+ sq. ft.	20,000 sq. ft.

**Section 30. Completion of Construction.** Construction of any improvement, once commenced, shall be pursued diligently to completion. Improvements not so completed or upon which construction has ceased for ninety (90) consecutive days, or which have been partially or totally destroyed and not rebuilt within a reasonable period, shall be deemed nuisances. Declarant or the Association may remove any such nuisance or repair or complete the same at the cost of the Owner provided the Lot Owner has not commenced required work within fourteen (14) days from the date the Association or the Declarant posts a notice to commence such work upon the property and mails a copy of such notice to the Lot Owner at the address appearing on the books of the Association. Such notice shall state the steps to be taken to eliminate the nuisance. Costs of the work shall be added to and become part of the assessments to which the Lot is subject. The Association and Declarant, or any of their agents, employees or contractors, shall not be liable for any damage which may result from any work performed, nor shall the Association or Declarant, or any of their agents or employees, be liable for any failure to exercise the right to so perform such work on any parcel or Lot.

**Section 31. Maintenance of Lots.** All Lots whether vacant or improved, occupied or unoccupied, shall be maintained in such a manner as to prevent their becoming unsightly, unsanitary or a hazard to health. If not so maintained, the Association or the Declarant shall have the right, after giving thirty (30) days written notice in like manner as above set forth in Section 30 above, through their agents and employees, to undertake such work as may be necessary and desirable to remedy the unsightly, unsanitary or hazardous condition, the cost of which shall be added to and become a part of assessment to which such Lot is subject. The Board and the Declarant have sole discretion to determine what is unsightly or unsanitary. Neither the Association nor the Declarant, nor any of their agents, employees or contractors, shall be liable for any damage which may result from any maintenance work so performed nor shall the Association or the Declarant, nor any of their agents or employees be liable for any failure to exercise the right to so maintain any Lot.

**Section 32. Dead Vegetation and Dead Limbs.** Except as provided in Section 24 of this Article, within six (6) months of completion of the main single family dwelling, each Lot Owner shall remove all dead trees, dead limbs and any dead vegetation that remain on a Lot, unless the Committee decides some or all of the removal is not necessary.

**Section 33. Disposal of Sanitary Waste.** All permanent plumbing fixtures, including dishwashers, toilets or garbage disposal systems shall be connected to the sanitary sewer system in the Subdivision.

**Section 34. Fences and Obstructions.** The following general fencing guidelines shall apply. All front yard property lines from single family dwellings to the street shall be kept free and open, except courtyards may be allowed at the discretion of the Committee. Any fencing allowed shall consist of materials determined by the Committee and at locations approved by the Committee. The Declarant may construct a Subdivision boundary fence or Lot boundary fence around all or any part of the Subdivision or the Golf Course. This perimeter fence shall not be removed, replaced or changed in any way by Lot Owners. Nothing herein contained shall prevent necessary erection of retaining walls required by topography and approved by the Committee.

No fence, wall, hedge, tree, plant, shrub, lawn, or foliage shall be planted, kept or maintained by the Lot Owner in such a manner as to create a potential hazard or any aesthetically unsatisfactory appearance on the Lot, as determined by the Committee. No fence, structural improvement, wall, hedge, tree, shrub, planting or other obstruction to vision shall be more than two (2) feet higher than curb level within twenty-five (25) feet of the intersection of any two (2) streets on any corner Lot.

**Section 35. Animals/Equestrian Traffic.** No animals (excluding fish) or fowl, including without limitation, horses (except as specified below in this section), cows, sheep, goats, pigs, chickens, and exotic pets, except for no more than four (4) usual household pets of a species (e.g., dogs, cats, small birds, hamsters, turtles, frogs, lizards, gerbils, nonpoisonous snakes) shall be allowed or maintained on any Lot. The permitted pets shall be kept, bred, or raised solely as household pets for private use and not for commercial purposes. No animal or fowl shall be allowed to make an unreasonably loud noises or shall otherwise be allowed to be a nuisance. No animal shall be permitted out of a structure on a Lot unless in a fenced enclosure, nor permitted off a Lot unless such animal is under the control of a person by means of a leash or other reasonable physical restraint. No pets shall be kept upon a Lot until such time as a certificate of occupancy has been issued for the dwelling on the Lot and adequate provisions approved by the Committee have been made for confining such pets to the Lot. No dog houses or dog runs are allowed on any Lot, unless such dog houses or dog runs are screened from view by landscaping or fencing and approved by the Committee. Upon request of a Lot Owner, the Committee, in its sole discretion, shall determine for the purposes of this Section whether a particular animal or fowl shall be considered as a permitted pet, whether it is a nuisance, or whether the number of animals or fowl on any Lot is reasonable.

Horses may be allowed on certain Lots within the Subdivision, but only if so designated by the Committee. Any said Lots so designated for horses must be at least one (1) acre in size. All plans for improvements for the keeping of horses (e.g., barns, paddocks, arenas, stalls, corrals) must be approved by the Committee. Equestrian traffic shall be allowed on public trails. Subject to rules and

restrictions by the Associations, equestrian traffic may be also allowed on private trails and open space.

**Section 36. Antennae/Exterior Or Roof-Mounted Equipment.** Television antennae and satellite dishes over 18 inches in diameter, and antennae for shortwave or ham radio installations, will not be installed or permitted on any Lot unless totally screened from public view from all neighboring Lots, Common Areas or the Golf Course. No air conditioning units, ducting or other equipment (except antennae and satellite dishes as allowed under this Section) shall be mounted on any roof, or on the front exterior wall or windows of a dwelling. Any such equipment mounted on side or rear exterior walls or windows must be screened from view and approved by the Committee.

**Section 37. Pools, Sports and Play Equipment.** No above-grade swimming or wading pools, trampolines, other sports apparatus, swingsets, or children's play equipment may be placed, installed, erected, or attached to any structure in the Subdivision unless such apparatus is approved by the Committee. In addition, bicycles, toys and childrens' play equipment, motorcycles, ATV's, snowmobiles, and similar vehicles must be garaged or parked in an enclosure or fenced in a manner to be hidden from public view when not in use.

**Section 38. Defacing of Common Area.** No tree, shrub, other landscaping or improvement within a Common Area shall be defaced or removed except at the express direction of the Association.

**Section 39. Limited Access.** There shall be no access to any Lot or parcel on the perimeter of the Subdivision except from designated streets or roads as shown on recorded final maps of the Subdivision, unless prior written approval is obtained from the Association.

**Section 40. No Nonresidential Areas Access.** Except as otherwise expressly provided in this Declaration, all access to the Nonresidential Areas from any Lot or the Common Area is prohibited for any purpose, whether it be jogging, walking, playing golf or otherwise, without the consent of an affected Nonresidential Areas Owner.

**Section 41. Operation of Motor Vehicles.** Except for authorized maintenance vehicles, no motor vehicle shall be operated in any area within the Subdivision except on a street or driveway. All speed limit and other traffic control signs erected within the Subdivision shall be observed at all times. Motorized vehicles except authorized maintenance vehicles or emergency vehicles are specifically prohibited on all open space, paths, trails, walkways or Common Areas (except streets or parking areas).

**Section 42. Landscaping.** Each Owner shall be responsible to properly and attractively landscape his Lot pursuant to approved landscape plans in a manner suitable to the character and quality of the Subdivision, and all landscaping shall be maintained to harmonize with and sustain the attractiveness of the Subdivision.

Each Lot Owner must establish and maintain landscaping to the applicable fire protection districts requirements for minimum defensible space, and all such landscaping shall be continually

maintained consistent with the standards of the development, good husbandry practices and the applicable fire protection districts requirements.

**Section 43. No Commercial Leasing.** No Lot Owner shall participate in any plan or scheme for the rental of the improvements on such Lot, nor shall any such Lot be operated as a commercial venture. Nothing in this paragraph shall prevent an Lot Owner from renting the Lot and improvements thereon for residential use during periods of such Lot Owner's absence.

**Section 44. Use of Water Features.** Active use of lakes, ponds, streams or other bodies of water within the Subdivision is prohibited, except that the Owner of the Golf Course, and its agents, successors and assigns shall have the exclusive right and easement to retrieve golf balls from bodies of water within the Common Areas which are within range of golf balls hit from the Golf Course. The Association shall not be responsible for any loss, damage, or injury to any person or property arising out of the authorized or unauthorized use of lakes, ponds, streams or other bodies of water within or adjacent to the Subdivision.

**Section 45. Impairment of Wildlife.** Capturing, trapping or killing wildlife within the Subdivision is prohibited, except all common rodents (e.g., rats, mice, moles, marmots, gophers), insects and other animals considered pests.

**Section 46. Disturbing Activities.** Activities which materially disturb or destroy the vegetation, wildlife, or air quality within the Subdivision or which use excessive amounts of water or which result in unreasonable levels of sound or light are prohibited.

**Section 47. Discharge of Weapons.** The discharge or use of firearms or other weapons within the Subdivision is prohibited. The terms "firearms and weapons" includes without limitation "B-B" guns, pellet guns, bows and arrows, pistols, rifles, shotguns, sling shots and other firearms and weapons of all types, regardless of size.

**Section 48. No Temporary Structures.** No temporary structure of any form or type, including self-contained camper trailer units, shall be permitted as a dwelling unit on any Lot or parcel. No garage or outbuilding shall be constructed before commencing construction of the main dwelling unit, and further, no trailer, garage, basement, outbuilding or other structure other than the completed main dwelling unit shall be used for temporary or permanent living quarters, except as provided herein. No covering or tent, if visible from any roadway, is permitted on any Lot for a period longer than 24 hours. Temporary construction-related structures on a Lot for office, storage and other construction uses shall be allowed, subject to approval of the Committee, but only during the period of initial construction of the main dwelling unit on the Lot until issuance of a certificate of occupancy.

**Section 49. Variances.** The Committee may, in its sole discretion, grant variances to the provisions of this Article IV over which it exercises the power of approval, and the Board may grant variances to any other provisions of this Article IV. No variance granted shall constitute a waiver or restrict enforcement of any other provision hereof, or constitute a precedent for granting another variance.

## ARTICLE V ARCHITECTURAL STANDARDS

As more particularly specified in Article X, Section 2, Declarant is exempt from provisions of Articles V and VI and compliance with Design Guidelines, except the provisions of Section 4 of this Article V. Otherwise, all Builders, Lot Owners and others conducting construction activities within the Subdivision shall comply with the standards specified in Articles V and VI.

**Section 1. Building Envelope.** The Committee may establish a building envelope and recommended point of access for each Lot. This envelope will be based upon the topography of the Lot, its relationship to neighboring Lots, and any unique feature that the Lot may have, such as trees, meadows, rock outcroppings, etc.. The size and shape of the building envelope may vary from Lot to Lot. If, in the opinion of the Committee certain Lots do not warrant the establishment of a specially designated envelope, the envelope for those Lots shall be set according to the normal setbacks of the governing local agency for that type of Lot. In general, all building construction shall be confined to the building envelope area. If, in the opinion of the Committee, the building envelope shall cause the Lot Owner undue hardship in locating his home or accessory improvements, variances may be permitted by the Committee.

**Section 2. Design Guidelines.** The Committee shall adopt by a majority vote Design Guidelines establishing the architectural standards for construction and uses on all Lots within the Subdivision. Once adopted the Design Guidelines may be amended by a majority vote of the committee from time to time, in the Committee's sole discretion. All Lot Owners shall comply with and abide by the Design Guidelines. Copies of the Design Guidelines shall be available to each Lot Owner at the time of close of escrow and shall be maintained at the office of the Committee. Design Guidelines are intended to be minimum requirements. The Committee may, on a case-by-case basis, adopt or impose more stringent design requirements.

**Section 3. Views.** No representation or warranties, covenants or agreements are made by Declarant or Association or their agents, with respect to the presence or absence of any current or future view, scene or location advantage from any portion of a Lot within the Subdivision. The view, scene or location advantage may be adversely affected currently or in the future by construction or changes to the following, including, without limitation, residential homes or other structures and facilities, utility facilities, landscaping, Common Areas, public facilities, streets, neighborhood amenities and other activities, development or occurrences whether on other land or on adjacent and nearby Lots. No representations, warranties, covenants or agreements are made by Declarant, Association or their agents concerning the preservation or permanence of any view, scene or location advantage for the Lot. Association and Declarant are not responsible or liable for any impairment of such view, scene or location advantage for any perceived or actual loss of value of the Lot resulting from such impairment. Lot Owners are solely responsible for analyzing and determining all risks concerning the current and future value of any view, scene or location advantage and the potential or existing impairment thereof and the risks of preserving the view, scene or location advantage.

**Section 4. Limitations On Single Family Dwelling Size.** The size of the interior square footage (i.e., exclusive of decks, garage, porches and accessory buildings) of certain areas of the

Phase I of the Subdivision, as shown on the site plan attached as Exhibit "F" to this Declaration, shall be restricted as follows:

- a. Village 1 - 1,800 sq. ft. to 2,450 sq. ft.;
- b. Village 2 - 2,800 sq. ft. or more;
- c. Village 3 - 2,800 sq. ft. or more;
- d. Village 4 - 2,400 sq. ft. to 3,100 sq. ft.; and
- e. Custom Lots - interior square footage on all lots in Phase I other than those lots in Villages 1-4 shall have a minimum of 2,400 feet.

Single family dwelling size restrictions on other Lots in the Subdivision than those described in this Section may be proscribed by Declarant by a document recorded prior to transfer of any such Lot from Declarant to a third party. The restrictions described in this Section shall apply only to size of each affected single family dwelling initially constructed on a Lot at the time a certificate of occupancy is first issued by Washoe County, and shall not prohibit or impede an expansion, renovation or reconstruction of a single family dwelling which varies from the square footage restrictions after initial issuance of a certificate of occupancy by Washoe County.

## ARTICLE VI ARCHITECTURAL CONTROLS AND DESIGN REVIEW COMMITTEE

**Section 1. Committee Establishment and Membership.** The ArrowCreek Design Review Committee of the Association is hereby established. Each Committee member shall have an indefinite term and serve at the discretion of the Board and, during the period of Declarant Control specified in Article II, Section 5 of this Declaration or for a period of twenty (20) years, whichever is later, shall be subject to approval by Declarant, which approval may be withheld or withdrawn at any time at Declarant's sole discretion.

The Committee shall be composed of not less than three (3) nor more than seven (7) members, to be appointed by the Board, at least one of whom shall be a qualified member of one of the allied physical design professions (i.e., civil engineer, architect, land planner, etc.). Committee members shall be subject to removal by the Board, and any vacancies from time to time existing shall be filled by appointment of the Board, except that the Committee need have no more than three (3) members. A quorum of the Committee shall consist of the lesser of a majority of committee members or three (3) persons. A decision may be rendered by a majority of committee members at a meeting at which a quorum is present. Committee members need not be Lot Owners or officers, directors or employees of the Association.

**Section 2. Written Approval of Plans.** Before commencing any building operations, written approval must be obtained from the Committee covering building and plot plans for all structures erected, altered, renovated, remodeled, placed, assembled, or permitted to remain on any Lot in the Subdivision, including garages, walks, fences, dog runs, landscaping, ditches and walls; except, however, that approval of the Committee shall not be required for building operations conducted by Declarant, its successors and assigns. The approval of said Committee shall include style, design, appearance, harmony of external design, building materials, location of the proposed structure with respect to topography, finish grade elevation and the street frontage. No approval shall

be construed as modifying, altering, or waiving any of the provisions herein set out unless a variance is issued by the Committee.

Committee approval shall be granted only after written application has been made to the Committee in the manner and form prescribed by it. In the event a Lot Owner desires to redecorate the exterior of any existing structure, it shall only be necessary to submit the new proposed color scheme to the Committee for its approval. Remodeling or adding to existing structures or making structural or architectural changes shall require the Lot Owner to submit complete plans therefor to the Committee, as in the case of erecting new structures.

Each Lot Owner shall be responsible to properly and attractively landscape his Lot, and maintain such landscaping. A landscape plan is to be a part of the house plans and is to be submitted to the Committee for approval. Landscaping must be completed as specified in the landscape plan within 90 days of obtaining a certificate of occupancy of the main dwelling on a Lot, subject to extensions granted by the Committee.

**Section 3. Committee Powers.** The Committee shall have the power to adopt Design Guidelines as well as rules and regulations, and to render decisions on such matters as are subject to approval, review, or consideration of the Committee under this Declaration, or as may be referred to the Committee by the Association, in accordance with such rules Design Guidelines and regulations as may from time to time be adopted by the Committee. Committee comments with respect to any application shall be strictly followed. If requested by the Committee, applications must be resubmitted to the Committee.

**Section 4. Time of Decision.** The decision of a majority of the Committee, acting in good faith in its sole discretion, upon any matters submitted or referred to it, shall be final. It is further provided that if no rejection shall have been sent by the Committee to an applicant within 45 days from the date of receipt of a submittal or as otherwise provided in the Design Guidelines such inaction shall be deemed to constitute approval. Any decision or approval by the Committee shall not relieve an applicant or Lot Owner from complying with any requirement of a public authority having jurisdiction, and shall not constitute any representation or guaranty by the Committee or a member thereof of compliance of the submitted matter with any statute, ordinance, or regulation pertaining thereto.

**Section 5. No Improvements without Approval.** No building, garage, shed, walkway, satellite dish, fence, wall, retaining wall, dog run, drainage ditch or system, landscaping or any other structure shall be commenced, erected, placed or altered on any Lot in the Subdivision until the building plans and specifications thereof, have been submitted to and approved in writing as to conformity and harmony of external design with the existing structures or general scheme in the Subdivision, and as to location of the building with respect to topography and finished ground elevation, by the Committee.

**Section 6. Grounds for Disapproval.** The Committee may disapprove any application for any of the following reasons:

1. If such application does not comply with this Declaration, or any rules or regulations promulgated by the Association or the Committee;
2. Because of the dissatisfaction of the Committee, in the Committee's sole discretion, with grading plans, location of the proposed improvement on a Lot, finished ground elevation, color scheme, exterior finish, design, proportions, architecture, shape, height or style of the proposed improvement, the materials used therein, the kind, pitch or type of roof proposed to be placed thereon, or for purely aesthetic reasons.

**Section 7. Rules and Regulations.** The Committee may from time to time adopt written rules and regulations of general application governing its procedures and approval criteria, whether as a portion of the Design Guidelines or as separate provisions, which may include, among other things, provisions for the form and content of application; required number of copies of plans and specifications; additional architectural guidelines; provisions for notice of approval or disapproval, and various approval criteria.

**Section 8. No Inspection Required.** No inspection of construction for which plans and specifications have been or should be approved by the Committee shall be required of the Committee, although all Committee members shall have the right to inspect all improvements to ascertain compliance with the provisions of Articles V and VI. Any member of the Committee also has the right at all reasonable times and places to enter on a Lot and inspect any structure for purposes of compliance with approved plans and specifications provided such right of entry shall not include the right to enter a completed occupied dwelling without the consent of the occupant.

**Section 9. Conformance to Plans Required.** After any plans and specifications and other data submitted have been approved by the Committee, no structure of any kind shall be erected, constructed, placed, altered, or maintained upon a Lot unless the same shall be erected, constructed, or altered in conformity with the plans and specifications, color scheme, and plot plan approved by the Committee. If any structure of any kind shall be erected, constructed, placed, altered, or maintained on a Lot other than in accordance with the plans and specifications, color scheme and plot plan theretofore approved by the Committee, such erection, construction, placing, alterations and maintenance shall be deemed to have been undertaken without the approval of the Committee ever having been obtained.

**Section 10. Variances.** The Committee may grant reasonable variances or adjustments from the provisions in this Article where literal application thereof results in unnecessary hardship and if the granting thereof in the opinion of the Committee will not be materially detrimental or injurious to other Lot Owners.

**Section 11. Certification of Compliance.** At any time prior to completion of construction of an improvement, the Committee may require a certification upon such form as it shall furnish from the Builder, contractor, Lot Owner or a licensed surveyor that such improvement does not violate any height restriction, set-back rule, ordinance or statute, nor encroach upon any easement or right-of-way of record and/or that all construction is in strict compliance with plans approved by the Committee.

**Section 12. Compensation and Filing Fee.** Members of the Committee may be compensated by reasonable fees charged for Committee services to those requesting actions by the Committee, if said fees are approved by the Board. As a means of defraying its expenses, the Committee shall require a filing fee set by the Committee to accompany the submission of plans and specifications for a new single family home and a filing fee for submitting plans for remodeling or additions or exterior redecorating color scheme.

**Section 13. Liability.** Notwithstanding the approval by the Committee of plans and specifications, neither it, the Declarant, the Association nor any person acting in behalf of any of them shall be responsible in any way for any defects in any plans or specifications or other material submitted to the Committee, nor for any defects in any work done pursuant thereto. Each person submitting such plans or specifications shall be solely responsible for the sufficiency thereof and the adequacy of improvements constructed pursuant thereto. No member of the Committee shall be held liable to any person, whether a Lot Owner or not, on account of any action or decision of the Committee or failure of the Committee to take any action or make any decision.

**Section 14. Enforcement.** In the event any improvement shall be commenced without Committee approval as herein required, or in the event any improvement is constructed not in conformance with plans therefor approved by the Committee, or not in conformance with this Declaration, the same shall constitute a violation of this Declaration. In addition to the remedies for violation of any portions of this Declaration set forth in herein, the Committee shall also have the power and authority to institute arbitration, legal or other appropriate proceedings to enjoin or otherwise prevent a violation of the provisions of this Declaration, and to recommend fines for levy by the Board. All costs of dispute resolution, including attorney's fees, shall be charged to and paid by the Lot Owner if the Association prevails. Such charges shall constitute a lien on such Owner's Lot as provided in Article III hereof from the date of entry of the judgment therefor in the judgment docket. In the event the Association is not successful, each party shall pay its own costs and attorney's fees.

## **ARTICLE VII PROVISIONS FOR NONRESIDENTIAL AREAS USES**

**Section 1. Applicability of Declaration.** While the Nonresidential Areas are not a portion of the Subdivision, Nonresidential Areas Owners hereby join in and execute this Declaration for the purpose of obtaining the benefits and bearing the burdens hereof. All provisions of this Declaration shall apply to the Nonresidential Areas and be binding on the Nonresidential Areas Owners, except the provisions of Articles IV, V and VI. All references to real estate and to Owners in this Declaration shall also refer to the Nonresidential Areas and the Nonresidential Areas Owners, respectively, when the context so applies.

**Section 2. Membership in Association and Voting Power.** Each Nonresidential Area Owner shall be a member of the Association upon the date of first commencement of business operation for that Nonresidential Area, with an allocated interest and commensurate voting power expressed in terms of "Equivalent Lots", established each year (prior to the time of voting at the annual meeting when a budget is adopted) in accordance with the burden each Nonresidential Area

places on the Common Area streets in the Subdivision and Association expenses, as determined by the following formula, to be applied to each Nonresidential Area individually:

- a. The average daily vehicle miles traveled for each Nonresidential Area, as determined by the then-existing traffic generating statistics finally adopted by the Regional Transportation Commission ("RTC") for each Nonresidential Area for purposes of assessing the Regional Road Impact Fee in accordance with the applicable Washoe County ordinance and RTC General Administrative Manual ("Manual"), shall be divided by the daily vehicle miles traveled for a single family dwelling pursuant to the Manual.
- b. The product of the calculation made pursuant to Subsection (a) above shall be multiplied by the percentage of the annual assessment per Lot represented by the following Association expenses: all annual costs of repair, maintenance and reserves for ArrowCreek Drive from the entry gate to the Nonresidential Area (including Common Area landscaping); the main entry gatehouse and entry fence and landscaping; security personnel and other security costs; indirect Association costs (e.g., insurance, office supplies, management fees, rent, office or management employees compensation, accounting and legal fees, and utilities); and other costs of the Association which reasonably provide a direct benefit to the Nonresidential Area
- c. The product of the calculation made pursuant to Subsection (b) above shall be the Equivalent Lots for the Nonresidential Area. Voting power and assessments for the Nonresidential Area shall be based on the Equivalent Lots.

For example, if Course Owner constructs 18 holes on the Golf Course and the RTC determines pursuant to the Manual that the daily vehicle miles traveled is 38.99 per hole for the Golf Course, the daily vehicle miles traveled for 18 holes would be 701.82. If the daily vehicle miles traveled for one single family dwelling in the Subdivision is 14.96, the product of the calculation made pursuant to Subsection (a) would be:

$$38.99 \times 18 \div 14.96 = 41.91$$

If the percentage of Association annual assessments per Lot comprised of the expenses specified in Subsection (b) were 50%, then the product of the calculation made pursuant to Subsection (b) would be:

$$41.91 \times .50 = 20.955 \text{ Equivalent Lots}$$

If phased expansion, renovation or other changes on the Nonresidential Areas result in determinations by the RTC of additional daily vehicle miles traveled, then the allocated interest and voting power of the Nonresidential Areas shall change accordingly by recalculation of the Equivalent Lots at the end of the calendar year in which the changes occur, prior to the date of the annual meeting of members. Each Nonresidential Area Owner shall be the only member of the Association representing that Nonresidential Area. No member of a Nonresidential Area (e.g. golf course

member) shall be deemed a member of the Association solely by virtue of his or her Nonresidential Area membership, nor have voting power or liability for assessments.

**Section 3. Declarant Easements to Nonresidential Areas.** Declarant hereby grants to Nonresidential Areas Owners for the benefit of the applicable Nonresidential Area the following easements:

- a. a nonexclusive easement permitting golf balls to come upon any portion of the Subdivision or Commercial Center from the Golf Course. The existence of this easement shall not relieve golfers of any liability for damage caused by errant golf balls.
- b. a non-exclusive easement of access and use over those portions of the Common Areas reasonably necessary, with or without the use of maintenance vehicles and equipment, for the operation, maintenance and repair of the Golf Course or Commercial Center.
- c. a non-exclusive easement for overspray of water or runoff on any portion of the Subdivision from any irrigation system serving the Commercial Center or Golf Course, including the use in any irrigation system of nonpotable water (e.g., untreated creek water or effluent from a sanitary sewer treatment plant).
- d. a non-exclusive easement, to the extent reasonably necessary, over the Subdivision for the installation, operation, maintenance, repair, replacement, monitoring and controlling of irrigation systems and equipment; including, without limitation, wells, pumps and pipelines, serving all or portions of the Golf Course or Commercial Center.
- e. a non-exclusive easement, to the extent reasonably necessary, over the Subdivision for the installation, maintenance, repair, operation, replacement and monitoring of utility lines, wire, drainage pipelines and other utility facilities serving the Golf Course or Commercial Center.
- f. a nonexclusive easement over the Subdivision for natural drainage of storm water runoff from the Golf Course or Commercial Center.
- g. an easement over the Subdivision for the construction, maintenance and repair of golf cart paths serving the Golf Course in reasonable locations to be mutually agreed by Declarant and the Course Owner.
- h. A nonexclusive easement of access over all Common Area streets, located or to be located within the Subdivision, for the Nonresidential Areas Owners, their agents, successors and assigns, as well as guests, invitees, licensees, patrons, members, employees, and authorized users of the Nonresidential Areas, reasonably necessary to travel to and from the Nonresidential Areas, and the right to park vehicles on the streets and Common Area parking places

within the Subdivision at reasonable times and places in conjunction with special events and other similar functions held at Nonresidential Areas.

**Section 4. No Liability for Use of Certain Easements for Golf Course.** Declarant, Association and Course Owner and Commercial Center Owner shall not be liable to each other or to Lot Owners for damage or injury caused by errant golf balls, overspray or runoff of Golf Course irrigation or other use of the Golf Course easements granted by the provisions of this Article.

**Section 5. Ownership and Operation of Nonresidential Areas.** Declarant, Association and Nonresidential Areas Owners make no representations or warranties with regard to the continuing existence, ownership or operation of the Nonresidential Areas, if any, and no purported representation or warranty in such regard by any person, either written or oral, shall be effective without an amendment to this Declaration executed or joined into by the applicable Nonresidential Area Owner. Further, the ownership and operation of the Nonresidential Areas may change at any time and from time to time by virtue of (but without limitation) the creation or conversion of the ownership or operating structure of the Nonresidential Areas to "equity" clubs or similar arrangements whereby the Nonresidential Areas or the rights to operate them are transferred to an entity or entities which are owned or controlled by members. No consent of the Association or any Lot Owner shall be required to effectuate such transfer or conversion.

**Section 6. No Right to Use.** Neither membership in the Association nor ownership or occupancy of a Lot shall confer any ownership interest in or right to use any Nonresidential Area. Nonresidential Area Owners shall have the right, from time to time in their sole and absolute discretion and without notice, to amend or waive the terms and conditions of use of the Nonresidential Areas, (e.g. Golf Course membership rights) including, without limitation, eligibility for and duration of use rights, categories of use and extent of use privileges, and number of users, and shall also have the right to reserve use rights and to terminate use rights altogether, subject to the provisions of any outstanding membership documents.

**Section 7. Golf Course View Impairment.** In addition to Section 3 of Article V, neither the Declarant, the Association nor the Course Owner guarantee or represent that any view over and across the Golf Course from Lots or Common Areas will be preserved without impairment. The Course Owner shall have no obligation to prune or thin trees or other landscaping, and shall have the right, in its sole and absolute discretion, to add trees and other landscaping to the Golf Course, as well as to construct safety or security-related improvements such as fences and screens, from time to time. In addition, the Course Owner may, in its sole and absolute discretion, change the location, configuration, size and elevation of the trees, bunkers, fairways and greens, or holes on the Golf Course from time to time. Any such additions, improvements or changes to the Golf Course may diminish or obstruct any view from the Lots or any expressed or implied easements for view purposes or for the passage of light and air are hereby expressly disclaimed by Declarant, Association and Course Owner.

**Section 8. Limitation on Amendments.** In recognition of the fact that the provisions of this Article are for the benefit of the Nonresidential Areas, no amendment to this Article may be made without the written approval of each Nonresidential Area Owner affected by the amendment.

**ARTICLE VIII  
OTHER EASEMENTS**

**Section 1. Reservation.** The following easements (also constituting irrevocable licenses) over each Lot and all Common Areas, and the right of ingress and egress to the extent reasonably necessary to exercise such easements, are reserved to Declarant and are granted for the benefit of the Association and the Declarant:

- a. **Utilities.** Such easements for the installation, maintenance and operation of all utilities as shown on recorded final maps of the Subdivision, together with the right to extend all utility services within such easements to other areas being developed within the Subdivision (including street lights) and the right to cut, trim or remove trees and plantings wherever necessary in connection with such installation, maintenance and operation.
- b. **Fencing Facing Common Area.** An easement on all applicable Lots to install or maintain (including repair and reconstruction) Lot fencing which faces Common Area or Nonresidential Areas, including without limitation streets, the Golf Course, the swim and tennis club, and the Commercial Center. The Association shall decide for each specific Lot, in the Association's sole discretion, whether any said fencing shall be installed or maintained, in order to enhance or preserve the general appearance of the Subdivision. The Association shall have the right, but not the obligation to do so. Any said fencing not so maintained by the Association shall be maintained by the Lot Owner. The Association may elect to maintain, in its sole discretion, only the side of said fencing facing the Common Area or Nonresidential Areas, in which case the Lot Owner shall maintain the remainder of the fence. In the event the Association elects to maintain a Lot Owner's fence as specified in this subsection, the Lot Owner shall not be charged the expense therefor other than as part of the Lot Owner's pro rata assessment for all Association costs.
- c. **Common Areas.** An easement on, over and under all Common Areas, in the Subdivision for the purpose of installing, maintaining and operating utilities to serve any portion of the Subdivision; for purposes of drainage control; for access to any Lot; for the purpose of construction or maintenance of Common Area improvements or Subdivision improvements; and for providing access to undeveloped portions of the Subdivision for any and all purposes at any and all times, including, but not by way of limitation, the right to use said Common Areas during construction of improvements on undeveloped portions of the Subdivision.
- d. **Signs.** An easement within ten (10) feet of a street or other Common Area for the installation of street and traffic signs (or other signs reasonably related to the regulation or enforcement of provisions of this Declaration) on all Subdivision Lots, together with the right to cut, trim or remove trees and plantings wherever necessary in connection with such installation, maintenance, repair and reconstruction.

- e. **Snow Plowing and Snow Placement.** An easement within ten (10) feet of any street or other Common Area upon all Subdivision Lots for the placement of snow plowed from that adjacent street or Common Area, provided that this easement is not intended to create a snow storage or dumping area on any Subdivision Lot, but only to allow the berming and placement of snow plowed from a street or other Common Area immediately adjacent to a Lot in order to clear the street of snow for the safe passage of vehicles and pedestrians on the street or other Common Area.
  
- f. **Right of Entry.** The Association shall have the right, but not the obligation, to enter upon any Lot for emergency, security, and safety reasons or to perform maintenance allowed or required of Association pursuant to provisions of this Declaration or pursuant to County requirements, as well as for the purpose of insuring or enforcing compliance with this Declaration, which right may be exercised by any member of the Board or the Committee, officers, agents, employees, and managers, and all policemen, firemen, ambulance personnel, and similar emergency personnel in the performance of their duties. Except in an emergency situation or as provided in Article VI, Section 8, entry shall only be during reasonable hours and after notice to the Lot Owner. This right of entry shall include the right of the Association to enter upon any Lot to cure any condition which may increase the possibility of a fire or other hazard in the event a Lot Owner fails or refuses to cure the condition within a reasonable time after request by the Board. However, this right shall not authorize entry into any occupied single family dwelling without permission of the occupant, except by emergency personnel acting in their official capacities.

**Section 2. Transfer of Easements.** A conveyance of Common Area to the Association shall also transfer to the Association all easements herein reserved to Declarant which are necessary or convenient to the obligation of the Association to carry out its duties prescribed herein, which transfer shall not diminish the rights in and to said easements herein reserved to Declarant. Nothing set forth herein shall be construed to impose on Declarant any duty or obligation of maintenance of Common Areas or improvements thereon after conveyance of the Common Areas to the Association.

**Section 3. Use or Maintenance by Owners.** The areas of any Lot affected by the easements reserved in this Article shall not be improved with structures placed or permitted to remain (or other activities undertaken) thereon which may damage or interfere with the use of said easements for the purposes herein set forth.

**Section 4. Liability for Use of Easement.** No Owner shall have any claim or cause of action against the Declarant, the Association, or the Nonresidential Areas Owners arising out of the use or nonuse by any person of any easement reserved or created by this Declaration.

**Section 5. Modification.** None of the easements and rights granted under this Article VIII may be modified, terminated or abridged without the written consent of the persons in whose favor such easements run.

**ARTICLE IX  
PROTECTION OF LENDERS**

**Section 1. Encumbrance of Lots Permitted.** Any Lot or Nonresidential Area may be encumbered with a deed of trust.

**Section 2. Breach of Covenants.** A breach by an Owner of any of the provisions of this Declaration shall not defeat or render invalid the lien of any mortgage or deed of trust made in good faith and for value; provided, however, the provisions of this Declaration shall be binding upon the Owners whose title thereto is acquired under foreclosure, trustee's sale, or otherwise.

**Section 3. Notice of Default.** Upon written request to the Association, the beneficiary of a first deed of trust encumbering real estate subject to this Declaration shall be entitled to written notification from the Association of any default by the Owner of that real estate in the performance of such Owner's obligations under this Declaration that is not cured within ninety (90) days.

**Section 4. Insurance Proceeds and Condemnation Awards.** No provision of this Declaration or the Association Articles shall give an Owner, or any other party, priority over any rights of a first deed of trust beneficiary in the case of a distribution to the Owner of insurance proceeds or condemnation awards.

**Section 5. Appearance at Meetings.** Because of its financial interest in the Subdivision, any beneficiary of a first deed of trust may appear (but cannot vote) at meetings of the members and the Association Executive Board.

**Section 6. Examination of Records.** Beneficiaries of first deeds of trust shall have the right to examine the books and records of the Association and can require the submission of financial data concerning the Association, including annual reports, audits and operating statements as and when furnished to the Owners.

**ARTICLE X  
LIMITATION OF RESTRICTIONS**

**Section 1. General/Assignment.** Declarant and any Successor Declarant may be undertaking the work of constructing improvements to the Subdivision or on Lots. The completion of such construction and the sale or other disposal of the Lots is essential to the establishment and welfare of the Subdivision as a residential community. The rights granted to Declarant which are contained in this Article are personal to Declarant and any Successor Declarant, and may only be transferred by a written, express assignment duly recorded from the Declarant to a Successor Declarant, or from Successor Declarant to another Successor Declarant, and are not assigned merely by the conveyance of title to Lots or Nonresidential Areas, without such an express assignment. Declarant may assign its rights as to a portion of the Subdivision to a Tract Builder, who shall then be the Successor Declarant as to those Lots subject to the assignment. Such a partial assignment may provide for limitations or qualifications of a Successor Declarants rights, in the sole discretion of Declarant

**Section 2. Limitations on Restrictions.** Nothing in this Declaration shall be understood or construed to:

- a. Prevent Declarant, its contractors or subcontractors from doing on the Subdivision or on any Lot whatever is reasonably necessary or advisable in connection with the commencement or completion of the above described work;
- b. Prevent Declarant or its representatives from erecting, constructing, and maintaining on any part of the Subdivision such structures as may be reasonably necessary for the conduct of its business of completing the work, establishing the Subdivision as a residential community, and disposing of the Lots by sale, lease, or otherwise;
- c. Prevent Declarant from maintaining such signs on any part of the Subdivision owned by Declarant or by the Association as may be necessary for the sale, lease, or disposition of Lots;
- d. Prevent Declarant from utilizing mobile homes or temporary structures as sales offices or for construction activities; and
- e. Allow any Lot Owners or Association to enforce any provision of Articles IV, V and VI against Declarant (except Section 4 of Article V), it being the intent of this subsection to exempt Declarant completely from compliance with the provisions of Articles IV, V and VI regarding Declarant's activities and Lots owned by Declarant (except Section 4 of Article V).

**Section 3. Modification.** The provisions of this Article may not be amended, terminated or abridged without the written consent of the Declarant.

## **ARTICLE XI COMPLIANCE WITH COUNTY CONDITIONS**

**Section 1. Perpetual Funding.** The provisions of Article III are intended to establish perpetual funding in interest-bearing accounts for the maintenance of all Common Area.

**Section 2. Enforcement of Special Assessment and Lien Provisions by County.** In the event the Association fails to enforce any of the following described provisions of this Declaration:

- a. the obligation of the Association to properly maintain all Common Areas in the Subdivision; or
- b. the obligation of the Association to pay prior to delinquency all County taxes and assessments levied against Association property or against the Association;

then County shall be entitled to commence an action to enforce such provisions by any means allowed in law or equity, including the levy of a special assessment against all of the Owners, which special assessment shall be secured by a lien in the manner provided in Article III hereof.

Notwithstanding the foregoing, the County shall be entitled to commence such action only after:

- a. the County has given reasonable notice (which shall be not less than thirty (30) days) to the Association, describing such violation, or if no Association is in existence, by publication of reasonable notice in a newspaper of general circulation in Washoe County; and
- b. the Association or the Owners shall have failed to cure such violation within a reasonable time thereafter to the reasonable satisfaction of Washoe County.

**Section 3. Disclaimer of County Responsibility.** WASHOE COUNTY WILL NOT ASSUME RESPONSIBILITY FOR MAINTENANCE OF THE PRIVATE STREET SYSTEM NOR ACCEPT THE STREETS FOR DEDICATION TO WASHOE COUNTY UNLESS THE STREETS MEET THOSE WASHOE COUNTY STANDARDS IN EFFECT AT THE TIME OF OFFER FOR DEDICATION.

**Section 4. Public Access Easements.** Certain Common Areas within the Subdivision shall be open to the public. These Common Areas include the bicycle paths on minor arterial streets and some collector streets; and areas for access to the public trail system, as more particularly specified in Exhibit "G", the Open Space Management Plan, of the Final Development Agreement. An access easement for these purposes on portions of the above-described Common Area is hereby granted to Washoe County on behalf of the public, at reasonable times during daylight hours and subject to reasonable restrictions imposed by the Association to reconcile issues of security, privacy and nonaccess for private residential areas of the Subdivision with the right of limited public access as described in this Section.

**Section 5. County as Third Party Beneficiary.** The County or other political subdivision in which the property may be located, is hereby expressly made a third party beneficiary to this Article of this Declaration, and to the following provisions of other Articles:

- a. Article II, Section 1.b, c and d; and
- b. Article III.

**Section 6. Common Open Space Area Plan.** Either Declarant or Association (as the case may be) during the period Declarant or Association owns Common Area which is designated open space pursuant to County requirements, shall monitor and maintain open space within the Common Area. The maintenance plan for open space within the Common Area shall consist of the following, at a minimum:

- a. **Vegetation Management.** Open space may be planted or landscaped to enhance it, or to improve it as wildlife habitat. Destruction or disturbance of native vegetation during Subdivision construction or by authorized use shall be avoided when possible, in order to preserve and maintain existing vegetation.
- b. **Debris and Litter Removal.** Debris and litter shall be removed on a regular basis, and a regular schedule of inspection and removal shall be established and adhered to, in order to keep the open space in a clean and sanitary condition.
- c. **Fire Access and Suppression.** Access for purposes of fire suppression shall be maintained at all times. Fuel modification and fire breaks required by County or the Nevada Division of Forestry shall be constructed and maintained in a good and proper manner.
- d. **Maintenance of Public Access and Limitations to Public Access.** While Declarant or Association owns all or any part of the open space, they reserve the right to limit and exclude public access (except on public trails), except that open space owned by Association as Common Area shall be subject to public access rules and limitations which may be promulgated from time to time on a case-by-case basis for each open space area. In order to preserve vegetation and avoid disturbance of open space, the Association may limit access on all or any part of the open space. In general, the provisions of Article IV, Sections 46 and 47 apply to all open space, except in a designated area for such vehicle travel, if any.

The responsibility of Declarant or Association (as the case may be) for maintenance of open space shall cease for open space dedicated pursuant to Section 10 of this Article.

**Section 7. Limitation on Amendments.** In recognition of the fact that the provisions of this Article are for the benefit of the County, no amendment to this Article may be made without the written approval of the County.

**Section 8. Notice of Sewer User Fees.** All uses in the Subdivision requiring sanitary sewer connection will be required to pay a sewer connection fee, specified by County ordinance and administered by the County Utility Services Division, unless otherwise provided by the County.

**Section 9. Setbacks for Overhead Power Lines.** Overhead electrical power lines traverse portions of the Subdivision. The minimum setbacks specified in the National Electric Safety Code shall be required in all applicable areas in proximity to these overhead power lines.

**Section 10. Dedication of Certain Open Space.** An area of ArrowCreek of approximately 1,500 acres (or as otherwise approved by Washoe County) is required to be dedicated to an entity approved by the County as public open space. Upon said dedication, which will probably be conveyed incrementally as residential development occurs, areas so dedicated shall not be (or shall

cease being) Common Area. Said dedication may be subject to conservation easements or covenants imposed by Declarant against uses which are not compatible with open space. If for any reason the County does not designate or approve the dedication of all or any portion of the Subdivision open space to an entity other than the Association, then it shall remain Common Area and be owned by the Association after designation on a final map pursuant to the provisions of this Declaration.

**Section 11. Notice of Pedestrian Access.** Subject to rules and restrictions of the Association, open space and private trails (as well as public trails) abutting Lots shall have access by pedestrians. To the extent said open space and private trails are also Common Area, pedestrian or other types of access may be denied to the general public and may be further restricted by the Association.

**Section 12. Termination Of Declaration Upon Dedication Of Common Area.** If portions of the Subdivision are dedicated in fee simple to Washoe County, or another governmental entity, for public use purposes (e.g., water storage tanks, well sites, certain streets, public trails, drainage channels or basins), or if the dedication of open space specified in Section 10 of this Article XI takes place, then this Declaration shall be terminated as to the real property so dedicated.

**Section 13. Limitation On Water Use/Lot Owner Liability For Excess Water Rights.** Declarant has entered into a certain Water Dedication Agreement ("Water Agreement") dated March 18, 1997 with the County, the water service provider for the Subdivision. The Water Agreement requires Declarant to dedicate sufficient water rights acceptable to the County for use on each Lot, pursuant to a proscribed dedication schedule ("Schedule") based on the size of each Lot. The Nevada State Engineer approves the dedication and use of these water rights on each Lot prior to construction of a residence on the Lot. If Lot Owners in the Subdivision actually use more water on their Lots in the aggregate on an average annual basis than the water rights so dedicated, pursuant to a verification procedure specified in the Water Agreement, the Declarant is then required to dedicate an additional amount of water rights acceptable to the County necessary to make up the difference between the actual aggregate water usage by Lot Owners and the amount of water rights dedicated for the Lots pursuant to the Schedule ("Deficiency").

In the event the Declarant is required by the County to dedicate water rights for a Deficiency, each Lot Owner whose actual water usage exceeds the water rights dedicated for that Owner's Lot shall be liable to Declarant to either provide the additional water rights or to reimburse Declarant a sum of money sufficient to pay for the value and costs of the water rights Declarant must dedicate for the Lot, in the following manner:

- a. After a Deficiency is established pursuant to the provisions of the Water Agreement, Declarant shall ascertain from the Subdivision water meter usage records which Lots have exceeded by water usage the amount of water rights dedicated under the Schedule, and the amount of excess water used on each Lot. Declarant shall then deduct from this amount an amount of water equal to the percentage in which the aggregate amount all excess water used by Lots which have exceeded by usage the water rights dedicated under the Schedule exceeds the Deficiency. The result shall be the deficiency in water rights for each Lot for which each said Lot Owner is liable ("Lot Deficiency"). For example if the Deficiency is 100 acre feet per annum and the

total aggregate of excess water used by all Lots exceeding by water usage the water rights dedicated under the Schedule is 120 acre feet, then the actual excess water usage for each Lot would be reduced by 20% to arrive at the Lot Deficiency.

- b. The Declarant shall notify each Lot Owner by certified mail at the Lot address of his Lot Deficiency and the fair market value of water rights constituting the Lot Deficiency (including costs of application, permits and consultant's fees to transfer the water rights to the County) ("Lot Deficiency Cost").
- c. Each Lot Owner with a Lot Deficiency shall have sixty (60) days from the date of delivery of the notice (or the date said notice is returned as undelivered or refused) either to pay to Declarant the Lot Deficiency Cost or to deliver to Declarant an amount of water rights acceptable to the County equal to the Lot Deficiency.
- d. In the event a Lot Owner fails or refuses to perform its obligations under Subsection c. above, Declarant shall be entitled to a lien against the Lot Owner's Lot in the amount of the Lot Deficiency Cost (plus all costs and attorneys fees reasonably incurred for collection, and interest on the Lot Deficiency Cost at the rate of twelve percent (12%) per annum until paid) in which case the Declarant may record a Notice of Lien against said Lot in the office of the Recording Washoe County, and the Lot Owner shall be personally liable, in addition to any other legal or equitable remedy allowed to Declarant by law, for the Lot Deficiency Cost. Said lien, upon recording of the Notice of Lien, shall be a burden on the Lot which runs with the land and binds all successors and assigns.

### ARTICLE XIII MISCELLANEOUS GENERAL PROVISIONS

**Section 1. Enforcement.** Except as expressly limited herein, Association, Declarant or any Owner shall have the right to enforce the provisions of this Declaration now or hereafter imposed by arbitration as prescribed by Nevada Revised Statutes 38.300-360, or by any proceeding at law or in equity. Failure by the Association, Declarant or by any Owner to enforce any provision shall in no event be deemed a waiver of the right to do so thereafter. The Association may establish and impose administrative procedures for resolving claims or disputes arising from the interpretation, application or enforcement of any provisions stated herein or specified in the Articles, Bylaws, or rules and regulations adopted by the Association or the Committee.

**Section 2. Suspension of Privileges.** The Board may, anything herein to the contrary notwithstanding, suspend all voting rights, other membership rights and all rights to use the Association's Common Areas of any Owner for any period during which any Association assessment against such Owner's property remains unpaid, or during the period of any continuing violation of the provisions of this Declaration by such Owner after the existence thereof has been declared by the Board, including a violation by virtue of the failure of a member to comply with the rules and regulations of the Association, provided the Association first complies with the following procedures:

- a. **Notice:** Association must either mail to the Owner by registered mail, return receipt requested, or personally deliver to the Owner a notice that voting rights, other membership rights and rights to use the Common Area will be suspended unless the unpaid assessments are paid or the violation is cured, as the case may be, within fourteen (14) days of delivery of the notice. Notice by registered mail shall be deemed delivered 48 hours after deposit with the U.S. Postal Service or on the date a receipt is signed, whichever is earlier.
- b. **Opportunity to be Heard:** The notice shall also specify, in the case of a proposed suspension on grounds other than failure to pay an assessment, that the Owner may protest the suspension by written notice to the Board delivered to any Board member in the manner specified above in subsection (a). In the event of a protest the suspension shall not take effect until the Board has held a hearing to consider the protest and made a decision on the merits of the protest.

**Section 3. Severability.** Invalidation of any one of these covenants, conditions or restrictions by judgment or court order shall in no way affect any other provisions, which shall remain in full force and effect.

**Section 4. Amendment.** This Declaration shall run with and bind the land for a term of twenty (20) years from the date this Declaration is recorded, after which time it shall be automatically extended for successive periods of ten (10) years, unless at least a majority of the Owners with voting power agree to terminate this Declaration, effective at the end of the then current term or ten (10) year extension period, in which case a notice signed by said Owners must be executed and recorded. Subject to the provisions of Article I, Section 5, Article VII, Section 8, Article VIII, Section 5, Article X, Section 3 and Article XI, Section 7, this Declaration may be amended by an instrument signed by at least a majority of the Owners with voting power. Any amendment must be recorded or it has no effect. For purposes of this Section, the signature of one of the Owners, for a Lot with more than one Owner, shall be deemed sufficient.

**Section 5. Declarant Consent To Withdrawal Of Real Estate.** Notwithstanding an assignment by Declarant to a Successor Declarant of all or part of Declarant's rights, no said Successor Declarant shall have the right to withdraw real estate unless the prior written consent of the Declarant, in Declarant's sole discretion, is granted and recorded concurrently with the recorded notice of withdrawal.

**Section 6. Approval of Declarant.** In all circumstances described herein in which Declarant has the right of approval, said approval and any request for approval shall be in writing. Declarant shall have a minimum of thirty (30) days after a request to approve or deny. If Declarant has not issued its written approval or denial within said thirty (30) days, the request shall be deemed approved.

**Section 7. Liability.** Declarant shall have no liability for repairs or maintenance of roads, or other improvements, including utility lines, located within the Common Areas of the Subdivision from and after the date of conveyance of such Common Areas to the Association. Neither Declarant,

County, the Committee, Association, nor any Owner shall be deemed liable in any manner whatsoever to any other Owner in the Subdivision or third party for any claim, cause of action or alleged damages resulting from:

- a. design concepts, aesthetics, latent or patent errors or defects in design or construction relating to improvements constructed on Lots, whether shown or omitted on any plans and specifications which may be approved by the Committee, or any buildings or structures erected therefrom; and
- b. any waiver of or failure to enforce a provision hereof, or failure to inspect or certify compliance with approved plans and specifications.

**Section 8. Attorneys Fees and Costs.** In any action to enforce or administer the provisions hereof, the prevailing party shall be entitled to reasonable attorneys fees and costs.

**Section 9. Cumulative Rights/Waiver.** Remedies specified herein are cumulative and any specification of them herein shall not be taken to preclude an aggrieved party's resort to any other remedy at law or in equity. No delay or failure on the part of any aggrieved party to invoke an available remedy in respect of a violation of any provision of this Declaration shall be held to be a waiver by that party of any right available to him upon the recurrence or continuance of said violation or the occurrence of a different violation.

**Section 10. Grantee's Acceptance.** Each grantee or purchaser of real estate subject to this Declaration shall, by acceptance of a deed conveying title thereto, or the execution of a contract for the purchase thereof, whether from Declarant or a subsequent Owner, accept such deed or contract upon and subject to each and all of the provisions of this Declaration and to the jurisdiction, rights, powers, privileges and immunities of Declarant and of the Association. By acceptance such grantee or purchaser shall for himself (his heirs, personal representatives, successors and assigns) covenant, consent and agree to and with Declarant, and to and with the grantees and subsequent Owners to keep, observe, comply with and perform all of the provisions of this Declaration and shall further agree to the continuation and completion of the Subdivision and all parts and projected Lots therein.

**Section 11. Captions.** Paragraph captions in this Declaration are for convenience only and do not in any way limit or amplify the terms or provisions hereof.

**Section 12. Use of the Words "Southwest Pointe" and "ArrowCreek".** No person shall use the words "Southwest Pointe" or "ArrowCreek" or any derivative, or any other term which Declarant may select to name or identify the Subdivision or any component thereof, in any printed or promotional material without the Declarant's prior written consent. However, Owners may use the words "Southwest Pointe" or "ArrowCreek" in printed or promotional matter solely to specify that particular property is located within the Subdivision, and the Association shall be entitled to use the words "Southwest Pointe" or "ArrowCreek" in its name and in the normal conduct of its business.

**Section 13. Interpretation.** The Association shall have sole right and authority to interpret any of the provisions of this Declaration, which interpretation shall, so long as the same is reasonable, be conclusive.

**Section 14. Choice Of Law/Venue.** This Declaration shall be construed and enforced in accordance with the laws of the State of Nevada, and venue for any action arising from this Declaration shall be in Washoe County, Nevada.

**Section 15. Gender And Number.** Unless the contract otherwise requires, when used herein, the singular includes the plural and vice versa, and the masculine includes the feminine and neuter and vice versa.

IN WITNESS WHEREOF, the undersigned, being the Declarant herein, has hereunto set his hand.

## *Preliminary Report (2nd Update)*

October 2, 1997

CFA ENGINEERING  
1150 CORPORATE BLVD.  
RENO, NV 89502  
Att:GEORGE FONG

Your No.: **ARROW CREEK ASSESSMENT DISTRICT**  
Our Order No.: 192763JM

In response to the above referenced application for a policy of title insurance, this Company hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a Policy or Policies of Title Insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an Exception below or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations of said Policy forms.

The printed Exceptions and Exclusions from the coverage of said Policy or Policies are set forth in Exhibit A attached. Copies of the Policy forms should be read. They are available from the office which issued this report.

Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Exhibit A of this report carefully. The exceptions and exclusions are meant to provide you with notice of insurance coverage provided by the title insurance policy selected and should be carefully considered.

It is important to note that this Preliminary Report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

This report (and any supplements or amendments thereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

Dated as of September 16, 1997 at 7:30 a.m.

  
\_\_\_\_\_  
Joe McCaffrey, Title Officer

Title to said estate or interest at the date hereof is vested in:

SOUTHWEST POINTE ASSOCIATES L.L.C., a Delaware limited liability company as to Parcels A and B, BETTY ALYCE JONES, HELEN JEANE JONES, IRIS G. BREWERTON, KENNETH G. WALKER, and GERALD C. SMITH, Trustees of THE NELL J. REDFIELD TRUST, as to Parcel C

The estate or interest in the land hereafter described or referred to covered by this report is:

A FEE

At the date hereof exceptions to coverage in addition to the printed exceptions and exclusions contained in said policy form would be as follows:

1. Taxes for the fiscal year 1997-1998, including any secured personal property tax, have been paid in full.  
AP # 152-020-06  
Total \$6,674.22
2. Taxes for the fiscal year 1997-1998, including any secured personal property tax, have been paid in full.  
AP # 152-020-08

Note:        The 2nd, 3rd and 4th Installments will become delinquent if not paid on or before the first Mondays in October, January and March, respectively.
6. Taxes for the fiscal year 1997-1998, including any secured personal property tax, have been paid in full.  
AP # 152-010-07  
Total \$81,724.18
7. Any liens which may be or may become due the South Truckee Meadows General Improvement District by reason of the location of said land within the boundaries of said District and any use of the services provided thereby. (All amounts are paid current.)
8. Any right of way for Thomas Creek and Dry Creek any and all their tributaries.
9. Easement over a portion of said land, for public utility purposes, and all rights and reservations connected therewith, as granted to Bell Telephone Company of Nevada, by instrument recorded July 8, 1976, in Book 987, Page 901, Document No. 415899, Official Records.

10. A 30 foot access and waterline easement and right of way and incidentals thereto, as granted to the COUNTY OF WASHOE, a political subdivision of the State of Nevada, by Grant of Easement dated March 31, 1988, recorded April 29, 1988 in Book 2728, Page 390, as Document No. 1242872, Official Records.
11. A 30 foot access and waterline easement and right of way and incidentals thereto, as granted to the COUNTY OF WASHOE, a political subdivision of the State of Nevada, by Grant of Easement dated March 31, 1988, recorded April 29, 1988, in Book 2728, Page 400, as Document No. 1242874, Official Records.
12. An easement and right of way, to construct, operate and maintain, overhead electric distribution facilities and all rights incidental thereto, as granted to Sierra Pacific Power Company, a Nevada corporation, by Grant of Easement dated November 22, 1988, recorded January 31, 1989, in Book 2860, Page 866, as Document No. 1302260, Official Records.
13. An easement and right of way to construct, operate and maintain underground electric distribution facilities and all rights incidental thereto, as granted to Sierra Pacific Power Company, a Nevada corporation, by Grant of Easement dated February 17, 1989, recorded March 23, 1989 in Book 2882, Page 917, as Document No. 1312355, Official Records.
14. Notice of Claim of Easement and incidental purposes as disclosed by instruments recorded September 23, 1992 in Book 3570, Page 985, as Document No. 1607389, Official Records.  
(Reference is made to said document for full particulars)
15. An easement as shown on Parcel Map No. 3086  
For : Access, drainage, public utilities and incidental purposes
16. An instrument entitled " SUBDIVISION IMPROVEMENT AGREEMENT PURSUANT TO WASHOE COUNTY CODE 110 ", recorded August 28, 1996 in Book 4658, Page 33, as Document No. 2025157 of Official Records.
17. An option agreement dated August 28, 1996, executed by BETTY ALYCE JONES, HELEN JEANE JONES, IRIS G. BREWERTON, KENNETH G. WALKER and GERALD C. SMITH, as Trustees under the provisions of that certain NELL J. REDFIELD Revocable Trust Agreement dated May 21, 1980 as optionor, and SOUTHWEST POINTE ASSOCIATES, L.L.C., a Delaware limited liability company as optionee, as disclosed by an instrument recorded August 29, 1996 as Document No. 2025691 of Official Records.  
(Affects Parcel C)
18. An easement for public utilities and incidental purposes recorded October 8, 1996 in Book 4691, page 766 as Document No. 2037161 of Official Records.  
Affects : A portion of said land

19. An easement for a temporary right-of-way for roadway turnaround and incidental purposes recorded December 4, 1996 in Book 4736, page 398 as Document No. 2053190 of Official Records.  
Affects : A portion of the land
20. An easement for storm drainage facilities and incidental purposes recorded December 4, 1996 in Book 4736, page 401 as Document No. 2053191 of Official Records.  
Affects : A portion of the land
21. An easement for a temporary right-of-way for roadway turnaround and incidental purposes recorded February 10, 1997 in Book 4790, page 782 as Document No. 2073456 of Official Records.  
Affects : A portion of the land
22. An easement for pedestrian ingress and egress and incidental purposes recorded February 10, 1997 in Book 4790, page 791 as Document No. 2073458 of Official Records.  
Affects : A portion of the land
23. The following grant reflected in the Owner's Certificate on Parcel Map No. 3153:  
  
"...easements as shown for access, utility and drainage are hereby granted."
24. The following notes reflected on Parcel Map No. 3153:
  1. The natural drainage will not be impeded during the development or improvement of these parcels.
  2. Public utility easements are hereby granted, 7.5 feet in width coincident with all dedicated street rights-of-way, 5 feet in width coincident with the exterior boundary of all parcels.  
  
A public utility easement is also hereby granted within each parcel for the exclusive purpose of installing and maintaining utility and Cable TV facilities to that parcel and the right to exit that parcel with said utility and Cable TV facilities for the purpose of serving adjacent parcels at locations mutually agreed upon by the owner of record, at that time, and the utility and Cable TV companies.
  3. Any structures within the 100 year flood zone must comply with the Washoe County Flood Hazard Ordinance.
  4. All improvements regarding access, floodwaters, utilities, wastewater disposal, water supply, and fire protection shall be completed in accordance with the timeframes and designs approved as part of Development Agreement Case No. DA9-1-93.

25. The following notes reflected on Parcel Map No. 3215:

1. The natural drainage will not be impeded during the development or improvement of these parcels.
2. A public utility and cable TV easement is also hereby granted within Parcels 1, 2 and 3 for the exclusive purpose of installing and maintaining utility and cable TV facilities to that parcel and the right to exit that parcel with said utility and cable TV facilities for the purpose of serving adjacent parcels at locations mutually agreed upon by the owner of record, at that time, and the utility and cable TV companies.
3. A private access easement is hereby reserved over those sixty foot wide strips of land within Parcel 4, as shown above, for access between Parcels 1, 2 and 3. These easements may be moved to a more suitable location upon future development of Parcel 4, with the approval of the Washoe County Engineer. A private blanket access easement is hereby reserved over Parcel 1 exclusively for access to Parcels 2 and 3.
4. The owner, buyers, assigns, or any interest holders of any lots or parcels shown hereon, hereby agree that all existing irrigation flows crossing these parcels shall be perpetuated. Any legal rights to water from these ditches shall be honored and the right of access for maintenance and operation shall not be denied to valid holders of those rights.

26. The following note reflected in the Owner's Certificate on Parcel Map No. 3215:

This is to certify that the undersigned Nell J. Redfield Trust is the owner of the tract of land represented on this plat and has consented to the preparation and recordation of this plat, that the same is executed in compliance with and subject to the provisions of N.R.S. Chapter 278, that the easements as shown for access, utility and drainage are hereby granted.

DESCRIPTION: SEE ATTACHED

NOTE: This report makes no representations as to water, water rights, minerals or mineral rights and no reliance can be made upon this report or a resulting title policy for such rights or ownership.

DESCRIPTION

All that certain lot, piece or parcel of land situate in the County of Washoe, State of Nevada, described as follows:

DESCRIPTION

SUBDIVISION AND OPEN SPACE

Portions of Sections 3, 10, 14, 15, 22, 23, 24, 26 and 27, T18N, R19E, MDM, Washoe County, Nevada, more particularly described as follows:

Parcels 1A and 4B of Survey Map 3294, as shown on the plat thereof, recorded August 26, 1997, as Document No. 2128435, Official Records of Washoe County, Nevada;

excepting therefrom the following described parcel of land:

Commencing at the southwest corner of said Section 24;  
thence along the south line of said Section 24, S 89°56'17" E, 884.69 feet;  
thence N 50°25'19" E, 496.72 feet;  
thence N 31°56'15" E, 623.45 feet to a point on the northerly line of Arrowcreek Parkway;  
thence along said northerly line the following courses and distances:  
N 37°41'43" W, 429.99 feet;  
along the arc of a tangent 910.00 foot radius curve to the left through a central angle of 16°48'17" a distance of 266.90 feet;  
N 54°30'00" W, 386.14 feet;  
along the arc of a tangent 490.00 foot radius curve to the right through a central angle of 50°49'12" a distance of 434.62 feet;  
thence N 03°40'48" W, 455.56 feet;  
along the arc of a tangent 710.00 foot radius curve to the left through a central angle of 46°40'18" a distance of 578.35 feet;  
thence N 50°21'06" W, 375.49 feet;  
along the arc of a tangent 840.00 foot radius curve to the right through a central angle of 22°56'48" a distance of 336.42 feet to the TRUE POINT OF BEGINNING;  
thence continuing along the arc of said 840.00 foot radius curve to the right through a central angle of 14°25'02" a distance of 211.37 feet;  
thence N 72°35'00" E, 300.09 feet;  
thence S 17°05'29" E, 34.74 feet;  
thence along the arc of a non-tangent 252.50 foot radius curve to the left from a tangent bearing S 72°54'31" W through a central angle of 54°56'25" a distance of 242.12 feet;  
thence S 17°58'07" W, 41.29 feet;  
thence along the arc of a tangent 87.50 foot radius curve to the right through a central angle of 46°09'22" a distance of 70.49 feet to the point of beginning.

Containing 2638.43 acres, more or less.

## DESCRIPTION

### GOLF COURSE AREA

Portions of Sections 14, 15, 22, 23, 24, 26 and 27, T18N, R19E, MDM, Washoe County, Nevada, more particularly described as follows:

Parcel 2A of Survey Map 3150, as shown on the plat thereof, recorded November 27, 1996, as Document No. 2051794, Official Records of Washoe County, Nevada;

Parcels 2 and 3 of Parcel Map 3215, as shown on the plat thereof, recorded June 2, 1997, as Document No. 2104035, Official Records of Washoe County, Nevada;

Parcels 2A, 3A and 1B of Survey Map 3294, as shown on the plat thereof, recorded August 26, 1997, as Document No. 2128435, Official Records of Washoe County, Nevada;

Containing 551.90 acres, more or less.

## DESCRIPTION

### COMMERCIAL CENTER

Portions of Sections 23 and 24, T18N, R19E, MDM, Washoe County, Nevada, and being a portion of Parcel 1A of Survey Map 3294, as shown on the plat thereof, recorded August 26, 1997, as Document No. 2128435, Official Records of Washoe County, Nevada; more particularly described as follows:

Commencing at the southwest corner of said Section 24;  
thence along the south line of said Section 24, S 89°56'17" E, 884.69 feet;  
thence N 50°25'19" E, 496.72 feet;  
thence N 31°56'15" E, 623.45 feet to a point on the northerly line of Arrowcreek Parkway;  
thence along said northerly line the following courses and distances:  
N 37°41'43" W, 429.99 feet;  
along the arc of a tangent 910.00 foot radius curve to the left through a central angle of 16°48'17" a distance of 266.90 feet;  
N 54°30'00" W, 386.14 feet;  
along the arc of a tangent 490.00 foot radius curve to the right through a central angle of 50°49'12" a distance of 434.62 feet;  
thence N 03°40'48" W, 455.56 feet;  
along the arc of a tangent 710.00 foot radius curve to the left through a central angle of 46°40'18" a distance of 578.35 feet;  
thence N 50°21'06" W, 375.49 feet;  
along the arc of a tangent 840.00 foot radius curve to the right through a central angle of 22°56'48" a distance of 336.42 feet to the TRUE POINT OF BEGINNING;  
thence continuing along the arc of said 840.00 foot radius curve to the right through a central angle of 14°25'02" a distance of 211.37 feet;  
thence N 72°35'00" E, 300.09 feet;  
thence S 17°05'29" E, 34.74 feet;  
thence along the arc of a non-tangent 252.50 foot radius curve to the left from a tangent bearing S 72°54'31" W through a central angle of 54°56'25" a distance of 242.12 feet;  
thence S 17°58'07" W, 41.29 feet;  
thence along the arc of a tangent 87.50 foot radius curve to the right through a central angle of 46°09'22" a distance of 70.49 feet to the point of beginning.

Containing 31,116 square feet, more or less.

## INTRODUCTION

This report presents the results of the master sanitary sewer study for the proposed ArrowCreek development in Washoe County, Nevada. This report shall provide the general sanitary sewer design guidelines for all future developments of the project. Final design may vary as long as the design concept as established in this report is maintained. Due to the existing topography, it is quite impossible to have any further development upstream of the project.

## SITE DESCRIPTION

ArrowCreek comprises 3,272 acres of undeveloped land located west of the present terminus of Zolezzi Lane as shown on the Vicinity Map.

The site slopes generally toward the northeast at grades ranging from 6 to 10 percent, with a total relief of approximately 1,125 feet. Two major drainageways traverse the property -- Thomas Creek along the southern and eastern edges and Dry Creek through the western & north central portions of the land.

The majority of the project site lies within FEMA Flood Zone X "unshaded", indicating minimal flood hazard. Thomas Creek and a portion of Dry Creek within the project site have been identified as FEMA Flood Zone A, indicating the limits of the 100-year flood. Wetlands and Waters of the USA are also identified on various branches of Dry Creek and Thomas Creek throughout the project site.

## PROJECT DESCRIPTION

ArrowCreek proposes 1,090 residential lots and two 18-hole golf courses. Other site amenities include an entry gate building, a community center, a golf clubhouse and a maintenance building. The residential lots are grouped into neighborhoods with lots ranging in size from 12,000 square feet to over 1 acre. No structures other than the roadways are proposed in the Flood Zone A area. Bridges will be provided at all locations where the roadway crosses the wetlands and/or the waters of the U.S.A. All utilities are to be spanned

with the roadway bridges. Due to the existing topography, it is quite impossible to have any development upstream of the project. Therefore, future sewage contribution from any upstream area is not considered.

### SCOPE OF STUDY

1. Provide a schematic layout of the onsite sanitary sewer system based on the current site plan.
2. Identify onsite locations where sewer lift stations will be required.
3. Evaluate the adequacy of the existing sewer system downstream for serving the ArrowCreek Project.
4. Identify where and when upgrades of the existing system are needed.

### ONSITE STUDY

#### General Description

The onsite sewer system is set up based on the lot layout and the anticipated grading per the current site plan as shown on the Master Sewer Plan. The sewer will be spanned with the roadway at all crossings with the flood zone, wetlands, and the Water of the U.S.A., and the proposed sewer system therefore will not disturb these areas.

The site is divided into 25 sub-areas with 23 design points. The number of lots contributing to each design point are estimated. The results are tabulated in Table 1 and on the Master Sewer Plan.

#### On-site Systems & Tie-In Locations

Due to the existing topography, there will be two onsite systems. Both systems will be crossing the east site boundary.

The system at the south will be a gravity system serving a total of 300 lots and the Entry Gate Building. It leaves the site at the southeast corner where it will tie-in to an 8" stub provided by the Ted Hunsberger Elementary School project on ArrowCreek Parkway. An 8" service connection is also prepared for a future park south of the school site.

For the remainder of the project, the Community Center, the Golf Clubhouse and the Maintenance Building plus approximately 484 lots can be sewered by gravity and 306 lots will be sewered either by pressure systems or individual septic systems. Two lift stations and force main systems, as shown in the Master Sewer Plan are required for the current site plan. However, the final site plan will depict the necessities for these lift stations and force mains. Nonetheless, the sewer system serving these lots will be leaving the site at the northeast corner and tie-in to an existing system on Zolezzi Lane at approximately 2,650 feet east.

An alternative to the two lift stations and 790 lots sewerage to the north, as described above, it may be feasible to sewer the extreme northeast portion (sub-areas 17-20) through the Southwest Vistas project. This would eliminate the need for one lift station, but may require an upgrade to the existing Southwest Vistas lift station. Also, downstream capacity through Southwest Vistas will need to be determined.

### Design Criteria

Per the Washoe County Utility Services Division's latest requirement, design flows for the residential units shall be 325 gallon per day per lot with a peak factor of 3, also Manning's n of 0.0012 shall be used for the hydraulic calculations of sewer pipes. Sewage contributions from the various onsite facilities (clubhouse, entry gate house, etc.) are not added to the total flow since their contributions are quite minimal comparing to the overall and their peak usage times are quite different from the residential use.

## **OFFSITE STUDY**

### Area of Study

The existing sewer lines at both tie-in locations are running in the easterly direction, and are joined into one at the intersection of Water Lily Way and West Daisybrush Lane, somewhere

in between Zolezzi Lane and Whites Creek Lane. Continue running toward the northeasterly direction, this combined system is connected to an existing trunk line on South Virginia Street. Per Washoe County Utility Services Division, once the system reaches this location, capacity is of no concern. Therefore, the offsite study area will be between the tie-in locations and the junction at the South Virginia Street and Zolezzi Lane intersection.

The existing system in question as described above is generally known as the Special Assessment District No. 9 Fieldcreek Trunk Lines. The subdivisions that are planned for this system include approximately 1,450 lots at full built-out as summarized below:

Thomas Creek Subdivision	195 Lots at full built-out
Saddlehorn Subdivision	432 Lots at full built-out
Fieldcreek Ranch Subdivision	447 Lots at full built-out
Southwest Vista Subdivision	376 Lots at full built-out

The existing information is shown on the Offsite Master Sewer Plan in pocket.

#### Current Connections

Thomas Creek Subdivision is fully constructed but the houses are all serviced by individual septic systems. There is no existing plan of when the subdivision will be connected to the system, but the Washoe County Utility Services Division would like to reserve the sewer capacity for these homes.

The other three subdivisions are not at full built-out yet, but the homes that are constructed are currently connected to the sewer system. For the purpose of estimating the number of current connections, the number of lots included in the subdivision final maps are listed in Table 2 and summarized below:

Saddlehorn Subdivision	266 Lots
Fieldcreek Ranch Subdivision	326 Lots
<u>Southwest Vista Subdivision</u>	<u>84 Lots</u>
Total Current Connections	676 Lots

## Study Groupings

For evaluation purpose, the existing sewer system in question is grouped into six sections as shown in the Offsite Master Sewer Plan and described below:

### Section 1: Fieldcreek Sewer System Trunk

This section contains sewer lines of 10" to 18" diameters between South Virginia Street and Junction A which is located at the intersection of West Daisybrush Lane and Water Lily Way. It is intended to accept flows from the entire study area, including Thomas Creek, Saddlehorn, Fieldcreek Ranch, and Southwest Vista Subdivisions. With the additional flow from the ArrowCreek project, it will be evaluated for a total of 2,540 lots (1,450 lots from the other subdivisions and 1,090 lots from ArrowCreek).

### Section 2: Fieldcreek Sewer System South (Part 1)

This section covers the 8" diameter sanitary sewer lines recently constructed with the Ted Hunsberger Elementary School Project. It is located between the east boundary of ArrowCreek and Junction B on Whites Creek Lane. The contributing flows will include approximately 300 lots from ArrowCreek plus the elementary school and the other miscellaneous areas such as the park, neighbor commercial, and fire station. Due to the different usage pattern of the residential lots versus other non-residential areas, and with the residential lots being the major contributors; it is adequate to evaluate the sewer system based on the residential lot demands only.

### Section 3: Fieldcreek Sewer System South (Part 2)

This section covers a relatively short length of 8" diameter sewer lines between Junction B and Junction C situated on Fieldcreek Lane approximately 400 feet east of Thomas Creek Road. It will accept flows from ArrowCreek (300 lots) and Saddlehorn Subdivision (432 lots); that is, a total of 732 lots.

#### Section 4: Fieldcreek Sewer System South (Part 3)

This section consists entirely of 10" diameter sewer lines that run between Junction C and Junction A. In addition to ArrowCreek and Saddlehorn (732 lots), approximately sixty percent (60%) of the Fieldcreek Ranch Subdivision (269 lots) will also be serviced by this line. A portion of the Thomas Creek Subdivision could also be serviced by this line, however, without any specific plan on how it would tie in to the system, it is assumed to be self-contained within the subdivision and may possibly tie-in to the existing sewer line on Zolezzi Lane directly downstream from Thomas Creek Road and not tributary to this section of the sewer line. Therefore, it will be evaluated for a total of 1001 lots.

#### Section 5: Fieldcreek Sewer System North (Part 1)

This section covers the areas between the connection point approximately 2,650 feet east of ArrowCreek on Zolezzi Lane and Junction D which is located at the intersection of Water Lily Way and Llama Court within the Fieldcreek Ranch Subdivision. Areas to be considered are the Southwest Vista Subdivision (376 lots), Thomas Creek Subdivision (195 lots), and the north portion of ArrowCreek that include approximately 790 lots and three other site facilities (Community Center, Golf Clubhouse and Maintenance Building). For the same reason as discussed previously, only the flows from the residential lots are included in the calculations. Therefore, a total of 1,361 lots will be considered.

#### Section 6: Fieldcreek Sewer System North (Part 2)

This section lies between Junction D and Junction A. In addition to the 1,361 lots mentioned above, this line is serving the remaining forty percent (40%) of the Fieldcreek Ranch Subdivision (approximately 178 lots). Therefore, this section of the sewer system will need to be designed for a total of 1,539 lots.

The sewer service demand on each of the six study sections, under both the ultimate and the current conditions, are listed in Table 3.

Source of Information

The existing sewer system in this study was designed and constructed at various times by various entities. Except for the section "Fieldcreek Sewer System South (Part 1)" that the information is based on the Ted Hunsberger Elementary School Improvement Plans prepared by CFA, Inc., information for all other sections of the existing sewer system are obtained from as-built plans provided by the Washoe County Utility Services Division. While the information presented here may be adequate for this preliminary study, recommendations for improvements at the construction level shall be made based on actual surveyed information.

Flow Estimation

A good way of estimating existing flow is to measure it. At the time of final design, flows shall be monitored at some key locations in order to assess the real existing flows. For the purpose of this report 325 gpd per lot is used for all lines. A peak factor of 3 is applied to sewer lines of all sizes.

On a per lot basis:

$$Q_{(8" \text{ diameter \& below})} = 325 \text{ gpd} \times 3 = 975 \text{ gpd} = 1.508 \times 10^{-3} \text{ cfs}$$

where

Q = flow rate

gpd = gallons per day

cfs = cubic feet per second

and

$$1 \text{ cfs} = 646,387.26 \text{ gpd}$$

Capacities of the existing sewer lines are evaluated at 80% full using Manning's n of 0.0012.

### Upgrade of the Existing System

Based on the available data, the existing capacity of each pipe segment (or pipe run) is estimated for the six study sections. The estimated capacities are converted into number of lots for convenience in identifying the needs of upgrade under the ultimate conditions. The results are presented in Tables 4-1 to 4-6.

For all the segments where upgrade is needed, an upgrade schedule is prepared, as shown in Table 5, to indicate when and where the upgrades are needed. This schedule however, only covers the two hypothetical situations:

1. Worst case scenario - All the lots within the study area are already connected to the system prior to any ArrowCreek development.
2. Best case scenario - There is no additional hook-up from the other subdivisions during the span of the ArrowCreek development.

In reality, as ArrowCreek develops, there will be some additional hook-ups from the other subdivisions within the study area, but probably not all. Therefore, the need and the timing of the upgrades shall be evaluated dynamically with the development by incorporating the concept as established here.

Future upgrades, which may include upsizing an existing line or providing additional lines (parallel system), shall be determined based on the site conditions at the time of final designs.

### **CONCLUSIONS**

The ArrowCreek project can be developed under this proposed master plan without adverse effect to the adjacent and downstream properties.

The findings in this report are summarized below:

1. Due to the site topography, there needs to be two onsite systems. The system at the south exits the site to the east to tie-in to the system on ArrowCreek Parkway east of

- Thomas Creek. The system at the north exits the site to the east to tie-in to the system on Zolezzi Lane. These two systems that ArrowCreek is tying into are both tributary to the Special Assessment District No. 9 Fieldcreek Trunk Lines.
2. Based on the current site plan, two onsite lift station locations are identified to serve a total of 306 lots. However, the actual needs, sizes, and locations for these lift stations shall be depicted by the final site plan. An alternative is to sewer a portion of the project through Southwest Vistas and eliminate the need for one lift station.
  3. Due to the topographic constraint, it is quite impossible for other future developments in the project vicinity to be serviced through the ArrowCreek Sewer System. Under the full built-out conditions of the study area, except for a few segments of the system, the majority of the existing downstream sewer lines have adequate capacities to serve the ArrowCreek project and the four subdivisions within the study area.
  4. Locations of the upgrades to the existing system have been identified under both the worst case and the best case scenarios. The actual when, where, how of the upgrades shall be evaluated, using the concepts established in this report, at each phase of the development based on the conditions at the time.

DRAFT

DEVELOPMENT STANDARDS HANDBOOK

FILE COPY

DA9-1-93

April 25, 1996

*Approved with conditions  
by DRC meeting on 5-9-96*

**EXCERPTS FROM THE WASHOE COUNTY PLANNING COMMISSION  
STAFF REPORT**

**To:** Members of the Design Review Committee

**Re:** Development Agreement Case No. DA9-1-93 for Southwest Pointe

**Date:** April 30, 1996

**Prepared By:** DSY

**GENERAL INFORMATION SUMMARY**

**Applicant/Property Owner:** Southwest Pointe Partners/Redfield Land Company

**Requested Action:** This development agreement will facilitate the development of a residential community including 1,090 homesites with common open space, a water delivery system, two golf courses with related recreational facilities, a day care facility, an equestrian center, and a commercial village center. The total acreage of the project is  $\pm 3,171.6$  acres and it is located north of Mount Rose Highway (SR 431) and west of Thomas Creek Road. The property is designated Low Density Suburban (LDS), Low Density Rural (LDR), Medium Density Rural (MDR), High Density Rural (HDR) and General Rural (GR) in the Southwest Truckee Meadows Area Plan and is situated within portions of Sections 3, 10, 13, 14, 15, 22, 23, 24, 26 and 27, T18N, R19E, MDM, Washoe County, Nevada. (APN: 49-010-04, 49-010-10 and 49-030-12)

**ISSUES AND CONDITIONS**

Article 814 of Development Code requires a Development Standards Handbook for all Development Agreements. The items specified within the following condition, other than the design of Whites Creek Lane, have been incorporated into the Development Standards Handbook.

97. Prior to the approval of the final development agreement, the developer shall submit schematic landscaping and architectural design guidelines of the entire project to the Design Review Committee (DRC) for its review and approval. These guidelines shall address, but not be limited to, type and color of building material, general architectural design, fencing, landscaping material (if plant material: type, size at time of planting, maturation size at full growth, period of time between planting and full growth), landscaping location, landscaping irrigation system, and financial assurances that landscaping will be planted and maintained.

The Design Review Committee shall also review the design of Whites Creek Lane, specifically to address Condition No. 18C.

**Design Review Committee**  
**re: Development Agreement DA9-1-93 (Southwest Pointe)**  
**April 30, 1996 -- page 2**

The Design Review Committee need only address the specifics noted within Condition 97. At its discretion, the committee may choose to provide input on other landscaping, design, or aesthetic considerations. The following requirements have been excerpted from the Article 814 of the Development Code.

- (g) Development Standards Handbook. A development standards handbook that provides development standards for the following:
- (1) Architectural style;
  - (2) Energy supply and conservation;
  - (3) Land grading, erosion and flood control;
  - (4) Natural hazards;
  - (5) Fire protection, security services and medical services;
  - (6) Housing supply;
  - (7) Water supply, treatment, storage, conservation and reuse;
  - (8) Wastewater treatment;
  - (9) Maintenance and enhancement of air quality;
  - (10) Wildlife and fisheries preservation;
  - (11) Historic, cultural and archaeological resources preservation;
  - (12) Recreational amenities;
  - (13) Open space provision and maintenance;
  - (14) Financial assurances for the development of the property and provision of services;
  - (15) Phasing of development;
  - (16) Procedures for the implementation of the development standards and amendment of the development standards handbook;
  - (17) Documentation verifying the development agreement approval, including reductions of all maps/drawings approved by the Board of County Commissioners as part of the approval of the preliminary development agreement; and
  - (18) Such other information which may be required by the Director of Development Review.
- (h) Other. Any optional contents included in the preliminary development agreement pursuant to this article, and any additional material required pursuant to any terms or conditions of approval of the preliminary development agreement.

# I. INTRODUCTION

## Purpose

This Handbook presents design guidelines and standards that will apply to the community at Southwest Pointe. This booklet serves several purposes. First, it will help prospective architects, designers, builders, and owners create residences and improvements that will fit within a defined architectural character. Second, the Handbook is intended to fulfill the requirements of Article 814, Development Agreements, of the Washoe County Development Code. Specifically, Section 110.814.75(g) of this article presents the topics that must be addressed in the Development Standards Handbook. And third, it is intended to provide the county and the residents in the Southwest Truckee Meadows with a feeling for the type of development being proposed.

This Handbook, along with additional provisions and "Residential Lot Declarations" that will be set forth in the Southwest Pointe CC&Rs, form the basis for evaluation of all drawings and specifications for construction submitted to the Southwest Pointe Architectural and Landscape Control Committee (ALCC) for review and approval, including any additions and modifications. The CC&Rs may specify further guidelines or restriction to those provided in this Handbook. When not in conflict, this Handbook is not meant to duplicate or supersede the requirements of Washoe County. Plans for construction will need to be processed through Washoe County and appropriate public agencies as well as through the ALCC.

A preliminary development agreement for Southwest Pointe was approved by the Board of County Commissioners on February 8, 1994. Subsequent to that approval, the preliminary agreement was amended on three occasions. The first amendment, approved on September 27, 1994, granted an 18-month extension of time for preparing the final development agreement. The second amendment, approved on November 8, 1994, modified several of the original conditions so that grading of the first 18-hole golf course and installation of utilities could commence, prior to recording the final development agreement. The third

amendment, approved on \_\_\_\_\_, 1996, modified, deleted, updated, and reorganized the conditions of approval. Additionally, special use permits have been approved for the golf course and related facilities (SPW9-13-93) and water system (SPW9-10-93). Copies of the conditions of approval for all actions taken by the Board of County Commissioners and the Washoe County Planning Commission are included as Exhibits \_\_\_\_\_ through \_\_\_\_\_ in the Development Agreement. Additionally as required by Section 110.814.75(g) (17), a copy of the original Concept Plan is included with Exhibit \_\_\_\_\_.

### **Project Description**

**Setting** - Southwest Pointe is set in the context of a rugged mountain backdrop and sagebrush-covered slopes that are punctuated by Thomas and Dry Creeks. The 3,272-acre project is located on a prominent site overlooking the Truckee Meadows. The majority of the property has unobstructed views, and the project has been laid out to maximize these views. Both Thomas and Dry Creeks cross the property, and the site plan takes these two prominent features into account. There is some riparian vegetation along the creeks but a majority of the site is covered with moderate to dense stands of bitterbrush and sagebrush and thinly scattered field grass and alfalfa.

As shown in Figure 1-1, the property is bounded by the Toiyabe National Forest to the west, Thomas Creek along the south, and the established neighborhoods of Thomas Creek Estates and Saddlehorn to the southeast and east. Elevations range from approximately 4,950 feet along the eastern portion of the site to 5,900 feet on the west. The property slopes in a southwest to northeast direction with slopes generally ranging from 5 to 15 percent. Moderately steep slopes, generally between 15 and 30 percent, are found at the northern end of the site.

**Site Plan** - The site plan for Southwest Pointe is based on a planning approach that analyzes the constraints and opportunities of the property to identify the most appropriate development areas. Site characteristics, including topography, geology, flora and fauna, drainage, view sheds, access points, and easements were mapped. In addition, surrounding land uses were also considered.

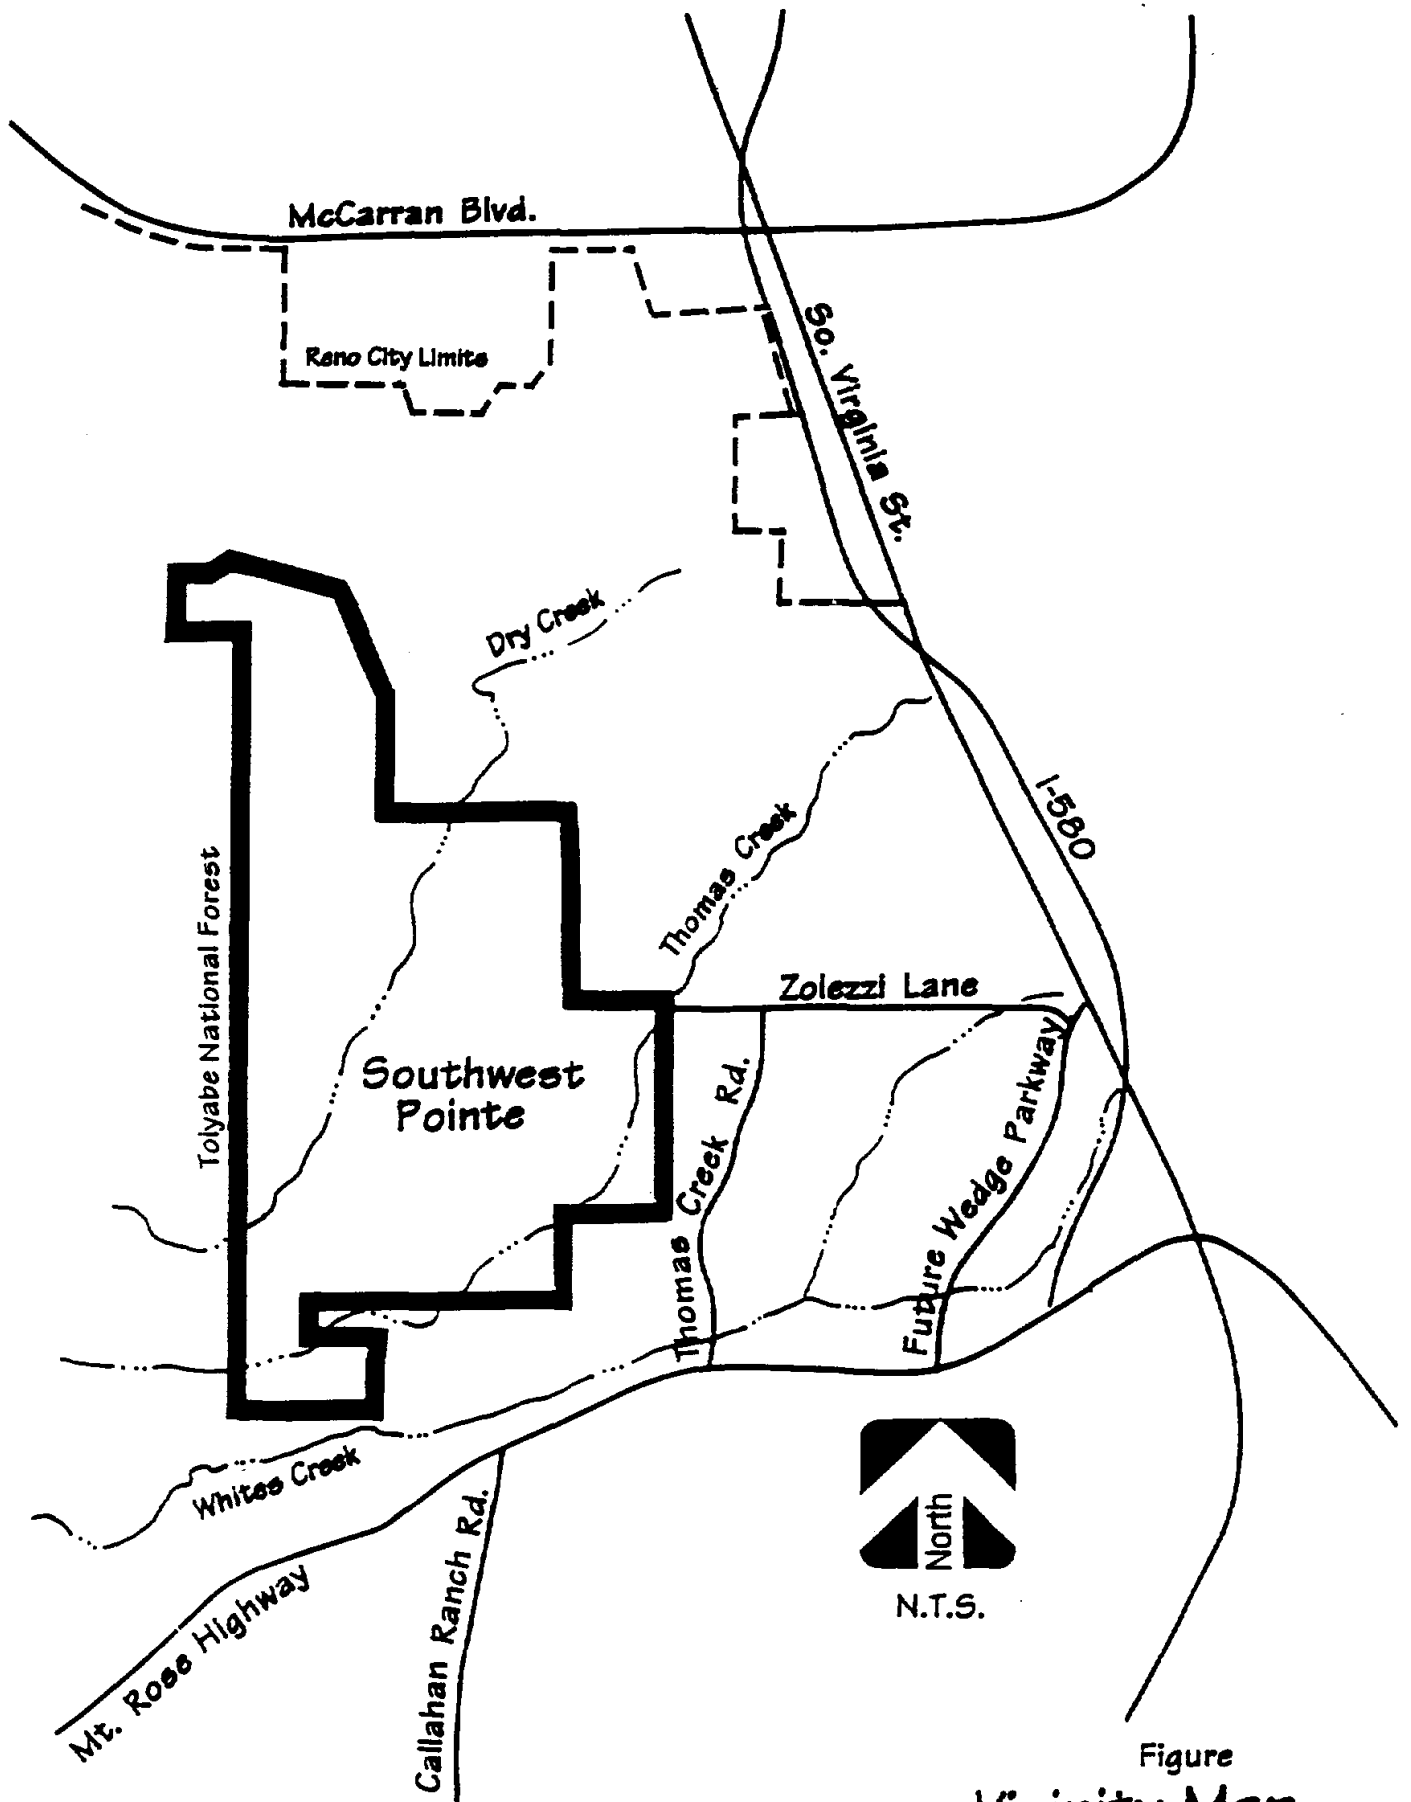

Figure  
Vicinity Map

The topography is steep and mountainous along the western boundary and in the "panhandle" to the north. Remaining portions of the site are characterized by gently and moderately sloping terrain with slopes ranging between 5 and 15 percent. These terrain features create panoramic views of downtown Reno and the Southeast Truckee Meadows from nearly every portion of the site.

A number of Holocene faults cross the property, generally running in a north-south direction. These faults define corridors within which development was planned. Holocene faults are defined as faults that show evidence of movement within the past 11,000 years.

Two drainages that form major geographical features traverse the property -- Thomas Creek along the southern and eastern edge and Dry Creek through the western and north central portions of the land. Some sections of the creeks are bordered by riparian wetlands and, therefore, setbacks for development are required. These riparian corridors are generally not visible from most of the site; however, these corridors are among the most scenic areas of the property.

The winter range for the Loyalton-Truckee deer herd covers the "panhandle" and the north portions of the site. Some residential and golf course development is proposed within the winter range; however, there is also a significant amount of acreage left as open space.

Blending the physical characteristics of the property with the allowable lot count of 1,090 single-family dwelling units and the development program, which calls for 36 holes of golf, the following design objectives were formulated and implemented in the site plan:

- Provide significant natural open space buffers around the periphery of the project to preserve the visual and physical environment of surrounding residents and to focus the views from within the property.
- Reserve the Thomas Creek and Dry Creek corridors and use creek edges, where feasible, for golf course fairways and for visual amenities from lots.

- Remain consistent with the intent of the Southwest Truckee Meadows Area Plan. Set aside a location for the civic uses proposed in the Area Plan -- schools, neighborhood park, regional trails, and a fire station.
- Create a major community entrance at Whites Creek Lane with signage, a gate house, and landscaping. Integrate the bridge structures across Thomas Creek with the community entrance features.
- Use the earthquake faults and associated building setbacks, wherever practical, as golf course fairways, road right-of-ways, and open space.
- Establish a rural golf course community theme by using smaller paved road sections, by creating neighborhood enclaves, and by controlling development through comprehensive design standards.
- Develop a mix of lot sizes within the following parameters: 10-20 percent one acre and larger, 30-40 percent 1/2 acre and larger, and 40-50 percent with a minimum size of 12,000 square feet. All residential units are single-family dwellings; no other housing types are proposed. Primary lot orientation should be to the golf courses and/or the panoramic views.

As shown on the Site Plan on the following page, the land use pattern clusters residential neighborhoods within enclaves created by the golf course fairways. All edges of the proposed development reserve substantial areas of natural open space, ranging from the entire "panhandle" to a minimum of 200 feet to the nearest existing lot. Table 1-1 presents a break down of the proposed land uses.

Table 1-1  
**Land Use Summary**  
 (acres are approximate)

<u>Land Use</u>	<u>Acreage</u>	
Residential	860	(26%)
Golf Course/Roads/Common Area	823	(25%)
Civic Uses	62	(2%)
Village Center	27	(1%)
Open Space	<u>1500</u>	(46%)
TOTAL	<b>3,272</b>	<b>(100%)</b>

**Public Facilities** - Various civic uses are shown on the site plan. These include an elementary school, possible middle school, fire station, neighborhood park, and regional trails. The Washoe County School District will be responsible for construction of the elementary and middle schools. A special use permit has already been approved for the elementary school and construction will start in the late spring or summer of 1996. The School District hopes to have the elementary school open in September 1997.

Construction of the middle school is dependent on several factors. First, based on the Conditions of Approval (i.e., Condition #51), the site must be reserved for an off-stream stormwater detention facility for a certain length of time. If the detention facility is not constructed, the site will then be dedicated to the School District for a middle school. The second factor is that the voters of Washoe County must pass a bond issue in November 1996 for future school construction.

A one-acre site for a fire station is shown at the entrance to Southwest Pointe. The site will be dedicated prior to recordation of the first final map (i.e., Condition #92). Construction of the fire station will be the responsibility of the Nevada Division of Forestry (NDF); however, it is possible that the Truckee Meadows Fire Protection District will also be involved in the construction and operation of the station since the location could serve both NDF and Truckee Meadows.

SITE PLAN

The neighborhood park and the regional, public trail system are discussed in detail in the Open Space Management Plan, which was prepared to comply with the Conditions of Approval (i.e., Conditions #93 through #96). According to the Management Plan, the Washoe County Department of Parks and Recreation will be responsible for constructing and maintaining the regional trails. The neighborhood park will be dedicated to Washoe County after the improvements have been completed. Southwest Pointe Partners or its successor will be reimbursed for the cost of the improvements and for the fair market value of the land from fees collected in Southwest Pointe from the Residential Construction Tax.

### Development Phasing

The approximate date for the start of construction for the first phase shall be on or before October 1, 1996. The first phase of the project shall be constructed of the first 18 holes of the golf course. All phases after the first phase for subdivision improvements shall be constructed within the time frames allowed pursuant to tentative maps and final maps for the project. Nonresidential development shall be constructed pursuant to special use permits, when applicable, under the time frame provided therein. Other phasing requirements shall be as provided in the Conditions of Approval.

## II. COMMUNITY DESIGN GUIDELINES

### Community Design Character

Southwest Pointe is located in the uplands area of the Truckee Meadows between the high desert valley floor and the mountain range of the Sierra Nevadas. This area has low vegetation generally of sagebrush and native shrubs.

The Southwest Pointe Community Design Character is intended to be organic to and respectful of the existing natural and regional environment. The existing environment is to be maintained by minimizing grading and earthwork and working with the land's terrain in locating roads and other improvements.

Due to the inherent visibility of the site and its natural features, the prescribed architectural and structural character is intended to blend into the natural environment and to enhance the nature of that environment by adding forms, features, texture, colors, and plants that are similar to those on site.

### Community Components

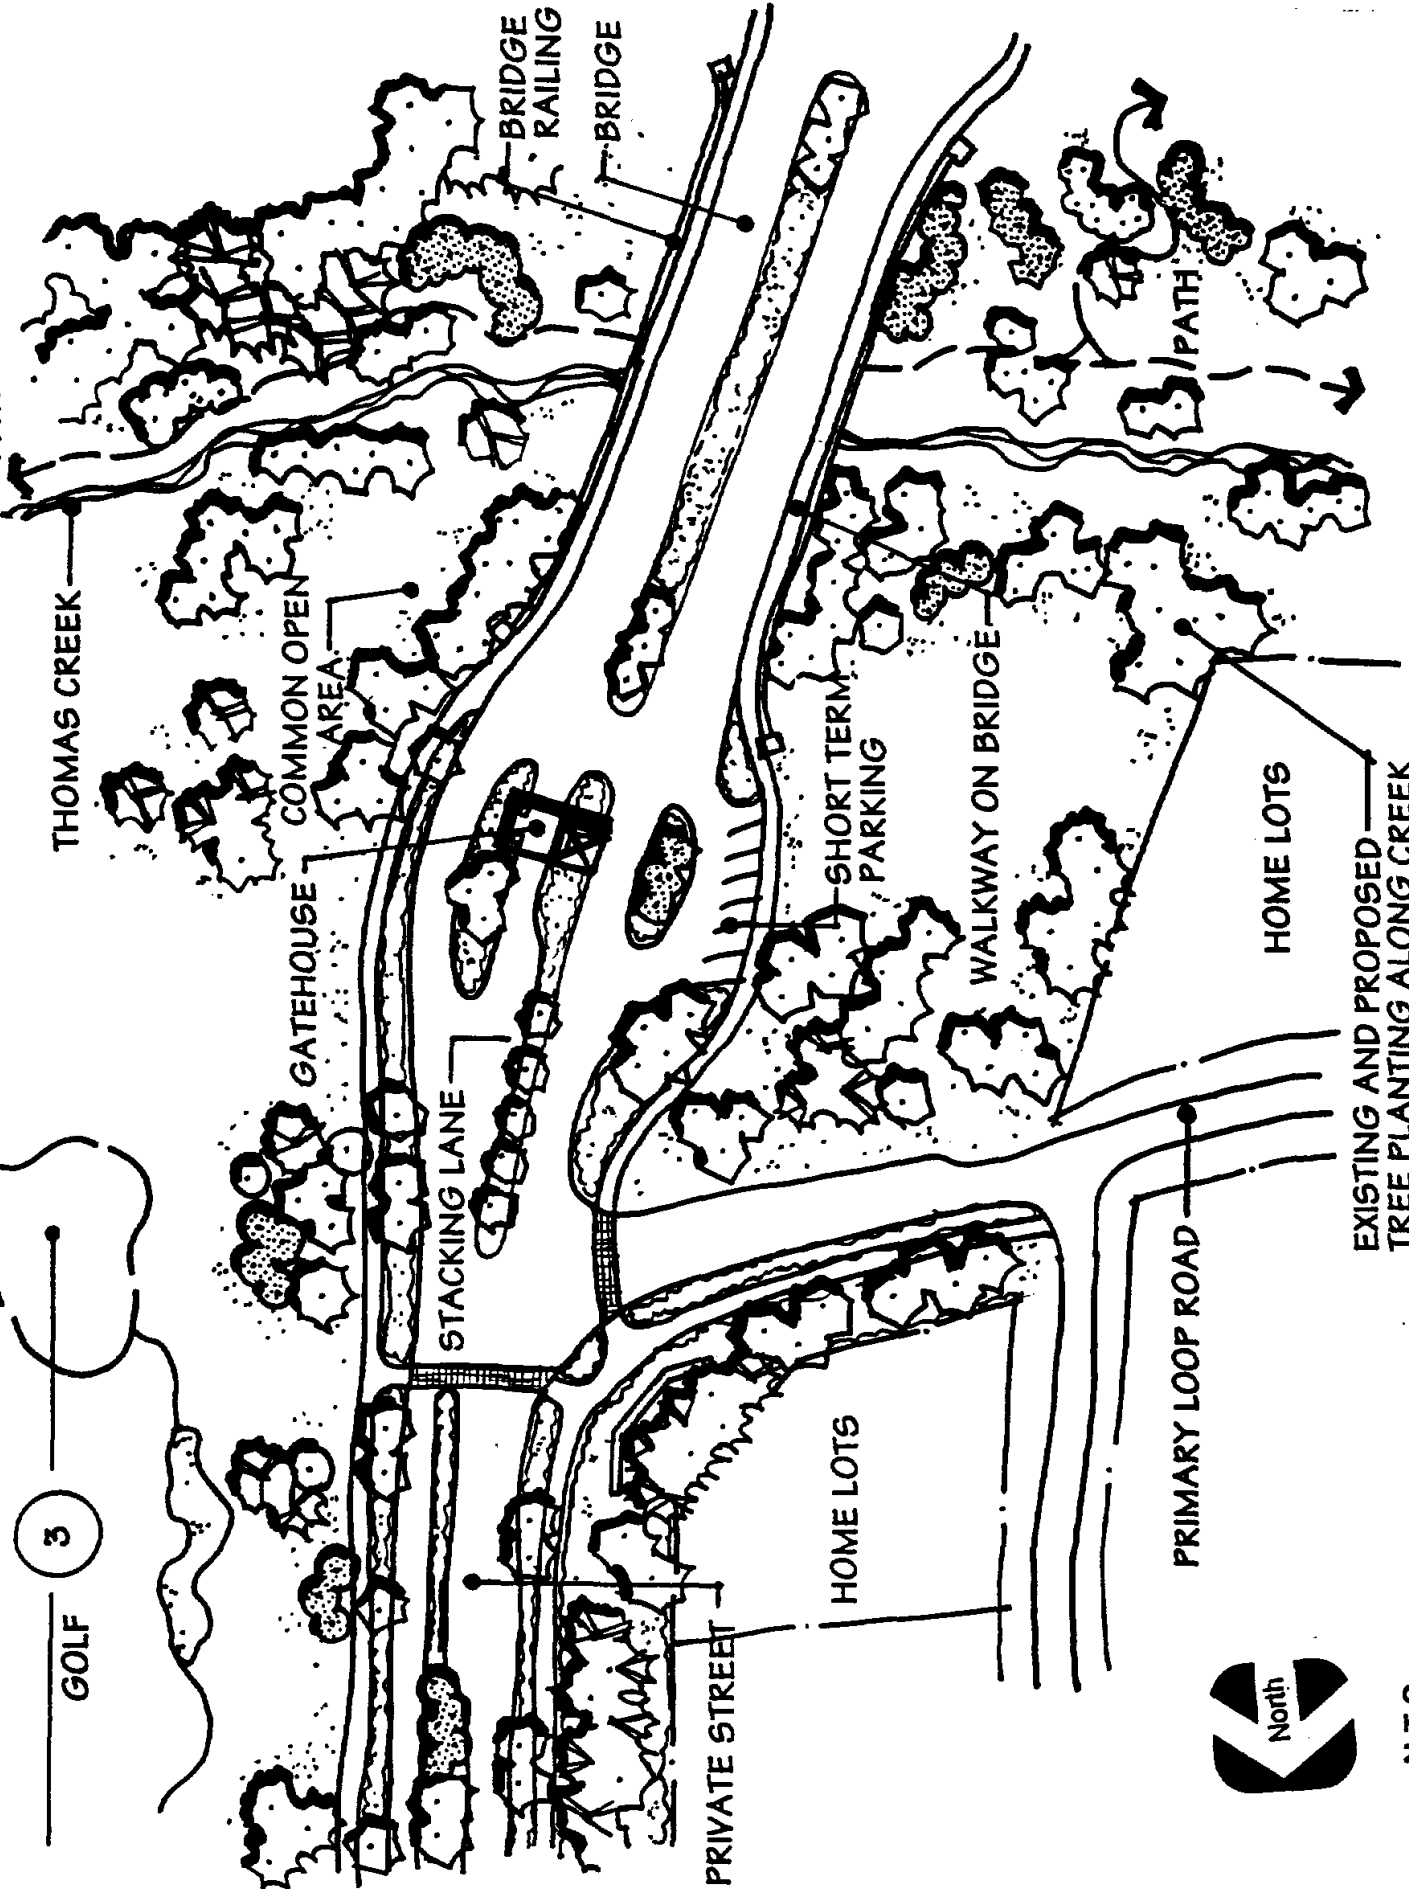

**Entry & Gate House** - The main project entry from Whites Creek Lane will feature one-way streets with a wide landscaped median between for safety and visual appeal. (Refer to Figure 2-1.) The entry is the visual gateway to the subdivision and the first impression to residents and guests. In that regard, the community character begins here with a strong visual impression.

The entry landscape for the first one quarter mile upon entering the project is a dense, natural forest setting, consisting of predominately native conifers, with a native woodland understory that provides fall color. The intent is to introduce a strong landscape theme consistent with the regional character, while enclosing views from the road. The landscape enclosure will soften the adjacent 3:1 embankments on the sides of the road and effectively screen the elementary school parking lot.

3

GOLF

ENTRY AREA PLAN

N.T.S.

The views, at first enclosed, will then dramatically open up at the approach to the bridge and gate house situated at the Thomas Creek crossing, with elevated vistas over fairways and the creek setting. Traveling into the entry area, the motorist approaches the gate house. The gate house will provide controlled access to the community and will direct visitors within Southwest Pointe.

The gate house has forms and materials resembling those on site and historic to the region. (Refer to Figure 2-2.) Portions of the building's facade are native stone, which establishes natural imagery. Beyond the entry building are entry gates with stone monuments and a vehicle turn-around. Once the traveler passes the entry, the vistas open, highlighting the project's open space, streetscape, golf course, and neighborhood entrances.

**Neighborhood Entries** - Landscaping, monumentation, and lighting will be used at neighborhood entries in a manner that creates a consistent theme throughout the project. A hierarchy of entries will be created. The treatment depicted in Figure 2-2 will be used at key entry locations along the main loop road. It features a combination of evergreen and deciduous trees with an understory of shrubs. Annuals and perennials will be planted for seasonal color. The entry also includes a retaining wall of native stone within which the neighborhood identification sign or clubhouse sign could be incorporated. Each minor neighborhood entry will be identified with signage, landscaping, and lighting that is consistent with the theme depicted in Figure 2-3.

**Bridges** - Bridge structures will be constructed to span the creeks and drainage ways to minimize grading and site disturbance. The structures may have stone elements at each end with painted decorative metal guard railings to blend in with community standards. (Refer to Figure 2-4.) Native stacked stone may be used to stabilize creek banks at each end of the bridge structure.

**Fences and Walls** - There will be two types of community fencing in Southwest Pointe. (Refer to Figures 2-5 and 2-6.) The first will be a low decorative, split rail design either with or without native stone pilasters. This fencing type will be a maximum of 3 feet high with an 8" x 8" post. In more prominent locations (e.g.,

TYPICAL BRIDGE STRUCTURE

SPLIT RAIL FENCE AND PILASTER

SCREENING FENCE

near the entry to the golf and tennis club), native rock pilasters may be used. The fence will follow the ground plane for slopes up to 10 percent; above that the fence will be stepped. Fencing around golf holes will be split rail without pilasters.

The second is a higher metal or wood fence either with or without native stone pilasters which will provide a visual screen and will only be allowed in certain areas of the development. Use of these fences will be strictly controlled to preserve the open and rural community theme. The fence is a 5 to 6 feet tall with or without stone pilasters. Fencing is either metal ballasters or wood members. All exposed wood surfaces will be lightly stained or treated with preservatives for longevity and appeal.

Walls will be reminiscent of the types seen historically throughout the eastern Sierra, using indigenous rock as a key material. Intersections and key places may be highlighted with attractive stone walls. Street signs or neighborhood identification signs may be integrated into walls.

**Lighting** - Lighting may be provided with landscape uplights on vegetation and pedestrian-scale bollards. Where necessary, along roadways and at intersections, lighting levels should be no more than absolutely required to perform the task for which it is intended (e.g., ambiance, safety).

Lighting levels are important to the overall lighting concept. Lighting is necessary in certain areas. For circulation safety, for functional purposes, and for aesthetics, lighting is often a necessary element. The level of lighting must also be appropriate. In general, lighting levels should be no more than absolutely required to perform the various tasks for which it is intended.

Street lights are required at major intersections (Condition #35). Light standards may be selected from the different types that Sierra Pacific Power Company has available; however, the developer does have the option of selecting different fixtures. Lights may be used as low-level accents for intersection signage and associated landscaping. Uplights to trees around intersections will be flush mounted. Signs should be lit from the ground, backlit, or a combination. Light spillage onto adjacent properties is discouraged.

Around the golf, tennis and swim center, lights in parking lots may be mounted on 25-30 foot tall poles for pedestrian and vehicle safety. The style, color, and type of light will be coordinated with the intersection lights. Entry areas and walkways may be lit with landscape lights and bollards less than 48 inches in height. Tennis court lights will use cut-off style sports lights to limit light spill over onto adjacent property. The multi-purpose sports fields adjacent to the pool/tennis center will not be lit since lighted fields are available at the nearby South Valleys Sports Complex.

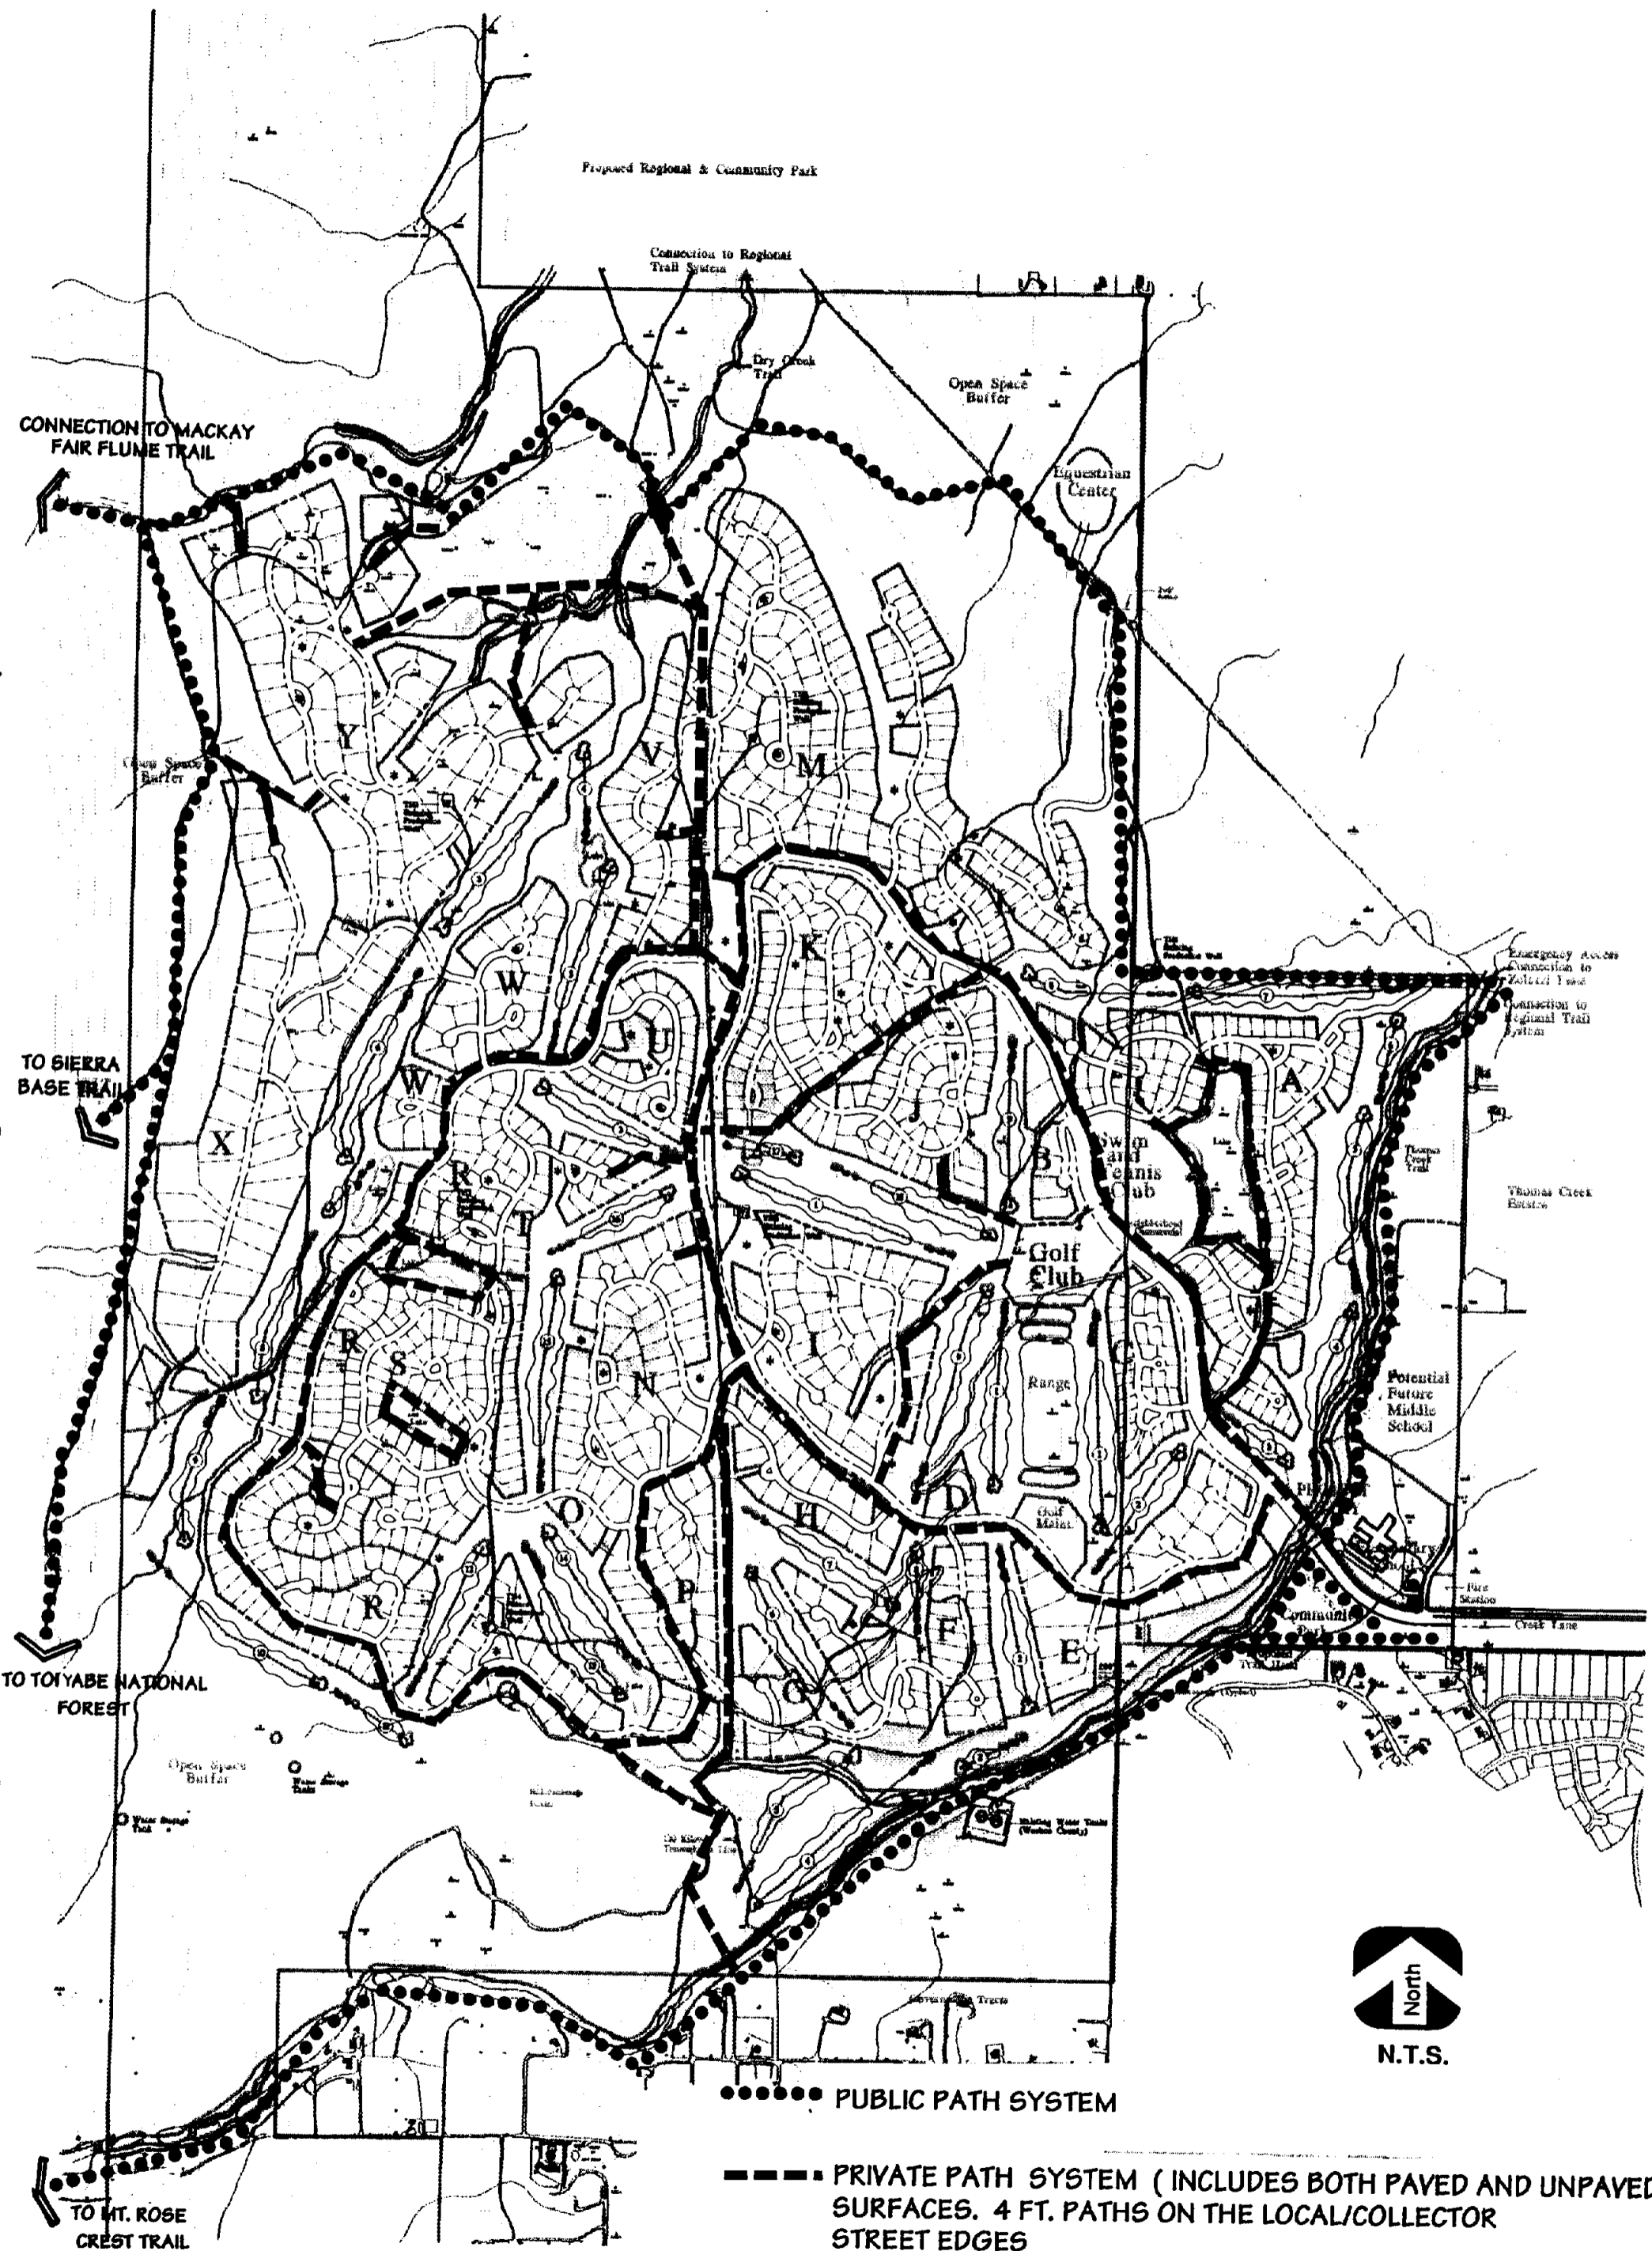

The entry at Thomas Creek and the bridge structure may be lit to a level that allows for safe driving and turning movements. The gatehouse will have overhead downlights for driver and license plate identification. Trees surrounding the entry will be uplit and some 'twinkle' style lights may be used.

Lighting within the neighborhood park will be minimal with a downlight below the shade shelter and an electrical receptacle provided. Field lighting is not desired because of the neighborhood function of the park and the close proximity to existing homes.

**Signs** - Community signing includes project entries, elementary school, neighborhood park, neighborhood entries, street signs, and signs around the golf and tennis club. The intent is to keep all signs along roadways low, at the eye level of the motorist. Community and neighborhood signs will be integrated with entry monoliths. The sign wall will have native exterior fascia. Sign lettering will be a metal attached to a smooth concrete backing or a cast concrete, mortared into place in the rock veneer.

Street signs for the roads and minor activity areas, such as sports fields, will be accomplished with metal or wood signs mounted on specially-designed posts, consistent with overall community design themes. Where possible, signs will be incorporated into low walls at entry points. Landscaping in front and to the sides of these signs will be kept low to avoid visual obstructions.

**Trails** - The proposed public trail system is consistent with the county's master plan for this park district. Figure 2-7 shows the trail system through the project. Regional public trails are proposed along Thomas Creek for access to the Mt.

..... PUBLIC PATH SYSTEM

----- PRIVATE PATH SYSTEM (INCLUDES BOTH PAVED AND UNPAVED SURFACES. 4 FT. PATHS ON THE LOCAL/COLLECTOR STREET EDGES)

**PUBLIC AND PRIVATE TRAIL SYSTEM**

Rose Crest Trail and around the northern portion of the project for access to the MacKay Fair Flume Trail and the U.S.F.S. parcel in Section 11. Both trails provide access to the Sierra Base Trail, which eventually ties into the Hunter Lake Trail. Portions of the Sierra Base Trail are located on U.S.F.S. property and other portions, especially near Dry Creek, are located on project property. It may be necessary to relocate portions of the existing trail because of golf course and residential development near Dry Creek.

Two trail types are proposed for the development -- private and public. Private trails connect residential units to the various project amenities such as the golf/tennis center, schools, neighborhood park, and open space. The trails also lead to the exterior public trail system and regional destinations well beyond the project boundary. In compliance with the Conditions of Approval (i.e., Condition #23), a schematic pedestrian circulation plan of the private trail system is shown in Figure 2-7.

Public trails connect existing residential neighborhoods to destinations such as Mt. Rose, Hunter Lake, and the MacKay Fair Flume Trail. These connections will ensure that public access to public lands to the west is not cut off. The trailhead at the neighborhood park allows for 25-car and 5-truck/trailer parking spaces. Some overnight parking will likely occur, especially for equestrian users whose destinations are sometimes many miles from the trailhead.

The private trails within the street rights-of-way are shown on the street sections in Figures 2-10 through 2-13. On the minor arterial, an 8-foot wide asphalt meandering path is proposed, with a transition to a 6-foot wide sidewalk beyond the entry gate. Both paths will follow the maximum proposed road gradient of 9 percent. The 8-foot width is intended to be multi-purpose -- bicycle, pedestrians, in-line skating, etc. A level dirt/gravel shoulder width of 2 feet will be provided for emergency pull-off. (Refer to Figure 2-8.)

Private trails outside of the street right-of-way consist of both primary and secondary types. Primary trails connect high use areas with residential units. A 4 to 6-foot wide asphalt trail is proposed, with a proposed sustained running slope of 5 percent. Rest areas will be provided every 1000 feet, consisting of a level pad outside of the path travel surface. Secondary trails connect residential

areas together and also extend to the public regional trail system. A 4 to 6-foot wide packed gravel or decomposed granite trail is proposed, with a sustained running slope of 5 percent and rest areas every 1000 feet maximum. Maximum grades in outlying areas will be held below 10 percent wherever practicable.

Public trails will be constructed and maintained by Washoe County. The developer is not responsible for public trails. Specifications for public trails may be varied by Washoe County. Based on current County standards, the following guidelines apply: wherever practicable, minimum trail width will be 36 inches clear. Grade is proposed to be a maximum of 10 percent for safety and to minimize erosion potential. Some level changes will be required in the Thomas Creek drainage and steeper slopes in the northwest corner of the site. Trail surfacing will probably be compacted dirt, with some small wooden creek/swale crossings as required. Pull-outs for horse-bicycle encounters will be provided along the way, especially where trail site distance is minimal. Vertical height clearance on the site is not a problem due to lack of trees everywhere but along portions of Thomas Creek.

Trail Signs - Figure 2-9 shows proposed signs for the public trail system. Signs will be located at trail heads and at other public access points. They are intended to help people determine if the primitive trail is within their level of ability. A regional map will also be displayed, along with warnings for snakes and drinking untreated water. At public/private trail crossings a small sign denoting the private trail will be installed. Public trail signs shall be constructed and maintained by Washoe County.

### Street and Median Guidelines

The roadway sections proposed for Southwest Pointe are shown in Figures 2-10 through 2-13. The street sections vary from a divided minor arterial at the entrance to small lightly traveled rural streets. The developer is responsible for construction of the public minor arterial to the project entrance where it becomes a private road. Washoe County is responsible for maintenance of the public roadway. Past that point, all roads are private and the developer is responsible for construction and maintenance until that responsibility is transferred to the Homeowners' Association. The developer is also responsible for installation and

**LOCAL AND RURAL STREETS**

# COMMON DRIVEWAYS

maintenance of all median landscaping and all landscaping along the edge of the minor arterial and collector streets. Maintenance of the landscaping and irrigation systems will initially be the responsibility of Southwest Pointe Partners or its successor until that responsibility is transferred to the Homeowners' Association. The Lot Developer or individual homeowner will be responsible for the installation, irrigation, and maintenance of all street right-of-way landscaping in front of individual lots fronting along private common driveways, rural streets, and local streets.

Roads will be constructed with a minimum 2 percent crown or cross section to maintain proper drainage. Maximum grade of landscaped areas within the street right-of-way will be 3 to 1. Vertical alignments of streets will be chosen to minimize cuts and fills. Pavement and base sections will be determined in accordance with the recommendations of the geotechnical engineer and Washoe County. All utilities will be placed underground.

Minor Arterial (Public or Private) - Whites Creek Lane from Thomas Creek Road to the bridge is a public road. From the bridge to the first intersection, Whites Creek Lane is classified as a private, minor arterial. The approved public and private street sections are shown in Figure 2-10. The private street will have an 120-foot minimum right-of-way with a 27-foot median, a 24 foot roadway section on either side of the median, and an 8-foot wide meandering asphalt path on both sides. A concrete header is proposed at the edge of pavement. No parking, except for emergencies, will be allowed.

Street trees will be planted between the meandering paths and street edge in an informal pattern of both deciduous and evergreen trees. Specimen-size trees will be used around the gate house. Near the project entry, a massing of evergreen trees on both sides of the street will focus views to the creek and slow down traffic as the street section transitions to a narrower pavement width. Median trees will be vertical and upright with no overhanging branches. Ground covers and shrubs will be kept low with an informal massing pattern to eventually cover most exposed ground. Flower and foliage color will be emphasized. Around intersection project signage, small irrigated lawn and annuals/wildflowers will be planted for a "high sierra" seasonal color.

From Thomas Creek Road to the project site, landscaping and irrigation will be installed by Southwest Pointe Partners or its successor. Landscaping along this section of roadway may consist mostly of shrubs, groundcovers, boulders, and only a few trees so that the residents of Saddlehorn do not have their views of Reno obscured.

**Collector Streets** - The street sections for collector streets are shown in Figure 2-11. From the first intersection to the golf and tennis club, a 120 foot right-of-way is shown. The roadside ditch serves a dual purpose -- snow storage and drainage. Residential driveway access will be allowed, but minimized. Landscaping along this section of roadway will continue the treatment used along the minor arterial.

Past the golf and tennis club, the road narrows to a 60-foot right-of-way with a 24-foot pavement width. (This street section is used in all locations where the average daily traffic ranges from 500 to 8000 ADT.) Either an 8-foot or a 4-foot path or gravel shoulder are shown on both sides, depending on the anticipated average daily traffic. Paths may not be constructed if alternate locations for pedestrian paths are shown on the Pedestrian Circulation Plan. Where necessary, a 12-foot, left-turn lane will be constructed at intersections. A concrete header with a roadside ditch is proposed. A minimum number of residential driveway access will be permitted. No parking, except for emergencies, will be permitted.

The landscaping within the right-of-way will continue to be informal with a combination of deciduous and evergreen trees massed in irregular patterns to simulate a natural forest pattern. Beyond the Swim and Tennis Club and Golf Club entrances, the landscape will transition to a more arid, "high desert" palette of shrubs and ground cover. Irrigation for plant material will be installed and maintained as a part of the common areas. In disturbed areas and along roadside ditches, erosion control grasses and wildflowers will be seeded to minimize erosion and provide seasonal color.

In neighborhoods with lots of 1/2 acre or less, the planting concept will consist of street trees planted in a regular pattern, to be selected from a list of approved tree species with heights under 25-30' at maturity in order to preserve off-site

views toward Reno. The intent is to provide summer shade and visual continuity within denser neighborhoods, but in such a way that the street tree pattern is not visibly intrusive because of the tree's height, form or seasonal color.

**Local Streets** - Local streets provide access within the individual neighborhoods. (Refer to the street sections in Figure 2-12.) A 60-foot right-of-way is shown, with a minimum pavement width of 22 feet, and a 4-foot wide path or gravel shoulder on both sides. Paths may not be constructed if alternate locations are shown on the Pedestrian Circulation Plan. A concrete header with a roadside ditch is proposed. No parking, except for emergencies, will be permitted. Landscaping and irrigation along local streets will be the responsibility of the Lot Developer or the individual homeowner. Landscaping must be reviewed and approved by the Architectural and Landscape Control Committee.

**Rural Streets** - Rural streets also provide access within individual neighborhoods. As shown in Figure 2-12, rural streets have a minimum 60-foot right-of-way, with a 22-foot pavement width. A concrete header with a roadside ditch is proposed for both snow storage and drainage. No parking, except for emergencies, will be permitted. Landscaping and irrigation along rural streets will be the responsibility of the Lot Developer or the individual homeowner. Landscaping must be reviewed and approved by the Architectural and Landscape Control Committee.

**Common Driveways** - Private, common driveways are used in a few locations where a small group of homes is proposed along collector streets. As shown in Figure 2-13, when a common driveway serves no more than 4 lots, the pavement width is 20 feet. When 5 or more lots are proposed, the pavement widens to 22 feet. No on street parking, except for emergencies, is permitted. Off street parking bays in common area will be constructed by the developer. To maintain consistency, landscaping in the area between the collector street and the common driveway will be the responsibility of the developer.

## Community Buildings

**Golf Clubhouse** - The Golf Clubhouse is intended to function as a recreation and social center for Southwest Pointe. The Clubhouse is located to maximize views of the two golf courses, Mt. Rose/Slide Mountain, the lights of the City of Reno plus the surrounding hills and valley below. The Clubhouse sits on an elevated plateau creating a strong visual impression as a community building. (Refer to Figure 2-14.)

The Golf Clubhouse will provide functional support to the public golf operation, including pro shop, bag storage, cart storage and dressing rooms. The building's basement will house the storage and service spaces, and the upper floor will house the different food and beverage spaces plus the pro shop. The dining spaces will be able to accommodate community functions plus special events, such as weddings or parties. The lower floor is mostly below grade as a basement to reduce the overall building height so the building does not dominate the site.

The exterior of the building has a native stone facade at the lower level so that the building appears to grow up from the ground and be visually connected to the site. Other building features, such as columns and chimneys at the upper floor, may also have native stone veneer. Other Clubhouse exterior materials include stucco-appearing walls with some wood trim for accent and metal roofing. The roofing color may be of a weathered copper patina, sage green or another natural landscape color to blend in with the natural environment. The stucco color is intended to be earthtone. Some exterior material color selections will be of other natural colors for subtle accents.

**Swim and Tennis Club** - The Swim and Tennis Club is intended to provide an additional recreation activity center within Southwest Pointe and will house different exercise spaces indoors plus outdoor tennis and swimming. (Refer to Figure 2-15.) Dressing facilities, snack bar, and administration activities will also be indoors.

The Swim and Tennis Club will be oriented around a town square courtyard opposite the driveway entrance to the Golf Clubhouse. Both driveway entrances will be visually enhanced with landscape medians and decorative streetscape

materials. The outdoor swimming area, as well as some of the tennis courts, will be lighted for evening use. The exterior design of the Swim and Tennis Club will be compatible to the Golf Clubhouse and other community buildings. (Refer to Figure 2-16.)

**Commercial Village** - A maximum 20,000 sq. ft. neighborhood retail and support services complex may be constructed adjacent to the Swim and Tennis Club around the town square. (Refer to Figure 2-15.) It is anticipated that retail uses may consist of a small market, video store; and services may include a beauty salon, travel agency, and real estate office. The one-story commercial building exterior will be of materials, forms, and colors that match the Swim and Tennis Club and are compatible with other community buildings.

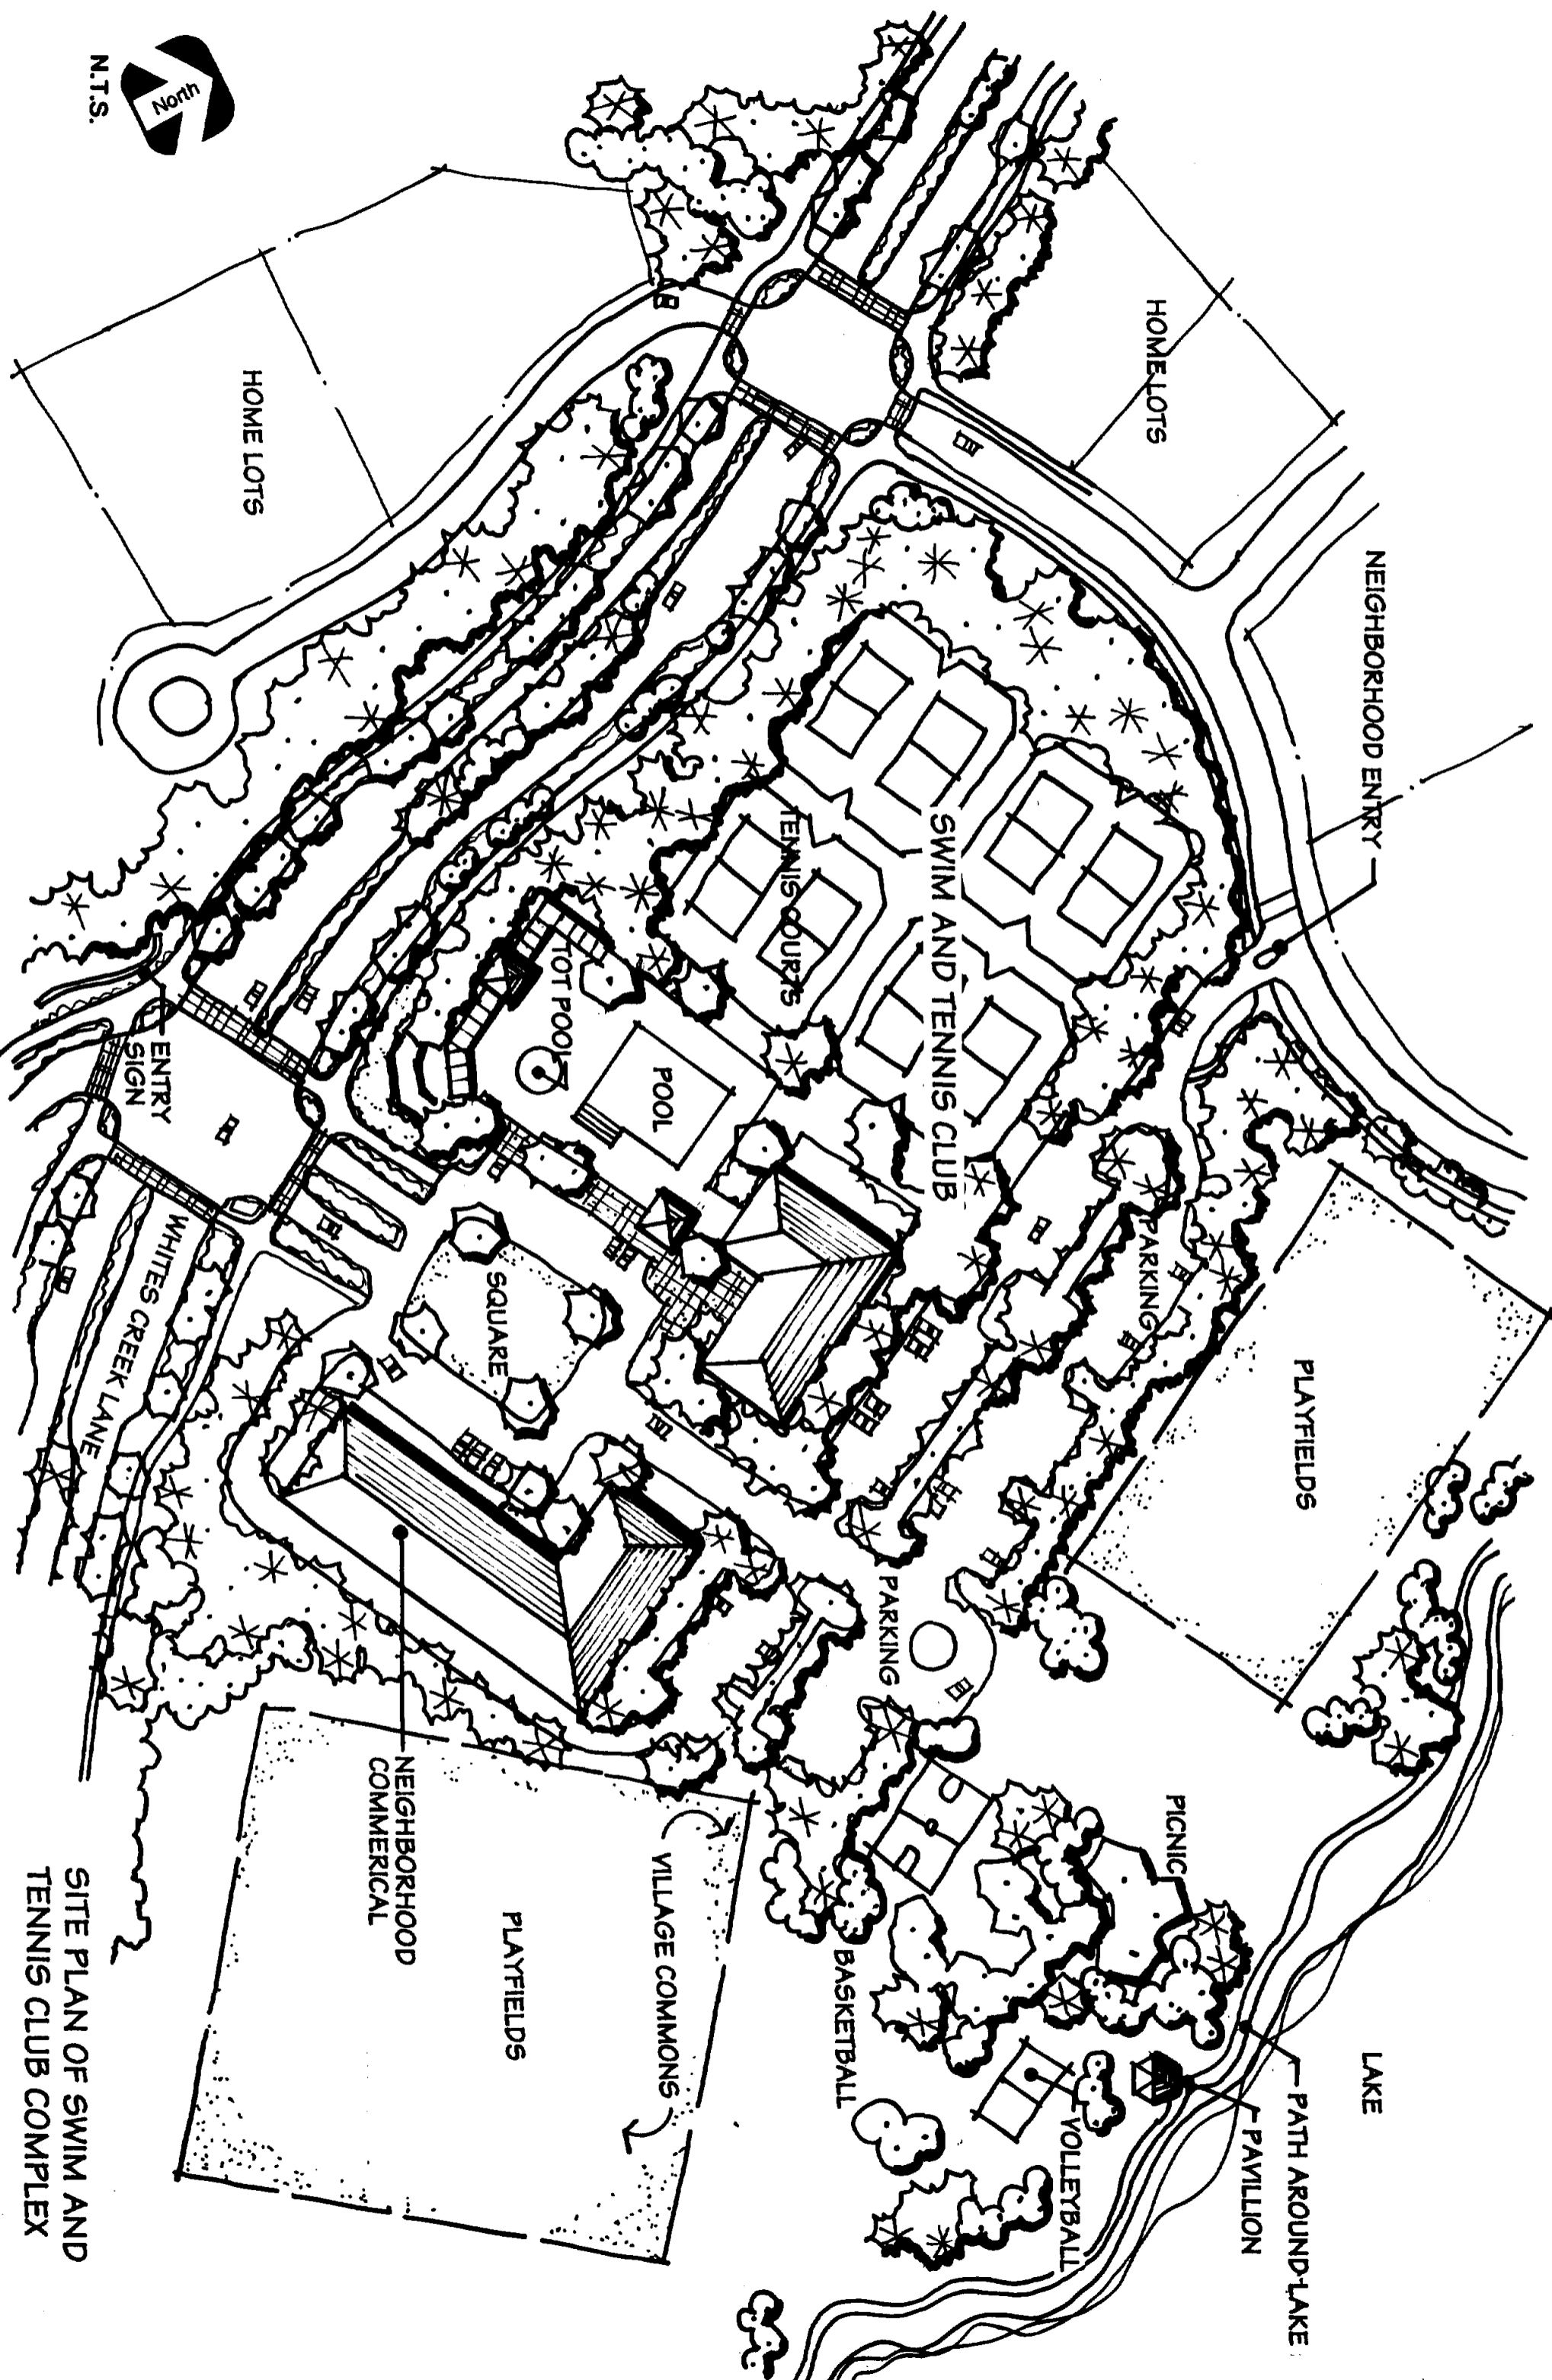

**Fire Station** - A site shall be set aside by the developer on which the Nevada Division of Forestry may construct and operate a two-bay fire station for regional fire protection. The fire station will be located before the entry, and is proposed to have building materials compatible to the other community buildings.

GOLF CLUBHOUSE

SWIM AND TENNIS CLUB

SITE PLAN OF SWIM AND TENNIS CLUB COMPLEX

### III. SITE DEVELOPMENT GUIDELINES

The purpose of the site development guidelines is to present methods for integrating homes into the natural setting through sensitive design. These guidelines are intended to apply to individual residences; whereas, the guidelines presented in the previous chapter apply to community buildings and other features.

#### Building Setbacks

Each residential lot will have building setbacks that define where and how structures can be built. The underlying objective is to encourage articulated building forms, one- and two-story massing, unobstructed views, privacy, and varied setback on the street, golf course, and between residences.

The minimum setback and yard dimensions are described below:

<u>Lot Size</u>	<u>Front Yard</u>	<u>Side Yard</u>	<u>Back Yard</u>
1 acre +	30'	12'	30'
1/2 acre +	25'*	10'	20'
12,000 sq. ft.	20'	8'	20'

\* Reduced to 20' with side-entry garage.

Projections, such as chimneys, covered porches, decks, roof overhangs, canopies, eaves, or other similar architectural features may extend into a required side, front, or back yard setback not to exceed 2 feet. Some lots may have varying setbacks which relate to unusual property features and geometry and these will be specified by the Residential Lot Declarations.

Setbacks from potentially active fault traces have been recommended by the geotechnical engineers. The fault traces that were trenched and staked are judged to be fault traces having relatively high risk of ground rupture during an earthquake. Buildings for human occupancy should not be sited over these faults and a setback is recommended for each side of the fault. The setbacks for each surveyed fault are shown on the site plan and will be identified on tentative and final maps.

### Minimum Lot Width

All residential lots shall comply with the following minimum average width requirements: 1 acre and larger lot, 150 feet; 1/2 acre to under 1-acre lots, 100 feet; and 12,000 square foot lots, 80 feet.

### Grading, Drainage, and Erosion Control

The placement of the home, driveway, and other site elements should minimize disruption of the natural topography as much as possible. Where grading is required, the slopes should be gently rounded to blend into the natural contours of the ground. Site grading should also complement and reinforce the architectural and landscape character by screening undesirable views of parking and storage areas and by helping to reduce the perceived height and mass of the architecture. Wherever practicable, re-graded slopes should not exceed 3 to 1. Geotechnical considerations may allow a steeper slope.

The individual lot purchaser or builder will present drawings to the ALCC for review that are creative and sensitive as to the individual footprint, setting on the lot, and natural grade. The builder/architect is encouraged to minimize the amount of grading on each lot. This same concept should be carried forth in the design of the hardscape and landscape areas adjacent to the building structure. Every effort should be made to achieve a final design which fits the shape of the lot and the land around it.

The control of water run-off and potential erosion should be a consideration both during construction and in the final design of the home site. Natural surface drainage patterns should be preserved whenever possible. Avoid concentrating surface drainage to reduce the erosion potential.

The preservation of existing vegetation cover minimizes the potential for erosion. Construction equipment should be limited to areas intended for specific site improvements in order to minimize damage to existing vegetative cover. Revegetation and erosion control are also discussed in Chapter V, Landscape Design Guidelines.

Dust control methods will comply with the requirements of the Washoe County District Health Department, Air Quality Management. A detailed dust control plan must be prepared prior to issuance of a grading permit for the golf course or approval of a final map (Condition #45). The dust control plan will address phased grading and stabilization methods including revegetation, application of palliatives, street cleaning, and dust controls on any storage piles located on the site.

### Driveways and Parking

To create a streetscape that blends with the rural setting, driveway widths should be minimized. Maximum paved driveway width outside of the building envelope is 12 feet. Slopes on driveways should generally not exceed 14 percent except in special cases. Provide culverts for driveways that cross landscaped drainage swales. Circular drives are only allowed in 1 acre lots.

Large expanses of asphalt or gravel are discouraged, as are large areas of untextured and uncolored concrete. Unpaved parking areas are discouraged. The visual impacts of paved areas can be reduced by tucking them into the topography and landscape.

On-street parking is prohibited throughout Southwest Pointe. Each lot must provide off-street guest parking to accommodate two cars. Additionally, the Conditions of Approval (Condition #40) require that guest parking be provided

within 500 feet of home that have lots ranging in size between 12,000 square feet and 1/2 acre. One space shall be provided for every three homes. The parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the tentative map.

### Auxiliary Structures and Site Utilities

Auxiliary structures, such as gazebos, utility sheds, etc., must be designed in a manner that harmonizes with the main structure. Plans for such structures must be submitted to the ALCC for review and approval.

All solar and mechanical equipment must be screened. All utility meters and appliances must also be screened. Trash and utility areas should be located to avoid direct views from streets or adjacent properties. These areas should be enclosed with fencing or screens that match residential architectural detailing and materials.

### Fences and Walls

Appropriate design and placement of fences and walls on residential lots is important in maintaining a high quality, rural atmosphere. It is essential that the materials, patterns and textures complement the surrounding architecture wherever possible.

No residential fence or wall will exceed 6 feet in height. When a change in elevation occurs, the wall or fence should be stepped in equal intervals. Plant materials or berming will be used to soften a continuous wall or fence. Lot perimeter fencing is allowed. Where the lot abuts the golf course, the perimeter fencing near the golf course must be consistent with the community fencing. (Refer to Community Design Guidelines, Chapter II.) Colors should complement the environment and match other architectural features. Use of darker earth tones is encouraged, with all exposed surfaces finished. All fencing must be submitted to the ALCC for review and approval.

Special consideration will be taken when installing walls so as not to obstruct views from adjacent homes. Any privacy walls and fences will be installed by the homeowner or builder and maintained by the homeowner.

When retaining walls are necessary, they should become an integral part of the design, not an afterthought. The use of several 2 or 3 foot high walls rather than a single taller wall is encouraged. Not only should the retaining walls be designed with careful consideration for strength and provisions for surface and underground drainage, but they should be configured to sensitively fit with the natural terrain and be constructed or faced with materials that blend with the setting.

Freestanding walls are appropriate when used as an extension of the residence, to define key outdoor spaces, and to protect from climatic extremes. Wall materials should be consistent with the architectural style of the house.

### Exterior Lighting

All exterior lighting must be approved by the Architectural and Landscape Control Committee. Homeowners are encouraged to utilize landscape lighting -- to subtly highlight unique architectural features, trees, and focal landscape areas. Lighting levels should also be provided which insure safe passage along walks to building entries. Lighting of patio and deck areas to provide for nighttime usage is also allowed.

Landscape lighting should be integrated into the overall design of the site. Downlights can be recessed into arbors and soffits. Ground-mounted landscape bollards may also be used. Pole lights and monoliths with lights greater than 48 inches in height are not allowed. Light sources should not be directly visible. Light trespass and glare onto adjacent properties is not allowed. Lighting should endeavor to highlight special features and use areas rather than a uniform glow across the property.

## Energy Conservation

All residential units shall include site design and building design or construction features and devices which are capable of conserving energy. Measures encouraged in the design of all residential structures are:

- Double glazing
- Size and placement of windows and other major openings shall take into account prevailing breezes during the summer season and protection from stronger winds during the winter season.
- Appropriate design features to deflect sunlight or allow it to enter the residence, depending on seasonal needs.
- Strategically locate and select plant materials in areas adjacent to the residence to reduce temperature buildup and sun penetration during the summer season.

Building construction requires sufficient insulation and insulated glass to meet State of Nevada energy standards. Other building construction energy conservation features are encouraged, such as high efficiency mechanical equipment, high efficiency glass (non reflective), etc.

## IV. ARCHITECTURAL DESIGN GUIDELINES

### Residential Design Character

The Guidelines seek to establish a community-wide theme for Southwest Pointe that transcends individual property boundaries. Consistent with the Community Design Character described in Chapter II, the Residential Design Character is intended to be respectful of and harmonize with the existing natural and newly created site environment. Building materials, forms, and colors shall be natural in character to blend into and complement the Southwest Pointe character.

The residential design intent is to encourage a variety of residential styles and to encourage creativity and diversity within the community. Creativity will allow for compatibility of golf course homes to the golf course, and compatibility of the hillside homes to the surrounding open space, as an example.

### Building Form, Mass, And Proportions

Residential structures shall employ forms, massing and proportional detailing that relates to the predominantly horizontal context of the upland range. Low forms are encouraged to not compete with the horizontal context. Two-story structures shall have at least 50 percent of the facade appear as a low, one-story structure in height, this suggests the middle of the structure be two story with one-story portions around it. This creates a vertically stepped facade from ground up to one-story, up to two story, and back down. The stepped facade emphasizes the horizontal and appears more organic than tall, two story high wall planes.

Simple, yet bold, roof dominated forms will also emphasize the horizontal features and minimize the appearance of the vertical ways. Hipped roofs are encouraged with a few accent gables as opposed to all gables or shed type roofs.

Wall planes shall also be stepped horizontally (or articulated) with offsets to break up long walls and to create shadows and shading to subdue long wall planes. Covered porches and trellises are also encouraged to create shadows and shading, including heat gain and glare reduction by shading windows and walls. Patios with porches and trellises extend the indoor living space from indoors to the outdoors.

Stepped building forms and the elements of the forms shall be carefully composed in an integrated manner with consideration given to overall, three dimensional proportions as well as the proportions of the individual architectural elements.

### Architectural Elements

Roofing - Roof surfaces shall have a strong texture, like the natural landscaping with one color to blend with the natural backdrop.

Roofing materials shall be fire resistant. Approved roofing materials consist of slate, concrete shakes, fiber cement shakes/shingles, 40-year fiberglass composition shingles, and metal roofing with ribs or shingles and without exposed fasteners. Wood shake or shingle roofs are not permitted.

Roof elements, such as skylights, exposed vents/flues and metal, shall be colored to match or blend in with the roofing. No exposed rooftop solar panels are permitted.

Walls - Wall surfaces shall be selected for durability, weather and fire resistance, minimum maintenance plus compatibility with the regional character and building style. Besides articulation, wall texture creates more attractive wall surfaces. The use of wall trim can add accent to wall surfaces, if employed correctly. Contrasting wall and trim colors are not encouraged. Approved wall surfaces consist of stone veneer, brick, stucco and wood siding.

Windows and Doors - The arrangement, location, size, shape, and relationship of window and door openings shall be composed in an orderly and proportional manner on all exterior facades. Continuity of window and door style shall be considered on all facades as well as within individual facades.

Chimneys - Chimneys are an important design element and shall be located and sized to be proportional to the overall building composition. All above roof fireplace flues shall have a chimney enclosure of no less than 2 feet by 5 feet. Stone and brick chimneys are encouraged.

### Exterior Materials And Colors

The composition of different exterior materials and colors shall be carefully selected and designed to insure compatibility to the building style and regional character. The use of many different materials and colors should be discouraged so that the building form is emphasized. General continuity of exterior materials at different exterior facades is required, although subtle variation from building to building is encouraged. The glass color shall be selected for shading, ultraviolet control and compatibility with other materials. No reflective glass is permitted. Intense and glossy colors are not permitted.

### Garages And Accessory Structures

Detached garages and guest houses are permitted only on lots 1 acre or larger in size. As a general rule, other accessory structures are not permitted. These structures may be separated from the residence; however, a connection is required. The connection shall be a trellis arbor, or another overhead element.

Small accessory structures, such as a remote spa trellis or other landscape type elements, may be detached if approved by the ALCC.

## Miscellaneous

**Antennas** - All antennas are restricted to the attic or interior of the residence. It is mandatory that all homes be pre-wired to accommodate cable reception. Satellite "dish" antennas are allowed only if adequately screened and not visible from surrounding areas.

**Awnings and Patio Covers** - Awnings and patio covers, if used, must be of solid color canvas within the approved color palette. Fiberglass or sheetmetal awnings are not permitted.

**Gutters and Downspouts** - All gutters and downspouts must be a color to blend into the building back drop, and downspouts shall be located to be least visible.

**Utility Service and Meters** - All utility service shall be underground with no exposure. All utility meters required to be exposed shall be either located to be not visible or enclosed in a cover box compatible with the building siding and as approved by the utility company. Meters shall be recessed in walls with no exposed conduit.

**Mechanical Equipment** - No exposed mechanical equipment is permitted. All exterior mechanical equipment, including solar panels, condensing units, etc. must be screened from view.

**Signs** - Exterior signs other than house numbers are prohibited. During construction or sale, one (1) approved construction/sales sign may be placed in front of each homesite. Real estate sales/listing information must be placed on a panel of the sign just as contractor's or architect's information would be. Additional freestanding signs, "snipes," banners, flags, etc. are prohibited. Political signs, within reason, are excepted from this prohibition.

## Energy Conservation

Southwest Pointe will have all locally available public utilities for energy as well as being very conducive to passive solar access for natural heating to conserve energy. Passive solar access requires consideration of building orientation and

window locations. Window locations should also be chosen to capture breezes for natural ventilation and cross ventilation within the structure for energy conservation.

Solar shading should also be considered for prevention of excessive heat gain, particularly in the summer and from the westly afternoon sun. Exterior shading devices include roof overhangs, trellises and patio covers. Plant material selection may help control solar access, such as deciduous trees for winter access and summer shading.

Building construction requires sufficient insulation and insulated glass to meet State of Nevada energy standards. Other building construction energy conservation features are encouraged, such as high efficiency mechanical equipment, high efficiency glass (not reflective), etc.

## **V. LANDSCAPE DESIGN GUIDELINES**

### **Landscape Design Character**

Landscaping will play a significant role in establishing the character of Southwest Pointe. These landscape guidelines are intended to enhance the character and quality of the community established by the architectural guidelines. The open space system responds to site conditions and creates a visual framework for the entire project. Neighborhood entries and roadway landscaping will reinforce the overall landscape themes which permeate the site and establish a "sense of place" within Southwest Pointe. Also contributing to the overall community identity are other consistent landscape elements such as walls, fences, lighting, signage, and paving.

In addition to providing exciting and challenging play, the golf courses have been carefully situated along the creeks, adjacent to major roads, and routed to take advantage of the panoramic views from the property. The courses have been planned to incorporate manicured lawns for the tees, fairways, and greens with transition landscaping to enhance the beauty of the adjacent native vegetation through contrasts in color and texture. Through careful planning, the golf courses and the entire Southwest Pointe community have been gently blended into the natural environment.

### **Landscaping - Common Areas**

Landscaping in common areas will be the responsibility of the developer. The intent of landscaping within the project site is both aesthetic and functional. The development will fit the local terrain and environment without looking out of character for northern Nevada (e.g., short grasses, muted grays and sage green colors of shrubs, with evergreens in clustered areas). At the same time, it is important that the landscape create a sense of arrival at the entry and a strong visual unity throughout the project. This will be accomplished through landscaping and consistent signage, walls, fencing, etc.

**Common Area Landscape Guidelines** - The following guidelines apply to common area landscaping:

- The landscape palette is informal and natural, combining the best characteristics of the high desert natural landscape. Native shrubs and ground cover will be massed in groups of a single species, used in combinations that provide contrasting colors, textures and forms in a broad-brushed approach to landscape design. Trees will be massed in naturalistic groupings of a single species, an interplay of evergreens, and contrasting deciduous trees.
- Drought-tolerant, low-maintenance plantings will be used.
- Screening of parking areas, utility enclosures, service yards, and hillsides will be done with evergreen trees and shrubs.
- A variety of plant sizes will be used, with specimen trees at central focal points such as the project entry and street intersections.
- Irrigation systems must be automatic, with a controller and valves. Drip systems will be utilized instead of above-ground spray heads in planter areas. The use of a central control irrigation system on the golf course will facilitate the use of satellite controllers in common areas. This will allow all controller programming from a central source at the clubhouse.
- Shrubs and trees that deer do not prefer will be planted, although deer and especially rabbits will eat almost any plant if hungry enough and during the time when plants are putting on new tender growth.
- Plantings will contain a combination of fast, medium, and slow growth rate types. Eventually the slow growth plants will dominate the landscape, being more disease free and less prone to wind breakage.
- The use of lawn will be restricted to key focal points such as entry locations.
- Future landscape plans in common areas must be consistent with county requirements and approved by the Architectural and Landscape Control Committee. The plant materials list in this Handbook will be followed for planting selection.

- Exposing native rock outcroppings and boulder groupings during grading operations will enhance the overall landscape theme. Ideally, boulders should have at least one third of their total size buried in the ground. This gives rock a more permanent and natural look rather than just setting them on top of the ground. Boulder size will be a minimum 3 foot diameter, with groupings rather than scattered rock.

### Landscaping - Private Yards

All visible areas of yards not hardscaped must be landscaped in an acceptable form -- either natural, with ornamental plantings, or with both. Landscaping plans for individual residences will be reviewed and approved by the Architectural and Landscape Control Committee. Homeowners purchasing builder products will have up to 6 months to install private landscaping after close of escrow without a penalty. Homeowners purchasing custom lots will have up to 6 months after receiving occupancy permits on their residences to install private landscaping without a penalty. The following guidelines have been created to provide homeowners, architects, designers, and landscapers a reference point from which to develop individual landscape plans. These guidelines may be amended from time to time by the review committee based on comments and suggestions from designers and homeowners.

Private Yard Guidelines - The following guidelines apply to landscaping in private yards:

- All plant materials selected should be suitable for the climate, soil conditions, and theme of the community. (Refer to Table A-1 in the appendix for a list of recommended plants.)
- Landscape planting palettes should be simple and kept to a limited number of plant materials.
- Plantings should be done in masses or groupings of a single species to avoid complexity.

- Landscape plantings should provide for effective screening of cars, utility enclosures, or any visually undesirable element or structure.
- Planting selections should strive to maximize color during all four seasons.
- All landscaped areas must have an automatic irrigation system, preferable designed by a Landscape Architect or irrigation consultant to ensure efficient water usage.
- Group plants with similar water requirements.

**Front Yard Landscaping** - The following guidelines apply to front yard landscaping:

- "Gravel gardens" are prohibited.
- All visible areas of yard not hardscaped, or in decking must be landscaped in an acceptable form.
- Front yards shall be planted with a combination of trees, shrubs, and ground cover or lawn. All lawns shall be sod and cover no more than 20 percent of the total landscape area.
- Except where previously installed by the developer, at least three trees shall be planted in the street right-of-way adjacent to the front of each 1-acre and 1/2-acre residential lot and at least two trees shall be planted in the street right-of-way adjacent to the front of each 12,000 square foot residential lot.
- At least five additional trees shall be planted per front yard on 1-acre lots, three trees per front yard on 1/2-acre lots, and two trees per front yard on 12,000 square foot lots. Groupings of vertical trees are encouraged.

**Side and Rear Yard Landscaping** - The following guidelines apply to side and rear yard landscaping:

- Side yard planting is encouraged to create a sense of privacy between adjacent homes.
- Rear yard planting can provide shade and privacy, define outdoor spaces, and frame views. Care must be taken, however, in planting trees and tall shrubs so as not to obstruct views from adjacent lots to the golf course and mountains. Final placement of all rear yard trees is subject to approval by the Architectural and Landscape Control Committee.

## Maintenance

Common Areas - Landscape, fencing, walls, irrigation systems, etc. installed by the developer will be maintained in a healthy and operational condition and will eventually be transferred to the Homeowners Association, which will then assume maintenance responsibility. Landscape maintenance will primarily consist of weeding, spraying pre- and post-emergents, insect control, pruning, plant replacement and irrigation system winterizing/repair. Drip irrigation lines will require flushing to remove debris so that emitters do not clog.

Open space and private trail maintenance will include trash pick-up, erosion control, re-surfacing trails, and upkeep of signage. (Washoe County will be responsible for any maintenance activities required on open space that is under their control.) Paved walks will require re-seeding and eventually resurfacing the asphalt. Related fencing will need board replacement and re-staining/re-sealing wood members.

Private Yards - The intent of maintenance standards for private yards is to keep the entire project up to high standards. Homeowners will be responsible for maintenance of their own lots. If the required front yard trees should die, they will need immediate replacement with trees of the same size and species. Property owners will also be responsible for maintaining landscaping along the right-of-ways of local and rural streets with direct lot frontage.

## Revegetation and Erosion Control

Revegetation is the process that involves seeds and small plants, fertilization, and soil stabilization once vegetation becomes established. It is one part of the overall erosion control process. Most often the best erosion control is a combination of structural or mechanical land revegetation. Once the ground is disturbed during construction, it is important to revegetate areas to be kept as open space as quickly as possible to minimize wind and water erosion on the soil. Typically, fast-growing annuals and perennials are installed for both short- and long-term stabilization.

**Timing** - The developer will follow the typical Washoe-Storey Conservation District and District Health Department guidelines for disturbed areas. A dust palliative will be applied to areas left undeveloped more than 30 days and a seed mix applied for areas left undeveloped more than 90 days. The preferred season for revegetation without irrigation is early spring after the ground softens. Late fall after the first snow is also acceptable. The developer may elect to seed between the preferred seasons with some supplemental irrigation from a water truck or temporary irrigation.

**Clearing Limits** - Areas to be cleared for development or cut/filled will be surveyed and staked so that equipment can be confined to those disturbed portions only. The objective is to save as much native vegetation within the development as possible for the open space between residential units. Clearing will be done on a phasing schedule as the development proceeds. The exception is the golf course, which will be graded and built in 9- or 18-hole increments.

**Seeding Methods** - Seeding will take place on open areas and slopes 3 to 1 and flatter. Slopes not accessible by drilling machines will either be hydroseeded or seeded with a mechanical broadcaster and raked by hand. Drilling is the preferred method since germination is generally the highest. Hydroseeding will be accomplished in a two step process. Seeding will take place on roughened soil with 30 percent mulch and then blowing the remaining 70 percent of the mulch on top of the seed. This ensures better seed/soil contact.

**Seeding Mixes** - One of the goals is to blend the development into the existing on-site environment. To accomplish this, a seed mix that matches the existing plant material is desired. Since the majority of the open space will not have permanent irrigation, the plants need to survive on rain or snow fall. A combination of woody plants (shrubs) and grasses are proposed for the mix. Also proposed are grindings from existing plants that are cleared. Since the seeds are already acclimated to the site, germination is usually very high. Plants to avoid seeding are those with a high fuel production that create a hazard for wildfires.

A general recommended seed mix is proposed in Table 5-1. More specific seed mixes will be developed during construction based on exposure, seeding timing, soil type, and degree of slope. Since the site is so large, seeding rates will need to be adjusted based on the above factors.

Three to four different grass and shrub types are recommended for a thicker and quicker cover. The wheat grasses are all fire resistant for use near residential units.

Table 5-1  
**General Seed Mix**  
 (in non-irrigated areas)

<u>Common Name</u>	<u>lbs/acre of pure live seed</u>
Indian Ricegrass	2
Fourwing Saltbush	4
Big Sagebrush	2
Great Basin Wildrye	2
Siberian Wheatgrass	4
Canbys Bluegrass	1
Annual Ryegrass	5
Palmer penstemon	1/4
Blue Flax	1/4
Shadescale	4
Total:	24.5 lbs/acre

In areas where drip irrigation is available, such as along roadways and around the golf course, trees and shrubs will be added to the above seed mix from Table A-1 (list of recommended plants). A variety of container sizes will be used, from tube packs to #5 cans, to provide a more natural appearance. Most woody plants are transplanted because of rodent predation to seeds. Larger shrubs and trees will also help stabilized slopes with their larger root mass. New plants will be mulched in the basins to conserve water and reduce weed competition around the root zone.

**Fertilization** - Fertilization will be added to the soils before seeding or during shrub/tree transplanting. Typical recommendations for low fertility sites call for 40 to 80 pounds of nitrogen, 50 to 75 pounds of phosphorous, and 50 pounds of potash per acre incorporated into the seed bed. For shrubs and trees, slow release plant tablets will be added to the planting pit during transplanting.

**Mulching** - Mulching provides a protective layer to help establish plants quicker. It also cools the soil, prevents soil crusting, keeps weed growth down and conserves water around the plant itself. For seeding, a hydromulch made of a wood product will be added to slopes where applicable. On steeper, longer slopes and drainageways, a wood excelsor blanket will be used with either a paper or plastic net backing. Blankets are unrolled and staked into place using wood pegs.

Flatter areas and slopes will be mulched with straw after seeding and either tackified or punched to keep straw in place. Typical rates are 3000 lbs/acre of clean straw, evenly distributed.

Mulching for shrubs and trees will be a ground bark or wood product. A minimum depth of 3 inches will be added to the watering basin and checked after major storms.

As previously mentioned, a dust palliative will be used to minimize wind erosion on areas left undeveloped more than 30 days. This is only a temporary solution and these areas will need to be re-seeded, since palliatives are tackifiers that reduce soil porosity by forming a soil crust. Foot and vehicle traffic quickly degrade a soil surface, requiring re-application.

All revegetated sites will be inspected by maintenance personnel to repair any gully damage caused by storms, especially during the summer months. Areas of inadequate plant establishment will be re-seeded or re-planted as required. In some areas, temporary chicken wire fencing will be required to prevent rabbit and deer browsing on plants until they are bigger, stronger, and better able to survive on their own.

## Fire Fuel Breaks and Green Belts

The project site is located in a high fire hazard area as identified by the Nevada Division of Forestry. This is due to the occurrence of lightning and strong westerly winds. Fire suppression over a long period of time has resulted in on-site fuel accumulation that will become a problem during a wildfire.

Mitigation is needed to reduce the fire hazards on the site. Proposed mitigation includes careful structure siting, fire hydrants, fuel breaks around structures, the use of fire resistant/retardant plants, ease of access for fire fighting equipment, and the use of appropriate building materials.

The developer will work with the Division of Forestry to locate firebreaks in appropriate locations. Effective fire protection can be achieved with a wide strip (at least 100 feet) of bare ground around structures created by removing the native shrubs and grasses. However, the bare ground is subject to water and wind erosion, besides being aesthetically unacceptable. A better solution is the use of "green belts". A green belt can be defined as a landscaped and irrigated zone between a structure and the brush-covered wildlands that is designed to halt or slow the spread of fire and to control soil erosion and water runoff. (Refer to Figure 5-1.) Requirements in developing such a green belt are as follows:

1. Removal of highly flammable native brush and grasses, especially cheat grass, from around structures for a distance of 30-50 feet. Remove any dead wood in and around shrubs. This zone will consist of grasses, introduced shrubs, and individual trees pruned up off the ground. All plants will have a high-moisture content because of drip or spray irrigation. The sprinkler system will be permanent and on a controller. Included in this zone is a 10 to 20 foot wide area on both sides of the front driveway. Appropriate planting for this zone are native, naturalized and exotic species that gradually blend to the more native zone beyond. Lawns will be kept to a minimum size for water conservation and sprinklered with an overhead automatic spray system.

EXISTING NATIVE VEGETATION-REMOVE DEAD WOOD AND DEBRIS OUT ANOTHER 50-100 FT. WHERE RESIDENTIAL ABUTS OPEN SPACE

THIN BRUSH AND TREES

LIMIT THE AMOUNT OF NATIVE BRUSH TO 20% SITE COVERAGE

REMOVE DEAD BRANCHES AND DEBRIS FOR 100 FT. INTERPLANT WITH ORNAMENTALS WITH A HIGH WATER CONTENT . INSTALL DRIP IRRIGATION SYSTEM

100 FT.

30 FT.

INTENSIVE LANDSCAPE

RESIDENCE

INTRODUCED ADAPTIVE LANDSCAPING - LAWN AND ORNAMENTAL SHRUBS . PRUNE TREES OFF OF THE GROUND. AUTOMATIC SPRAY IRRIGATION SYSTEM FOR HIGH MOISTURE CONTENT .

2. In the 30 - 100 foot zone around the structures, dead woody plants will be removed. Trees and shrubs will be occasionally pruned and "weedy" species eradicated. This landscape zone is intended to coordinate with the requirements for a managed fire break transition zone. Beyond the 100 foot zone, up to 200 feet, the amount of vegetation will be reduced and the most flammable species thinned.
3. Maintenance of the plantings will include weed control, cutting back woody plants, and removal of plant litter and fallen branches. Part of the effectiveness of a green belt lies in minimizing the volume of fuel available. Without proper maintenance, fire-retardant planting can become a fire hazard over time. Irrigation and maintenance schedules will be provided with final plans for the project.
4. The previous green belt conditions will be a part of the CC&Rs with mandatory enforcement. If property owners do not comply with the conditions, the Homeowners' Association will be authorized to contract for maintenance and bill the property owner.

A crucial step in the planning and construction of a green belt is selection of the plants to use. Listed in Table A-2 in the appendix are recommended species with varying degrees of fire retardance that have value for landscaping in green belts. Although a number of broad similarities may exist within the overall project area, it is not possible to make specific site recommendations until fire hazard, soil, topography, and sun exposure are further studied. Plants listed will be coordinated with those listed in the erosion control section of the Handbook. Generally, green belt species will be planted around structures and at the residential perimeter.

It is important that plants from Table A-2 be grouped according to water requirements. Highly drought-tolerant species are often damaged or killed if over-watered. Over watering also forces unwanted growth in the plants and encourages weeds. If two or more species are planted together, it is essential that they have similar water requirements so that they can be watered from the same automatic valve. When an area is irrigated, it should be thoroughly soaked to encourage the roots to grow deeply into the soil. Frequent, light irrigation must be avoided.

## Water Conservation

Water conservation in the Truckee Meadows is a long-term responsibility for all residents, since we live in a desert climate with limited resources. There are many ways to conserve water in the outdoor landscape. Generally, plants will use as much water as a person gives them, so overwatering is the result of owners not realizing proper planting water requirements.

The principals of a relatively recent concept of "Xeriscape" (dry landscape) should be followed in every new development and retrofitted into existing landscapes. The principals are briefly summarized as follows:

- Mulch plantings to keep soil cool and reduce evaporation.
- Plan and design planting/irrigation from a project's beginning.
- Create practical and usable lawn areas of reasonable size and shape.
- Use appropriate plants for the area and group into water zones.
- Improve the soil in the intensive landscape zones with compost or manure.
- Irrigate efficiently with properly designed systems with automatic timers.
- Maintain the landscape appropriately by mowing, pruning and fertilizing properly.

Well done Xeriscape-type designs can typically reduce irrigation water by more than 50 percent, compared with traditional designs dominated by over watering lawns. Over watering can also kill highly drought-tolerant plants and force unwanted growth.

Home buyers in Southwest Pointe will be encouraged to follow the above water conservation methods in their private yard areas within the 30 foot intensive landscape zone surrounding the structure. Lower water bills will be just one of the long term benefits of proper landscaping.

## VI. SERVICES AND FACILITIES

### Water Service

The property is outside the boundary of the South Truckee Meadows General Improvement District/Special Assessment District #18. This property will be developed outside the district; however, all of the potable water facilities on lots will eventually be dedicated to Washoe County. The developer of Southwest Pointe may construct a new water system since there are no existing facilities to accommodate this project. The Southwest Pointe water system may connect to the existing system. Washoe County has drilled several exploratory wells on the property. These wells will be used as the main production wells for the project.

The elevations at which water storage tanks will be located to obtain the proper pressure have been identified and are shown on the site plan. One or two tanks will be located at an elevation of approximately 5,710 feet. A third and smaller tank will be constructed at an elevation of approximately 5,848 feet. The tanks will have a height of approximately 24 feet. The total water storage requirement is between 1.2 and 1.4 million gallons (i.e., 926,500 gallons residential storage, 240,000 gallons commercial storage, and 120,000 gallons per tank residential fire storage). The lower tank(s) would have a storage requirement of 975,000 to 1.2 million gallons. The upper tank will have a capacity of approximately 200,000 gallons. The tanks have been located in a ravine to screen them from view. If additional screening is necessary, landscaping would be installed to the satisfaction of the Department of Development Review.

To serve the two proposed golf courses in Southwest Pointe, as well as the other courses and parks planned in the vicinity, Washoe County proposes to reuse treated wastewater and untreated creek water from the South Truckee Meadows Wastewater Treatment Plant. The Conditions of Approval for Southwest Pointe

(i.e., #77) require the developer to use treated wastewater from the treatment plant. Additionally, as part of the initial construction, the developer will provide the necessary on-site easements needed to construct the infrastructure and, when the treated wastewater or creek water becomes available, the developer will construct the necessary on-site infrastructure.

Water conservation will result by using and managing resources efficiently and effectively. Reducing domestic water usage is an objective for this development. To achieve this objective the following devices and/or programs will be initiated:

- Water conservation devices will be used throughout Southwest Pointe as specified by current county ordinances.
- Water conservation principals for landscaped areas are addressed at the end of Chapter 5.

### Sewer Service

Southwest Pointe will be served by the South Truckee Meadows Wastewater Treatment Plant, and, according to County staff, capacity is available. The plant currently has a capacity of 0.75 million gallons per day (mgd); however, the ultimate capacity is planned to be 6.0 mgd. Based on the number of existing and approved dwelling units within the service area, the current capacity has been allocated. This allocation exists only on paper and would be a problem only if all of the currently approved homes were constructed immediately. According to the county staff, the plant has been designed for expansion, and capacity will be available for this project.

Existing sewer service is only a short distance from Southwest Pointe. A 10-inch line has been extended to Saddlehorn and another 10-inch line serves Southwest Vistas. Because of the topography and site plan, Southwest Pointe will be sewerred to both locations.

### Fire Protection

Fire protection service is intended to be provided by the Nevada Division of Forestry, Sierra Fire Protection District. The closest existing station is Galena Station #2, which is located on the Mt. Rose Highway approximately 2 miles west of the intersection of Mt. Rose and Thomas Creek Road.

Consistent with the Southwest Truckee Meadows Area Plan, a one-acre site for a fire station is proposed near the entrance to Southwest Pointe. The site will be offered for dedication prior to recordation of the first final map. According to NDF staff, the station would be 3,800-4,000 square feet with two bays and living quarters. If constructed, there would be two, full-time employees supported by volunteers.

The entrance to Southwest Pointe may be gated at the point where Whites Creek Lane becomes a private road (i.e., near Thomas Creek). The developer will meet with NDF staff to discuss their needs in order to maintain emergency access. Fire fuel breaks will also be required in many locations and an acceptable design will be developed with NDF staff. Maintenance of the fire fuel breaks will be the responsibility of the individual homeowner or the Homeowners' Association depending on the location.

### Security and Emergency Services

The Washoe County Sheriff's Department is intended to provide police protection service to this site from the main station at 911 Parr Boulevard. There is currently one patrol unit regularly assigned to the area, with an average response time of 10 minutes. The response time in this area will be greatly improved if the Sheriff's Department locates a substation in the community center in the South Valleys Regional Park at the intersection of Whites Creek Lane and Wedge Parkway. The first phase of the park has been constructed. The community center is located in a later phase; therefore, it may be several years before the substation is operational.

The gate house at the entrance to the project may be manned; however, no other private security personnel are planned. During the initial phases of the project, roving security personnel may be used to prevent theft and/or vandalism. The developer will meet with Sheriff's Department staff to discuss their needs in order to maintain emergency access.

### **Private Recreation Amenities**

The two golf courses proposed in this development are contemplated to be a combination of daily fee-public play and membership play. The golf courses will not be owned or controlled by the Homeowners' Association. Notwithstanding the administration of the entry area, so long as either of the golf courses are available for public play, an easement(s) or some other form of vehicular right-of-way shall protect the public's ability to access the golf course.

The swim and tennis facility shall be controlled by the Homeowners' Association and is not contemplated for use by the general public.

### **Financial Assurances for Provision of Services**

Financial assurances for provision of services (e.g., private road maintenance, common area landscaping, private recreation amenities, private drainage facilities and security) shall be provided under the project CC&Rs, which shall provide for funding of these services through assessments and insure collection of assessments through liens on lots.

## VII. SPECIAL CONDITIONS

### Thomas and Dry Creeks

Two creeks cross the property -- Thomas Creek along the southern and eastern edge and Dry Creek through the western and north central portions of the site. The creeks are bordered by riparian vegetation and a wetlands delineation, prepared by Soil Resource Investigations and approved by the Corps of Engineers, has concluded that wetlands exist along both creeks. These areas will be avoided and will remain undisturbed where feasible.

The Conditions of Approval state that a buffer will be provided between the fairways/greens and all creeks (i.e., Condition #55). The setback of the buffer will comply with 100.200 (e) of the Uniform Building Code (i.e., 50 feet from the centerline of drainage area greater than 5,000 acres). A second condition (i.e., Condition #56) requires that a minimum buffer of 50-feet be provided between any structure and riparian vegetation.

At locations where roadways cross the creeks, the intent is to span the creek and leave all delineated wetlands undisturbed. This will be accomplished through the use of railroad flatbed car bridges. Concrete abutments will be constructed on either side of the creek outside the delineated wetlands. The railroad cars will then be placed to "clear span" the creek bed.

### Wildlife

Portions of the project site are located in the winter range of the Loyalton-Truckee deer herd. The herd summers largely at higher elevations and winters in the lower reaches of the Sierra Nevada. Some residential and golf course development is proposed within the winter range; however, there is also a

significant amount of acreage within the winter range that will be left as open space. Some key mule deer winter range habitat has also been identified at the northwest end of Southwest Pointe. For the most part, this area is proposed to be left as open space.

To reduce the impacts of development on the deer herd, the following mitigation measures are proposed:

- Leave open space around the developed area and provide open areas within the development in conjunction with the golf course.
- Seasonal restrictions and/or regulated recreational use in open space areas identified as key mule deer habitat will be enforced. Provisions will be made for these types of restrictions at the time the open space is deeded. (Refer to Open Space Management Plan.)
- Boundary fencing is not proposed.

The staff of the Washoe County Department of Parks and Recreation has also expressed interest in stocking Thomas Creek with fish through the Urban Fisheries Program. To accomplish this work, vehicular access to the creek is necessary. Two locations for vehicular access are proposed -- one is at the neighborhood park and the other is from the maintenance road to the existing water tanks.

### **Cultural and Archaeological Resources**

All cultural resources issues (ethnographic, historic, and prehistoric) are being managed by personnel of Kautz Environmental Consultants, Inc. of Reno, Nevada. All historic and prehistoric sites in Southwest Pointe have been identified and recommendations regarding their significance have been made, or are currently being made (Hutchins and Kautz 1995, Christensen and Kautz 1995, and Christensen and Burns 1996). Recommendations have been passed to the Nevada State Historic Preservation Office (SHPO) in conformity with the Truckee Meadows Regional Plan: Conservation Element (1991, revised).

A total of 88 archaeological sites have been discovered on project lands of which 70 are prehistoric in age, one is historic, and 17 have components of both historic and prehistoric age. A total of 25 non-significant isolated finds have also been recorded. Nineteen archaeological sites have been recommended as significant and 12 remain unevaluated. The remaining 57 sites are recommended as non-significant resources requiring no further work.

All reports from KEC pertaining to this project have been provided to the Washoe Tribe of Nevada and California and all cultural resource management activities are being arranged through the Tribe's Cultural Resources Coordinator. Already, a valuable and very unusual Native American bas relief effigy located on this land has been donated to the Tribe and, following its removal last year, resides in the Nevada State Museum.

All significant and unevaluated archaeological sites will either be avoided or mitigated during the construction, maintenance, and operation of this project. All mitigation will occur prior to site disturbance, though these activities may be phased in coordination with planned construction.

Prior to mitigation, an Historic Properties Treatment Plan will be submitted to the SHPO, outlining in detail the mitigation procedures to be employed, the precise sample, and the methodological and theoretical framework delineating the inquiry at each site. Following both the acceptance of this plan and completion of the specified fieldwork, construction will begin.

## VIII. DEVELOPMENT PROCESSING

### Relationship to Other Ordinances

The provisions of this Handbook will govern the development of Southwest Pointe. However, where the provisions of the Handbook do not address a specific subject, the provisions of the Washoe County Development Code (Chapter 110) or other ordinances governing the development of land shall prevail, subject to the provisions of the final development agreement.

### Amendments to the Development Standards Handbook

It is anticipated that this Handbook will need to be periodically updated and amended. If modifications are necessary, the Department of Development Review will be notified by letter, stating the changes requested, the reasons for the changes, and the effects of the changes. Minor modifications can be approved at the staff level. The definition of "minor" will be made by the Director of the Department of Development Review. More significant changes must be approved by the Washoe County Design Review Committee.

During the design and construction phase of the project, it will be the responsibility of Southwest Pointe Partners or its successor to initiate the amendment request. This responsibility will eventually be assumed by the Homeowner's Association.

### Approval Process

Design review will be required of each Lot Developer. Southwest Pointe Partners will provide each Lot Developer with a copy of the approved Development Standards Handbook and CC&Rs. These documents should be reviewed carefully by each Lot Developer.

The Architectural and Landscape Control Committee (ALCC) will review all preliminary and final construction drawings for structures and landscaping prior to their submission to Washoe County. The purpose of this initial plan review is to insure compliance with the Development Standards, the CC&Rs, and the overall master plan for Southwest Pointe. Any development plans submitted to Washoe County must be accompanied by verification from the ALCC stating that the plans have been approved by that Committee. Minor variations from the Development Standards may be approved by the ALCC providing that these variation are in conformance with county regulations and the intent of these Development Standards.

Approval by the ALCC does not imply that the plans are in compliance with all applicable county codes, ordinances, or other regulations. Each Lot Developer is responsible for submittal and processing of all plans and permits required by the county prior to the commencement of construction.

#### *Financial Assurances for Development of Property*

Financial assurances for the construction of capital improvements to be dedicated to the County shall be provided as required by Washoe County Code or pursuant to subdivision improvement agreements under tentative maps, subject to the provisions of the final development agreement.

**APPENDIX**

Table A-1  
RECOMMENDED PLANTS

**Special Uses**

Common Name	Botanical Name	Deer Resistant	Drought Tolerant	Revegetation	Erosion Control	Remarks
<b>Deciduous Shrubs</b>						
Cinquefoil	Potentilla fruticosa					
Alpine Current	Ribes alpinum			√		Berries attract birds
Golden Current	Ribes aureum		√	√		Berries attract birds
Siberian Peashrub	Caragana arborescens		√	√		
Redosier Dogwood	Cornus stolonifera			√		Streambank revegetation
Staghorn Sumac	Rhus typhina			√		Good bank cover
Odessa Tamarix	Tamarix odessa		√	√		Spring flowers
Snowberry	Symphoricarpos albus		√	√	√	
Amur Maple (tough)	Acer ginnala					Good fall color
Buffaloberry	Shepherdia argentea		√	√		
Memorial Rose	Rosa wichuraiana				√	Good bank cover
Smoke Tree	Cotinus coggygria	√	√			Interesting flowers
Tartarian Honeysuckle	Lonicera tatarica		√	√		
Western Chokecherry	Prunus virginiana var. demissa					Berries attract birds
Western Sand Cherry	Prunus besseyi		√	√		Berries attract birds
Sweet Mockorange	Philadelphus coronarius					Fragrant
Nanking Cherry	Prunus tomentosa		√	√		
Smooth Sumac	Rhus glabra		√	√		Good bank cover
Squawbush Sumac	Rhus trilobata		√			
Mentor Barberry	Berberis x mentorensis					
Peking Cotoneaster	Cotoneaster acutifolius					

Table A-1 (Cont.)  
**RECOMMENDED PLANTS**

**Special Uses**

Common Name	Botanical Name	Deer Resistant	Drought Tolerant	Revegetation	Erosion Control	Remarks
<b>Evergreen Shrubs</b>						
Big Sagebrush	<i>Artemisia tridentata</i>	√	√	√		Sierra native
Bitterbrush	<i>Pershia tridentata</i>		√	√		Sierra native
Fourwing Saltbrush	<i>Atriplex canescens</i>	√	√	√		Sierra native
Greenleaf Manzanita	<i>Arctostaphylos patula</i>		√	√		Sierra native
Scotch Broom	<i>Cytisus scoparius</i>	√	√			
Mountain Mahogany	<i>Cercocarpus ledifolius</i>		√	√		For dry sites
Chinese Juniper	<i>Juniperus chinensis</i>	√	√			
Horizontal Juniper	<i>Juniperus horizontalis</i>	√	√	√		
Oregon Grapeholly	<i>Mahonia aquifolium</i>	√				Medicinal berries
Mugo Pine	<i>Pinus mugo</i>	√				
<b>Deciduous Trees</b>						
Amur Maple	<i>Acer ginnala</i>		√			Good fall color
Black Locust	<i>Robinia pseudoacacia</i>		√			Showy flowers
Amur Chokecherry	<i>Prunus maackii</i>					
European White Poplar	<i>Populus alba</i>					Very fast growth
Golden Willow	<i>Salix alba vitellina</i>					
Aspen	<i>Populus tremuloides</i>					Sierra native
Hackberry	<i>Celtis occidentalis</i>		√			Good shade tree
Idaho Locust	<i>Robinia ambigua 'Idahoensis'</i>		√			Showy flowers
Goldenrain Tree	<i>Koelreuteria paniculata</i>		√			Laterns interesting
Russian Olive	<i>Elaeagnus angustifolia</i>		√			Grey green foliage
Western Catalpa	<i>Catalpa speciosa</i>					
White Oak	<i>Quercus alba</i>					Large shade tree

Table A-1 (Cont.)  
**RECOMMENDED PLANTS**

**Special Uses**

Common Name	Botanical Name	Deer Resistant	Drought Tolerant	Revegetation	Erosion Control	Remarks
Bur Oak	<i>Quercus macrocarpa</i>					
Black Locust	<i>Robinia pseudoacacia</i>		√			
Blue Ash	<i>Fraxinus quadrangulata</i>	√	√			
Columnar English Oak	<i>Quercus robur</i> 'Columnaris'					Dark green leaves
<b>Evergreen Trees</b>						
Jeffrey Pine	<i>Pinus jeffreyi</i>	√	√			Sierra native
Ponderosa Pine	<i>Pinus ponderosa</i>	√	√			
Lodgepole Pine	<i>Pinus contorta</i>	√	√			
Rocky Mountain Juniper	<i>Juniperus scopulorum</i>	√	√			Interesting berries
Arizona Cypress	<i>Cupressus arizonica</i>	√	√			
Austrian Black Pine	<i>Pinus nigra</i>					Fast growth
Piñon Pine	<i>Pinus edulis</i>	√	√			
Rocky Mountain Junipers	<i>Juniperus scopulorum</i>	√	√			
Scotch Pine	<i>Pinus sylvestris</i>	√	√			
Singleleaf Piñon Pine	<i>Pinus monophylla</i>	√	√			Nevada state tree
White Fir	<i>Abies concolor</i>	√				Sierra native
Incense Cedar	<i>Calocedrus decurrens</i>	√				Sierra native
Colorado Blue Spruce	<i>Picea pungens glauca</i>	√				Blue color
<b>Ground Covers</b>						
Bearberry	<i>Arctostaphylos uva-ursi</i>	√	√	√	√	Makes a green carpet
Lavendar Cotton	<i>Santolina chamaecyparissus</i>	√	√			Showy flowers
Winter Creeper	<i>Euonymus fortunei</i>					
Snow in Summer	<i>Cerastium tomentosum</i>	√	√		√	Invasive
Periwinkle	<i>Vinca major</i>				√	Invasive
Brooms	<i>Genista spp.</i>	√	√		√

Tall Wheatgrass	Agropyron elongatum				√	
Indian Ricegrass	Aryzopsis hymenoides				√	
Sand Dropseed	Sporobolus cryptandrus				√	
Alkali Sacaton	Sporobolus airoides				√	

Table A-2  
**RECOMMENDED PLANTS FOR LANDSCAPED GREEN BELTS**  
 IN THE 30'-100' FIRE BREAK TRANSITION ZONE

Species	Drought Tolerance	Erosion Control (30-60° Slope)	Growth Height	Mature Height (Inches)	Scale of Use
<i>Achillea tomentosa</i> Wooly Yarrow	Fair		Very Spreading	to 12	Small
<i>Atriplex gardneri</i> Gardner's Saltbush	Excellent	++	Semi Upright	12-18	Medium
<i>Atriplex semibaccata</i> Creeping Australian Saltbush	Excellent	++	Semi Upright	to 12	Large
<i>Cerastium tomentosum</i> Snow in Summer	Good		Spreading	4-6	Medium
<i>Euonymus fortunei</i> var. <i>radicans</i> Common Winter Creeper	Fair-Good	+	Very Spreading	18-24	Medium
<i>Potentilla verna</i> Spring Cinquefoil	Good	+	Spreading	3-6	Medium
<i>Santolina virens</i> Green Lavender Cotton	Excellent	++	Upright	18-24	Large
<i>Santolina chamaecyparissus</i> Lavender Cotton	Excellent	++	Upright	18-24	Large
<i>Vinca major</i> Periwinkle	Good	++	Very Spreading	18-24	Large
<i>Arctostaphylos uva-ursi</i> Bearberry	Excellent	++	Spreading	to 12	Large
<i>Hedera helix</i> English Ivy	Poor	++	Very Spreading	to 12	Large
<i>Hypericum calycinum</i> Aaron's Beard	Good	++	Upright	12-15	Medium - Large
<i>Ceanothus prostratus</i> Squaw Carpet	Excellent	++	Spreading	2-6	Medium

Footnotes for Table A-2

**Drought Tolerance:** Excellent - Little supplemental water needed during the dry season  
Very Good - Occasional watering needed 2-4 times during the dry season.  
Good - Requires moderate water (about once a month during dry season)  
Fair - Requires watering every 2-3 weeks.  
Poor - Needs frequent watering (every week to 10 days or more)

The above applies to established plants. Newly planted areas will require substantially more water.

**Erosion Control:** Each species is evaluated as to whether it is good (++) , fair (+) , or not recommended for steeper slopes (30-60°).

**Growth Habit:** Very Spreading - Trailing stems or creeping along the ground.  
Spreading - Stems grow horizontally for short distances.  
Semi Upright - Plants grow more or less vertically and forming clumps.  
Upright - Plants distinctly vertical with little lateral spreading.

**Scale of Use:** Small - Best suited as a small-scale ground cover (limit use to a few hundred square feet)  
Medium - Good ground cover for medium sized areas.  
Large - Large area ground cover

DESIGN REVIEW COMMITTEE APPLICATION  
SUPPLEMENTAL INFORMATION**

---

(ALL REQUIRED INFORMATION MAY BE SEPARATELY ATTACHED)

Chapter 110 of the Washoe County Code is commonly known as the Development Code. Specific reference to the Design Review Committee may be found in Section 110.916.10. Design Review Committee approval is often required to ensure that a project will be compatible with surrounding properties or that appropriate buffering will be provided to mitigate any adverse effects. The condition of approval that required Design Review Committee action will state the items of concern that must be addressed in this application.

# I. INTRODUCTION

## Purpose

This Handbook presents design guidelines and standards that will apply to the community at Southwest Pointe. This booklet serves several purposes. First, it will help prospective architects, designers, builders, and owners create residences and improvements that will fit within a defined architectural character. Second, the Handbook is intended to fulfill the requirements of Article 814, Development Agreements, of the Washoe County Development Code. Specifically, Section 110.814.75(g) of this article presents the topics that must be addressed in the Development Standards Handbook. And third, it is intended to provide the county and the residents in the Southwest Truckee Meadows with a feeling for the type of development being proposed.

This Handbook, along with additional provisions and "Residential Lot Declarations" that will be set forth in the Southwest Pointe CC&Rs, form the basis for evaluation of all drawings and specifications for construction submitted to the Southwest Pointe Architectural and Landscape Control Committee (ALCC) for review and approval, including any additions and modifications. The CC&Rs may specify further guidelines or restriction to those provided in this Handbook. When not in conflict, this Handbook is not meant to duplicate or supersede the requirements of Washoe County. Plans for construction will need to be processed through Washoe County and appropriate public agencies as well as through the ALCC.

A preliminary development agreement for Southwest Pointe was approved by the Board of County Commissioners on February 8, 1994. Subsequent to that approval, the preliminary agreement was amended on three occasions. The first amendment, approved on September 27, 1994, granted an 18-month extension of time for preparing the final development agreement. The second amendment, approved on November 8, 1994, modified several of the original conditions so that grading of the first 18-hole golf course and installation of utilities could commence, prior to recording the final development agreement. The third

amendment, approved on \_\_\_\_\_, 1996, modified, deleted, updated, and reorganized the conditions of approval. Additionally, special use permits have been approved for the golf course and related facilities (SPW9-13-93) and water system (SPW9-10-93). Copies of the conditions of approval for all actions taken by the Board of County Commissioners and the Washoe County Planning Commission are included as Exhibits \_\_\_\_\_ through \_\_\_\_\_ in the Development Agreement. Additionally as required by Section 110.814.75(g) (17), a copy of the original Concept Plan is included with Exhibit \_\_\_\_\_.

### **Project Description**

**Setting** - Southwest Pointe is set in the context of a rugged mountain backdrop and sagebrush-covered slopes that are punctuated by Thomas and Dry Creeks. The 3,272-acre project is located on a prominent site overlooking the Truckee Meadows. The majority of the property has unobstructed views, and the project has been laid out to maximize these views. Both Thomas and Dry Creeks cross the property, and the site plan takes these two prominent features into account. There is some riparian vegetation along the creeks but a majority of the site is covered with moderate to dense stands of bitterbrush and sagebrush and thinly scattered field grass and alfalfa.

As shown in Figure 1-1, the property is bounded by the Toiyabe National Forest to the west, Thomas Creek along the south, and the established neighborhoods of Thomas Creek Estates and Saddlehorn to the southeast and east. Elevations range from approximately 4,950 feet along the eastern portion of the site to 5,900 feet on the west. The property slopes in a southwest to northeast direction with slopes generally ranging from 5 to 15 percent. Moderately steep slopes, generally between 15 and 30 percent, are found at the northern end of the site.

**Site Plan** - The site plan for Southwest Pointe is based on a planning approach that analyzes the constraints and opportunities of the property to identify the most appropriate development areas. Site characteristics, including topography, geology, flora and fauna, drainage, view sheds, access points, and easements were mapped. In addition, surrounding land uses were also considered.

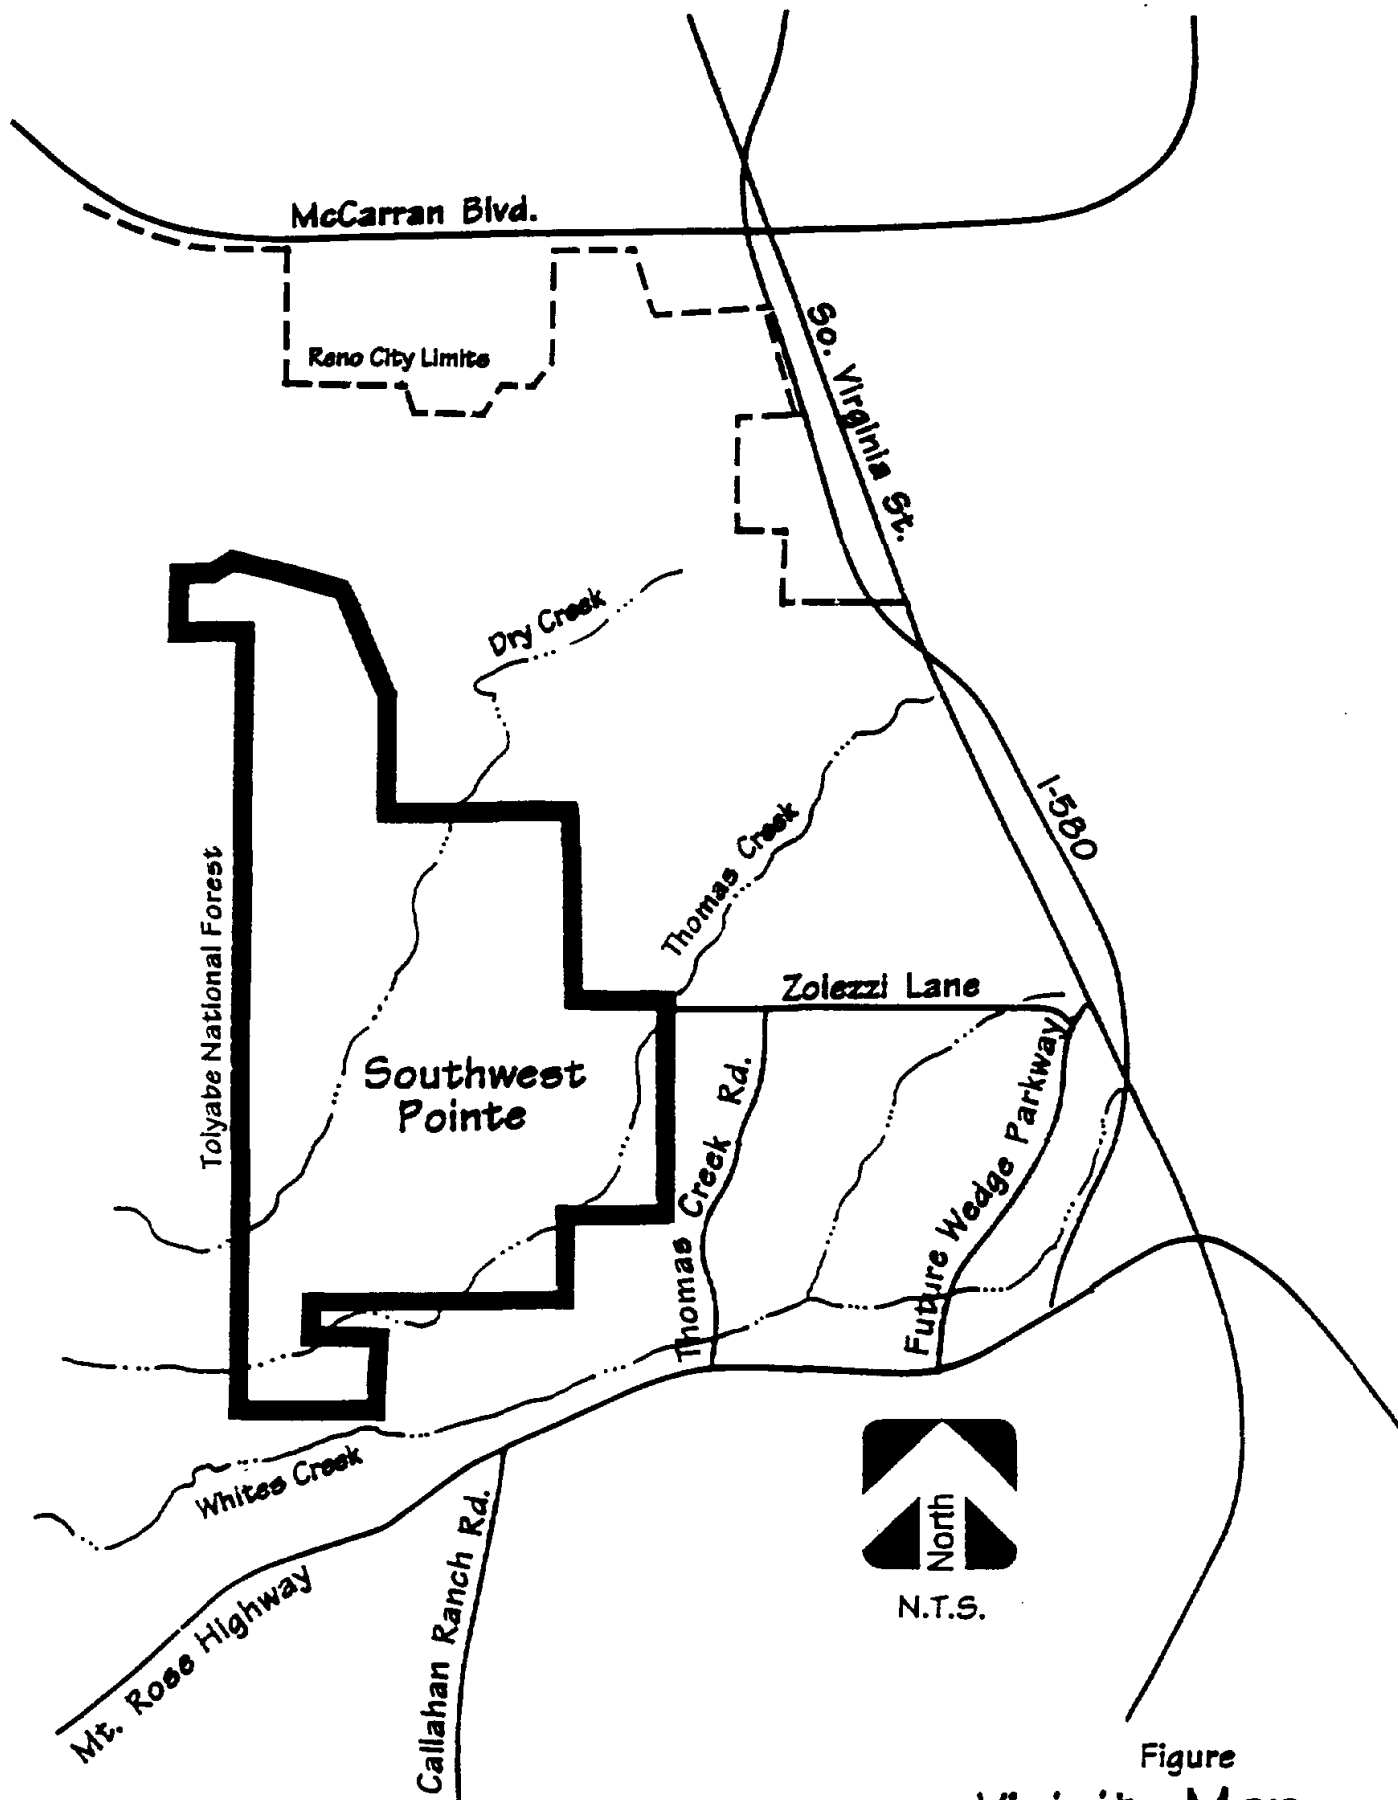

Figure  
Vicinity Map

The topography is steep and mountainous along the western boundary and in the "panhandle" to the north. Remaining portions of the site are characterized by gently and moderately sloping terrain with slopes ranging between 5 and 15 percent. These terrain features create panoramic views of downtown Reno and the Southeast Truckee Meadows from nearly every portion of the site.

A number of Holocene faults cross the property, generally running in a north-south direction. These faults define corridors within which development was planned. Holocene faults are defined as faults that show evidence of movement within the past 11,000 years.

Two drainages that form major geographical features traverse the property -- Thomas Creek along the southern and eastern edge and Dry Creek through the western and north central portions of the land. Some sections of the creeks are bordered by riparian wetlands and, therefore, setbacks for development are required. These riparian corridors are generally not visible from most of the site; however, these corridors are among the most scenic areas of the property.

The winter range for the Loyalton-Truckee deer herd covers the "panhandle" and the north portions of the site. Some residential and golf course development is proposed within the winter range; however, there is also a significant amount of acreage left as open space.

Blending the physical characteristics of the property with the allowable lot count of 1,090 single-family dwelling units and the development program, which calls for 36 holes of golf, the following design objectives were formulated and implemented in the site plan:

- Provide significant natural open space buffers around the periphery of the project to preserve the visual and physical environment of surrounding residents and to focus the views from within the property.
- Reserve the Thomas Creek and Dry Creek corridors and use creek edges, where feasible, for golf course fairways and for visual amenities from lots.

- Remain consistent with the intent of the Southwest Truckee Meadows Area Plan. Set aside a location for the civic uses proposed in the Area Plan -- schools, neighborhood park, regional trails, and a fire station.
- Create a major community entrance at Whites Creek Lane with signage, a gate house, and landscaping. Integrate the bridge structures across Thomas Creek with the community entrance features.
- Use the earthquake faults and associated building setbacks, wherever practical, as golf course fairways, road right-of-ways, and open space.
- Establish a rural golf course community theme by using smaller paved road sections, by creating neighborhood enclaves, and by controlling development through comprehensive design standards.
- Develop a mix of lot sizes within the following parameters: 10-20 percent one acre and larger, 30-40 percent 1/2 acre and larger, and 40-50 percent with a minimum size of 12,000 square feet. All residential units are single-family dwellings; no other housing types are proposed. Primary lot orientation should be to the golf courses and/or the panoramic views.

As shown on the Site Plan on the following page, the land use pattern clusters residential neighborhoods within enclaves created by the golf course fairways. All edges of the proposed development reserve substantial areas of natural open space, ranging from the entire "panhandle" to a minimum of 200 feet to the nearest existing lot. Table 1-1 presents a break down of the proposed land uses.

Table 1-1  
**Land Use Summary**  
 (acres are approximate)

<u>Land Use</u>	<u>Acreage</u>	
Residential	860	(26%)
Golf Course/Roads/Common Area	823	(25%)
Civic Uses	62	(2%)
Village Center	27	(1%)
Open Space	<u>1500</u>	(46%)
<b>TOTAL</b>	<b>3,272</b>	<b>(100%)</b>

**Public Facilities** - Various civic uses are shown on the site plan. These include an elementary school, possible middle school, fire station, neighborhood park, and regional trails. The Washoe County School District will be responsible for construction of the elementary and middle schools. A special use permit has already been approved for the elementary school and construction will start in the late spring or summer of 1996. The School District hopes to have the elementary school open in September 1997.

Construction of the middle school is dependent on several factors. First, based on the Conditions of Approval (i.e., Condition #51), the site must be reserved for an off-stream stormwater detention facility for a certain length of time. If the detention facility is not constructed, the site will then be dedicated to the School District for a middle school. The second factor is that the voters of Washoe County must pass a bond issue in November 1996 for future school construction.

A one-acre site for a fire station is shown at the entrance to Southwest Pointe. The site will be dedicated prior to recordation of the first final map (i.e., Condition #92). Construction of the fire station will be the responsibility of the Nevada Division of Forestry (NDF); however, it is possible that the Truckee Meadows Fire Protection District will also be involved in the construction and operation of the station since the location could serve both NDF and Truckee Meadows.

SITE PLAN

The neighborhood park and the regional, public trail system are discussed in detail in the Open Space Management Plan, which was prepared to comply with the Conditions of Approval (i.e., Conditions #93 through #96). According to the Management Plan, the Washoe County Department of Parks and Recreation will be responsible for constructing and maintaining the regional trails. The neighborhood park will be dedicated to Washoe County after the improvements have been completed. Southwest Pointe Partners or its successor will be reimbursed for the cost of the improvements and for the fair market value of the land from fees collected in Southwest Pointe from the Residential Construction Tax.

### Development Phasing

The approximate date for the start of construction for the first phase shall be on or before October 1, 1996. The first phase of the project shall be constructed of the first 18 holes of the golf course. All phases after the first phase for subdivision improvements shall be constructed within the time frames allowed pursuant to tentative maps and final maps for the project. Nonresidential development shall be constructed pursuant to special use permits, when applicable, under the time frame provided therein. Other phasing requirements shall be as provided in the Conditions of Approval.

## II. COMMUNITY DESIGN GUIDELINES

### Community Design Character

Southwest Pointe is located in the uplands area of the Truckee Meadows between the high desert valley floor and the mountain range of the Sierra Nevadas. This area has low vegetation generally of sagebrush and native shrubs.

The Southwest Pointe Community Design Character is intended to be organic to and respectful of the existing natural and regional environment. The existing environment is to be maintained by minimizing grading and earthwork and working with the land's terrain in locating roads and other improvements.

Due to the inherent visibility of the site and its natural features, the prescribed architectural and structural character is intended to blend into the natural environment and to enhance the nature of that environment by adding forms, features, texture, colors, and plants that are similar to those on site.

### Community Components

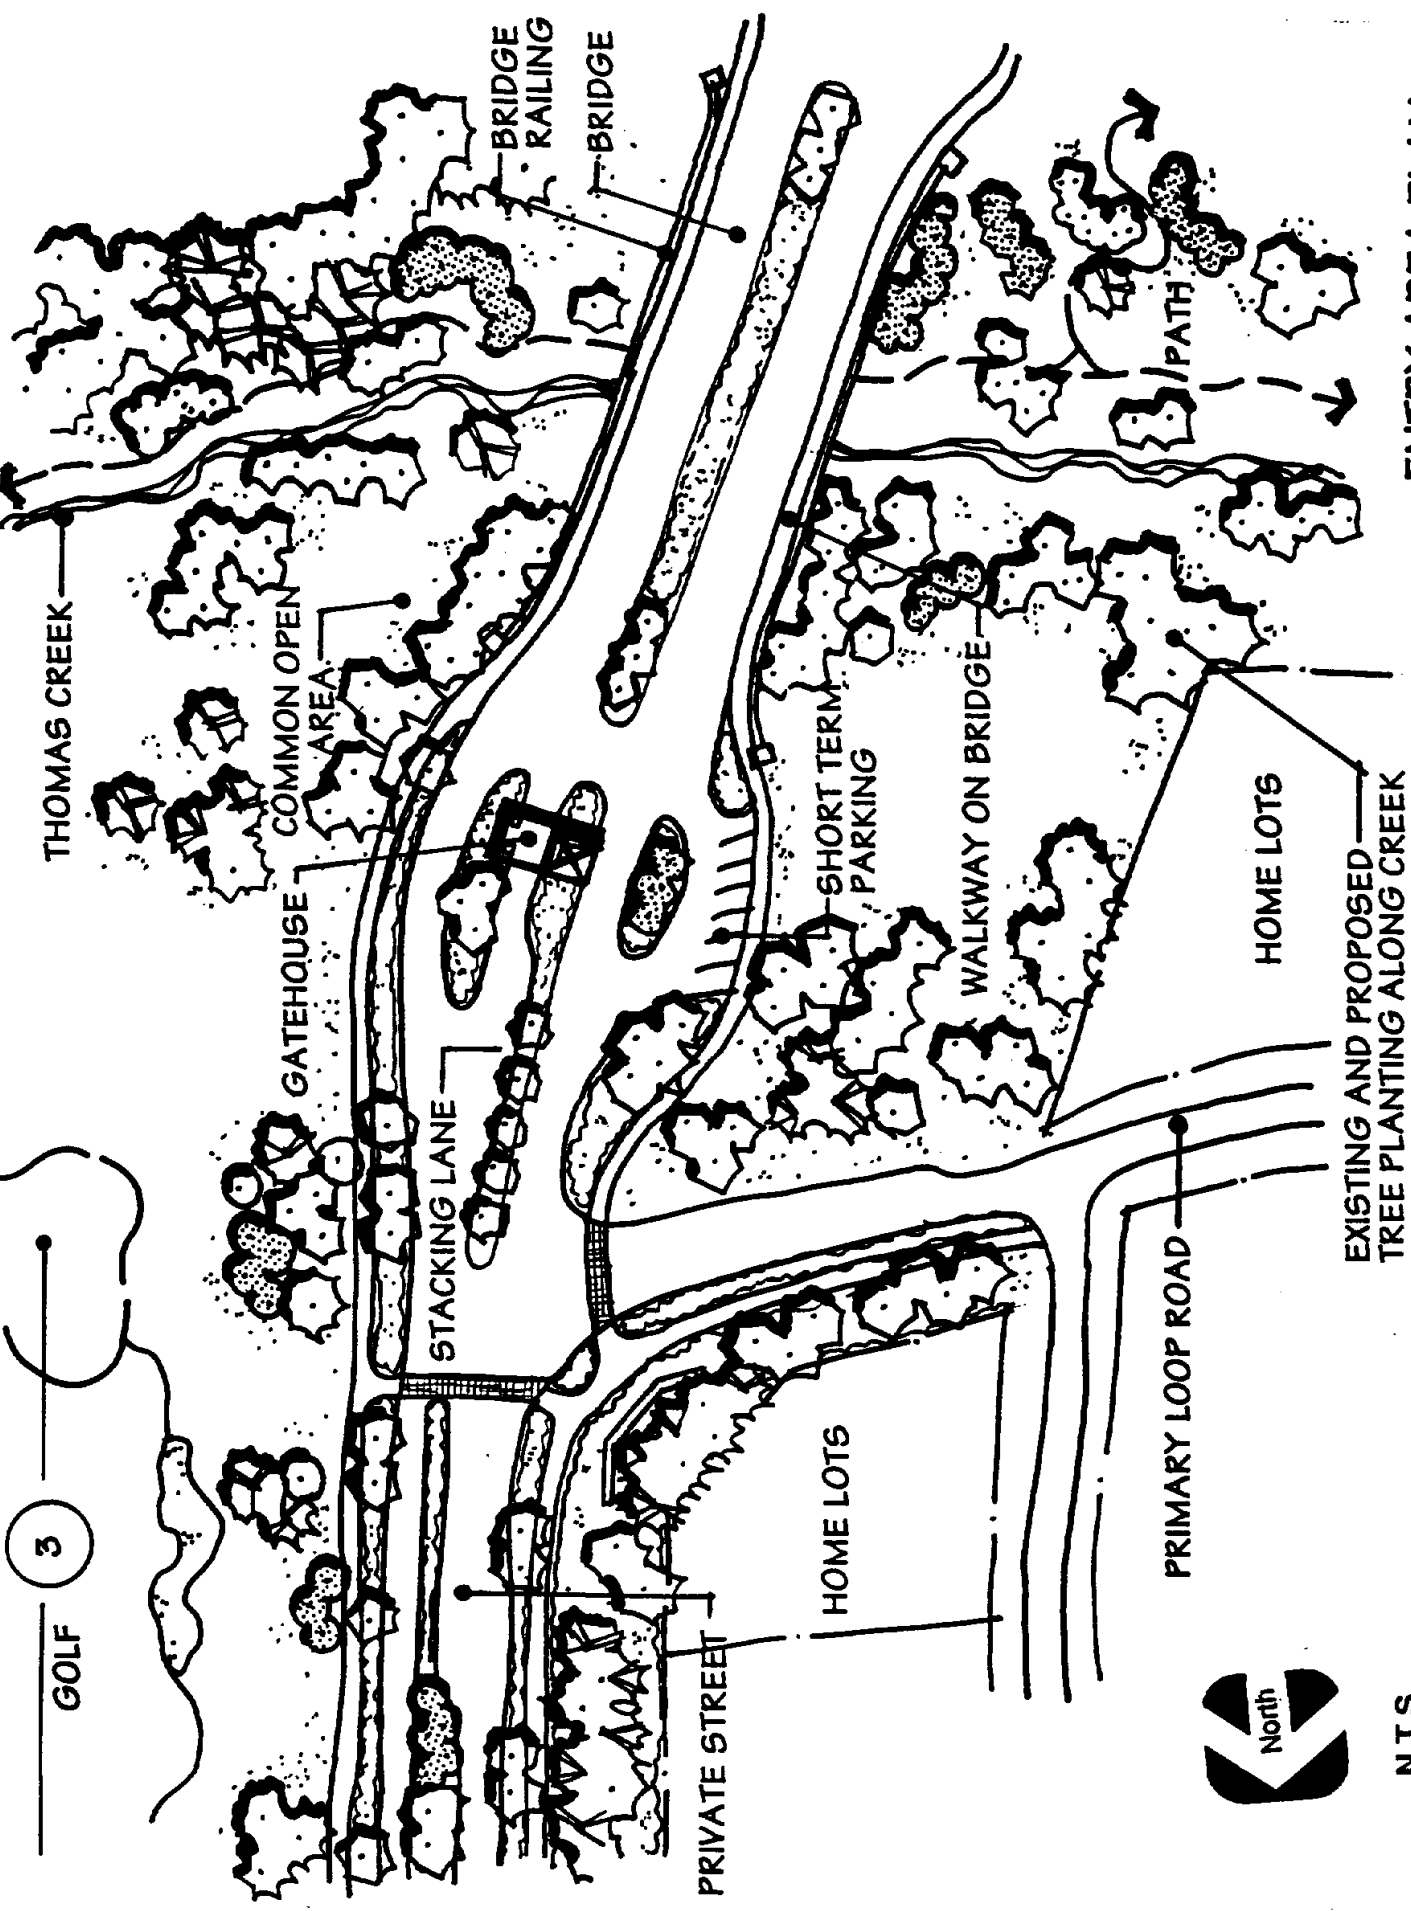

Entry & Gate House - The main project entry from Whites Creek Lane will feature one-way streets with a wide landscaped median between for safety and visual appeal. (Refer to Figure 2-1.) The entry is the visual gateway to the subdivision and the first impression to residents and guests. In that regard, the community character begins here with a strong visual impression.

The entry landscape for the first one quarter mile upon entering the project is a dense, natural forest setting, consisting of predominately native conifers, with a native woodland understory that provides fall color. The intent is to introduce a strong landscape theme consistent with the regional character, while enclosing views from the road. The landscape enclosure will soften the adjacent 3:1 embankments on the sides of the road and effectively screen the elementary school parking lot.

GOLF

3

ENTRY AREA PLAN

EXISTING AND PROPOSED TREE PLANTING ALONG CREEK

N.T.S.

The views, at first enclosed, will then dramatically open up at the approach to the bridge and gate house situated at the Thomas Creek crossing, with elevated vistas over fairways and the creek setting. Traveling into the entry area, the motorist approaches the gate house. The gate house will provide controlled access to the community and will direct visitors within Southwest Pointe.

The gate house has forms and materials resembling those on site and historic to the region. (Refer to Figure 2-2.) Portions of the building's facade are native stone, which establishes natural imagery. Beyond the entry building are entry gates with stone monuments and a vehicle turn-around. Once the traveler passes the entry, the vistas open, highlighting the project's open space, streetscape, golf course, and neighborhood entrances.

**Neighborhood Entries** - Landscaping, monumentation, and lighting will be used at neighborhood entries in a manner that creates a consistent theme throughout the project. A hierarchy of entries will be created. The treatment depicted in Figure 2-2 will be used at key entry locations along the main loop road. It features a combination of evergreen and deciduous trees with an understory of shrubs. Annuals and perennials will be planted for seasonal color. The entry also includes a retaining wall of native stone within which the neighborhood identification sign or clubhouse sign could be incorporated. Each minor neighborhood entry will be identified with signage, landscaping, and lighting that is consistent with the theme depicted in Figure 2-3.

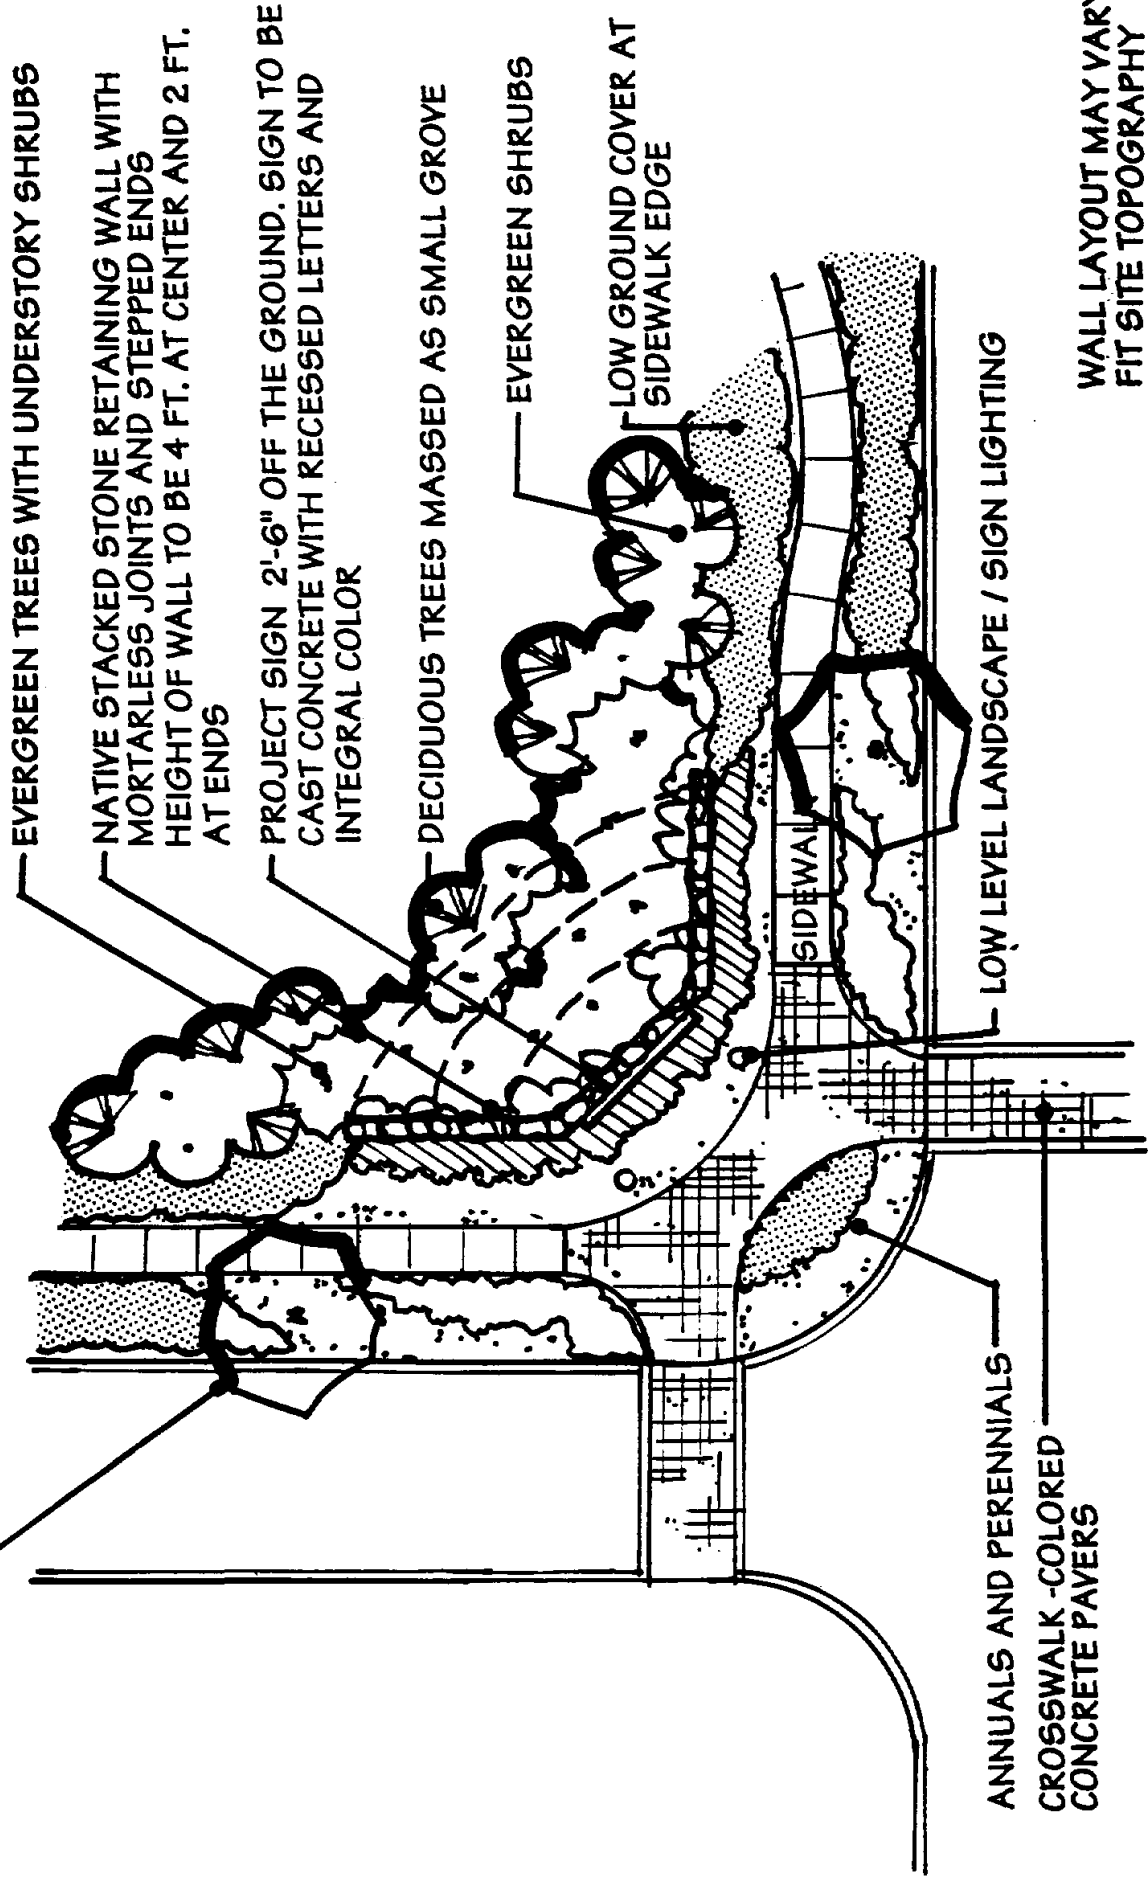

**Bridges** - Bridge structures will be constructed to span the creeks and drainage ways to minimize grading and site disturbance. The structures may have stone elements at each end with painted decorative metal guard railings to blend in with community standards. (Refer to Figure 2-4.) Native stacked stone may be used to stabilize creek banks at each end of the bridge structure.

**Fences and Walls** - There will be two types of community fencing in Southwest Pointe. (Refer to Figures 2-5 and 2-6.) The first will be a low decorative, split rail design either with or without native stone pilasters. This fencing type will be a maximum of 3 feet high with an 8" x 8" post. In more prominent locations (e.g.,

# NEIGHBORHOOD ENTRY PLAN

TYPICAL BRIDGE STRUCTURE

SPLIT RAIL FENCE AND PILASTER

SCREENING FENCE

near the entry to the golf and tennis club), native rock pilasters may be used. The fence will follow the ground plane for slopes up to 10 percent; above that the fence will be stepped. Fencing around golf holes will be split rail without pilasters.

The second is a higher metal or wood fence either with or without native stone pilasters which will provide a visual screen and will only be allowed in certain areas of the development. Use of these fences will be strictly controlled to preserve the open and rural community theme. The fence is a 5 to 6 feet tall with or without stone pilasters. Fencing is either metal ballasters or wood members. All exposed wood surfaces will be lightly stained or treated with preservatives for longevity and appeal.

Walls will be reminiscent of the types seen historically throughout the eastern Sierra, using indigenous rock as a key material. Intersections and key places may be highlighted with attractive stone walls. Street signs or neighborhood identification signs may be integrated into walls.

**Lighting** - Lighting may be provided with landscape uplights on vegetation and pedestrian-scale bollards. Where necessary, along roadways and at intersections, lighting levels should be no more than absolutely required to perform the task for which it is intended (e.g., ambiance, safety).

Lighting levels are important to the overall lighting concept. Lighting is necessary in certain areas. For circulation safety, for functional purposes, and for aesthetics, lighting is often a necessary element. The level of lighting must also be appropriate. In general, lighting levels should be no more than absolutely required to perform the various tasks for which it is intended.

Street lights are required at major intersections (Condition #35). Light standards may be selected from the different types that Sierra Pacific Power Company has available; however, the developer does have the option of selecting different fixtures. Lights may be used as low-level accents for intersection signage and associated landscaping. Uplights to trees around intersections will be flush mounted. Signs should be lit from the ground, backlit, or a combination. Light spillage onto adjacent properties is discouraged.

Around the golf, tennis and swim center, lights in parking lots may be mounted on 25-30 foot tall poles for pedestrian and vehicle safety. The style, color, and type of light will be coordinated with the intersection lights. Entry areas and walkways may be lit with landscape lights and bollards less than 48 inches in height. Tennis court lights will use cut-off style sports lights to limit light spill over onto adjacent property. The multi-purpose sports fields adjacent to the pool/tennis center will not be lit since lighted fields are available at the nearby South Valleys Sports Complex.

The entry at Thomas Creek and the bridge structure may be lit to a level that allows for safe driving and turning movements. The gatehouse will have overhead downlights for driver and license plate identification. Trees surrounding the entry will be uplit and some 'twinkle' style lights may be used.

Lighting within the neighborhood park will be minimal with a downlight below the shade shelter and an electrical receptacle provided. Field lighting is not desired because of the neighborhood function of the park and the close proximity to existing homes.

**Signs** - Community signing includes project entries, elementary school, neighborhood park, neighborhood entries, street signs, and signs around the golf and tennis club. The intent is to keep all signs along roadways low, at the eye level of the motorist. Community and neighborhood signs will be integrated with entry monoliths. The sign wall will have native exterior fascia. Sign lettering will be a metal attached to a smooth concrete backing or a cast concrete, mortared into place in the rock veneer.

Street signs for the roads and minor activity areas, such as sports fields, will be accomplished with metal or wood signs mounted on specially-designed posts, consistent with overall community design themes. Where possible, signs will be incorporated into low walls at entry points. Landscaping in front and to the sides of these signs will be kept low to avoid visual obstructions.

**Trails** - The proposed public trail system is consistent with the county's master plan for this park district. Figure 2-7 shows the trail system through the project. Regional public trails are proposed along Thomas Creek for access to the Mt.

Rose Crest Trail and around the northern portion of the project for access to the MacKay Fair Flume Trail and the U.S.F.S. parcel in Section 11. Both trails provide access to the Sierra Base Trail, which eventually ties into the Hunter Lake Trail. Portions of the Sierra Base Trail are located on U.S.F.S. property and other portions, especially near Dry Creek, are located on project property. It may be necessary to relocate portions of the existing trail because of golf course and residential development near Dry Creek.

Two trail types are proposed for the development -- private and public. Private trails connect residential units to the various project amenities such as the golf/tennis center, schools, neighborhood park, and open space. The trails also lead to the exterior public trail system and regional destinations well beyond the project boundary. In compliance with the Conditions of Approval (i.e., Condition #23), a schematic pedestrian circulation plan of the private trail system is shown in Figure 2-7.

Public trails connect existing residential neighborhoods to destinations such as Mt. Rose, Hunter Lake, and the MacKay Fair Flume Trail. These connections will ensure that public access to public lands to the west is not cut off. The trailhead at the neighborhood park allows for 25-car and 5-truck/trailer parking spaces. Some overnight parking will likely occur, especially for equestrian users whose destinations are sometimes many miles from the trailhead.

The private trails within the street rights-of-way are shown on the street sections in Figures 2-10 through 2-13. On the minor arterial, an 8-foot wide asphalt meandering path is proposed, with a transition to a 6-foot wide sidewalk beyond the entry gate. Both paths will follow the maximum proposed road gradient of 9 percent. The 8-foot width is intended to be multi-purpose -- bicycle, pedestrians, in-line skating, etc. A level dirt/gravel shoulder width of 2 feet will be provided for emergency pull-off. (Refer to Figure 2-8.)

Private trails outside of the street right-of-way consist of both primary and secondary types. Primary trails connect high use areas with residential units. A 4 to 6-foot wide asphalt trail is proposed, with a proposed sustained running slope of 5 percent. Rest areas will be provided every 1000 feet, consisting of a level pad outside of the path travel surface. Secondary trails connect residential

areas together and also extend to the public regional trail system. A 4 to 6-foot wide packed gravel or decomposed granite trail is proposed, with a sustained running slope of 5 percent and rest areas every 1000 feet maximum. Maximum grades in outlying areas will be held below 10 percent wherever practicable.

Public trails will be constructed and maintained by Washoe County. The developer is not responsible for public trails. Specifications for public trails may be varied by Washoe County. Based on current County standards, the following guidelines apply: wherever practicable, minimum trail width will be 36 inches clear. Grade is proposed to be a maximum of 10 percent for safety and to minimize erosion potential. Some level changes will be required in the Thomas Creek drainage and steeper slopes in the northwest corner of the site. Trail surfacing will probably be compacted dirt, with some small wooden creek/swale crossings as required. Pull-outs for horse-bicycle encounters will be provided along the way, especially where trail site distance is minimal. Vertical height clearance on the site is not a problem due to lack of trees everywhere but along portions of Thomas Creek.

Trail Signs - Figure 2-9 shows proposed signs for the public trail system. Signs will be located at trail heads and at other public access points. They are intended to help people determine if the primitive trail is within their level of ability. A regional map will also be displayed, along with warnings for snakes and drinking untreated water. At public/private trail crossings a small sign denoting the private trail will be installed. Public trail signs shall be constructed and maintained by Washoe County.

### Street and Median Guidelines

The roadway sections proposed for Southwest Pointe are shown in Figures 2-10 through 2-13. The street sections vary from a divided minor arterial at the entrance to small lightly traveled rural streets. The developer is responsible for construction of the public minor arterial to the project entrance where it becomes a private road. Washoe County is responsible for maintenance of the public roadway. Past that point, all roads are private and the developer is responsible for construction and maintenance until that responsibility is transferred to the Homeowners' Association. The developer is also responsible for installation and

60' ROW (COLLECTOR, PRIVATE, ADT = 500 TO 2,000)

# COMMON DRIVEWAYS

maintenance of all median landscaping and all landscaping along the edge of the minor arterial and collector streets. Maintenance of the landscaping and irrigation systems will initially be the responsibility of Southwest Pointe Partners or its successor until that responsibility is transferred to the Homeowners' Association. The Lot Developer or individual homeowner will be responsible for the installation, irrigation, and maintenance of all street right-of-way landscaping in front of individual lots fronting along private common driveways, rural streets, and local streets.

Roads will be constructed with a minimum 2 percent crown or cross section to maintain proper drainage. Maximum grade of landscaped areas within the street right-of-way will be 3 to 1. Vertical alignments of streets will be chosen to minimize cuts and fills. Pavement and base sections will be determined in accordance with the recommendations of the geotechnical engineer and Washoe County. All utilities will be placed underground.

**Minor Arterial (Public or Private)** - Whites Creek Lane from Thomas Creek Road to the bridge is a public road. From the bridge to the first intersection, Whites Creek Lane is classified as a private, minor arterial. The approved public and private street sections are shown in Figure 2-10. The private street will have an 120-foot minimum right-of-way with a 27-foot median, a 24 foot roadway section on either side of the median, and an 8-foot wide meandering asphalt path on both sides. A concrete header is proposed at the edge of pavement. No parking, except for emergencies, will be allowed.

Street trees will be planted between the meandering paths and street edge in an informal pattern of both deciduous and evergreen trees. Specimen-size trees will be used around the gate house. Near the project entry, a massing of evergreen trees on both sides of the street will focus views to the creek and slow down traffic as the street section transitions to a narrower pavement width. Median trees will be vertical and upright with no overhanging branches. Ground covers and shrubs will be kept low with an informal massing pattern to eventually cover most exposed ground. Flower and foliage color will be emphasized. Around intersection project signage, small irrigated lawn and annuals/wildflowers will be planted for a "high sierra" seasonal color.

From Thomas Creek Road to the project site, landscaping and irrigation will be installed by Southwest Pointe Partners or its successor. Landscaping along this section of roadway may consist mostly of shrubs, groundcovers, boulders, and only a few trees so that the residents of Saddlehorn do not have their views of Reno obscured.

**Collector Streets** - The street sections for collector streets are shown in Figure 2-11. From the first intersection to the golf and tennis club, a 120 foot right-of-way is shown. The roadside ditch serves a dual purpose -- snow storage and drainage. Residential driveway access will be allowed, but minimized. Landscaping along this section of roadway will continue the treatment used along the minor arterial.

Past the golf and tennis club, the road narrows to a 60-foot right-of-way with a 24-foot pavement width. (This street section is used in all locations where the average daily traffic ranges from 500 to 8000 ADT.) Either an 8-foot or a 4-foot path or gravel shoulder are shown on both sides, depending on the anticipated average daily traffic. Paths may not be constructed if alternate locations for pedestrian paths are shown on the Pedestrian Circulation Plan. Where necessary, a 12-foot, left-turn lane will be constructed at intersections. A concrete header with a roadside ditch is proposed. A minimum number of residential driveway access will be permitted. No parking, except for emergencies, will be permitted.

The landscaping within the right-of-way will continue to be informal with a combination of deciduous and evergreen trees massed in irregular patterns to simulate a natural forest pattern. Beyond the Swim and Tennis Club and Golf Club entrances, the landscape will transition to a more arid, "high desert" palette of shrubs and ground cover. Irrigation for plant material will be installed and maintained as a part of the common areas. In disturbed areas and along roadside ditches, erosion control grasses and wildflowers will be seeded to minimize erosion and provide seasonal color.

In neighborhoods with lots of 1/2 acre or less, the planting concept will consist of street trees planted in a regular pattern, to be selected from a list of approved tree species with heights under 25-30' at maturity in order to preserve off-site

views toward Reno. The intent is to provide summer shade and visual continuity within denser neighborhoods, but in such a way that the street tree pattern is not visibly intrusive because of the tree's height, form or seasonal color.

**Local Streets** - Local streets provide access within the individual neighborhoods. (Refer to the street sections in Figure 2-12.) A 60-foot right-of-way is shown, with a minimum pavement width of 22 feet, and a 4-foot wide path or gravel shoulder on both sides. Paths may not be constructed if alternate locations are shown on the Pedestrian Circulation Plan. A concrete header with a roadside ditch is proposed. No parking, except for emergencies, will be permitted. Landscaping and irrigation along local streets will be the responsibility of the Lot Developer or the individual homeowner. Landscaping must be reviewed and approved by the Architectural and Landscape Control Committee.

**Rural Streets** - Rural streets also provide access within individual neighborhoods. As shown in Figure 2-12, rural streets have a minimum 60-foot right-of-way, with a 22-foot pavement width. A concrete header with a roadside ditch is proposed for both snow storage and drainage. No parking, except for emergencies, will be permitted. Landscaping and irrigation along rural streets will be the responsibility of the Lot Developer or the individual homeowner. Landscaping must be reviewed and approved by the Architectural and Landscape Control Committee.

**Common Driveways** - Private, common driveways are used in a few locations where a small group of homes is proposed along collector streets. As shown in Figure 2-13, when a common driveway serves no more than 4 lots, the pavement width is 20 feet. When 5 or more lots are proposed, the pavement widens to 22 feet. No on street parking, except for emergencies, is permitted. Off street parking bays in common area will be constructed by the developer. To maintain consistency, landscaping in the area between the collector street and the common driveway will be the responsibility of the developer.

## Community Buildings

**Golf Clubhouse** - The Golf Clubhouse is intended to function as a recreation and social center for Southwest Pointe. The Clubhouse is located to maximize views of the two golf courses, Mt. Rose/Slide Mountain, the lights of the City of Reno plus the surrounding hills and valley below. The Clubhouse sits on an elevated plateau creating a strong visual impression as a community building. (Refer to Figure 2-14.)

The Golf Clubhouse will provide functional support to the public golf operation, including pro shop, bag storage, cart storage and dressing rooms. The building's basement will house the storage and service spaces, and the upper floor will house the different food and beverage spaces plus the pro shop. The dining spaces will be able to accommodate community functions plus special events, such as weddings or parties. The lower floor is mostly below grade as a basement to reduce the overall building height so the building does not dominate the site.

The exterior of the building has a native stone facade at the lower level so that the building appears to grow up from the ground and be visually connected to the site. Other building features, such as columns and chimneys at the upper floor, may also have native stone veneer. Other Clubhouse exterior materials include stucco-appearing walls with some wood trim for accent and metal roofing. The roofing color may be of a weathered copper patina, sage green or another natural landscape color to blend in with the natural environment. The stucco color is intended to be earthtone. Some exterior material color selections will be of other natural colors for subtle accents.

**Swim and Tennis Club** - The Swim and Tennis Club is intended to provide an additional recreation activity center within Southwest Pointe and will house different exercise spaces indoors plus outdoor tennis and swimming. (Refer to Figure 2-15.) Dressing facilities, snack bar, and administration activities will also be indoors.

The Swim and Tennis Club will be oriented around a town square courtyard opposite the driveway entrance to the Golf Clubhouse. Both driveway entrances will be visually enhanced with landscape medians and decorative streetscape

materials. The outdoor swimming area, as well as some of the tennis courts, will be lighted for evening use. The exterior design of the Swim and Tennis Club will be compatible to the Golf Clubhouse and other community buildings. (Refer to Figure 2-16.)

**Commercial Village** - A maximum 20,000 sq. ft. neighborhood retail and support services complex may be constructed adjacent to the Swim and Tennis Club around the town square. (Refer to Figure 2-15.) It is anticipated that retail uses may consist of a small market, video store; and services may include a beauty salon, travel agency, and real estate office. The one-story commercial building exterior will be of materials, forms, and colors that match the Swim and Tennis Club and are compatible with other community buildings.

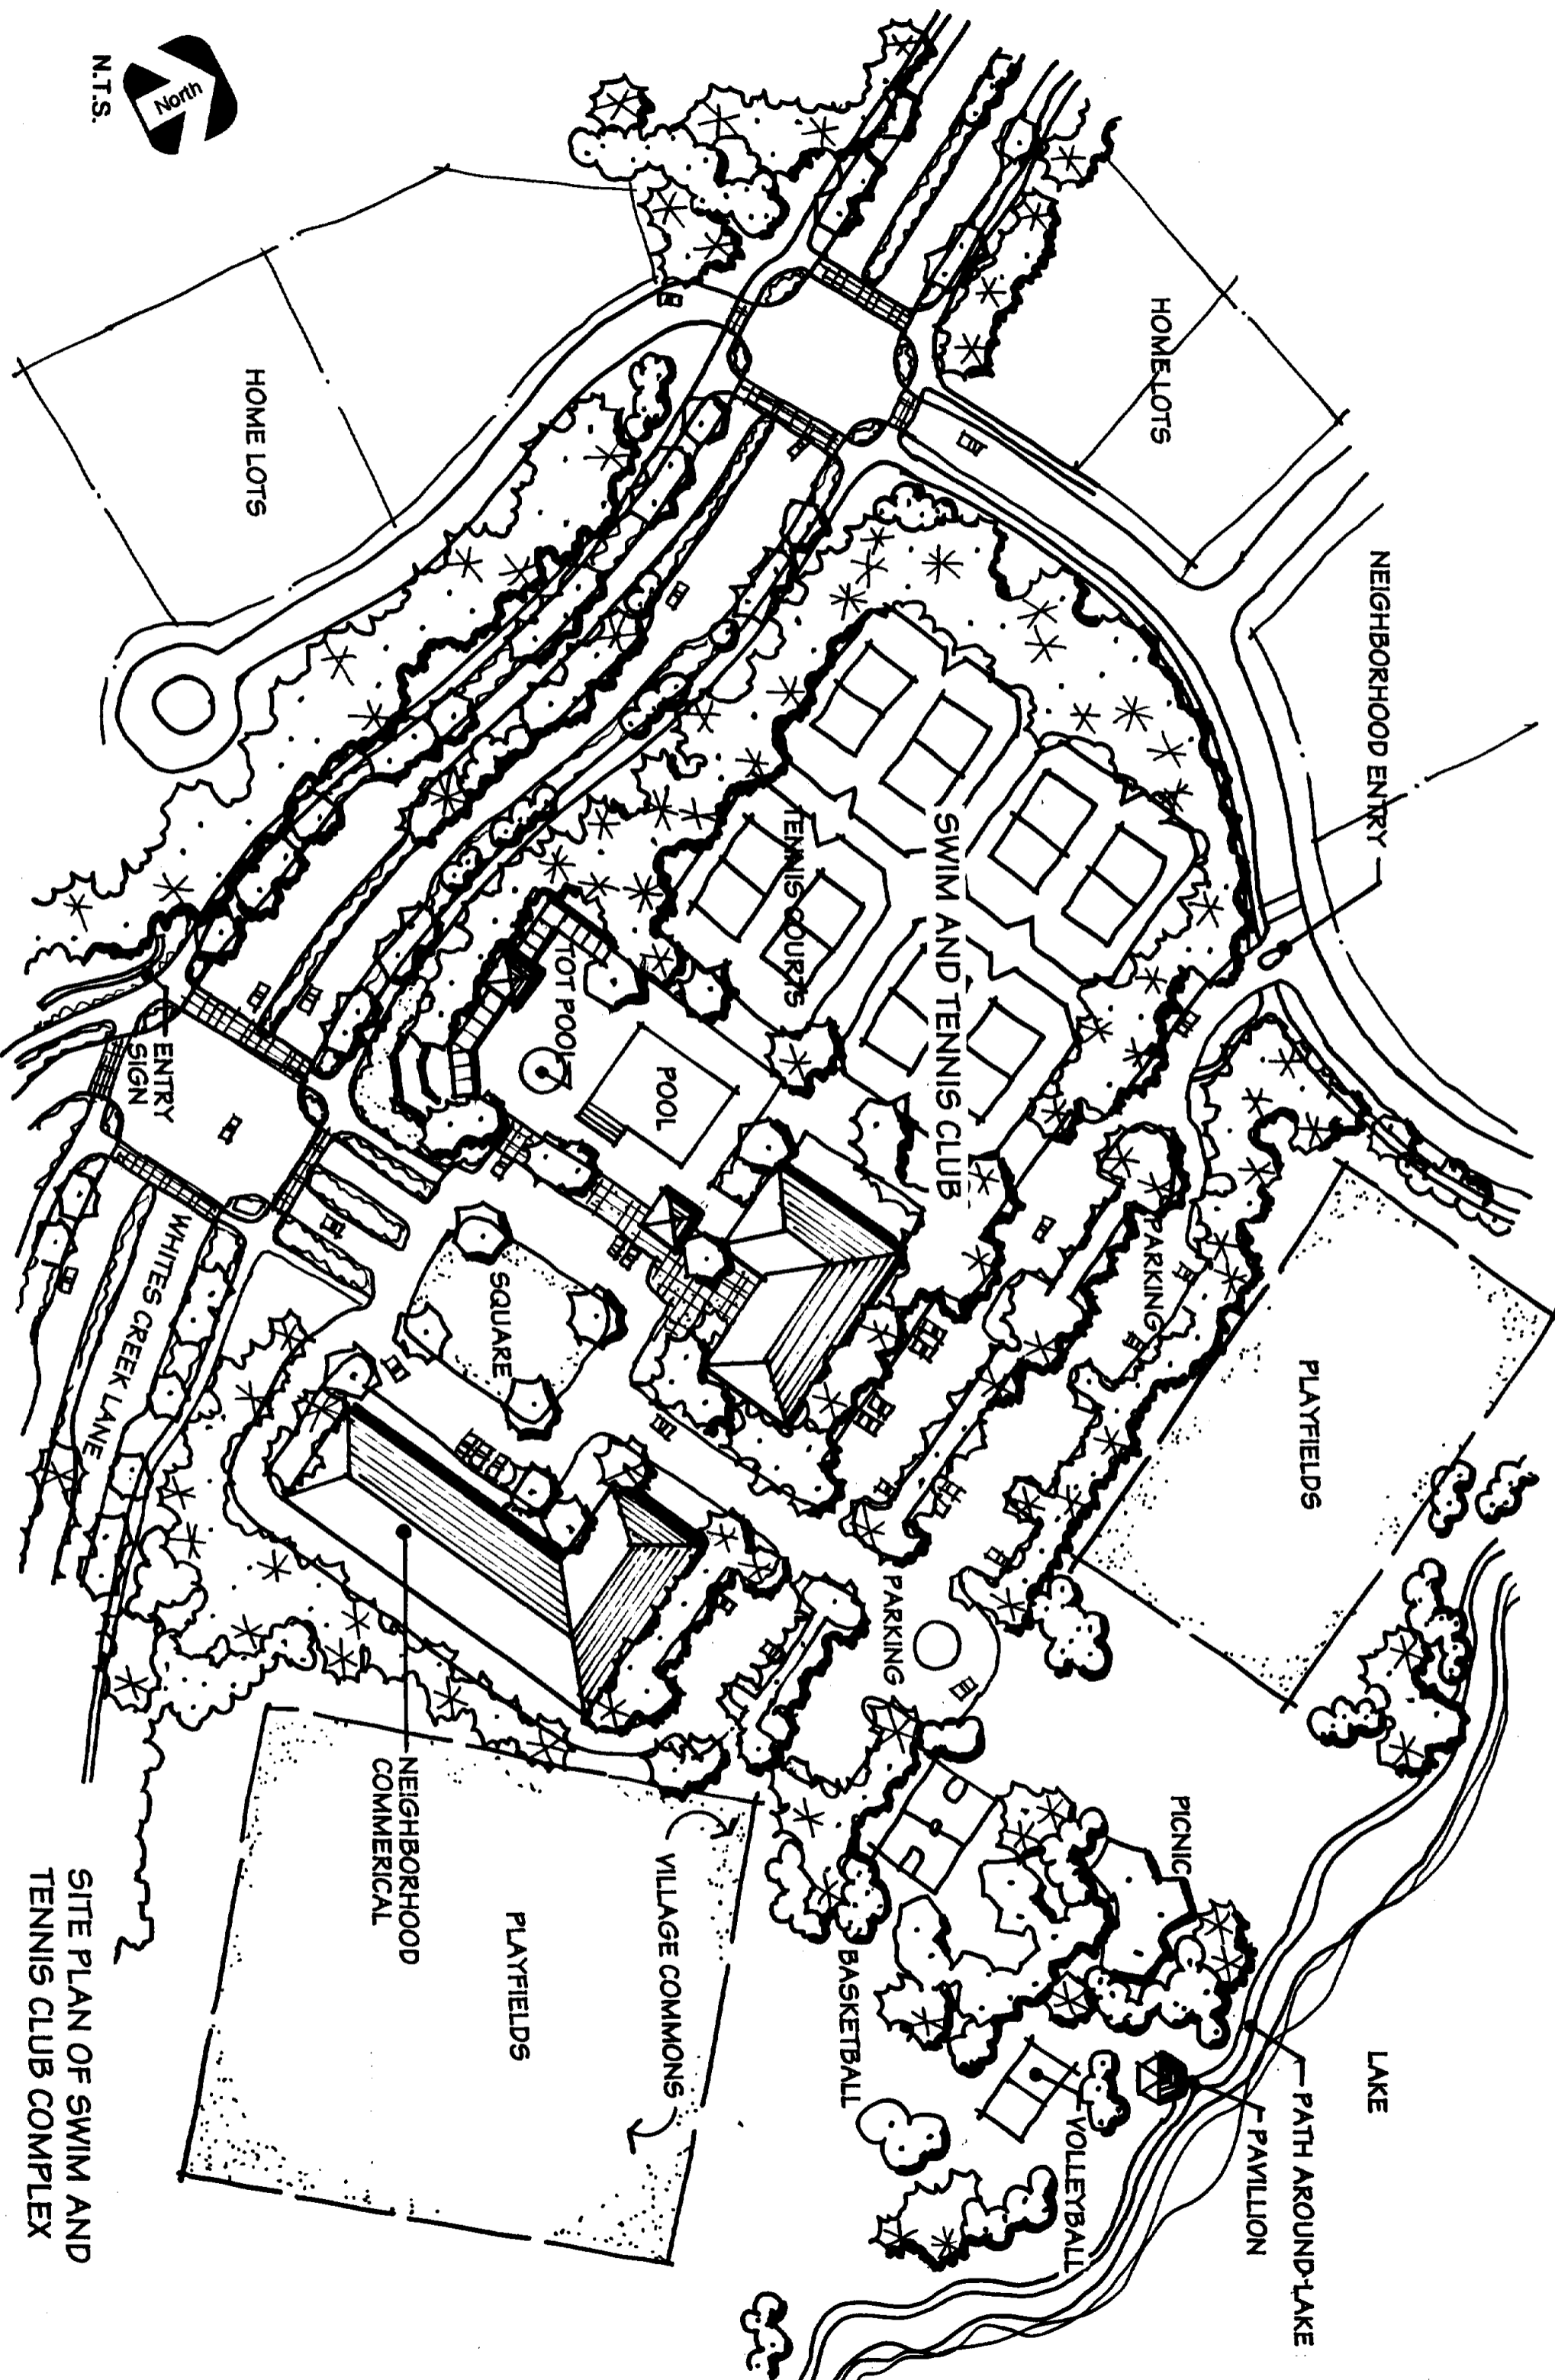

**Fire Station** - A site shall be set aside by the developer on which the Nevada Division of Forestry may construct and operate a two-bay fire station for regional fire protection. The fire station will be located before the entry, and is proposed to have building materials compatible to the other community buildings.

GOLF CLUBHOUSE

SWIM AND TENNIS CLUB

N.T.S.

SITE PLAN OF SWIM AND TENNIS CLUB COMPLEX

### III. SITE DEVELOPMENT GUIDELINES

The purpose of the site development guidelines is to present methods for integrating homes into the natural setting through sensitive design. These guidelines are intended to apply to individual residences; whereas, the guidelines presented in the previous chapter apply to community buildings and other features.

#### Building Setbacks

Each residential lot will have building setbacks that define where and how structures can be built. The underlying objective is to encourage articulated building forms, one- and two-story massing, unobstructed views, privacy, and varied setback on the street, golf course, and between residences.

The minimum setback and yard dimensions are described below:

<u>Lot Size</u>	<u>Front Yard</u>	<u>Side Yard</u>	<u>Back Yard</u>
1 acre +	30'	12'	30'
1/2 acre +	25'*	10'	20'
12,000 sq. ft.	20'	8'	20'

\* Reduced to 20' with side-entry garage.

Projections, such as chimneys, covered porches, decks, roof overhangs, canopies, eaves, or other similar architectural features may extend into a required side, front, or back yard setback not to exceed 2 feet. Some lots may have varying setbacks which relate to unusual property features and geometry and these will be specified by the Residential Lot Declarations.

Setbacks from potentially active fault traces have been recommended by the geotechnical engineers. The fault traces that were trenched and staked are judged to be fault traces having relatively high risk of ground rupture during an earthquake. Buildings for human occupancy should not be sited over these faults and a setback is recommended for each side of the fault. The setbacks for each surveyed fault are shown on the site plan and will be identified on tentative and final maps.

### Minimum Lot Width

All residential lots shall comply with the following minimum average width requirements: 1 acre and larger lot, 150 feet; 1/2 acre to under 1-acre lots, 100 feet; and 12,000 square foot lots, 80 feet.

### Grading, Drainage, and Erosion Control

The placement of the home, driveway, and other site elements should minimize disruption of the natural topography as much as possible. Where grading is required, the slopes should be gently rounded to blend into the natural contours of the ground. Site grading should also complement and reinforce the architectural and landscape character by screening undesirable views of parking and storage areas and by helping to reduce the perceived height and mass of the architecture. Wherever practicable, re-graded slopes should not exceed 3 to 1. Geotechnical considerations may allow a steeper slope.

The individual lot purchaser or builder will present drawings to the ALCC for review that are creative and sensitive as to the individual footprint, setting on the lot, and natural grade. The builder/architect is encouraged to minimize the amount of grading on each lot. This same concept should be carried forth in the design of the hardscape and landscape areas adjacent to the building structure. Every effort should be made to achieve a final design which fits the shape of the lot and the land around it.

The control of water run-off and potential erosion should be a consideration both during construction and in the final design of the home site. Natural surface drainage patterns should be preserved whenever possible. Avoid concentrating surface drainage to reduce the erosion potential.

The preservation of existing vegetation cover minimizes the potential for erosion. Construction equipment should be limited to areas intended for specific site improvements in order to minimize damage to existing vegetative cover. Revegetation and erosion control are also discussed in Chapter V, Landscape Design Guidelines.

Dust control methods will comply with the requirements of the Washoe County District Health Department, Air Quality Management. A detailed dust control plan must be prepared prior to issuance of a grading permit for the golf course or approval of a final map (Condition #45). The dust control plan will address phased grading and stabilization methods including revegetation, application of palliatives, street cleaning, and dust controls on any storage piles located on the site.

### Driveways and Parking

To create a streetscape that blends with the rural setting, driveway widths should be minimized. Maximum paved driveway width outside of the building envelope is 12 feet. Slopes on driveways should generally not exceed 14 percent except in special cases. Provide culverts for driveways that cross landscaped drainage swales. Circular drives are only allowed in 1 acre lots.

Large expanses of asphalt or gravel are discouraged, as are large areas of untextured and uncolored concrete. Unpaved parking areas are discouraged. The visual impacts of paved areas can be reduced by tucking them into the topography and landscape.

On-street parking is prohibited throughout Southwest Pointe. Each lot must provide off-street guest parking to accommodate two cars. Additionally, the Conditions of Approval (Condition #40) require that guest parking be provided

within 500 feet of home that have lots ranging in size between 12,000 square feet and 1/2 acre. One space shall be provided for every three homes. The parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the tentative map.

### Auxiliary Structures and Site Utilities

Auxiliary structures, such as gazebos, utility sheds, etc., must be designed in a manner that harmonizes with the main structure. Plans for such structures must be submitted to the ALCC for review and approval.

All solar and mechanical equipment must be screened. All utility meters and appliances must also be screened. Trash and utility areas should be located to avoid direct views from streets or adjacent properties. These areas should be enclosed with fencing or screens that match residential architectural detailing and materials.

### Fences and Walls

Appropriate design and placement of fences and walls on residential lots is important in maintaining a high quality, rural atmosphere. It is essential that the materials, patterns and textures complement the surrounding architecture wherever possible.

No residential fence or wall will exceed 6 feet in height. When a change in elevation occurs, the wall or fence should be stepped in equal intervals. Plant materials or berming will be used to soften a continuous wall or fence. Lot perimeter fencing is allowed. Where the lot abuts the golf course, the perimeter fencing near the golf course must be consistent with the community fencing. (Refer to Community Design Guidelines, Chapter II.) Colors should complement the environment and match other architectural features. Use of darker earth tones is encouraged, with all exposed surfaces finished. All fencing must be submitted to the ALCC for review and approval.

Special consideration will be taken when installing walls so as not to obstruct views from adjacent homes. Any privacy walls and fences will be installed by the homeowner or builder and maintained by the homeowner.

When retaining walls are necessary, they should become an integral part of the design, not an afterthought. The use of several 2 or 3 foot high walls rather than a single taller wall is encouraged. Not only should the retaining walls be designed with careful consideration for strength and provisions for surface and underground drainage, but they should be configured to sensitively fit with the natural terrain and be constructed or faced with materials that blend with the setting.

Freestanding walls are appropriate when used as an extension of the residence, to define key outdoor spaces, and to protect from climatic extremes. Wall materials should be consistent with the architectural style of the house.

### Exterior Lighting

All exterior lighting must be approved by the Architectural and Landscape Control Committee. Homeowners are encouraged to utilize landscape lighting -- to subtly highlight unique architectural features, trees, and focal landscape areas. Lighting levels should also be provided which insure safe passage along walks to building entries. Lighting of patio and deck areas to provide for nighttime usage is also allowed.

Landscape lighting should be integrated into the overall design of the site. Downlights can be recessed into arbors and soffits. Ground-mounted landscape bollards may also be used. Pole lights and monoliths with lights greater than 48 inches in height are not allowed. Light sources should not be directly visible. Light trespass and glare onto adjacent properties is not allowed. Lighting should endeavor to highlight special features and use areas rather than a uniform glow across the property.

## Energy Conservation

All residential units shall include site design and building design or construction features and devices which are capable of conserving energy. Measures encouraged in the design of all residential structures are:

- Double glazing
- Size and placement of windows and other major openings shall take into account prevailing breezes during the summer season and protection from stronger winds during the winter season.
- Appropriate design features to deflect sunlight or allow it to enter the residence, depending on seasonal needs.
- Strategically locate and select plant materials in areas adjacent to the residence to reduce temperature buildup and sun penetration during the summer season.

Building construction requires sufficient insulation and insulated glass to meet State of Nevada energy standards. Other building construction energy conservation features are encouraged, such as high efficiency mechanical equipment, high efficiency glass (non reflective), etc.

## **IV. ARCHITECTURAL DESIGN GUIDELINES**

### **Residential Design Character**

The Guidelines seek to establish a community-wide theme for Southwest Pointe that transcends individual property boundaries. Consistent with the Community Design Character described in Chapter II, the Residential Design Character is intended to be respectful of and harmonize with the existing natural and newly created site environment. Building materials, forms, and colors shall be natural in character to blend into and complement the Southwest Pointe character.

The residential design intent is to encourage a variety of residential styles and to encourage creativity and diversity within the community. Creativity will allow for compatibility of golf course homes to the golf course, and compatibility of the hillside homes to the surrounding open space, as an example.

### **Building Form, Mass, And Proportions**

Residential structures shall employ forms, massing and proportional detailing that relates to the predominantly horizontal context of the upland range. Low forms are encouraged to not compete with the horizontal context. Two-story structures shall have at least 50 percent of the facade appear as a low, one-story structure in height, this suggests the middle of the structure be two story with one-story portions around it. This creates a vertically stepped facade from ground up to one-story, up to two story, and back down. The stepped facade emphasizes the horizontal and appears more organic than tall, two story high wall planes.

Simple, yet bold, roof dominated forms will also emphasize the horizontal features and minimize the appearance of the vertical ways. Hipped roofs are encouraged with a few accent gables as opposed to all gables or shed type roofs.

Wall planes shall also be stepped horizontally (or articulated) with offsets to break up long walls and to create shadows and shading to subdue long wall planes. Covered porches and trellises are also encouraged to create shadows and shading, including heat gain and glare reduction by shading windows and walls. Patios with porches and trellises extend the indoor living space from indoors to the outdoors.

Stepped building forms and the elements of the forms shall be carefully composed in an integrated manner with consideration given to overall, three dimensional proportions as well as the proportions of the individual architectural elements.

### Architectural Elements

**Roofing** - Roof surfaces shall have a strong texture, like the natural landscaping with one color to blend with the natural backdrop.

Roofing materials shall be fire resistant. Approved roofing materials consist of slate, concrete shakes, fiber cement shakes/shingles, 40-year fiberglass composition shingles, and metal roofing with ribs or shingles and without exposed fasteners. Wood shake or shingle roofs are not permitted.

Roof elements, such as skylights, exposed vents/flues and metal, shall be colored to match or blend in with the roofing. No exposed rooftop solar panels are permitted.

**Walls** - Wall surfaces shall be selected for durability, weather and fire resistance, minimum maintenance plus compatibility with the regional character and building style. Besides articulation, wall texture creates more attractive wall surfaces. The use of wall trim can add accent to wall surfaces, if employed correctly. Contrasting wall and trim colors are not encouraged. Approved wall surfaces consist of stone veneer, brick, stucco and wood siding.

**Windows and Doors** - The arrangement, location, size, shape, and relationship of window and door openings shall be composed in an orderly and proportional manner on all exterior facades. Continuity of window and door style shall be considered on all facades as well as within individual facades.

**Chimneys** - Chimneys are an important design element and shall be located and sized to be proportional to the overall building composition. All above roof fireplace flues shall have a chimney enclosure of no less than 2 feet by 5 feet. Stone and brick chimneys are encouraged.

### **Exterior Materials And Colors**

The composition of different exterior materials and colors shall be carefully selected and designed to insure compatibility to the building style and regional character. The use of many different materials and colors should be discouraged so that the building form is emphasized. General continuity of exterior materials at different exterior facades is required, although subtle variation from building to building is encouraged. The glass color shall be selected for shading, ultraviolet control and compatibility with other materials. No reflective glass is permitted. Intense and glossy colors are not permitted.

### **Garages And Accessory Structures**

Detached garages and guest houses are permitted only on lots 1 acre or larger in size. As a general rule, other accessory structures are not permitted. These structures may be separated from the residence; however, a connection is required. The connection shall be a trellis arbor, or another overhead element.

Small accessory structures, such as a remote spa trellis or other landscape type elements, may be detached if approved by the ALCC.

## Miscellaneous

**Antennas** - All antennas are restricted to the attic or interior of the residence. It is mandatory that all homes be pre-wired to accommodate cable reception. Satellite "dish" antennas are allowed only if adequately screened and not visible from surrounding areas.

**Awnings and Patio Covers** - Awnings and patio covers, if used, must be of solid color canvas within the approved color palette. Fiberglass or sheetmetal awnings are not permitted.

**Gutters and Downspouts** - All gutters and downspouts must be a color to blend into the building back drop, and downspouts shall be located to be least visible.

**Utility Service and Meters** - All utility service shall be underground with no exposure. All utility meters required to be exposed shall be either located to be not visible or enclosed in a cover box compatible with the building siding and as approved by the utility company. Meters shall be recessed in walls with no exposed conduit.

**Mechanical Equipment** - No exposed mechanical equipment is permitted. All exterior mechanical equipment, including solar panels, condensing units, etc. must be screened from view.

**Signs** - Exterior signs other than house numbers are prohibited. During construction or sale, one (1) approved construction/sales sign may be placed in front of each homesite. Real estate sales/listing information must be placed on a panel of the sign just as contractor's or architect's information would be. Additional freestanding signs, "snipes," banners, flags, etc. are prohibited. Political signs, within reason, are excepted from this prohibition.

## Energy Conservation

Southwest Pointe will have all locally available public utilities for energy as well as being very conducive to passive solar access for natural heating to conserve energy. Passive solar access requires consideration of building orientation and

window locations. Window locations should also be chosen to capture breezes for natural ventilation and cross ventilation within the structure for energy conservation.

Solar shading should also be considered for prevention of excessive heat gain, particularly in the summer and from the westly afternoon sun. Exterior shading devices include roof overhangs, trellises and patio covers. Plant material selection may help control solar access, such as deciduous trees for winter access and summer shading.

Building construction requires sufficient insulation and insulated glass to meet State of Nevada energy standards. Other building construction energy conservation features are encouraged, such as high efficiency mechanical equipment, high efficiency glass (not reflective), etc.

## V. LANDSCAPE DESIGN GUIDELINES

### Landscape Design Character

Landscaping will play a significant role in establishing the character of Southwest Pointe. These landscape guidelines are intended to enhance the character and quality of the community established by the architectural guidelines. The open space system responds to site conditions and creates a visual framework for the entire project. Neighborhood entries and roadway landscaping will reinforce the overall landscape themes which permeate the site and establish a "sense of place" within Southwest Pointe. Also contributing to the overall community identity are other consistent landscape elements such as walls, fences, lighting, signage, and paving.

In addition to providing exciting and challenging play, the golf courses have been carefully situated along the creeks, adjacent to major roads, and routed to take advantage of the panoramic views from the property. The courses have been planned to incorporate manicured lawns for the tees, fairways, and greens with transition landscaping to enhance the beauty of the adjacent native vegetation through contrasts in color and texture. Through careful planning, the golf courses and the entire Southwest Pointe community have been gently blended into the natural environment.

### Landscaping - Common Areas

Landscaping in common areas will be the responsibility of the developer. The intent of landscaping within the project site is both aesthetic and functional. The development will fit the local terrain and environment without looking out of character for northern Nevada (e.g., short grasses, muted grays and sage green colors of shrubs, with evergreens in clustered areas). At the same time, it is important that the landscape create a sense of arrival at the entry and a strong visual unity throughout the project. This will be accomplished through landscaping and consistent signage, walls, fencing, etc.

**Common Area Landscape Guidelines** - The following guidelines apply to common area landscaping:

- The landscape palette is informal and natural, combining the best characteristics of the high desert natural landscape. Native shrubs and ground cover will be massed in groups of a single species, used in combinations that provide contrasting colors, textures and forms in a broad-brushed approach to landscape design. Trees will be massed in naturalistic groupings of a single species, an interplay of evergreens, and contrasting deciduous trees.
- Drought-tolerant, low-maintenance plantings will be used.
- Screening of parking areas, utility enclosures, service yards, and hillsides will be done with evergreen trees and shrubs.
- A variety of plant sizes will be used, with specimen trees at central focal points such as the project entry and street intersections.
- Irrigation systems must be automatic, with a controller and valves. Drip systems will be utilized instead of above-ground spray heads in planter areas. The use of a central control irrigation system on the golf course will facilitate the use of satellite controllers in common areas. This will allow all controller programming from a central source at the clubhouse.
- Shrubs and trees that deer do not prefer will be planted, although deer and especially rabbits will eat almost any plant if hungry enough and during the time when plants are putting on new tender growth.
- Plantings will contain a combination of fast, medium, and slow growth rate types. Eventually the slow growth plants will dominate the landscape, being more disease free and less prone to wind breakage.
- The use of lawn will be restricted to key focal points such as entry locations.
- Future landscape plans in common areas must be consistent with county requirements and approved by the Architectural and Landscape Control Committee. The plant materials list in this Handbook will be followed for planting selection.

- Exposing native rock outcroppings and boulder groupings during grading operations will enhance the overall landscape theme. Ideally, boulders should have at least one third of their total size buried in the ground. This gives rock a more permanent and natural look rather than just setting them on top of the ground. Boulder size will be a minimum 3 foot diameter, with groupings rather than scattered rock.

### Landscaping - Private Yards

All visible areas of yards not hardscaped must be landscaped in an acceptable form -- either natural, with ornamental plantings, or with both. Landscaping plans for individual residences will be reviewed and approved by the Architectural and Landscape Control Committee. Homeowners purchasing builder products will have up to 6 months to install private landscaping after close of escrow without a penalty. Homeowners purchasing custom lots will have up to 6 months after receiving occupancy permits on their residences to install private landscaping without a penalty. The following guidelines have been created to provide homeowners, architects, designers, and landscapers a reference point from which to develop individual landscape plans. These guidelines may be amended from time to time by the review committee based on comments and suggestions from designers and homeowners.

Private Yard Guidelines - The following guidelines apply to landscaping in private yards:

- All plant materials selected should be suitable for the climate, soil conditions, and theme of the community. (Refer to Table A-1 in the appendix for a list of recommended plants.)
- Landscape planting palettes should be simple and kept to a limited number of plant materials.
- Plantings should be done in masses or groupings of a single species to avoid complexity.

- Landscape plantings should provide for effective screening of cars, utility enclosures, or any visually undesirable element or structure.
- Planting selections should strive to maximize color during all four seasons.
- All landscaped areas must have an automatic irrigation system, preferable designed by a Landscape Architect or irrigation consultant to ensure efficient water usage.
- Group plants with similar water requirements.

**Front Yard Landscaping** - The following guidelines apply to front yard landscaping:

- "Gravel gardens" are prohibited.
- All visible areas of yard not hardscaped, or in decking must be landscaped in an acceptable form.
- Front yards shall be planted with a combination of trees, shrubs, and ground cover or lawn. All lawns shall be sod and cover no more than 20 percent of the total landscape area.
- Except where previously installed by the developer, at least three trees shall be planted in the street right-of-way adjacent to the front of each 1-acre and 1/2-acre residential lot and at least two trees shall be planted in the street right-of-way adjacent to the front of each 12,000 square foot residential lot.
- At least five additional trees shall be planted per front yard on 1-acre lots, three trees per front yard on 1/2-acre lots, and two trees per front yard on 12,000 square foot lots. Groupings of vertical trees are encouraged.

**Side and Rear Yard Landscaping** - The following guidelines apply to side and rear yard landscaping:

- Side yard planting is encouraged to create a sense of privacy between adjacent homes.
- Rear yard planting can provide shade and privacy, define outdoor spaces, and frame views. Care must be taken, however, in planting trees and tall shrubs so as not to obstruct views from adjacent lots to the golf course and mountains. Final placement of all rear yard trees is subject to approval by the Architectural and Landscape Control Committee.

## Maintenance

Common Areas - Landscape, fencing, walls, irrigation systems, etc. installed by the developer will be maintained in a healthy and operational condition and will eventually be transferred to the Homeowners Association, which will then assume maintenance responsibility. Landscape maintenance will primarily consist of weeding, spraying pre- and post-emergents, insect control, pruning, plant replacement and irrigation system winterizing/repair. Drip irrigation lines will require flushing to remove debris so that emitters do not clog.

Open space and private trail maintenance will include trash pick-up, erosion control, re-surfacing trails, and upkeep of signage. (Washoe County will be responsible for any maintenance activities required on open space that is under their control.) Paved walks will require re-seeding and eventually resurfacing the asphalt. Related fencing will need board replacement and re-staining/re-sealing wood members.

Private Yards - The intent of maintenance standards for private yards is to keep the entire project up to high standards. Homeowners will be responsible for maintenance of their own lots. If the required front yard trees should die, they will need immediate replacement with trees of the same size and species. Property owners will also be responsible for maintaining landscaping along the right-of-ways of local and rural streets with direct lot frontage.

## Revegetation and Erosion Control

Revegetation is the process that involves seeds and small plants, fertilization, and soil stabilization once vegetation becomes established. It is one part of the overall erosion control process. Most often the best erosion control is a combination of structural or mechanical land revegetation. Once the ground is disturbed during construction, it is important to revegetate areas to be kept as open space as quickly as possible to minimize wind and water erosion on the soil. Typically, fast-growing annuals and perennials are installed for both short- and long-term stabilization.

**Timing** - The developer will follow the typical Washoe-Storey Conservation District and District Health Department guidelines for disturbed areas. A dust palliative will be applied to areas left undeveloped more than 30 days and a seed mix applied for areas left undeveloped more than 90 days. The preferred season for revegetation without irrigation is early spring after the ground softens. Late fall after the first snow is also acceptable. The developer may elect to seed between the preferred seasons with some supplemental irrigation from a water truck or temporary irrigation.

**Clearing Limits** - Areas to be cleared for development or cut/filled will be surveyed and staked so that equipment can be confined to those disturbed portions only. The objective is to save as much native vegetation within the development as possible for the open space between residential units. Clearing will be done on a phasing schedule as the development proceeds. The exception is the golf course, which will be graded and built in 9- or 18-hole increments.

**Seeding Methods** - Seeding will take place on open areas and slopes 3 to 1 and flatter. Slopes not accessible by drilling machines will either be hydroseeded or seeded with a mechanical broadcaster and raked by hand. Drilling is the preferred method since germination is generally the highest. Hydroseeding will be accomplished in a two step process. Seeding will take place on roughened soil with 30 percent mulch and then blowing the remaining 70 percent of the mulch on top of the seed. This ensures better seed/soil contact.

**Seeding Mixes** - One of the goals is to blend the development into the existing on-site environment. To accomplish this, a seed mix that matches the existing plant material is desired. Since the majority of the open space will not have permanent irrigation, the plants need to survive on rain or snow fall. A combination of woody plants (shrubs) and grasses are proposed for the mix. Also proposed are grindings from existing plants that are cleared. Since the seeds are already acclimated to the site, germination is usually very high. Plants to avoid seeding are those with a high fuel production that create a hazard for wildfires.

A general recommended seed mix is proposed in Table 5-1. More specific seed mixes will be developed during construction based on exposure, seeding timing, soil type, and degree of slope. Since the site is so large, seeding rates will need to be adjusted based on the above factors.

Three to four different grass and shrub types are recommended for a thicker and quicker cover. The wheat grasses are all fire resistant for use near residential units.

Table 5-1  
**General Seed Mix**  
 (in non-irrigated areas)

<u>Common Name</u>	<u>lbs/acre of pure live seed</u>
Indian Ricegrass	2
Fourwing Saltbush	4
Big Sagebrush	2
Great Basin Wildrye	2
Siberian Wheatgrass	4
Canbys Bluegrass	1
Annual Ryegrass	5
Palmer penstemon	1/4
Blue Flax	1/4
Shadescale	4
Total:	24.5 lbs/acre

In areas where drip irrigation is available, such as along roadways and around the golf course, trees and shrubs will be added to the above seed mix from Table A-1 (list of recommended plants). A variety of container sizes will be used, from tube packs to #5 cans, to provide a more natural appearance. Most woody plants are transplanted because of rodent predation to seeds. Larger shrubs and trees will also help stabilized slopes with their larger root mass. New plants will be mulched in the basins to conserve water and reduce weed competition around the root zone.

**Fertilization** - Fertilization will be added to the soils before seeding or during shrub/tree transplanting. Typical recommendations for low fertility sites call for 40 to 80 pounds of nitrogen, 50 to 75 pounds of phosphorous, and 50 pounds of potash per acre incorporated into the seed bed. For shrubs and trees, slow release plant tablets will be added to the planting pit during transplanting.

**Mulching** - Mulching provides a protective layer to help establish plants quicker. It also cools the soil, prevents soil crusting, keeps weed growth down and conserves water around the plant itself. For seeding, a hydromulch made of a wood product will be added to slopes where applicable. On steeper, longer slopes and drainageways, a wood excelsor blanket will be used with either a paper or plastic net backing. Blankets are unrolled and staked into place using wood pegs.

Flatter areas and slopes will be mulched with straw after seeding and either tackified or punched to keep straw in place. Typical rates are 3000 lbs/acre of clean straw, evenly distributed.

Mulching for shrubs and trees will be a ground bark or wood product. A minimum depth of 3 inches will be added to the watering basin and checked after major storms.

As previously mentioned, a dust palliative will be used to minimize wind erosion on areas left undeveloped more than 30 days. This is only a temporary solution and these areas will need to be re-seeded, since palliatives are tackifiers that reduce soil porosity by forming a soil crust. Foot and vehicle traffic quickly degrade a soil surface, requiring re-application.

All revegetated sites will be inspected by maintenance personnel to repair any gully damage caused by storms, especially during the summer months. Areas of inadequate plant establishment will be re-seeded or re-planted as required. In some areas, temporary chicken wire fencing will be required to prevent rabbit and deer browsing on plants until they are bigger, stronger, and better able to survive on their own.

## Fire Fuel Breaks and Green Belts

The project site is located in a high fire hazard area as identified by the Nevada Division of Forestry. This is due to the occurrence of lightning and strong westerly winds. Fire suppression over a long period of time has resulted in on-site fuel accumulation that will become a problem during a wildfire.

Mitigation is needed to reduce the fire hazards on the site. Proposed mitigation includes careful structure siting, fire hydrants, fuel breaks around structures, the use of fire resistant/retardant plants, ease of access for fire fighting equipment, and the use of appropriate building materials.

The developer will work with the Division of Forestry to locate firebreaks in appropriate locations. Effective fire protection can be achieved with a wide strip (at least 100 feet) of bare ground around structures created by removing the native shrubs and grasses. However, the bare ground is subject to water and wind erosion, besides being aesthetically unacceptable. A better solution is the use of "green belts". A green belt can be defined as a landscaped and irrigated zone between a structure and the brush-covered wildlands that is designed to halt or slow the spread of fire and to control soil erosion and water runoff. (Refer to Figure 5-1.) Requirements in developing such a green belt are as follows:

1. Removal of highly flammable native brush and grasses, especially cheat grass, from around structures for a distance of 30-50 feet. Remove any dead wood in and around shrubs. This zone will consist of grasses, introduced shrubs, and individual trees pruned up off the ground. All plants will have a high-moisture content because of drip or spray irrigation. The sprinkler system will be permanent and on a controller. Included in this zone is a 10 to 20 foot wide area on both sides of the front driveway. Appropriate planting for this zone are native, naturalized and exotic species that gradually blend to the more native zone beyond. Lawns will be kept to a minimum size for water conservation and sprinklered with an overhead automatic spray system.

EXISTING NATIVE VEGETATION-REMOVE DEAD WOOD AND DEBRIS OUT ANOTHER 50-100 FT. WHERE RESIDENTIAL ABUTS OPEN SPACE

THIN BRUSH AND TREES

LIMIT THE AMOUNT OF NATIVE BRUSH TO 20% SITE COVERAGE

REMOVE DEAD BRANCHES AND DEBRIS FOR 100 FT. INTERPLANT WITH ORNAMENTALS WITH A HIGH WATER CONTENT. INSTALL DRIP IRRIGATION SYSTEM

30 FT.

INTENSIVE LANDSCAPE

RESIDENCE

INTRODUCED ADAPTIVE LANDSCAPING  
LAWN AND ORNAMENTAL SHRUBS. PRUNE TREES OFF OF THE GROUND. AUTOMATIC SPRAY IRRIGATION SYSTEM FOR HIGH MOISTURE CONTENT.

FIREBREAKS

2. In the 30 - 100 foot zone around the structures, dead woody plants will be removed. Trees and shrubs will be occasionally pruned and "weedy" species eradicated. This landscape zone is intended to coordinate with the requirements for a managed fire break transition zone. Beyond the 100 foot zone, up to 200 feet, the amount of vegetation will be reduced and the most flammable species thinned.
3. Maintenance of the plantings will include weed control, cutting back woody plants, and removal of plant litter and fallen branches. Part of the effectiveness of a green belt lies in minimizing the volume of fuel available. Without proper maintenance, fire-retardant planting can become a fire hazard over time. Irrigation and maintenance schedules will be provided with final plans for the project.
4. The previous green belt conditions will be a part of the CC&Rs with mandatory enforcement. If property owners do not comply with the conditions, the Homeowners' Association will be authorized to contract for maintenance and bill the property owner.

A crucial step in the planning and construction of a green belt is selection of the plants to use. Listed in Table A-2 in the appendix are recommended species with varying degrees of fire retardance that have value for landscaping in green belts. Although a number of broad similarities may exist within the overall project area, it is not possible to make specific site recommendations until fire hazard, soil, topography, and sun exposure are further studied. Plants listed will be coordinated with those listed in the erosion control section of the Handbook. Generally, green belt species will be planted around structures and at the residential perimeter.

It is important that plants from Table A-2 be grouped according to water requirements. Highly drought-tolerant species are often damaged or killed if over-watered. Over watering also forces unwanted growth in the plants and encourages weeds. If two or more species are planted together, it is essential that they have similar water requirements so that they can be watered from the same automatic valve. When an area is irrigated, it should be thoroughly soaked to encourage the roots to grow deeply into the soil. Frequent, light irrigation must be avoided.

## Water Conservation

Water conservation in the Truckee Meadows is a long-term responsibility for all residents, since we live in a desert climate with limited resources. There are many ways to conserve water in the outdoor landscape. Generally, plants will use as much water as a person gives them, so overwatering is the result of owners not realizing proper planting water requirements.

The principals of a relatively recent concept of "Xeriscape" (dry landscape) should be followed in every new development and retrofitted into existing landscapes. The principals are briefly summarized as follows:

- Mulch plantings to keep soil cool and reduce evaporation.
- Plan and design planting/irrigation from a project's beginning.
- Create practical and usable lawn areas of reasonable size and shape.
- Use appropriate plants for the area and group into water zones.
- Improve the soil in the intensive landscape zones with compost or manure.
- Irrigate efficiently with properly designed systems with automatic timers.
- Maintain the landscape appropriately by mowing, pruning and fertilizing properly.

Well done Xeriscape-type designs can typically reduce irrigation water by more than 50 percent, compared with traditional designs dominated by over watering lawns. Over watering can also kill highly drought-tolerant plants and force unwanted growth.

Home buyers in Southwest Pointe will be encouraged to follow the above water conservation methods in their private yard areas within the 30 foot intensive landscape zone surrounding the structure. Lower water bills will be just one of the long term benefits of proper landscaping.

## VI. SERVICES AND FACILITIES

### Water Service

The property is outside the boundary of the South Truckee Meadows General Improvement District/Special Assessment District #18. This property will be developed outside the district; however, all of the potable water facilities on lots will eventually be dedicated to Washoe County. The developer of Southwest Pointe may construct a new water system since there are no existing facilities to accommodate this project. The Southwest Pointe water system may connect to the existing system. Washoe County has drilled several exploratory wells on the property. These wells will be used as the main production wells for the project.

The elevations at which water storage tanks will be located to obtain the proper pressure have been identified and are shown on the site plan. One or two tanks will be located at an elevation of approximately 5,710 feet. A third and smaller tank will be constructed at an elevation of approximately 5,848 feet. The tanks will have a height of approximately 24 feet. The total water storage requirement is between 1.2 and 1.4 million gallons (i.e., 926,500 gallons residential storage, 240,000 gallons commercial storage, and 120,000 gallons per tank residential fire storage). The lower tank(s) would have a storage requirement of 975,000 to 1.2 million gallons. The upper tank will have a capacity of approximately 200,000 gallons. The tanks have been located in a ravine to screen them from view. If additional screening is necessary, landscaping would be installed to the satisfaction of the Department of Development Review.

To serve the two proposed golf courses in Southwest Pointe, as well as the other courses and parks planned in the vicinity, Washoe County proposes to reuse treated wastewater and untreated creek water from the South Truckee Meadows Wastewater Treatment Plant. The Conditions of Approval for Southwest Pointe

(i.e., #77) require the developer to use treated wastewater from the treatment plant. Additionally, as part of the initial construction, the developer will provide the necessary on-site easements needed to construct the infrastructure and, when the treated wastewater or creek water becomes available, the developer will construct the necessary on-site infrastructure.

Water conservation will result by using and managing resources efficiently and effectively. Reducing domestic water usage is an objective for this development. To achieve this objective the following devices and/or programs will be initiated:

- Water conservation devices will be used throughout Southwest Pointe as specified by current county ordinances.
- Water conservation principals for landscaped areas are addressed at the end of Chapter 5.

### Sewer Service

Southwest Pointe will be served by the South Truckee Meadows Wastewater Treatment Plant, and, according to County staff, capacity is available. The plant currently has a capacity of 0.75 million gallons per day (mgd); however, the ultimate capacity is planned to be 6.0 mgd. Based on the number of existing and approved dwelling units within the service area, the current capacity has been allocated. This allocation exists only on paper and would be a problem only if all of the currently approved homes were constructed immediately. According to the county staff, the plant has been designed for expansion, and capacity will be available for this project.

Existing sewer service is only a short distance from Southwest Pointe. A 10-inch line has been extended to Saddlehorn and another 10-inch line serves Southwest Vistas. Because of the topography and site plan, Southwest Pointe will be sewerred to both locations.

### Fire Protection

Fire protection service is intended to be provided by the Nevada Division of Forestry, Sierra Fire Protection District. The closest existing station is Galena Station #2, which is located on the Mt. Rose Highway approximately 2 miles west of the intersection of Mt. Rose and Thomas Creek Road.

Consistent with the Southwest Truckee Meadows Area Plan, a one-acre site for a fire station is proposed near the entrance to Southwest Pointe. The site will be offered for dedication prior to recordation of the first final map. According to NDF staff, the station would be 3,800-4,000 square feet with two bays and living quarters. If constructed, there would be two, full-time employees supported by volunteers.

The entrance to Southwest Pointe may be gated at the point where Whites Creek Lane becomes a private road (i.e., near Thomas Creek). The developer will meet with NDF staff to discuss their needs in order to maintain emergency access. Fire fuel breaks will also be required in many locations and an acceptable design will be developed with NDF staff. Maintenance of the fire fuel breaks will be the responsibility of the individual homeowner or the Homeowners' Association depending on the location.

### Security and Emergency Services

The Washoe County Sheriff's Department is intended to provide police protection service to this site from the main station at 911 Parr Boulevard. There is currently one patrol unit regularly assigned to the area, with an average response time of 10 minutes. The response time in this area will be greatly improved if the Sheriff's Department locates a substation in the community center in the South Valleys Regional Park at the intersection of Whites Creek Lane and Wedge Parkway. The first phase of the park has been constructed. The community center is located in a later phase; therefore, it may be several years before the substation is operational.

The gate house at the entrance to the project may be manned; however, no other private security personnel are planned. During the initial phases of the project, roving security personnel may be used to prevent theft and/or vandalism. The developer will meet with Sheriff's Department staff to discuss their needs in order to maintain emergency access.

### Private Recreation Amenities

The two golf courses proposed in this development are contemplated to be a combination of daily fee-public play and membership play. The golf courses will not be owned or controlled by the Homeowners' Association. Notwithstanding the administration of the entry area, so long as either of the golf courses are available for public play, an easement(s) or some other form of vehicular right-of-way shall protect the public's ability to access the golf course.

The swim and tennis facility shall be controlled by the Homeowners' Association and is not contemplated for use by the general public.

### Financial Assurances for Provision of Services

Financial assurances for provision of services (e.g., private road maintenance, common area landscaping, private recreation amenities, private drainage facilities and security) shall be provided under the project CC&Rs, which shall provide for funding of these services through assessments and insure collection of assessments through liens on lots.

## **VII. SPECIAL CONDITIONS**

### **Thomas and Dry Creeks**

Two creeks cross the property -- Thomas Creek along the southern and eastern edge and Dry Creek through the western and north central portions of the site. The creeks are bordered by riparian vegetation and a wetlands delineation, prepared by Soil Resource Investigations and approved by the Corps of Engineers, has concluded that wetlands exist along both creeks. These areas will be avoided and will remain undisturbed where feasible.

The Conditions of Approval state that a buffer will be provided between the fairways/greens and all creeks (i.e., Condition #55). The setback of the buffer will comply with 100.200 (e) of the Uniform Building Code (i.e., 50 feet from the centerline of drainage area greater than 5,000 acres). A second condition (i.e., Condition #56) requires that a minimum buffer of 50-feet be provided between any structure and riparian vegetation.

At locations where roadways cross the creeks, the intent is to span the creek and leave all delineated wetlands undisturbed. This will be accomplished through the use of railroad flatbed car bridges. Concrete abutments will be constructed on either side of the creek outside the delineated wetlands. The railroad cars will then be placed to "clear span" the creek bed.

### **Wildlife**

Portions of the project site are located in the winter range of the Loyalton-Truckee deer herd. The herd summers largely at higher elevations and winters in the lower reaches of the Sierra Nevada. Some residential and golf course development is proposed within the winter range; however, there is also a

significant amount of acreage within the winter range that will be left as open space. Some key mule deer winter range habitat has also been identified at the northwest end of Southwest Pointe. For the most part, this area is proposed to be left as open space.

To reduce the impacts of development on the deer herd, the following mitigation measures are proposed:

- Leave open space around the developed area and provide open areas within the development in conjunction with the golf course.
- Seasonal restrictions and/or regulated recreational use in open space areas identified as key mule deer habitat will be enforced. Provisions will be made for these types of restrictions at the time the open space is decided. (Refer to Open Space Management Plan.)
- Boundary fencing is not proposed.

The staff of the Washoe County Department of Parks and Recreation has also expressed interest in stocking Thomas Creek with fish through the Urban Fisheries Program. To accomplish this work, vehicular access to the creek is necessary. Two locations for vehicular access are proposed -- one is at the neighborhood park and the other is from the maintenance road to the existing water tanks.

### Cultural and Archaeological Resources

All cultural resources issues (ethnographic, historic, and prehistoric) are being managed by personnel of Kautz Environmental Consultants, Inc. of Reno, Nevada. All historic and prehistoric sites in Southwest Pointe have been identified and recommendations regarding their significance have been made, or are currently being made (Hutchins and Kautz 1995, Christensen and Kautz 1995, and Christensen and Burns 1996). Recommendations have been passed to the Nevada State Historic Preservation Office (SHPO) in conformity with the Truckee Meadows Regional Plan: Conservation Element (1991, revised).

A total of 88 archaeological sites have been discovered on project lands of which 70 are prehistoric in age, one is historic, and 17 have components of both historic and prehistoric age. A total of 25 non-significant isolated finds have also been recorded. Nineteen archaeological sites have been recommended as significant and 12 remain unevaluated. The remaining 57 sites are recommended as non-significant resources requiring no further work.

All reports from KEC pertaining to this project have been provided to the Washoe Tribe of Nevada and California and all cultural resource management activities are being arranged through the Tribe's Cultural Resources Coordinator. Already, a valuable and very unusual Native American bas relief effigy located on this land has been donated to the Tribe and, following its removal last year, resides in the Nevada State Museum.

All significant and unevaluated archaeological sites will either be avoided or mitigated during the construction, maintenance, and operation of this project. All mitigation will occur prior to site disturbance, though these activities may be phased in coordination with planned construction.

Prior to mitigation, an Historic Properties Treatment Plan will be submitted to the SHPO, outlining in detail the mitigation procedures to be employed, the precise sample, and the methodological and theoretical framework delineating the inquiry at each site. Following both the acceptance of this plan and completion of the specified fieldwork, construction will begin.

## VIII. DEVELOPMENT PROCESSING

### Relationship to Other Ordinances

The provisions of this Handbook will govern the development of Southwest Pointe. However, where the provisions of the Handbook do not address a specific subject, the provisions of the Washoe County Development Code (Chapter 110) or other ordinances governing the development of land shall prevail, subject to the provisions of the final development agreement.

### Amendments to the Development Standards Handbook

It is anticipated that this Handbook will need to be periodically updated and amended. If modifications are necessary, the Department of Development Review will be notified by letter, stating the changes requested, the reasons for the changes, and the effects of the changes. Minor modifications can be approved at the staff level. The definition of "minor" will be made by the Director of the Department of Development Review. More significant changes must be approved by the Washoe County Design Review Committee.

During the design and construction phase of the project, it will be the responsibility of Southwest Pointe Partners or its successor to initiate the amendment request. This responsibility will eventually be assumed by the Homeowner's Association.

### Approval Process

Design review will be required of each Lot Developer. Southwest Pointe Partners will provide each Lot Developer with a copy of the approved Development Standards Handbook and CC&Rs. These documents should be reviewed carefully by each Lot Developer.

The Architectural and Landscape Control Committee (ALCC) will review all preliminary and final construction drawings for structures and landscaping prior to their submission to Washoe County. The purpose of this initial plan review is to insure compliance with the Development Standards, the CC&Rs, and the overall master plan for Southwest Pointe. Any development plans submitted to Washoe County must be accompanied by verification from the ALCC stating that the plans have been approved by that Committee. Minor variations from the Development Standards may be approved by the ALCC providing that these variation are in conformance with county regulations and the intent of these Development Standards.

Approval by the ALCC does not imply that the plans are in compliance with all applicable county codes, ordinances, or other regulations. Each Lot Developer is responsible for submittal and processing of all plans and permits required by the county prior to the commencement of construction.

#### *Financial Assurances for Development of Property*

Financial assurances for the construction of capital improvements to be dedicated to the County shall be provided as required by Washoe County Code or pursuant to subdivision improvement agreements under tentative maps, subject to the provisions of the final development agreement.

**APPENDIX**

Table A-1  
RECOMMENDED PLANTS

Special Uses

Common Name	Botanical Name	Deer Resistant	Drought Tolerant	Revegetation	Erosion Control	Remarks
<b>Deciduous Shrubs</b>						
Cinquefoil	Potentilla fruticosa					
Alpine Current	Ribes alpinum			√		Berries attract birds
Golden Current	Ribes aureum		√	√		Berries attract birds
Siberian Peashrub	Caragana arborescens		√	√		
Redosier Dogwood	Cornus stolonifera			√		Streambank revegetation
Staghorn Sumac	Rhus typhina			√		Good bank cover
Odessa Tamarix	Tamarix odessa		√	√		Spring flowers
Snowberry	Symphoricarpos albus		√	√	√	
Amur Maple (tough)	Acer ginnala					Good fall color
Buffaloberry	Shepherdia argentea		√	√		
Memorial Rose	Rosa wichuraiana				√	Good bank cover
Smoke Tree	Cotinus coggygia	√	√			Interesting flowers
Tartarian Honeysuckle	Lonicera tatarica		√	√		
Western Chokecherry	Prunus virginiana var. demissa					Berries attract birds
Western Sand Cherry	Prunus besseyi		√	√		Berries attract birds
Sweet Mockorange	Philadelphus coronarius					Fragrant
Nanking Cherry	Prunus tomentosa		√	√		
Smooth Sumac	Rhus glabra		√	√		Good bank cover
Squawbush Sumac	Rhus trilobata		√			
Mentor Barberry	Berberis x mentorensis					
Peking Cotoneaster	Cotoneaster acutifolius

Table A-2  
**RECOMMENDED PLANTS FOR LANDSCAPED GREEN BELTS**  
 IN THE 30'-100' FIRE BREAK TRANSITION ZONE

Species	Drought Tolerance	Erosion Control (30-60°) Slope	Growth Height	Mature Height (Inches)	Scale of Use
<i>Achillea tomentosa</i> Woolly Yarrow	Fair		Very Spreading	to 12	Small
<i>Atriplex gardneri</i> Gardner's Saltbush	Excellent	++	Semi Upright	12-18	Medium
<i>Atriplex semibaccata</i> Creeping Australian Saltbush	Excellent	++	Semi Upright	to 12	Large
<i>Cerastium tomentosum</i> Snow in Summer	Good		Spreading	4-6	Medium
<i>Euonymus fortunei</i> var. <i>radicans</i> Common Winter Creeper	Fair-Good	+	Very Spreading	18-24	Medium
<i>Potentilla verna</i> Spring Cinquefoil	Good	+	Spreading	3-6	Medium
<i>Santolina virens</i> Green Lavender Cotton	Excellent	++	Upright	18-24	Large
<i>Santolina chamaecyparissus</i> Lavender Cotton	Excellent	++	Upright	18-24	Large
<i>Vinca major</i> Periwinkle	Good	++	Very Spreading	18-24	Large
<i>Arctostaphylos uva-ursi</i> Bearberry	Excellent	++	Spreading	to 12	Large
<i>Hedera helix</i> English Ivy	Poor	++	Very Spreading	to 12	Large
<i>Hypericum calycinum</i> Aaron's Beard	Good	++	Upright	12-15	Medium - Large
<i>Ceanothus prostratus</i> Squaw Carpet	Excellent	++	Spreading	2-6	Medium

Footnotes for Table A-2

**Drought Tolerance:** Excellent - Little supplemental water needed during the dry season  
Very Good - Occasional watering needed 2-4 times during the dry season.  
Good - Requires moderate water (about once a month during dry season)  
Fair - Requires watering every 2-3 weeks.  
Poor - Needs frequent watering (every week to 10 days or more)

The above applies to established plants. Newly planted areas will require substantially more water.

**Erosion Control:** Each species is evaluated as to whether it is good (++) , fair (+), or not recommended for steeper slopes (30-60°).

**Growth Habit:** Very Spreading - Trailing stems or creeping along the ground.  
Spreading - Stems grow horizontally for short distances.  
Semi Upright - Plants grow more or less vertically and forming clumps.  
Upright - Plants distinctly vertical with little lateral spreading.

**Scale of Use:** Small - Best suited as a small-scale ground cover (limit use to a few hundred square feet)  
Medium - Good ground cover for medium sized areas.  
Large - Large area ground cover

## 1.0 EXECUTIVE SUMMARY

This document presents the Water Quality Management Plan (WQMP) for the Southwest Pointe development, hereafter referred to as the "Project." Plate 1 (Appendix A) shows the approximate Project location. The Project consists of a 36-hole golf course and residential development. The purpose of the WQMP is to present a workable plan to manage the surface water and groundwater quality at the project site during construction and during golf course operation. The WQMP includes a water quality monitoring program and a list of construction practices to be used at the project to reduce the chance of degrading the water quality in Thomas and Dry creeks.

Kleinfelder, Inc., developed the monitoring program to assess the pre-construction quality of surface water and to assess potential changes in surface water and groundwater quality during golf course operation. The monitoring program is summarized in the following bulleted items:

- Prior to golf course construction, sample and analyze surface water taken from Thomas and Dry creeks as it enters and leaves the Project. Dry Creek shall be gauged to measure volumetric flow. To establish baseline concentrations (pre-construction); a minimum of one sampling event should be performed before construction begins. Section 5.2 lists the analytical parameters.
- During golf course construction, quarterly sample and analyze surface water quarterly in Jones and Dry Creek, if flowing (Section 5.2).
- Graphically plot surface water analytical monitoring results to assess significant changes in water quality and summarize findings in a quarterly letter report.
- During golf course operation, sample and analyze water collected from three golf course green underdrain systems. The chemical analysis of these water samples will help determine if fertilizers or pesticides leach through the greens due to irrigation water and/or seasonal precipitation. A minimum of one baseline sampling event should be performed prior to first chemical/fertilizer application. Plate 2 shows the test green locations.
- During golf course operation, tri-annually sample and analyze surface water to compare with baseline/pre-construction water quality. If changes in water quality are observed the data will be evaluated to assess whether the changes are regional, climatic or a response to golf course operation. The Nevada Division of Environmental Protection (NDEP) and Washoe County maintain a non degradation policy. Any increasing trend is viewed as degradation. Golf course operations would need to be modified to stop the degradation.

Southwest Pointe will change the construction and/or golf course management techniques if monitoring parameter concentrations indicate a change in water quality is occurring due to golf course construction or operations. If necessary, physical/construction mitigation options will be considered. If management of the chemical application is successful, as shown by non-degradation, the golf course can petition Washoe County Department of Comprehensive Planning (WCDCP) to reduce or eliminate sampling requirements.

---

## 2.0 INTRODUCTION

---

Kleinfelder, Inc. prepared this WQMP for Southwest Pointe. This WQMP was prepared to satisfy Washoe County's Condition of Approval No. 61. The WCDGP requires the WQMP.

The Project consists of thirty-six hole golf course with a custom residential community. The WQMP is for the golf course construction and operation.

### 2.1 PURPOSE

The purpose of the WQMP is to present a working plan for managing the quality of the surface and groundwater at the Project site. As part of the WQMP, a water quality monitoring program was developed to assess the water quality prior to the Project construction, during construction and during operation of the golf course. In addition, the WQMP includes a list of construction practices that can be followed/implemented at the Project. These environmentally sound procedures can reduce the chances of degrading the water quality at the Project.

### 3.0 WATER QUALITY MANAGEMENT GOALS

---

This WQMP was developed as a plan to reduce the potential for irreversibly degrading the water quality at the Project. In addition, the WQMP will assess the impact the construction and operation of the Project may have on water quality, if any.

The phrase "water quality" is not synonymous with water pollution, but is rather, a quantification of the chemical/physical state of the water as it applies to its many beneficial uses. The water composition/chemistry reflects the natural and cultural responses to inputs and withdrawals to and from the system (Krenkel, 1980).

The surface water monitoring program will assess changes from the pre-construction water quality. An observed change in water quality that occurs during the project construction and operation, will be compared to background mean concentrations. The change will be assessed in order to determine the cause. If the change is attributed to Southwest Pointe, the practice causing the degradation will be modified or abandoned. The total suspended solids (TSS) and turbidity concentration in Thomas and Dry creeks are the primary or key monitoring parameters during the construction phase.

The golf course green underdrain monitoring program will assess water quality as the water moves down into the vadose zone. Because static groundwater level is 100 feet below ground surface or greater, the water quality information will help assess if leaching of chemicals could pose a threat to groundwater quality. If the water quality in the golf green underdrain samples indicates fertilizer could migrate deeper to groundwater, other monitoring systems may be required by WCDPC. Baseline golf course green underdrain monitoring will be initiated when the golf course construction nears completion, but before chemical application begins.

The preliminary greens to be monitored are numbers 1, 4 and 6. These greens are located adjacent to biologically sensitive areas. The proposed locations will increase the probability of detecting a potential problem early, before it becomes irreversible.

The golf course green underdrain leachate water quality should not show significant increase in nitrogen concentration because application at the optimum rate nitrogen is biologically utilized, sorbed, diluted, and chemically consumed. If over-applied, non-utilized nitrogen could migrate past the target soil profile and move into the golf green underdrain system and downward into the vadose zone. The utilization process should continue to reduce and retard the nitrogen flow until dissolved concentrations reach background levels. If elevated concentrations are detected in the golf green underdrain leachate, Southwest Pointe will need to modify the chemical application plan. If change in management techniques do not rectify the problem it may be necessary to install vadose zone monitoring system such as lysimeters.

Changes in water quality can represent natural seasonal fluctuations in response to above or below normal precipitation, from the golf course operation or off-site operations. The NDEP and WCDEP maintain a non-degradation policy, where any increasing pollutant concentration trend is considered degradation. The objective of Southwest Pointe is to prevent degradation of the surface and groundwater, and if degradation is observed, assess the cause and modify practices to mitigate the degradation.

## 4.0 GEOLOGIC AND HYDROGEOLOGIC SETTING

### 4.1 REGIONAL PHYSIOGRAPHY

The Project area is located in the southwest part of the Truckee Meadows. The Truckee Meadows is a structural depression within a region transitional between the Sierra Nevada and the Basin and Range Geomorphic provinces (Gates and Watters, 1992) not referenced. The eastern edge of the Sierra Nevada province is dominated by the Sierra Nevada fault system. This fault system is a zone of movement in which faults have an echelon course and predominantly have dip-slip offset (Bonham, 1969). The Sierra Nevada fault system resembles Basin and Range faults, and trends north to south, from Reno to Markleeville.

The project area is bounded by the Carson Range to the west and the Virginia Range on the east. The topography of the site generally slopes to the east and has a range of elevation from 4,800 feet to 5,920 feet. Thomas and Dry creeks are the main drainage features on the site. Dry Creek is an intermittent stream, while Thomas Creek normally flows year-round. Appendix B contains flow measurement and water quality data for Thomas Creek.

### 4.2 SITE GEOLOGY AND HYDROGEOLOGY

The Project is located on the upper (western) portion of the Mount Rose alluvial fan complex. Around the Truckee Meadows, Pleistocene, and Holocene faults are associated with the Sierra Nevada fault system. These faults are primarily north-south trending and bisect alluvial fans, including the Mount Rose fan complex. Similar faults have been mapped on the Project site (Bonham, 1983). There is evidence that suggests east-west trending faults are present that predate the north-south trending faults (Van deKamp and Goranson, 1990).

The Mount Rose fan complex is composed of an alluvial veneer over a volcanic pediment. The alluvium is composed of older Quaternary Donner Lake Outwash, overlain by younger Quaternary Tahoe Outwash. Both the Tahoe and Donner Lake units are glacial outwash stream deposits from major creeks that flowed from alpine glaciers on Mount Rose (Bonham, 1983). These outwash deposits consist primarily of volcanic rock with minor granitic cobbles.

Plate 2 shows the approximate locations and depth to water of monitoring wells installed by Washoe County Utility Division (WCUD) on the Project. In general, depth to groundwater is approximately 100 to 200 feet below the ground surface throughout the Project area. The depth to water measurements obtained were taken from drilling logs prepared for WCUD during the exploratory drilling on the Mt. Rose Fan. Appendix C contains a copy of the well logs.

## 5.0 WATER QUALITY MANAGEMENT

Management of the water quality at the Project will be accomplished by three primary activities. The first is construction and operation practices that will be implemented to reduce the effect the Project construction and operation has on the water quality. The second activity is the water quality monitoring program. The monitoring program will help maintain water quality by providing a method to detect problems before they become irreversible. Section 5.2 presents the theory and methodology behind the selected monitoring parameters and the sampling locations. In addition, the schedule and frequency for the monitoring events is included.

### 5.1 CONSTRUCTION MANAGEMENT ACTIVITIES

This construction management section presents procedures and construction techniques that will be utilized to reduce potential for degradation of Thomas and Dry creeks. This section is not intended to be a drainage plan, grading plan, or a Storm Water Pollution Prevention Plan.

The Project will be constructed and operated under the following general requirements and prohibitions:

1. The golf course will be designed in order to reduce surface water drainage that would cause erosion.
2. There shall be no removal of vegetation or disturbance of existing soil conditions except where adequate erosion control and storm water runoff control facilities are installed and operational.
3. Adequate erosion control and storm water runoff control facilities shall be installed, operated, and maintained to manage discharges from areas where existing ground surface conditions have been disturbed.
4. The discharge of surplus waste earthen material to drainage ways is prohibited.
5. The placement of waste earthen materials in such a manner as to allow the discharge of such materials to adjacent undisturbed land areas or to any surface water is prohibited.
6. There shall be no significant modification of stream channel geometry without proper notification of regulatory authorities.
7. Disturbed areas shall be adequately re-stabilized or re-vegetated. Re-vegetated areas shall be continually maintained until vegetation becomes established.
8. Surface flows from the Project site shall be controlled so as to reduce cause of downstream erosion at any point.
9. Surface waste earthen materials shall be removed from the Project site and deposited only at a legal point of disposal or adequately re-stabilized on-site.

10. Areas not subject to construction shall be marked and protected from soil disturbance.
11. Fresh concrete or cement shall not be allowed to contact or enter surface waters.
12. Stormwater runoff collection, pre-treatment, and infiltration disposal facilities for areas of completed construction shall be designed, installed, and maintained to preclude a discharge that exceeds the capacities of the stormwater detention and control system described in the grading plan.

## 5.2 WATER QUALITY MONITORING

Kleinfelder developed the WQMP considering the physical location of the monitoring points, the schedule of sampling, and the selection of the analytical parameters. We chose the analytical parameters as key indicators parameters in monitoring changes in water quality. The analytical assessment consists of monitoring for the following water quality indicator parameters:

<u>LABORATORY PARAMETERS:</u>	<u>SURFACE WATER</u>	<u>UNDERDRAIN LEACHATE</u>
Total Dissolved Solids (TDS)		X
Total Suspended Solids (TSS)	X	
Nitrate Nitrogen	X	X
Ammonia	X	X
Total Kjeldahl Nitrogen (TKN)	X	X
Individual pesticides used during golf course operations	X	X
Total Phosphorus	X	X
 <u>FIELD PARAMETERS:</u>		
pH	X	X
Turbidity	X	X
Electrical Conductivity	X	X

NOTE: The post-construction sampling/analyses will include analyses for pesticides used on the golf course.

The analyses will be performed by a laboratory certified/approved by the Nevada Division of Environmental Protection (NDEP).

The analytical parameters were selected to identify a variety of sources and pollutants. The following paragraphs present the rationale behind the selection of the analyses.

The TKN analysis is used to monitor for nitrogen and ammonia. The presence of elevated levels of TKN can indicate a relatively new source of pollution. Elevated TKN in upgradient Thomas Creek monitoring station SW-1 may indicate off-site degradation from septic systems leaching into the surface water. The ammonia analysis is used to assess the relative age or "freshness" of the

pollutants and to distinguish between organic and inorganic nitrogen in the TKN analysis. The nitrate and total phosphorous analyses will be used to monitor for the hydrolyzed fertilizers. The TSS analysis is used to monitor for erosion/runoff of sediment into Thomas and Dry creeks during the Project construction and operation. TDS concentration is monitored in the groundwater to assess changes in dissolved materials due to surface activity.

During the post-construction sampling of the golf course, each individual pesticide that is applied will be analyzed in both underdrain and surface water samples.

The field parameters, pH, electrical conductivity, and turbidity are used to monitor water quality changes and to support laboratory analyses. A significant change in any of the field parameters could indicate a change in water quality, either a natural seasonal change or a response to the Project construction and operation. Electrical conductivity can be used to estimate TDS and turbidity, and to some extent can be used to estimate TSS.

Sampling station locations, on Thomas and Dry creeks and golf green leachate sampling locations were selected to assess surface water quality entering and exiting the Project. The underdrain water collection systems will help assess fertilizer leaching in the vadose zone before it can degrade groundwater. The selected golf course green underdrain systems will be sampled a minimum of once for baseline data.

#### 5.2.1 Surface Water Monitoring Plan

The water quality monitoring of Thomas and Dry creeks includes sampling, laboratory analysis, and assessment of the results. Both creeks will be sampled at an upstream and downstream stations. Station SW-1 is located where Thomas Creek enters the Project property, and SW-2 is located where it exits the Project. Monitoring of Dry Creek sampling station SW-3 and SW-4, will depend whether it is flowing. During spring snow melt, Dry Creek may flow, but is dry the majority of the year. Dry Creek will be sampled and the volumetric flow gauged if it is flowing during the scheduled sampling dates. Plate 2 shows the approximate sampling station locations.

In order to establish a concentration baseline for the monitored parameters, the two surface water stations will be sampled a minimum of one times prior to construction start-up. Appendix B contains a summary table of analytical results for the upper Thomas Creek measured by NDEP. The baseline data will be used later to compare construction and operation concentrations for each parameter.

During construction of the Project, Thomas and Dry creeks will be sampled quarterly for the laboratory analytical parameters 5.2. In addition, bimonthly volumetric flow measurements for Jones will be obtained from Washoe County. NDEP analyzes the water quality in Thomas Creek monthly, and these results can be obtained to compare with Southwest Pointe's results. Section 6.0 presents possible mitigating options to be considered.

We understand WCDGP will require tri-annual monitoring of the surface water following the first round of seeding/fertilization. The tri-annual sampling will be performed in the spring, summer and late fall of each year. If construction or post-construction concentrations are statistically significantly different than pre-construction levels, corrective measures will be implemented. Appendix B, summarizes the monitoring schedule.

The table in section 5.2.2 summarizes the monitoring schedule.

### 5.2.2 Vadose Zone Groundwater Monitoring Plan

The water entering the vadose will be sampled from golf course green underdrain systems and analyzed to assess changes in water quality with time under golf greens 1, 4, and 6. Monitoring vadose zone water quality will help assess if groundwater can potentially be impacted.

Like the surface water, a baseline for pre-operation water quality will be established using analytical results from a minimum of one sampling events performed prior to the first chemical application/fertilization. Plate 2 shows the locations of the greens to be sampled.

The baseline, golf green, underdrain water quality monitoring will be performed a minimum of one time before the first chemical/fertilizer application to the golf course. The monitoring will include sampling, chemical analysis, and comparison to baseline concentrations. The data will be monitored in order to assess increasing concentrations at depth of analytical parameters. If concentrations appear to be increasing significantly, procedures will be modified. Section 6.0 presents possible golf course operation management techniques, and construction methods to mitigate the source/problems.

Golf course operation (post-construction) monitoring will be performed tri-annually each year following the first round of chemical/fertilization. The analytical constituents will be the same as the baseline events with the addition of analyses for individual pesticides used on the golf course. The tri-annual sampling will be performed in the spring, summer, and late fall of each year in conjunction with the surface water sampling. Table 1 summarizes the surface and vadose zone sampling schedule.

**TABLE 1**

**SURFACE AND VADOSE ZONE  
MONITORING SCHEDULE**

**SOUTHWEST POINTE GOLF COURSE WATER QUALITY MANAGEMENT PLAN  
RENO, NEVADA**

	<b>Pre-Construction Baseline</b>	<b>Construction</b>	<b>Golf Course Operation</b>
Surface Water - Thomas and Dry Creeks	Minimum of One Sampling Event	Quarterly Sampling and Reporting	Tri-annual Sampling and Reporting
Golf Green Underdrain Monitoring	Not Applicable	Minimum of One Baseline Sampling Event Before First Chemical Application	Tri-annual Sampling and Reporting

**5.2.3 Water Quality Reporting**

The golf course construction quarterly surface water monitoring results will be presented to WCDP in a letter format summarizing monitoring events, analytical data and findings/conclusions. The letter report will be submitted to WCDP and NDEP within 30 days of Southwest Pointe receiving analytical report data. The letter report will discuss the changes in water quality, if any. Additionally, a tabulation of current, post, and baseline analytical data will be included. When the tri-annual sampling begins, the report presentation will coincide with sampling events.

---

## 6.0 MITIGATION OPTIONS

---

The water quality monitoring program was designed to detect changes in water quality. If water quality changes are detected and show a trend of increasing concentration, or if water quality standards are approached, mitigating options will be considered. The options available range from management techniques to physical abatement structures. The following items represents possible mitigation alternatives:

- Elimination or exchange of a potential environmentally unsafe material for a less harmful material/chemical.
- Reduction of the concentration or frequency of chemical application.
- Modification to the irrigation frequency/timing.
- Collection and treatment of underdrain leachate.

- The plan provisions are consistent with the adopted preliminary development agreement.
  - Among the provisions the site plans include are:
    - Lot and block layouts and locations
    - Street patterns, elevations, and grades
    - Delineation of common areas
    - Location of project entry
    - Layouts and location of the golf courses and associated clubhouse and maintenance facilities
    - Sites for recreational amenities
    - School sites
    - Nevada Division of Forestry fire station site
    - Public and private trails and connections to the regional trail system
    - Perimeter residential lot fencing
    - Community fencing
    - Earthquake faults
    - Some private common driveways
    - Emergency access
    - Proposed and existing wells and water storage tanks
    - Wetlands, Maps Flood Zone "A" of the Flood Insurance Rate, and Waters of the USA
    - Locations of cut and fill slopes along the perimeter
  - All of these plan provisions are consistent with the preliminary Development Agreement approved by Washoe County.
- The plan provisions satisfy the requirements specified in the Conditions of Approval specified by Washoe County for the preliminary Development Agreement.

- **The floor area proposed for nonresidential use is not increased;**
  - **The nonresidential uses will comply with all requirements of the Washoe County Code, including parking and landscaping. No waivers were requested or granted.**
  - **Specific uses, when established, will determine the ratio of floor area to lot size. No deviation from code requirements has been requested and none is being permitted by the Final Development Agreement.**
  
- **The total ground area covered by buildings and the height of buildings is not increased; and**
  - **Southwest Pointe is primarily a residential project with ancillary recreational amenities and public facilities. The ground area covered by the residential structures will correspond to developments of similar nature and quality.**
  - **As referenced in the finding on floor area, no deviation from code requirements has been requested and none is being permitted by the Final Development Agreement.**
  - **The height of residential and nonresidential structures will comply with the adopted Development Standards Handbook. No blanket variances have been requested or are being granted.**

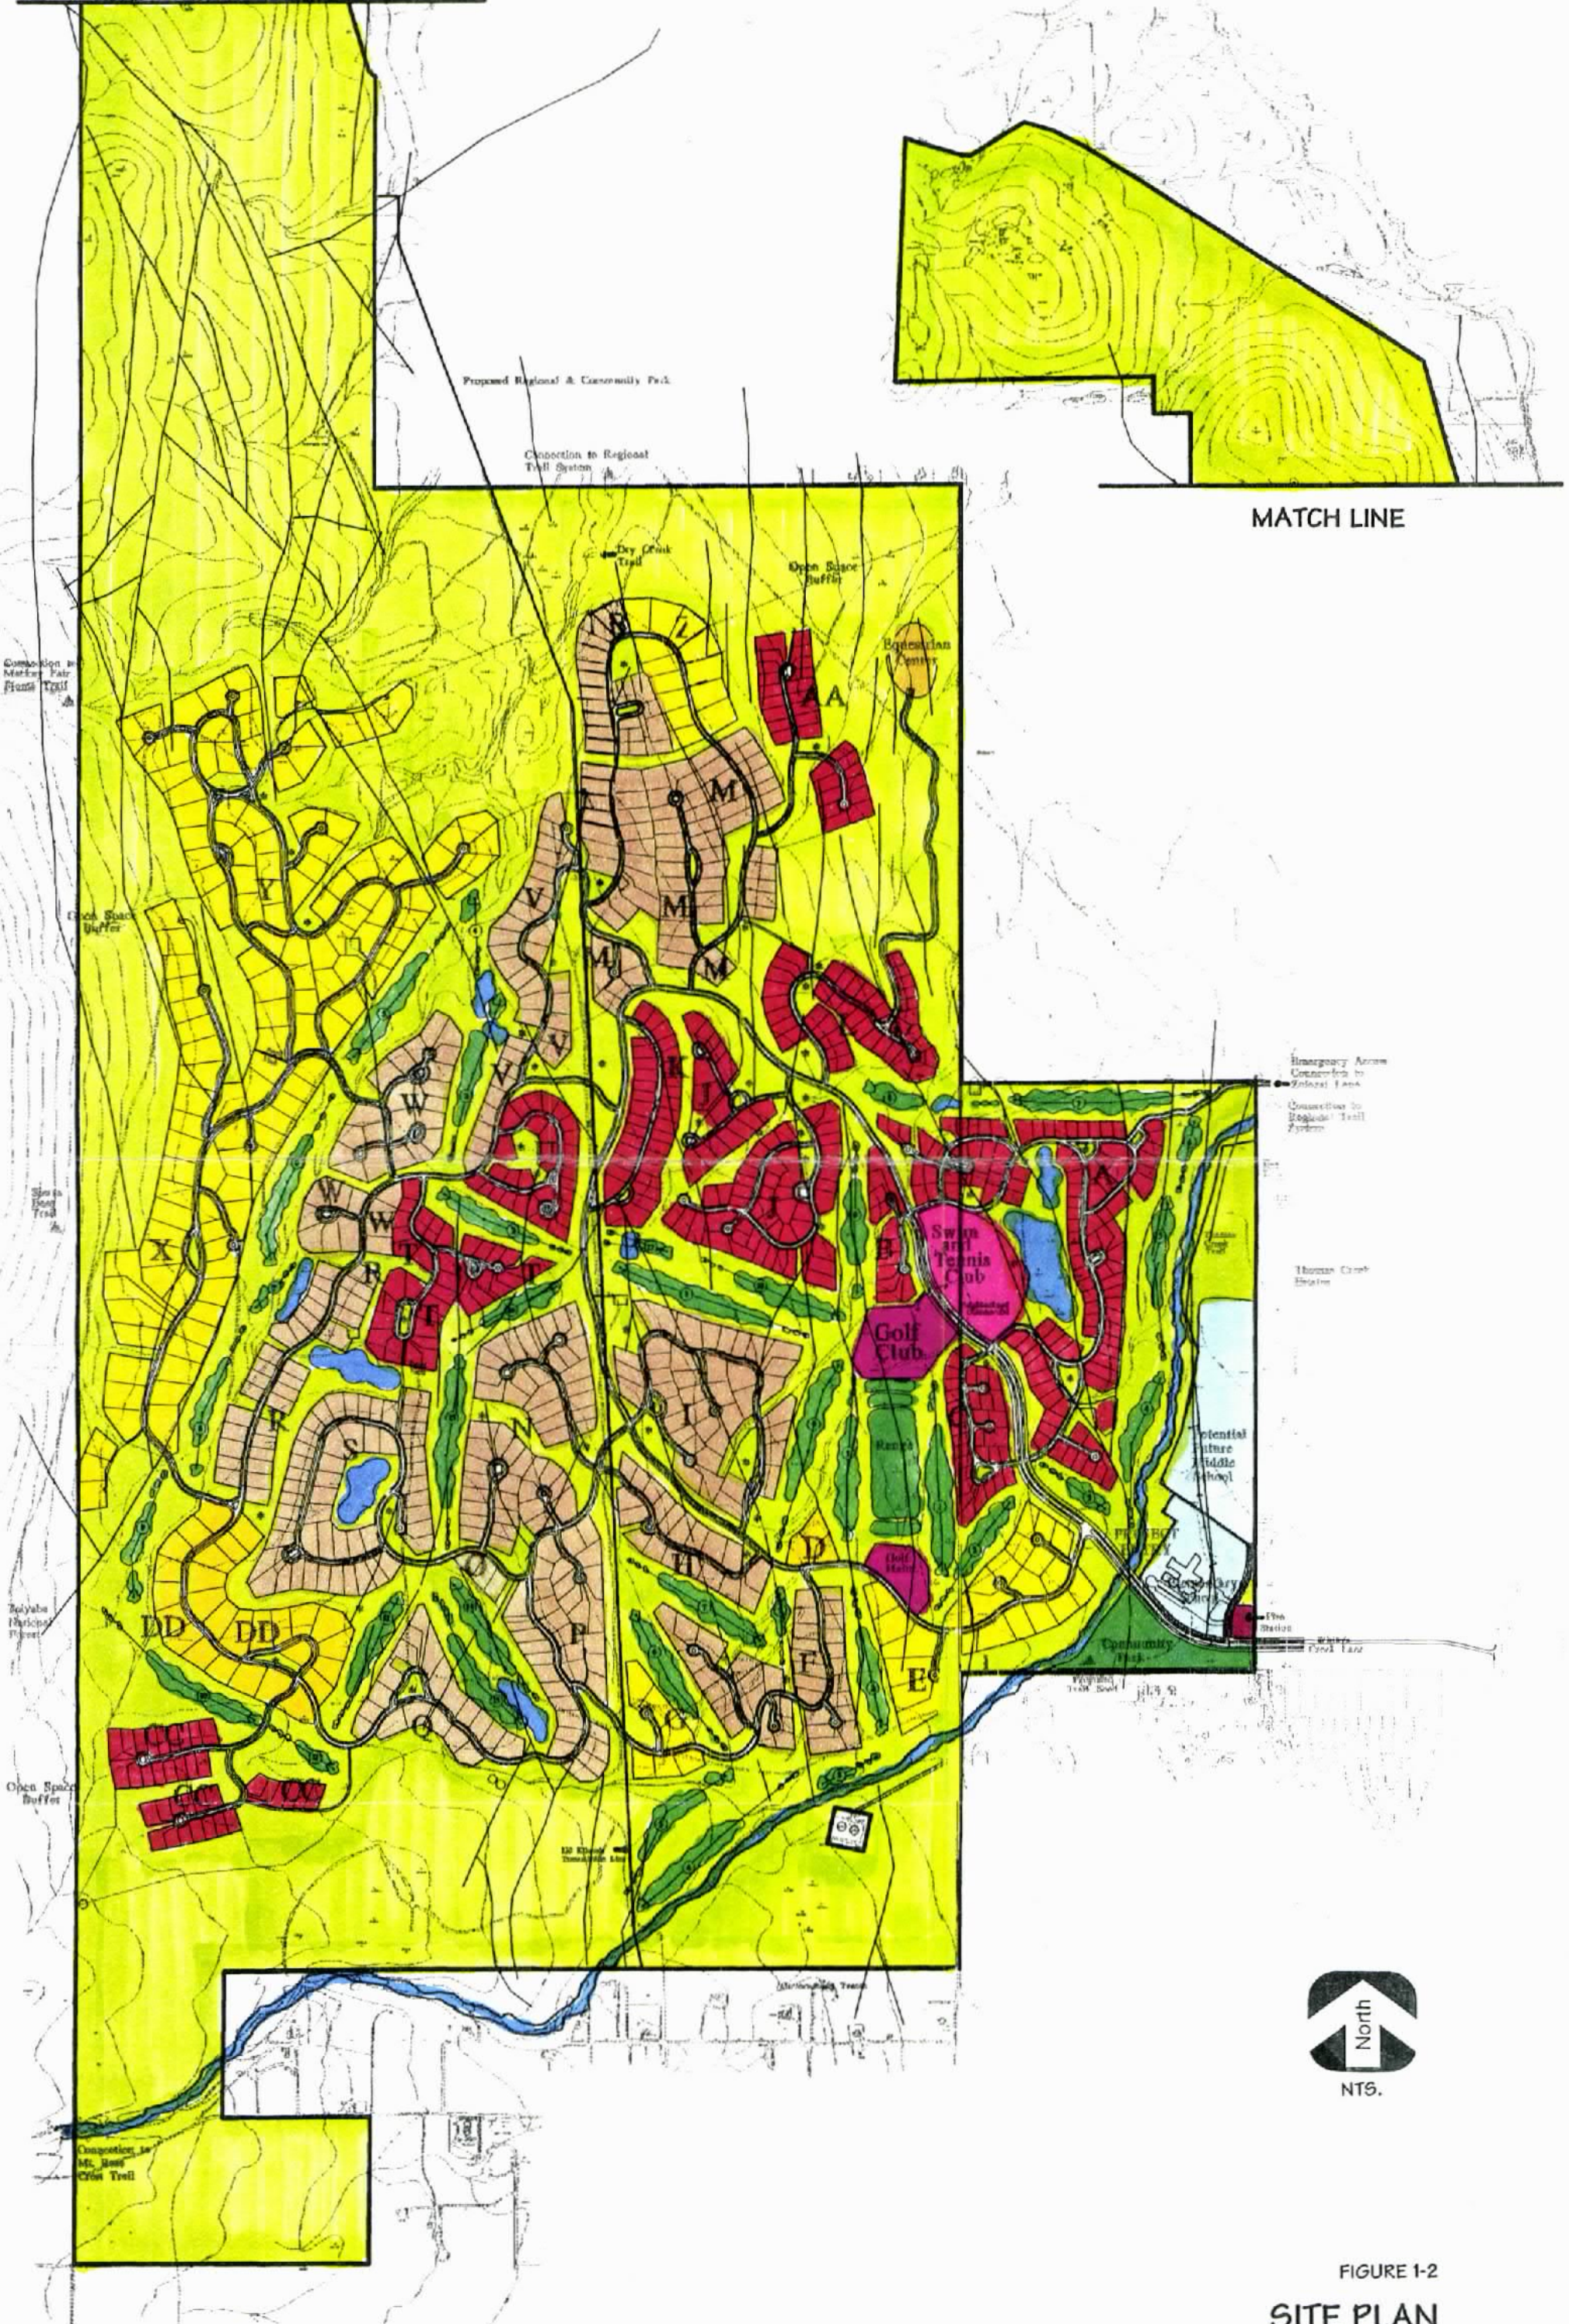

- **The proposed ratio of residential to nonresidential use is not changed;**
  - **The proposed public facilities and commercial site are located within the same area and are of the same size as those previously approved by Washoe County.**
  - **All undeveloped open space areas and developed common areas are located within the same areas and are of the same size as those previously approved by Washoe County.**
  - **All golf courses and related recreational and ancillary facilities are located within the same areas and are of the same size as those previously approved by Washoe County.**
  
- **The area set aside for common open space is not reduced or the area is not substantially relocated;**
  - **All undeveloped open space areas and developed common areas are located within the same areas and are of the same size as those previously approved by Washoe County.**
  - **The proposed system of trails corresponds to the system adopted by Washoe County and includes approximately six miles of public trails.**
  - **Approximately 1500 acres of undisturbed, natural open space will be dedicated to Washoe County as the development of Southwest Pointe progresses.**

The Director of the Department of Development Review has forwarded the Final Development Agreement to the Board of County Commissioners. The Director has determined that the findings required by Article 814 of the Development Code can be made. Those findings and the rationale for supporting them follows:

- The proposed gross residential density or intensity of use is not changed:
  - The number of dwelling units (d.u.) permitted by the preliminary Development Agreement approved by the BCC on November 8, 1994, 1090, equals the number in the Final Development Agreement that is being presented for approval.
  - That number is the same as when the Development Agreement was first proposed in September 1993 and is based upon figures provided by Washoe County which were developed from existing zoning on the Southwest Truckee Meadows Area Plan. Those figures are:
    - 307 acres were zoned Low Density Suburban (LDS) which permits a density of 1.00 d.u. per acre and yielded 307 residential lots.
    - 1,800 acres were zoned High Density Rural (HDR) which permits a density of 0.40 d.u. per acre and yielded 720 residential lots.
    - 70 acres were zoned Medium Density Rural (MDR) which permits a density of 0.20 d.u. per acre and yielded 14 residential lots.
    - 228 acres were zoned Low Density Rural (LDR) which permits a density of 0.10 d.u. per acre and yielded 28 residential lots.
    - 867 acres were zoned General Rural (GR) which permits a density of d.u. per acre and yielded 21 residential lots.
  - For more than four years the applicant has relied upon a density of 28 units for the LDR acreage. These figures were provided by Washoe County in February 1992. In actuality the correct count is 22, a difference of six units.
  - In all prior actions the Development Agreement has always been found in conformance with the Comprehensive Plan and the Southwest Truckee Meadows Area Plan.
- The residential densities have been removed from all developed and undeveloped open space areas, golf courses and related recreational and ancillary facilities, and public and commercial areas. These areas will remain nonresidential.

1 **FINAL DEVELOPMENT AGREEMENT**

2  
3 This Agreement is entered into this \_\_\_ day of \_\_\_\_\_, 1996 by and  
4 between the **COUNTY OF WASHOE**, a political subdivision of the State of Nevada  
5 ("COUNTY"); and **BETTY ALYCE JONES, HELEN JEANE JONES, IRIS G.**  
6 **BREWERTON, KENNETH G. WALKER, AND GERALD C. SMITH**, Trustees of The  
7 **Nell J. Redfield Trust** and **SOUTHWEST POINTE PARTNERS**, a Nevada general  
8 partnership, (collectively referred to as "OWNERS"). For valuable consideration,  
9 receipt of which is hereby acknowledged, the parties agree as follows:

10  
11 1. **GENERAL.**

12 1.1 **Legal Authority.** Nevada Revised Statute ("NRS") 278.0201 to  
13 278.0207 and Washoe County Development Code (the "Code") §§ 110.814.00 to  
14 110.814.95 authorize the COUNTY and the OWNERS to enter into agreements for the  
15 development of real property. This Agreement is a final development agreement, as  
16 defined in Code § 110.814.75, and as provided in NRS Chapter 278.

17  
18 1.2 **The Project.** The OWNERS hold a legal or equitable interest in  
19 certain real property located in COUNTY, a legal description of which is attached as  
20 Exhibit "A". Development of the real property, subject to the terms of this Agreement,  
21 has been authorized by COUNTY under Case No. DA9-1-93 and ancillary cases, and  
22 is described as a residential community which includes 1,090 residential lots with  
23 common open space, a water delivery system (potable and nonpotable), sewer  
24 system, two golf courses with related recreational facilities, and a commercial village  
25 center, the total acreage being  $\pm 3,171.6$  acres, designated under COUNTY land use  
26  
27  
28

1 designations as Low Density Suburban, Low Density Rural, Medium Density Rural,  
2 High Density Rural, and General Rural (the "Project").

3 **1.3 Past Approvals.** The OWNERS have obtained the following  
4 approvals from the COUNTY pertaining to the Project:  
5

- 6 a) On June 11, 1996 OWNERS obtained approval from the  
7 Board of County Commissioners for conditions to DA9-1-  
8 93. Said conditions and amendments are attached hereto  
9 as Exhibit "B".
- 10 b) On September 5, 1995 OWNERS obtained approval from  
11 the Planning Commission for a Special Use Permit (Case  
12 No. SPW9-10-93) to develop a water system having  
13 storage of 1.4 million gallons and necessary delivery  
14 system. The order issuing such approval is attached as  
15 Exhibit "C"
- 16 c) On May 2, 1995 OWNERS obtained approval from the  
17 Planning Commission for a Special Use Permit (Case No.  
18 SPW9-13-93) to grade the first golf course and improve  
19 the construction access. The order issuing such approval  
20 is attached as Exhibit "D".
- 21 d) On November 8, 1994 OWNERS obtained approval from  
22 the Board of County Commissioners to amend the  
23 preliminary development agreement.
- 24 e) On September 27, 1994 OWNERS obtained approval from  
25 the Board of County Commissioners for an 18-month  
26 extension to submit a draft final agreement, which  
27 OWNERS have submitted in compliance with said  
28 extension.
- f) On February 8, 1994 OWNERS obtained approval from  
the Board of County Commissioners pursuant to Code §  
110.814.70 of a preliminary development agreement (Case  
No. DA9-1-93).

1.4 **Ordinance.** This Agreement shall be approved by ordinance. The  
Project is to be developed as a single entity and includes uses and development

standards consistent with the Washoe County Comprehensive Plan and the Southwest Truckee Meadows Area Plan.

1.5 **Benefit To OWNERS.** The OWNERS acknowledge and agree that, prior to entering into this Agreement appropriate legal advice and counsel was sought, that the OWNERS made a voluntary informed business decision to enter into this Agreement in good faith. The OWNERS further acknowledge and agree that substantial benefits will accrue to the OWNERS as a result of the OWNERS and the COUNTY entering into this Agreement, including entitlements to develop the Project in accordance with this Agreement and the Conditions of Approval, an extension or opportunity to seek an extension of the time in which to file a final subdivision map under this Agreement, certainty in the particular on-site and offsite improvements and requirements which the OWNERS will be responsible for constructing or completing, and certainty in the imposition of land use fees or obligations which may be imposed by the COUNTY.

1.6 **Benefit to COUNTY.** The COUNTY acknowledges and agrees that substantial benefits will accrue to the COUNTY as a result of OWNERS and the COUNTY entering into this Agreement, including the rational, planned land uses and development of the Real Property.

2. **SELECTED DEFINITIONS.**

2.1 "Agreement" means this development agreement.

2.2 "Conditions of Approval" mean all conditions of the Project approvals as set forth in the orders from Washoe County attached to this Agreement.

1 as Exhibits B, C, and D, which conditions are incorporated herein as provisions of this  
2 Agreement.

3 2.3 "COUNTY" means Washoe County, a political subdivision of the  
4 State of Nevada, and its officers, elected officials, agents, employees, divisions,  
5 departments, committees, boards and commissions.  
6

7 2.4 CC&Rs means the declaration of covenants, conditions and  
8 restrictions which will be drafted by OWNERS, approved by the COUNTY and  
9 recorded against the Real Property, as further provided in the Conditions of Approval.

10 2.5 "Development Standards Handbook" means the development  
11 standards for the Project as set forth in Exhibit "E".  
12

13 2.6 "Golf Course Property" includes all real property for the golf and  
14 related recreational facilities component of the Project.

15 2.7 "OWNERS" mean those property owners identified above and  
16 their successors and assigns.

17 2.8 "Project" means the Southwest Pointe development as approved  
18 by the COUNTY in Case No. DA9-1-93 and this Agreement.

19 2.9 "Public Facilities" are facilities that will be dedicated to the  
20 COUNTY. Public Facilities shall include, but are not limited to: on-site or offsite  
21 sewage collection facilities; water rights dedicated for service; water systems facilities;  
22 together with all lines, mains, holding and disposing areas, tanks, public easements  
23 and rights-of-way; and all off-site improvements that include public roadways,  
24 equipment, street lights and traffic signals. Owner constructed Public Facilities for  
25 water will include all non-golf related improvements consisting of the required water  
26  
27  
28

1 storage tanks, well improvements, water mains, water services, water meters, gate  
2 valves, fire hydrants, flush valves, air release valves and related appurtenances. The  
3 Public Facilities for sewer will include sewer manholes, sewer mains, sewer laterals  
4 and collection lines within the Common Area Property as well as off-site effluent  
5 irrigation lines, tanks and pump stations, and the on-site effluent main line and  
6 reservoirs. In addition, Public Facilities also includes improvement of Whites Creek  
7 Lane as specified in the Conditions of Approval.  
8

9 2.10 "Public Utilities" include, but are not limited to, water, sewer,  
10 natural gas, electricity, telephone, and cable television, together with all equipment  
11 and easements dedicated for these utilities.  
12

13 2.11 "Real Property" means all the real property described in Exhibit  
14 "A". The real property includes the Golf Course Property, the Subdivision Property,  
15 and any remaining real property within the Project.  
16

17 2.12 "Site Plan" means the plans in compliance with Code §  
18 110.814.45 and attached hereto as Exhibit "F", and includes the Development  
19 Standards Handbook, Exhibit "E".  
20

21 2.13 "Subdivision Improvements" are any on-site or off-site  
22 improvements or facilities required of residential subdivisions pursuant to this  
23 Agreement. Subdivision Improvements include, but are not limited to, all drainage  
24 improvements, common area improvements, curbs, streets, gutters, medians,  
25 parkways, pedestrian and bike paths, sidewalks, street lights, any directional traffic  
26 devices, and the Public Facilities required in connection with residential development.  
27  
28

1                   2.14 "Subdivision Property" includes all real property for the residential  
2 housing component of the Project.

3                   3.     REQUIRED CONTENTS OF AGREEMENT. Pursuant to Code §  
4 110.814.75, the following matters are included in this Agreement.

5  
6                   3.1     Preliminary Agreement. Reference is made to the preliminary  
7 development agreement as approved in Case No. DA9-1-93 and amended or  
8 superseded by this Agreement.

9                   3.2     Legal Agreement. The substance of covenants, grants or  
10 easements, or other restrictions proposed to be imposed upon the use of the land,  
11 buildings and structures, including proposed easements or grants for Public Utilities  
12 shall be as provided in the CC&Rs and as specified in the Conditions of Approval.

13  
14                  3.3     Site Plan. A Site Plan in conformance to Code § 110.814.45 is  
15 attached to this Agreement as Exhibit "F"; and includes the Development Standards  
16 Handbook, Exhibit "E".

17                  3.4     Installation and Maintenance. A program for the installation and  
18 maintenance of parking areas, lighting, landscaping, private drainage facilities  
19 (including detention ponds, ditches, storm drains and drop inlets), private streets,  
20 utilities, recreational facilities and other infrastructure is specified in the Conditions of  
21 Approval and will be further provided for, in part, in the CC&Rs.

22  
23                  3.5     Open Space Resources. A program for the protection of open  
24 space resources, approved by COUNTY, is attached as Exhibit "G". No open space  
25 shall be sold to a bona fide third party without prior written consent of County. As  
26

1 provided in Exhibit "G", after the 10-acre park is constructed, the County shall be  
2 responsible for park maintenance and upkeep.

3 **3.6 Development Schedule And Phasing.** Guidelines for a  
4 development schedule and phasing of the Project are more particularly described in  
5 the Development Standards Handbook ( See Article I), Exhibit "E".  
6

7 **3.7 Development Standards Handbook.** A Development Standards  
8 Handbook in compliance with Code § 110.814.35(a) is attached hereto as Exhibit "E".

9 **3.8 Incorporation Of Other Exhibits.** The following exhibits are also  
10 attached hereto:

- 11 a) Right-Of-Way Documents for Off-Site Access from  
12 Thomas Creek Road, Exhibit "H";
- 13 b) Construction Traffic Haul Route Plan, Exhibit "I";
- 14 c) Concept-Level Storm Drain Plan, Exhibit "J";
- 15 d) Geotechnical Report On Earthquake Faulting, Exhibit "K";  
16 and
- 17 e) Schematic Water System Plan, Exhibit "L".

18 **4. EFFECT OF AGREEMENT.**

19 **4.1 Entitlements.** The approval of this Agreement by County  
20 constitutes a vested right of OWNERS to develop the Real Property as set forth in this  
21 Agreement and pursuant to the land use designations provided herein. Pursuant to  
22 Code § 110.814.15(b), this Agreement does not prevent COUNTY in a subsequent  
23 action applicable to the Real Property from adopting new ordinances, resolutions or  
24 regulations that conflict with those ordinances, resolutions and regulations in effect at  
25 the time this Agreement is made, provided any new ordinances, resolutions or  
26  
27  
28

1 regulations do not impose upon OWNERS restrictions, requirements or standards  
2 which are more burdensome, more expensive or more onerous to satisfy than those  
3 in effect at the time this Agreement is made; and provided further that any said new  
4 ordinances, resolutions or regulations do not conflict with provisions of this Agreement  
5 in a manner that adversely affects OWNERS. The parties agree such a conflict or  
6 inconsistency would prevent development of the Project as set forth in this Agreement.  
7  
8 Nothing contained in this subsection 4.1 shall be construed to impair enforcement or  
9 compliance with the provisions of Code § 110.814.15(c) or (d).

10 **4.2 Subsequent Approvals And Conditions.** Tentative maps and  
11 final maps for Subdivision Property, building permits, variances, parcel maps,  
12 boundary line adjustments, special use permits for nonresidential property, and other  
13 approvals by COUNTY within the Project ("Subsequent Approvals") shall be required  
14 pursuant to Code requirements in existence at the time this Agreement is made,  
15 except as stated otherwise herein. All Subsequent Approvals in conformance with  
16 NRS Chapter 278 and the Code (as amended hereby), and in substantial  
17 conformance with the provisions of this Agreement shall be approved by the COUNTY  
18 as a consent item without public hearing. The Conditions of Approval specified in  
19 Exhibit "B", "C", and "D" may not be amended by Subsequent Approvals without the  
20 consent of OWNERS. Any conditions imposed by COUNTY in Subsequent Approvals  
21 which pertain to the same subject matter as any Conditions of Approval may not  
22 impose restrictions, requirements or standards which are more burdensome, more  
23 expensive or more onerous for OWNERS to satisfy than any Conditions of Approval,  
24 without the consent of OWNERS; provided that reasonable conditions imposed by  
25  
26  
27  
28

1 COUNTY in Subsequent Approvals which pertain to matters not addressed by any  
2 Conditions of Approval, or provide more detail and do not conflict with matters  
3 addressed by any Conditions of Approval, shall be allowed.

4 Conditions and provisions hereof regarding construction of off-site or on-site  
5 improvements (e.g. streets and utilities), including development standards and design  
6 guidelines, may be varied upon request of the OWNERS and approval of the County  
7 Engineer.  
8

9 **4.3 Subsequent Fees.** COUNTY currently imposes four (4) fees for  
10 the privilege of developing real property: a water connection fee; a sewer connection  
11 fee; a park residential construction tax; and the Regional Road Impact Fee ("RRIF")  
12 ("collectively County Fees"). The County Fees shall be imposed on applicable  
13 development within the Project in the same manner said fees are imposed for other  
14 similarly situated development in the COUNTY, subject to the following conditions.  
15

16 **4.3.1** Provided OWNERS construct a potable water system as  
17 part of the Public Facilities to serve the potable water demands of the Project as those  
18 demands arise, COUNTY shall charge no water connection fee for development within  
19 the Project.

20 **4.3.2** Provided OWNERS receive a credit for all off-site sewer  
21 facilities infrastructure constructed by OWNERS, OWNERS shall pay the sewer  
22 connection fee at the time and in the amount specified by COUNTY ordinance.  
23

24 **4.3.3** Subject to any credits allowed by a RRIF Capital Front-  
25 Ending Agreement, OWNERS shall pay the RRIF at the time and in the amount  
26 specified by County ordinance.

4.3.4 Subject to the provisions of an agreement between COUNTY and OWNERS for the construction of neighborhood park improvements within the Project, OWNERS shall pay the park residential construction tax at the time and in the amount specified under NRS 278.497 to NRS 278.4987.

4.4 No New COUNTY Fees. Except for the County Fees or as specified in subsections 4.5 and 4.6 below, no new fees or taxes enacted or approved by COUNTY after the date this Agreement is made for construction or development within the Project or for capital improvements for Public Facilities shall apply to the Project, provided that the provisions of this subsection are not intended to prohibit the imposition and collection of County fees and charges imposed at the time of execution hereof (e.g., for permits or inspections).

4.5 Special Assessment Districts. The parties agree that certain Public Facilities may be financed, constructed and paid for, in whole or in part, by one or more developer special assessment districts. For the purposes of the County's Special Assessment Guidelines dated February, 1992 ("Guidelines"), the parties agree that the following improvements generally provide a public benefit, satisfy Section A of the Guidelines and may be included at the discretion of the parties in a special assessment district:

- (a) the construction and land costs of Whites Creek Lane;
- (b) the County-owned nonpotable water system for golf course and landscape irrigation;
- (c) the purchase price of creek water rights (with supplemental groundwater rights) for the County-owned nonpotable water system;

26  
27  
28

- (d) the County-owned potable water system; and
- (e) County-owned landscaping improvements and trails/paths along public streets.

**4.6 Nonpotable Water Agreement.** Any fees, costs and expenses of OWNERS pursuant to an agreement between the parties for the provision of nonpotable water for golf course and common area landscape irrigation shall not be construed as a new fee under subsection 4.4. above.

**4.7 Credits Or Reimbursements Of County Fees.** No successor or assign of OWNERS shall be entitled to a credit or reimbursement of a County Fee or fee imposed pursuant to subsection 4.6 above, unless that successor OWNER obtains an express assignment of the right to the credit or reimbursement from the OWNER who paid for or earned the credit or reimbursement of a County Fee.

**4.8 Parcel Maps.** OWNERS shall be entitled to submit or obtain approval of parcel maps within Project in order to facilitate development, even if said parcel maps create legal parcels within an area of the Project subject to a tentative map, provided that such parcel maps are not used as a subterfuge to create residential lots subject to an approved tentative map. OWNERS shall not be required to dedicate water rights for new parcels created by parcel maps within the Project, if such new parcels are not intended to require potable water service by COUNTY under the provisions of this Agreement.

**4.9 Fire Protection.** Owners agree to transfer and dedicate free of charge to County (or to another government entity of County's choice) prior to the recordation of the first final map a one-acre fire station site located on Whites Creek Lane east of the proposed elementary school and east of the Project entrance. The

1 exact location and parcel configuration shall be mutually agreed by the parties. The  
2 deed for the fire station site shall restrict use to a fire station and ancillary purposes.  
3 Owners and representatives of the Nevada Division of Forestry have entered into  
4 discussions regarding the free dedication of the fire station site and other possible  
5 needs for fire protection, and no other commitments were made except Owner's  
6 agreement herein to dedicate the fire station site.  
7

8 **5. TERM OF AGREEMENT AND AMENDMENTS.**

9 **5.1 Term.** The term of this Agreement shall be fifteen (15) years from  
10 the date hereof; provided that all applicable terms of this Agreement shall remain  
11 binding and enforceable regarding permits, construction or development on any  
12 portion of the Real Property subject to a tentative map, a recorded final map or a  
13 special use permit in existence at the time of expiration of this Agreement.  
14

15 **5.2 Amendments.** Amendments to this Agreement shall be defined  
16 as changes which are not in substantial compliance with the overall Project character  
17 and design. Amendments, if any, shall be approved as provided in NRS 278.0205.  
18 Changes hereto which are in substantial compliance with the overall Project character  
19 and design may be requested by Owners and approved or denied by the Director of  
20 Development Review. The Director of Development Review shall also decide whether  
21 or not a proposed change is in substantial compliance with the overall Project  
22 character or design. The Owners may appeal an adverse decision by the Director of  
23 Development Review under this Subsection 5.2 to the Board Of County  
24 Commissioners by written notice filed with the Director of Development Review, if filed  
25 within twenty (20) days of receipt of the notice of the adverse decision.

6. OBLIGATIONS OF OWNERS/ASSIGNMENT.

The parties acknowledge that OWNERS will sell or otherwise convey title to portions of the Real Property as development occurs. Successors to OWNERS shall acquire rights and assume obligations only to the extent required under this Agreement to develop or use the portion of the Real Property so acquired. Upon conveyance of each portion of Real Property, OWNERS' liability for obligations under this Agreement shall terminate, provided the successor OWNERS assumes said obligations. The provisions of this Agreement constitute covenants running with the Real Property. Notwithstanding the provisions of this Section 6, a successor OWNER of a single lot created by final map within the Project shall not have any obligation under this Agreement other than for development and use of the lot so owned consistent with this Agreement.

7. MISCELLANEOUS.

7.1 Governing Law; Venue. This Agreement is being executed and delivered in Washoe County, Nevada, and is intended to be performed in the State of Nevada, and the laws of Nevada shall govern the validity, construction, enforcement and interpretation of this Agreement. Venue for any legal action arising out of this Agreement shall be in Washoe County, Nevada.

7.2 Entirety and Amendments. This Agreement embodies the entire Agreement between the parties and supersedes all prior agreements and understandings, if any, relating to the Project, and may be amended or supplemented only by an instrument in writing executed by the party against whom enforcement is sought, and as provided in Code § 110814.95(b). No oral statements or representations made before or after the execution of this Agreement regarding the subject matter of this Agreement are binding on a party, nor may any such oral statements or representations be relied on by a party.

7.3 **Invalid Provisions.** If any provision of this Agreement is held to be illegal, invalid or unenforceable under present or future laws, such provision shall be fully severable. The Agreement shall be construed and enforced as if such illegal, invalid or unenforceable provision had never comprised a part of the Agreement. The remaining provisions of the Agreement shall remain in full force and effect and shall not be affected by the illegal, invalid or unenforceable provision or by its severance from this Agreement.

7.4 **Parties Bound and Assignment.** Subject to the provisions of Section 6, this Agreement shall be binding upon and inure to the benefit of the parties, and their respective heirs, personal representatives, successors and assigns. In the event COUNTY, for any reason, ceases to have jurisdiction as the applicable local governmental entity regarding the subject matter of all or any part of the Agreement, COUNTY shall require the new entity to assume the applicable obligations hereof.

7.5 **Further Acts.** In addition to the acts recited in this Agreement to be performed, the parties agree to perform, or cause to be performed, any and all further acts as may be reasonably necessary to consummate the obligations contemplated hereby.

7.6 **Headings.** Headings used in this Agreement are used for reference purposes only and do not constitute substantive matter to be considered in construing the terms of this Agreement.

7.7 **Attorneys' Fees.** In the event that any action is necessary to enforce the rights of any party hereto, the prevailing party in any such action shall be entitled to reasonable costs and attorneys' fees.

7.8 **Notice.** All notices given pursuant to this Agreement shall be in writing and shall be given by personal delivery, by facsimile transmission, by United States mail or by United States express mail or other established express delivery service (such as Federal Express), postage or delivery charge prepaid, addressed to the appropriate party at the address set forth below:

7.10 **Indemnity.** Developer shall indemnify and hold harmless COUNTY and its officers, employees, and agents, from any claims, demands, losses, defense costs, or liability of any kind or nature, which COUNTY may sustain or incur or which may be imposed upon them out of actions by, or the negligence of, Developer, its officers, agents or employees, arising out of Developer's obligations specified in Section 2 hereof, accepting only liability arising out of gross negligence or intentional wrong doing by County, its officers, agents, or employees.

7.11 **Arbitration.** Any dispute arising from rights or obligations of this Agreement shall be submitted to arbitration pursuant to the Commercial Rules of the American Arbitration Association, including any disputes regarding consents or approvals to be given by a party. The decision of the arbitrator shall be final and binding on both parties.

7.12 **Recordation.** This Agreement shall not be recorded, but in order to comply with Code § 110.814.95(c) the Memorandum Of Agreement attached hereto as Exhibit "M" shall be recorded upon execution hereof in the office of the Recorder of Washoe County, Nevada.

7.13 **Exhibits.** All exhibits to this Agreement are incorporated herein as if fully set forth.

1 **FINAL DEVELOPMENT AGREEMENT**

2  
3 This Agreement is entered into this \_\_\_ day of \_\_\_\_\_, 1996 by and  
4 between the **COUNTY OF WASHOE**, a political subdivision of the State of Nevada  
5 ("COUNTY"); and **BETTY ALYCE JONES, HELEN JEANE JONES, IRIS G.**  
6 **BREWERTON, KENNETH G. WALKER, AND GERALD C. SMITH**, Trustees of The  
7 Nell J. Redfield Trust and **SOUTHWEST POINTE PARTNERS**, a Nevada general  
8 partnership, (collectively referred to as "OWNERS"). For valuable consideration,  
9 receipt of which is hereby acknowledged, the parties agree as follows:  
10

11 1. **GENERAL.**

12 1.1 **Legal Authority.** Nevada Revised Statute ("NRS") 278.0201 to  
13 278.0207 and Washoe County Development Code (the "Code") §§ 110.814.00 to  
14 110.814.95 authorize the COUNTY and the OWNERS to enter into agreements for the  
15 development of real property. This Agreement is a final development agreement, as  
16 defined in Code § 110.814.75, and as provided in NRS Chapter 278.  
17

18 1.2 **The Project.** The OWNERS hold a legal or equitable interest in  
19 certain real property located in COUNTY, a legal description of which is attached as  
20 Exhibit "A". Development of the real property, subject to the terms of this Agreement,  
21 has been authorized by COUNTY under Case No. DA9-1-93 and ancillary cases, and  
22 is described as a residential community which includes 1,090 residential lots with  
23 common open space, a water delivery system (potable and nonpotable), sewer  
24 system, two golf courses with related recreational facilities, and a commercial village  
25 center, the total acreage being ±3,171.6 acres, designated under COUNTY land use  
26  
27  
28

1 designations as Low Density Suburban, Low Density Rural, Medium Density Rural,  
2 High Density Rural, and General Rural (the "Project").

3 **1.3 Past Approvals.** The OWNERS have obtained the following  
4 approvals from the COUNTY pertaining to the Project:

- 5
- 6 a) On June 11, 1996 OWNERS obtained approval from the  
7 Board of County Commissioners for conditions to DA9-1-  
8 93. Said conditions and amendments are attached hereto  
9 as Exhibit "B".
- 10 b) On September 5, 1995 OWNERS obtained approval from  
11 the Planning Commission for a Special Use Permit (Case  
12 No. SPW9-10-93) to develop a water system having  
13 storage of 1.4 million gallons and necessary delivery  
14 system. The order issuing such approval is attached as  
15 Exhibit "C"
- 16 c) On May 2, 1995 OWNERS obtained approval from the  
17 Planning Commission for a Special Use Permit (Case No.  
18 SPW9-13-93) to grade the first golf course and improve  
19 the construction access. The order issuing such approval  
20 is attached as Exhibit "D".
- 21 d) On November 8, 1994 OWNERS obtained approval from  
22 the Board of County Commissioners to amend the  
23 preliminary development agreement.
- 24 e) On September 27, 1994 OWNERS obtained approval from  
25 the Board of County Commissioners for an 18-month  
26 extension to submit a draft final agreement, which  
27 OWNERS have submitted in compliance with said  
28 extension.
- 29 f) On February 8, 1994 OWNERS obtained approval from  
30 the Board of County Commissioners pursuant to Code §  
31 110.814.70 of a preliminary development agreement (Case  
32 No. DA9-1-93).

33 **1.4 Ordinance.** This Agreement shall be approved by ordinance. The  
34 Project is to be developed as a single entity and includes uses and development

standards consistent with the Washoe County Comprehensive Plan and the Southwest Truckee Meadows Area Plan.

**1.5 Benefit To OWNERS.** The OWNERS acknowledge and agree that, prior to entering into this Agreement appropriate legal advice and counsel was sought, that the OWNERS made a voluntary informed business decision to enter into this Agreement in good faith. The OWNERS further acknowledge and agree that substantial benefits will accrue to the OWNERS as a result of the OWNERS and the COUNTY entering into this Agreement, including entitlements to develop the Project in accordance with this Agreement and the Conditions of Approval, an extension or opportunity to seek an extension of the time in which to file a final subdivision map under this Agreement, certainty in the particular on-site and offsite improvements and requirements which the OWNERS will be responsible for constructing or completing, and certainty in the imposition of land use fees or obligations which may be imposed by the COUNTY.

**1.6 Benefit to COUNTY.** The COUNTY acknowledges and agrees that substantial benefits will accrue to the COUNTY as a result of OWNERS and the COUNTY entering into this Agreement, including the rational, planned land uses and development of the Real Property.

**2. SELECTED DEFINITIONS.**

**2.1** "Agreement" means this development agreement.

**2.2** "Conditions of Approval" mean all conditions of the Project approvals as set forth in the orders from Washoe County attached to this Agreement

1 as Exhibits B, C, and D, which conditions are incorporated herein as provisions of this  
2 Agreement.

3           **2.3** "COUNTY" means Washoe County, a political subdivision of the  
4 State of Nevada, and its officers, elected officials, agents, employees, divisions,  
5 departments, committees, boards and commissions.

6           **2.4** CC&Rs means the declaration of covenants, conditions and  
7 restrictions which will be drafted by OWNERS, approved by the COUNTY and  
8 recorded against the Real Property, as further provided in the Conditions of Approval.

9           **2.5** "Development Standards Handbook" means the development  
10 standards for the Project as set forth in Exhibit "E".

11           **2.6** "Golf Course Property" includes all real property for the golf and  
12 related recreational facilities component of the Project.

13           **2.7** "OWNERS" mean those property owners identified above and  
14 their successors and assigns.

15           **2.8** "Project" means the Southwest Pointe development as approved  
16 by the COUNTY in Case No. DA9-1-93 and this Agreement.

17           **2.9** "Public Facilities" are facilities that will be dedicated to the  
18 COUNTY. Public Facilities shall include, but are not limited to: on-site or offsite  
19 sewage collection facilities; water rights dedicated for service; water systems facilities;  
20 together with all lines, mains, holding and disposing areas, tanks, public easements  
21 and rights-of-way; and all off-site improvements that include public roadways,  
22 equipment, street lights and traffic signals. Owner constructed Public Facilities for  
23 water will include all non-golf related improvements consisting of the required water  
24  
25  
26  
27  
28

1 storage tanks, well improvements, water mains, water services, water meters, gate  
2 valves, fire hydrants, flush valves, air release valves and related appurtenances. The  
3 Public Facilities for sewer will include sewer manholes, sewer mains, sewer laterals  
4 and collection lines within the Common Area Property as well as off-site effluent  
5 irrigation lines, tanks and pump stations, and the on-site effluent main line and  
6 reservoirs. In addition, Public Facilities also includes improvement of Whites Creek  
7 Lane as specified in the Conditions of Approval.  
8

9           **2.10** "Public Utilities" include, but are not limited to, water, sewer,  
10 natural gas, electricity, telephone, and cable television, together with all equipment  
11 and easements dedicated for these utilities.

12           **2.11** "Real Property" means all the real property described in Exhibit  
13 "A". The real property includes the Golf Course Property, the Subdivision Property,  
14 and any remaining real property within the Project.  
15

16           **2.12** "Site Plan" means the plans in compliance with Code §  
17 110.814.45 and attached hereto as Exhibit "F", and includes the Development  
18 Standards Handbook, Exhibit "E".  
19

20           **2.13** "Subdivision Improvements" are any on-site or off-site  
21 improvements or facilities required of residential subdivisions pursuant to this  
22 Agreement. Subdivision Improvements include, but are not limited to, all drainage  
23 improvements, common area improvements, curbs, streets, gutters, medians,  
24 parkways, pedestrian and bike paths, sidewalks, street lights, any directional traffic  
25 devices, and the Public Facilities required in connection with residential development.

2.14 "Subdivision Property" includes all real property for the residential housing component of the Project.

3. **REQUIRED CONTENTS OF AGREEMENT.** Pursuant to Code § 110.814.75, the following matters are included in this Agreement.

3.1 **Preliminary Agreement.** Reference is made to the preliminary development agreement as approved in Case No. DA9-1-93 and amended or superseded by this Agreement.

3.2 **Legal Agreement.** The substance of covenants, grants or easements, or other restrictions proposed to be imposed upon the use of the land, buildings and structures, including proposed easements or grants for Public Utilities shall be as provided in the CC&Rs and as specified in the Conditions of Approval.

3.3 **Site Plan.** A Site Plan in conformance to Code § 110.814.45 is attached to this Agreement as Exhibit "F"; and includes the Development Standards Handbook, Exhibit "E".

3.4 **Installation and Maintenance.** A program for the installation and maintenance of parking areas, lighting, landscaping, private drainage facilities (including detention ponds, ditches, storm drains and drop inlets), private streets, utilities, recreational facilities and other infrastructure is specified in the Conditions of Approval and will be further provided for, in part, in the CC&Rs.

3.5 **Open Space Resources.** A program for the protection of open space resources, approved by COUNTY, is attached as Exhibit "G". No open space shall be sold to a bona fide third party without prior written consent of County. As

provided in Exhibit "G", after the 10-acre park is constructed, the County shall be responsible for park maintenance and upkeep.

**3.6 Development Schedule And Phasing.** Guidelines for a development schedule and phasing of the Project are more particularly described in the Development Standards Handbook ( See Article I), Exhibit "E".

**3.7 Development Standards Handbook.** A Development Standards Handbook in compliance with Code § 110.814.35(a) is attached hereto as Exhibit "E".

**3.8 Incorporation Of Other Exhibits.** The following exhibits are also attached hereto:

- a) Right-Of-Way Documents for Off-Site Access from Thomas Creek Road, Exhibit "H";
- b) Construction Traffic Haul Route Plan, Exhibit "I";
- c) Concept-Level Storm Drain Plan, Exhibit "J";
- d) Geotechnical Report On Earthquake Faulting, Exhibit "K"; and
- e) Schematic Water System Plan, Exhibit "L".

**4. EFFECT OF AGREEMENT.**

**4.1 Entitlements.** The approval of this Agreement by County constitutes a vested right of OWNERS to develop the Real Property as set forth in this Agreement and pursuant to the land use designations provided herein. Pursuant to Code § 110.814.15(b), this Agreement does not prevent COUNTY in a subsequent action applicable to the Real Property from adopting new ordinances, resolutions or regulations that conflict with those ordinances, resolutions and regulations in effect at the time this Agreement is made, provided any new ordinances, resolutions or

1 regulations do not impose upon OWNERS restrictions, requirements or standards  
2 which are more burdensome, more expensive or more onerous to satisfy than those  
3 in effect at the time this Agreement is made; and provided further that any said new  
4 ordinances, resolutions or regulations do not conflict with provisions of this Agreement  
5 in a manner that adversely affects OWNERS. The parties agree such a conflict or  
6 inconsistency would prevent development of the Project as set forth in this Agreement.  
7 Nothing contained in this subsection 4.1 shall be construed to impair enforcement or  
8 compliance with the provisions of Code § 110.814.15(c) or (d).  
9

10 **4.2 Subsequent Approvals And Conditions.** Tentative maps and  
11 final maps for Subdivision Property, building permits, variances, parcel maps,  
12 boundary line adjustments, special use permits for nonresidential property, and other  
13 approvals by COUNTY within the Project ("Subsequent Approvals") shall be required  
14 pursuant to Code requirements in existence at the time this Agreement is made,  
15 except as stated otherwise herein. All Subsequent Approvals in conformance with  
16 NRS Chapter 278 and the Code (as amended hereby), and in substantial  
17 conformance with the provisions of this Agreement shall be approved by the COUNTY  
18 as a consent item without public hearing. The Conditions of Approval specified in  
19 Exhibit "B", "C", and "D" may not be amended by Subsequent Approvals without the  
20 consent of OWNERS. Any conditions imposed by COUNTY in Subsequent Approvals  
21 which pertain to the same subject matter as any Conditions of Approval may not  
22 impose restrictions, requirements or standards which are more burdensome, more  
23 expensive or more onerous for OWNERS to satisfy than any Conditions of Approval,  
24 without the consent of OWNERS; provided that reasonable conditions imposed by  
25  
26  
27  
28

1 COUNTY in Subsequent Approvals which pertain to matters not addressed by any  
2 Conditions of Approval, or provide more detail and do not conflict with matters  
3 addressed by any Conditions of Approval, shall be allowed.

4 Conditions and provisions hereof regarding construction of off-site or on-site  
5 improvements (e.g. streets and utilities), including development standards and design  
6 guidelines, may be varied upon request of the OWNERS and approval of the County  
7 Engineer.  
8

9 **4.3 Subsequent Fees.** COUNTY currently imposes four (4) fees for  
10 the privilege of developing real property: a water connection fee; a sewer connection  
11 fee; a park residential construction tax; and the Regional Road Impact Fee ("RRIF")  
12 ("collectively County Fees"). The County Fees shall be imposed on applicable  
13 development within the Project in the same manner said fees are imposed for other  
14 similarly situated development in the COUNTY, subject to the following conditions.  
15

16 **4.3.1** Provided OWNERS construct a potable water system as  
17 part of the Public Facilities to serve the potable water demands of the Project as those  
18 demands arise, COUNTY shall charge no water connection fee for development within  
19 the Project.  
20

21 **4.3.2** Provided OWNERS receive a credit for all off-site sewer  
22 facilities infrastructure constructed by OWNERS, OWNERS shall pay the sewer  
23 connection fee at the time and in the amount specified by COUNTY ordinance.

24 **4.3.3** Subject to any credits allowed by a RRIF Capital Front-  
25 Ending Agreement, OWNERS shall pay the RRIF at the time and in the amount  
26 specified by County ordinance.  
27  
28

1                   **4.3.4** Subject to the provisions of an agreement between  
2 COUNTY and OWNERS for the construction of neighborhood park improvements  
3 within the Project, OWNERS shall pay the park residential construction tax at the time  
4 and in the amount specified under NRS 278.497 to NRS 278.4987.

5                   **4.4** **No New COUNTY Fees.** Except for the County Fees or as  
6 specified in subsections 4.5 and 4.6 below, no new fees or taxes enacted or approved  
7 by COUNTY after the date this Agreement is made for construction or development  
8 within the Project or for capital improvements for Public Facilities shall apply to the  
9 Project, provided that the provisions of this subsection are not intended to prohibit the  
10 imposition and collection of County fees and charges imposed at the time of execution  
11 hereof (e.g., for permits or inspections).

12                   **4.5** **Special Assessment Districts.** The parties agree that certain  
13 Public Facilities may be financed, constructed and paid for, in whole or in part, by one  
14 or more developer special assessment districts. For the purposes of the County's  
15 Special Assessment Guidelines dated February, 1992 ("Guidelines"), the parties agree  
16 that the following improvements generally provide a public benefit, satisfy Section A  
17 of the Guidelines and may be included at the discretion of the parties in a special  
18 assessment district:  
19  
20

- 21
- 22                   (a) the construction and land costs of Whites Creek Lane;
  - 23                   (b) the County-owned nonpotable water system for golf  
24                   course and landscape irrigation;
  - 25                   (c) the purchase price of creek water rights (with  
26                   supplemental groundwater rights) for the County-owned  
27                   nonpotable water system;
- 28

26  
27  
28

- (d) the County-owned potable water system; and
- (e) County-owned landscaping improvements and trails/paths along public streets.

**4.6 Nonpotable Water Agreement.** Any fees, costs and expenses of OWNERS pursuant to an agreement between the parties for the provision of nonpotable water for golf course and common area landscape irrigation shall not be construed as a new fee under subsection 4.4. above.

**4.7 Credits Or Reimbursements Of County Fees.** No successor or assign of OWNERS shall be entitled to a credit or reimbursement of a County Fee or fee imposed pursuant to subsection 4.6 above, unless that successor OWNER obtains an express assignment of the right to the credit or reimbursement from the OWNER who paid for or earned the credit or reimbursement of a County Fee.

**4.8 Parcel Maps.** OWNERS shall be entitled to submit or obtain approval of parcel maps within Project in order to facilitate development, even if said parcel maps create legal parcels within an area of the Project subject to a tentative map, provided that such parcel maps are not used as a subterfuge to create residential lots subject to an approved tentative map. OWNERS shall not be required to dedicate water rights for new parcels created by parcel maps within the Project, if such new parcels are not intended to require potable water service by COUNTY under the provisions of this Agreement.

**4.9 Fire Protection.** Owners agree to transfer and dedicate free of charge to County (or to another government entity of County's choice) prior to the recordation of the first final map a one-acre fire station site located on Whites Creek Lane east of the proposed elementary school and east of the Project entrance. The

1 exact location and parcel configuration shall be mutually agreed by the parties. The  
2 deed for the fire station site shall restrict use to a fire station and ancillary purposes.  
3 Owners and representatives of the Nevada Division of Forestry have entered into  
4 discussions regarding the free dedication of the fire station site and other possible  
5 needs for fire protection, and no other commitments were made except Owner's  
6 agreement herein to dedicate the fire station site.  
7

8 **5. TERM OF AGREEMENT AND AMENDMENTS.**

9 **5.1 Term.** The term of this Agreement shall be fifteen (15) years from  
10 the date hereof; provided that all applicable terms of this Agreement shall remain  
11 binding and enforceable regarding permits, construction or development on any  
12 portion of the Real Property subject to a tentative map, a recorded final map or a  
13 special use permit in existence at the time of expiration of this Agreement.  
14

15 **5.2 Amendments.** Amendments to this Agreement shall be defined  
16 as changes which are not in substantial compliance with the overall Project character  
17 and design. Amendments, if any, shall be approved as provided in NRS 278.0205.  
18 Changes hereto which are in substantial compliance with the overall Project character  
19 and design may be requested by Owners and approved or denied by the Director of  
20 Development Review. The Director of Development Review shall also decide whether  
21 or not a proposed change is in substantial compliance with the overall Project  
22 character or design. The Owners may appeal an adverse decision by the Director of  
23 Development Review under this Subsection 5.2 to the Board Of County  
24 Commissioners by written notice filed with the Director of Development Review, if filed  
25 within twenty (20) days of receipt of the notice of the adverse decision.

6. **OBLIGATIONS OF OWNERS/ASSIGNMENT.**

The parties acknowledge that OWNERS will sell or otherwise convey title to portions of the Real Property as development occurs. Successors to OWNERS shall acquire rights and assume obligations only to the extent required under this Agreement to develop or use the portion of the Real Property so acquired. Upon conveyance of each portion of Real Property, OWNERS' liability for obligations under this Agreement shall terminate, provided the successor OWNERS assumes said obligations. The provisions of this Agreement constitute covenants running with the Real Property. Notwithstanding the provisions of this Section 6, a successor OWNER of a single lot created by final map within the Project shall not have any obligation under this Agreement other than for development and use of the lot so owned consistent with this Agreement.

7. **MISCELLANEOUS.**

7.1 **Governing Law; Venue.** This Agreement is being executed and delivered in Washoe County, Nevada, and is intended to be performed in the State of Nevada, and the laws of Nevada shall govern the validity, construction, enforcement and interpretation of this Agreement. Venue for any legal action arising out of this Agreement shall be in Washoe County, Nevada.

7.2 **Entirety and Amendments.** This Agreement embodies the entire Agreement between the parties and supersedes all prior agreements and understandings, if any, relating to the Project, and may be amended or supplemented only by an instrument in writing executed by the party against whom enforcement is sought, and as provided in Code § 110814.95(b). No oral statements or representations made before or after the execution of this Agreement regarding the subject matter of this Agreement are binding on a party, nor may any such oral statements or representations be relied on by a party.

**7.3 Invalid Provisions.** If any provision of this Agreement is held to be illegal, invalid or unenforceable under present or future laws, such provision shall be fully severable. The Agreement shall be construed and enforced as if such illegal, invalid or unenforceable provision had never comprised a part of the Agreement. The remaining provisions of the Agreement shall remain in full force and effect and shall not be affected by the illegal, invalid or unenforceable provision or by its severance from this Agreement.

**7.4 Parties Bound and Assignment.** Subject to the provisions of Section 6, this Agreement shall be binding upon and inure to the benefit of the parties, and their respective heirs, personal representatives, successors and assigns. In the event COUNTY, for any reason, ceases to have jurisdiction as the applicable local governmental entity regarding the subject matter of all or any part of the Agreement, COUNTY shall require the new entity to assume the applicable obligations hereof.

**7.5 Further Acts.** In addition to the acts recited in this Agreement to be performed, the parties agree to perform, or cause to be performed, any and all further acts as may be reasonably necessary to consummate the obligations contemplated hereby.

**7.6 Headings.** Headings used in this Agreement are used for reference purposes only and do not constitute substantive matter to be considered in construing the terms of this Agreement.

**7.7 Attorneys' Fees.** In the event that any action is necessary to enforce the rights of any party hereto, the prevailing party in any such action shall be entitled to reasonable costs and attorneys' fees.

**7.8 Notice.** All notices given pursuant to this Agreement shall be in writing and shall be given by personal delivery, by facsimile transmission, by United States mail or by United States express mail or other established express delivery service (such as Federal Express), postage or delivery charge prepaid, addressed to the appropriate party at the address set forth below:

**7.10 Indemnity.** Developer shall indemnify and hold harmless COUNTY and its officers, employees, and agents, from any claims, demands, losses, defense costs, or liability of any kind or nature, which COUNTY may sustain or incur or which may be imposed upon them out of actions by, or the negligence of, Developer, its officers, agents or employees, arising out of Developer's obligations specified in Section 2 hereof, accepting only liability arising out of gross negligence or intentional wrong doing by County, its officers, agents, or employees.

**7.11 Arbitration.** Any dispute arising from rights or obligations of this Agreement shall be submitted to arbitration pursuant to the Commercial Rules of the American Arbitration Association, including any disputes regarding consents or approvals to be given by a party. The decision of the arbitrator shall be final and binding on both parties.

**7.12 Recordation.** This Agreement shall not be recorded, but in order to comply with Code § 110.814.95(c) the Memorandum Of Agreement attached hereto as Exhibit "M" shall be recorded upon execution hereof in the office of the Recorder of Washoe County, Nevada.

**7.13 Exhibits.** All exhibits to this Agreement are incorporated herein as if fully set forth.

1 **FINAL DEVELOPMENT AGREEMENT**

2  
3 This Agreement is entered into this \_\_\_ day of \_\_\_\_\_, 1996 by and  
4 between the **COUNTY OF WASHOE**, a political subdivision of the State of Nevada  
5 ("**COUNTY**"); and **BETTY ALYCE JONES, HELEN JEANE JONES, IRIS G.**  
6 **BREWERTON, KENNETH G. WALKER, AND GERALD C. SMITH**, Trustees of The  
7 Nell J. Redfield Trust and **SOUTHWEST POINTE PARTNERS**, a Nevada general  
8 partnership, (collectively referred to as "**OWNERS**"). For valuable consideration,  
9 receipt of which is hereby acknowledged, the parties agree as follows:  
10

11 1. **GENERAL.**

12 1.1 **Legal Authority.** Nevada Revised Statute ("**NRS**") 278.0201 to  
13 278.0207 and Washoe County Development Code (the "**Code**") §§ 110.814.00 to  
14 110.814.95 authorize the **COUNTY** and the **OWNERS** to enter into agreements for the  
15 development of real property. This Agreement is a final development agreement, as  
16 defined in Code § 110.814.75, and as provided in **NRS Chapter 278.**  
17

18 1.2 **The Project.** The **OWNERS** hold a legal or equitable interest in  
19 certain real property located in **COUNTY**, a legal description of which is attached as  
20 Exhibit "**A**". Development of the real property, subject to the terms of this Agreement,  
21 has been authorized by **COUNTY** under Case No. DA9-1-93 and ancillary cases, and  
22 is described as a residential community which includes 1,090 residential lots with  
23 common open space, a water delivery system (potable and nonpotable), sewer  
24 system, two golf courses with related recreational facilities, and a commercial village  
25 center, the total acreage being  $\pm 3,171.6$  acres, designated under **COUNTY** land use  
26  
27  
28

1 designations as Low Density Suburban, Low Density Rural, Medium Density Rural,  
2 High Density Rural, and General Rural (the "Project").

3 **1.3 Past Approvals.** The OWNERS have obtained the following  
4 approvals from the COUNTY pertaining to the Project:  
5

- 6 a) On June 11, 1996 OWNERS obtained approval from the  
7 Board of County Commissioners for conditions to DA9-1-  
8 93. Said conditions and amendments are attached hereto  
9 as Exhibit "B".
- 10 b) On September 5, 1995 OWNERS obtained approval from  
11 the Planning Commission for a Special Use Permit (Case  
12 No. SPW9-10-93) to develop a water system having  
13 storage of 1.4 million gallons and necessary delivery  
14 system. The order issuing such approval is attached as  
15 Exhibit "C"
- 16 c) On May 2, 1995 OWNERS obtained approval from the  
17 Planning Commission for a Special Use Permit (Case No.  
18 SPW9-13-93) to grade the first golf course and improve  
19 the construction access. The order issuing such approval  
20 is attached as Exhibit "D".
- 21 d) On November 8, 1994 OWNERS obtained approval from  
22 the Board of County Commissioners to amend the  
23 preliminary development agreement.
- 24 e) On September 27, 1994 OWNERS obtained approval from  
25 the Board of County Commissioners for an 18-month  
26 extension to submit a draft final agreement, which  
27 OWNERS have submitted in compliance with said  
28 extension.
- f) On February 8, 1994 OWNERS obtained approval from  
the Board of County Commissioners pursuant to Code §  
110.814.70 of a preliminary development agreement (Case  
No. DA9-1-93).

25 **1.4 Ordinance.** This Agreement shall be approved by ordinance. The  
26 Project is to be developed as a single entity and includes uses and development  
27  
28

1 standards consistent with the Washoe County Comprehensive Plan and the Southwest  
2 Truckee Meadows Area Plan.

3           **1.5 Benefit To OWNERS.** The OWNERS acknowledge and agree  
4 that, prior to entering into this Agreement appropriate legal advice and counsel was  
5 sought, that the OWNERS made a voluntary informed business decision to enter into  
6 this Agreement in good faith. The OWNERS further acknowledge and agree that  
7 substantial benefits will accrue to the OWNERS as a result of the OWNERS and the  
8 COUNTY entering into this Agreement, including entitlements to develop the Project  
9 in accordance with this Agreement and the Conditions of Approval, an extension or  
10 opportunity to seek an extension of the time in which to file a final subdivision map  
11 under this Agreement, certainty in the particular on-site and offsite improvements and  
12 requirements which the OWNERS will be responsible for constructing or completing,  
13 and certainty in the imposition of land use fees or obligations which may be imposed  
14 by the COUNTY.  
15

16           **1.6 Benefit to COUNTY.** The COUNTY acknowledges and agrees  
17 that substantial benefits will accrue to the COUNTY as a result of OWNERS and the  
18 COUNTY entering into this Agreement, including the rational, planned land uses and  
19 development of the Real Property.  
20

21           **2. SELECTED DEFINITIONS.**

22           2.1 "Agreement" means this development agreement.

23           2.2 "Conditions of Approval" mean all conditions of the Project  
24 approvals as set forth in the orders from Washoe County attached to this Agreement  
25  
26  
27  
28

1 as Exhibits B, C, and D, which conditions are incorporated herein as provisions of this  
2 Agreement.

3 2.3 "COUNTY" means Washoe County, a political subdivision of the  
4 State of Nevada, and its officers, elected officials, agents, employees, divisions,  
5 departments, committees, boards and commissions.  
6

7 2.4 CC&Rs means the declaration of covenants, conditions and  
8 restrictions which will be drafted by OWNERS, approved by the COUNTY and  
9 recorded against the Real Property, as further provided in the Conditions of Approval.

10 2.5 "Development Standards Handbook" means the development  
11 standards for the Project as set forth in Exhibit "E".  
12

13 2.6 "Golf Course Property" includes all real property for the golf and  
14 related recreational facilities component of the Project.

15 2.7 "OWNERS" mean those property owners identified above and  
16 their successors and assigns.

17 2.8 "Project" means the Southwest Pointe development as approved  
18 by the COUNTY in Case No. DA9-1-93 and this Agreement.

19 2.9 "Public Facilities" are facilities that will be dedicated to the  
20 COUNTY. Public Facilities shall include, but are not limited to: on-site or offsite  
21 sewage collection facilities; water rights dedicated for service; water systems facilities;  
22 together with all lines, mains, holding and disposing areas, tanks, public easements  
23 and rights-of-way; and all off-site improvements that include public roadways,  
24 equipment, street lights and traffic signals. Owner constructed Public Facilities for  
25 water will include all non-golf related improvements consisting of the required water  
26  
27  
28

1 storage tanks, well improvements, water mains, water services, water meters, gate  
2 valves, fire hydrants, flush valves, air release valves and related appurtenances. The  
3 Public Facilities for sewer will include sewer manholes, sewer mains, sewer laterals  
4 and collection lines within the Common Area Property as well as off-site effluent  
5 irrigation lines, tanks and pump stations, and the on-site effluent main line and  
6 reservoirs. In addition, Public Facilities also includes improvement of Whites Creek  
7 Lane as specified in the Conditions of Approval.  
8

9 2.10 "Public Utilities" include, but are not limited to, water, sewer,  
10 natural gas, electricity, telephone, and cable television, together with all equipment  
11 and easements dedicated for these utilities.  
12

13 2.11 "Real Property" means all the real property described in Exhibit  
14 "A". The real property includes the Golf Course Property, the Subdivision Property,  
15 and any remaining real property within the Project.  
16

17 2.12 "Site Plan" means the plans in compliance with Code §  
18 110.814.45 and attached hereto as Exhibit "F", and includes the Development  
19 Standards Handbook, Exhibit "E".  
20

21 2.13 "Subdivision Improvements" are any on-site or off-site  
22 improvements or facilities required of residential subdivisions pursuant to this  
23 Agreement. Subdivision Improvements include, but are not limited to, all drainage  
24 improvements, common area improvements, curbs, streets, gutters, medians,  
25 parkways, pedestrian and bike paths, sidewalks, street lights, any directional traffic  
26 devices, and the Public Facilities required in connection with residential development.  
27  
28

1                   2.14 "Subdivision Property" includes all real property for the residential  
2 housing component of the Project.

3                   **3.    REQUIRED CONTENTS OF AGREEMENT.** Pursuant to Code §  
4 110.814.75, the following matters are included in this Agreement.

5                   **3.1   Preliminary Agreement.** Reference is made to the preliminary  
6 development agreement as approved in Case No. DA9-1-93 and amended or  
7 superseded by this Agreement.

8                   **3.2   Legal Agreement.** The substance of covenants, grants or  
9 easements, or other restrictions proposed to be imposed upon the use of the land,  
10 buildings and structures, including proposed easements or grants for Public Utilities  
11 shall be as provided in the CC&Rs and as specified in the Conditions of Approval.

12                   **3.3   Site Plan.** A Site Plan in conformance to Code § 110.814.45 is  
13 attached to this Agreement as Exhibit "F"; and includes the Development Standards  
14 Handbook, Exhibit "E".

15                   **3.4   Installation and Maintenance.** A program for the installation and  
16 maintenance of parking areas, lighting, landscaping, private drainage facilities  
17 (including detention ponds, ditches, storm drains and drop inlets), private streets,  
18 utilities, recreational facilities and other infrastructure is specified in the Conditions of  
19 Approval and will be further provided for, in part, in the CC&Rs.

20                   **3.5   Open Space Resources.** A program for the protection of open  
21 space resources, approved by COUNTY, is attached as Exhibit "G". No open space  
22 shall be sold to a bona fide third party without prior written consent of County. As  
23

1 provided in Exhibit "G", after the 10-acre park is constructed, the County shall be  
2 responsible for park maintenance and upkeep.

3 **3.6 Development Schedule And Phasing.** Guidelines for a  
4 development schedule and phasing of the Project are more particularly described in  
5 the Development Standards Handbook ( See Article I), Exhibit "E".  
6

7 **3.7 Development Standards Handbook.** A Development Standards  
8 Handbook in compliance with Code § 110.814.35(a) is attached hereto as Exhibit "E".

9 **3.8 Incorporation Of Other Exhibits.** The following exhibits are also  
10 attached hereto:

- 11 a) Right-Of-Way Documents for Off-Site Access from  
12 Thomas Creek Road, Exhibit "H";
- 13 b) Construction Traffic Haul Route Plan, Exhibit "I";
- 14 c) Concept-Level Storm Drain Plan, Exhibit "J";
- 15 d) Geotechnical Report On Earthquake Faulting, Exhibit "K";  
16 and
- 17 e) Schematic Water System Plan, Exhibit "L".

18 **4. EFFECT OF AGREEMENT.**

19 **4.1 Entitlements.** The approval of this Agreement by County  
20 constitutes a vested right of OWNERS to develop the Real Property as set forth in this  
21 Agreement and pursuant to the land use designations provided herein. Pursuant to  
22 Code § 110.814.15(b), this Agreement does not prevent COUNTY in a subsequent  
23 action applicable to the Real Property from adopting new ordinances, resolutions or  
24 regulations that conflict with those ordinances, resolutions and regulations in effect at  
25 the time this Agreement is made, provided any new ordinances, resolutions or  
26  
27  
28

1 regulations do not impose upon OWNERS restrictions, requirements or standards  
2 which are more burdensome, more expensive or more onerous to satisfy than those  
3 in effect at the time this Agreement is made; and provided further that any said new  
4 ordinances, resolutions or regulations do not conflict with provisions of this Agreement  
5 in a manner that adversely affects OWNERS. The parties agree such a conflict or  
6 inconsistency would prevent development of the Project as set forth in this Agreement.  
7 Nothing contained in this subsection 4.1 shall be construed to impair enforcement or  
8 compliance with the provisions of Code § 110.814.15(c) or (d).  
9

10 **4.2 Subsequent Approvals And Conditions.** Tentative maps and  
11 final maps for Subdivision Property, building permits, variances, parcel maps,  
12 boundary line adjustments, special use permits for nonresidential property, and other  
13 approvals by COUNTY within the Project ("Subsequent Approvals") shall be required  
14 pursuant to Code requirements in existence at the time this Agreement is made,  
15 except as stated otherwise herein. All Subsequent Approvals in conformance with  
16 NRS Chapter 278 and the Code (as amended hereby), and in substantial  
17 conformance with the provisions of this Agreement shall be approved by the COUNTY  
18 as a consent item without public hearing. The Conditions of Approval specified in  
19 Exhibit "B", "C", and "D" may not be amended by Subsequent Approvals without the  
20 consent of OWNERS. Any conditions imposed by COUNTY in Subsequent Approvals  
21 which pertain to the same subject matter as any Conditions of Approval may not  
22 impose restrictions, requirements or standards which are more burdensome, more  
23 expensive or more onerous for OWNERS to satisfy than any Conditions of Approval,  
24 without the consent of OWNERS; provided that reasonable conditions imposed by  
25  
26  
27  
28

1 COUNTY in Subsequent Approvals which pertain to matters not addressed by any  
2 Conditions of Approval, or provide more detail and do not conflict with matters  
3 addressed by any Conditions of Approval, shall be allowed.

4 Conditions and provisions hereof regarding construction of off-site or on-site  
5 improvements (e.g. streets and utilities), including development standards and design  
6 guidelines, may be varied upon request of the OWNERS and approval of the County  
7 Engineer.

8  
9 **4.3 Subsequent Fees.** COUNTY currently imposes four (4) fees for  
10 the privilege of developing real property: a water connection fee; a sewer connection  
11 fee; a park residential construction tax; and the Regional Road Impact Fee ("RRIF")  
12 ("collectively County Fees"). The County Fees shall be imposed on applicable  
13 development within the Project in the same manner said fees are imposed for other  
14 similarly situated development in the COUNTY, subject to the following conditions.

15  
16 4.3.1 Provided OWNERS construct a potable water system as  
17 part of the Public Facilities to serve the potable water demands of the Project as those  
18 demands arise, COUNTY shall charge no water connection fee for development within  
19 the Project.

20  
21 4.3.2 Provided OWNERS receive a credit for all off-site sewer  
22 facilities infrastructure constructed by OWNERS, OWNERS shall pay the sewer  
23 connection fee at the time and in the amount specified by COUNTY ordinance.

24 4.3.3 Subject to any credits allowed by a RRIF Capital Front-  
25 Ending Agreement, OWNERS shall pay the RRIF at the time and in the amount  
26 specified by County ordinance.

1                   4.3.4 Subject to the provisions of an agreement between  
2 COUNTY and OWNERS for the construction of neighborhood park improvements  
3 within the Project, OWNERS shall pay the park residential construction tax at the time  
4 and in the amount specified under NRS 278.497 to NRS 278.4987.

5  
6                   **4.4 No New COUNTY Fees.** Except for the County Fees or as  
7 specified in subsections 4.5 and 4.6 below, no new fees or taxes enacted or approved  
8 by COUNTY after the date this Agreement is made for construction or development  
9 within the Project or for capital improvements for Public Facilities shall apply to the  
10 Project, provided that the provisions of this subsection are not intended to prohibit the  
11 imposition and collection of County fees and charges imposed at the time of execution  
12 hereof (e.g., for permits or inspections).

13  
14                   **4.5 Special Assessment Districts.** The parties agree that certain  
15 Public Facilities may be financed, constructed and paid for, in whole or in part, by one  
16 or more developer special assessment districts. For the purposes of the County's  
17 Special Assessment Guidelines dated February, 1992 ("Guidelines"), the parties agree  
18 that the following improvements generally provide a public benefit, satisfy Section A  
19 of the Guidelines and may be included at the discretion of the parties in a special  
20 assessment district:

- 21
- 22                   (a) the construction and land costs of Whites Creek Lane;
  - 23                   (b) the County-owned nonpotable water system for golf  
24                   course and landscape irrigation;
  - 25                   (c) the purchase price of creek water rights (with  
26                   supplemental groundwater rights) for the County-owned  
27                   nonpotable water system;
- 28

- 1 (d) the County-owned potable water system; and  
2  
3 (e) County-owned landscaping improvements and trails/paths  
4 along public streets.

5 **4.6 Nonpotable Water Agreement.** Any fees, costs and expenses  
6 of OWNERS pursuant to an agreement between the parties for the provision of  
7 nonpotable water for golf course and common area landscape irrigation shall not be  
8 construed as a new fee under subsection 4.4. above.

9 **4.7 Credits Or Reimbursements Of County Fees.** No successor or  
10 assign of OWNERS shall be entitled to a credit or reimbursement of a County Fee or  
11 fee imposed pursuant to subsection 4.6 above, unless that successor OWNER obtains  
12 an express assignment of the right to the credit or reimbursement from the OWNER  
13 who paid for or earned the credit or reimbursement of a County Fee.

14 **4.8 Parcel Maps.** OWNERS shall be entitled to submit or obtain  
15 approval of parcel maps within Project in order to facilitate development, even if said  
16 parcel maps create legal parcels within an area of the Project subject to a tentative  
17 map, provided that such parcel maps are not used as a subterfuge to create  
18 residential lots subject to an approved tentative map. OWNERS shall not be required  
19 to dedicate water rights for new parcels created by parcel maps within the Project, if  
20 such new parcels are not intended to require potable water service by COUNTY under  
21 the provisions of this Agreement.

22  
23 **4.9 Fire Protection.** Owners agree to transfer and dedicate free of  
24 charge to County (or to another government entity of County's choice) prior to the  
25 recordation of the first final map a one-acre fire station site located on Whites Creek  
26 Lane east of the proposed elementary school and east of the Project entrance. The  
27  
28

1 exact location and parcel configuration shall be mutually agreed by the parties. The  
2 deed for the fire station site shall restrict use to a fire station and ancillary purposes.  
3 Owners and representatives of the Nevada Division of Forestry have entered into  
4 discussions regarding the free dedication of the fire station site and other possible  
5 needs for fire protection, and no other commitments were made except Owner's  
6 agreement herein to dedicate the fire station site.  
7

8 **5. TERM OF AGREEMENT.**

9 The term of this Agreement shall be fifteen (15) years from the date  
10 hereof; provided that all applicable terms of this Agreement shall remain binding and  
11 enforceable regarding permits, construction or development on any portion of the Real  
12 Property subject to a tentative map, a recorded final map or a special use permit in  
13 existence at the time of expiration of this Agreement.  
14

15 **6. OBLIGATIONS OF OWNERS/ASSIGNMENT.**

16 The parties acknowledge that OWNERS will sell or otherwise convey title  
17 to portions of the Real Property as development occurs. Successors to OWNERS  
18 shall acquire rights and assume obligations only to the extent required under this  
19 Agreement to develop or use the portion of the Real Property so acquired. Upon  
20 conveyance of each portion of Real Property, OWNERS' liability for obligations under  
21 this Agreement shall terminate, provided the successor OWNERS assumes said  
22 obligations. The provisions of this Agreement constitute covenants running with the  
23 Real Property. Notwithstanding the provisions of this Section 6, a successor OWNER  
24 of a single lot created by final map within the Project shall not have any obligation  
25  
26  
27  
28

1 under this Agreement other than for development and use of the lot so owned  
2 consistent with this Agreement.

3 **7. MISCELLANEOUS.**

4  
5 **7.1 Governing Law; Venue.** This Agreement is being executed and  
6 delivered in Washoe County, Nevada, and is intended to be  
7 performed in the State of Nevada, and the laws of Nevada shall  
8 govern the validity, construction, enforcement and interpretation  
9 of this Agreement. Venue for any legal action arising out of this  
10 Agreement shall be in Washoe County, Nevada.

11  
12 **7.2 Entirety and Amendments.** This Agreement embodies the entire  
13 Agreement between the parties and supersedes all prior  
14 agreements and understandings, if any, relating to the Project,  
15 and may be amended or supplemented only by an instrument in  
16 writing executed by the party against whom enforcement is  
17 sought, and as provided in Code § 110814.95(b). No oral  
18 statements or representations made before or after the execution  
19 of this Agreement regarding the subject matter of this Agreement  
20 are binding on a party, nor may any such oral statements or  
21 representations be relied on by a party.

22  
23 **7.3 Invalid Provisions.** If any provision of this Agreement is held to  
24 be illegal, invalid or unenforceable under present or future laws,  
25 such provision shall be fully severable. The Agreement shall be  
26 construed and enforced as if such illegal, invalid or unenforceable  
27 provision had never comprised a part of the Agreement. The  
28 remaining provisions of the Agreement shall remain in full force  
and effect and shall not be affected by the illegal, invalid or  
unenforceable provision or by its severance from this Agreement.

**7.4 Parties Bound and Assignment.** Subject to the provisions of  
Section 6, this Agreement shall be binding upon and inure to the  
benefit of the parties, and their respective heirs, personal  
representatives, successors and assigns. In the event COUNTY,  
for any reason, ceases to have jurisdiction as the applicable local  
governmental entity regarding the subject matter of all or any part  
of the Agreement, COUNTY shall require the new entity to  
assume the applicable obligations hereof.

**7.5 Further Acts.** In addition to the acts recited in this Agreement to  
be performed, the parties agree to perform, or cause to be  
performed, any and all further acts as may be reasonably  
necessary to consummate the obligations contemplated hereby.

The persons and addresses to which notices are to be given may be changed at any time by any party upon written notice to the other party. All notices given pursuant to this Agreement shall be deemed given upon delivery.

**7.9 Receipt Defined.** For the purpose of this Agreement, the term "delivery" shall mean any of the following: (a) the date of delivery of the notice or other document as shown on the return receipt; (b) the date of actual receipt of the notice or other document; or (c) in the case of refusal to accept delivery or inability to deliver the notice or other document, the earlier of: (i) the date of the attempted delivery or refusal to accept delivery; (ii) the date of the postmark on the return receipt; or (iii) the date of receipt of notice of refusal or notice of nondelivery by the sending party.

**7.10 Indemnity.** Developer shall indemnify and hold harmless COUNTY and its officers, employees, and agents, from any claims, demands, losses, defense costs, or liability of any kind or nature, which COUNTY may sustain or incur or which may be imposed upon them out of actions by, or the negligence of, Developer, its officers, agents or employees, arising out of Developer's obligations specified in Section 2 hereof, accepting only liability arising out of gross negligence or intentional wrong doing by County, its officers, agents, or employees.

**7.11 Arbitration.** Any dispute arising from rights or obligations of this Agreement shall be submitted to arbitration pursuant to the Commercial Rules of the American Arbitration Association, including any disputes regarding consents or approvals to be given by a party. The decision of the arbitrator shall be final and binding on both parties.

**7.12 Recordation.** This Agreement shall not be recorded, but in order to comply with Code § 110.814.95(c) the Memorandum Of Agreement attached hereto as Exhibit "M" shall be recorded upon execution hereof in the office of the Recorder of Washoe County, Nevada.

**FINAL DEVELOPMENT AGREEMENT**

This Agreement is entered into this \_\_\_ day of \_\_\_\_\_, 1996 by and between the **COUNTY OF WASHOE**, a political subdivision of the State of Nevada ("COUNTY"); and **BETTY ALYCE JONES, HELEN JEANE JONES, IRIS G. BREWERTON, KENNETH G. WALKER, AND GERALD C. SMITH**, Trustees of The Nell J. Redfield Trust and **SOUTHWEST POINTE PARTNERS**, a Nevada general partnership, (collectively referred to as "OWNERS"). For valuable consideration, receipt of which is hereby acknowledged, the parties agree as follows:

1. **GENERAL.**

1.1 **Legal Authority.** Nevada Revised Statute ("NRS") 278.0201 to 278.0207 and Washoe County Development Code (the "Code") §§ 110.814.00 to 110.814.95 authorize the COUNTY and the OWNERS to enter into agreements for the development of real property. This Agreement is a final development agreement, as defined in Code § 110.814.75, and as provided in NRS Chapter 278.

1.2 **The Project.** The OWNERS hold a legal or equitable interest in certain real property located in COUNTY, a legal description of which is attached as Exhibit "A". Development of the real property, subject to the terms of this Agreement, has been authorized by COUNTY under Case No. DA9-1-93 and ancillary cases, and is described as a residential community which includes 1,090 residential lots with common open space, a water delivery system (potable and nonpotable), sewer system, two golf courses with related recreational facilities, and a commercial village center, the total acreage being ±3,171.6 acres, designated under COUNTY land use

1 designations as Low Density Suburban, Low Density Rural, Medium Density Rural,  
2 High Density Rural, and General Rural (the "Project").

3 **1.3 Past Approvals.** The OWNERS have obtained the following  
4 approvals from the COUNTY pertaining to the Project:  
5

- 6 a) On June 11, 1996 OWNERS obtained approval from the  
7 Board of County Commissioners for conditions to DA9-1-  
8 93. Said conditions and amendments are attached hereto  
9 as Exhibit "B".
- 10 b) On September 5, 1995 OWNERS obtained approval from  
11 the Planning Commission for a Special Use Permit (Case  
12 No. SPW9-10-93) to develop a water system having  
13 storage of 1.4 million gallons and necessary delivery  
14 system. The order issuing such approval is attached as  
15 Exhibit "C"
- 16 c) On May 2, 1995 OWNERS obtained approval from the  
17 Planning Commission for a Special Use Permit (Case No.  
18 SPW9-13-93) to grade the first golf course and improve  
19 the construction access. The order issuing such approval  
20 is attached as Exhibit "D".
- 21 d) On November 8, 1994 OWNERS obtained approval from  
22 the Board of County Commissioners to amend the  
23 preliminary development agreement.
- 24 e) On September 27, 1994 OWNERS obtained approval from  
25 the Board of County Commissioners for an 18-month  
26 extension to submit a draft final agreement, which  
27 OWNERS have submitted in compliance with said  
28 extension.
- 29 f) On February 8, 1994 OWNERS obtained approval from  
30 the Board of County Commissioners pursuant to Code §  
31 110.814.70 of a preliminary development agreement (Case  
32 No. DA9-1-93).

33 **1.4 Ordinance.** This Agreement shall be approved by ordinance. The  
34 Project is to be developed as a single entity and includes uses and development

1 standards consistent with the Washoe County Comprehensive Plan and the Southwest  
2 Truckee Meadows Area Plan.

3           **1.5 Benefit To OWNERS.** The OWNERS acknowledge and agree  
4 that, prior to entering into this Agreement appropriate legal advice and counsel was  
5 sought, that the OWNERS made a voluntary informed business decision to enter into  
6 this Agreement in good faith. The OWNERS further acknowledge and agree that  
7 substantial benefits will accrue to the OWNERS as a result of the OWNERS and the  
8 COUNTY entering into this Agreement, including entitlements to develop the Project  
9 in accordance with this Agreement and the Conditions of Approval, an extension or  
10 opportunity to seek an extension of the time in which to file a final subdivision map  
11 under this Agreement, certainty in the particular on-site and offsite improvements and  
12 requirements which the OWNERS will be responsible for constructing or completing,  
13 and certainty in the imposition of land use fees or obligations which may be imposed  
14 by the COUNTY.  
15

16           **1.6 Benefit to COUNTY.** The COUNTY acknowledges and agrees  
17 that substantial benefits will accrue to the COUNTY as a result of OWNERS and the  
18 COUNTY entering into this Agreement, including the rational, planned land uses and  
19 development of the Real Property.  
20

21  
22           **2. SELECTED DEFINITIONS.**

23           2.1 "Agreement" means this development agreement.

24           2.2 "Conditions of Approval" mean all conditions of the Project  
25 approvals as set forth in the orders from Washoe County attached to this Agreement.  
26  
27  
28

1 as Exhibits B, C, and D, which conditions are incorporated herein as provisions of this  
2 Agreement.

3 2.3 "COUNTY" means Washoe County, a political subdivision of the  
4 State of Nevada, and its officers, elected officials, agents, employees, divisions,  
5 departments, committees, boards and commissions.  
6

7 2.4 CC&Rs means the declaration of covenants, conditions and  
8 restrictions which will be drafted by OWNERS, approved by the COUNTY and  
9 recorded against the Real Property, as further provided in the Conditions of Approval.

10 2.5 "Development Standards Handbook" means the development  
11 standards for the Project as set forth in Exhibit "E".  
12

13 2.6 "Golf Course Property" includes all real property for the golf and  
14 related recreational facilities component of the Project.

15 2.7 "OWNERS" mean those property owners identified above and  
16 their successors and assigns.

17 2.8 "Project" means the Southwest Pointe development as approved  
18 by the COUNTY in Case No. DA9-1-93 and this Agreement.

19 2.9 "Public Facilities" are facilities that will be dedicated to the  
20 COUNTY. Public Facilities shall include, but are not limited to: on-site or offsite  
21 sewage collection facilities; water rights dedicated for service; water systems facilities;  
22 together with all lines, mains, holding and disposing areas, tanks, public easements  
23 and rights-of-way; and all off-site improvements that include public roadways,  
24 equipment, street lights and traffic signals. Owner constructed Public Facilities for  
25 water will include all non-golf related improvements consisting of the required water  
26  
27  
28

1 storage tanks, well improvements, water mains, water services, water meters, gate  
2 valves, fire hydrants, flush valves, air release valves and related appurtenances. The  
3 Public Facilities for sewer will include sewer manholes, sewer mains, sewer laterals  
4 and collection lines within the Common Area Property as well as off-site effluent  
5 irrigation lines, tanks and pump stations, and the on-site effluent main line and  
6 reservoirs. In addition, Public Facilities also includes improvement of Whites Creek  
7 Lane as specified in the Conditions of Approval.  
8

9 2.10 "Public Utilities" include, but are not limited to, water, sewer,  
10 natural gas, electricity, telephone, and cable television, together with all equipment  
11 and easements dedicated for these utilities.  
12

13 2.11 "Real Property" means all the real property described in Exhibit  
14 "A". The real property includes the Golf Course Property, the Subdivision Property,  
15 and any remaining real property within the Project.  
16

17 2.12 "Site Plan" means the plans in compliance with Code §  
18 110.814.45 and attached hereto as Exhibit "F", and includes the Development  
19 Standards Handbook, Exhibit "E".  
20

21 2.13 "Subdivision Improvements" are any on-site or off-site  
22 improvements or facilities required of residential subdivisions pursuant to this  
23 Agreement. Subdivision Improvements include, but are not limited to, all drainage  
24 improvements, common area improvements, curbs, streets, gutters, medians,  
25 parkways, pedestrian and bike paths, sidewalks, street lights, any directional traffic  
26 devices, and the Public Facilities required in connection with residential development.  
27  
28

1                   2.14 "Subdivision Property" includes all real property for the residential  
2 housing component of the Project.

3                   **3.     REQUIRED CONTENTS OF AGREEMENT.** Pursuant to Code §  
4 110.814.75, the following matters are included in this Agreement.

5  
6                   **3.1     Preliminary Agreement.** Reference is made to the preliminary  
7 development agreement as approved in Case No. DA9-1-93 and amended or  
8 superseded by this Agreement.

9                   **3.2     Legal Agreement.** The substance of covenants, grants or  
10 easements, or other restrictions proposed to be imposed upon the use of the land,  
11 buildings and structures, including proposed easements or grants for Public Utilities  
12 shall be as provided in the CC&Rs and as specified in the Conditions of Approval.

13  
14                   **3.3     Site Plan.** A Site Plan in conformance to Code § 110.814.45 is  
15 attached to this Agreement as Exhibit "F"; and includes the Development Standards  
16 Handbook, Exhibit "E".

17                   **3.4     Installation and Maintenance.** A program for the installation and  
18 maintenance of parking areas, lighting, landscaping, private drainage facilities  
19 (including detention ponds, ditches, storm drains and drop inlets), private streets,  
20 utilities, recreational facilities and other infrastructure is specified in the Conditions of  
21 Approval and will be further provided for, in part, in the CC&Rs.

22                   **3.5     Open Space Resources.** A program for the protection of open  
23 space resources, approved by COUNTY, is attached as Exhibit "G". No open space  
24 shall be sold to a bona fide third party without prior written consent of County. As  
25  
26  
27  
28

1 provided in Exhibit "G", after the 10-acre park is constructed, the County shall be  
2 responsible for park maintenance and upkeep.

3 **3.6 Development Schedule And Phasing.** Guidelines for a  
4 development schedule and phasing of the Project are more particularly described in  
5 the Development Standards Handbook ( See Article I), Exhibit "E".  
6

7 **3.7 Development Standards Handbook.** A Development Standards  
8 Handbook in compliance with Code § 110.814.35(a) is attached hereto as Exhibit "E".

9 **3.8 Incorporation Of Other Exhibits.** The following exhibits are also  
10 attached hereto:

- 11 a) Right-Of-Way Documents for Off-Site Access from
- 12 Thomas Creek Road, Exhibit "H";
- 13 b) Construction Traffic Haul Route Plan, Exhibit "I";
- 14 c) Concept-Level Storm Drain Plan, Exhibit "J";
- 15 d) Geotechnical Report On Earthquake Faulting, Exhibit "K";
- 16 and
- 17 e) Schematic Water System Plan, Exhibit "L".

18 **4. EFFECT OF AGREEMENT.**

19 **4.1 Entitlements.** The approval of this Agreement by County  
20 constitutes a vested right of OWNERS to develop the Real Property as set forth in this  
21 Agreement and pursuant to the land use designations provided herein. Pursuant to  
22 Code § 110.814.15(b), this Agreement does not prevent COUNTY in a subsequent  
23 action applicable to the Real Property from adopting new ordinances, resolutions or  
24 regulations that conflict with those ordinances, resolutions and regulations in effect at  
25 the time this Agreement is made, provided any new ordinances, resolutions or  
26  
27  
28

1 regulations do not impose upon OWNERS restrictions, requirements or standards  
2 which are more burdensome, more expensive or more onerous to satisfy than those  
3 in effect at the time this Agreement is made; and provided further that any said new  
4 ordinances, resolutions or regulations do not conflict with provisions of this Agreement  
5 in a manner that adversely affects OWNERS. The parties agree such a conflict or  
6 inconsistency would prevent development of the Project as set forth in this Agreement.  
7 Nothing contained in this subsection 4.1 shall be construed to impair enforcement or  
8 compliance with the provisions of Code § 110.814.15(c) or (d).  
9

10 **4.2 Subsequent Approvals And Conditions.** Tentative maps and  
11 final maps for Subdivision Property, building permits, variances, parcel maps,  
12 boundary line adjustments, special use permits for nonresidential property, and other  
13 approvals by COUNTY within the Project ("Subsequent Approvals") shall be required  
14 pursuant to Code requirements in existence at the time this Agreement is made,  
15 except as stated otherwise herein. All Subsequent Approvals in conformance with  
16 NRS Chapter 278 and the Code (as amended hereby), and in substantial  
17 conformance with the provisions of this Agreement shall be approved by the COUNTY  
18 as a consent item without public hearing. The Conditions of Approval specified in  
19 Exhibit "B", "C", and "D" may not be amended by Subsequent Approvals without the  
20 consent of OWNERS. Any conditions imposed by COUNTY in Subsequent Approvals  
21 which pertain to the same subject matter as any Conditions of Approval may not  
22 impose restrictions, requirements or standards which are more burdensome, more  
23 expensive or more onerous for OWNERS to satisfy than any Conditions of Approval,  
24 without the consent of OWNERS; provided that reasonable conditions imposed by  
25  
26  
27  
28

1 COUNTY in Subsequent Approvals which pertain to matters not addressed by any  
2 Conditions of Approval, or provide more detail and do not conflict with matters  
3 addressed by any Conditions of Approval, shall be allowed.

4  
5 Conditions and provisions hereof regarding construction of off-site or on-site  
6 improvements (e.g. streets and utilities), including development standards and design  
7 guidelines, may be varied upon request of the OWNERS and approval of the County  
8 Engineer.

9 **4.3 Subsequent Fees.** COUNTY currently imposes four (4) fees for  
10 the privilege of developing real property: a water connection fee; a sewer connection  
11 fee; a park residential construction tax; and the Regional Road Impact Fee ("RRIF")  
12 ("collectively County Fees"). The County Fees shall be imposed on applicable  
13 development within the Project in the same manner said fees are imposed for other  
14 similarly situated development in the COUNTY, subject to the following conditions.

15  
16 4.3.1 Provided OWNERS construct a potable water system as  
17 part of the Public Facilities to serve the potable water demands of the Project as those  
18 demands arise, COUNTY shall charge no water connection fee for development within  
19 the Project.

20  
21 4.3.2 Provided OWNERS receive a credit for all off-site sewer  
22 facilities infrastructure constructed by OWNERS, OWNERS shall pay the sewer  
23 connection fee at the time and in the amount specified by COUNTY ordinance.

24 4.3.3 Subject to any credits allowed by a RRIF Capital Front-  
25 Ending Agreement, OWNERS shall pay the RRIF at the time and in the amount  
26 specified by County ordinance.

1                   4.3.4 Subject to the provisions of an agreement between  
2 COUNTY and OWNERS for the construction of neighborhood park improvements  
3 within the Project, OWNERS shall pay the park residential construction tax at the time  
4 and in the amount specified under NRS 278.497 to NRS 278.4987.  
5

6                   **4.4 No New COUNTY Fees.** Except for the County Fees or as  
7 specified in subsections 4.5 and 4.6 below, no new fees or taxes enacted or approved  
8 by COUNTY after the date this Agreement is made for construction or development  
9 within the Project or for capital improvements for Public Facilities shall apply to the  
10 Project, provided that the provisions of this subsection are not intended to prohibit the  
11 imposition and collection of County fees and charges imposed at the time of execution  
12 hereof (e.g., for permits or inspections).  
13

14                   **4.5 Special Assessment Districts.** The parties agree that certain  
15 Public Facilities may be financed, constructed and paid for, in whole or in part, by one  
16 or more developer special assessment districts. For the purposes of the County's  
17 Special Assessment Guidelines dated February, 1992 ("Guidelines"), the parties agree  
18 that the following improvements generally provide a public benefit, satisfy Section A  
19 of the Guidelines and may be included at the discretion of the parties in a special  
20 assessment district:  
21

- 22                   (a) the construction and land costs of Whites Creek Lane;  
23                   (b) the County-owned nonpotable water system for golf  
24                   course and landscape irrigation;  
25                   (c) the purchase price of creek water rights (with  
26                   supplemental groundwater rights) for the County-owned  
27                   nonpotable water system;  
28

1  
2  
3

20  
21  
22  
23  
24  
25  
26  
27  
28

- (d) the County-owned potable water system; and
- (e) County-owned landscaping improvements and trails/paths along public streets.

**4.6 Nonpotable Water Agreement.** Any fees, costs and expenses of OWNERS pursuant to an agreement between the parties for the provision of nonpotable water for golf course and common area landscape irrigation shall not be construed as a new fee under subsection 4.4. above.

**4.7 Credits Or Reimbursements Of County Fees.** No successor or assign of OWNERS shall be entitled to a credit or reimbursement of a County Fee or fee imposed pursuant to subsection 4.6 above, unless that successor OWNER obtains an express assignment of the right to the credit or reimbursement from the OWNER who paid for or earned the credit or reimbursement of a County Fee.

**4.8 Parcel Maps.** OWNERS shall be entitled to submit or obtain approval of parcel maps within Project in order to facilitate development, even if said parcel maps create legal parcels within an area of the Project subject to a tentative map, provided that such parcel maps are not used as a subterfuge to create residential lots subject to an approved tentative map. OWNERS shall not be required to dedicate water rights for new parcels created by parcel maps within the Project, if such new parcels are not intended to require potable water service by COUNTY under the provisions of this Agreement.

**4.9 Fire Protection.** Owners agree to transfer and dedicate free of charge to County (or to another government entity of County's choice) prior to the recordation of the first final map a one-acre fire station site located on Whites Creek Lane east of the proposed elementary school and east of the Project entrance. The

1 exact location and parcel configuration shall be mutually agreed by the parties. The  
2 deed for the fire station site shall restrict use to a fire station and ancillary purposes.  
3 Owners and representatives of the Nevada Division of Forestry have entered into  
4 discussions regarding the free dedication of the fire station site and other possible  
5 needs for fire protection, and no other commitments were made except Owner's  
6 agreement herein to dedicate the fire station site.  
7

8 **5. TERM OF AGREEMENT.**

9 The term of this Agreement shall be fifteen (15) years from the date  
10 hereof; provided that all applicable terms of this Agreement shall remain binding and  
11 enforceable regarding permits, construction or development on any portion of the Real  
12 Property subject to a tentative map, a recorded final map or a special use permit in  
13 existence at the time of expiration of this Agreement.  
14

15 **6. OBLIGATIONS OF OWNERS/ASSIGNMENT.**

16 The parties acknowledge that OWNERS will sell or otherwise convey title  
17 to portions of the Real Property as development occurs. Successors to OWNERS  
18 shall acquire rights and assume obligations only to the extent required under this  
19 Agreement to develop or use the portion of the Real Property so acquired. Upon  
20 conveyance of each portion of Real Property, OWNERS' liability for obligations under  
21 this Agreement shall terminate, provided the successor OWNERS assumes said  
22 obligations. The provisions of this Agreement constitute covenants running with the  
23 Real Property. Notwithstanding the provisions of this Section 6, a successor OWNER  
24 of a single lot created by final map within the Project shall not have any obligation  
25  
26  
27  
28

1 under this Agreement other than for development and use of the lot so owned  
2 consistent with this Agreement.

3 **7. MISCELLANEOUS.**

4  
5 **7.1 Governing Law; Venue.** This Agreement is being executed and  
6 delivered in Washoe County, Nevada, and is intended to be  
7 performed in the State of Nevada, and the laws of Nevada shall  
8 govern the validity, construction, enforcement and interpretation  
9 of this Agreement. Venue for any legal action arising out of this  
10 Agreement shall be in Washoe County, Nevada.

11  
12 **7.2 Entirety and Amendments.** This Agreement embodies the entire  
13 Agreement between the parties and supersedes all prior  
14 agreements and understandings, if any, relating to the Project,  
15 and may be amended or supplemented only by an instrument in  
16 writing executed by the party against whom enforcement is  
17 sought, and as provided in Code § 110814.95(b). No oral  
18 statements or representations made before or after the execution  
19 of this Agreement regarding the subject matter of this Agreement  
20 are binding on a party, nor may any such oral statements or  
21 representations be relied on by a party.

22  
23 **7.3 Invalid Provisions.** If any provision of this Agreement is held to  
24 be illegal, invalid or unenforceable under present or future laws,  
25 such provision shall be fully severable. The Agreement shall be  
26 construed and enforced as if such illegal, invalid or unenforceable  
27 provision had never comprised a part of the Agreement. The  
28 remaining provisions of the Agreement shall remain in full force  
and effect and shall not be affected by the illegal, invalid or  
unenforceable provision or by its severance from this Agreement.

**7.4 Parties Bound and Assignment.** Subject to the provisions of  
Section 6, this Agreement shall be binding upon and inure to the  
benefit of the parties, and their respective heirs, personal  
representatives, successors and assigns. In the event COUNTY,  
for any reason, ceases to have jurisdiction as the applicable local  
governmental entity regarding the subject matter of all or any part  
of the Agreement, COUNTY shall require the new entity to  
assume the applicable obligations hereof.

**7.5 Further Acts.** In addition to the acts recited in this Agreement to  
be performed, the parties agree to perform, or cause to be  
performed, any and all further acts as may be reasonably  
necessary to consummate the obligations contemplated hereby.

**7.6** Headings. Headings used in this Agreement are used for reference purposes only and do not constitute substantive matter to be considered in construing the terms of this Agreement.

**7.7** Attorneys' Fees. In the event that any action is necessary to enforce the rights of any party hereto, the prevailing party in any such action shall be entitled to reasonable costs and attorneys' fees.

**7.8** Notice. All notices given pursuant to this Agreement shall be in writing and shall be given by personal delivery, by facsimile transmission, by United States mail or by United States express mail or other established express delivery service (such as Federal Express), postage or delivery charge prepaid, addressed to the appropriate party at the address set forth below:

The persons and addresses to which notices are to be given may be changed at any time by any party upon written notice to the other party. All notices given pursuant to this Agreement shall be deemed given upon delivery.

**7.9 Receipt Defined.** For the purpose of this Agreement, the term "delivery" shall mean any of the following: (a) the date of delivery of the notice or other document as shown on the return receipt; (b) the date of actual receipt of the notice or other document; or (c) in the case of refusal to accept delivery or inability to deliver the notice or other document, the earlier of: (i) the date of the attempted delivery or refusal to accept delivery; (ii) the date of the postmark on the return receipt; or (iii) the date of receipt of notice of refusal or notice of nondelivery by the sending party.

**7.10 Indemnity.** Developer shall indemnify and hold harmless COUNTY and its officers, employees, and agents, from any claims, demands, losses, defense costs, or liability of any kind or nature, which COUNTY may sustain or incur or which may be imposed upon them out of actions by, or the negligence of, Developer, its officers, agents or employees, arising out of Developer's obligations specified in Section 2 hereof, accepting only liability arising out of gross negligence or intentional wrong doing by County, its officers, agents, or employees.

**7.11 Arbitration.** Any dispute arising from rights or obligations of this Agreement shall be submitted to arbitration pursuant to the Commercial Rules of the American Arbitration Association, including any disputes regarding consents or approvals to be given by a party. The decision of the arbitrator shall be final and binding on both parties.

**7.12 Recordation.** This Agreement shall not be recorded, but in order to comply with Code § 110.814.95(c) the Memorandum Of Agreement attached hereto as Exhibit "M" shall be recorded upon execution hereof in the office of the Recorder of Washoe County, Nevada.

LEGAL DESCRIPTION  
SOUTHWEST POINTE

All that certain lot, piece or parcel of land situate in the County of Washoe, State of Nevada, described as follows:

Parcel 1

T. 18 N., R. 19 E., MDB&M

Section 3: The south half

Excepting therefrom that portion thereof conveyed to Caleb Van Husen Whitbeck by Deed recorded in Book 86, Page 247, Deed Records.

Section 10: All

Excepting therefrom that portion thereof conveyed to Caleb Van Husen Whitbeck by Deed recorded in Book 86, Page 247, Deed records.

Further excepting therefrom those portions conveyed to the United States of America by Deed recorded October 23, 1984, in Book 2084, Page 80, as Document No. 957829, Official Records.

Parcel 2

T. 18 N., R. 19 E., MDB&M

Section 14: All

Section 15: The east half

Section 22: The east half

Section 23: All

Section 24: The west half

Section 26: The north half

Excepting therefrom that portion conveyed to the County of Washoe, a political subdivision, by Deed recorded April 29, 1988, in Book 2728, Page 395, as Document No. 1242873, Official Records.

Section 27: The northeast quarter; the west half of the southeast quarter; the southeast quarter of the southeast quarter.

Containing 3,272 acres, more or less.

1 **FINAL DEVELOPMENT AGREEMENT**

2  
3 This Agreement is entered into this \_\_\_ day of \_\_\_\_\_, 1996 by and  
4 between the **COUNTY OF WASHOE**, a political subdivision of the State of Nevada  
5 ("COUNTY"); and **BETTY ALYCE JONES, HELEN JEANE JONES, IRIS G.**  
6 **BREWERTON, KENNETH G. WALKER, AND GERALD C. SMITH**, Trustees of The  
7 Nell J. Redfield Trust and **SOUTHWEST POINTE PARTNERS**, a Nevada general  
8 partnership, (collectively referred to as "OWNERS"). For valuable consideration,  
9 receipt of which is hereby acknowledged, the parties agree as follows:  
10

11 **1. GENERAL.**

12 1.1 **Legal Authority.** Nevada Revised Statute ("NRS") 278.0201 to  
13 278.0207 and Washoe County Development Code (the "Code") §§ 110.814.00 to  
14 110.814.95 authorize the COUNTY and the OWNERS to enter into agreements for the  
15 development of real property. This Agreement is a final development agreement, as  
16 defined in Code § 110.814.75, and as provided in NRS Chapter 278.  
17

18 1.2 **The Project.** The OWNERS hold a legal or equitable interest in  
19 certain real property located in COUNTY, a legal description of which is attached as  
20 Exhibit "A". Development of the real property, subject to the terms of this Agreement,  
21 has been authorized by COUNTY under Case No. DA9-1-93 and ancillary cases, and  
22 is described as a residential community which includes 1,090 residential lots with  
23 common open space, a water delivery system (potable and nonpotable), sewer  
24 system, two golf courses with related recreational facilities, and a commercial village  
25 center, the total acreage being ±3,171.6 acres, designated under COUNTY land use  
26  
27  
28

1 designations as Low Density Suburban, Low Density Rural, Medium Density Rural,  
2 High Density Rural, and General Rural (the "Project").

3 **1.3 Past Approvals.** The OWNERS have obtained the following  
4 approvals from the COUNTY pertaining to the Project:  
5

- 6 a) On June 11, 1996 OWNERS obtained approval from the  
7 Board of County Commissioners for conditions to DA9-1-  
8 93. Said conditions and amendments are attached hereto  
9 as Exhibit "B".
- 10 b) On September 5, 1995 OWNERS obtained approval from  
11 the Planning Commission for a Special Use Permit (Case  
12 No. SPW9-10-93) to develop a water system having  
13 storage of 1.4 million gallons and necessary delivery  
14 system. The order issuing such approval is attached as  
15 Exhibit "C".
- 16 c) On May 2, 1995 OWNERS obtained approval from the  
17 Planning Commission for a Special Use Permit (Case No.  
18 SPW9-13-93) to grade the first golf course and improve  
19 the construction access. The order issuing such approval  
20 is attached as Exhibit "D".
- 21 d) On November 8, 1994 OWNERS obtained approval from  
22 the Board of County Commissioners to amend the  
23 preliminary development agreement.
- 24 e) On September 27, 1994 OWNERS obtained approval from  
25 the Board of County Commissioners for an 18-month  
26 extension to submit a draft final agreement, which  
27 OWNERS have submitted in compliance with said  
28 extension.
- f) On February 8, 1994 OWNERS obtained approval from  
the Board of County Commissioners pursuant to Code §  
110.814.70 of a preliminary development agreement (Case  
No. DA9-1-93).

1.4 **Ordinance.** This Agreement shall be approved by ordinance. The  
Project is to be developed as a single entity and includes uses and development

standards consistent with the Washoe County Comprehensive Plan and the Southwest Truckee Meadows Area Plan.

**1.5 Benefit To OWNERS.** The OWNERS acknowledge and agree that, prior to entering into this Agreement appropriate legal advice and counsel was sought, that the OWNERS made a voluntary informed business decision to enter into this Agreement in good faith. The OWNERS further acknowledge and agree that substantial benefits will accrue to the OWNERS as a result of the OWNERS and the COUNTY entering into this Agreement, including entitlements to develop the Project in accordance with this Agreement and the Conditions of Approval, an extension or opportunity to seek an extension of the time in which to file a final subdivision map under this Agreement, certainty in the particular on-site and offsite improvements and requirements which the OWNERS will be responsible for constructing or completing, and certainty in the imposition of land use fees or obligations which may be imposed by the COUNTY.

**1.6 Benefit to COUNTY.** The COUNTY acknowledges and agrees that substantial benefits will accrue to the COUNTY as a result of OWNERS and the COUNTY entering into this Agreement, including the rational, planned land uses and development of the Real Property.

**2. SELECTED DEFINITIONS.**

2.1 "Agreement" means this development agreement.

2.2 "Conditions of Approval" mean all conditions of the Project approvals as set forth in the orders from Washoe County attached to this Agreement.

as Exhibits B, C, and D, which conditions are incorporated herein as provisions of this Agreement.

2.3 "COUNTY" means Washoe County, a political subdivision of the State of Nevada, and its officers, elected officials, agents, employees, divisions, departments, committees, boards and commissions.

2.4 CC&Rs means the declaration of covenants, conditions and restrictions which will be drafted by OWNERS, approved by the COUNTY and recorded against the Real Property, as further provided in the Conditions of Approval.

2.5 "Development Standards Handbook" means the development standards for the Project as set forth in Exhibit "E".

2.6 "Golf Course Property" includes all real property for the golf and related recreational facilities component of the Project.

2.7 "OWNERS" mean those property owners identified above and their successors and assigns.

2.8 "Project" means the Southwest Pointe development as approved by the COUNTY in Case No. DA9-1-93 and this Agreement.

2.9 "Public Facilities" are facilities that will be dedicated to the COUNTY. Public Facilities shall include, but are not limited to: on-site or offsite sewage collection facilities; water rights dedicated for service; water systems facilities; together with all lines, mains, holding and disposing areas, tanks, public easements and rights-of-way; and all off-site improvements that include public roadways, equipment, street lights and traffic signals. Owner constructed Public Facilities for water will include all non-golf related improvements consisting of the required water

storage tanks, well improvements, water mains, water services, water meters, gate valves, fire hydrants, flush valves, air release valves and related appurtenances. The Public Facilities for sewer will include sewer manholes, sewer mains, sewer laterals and collection lines within the Common Area Property as well as off-site effluent irrigation lines, tanks and pump stations, and the on-site effluent main line and reservoirs. In addition, Public Facilities also includes improvement of Whites Creek Lane as specified in the Conditions of Approval.

2.10 "Public Utilities" include, but are not limited to, water, sewer, natural gas, electricity, telephone, and cable television, together with all equipment and easements dedicated for these utilities.

2.11 "Real Property" means all the real property described in Exhibit "A". The real property includes the Golf Course Property, the Subdivision Property, and any remaining real property within the Project.

2.12 "Site Plan" means the plans in compliance with Code § 110.814.45 and attached hereto as Exhibit "F", and includes the Development Standards Handbook, Exhibit "E".

2.13 "Subdivision Improvements" are any on-site or off-site improvements or facilities required of residential subdivisions pursuant to this Agreement. Subdivision Improvements include, but are not limited to, all drainage improvements, common area improvements, curbs, streets, gutters, medians, parkways, pedestrian and bike paths, sidewalks, street lights, any directional traffic devices, and the Public Facilities required in connection with residential development.

1                   2.14 "Subdivision Property" includes all real property for the residential  
2 housing component of the Project.

3                   **3.     REQUIRED CONTENTS OF AGREEMENT.** Pursuant to Code §  
4 110.814.75, the following matters are included in this Agreement.

5                   **3.1     Preliminary Agreement.** Reference is made to the preliminary  
6 development agreement as approved in Case No. DA9-1-93 and amended or  
7 superseded by this Agreement.

8                   **3.2     Legal Agreement.** The substance of covenants, grants or  
9 easements, or other restrictions proposed to be imposed upon the use of the land,  
10 buildings and structures, including proposed easements or grants for Public Utilities  
11 shall be as provided in the CC&Rs and as specified in the Conditions of Approval.

12                   **3.3     Site Plan.** A Site Plan in conformance to Code § 110.814.45 is  
13 attached to this Agreement as Exhibit "F"; and includes the Development Standards  
14 Handbook, Exhibit "E".

15                   **3.4     Installation and Maintenance.** A program for the installation and  
16 maintenance of parking areas, lighting, landscaping, private drainage facilities  
17 (including detention ponds, ditches, storm drains and drop inlets), private streets,  
18 utilities, recreational facilities and other infrastructure is specified in the Conditions of  
19 Approval and will be further provided for, in part, in the CC&Rs.

20                   **3.5     Open Space Resources.** A program for the protection of open  
21 space resources, approved by COUNTY, is attached as Exhibit "G". No open space  
22 shall be sold to a bona fide third party without prior written consent of County. As

provided in Exhibit "G", after the 10-acre park is constructed, the County shall be responsible for park maintenance and upkeep.

**3.6 Development Schedule And Phasing.** Guidelines for a development schedule and phasing of the Project are more particularly described in the Development Standards Handbook ( See Article I), Exhibit "E".

**3.7 Development Standards Handbook.** A Development Standards Handbook in compliance with Code § 110.814.35(a) is attached hereto as Exhibit "E".

**3.8 Incorporation Of Other Exhibits.** The following exhibits are also attached hereto:

- a) Right-Of-Way Documents for Off-Site Access from Thomas Creek Road, Exhibit "H";
- b) Construction Traffic Haul Route Plan, Exhibit "I";
- c) Concept-Level Storm Drain Plan, Exhibit "J";
- d) Geotechnical Report On Earthquake Faulting, Exhibit "K"; and
- e) Schematic Water System Plan, Exhibit "L".

**4. EFFECT OF AGREEMENT.**

**4.1 Entitlements.** The approval of this Agreement by County constitutes a vested right of OWNERS to develop the Real Property as set forth in this Agreement and pursuant to the land use designations provided herein. Pursuant to Code § 110.814.15(b), this Agreement does not prevent COUNTY in a subsequent action applicable to the Real Property from adopting new ordinances, resolutions or regulations that conflict with those ordinances, resolutions and regulations in effect at the time this Agreement is made, provided any new ordinances, resolutions or

1 regulations do not impose upon OWNERS restrictions, requirements or standards  
2 which are more burdensome, more expensive or more onerous to satisfy than those  
3 in effect at the time this Agreement is made; and provided further that any said new  
4 ordinances, resolutions or regulations do not conflict with provisions of this Agreement  
5 in a manner that adversely affects OWNERS. The parties agree such a conflict or  
6 inconsistency would prevent development of the Project as set forth in this Agreement.  
7  
8 Nothing contained in this subsection 4.1 shall be construed to impair enforcement or  
9 compliance with the provisions of Code § 110.814.15(c) or (d).

10 **4.2 Subsequent Approvals And Conditions.** Tentative maps and  
11 final maps for Subdivision Property, building permits, variances, parcel maps,  
12 boundary line adjustments, special use permits for nonresidential property, and other  
13 approvals by COUNTY within the Project ("Subsequent Approvals") shall be required  
14 pursuant to Code requirements in existence at the time this Agreement is made,  
15 except as stated otherwise herein. All Subsequent Approvals in conformance with  
16 NRS Chapter 278 and the Code (as amended hereby), and in substantial  
17 conformance with the provisions of this Agreement shall be approved by the COUNTY  
18 as a consent item without public hearing. The Conditions of Approval specified in  
19 Exhibit "B", "C", and "D" may not be amended by Subsequent Approvals without the  
20 consent of OWNERS. Any conditions imposed by COUNTY in Subsequent Approvals  
21 which pertain to the same subject matter as any Conditions of Approval may not  
22 impose restrictions, requirements or standards which are more burdensome, more  
23 expensive or more onerous for OWNERS to satisfy than any Conditions of Approval,  
24 without the consent of OWNERS; provided that reasonable conditions imposed by  
25  
26  
27  
28

1 COUNTY in Subsequent Approvals which pertain to matters not addressed by any  
2 Conditions of Approval, or provide more detail and do not conflict with matters  
3 addressed by any Conditions of Approval, shall be allowed.

4  
5 Conditions and provisions hereof regarding construction of off-site or on-site  
6 improvements (e.g. streets and utilities), including development standards and design  
7 guidelines, may be varied upon request of the OWNERS and approval of the County  
8 Engineer.

9 **4.3 Subsequent Fees.** COUNTY currently imposes four (4) fees for  
10 the privilege of developing real property: a water connection fee; a sewer connection  
11 fee; a park residential construction tax; and the Regional Road Impact Fee ("RRIF")  
12 ("collectively County Fees"). The County Fees shall be imposed on applicable  
13 development within the Project in the same manner said fees are imposed for other  
14 similarly situated development in the COUNTY, subject to the following conditions.

15  
16 4.3.1 Provided OWNERS construct a potable water system as  
17 part of the Public Facilities to serve the potable water demands of the Project as those  
18 demands arise, COUNTY shall charge no water connection fee for development within  
19 the Project.

20  
21 4.3.2 Provided OWNERS receive a credit for all off-site sewer  
22 facilities infrastructure constructed by OWNERS, OWNERS shall pay the sewer  
23 connection fee at the time and in the amount specified by COUNTY ordinance.

24 4.3.3 Subject to any credits allowed by a RRIF Capital Front-  
25 Ending Agreement, OWNERS shall pay the RRIF at the time and in the amount  
26 specified by County ordinance.

27  
28

1                   4.3.4 Subject to the provisions of an agreement between  
2 COUNTY and OWNERS for the construction of neighborhood park improvements  
3 within the Project, OWNERS shall pay the park residential construction tax at the time  
4 and in the amount specified under NRS 278.497 to NRS 278.4987.

5                   **4.4 No New COUNTY Fees.** Except for the County Fees or as  
6 specified in subsections 4.5 and 4.6 below, no new fees or taxes enacted or approved  
7 by COUNTY after the date this Agreement is made for construction or development  
8 within the Project or for capital improvements for Public Facilities shall apply to the  
9 Project, provided that the provisions of this subsection are not intended to prohibit the  
10 imposition and collection of County fees and charges imposed at the time of execution  
11 hereof (e.g., for permits or inspections).

12                   **4.5 Special Assessment Districts.** The parties agree that certain  
13 Public Facilities may be financed, constructed and paid for, in whole or in part, by one  
14 or more developer special assessment districts. For the purposes of the County's  
15 Special Assessment Guidelines dated February, 1992 ("Guidelines"), the parties agree  
16 that the following improvements generally provide a public benefit, satisfy Section A  
17 of the Guidelines and may be included at the discretion of the parties in a special  
18 assessment district:  
19  
20

- 21
- 22                   (a) the construction and land costs of Whites Creek Lane;
  - 23                   (b) the County-owned nonpotable water system for golf  
24                   course and landscape irrigation;
  - 25                   (c) the purchase price of creek water rights (with  
26                   supplemental groundwater rights) for the County-owned  
27                   nonpotable water system;
- 28

26  
27  
28

- (d) the County-owned potable water system; and
- (e) County-owned landscaping improvements and trails/paths along public streets.

**4.6 Nonpotable Water Agreement.** Any fees, costs and expenses of OWNERS pursuant to an agreement between the parties for the provision of nonpotable water for golf course and common area landscape irrigation shall not be construed as a new fee under subsection 4.4. above.

**4.7 Credits Or Reimbursements Of County Fees.** No successor or assign of OWNERS shall be entitled to a credit or reimbursement of a County Fee or fee imposed pursuant to subsection 4.6 above, unless that successor OWNER obtains an express assignment of the right to the credit or reimbursement from the OWNER who paid for or earned the credit or reimbursement of a County Fee.

**4.8 Parcel Maps.** OWNERS shall be entitled to submit or obtain approval of parcel maps within Project in order to facilitate development, even if said parcel maps create legal parcels within an area of the Project subject to a tentative map, provided that such parcel maps are not used as a subterfuge to create residential lots subject to an approved tentative map. OWNERS shall not be required to dedicate water rights for new parcels created by parcel maps within the Project, if such new parcels are not intended to require potable water service by COUNTY under the provisions of this Agreement.

**4.9 Fire Protection.** Owners agree to transfer and dedicate free of charge to County (or to another government entity of County's choice) prior to the recordation of the first final map a one-acre fire station site located on Whites Creek Lane west of the proposed elementary school and east of the Project entrance. The

1 exact location and parcel configuration shall be mutually agreed by the parties. The  
2 deed for the fire station site shall restrict use to a fire station and ancillary purposes.  
3 Owners and representatives of the Truckee Meadows Fire Protection District have  
4 entered into discussions regarding the free dedication of the fire station site and other  
5 possible needs for fire protection, and no other commitments were made except  
6 Owner's agreement herein to dedicate the fire station site.  
7

8 **5. TERM OF AGREEMENT.**

9 The term of this Agreement shall be fifteen (15) years from the date  
10 hereof; provided that all applicable terms of this Agreement shall remain binding and  
11 enforceable regarding permits, construction or development on any portion of the Real  
12 Property subject to a tentative map, a recorded final map or a special use permit in  
13 existence at the time of expiration of this Agreement.  
14

15 **6. OBLIGATIONS OF OWNERS/ASSIGNMENT.**

16 The parties acknowledge that OWNERS will sell or otherwise convey title  
17 to portions of the Real Property as development occurs. Successors to OWNERS  
18 shall acquire rights and assume obligations only to the extent required under this  
19 Agreement to develop or use the portion of the Real Property so acquired. Upon  
20 conveyance of each portion of Real Property, OWNERS' liability for obligations under  
21 this Agreement shall terminate, provided the successor OWNERS assumes said  
22 obligations. The provisions of this Agreement constitute covenants running with the  
23 Real Property. Notwithstanding the provisions of this Section 6, a successor OWNER  
24 of a single lot created by final map within the Project shall not have any obligation  
25  
26  
27  
28

1 under this Agreement other than for development and use of the lot so owned  
2 consistent with this Agreement.

3 **7. MISCELLANEOUS.**

4 **7.1 Governing Law; Venue.** This Agreement is being executed and  
5 delivered in Washoe County, Nevada, and is intended to be  
6 performed in the State of Nevada, and the laws of Nevada shall  
7 govern the validity, construction, enforcement and interpretation  
8 of this Agreement. Venue for any legal action arising out of this  
9 Agreement shall be in Washoe County, Nevada.

10 **7.2 Entirety and Amendments.** This Agreement embodies the entire  
11 Agreement between the parties and supersedes all prior  
12 agreements and understandings, if any, relating to the Project,  
13 and may be amended or supplemented only by an instrument in  
14 writing executed by the party against whom enforcement is  
15 sought, and as provided in Code § 110814.95(b). No oral  
16 statements or representations made before or after the execution  
17 of this Agreement regarding the subject matter of this Agreement  
18 are binding on a party, nor may any such oral statements or  
19 representations be relied on by a party.

20 **7.3 Invalid Provisions.** If any provision of this Agreement is held to  
21 be illegal, invalid or unenforceable under present or future laws,  
22 such provision shall be fully severable. The Agreement shall be  
23 construed and enforced as if such illegal, invalid or unenforceable  
24 provision had never comprised a part of the Agreement. The  
25 remaining provisions of the Agreement shall remain in full force  
26 and effect and shall not be affected by the illegal, invalid or  
27 unenforceable provision or by its severance from this Agreement.

28 **7.4 Parties Bound and Assignment.** Subject to the provisions of  
Section 6, this Agreement shall be binding upon and inure to the  
benefit of the parties, and their respective heirs, personal  
representatives, successors and assigns. In the event COUNTY,  
for any reason, ceases to have jurisdiction as the applicable local  
governmental entity regarding the subject matter of all or any part  
of the Agreement, COUNTY shall require the new entity to  
assume the applicable obligations hereof.

**7.5 Further Acts.** In addition to the acts recited in this Agreement to  
be performed, the parties agree to perform, or cause to be  
performed, any and all further acts as may be reasonably  
necessary to consummate the obligations contemplated hereby.

The persons and addresses to which notices are to be given may be changed at any time by any party upon written notice to the other party. All notices given pursuant to this Agreement shall be deemed given upon delivery.

**7.9 Receipt Defined.** For the purpose of this Agreement, the term "delivery" shall mean any of the following: (a) the date of delivery of the notice or other document as shown on the return receipt; (b) the date of actual receipt of the notice or other document; or (c) in the case of refusal to accept delivery or inability to deliver the notice or other document, the earlier of: (i) the date of the attempted delivery or refusal to accept delivery; (ii) the date of the postmark on the return receipt; or (iii) the date of receipt of notice of refusal or notice of nondelivery by the sending party.

**7.10 Indemnity.** Developer shall indemnify and hold harmless COUNTY and its officers, employees, and agents, from any claims, demands, losses, defense costs, or liability of any kind or nature, which COUNTY may sustain or incur or which may be imposed upon them out of actions by, or the negligence of, Developer, its officers, agents or employees, arising out of Developer's obligations specified in Section 2 hereof, accepting only liability arising out of gross negligence or intentional wrong doing by County, its officers, agents, or employees.

**7.11 Arbitration.** Any dispute arising from rights or obligations of this Agreement shall be submitted to arbitration pursuant to the Commercial Rules of the American Arbitration Association, including any disputes regarding consents or approvals to be given by a party. The decision of the arbitrator shall be final and binding on both parties.

**7.12 Recordation.** This Agreement shall not be recorded, but in order to comply with Code § 110.814.95(c) the Memorandum Of Agreement attached hereto as Exhibit "M" shall be recorded upon execution hereof in the office of the Recorder of Washoe County, Nevada.

**FINAL DEVELOPMENT AGREEMENT**

1  
2  
3 This Agreement is entered into this \_\_\_ day of \_\_\_\_\_, 1996 by and  
4 between the **COUNTY OF WASHOE**, a political subdivision of the State of Nevada  
5 ("COUNTY"); and **BETTY ALYCE JONES, HELEN JEANE JONES, IRIS G.**  
6 **BREWERTON, KENNETH G. WALKER, AND GERALD C. SMITH**, Trustees of The  
7 Neil J. Redfield Trust and **SOUTHWEST POINTE PARTNERS**, a Nevada general  
8 partnership, (collectively referred to as "OWNERS"). For valuable consideration,  
9 receipt of which is hereby acknowledged, the parties agree as follows:

10  
11 **1. GENERAL.**

12 1.1 **Legal Authority.** Nevada Revised Statute ("NRS") 278.0201 to  
13 278.0207 and Washoe County Development Code (the "Code") §§ 110.814.00 to  
14 110.814.95 authorize the COUNTY and the OWNERS to enter into agreements for the  
15 development of real property. This Agreement is a final development agreement, as  
16 defined in Code § 110.814.75, and as provided in NRS Chapter 278.

17  
18 1.2 **The Project.** The OWNERS hold a legal or equitable interest in  
19 certain real property located in COUNTY, a legal description of which is attached as  
20 Exhibit "A". Development of the real property, subject to the terms of this Agreement,  
21 has been authorized by COUNTY under Case No. DA9-1-93 and ancillary cases, and  
22 is described as a residential community which includes 1,090 residential lots with  
23 common open space, a water delivery system (potable and nonpotable), sewer  
24 system, two golf courses with related recreational facilities, and a commercial village  
25 center, the total acreage being ±3,171.6 acres, designated under COUNTY land use  
26  
27  
28

1 designations as Low Density Suburban, Low Density Rural, Medium Density Rural,  
2 High Density Rural, and General Rural (the "Project").

3 **1.3 Past Approvals.** The OWNERS have obtained the following  
4 approvals from the COUNTY pertaining to the Project:

- 5
- 6 a) On February 8, 1994 OWNERS obtained approval from  
7 the Washoe Board of County Commissioners pursuant to  
8 Code § 110.814.70 of a preliminary development  
9 agreement. DA9-1-93
- 10 b) On November 8, 1994 OWNERS obtained approval from  
11 the Washoe Board of County Commissioners to amend  
12 the preliminary development agreement.
- 13 c) On May 2, 1995 OWNERS obtained approval from the  
14 ~~Washoe County~~ Planning Commission for a Special Use  
15 Permit to grade the first golf course and improve the  
16 construction access. The order issuing such approval is  
17 attached as Exhibit "B". SPW9-13-93
- 18 d) On September 5, 1995 OWNERS obtained approval from  
19 the ~~Washoe County~~ Planning Commission for a Special  
20 Use Permit to develop a water system having storage of  
21 1.4 million gallons and necessary delivery system. The  
22 order issuing such approval is attached as Exhibit "C"  
23 SPW9-10-93
- 24 e) On September 27, 1994 Owners obtained approval from  
25 the Board of County Commissioners for an 18-month  
26 extension to submit a draft final agreement, which Owners  
27 have submitted in compliance with said extension.
- 28 f) On 5/7/96 OWNERS obtained approval from  
the Washoe County Planning Commission for conditions  
to the final development agreement. Said conditions and  
amendments thereto approved concurrently with this  
Agreement by the Board Of County Commissions, and are  
attached hereto as Exhibit "D".

Reverse  
Chronological

1.4 **Ordinance.** This Agreement shall be approved by ordinance. The  
Project is to be developed as a single entity and includes uses and development

standards consistent with the Washoe County Comprehensive Plan and the Southwest Truckee Meadows Area Plan.

1.5 **Benefit To OWNERS.** The OWNERS acknowledge and agree that, prior to entering into this Agreement appropriate legal advice and counsel was sought, that the OWNERS made a voluntary informed business decision to enter into this Agreement in good faith. The OWNERS further acknowledge and agree that substantial benefits will accrue to the OWNERS as a result of the OWNERS and the COUNTY entering into this Agreement, including entitlements to develop the Project in accordance with this Agreement and the Conditions of Approval, an extension or opportunity to seek an extension of the time in which to file a final subdivision map under this Agreement, certainty in the particular on-site and offsite improvements and requirements which the OWNERS will be responsible for constructing or completing, and certainty in the imposition of land use fees or obligations which may be imposed by the COUNTY.

1.6 **Benefit to COUNTY.** The COUNTY acknowledges and agrees that substantial benefits will accrue to the COUNTY as a result of OWNERS and the COUNTY entering into this Agreement, including the rational, planned land uses and development of the Real Property.

2. **SELECTED DEFINITIONS.**

2.1 "Agreement" means this development agreement.

2.2 "Conditions of Approval" mean all conditions of the Project approvals as set forth in the orders from Washoe County attached to this Agreement

1 as Exhibits B, C, and D, which conditions are incorporated herein as provisions of this  
2 Agreement.

3 2.3 "COUNTY" means Washoe County, a political subdivision of the  
4 State of Nevada, and its officers, elected officials, agents, employees, divisions,  
5 departments, committees, boards and commissions.

6 2.4 CC&Rs means the declaration of covenants, conditions and  
7 restrictions which will be drafted by OWNERS, approved by the COUNTY and  
8 recorded against the Real Property, as further provided in the Conditions of Approval.

9 2.5 "Development Standards Handbook" means the development  
10 standards for the Project as set forth in Exhibit "E".

11 2.6 "Golf Course Property" includes all real property for the golf and  
12 related recreational facilities component of the Project.

13 2.7 "OWNERS" mean those property owners identified above and  
14 their successors and assigns.

15 2.8 "Project" means the Southwest Pointe development as approved  
16 by the COUNTY in Case No. DA9-1-93 and this Agreement.

17 2.9 "Public Facilities" are facilities that will be dedicated to the  
18 COUNTY. Public Facilities shall include, but are not limited to: ~~storm drains and drop~~  
19 ~~inlets; on-site or offsite sewage collection facilities; water rights dedicated for service;~~  
20 ~~No - County will not maintain piped storm drains on private streets~~  
21 water systems facilities; together with all lines, mains, holding and disposing areas,  
22 tanks, public easements and rights-of-way; and all off-site improvements that include  
23 public roadways, equipment, street lights and traffic signals. OWNER constructed  
24 Public Facilities for water will include all non-golf related improvements consisting of

the required water storage tanks, well improvements, water mains, water services, water meters, gate valves, fire hydrants, flush valves, air release valves and related appurtenances. The Public Facilities for sewer will include sewer manholes, sewer mains, sewer laterals and collection lines within the Common Area Property as well as off-site effluent irrigation lines, tanks and pump stations, and the on-site effluent main line and reservoirs. In addition, Public Facilities also includes improvement of Whites Creek Lane as specified in the Conditions of Approval.

2.10 "Public Utilities" include, but are not limited to, water, sewer, natural gas, electricity, telephone, and cable television, together with all equipment and easements dedicated for these utilities.

2.11 "Real Property" means all the real property described in Exhibit "A". The real property includes the Golf Course Property, the Subdivision Property, and any remaining real property within the Project.

2.12 "Site Plan" means the plans in compliance with Code § 110.814.45 and attached hereto as Exhibit "F", and includes the Development Standards Handbook, Exhibit "E".

2.13 "Subdivision Improvements" are any on-site or off-site improvements or facilities required of residential subdivisions pursuant to this Agreement. Subdivision Improvements include, but are not limited to, all drainage improvements, common area improvements, curbs, streets, gutters, medians, parkways, pedestrian and bike paths, sidewalks, street lights, ~~storm drains~~, any directional traffic devices, and the Public Facilities required in connection with residential development.

Engineering has not seen the Side Plan. Did you make sure it shows what it's supposed to? Does it meet Engineering Criteria? If a poor design is approved, we "stuck" with it?

2.14 "Subdivision Property" includes all real property for the residential housing component of the Project.

3. REQUIRED CONTENTS OF AGREEMENT. Pursuant to Code § 110.814.75, the following matters are included in this Agreement.

3.1 Preliminary Agreement. Reference is made to the preliminary development agreement as approved in Case No. DA9-1-93 and amended or superseded by this Agreement.

3.2 Legal Agreement. The substance of covenants, grants or easements, or other restrictions proposed to be imposed upon the use of the land, buildings and structures, including proposed easements or grants for Public Utilities shall be as provided in the CC&Rs and as specified in the Conditions of Approval.

3.3 Site Plan. A Site Plan in conformance to Code § 110.814.45 is attached to this Agreement as Exhibit "F"; and includes the Development Standards Handbook, Exhibit "E".

3.4 Installation and Maintenance. A program for the installation and maintenance of parking areas, lighting, landscaping, private streets, utilities, recreational facilities and other infrastructure is specified in the Conditions of Approval and will be further provided for, in part, in the CC&Rs.

3.5 Open Space Resources. A program for the protection of open space resources, approved by COUNTY, is attached as Exhibit "G". (over)

3.6 Development Schedule And Phasing. Guidelines for a development schedule and phasing of the Project are more particularly described in the Development Standards Handbook ( See Article I), Exhibit "E".

*ponds, ditches, storm drains and drop inlets*

3.5 No open space shall be sold to a bona fide third party without prior written approval consent of County. As provided in Exhibit "G", after the 10-acre park is constructed, the County shall be responsible for park maintenance and upkeep.

1 ~~The approximate date for the start of construction for the first phase shall be on or~~  
2 ~~before October 1, 1996. The first phase of the Project shall be construction of the first~~  
3 ~~18 holes of the Golf Course Property. All phases after the first phase for Subdivision~~  
4 ~~improvements shall be constructed within the time frames allowed pursuant to~~  
5 ~~tentative maps and final maps for the Project. Nonresidential development shall be~~  
6 ~~constructed pursuant to special use permits, when applicable, under the time frame~~  
7 ~~provided therein. Other phasing requirements shall be as provided in the Conditions~~  
8 ~~of Approval.~~

Engineering  
has not seen  
this. Are  
there portions  
that require  
Engineering  
review?

9 → 3.7 Development Standards Handbook. A Development Standards  
10 Handbook in compliance with Code § 110.814.35(a) is attached hereto as Exhibit "E".

11 4. EFFECT OF AGREEMENT. (COVER)

12  
13 4.1 Entitlements. The approval of this Agreement by County  
14 constitutes a vested right of Owners to develop the Real Property as set forth in this  
15 Agreement and pursuant to the land use designations provided herein. Pursuant to  
16 Code § 110.814.15(b), this Agreement does not prevent COUNTY in a subsequent  
17 action applicable to the Real Property from adopting new ordinances, resolutions or  
18 regulations that conflict with those ordinances, resolutions and regulations in effect at  
19 the time this Agreement is made, provided any new ordinances, resolutions or  
20 regulations do not impose upon OWNERS restrictions, requirements or standards  
21 which are more burdensome, more expensive or more onerous to satisfy than those  
22 in effect at the time this Agreement is made; and provided further that any said new  
23 ordinances, resolutions or regulations do not conflict with provisions of this Agreement  
24 in a manner that adversely affects OWNERS. The parties agree such a conflict or  
25  
26  
27  
28

1 inconsistency would prevent development of the Project as set forth in this Agreement.  
2 Nothing contained in this subsection 4.1 shall be construed to impair enforcement or  
3 compliance with the provisions of Code § 110.814.15(c) or (d).

4           **4.2    Subsequent Approvals And Conditions.** Tentative maps and  
5 final maps for Subdivision Property, building permits, variances, parcel maps,  
6 boundary line adjustments, special use permits for nonresidential property, and other  
7 approvals by COUNTY within the Project ("Subsequent Approvals") shall be required  
8 pursuant to Code requirements in existence at the time this Agreement is made,  
9 except as stated otherwise herein. All Subsequent Approvals in conformance with  
10 NRS Chapter 278 and the Code (as amended hereby), and in substantial  
11 conformance with the provisions of this Agreement shall be approved by the COUNTY  
12 as a consent item without public hearing. The Conditions of Approval specified in  
13 Exhibit "B", "C", and "D" may not be amended by Subsequent Approvals without the  
14 consent of OWNERS. Any conditions imposed by COUNTY in Subsequent Approvals  
15 which pertain to the same subject matter as any Conditions of Approval may not  
16 impose restrictions, requirements or standards which are more burdensome, more  
17 expensive or more onerous for Owners to satisfy than any Conditions of Approval,  
18 without the consent of OWNERS; provided that reasonable conditions imposed by  
19 COUNTY in Subsequent Approvals which pertain to matters not addressed by any  
20 Conditions of Approval, or provide more detail and do not conflict with matters  
21 addressed by any Conditions of Approval, shall be allowed.

22           Conditions and provisions hereof regarding construction of off-site or on-site  
23 improvements (e.g. streets and utilities), including development standards and design  
24

1 guidelines, may be varied upon request of the Owner and approval of the County  
2 Engineer.

*Does this section exclude plan review fees and  
inspection fees? We should still be allowed to  
charge these fees.*

3 **4.3 Subsequent Fees.** COUNTY currently imposes four (4) fees for  
4 the privilege of developing real property: a water connection fee; a sewer connection  
5 fee; a park residential construction tax; and the Regional Road Impact Fee ("RRIF")  
6 ("collectively County Fees"). The County Fees shall be imposed on applicable  
7 development within the Project in the same manner said fees are imposed for other  
8 similarly situated development in the COUNTY, subject to the following conditions.

9  
10 4.3.1 Provided OWNERS construct a potable water system as  
11 part of the Public Facilities to serve the potable water demands of the Project as those  
12 demands arise, COUNTY shall charge no water connection fee for development within  
13 the Project.

14  
15 4.3.2 Provided OWNERS receive a credit for all off-site sewer  
16 facilities infrastructure constructed by OWNERS, OWNERS shall pay the sewer  
17 connection fee at the time and in the amount specified by COUNTY ordinance.

18 4.3.3 Subject to any credits allowed by a RRIF Capital Front-  
19 Ending Agreement, OWNERS shall pay the RRIF at the time and in the amount  
20 specified by County ordinance.

21 4.3.4 Subject to the provisions of an agreement between  
22 COUNTY and OWNERS for the construction of neighborhood park improvements  
23 within the Project, OWNERS shall pay the park residential construction tax at the time  
24 and in the amount specified under NRS 278.497 to NRS 278.4987.

25  
26 *inspection fees?* **4.4 No New COUNTY Fees.** Except for the County Fees or as

specified in subsections 4.5 and 4.6 below, no new fees or taxes enacted or approved by COUNTY after the date this Agreement is made for construction or development within the Project or for capital improvements for Public Facilities shall apply to the Project.

MADDY

**4.5 Special Assessment Districts.** At the option of OWNERS, the parties agree that certain Public Facilities shall be financed, constructed and paid for, in whole or in part, by one or more developer special assessment districts. The following improvements are agreed to provide a public benefit and are includable at the discretion of OWNERS in such special assessment districts:

*define extent of Whites Creek Lane*

- (a) the construction and land costs of Whites Creek Lane;
- (b) the County-owned nonpotable water system for golf course and landscape irrigation;
- (c) the purchase price of creek water rights (with supplemental groundwater rights for the nonpotable water system and water rights for the potable water system);
- (d) the off-site Public Utilities;
- (e) the County-owned potable water system; and

*Thought these were no public streets in paper*

- ~~(f) the neighborhood park improvements and land costs; and~~
- (f) landscaping improvements in common area and trails/paths along public streets.

**4.6 Nonpotable Water Agreement.** Any fees, costs and expenses of OWNERS pursuant to an agreement between the parties for the provision of nonpotable water for golf course and common area landscape irrigation shall not be construed as a new fee under subsection 4.4. above.

**4.7 Credits Or Reimbursements Of County Fees.** No successor or assign of OWNERS shall be entitled to a credit or reimbursement of a County Fee or fee imposed pursuant to subsection 4.6 above, unless that successor OWNER obtains an express assignment of the right to the credit or reimbursement from the OWNER who paid for or earned the credit or reimbursement of a County Fee.

**4.8 Parcel Maps.** OWNERS shall be entitled to submit or obtain approval of parcel maps within Project in order to facilitate development, even if said parcel maps create legal parcels within an area of the Project subject to a tentative map, provided that such parcel maps are not used as a subterfuge to create residential lots subject to an approved tentative map. OWNERS shall not be required to dedicate water rights for new parcels created by parcel maps within the Project, if such new parcels are not intended to require potable water service by COUNTY under the provisions of this Agreement.

**4.9 Security For Improvements.** In order to construct improvements pursuant to this Agreement for which COUNTY customarily requires security to be posted prior to commencement, OWNERS shall not be required to provide security to COUNTY for the construction of private streets or Public Utilities which upon completion are not to be owned by COUNTY. Any security required by COUNTY shall

*Normally a security is provided for privately owned improvements*

*Inspection Fees? for public improvements*

*Without a financial security, how do we ensure that the streets are built per plan? If the owner defaults, what does the County?*

- (a) One hundred percent (100%) of the approved engineer's cost estimate for the improvements to be constructed; plus
- (b) Twenty percent (20%) of that sum as a contingency amount.

*use to complete the construction? See attached comments from Engineering on original draft of this agreement, dated 12/95. Security should be per standard County procedures.*

5. TERM OF AGREEMENT.

The term of this Agreement shall be fifteen (15) years from the date hereof; provided that all applicable terms of this Agreement shall remain binding and enforceable regarding permits, construction or development on any portion of the Real Property subject to a tentative map, a recorded final map or a special use permit in existence at the time of expiration of this Agreement.

6. OBLIGATIONS OF OWNERS/ASSIGNMENT.

The parties acknowledge that OWNERS will sell or otherwise convey title to portions of the Real Property as development occurs. Successors to OWNERS shall acquire rights and assume obligations only to the extent required under this Agreement to develop or use the portion of the Real Property so acquired. Upon conveyance of each portion of Real Property, OWNERS' liability for obligations under this Agreement shall terminate, provided the successor OWNER assumes said obligations. The provisions of this Agreement constitute covenants running with the Real Property. Notwithstanding the provisions of this Section 6, a successor OWNER of a single lot created by final map within the Project shall not have any obligation under this Agreement other than for development and use of the lot so owned consistent with this Agreement.

7. MISCELLANEOUS.

7.1 Governing Law; Venue. This Agreement is being executed and delivered in Washoe County, Nevada, and is intended to be performed in the State of Nevada, and the laws of Nevada shall govern the validity, construction, enforcement and interpretation of this Agreement. Venue for any legal action arising out of this Agreement shall be in Washoe County, Nevada.

**7.2 Entirety and Amendments.** This Agreement embodies the entire Agreement between the parties and supersedes all prior agreements and understandings, if any, relating to the Project, and may be amended or supplemented only by an instrument in writing executed by the party against whom enforcement is sought, and as provided in Code § 110814.95(b). No oral statements or representations made before or after the execution of this Agreement regarding the subject matter of this Agreement are binding on a party, nor may any such oral statements or representations be relied on by a party.

**7.3 Invalid Provisions.** If any provision of this Agreement is held to be illegal, invalid or unenforceable under present or future laws, such provision shall be fully severable. The Agreement shall be construed and enforced as if such illegal, invalid or unenforceable provision had never comprised a part of the Agreement. The remaining provisions of the Agreement shall remain in full force and effect and shall not be affected by the illegal, invalid or unenforceable provision or by its severance from this Agreement.

**7.4 Parties Bound and Assignment.** Subject to the provisions of Section 6, this Agreement shall be binding upon and inure to the benefit of the parties, and their respective heirs, personal representatives, successors and assigns. In the event COUNTY, for any reason, ceases to have jurisdiction as the applicable local governmental entity regarding the subject matter of all or any part of the Agreement, COUNTY shall require the new entity to assume the applicable obligations hereof.

**7.5 Further Acts.** In addition to the acts recited in this Agreement to be performed, the parties agree to perform, or cause to be performed, any and all further acts as may be reasonably necessary to consummate the obligations contemplated hereby.

**7.6 Headings.** Headings used in this Agreement are used for reference purposes only and do not constitute substantive matter to be considered in construing the terms of this Agreement.

**7.7 Attorneys' Fees.** In the event that any action is necessary to enforce the rights of any party hereto, the prevailing party in any such action shall be entitled to reasonable costs and attorneys' fees.

**7.8 Notice.** All notices given pursuant to this Agreement shall be in writing and shall be given by personal delivery, by facsimile transmission, by United States mail or by United States express

other party. All notices given pursuant to this Agreement shall be deemed given upon delivery.

**7.9 Receipt Defined.** For the purpose of this Agreement, the term "delivery" shall mean any of the following: (a) the date of delivery of the notice or other document as shown on the return receipt; (b) the date of actual receipt of the notice or other document; or (c) in the case of refusal to accept delivery or inability to deliver the notice or other document, the earlier of: (i) the date of the attempted delivery or refusal to accept delivery; (ii) the date of the postmark on the return receipt; or (iii) the date of receipt of notice of refusal or notice of nondelivery by the sending party.

**7.10 Indemnity.** Developer shall indemnify and hold harmless COUNTY and its officers, employees, and agents, from any claims, demands, losses, defense costs, or liability of any kind or nature, which COUNTY may sustain or incur or which may be imposed upon them out of actions by, or the negligence of, Developer, its officers, agents or employees, arising out of Developer's obligations specified in Section 2 hereof, accepting only liability arising out of gross negligence or intentional wrong doing by County, its officers, agents, or employees.

**7.11 Arbitration.** Any dispute arising from rights or obligations of this Agreement shall be submitted to arbitration pursuant to the Commercial Rules of the American Arbitration Association, including any disputes regarding consents or approvals to be given by a party. The decision of the arbitrator shall be final and binding on both parties.

**7.12 Recordation.** This Agreement shall not be recorded, but in order to comply with Code § 110.814.95(c) the Memorandum Of Agreement attached hereto as Exhibit \_\_\_\_ shall be recorded upon execution hereof in the office of the Recorder of Washoe County, Nevada.

**7.13 Exhibits.** All exhibits to this Agreement are incorporated herein as if fully set forth.

**PROPOSED LANGUAGE ON PHASING**  
**FOR DEVELOPMENT STANDARDS HANDBOOK**

Page 1-8    **Development Phasing.**

Construction will commence in late summer or early fall 1996. The project will begin with the development of construction access roads and grading of the initial (lower) golf course. Coincidental with these activities will be the construction of utilities as well as the entry road and the main loop road that services the golf course clubhouse, swim and tennis facility and Phase I residential areas (approximately 400 lots). It is estimated that "intract" improvements for the residential lots in Phase I will occur over a three to four year period following grading of the entry road and main loop road, depending on market conditions.

Construction of the swim and tennis facility is proposed to commence as Phase I approaches "build out".

As the Phase I residential land approaches build out, grading, road improvements and utilities for the Phase II residential areas (approximately 350 lots) will commence. It is estimated that "intract" improvements for the residential lots in Phase II will occur over a three to four year period following grading of the roads, depending on market conditions. The second golf course is proposed for construction during the development of Phase II; however, the demand for golf will dictate whether it occurs sooner or later.

As the Phase II residential land approaches build out, grading and road improvements for the Phase III residential areas (approximately 340 lots) will commence. It is estimated that "intract" improvements for the residential lots in Phase III will occur over a three to four year period following grading of the roads, depending on market conditions.

It should be noted that, depending on market conditions, Phase II and Phase III may be smaller than indicated above, resulting in the potential of one or more additional phases.

25  
26  
27  
28

The proposed neighborhood commercial use, located across from the golf clubhouse area, is projected for development in or beyond Phase III. The precise timing, and whether or not it will be built, will be predicated on market conditions. In any event, at the time the initial phases are developed, there will probably not be enough residents to support neighborhood commercial uses.

Appropriate open space dedications, trail improvements, right-of-way landscaping and other community improvements will occur coincidental to the development of each phase of the project, pursuant to conditions of tentative maps or special use permits.

The time frames mentioned above may be shortened or lengthened by the developer, and the phases may be changed, if the developer believes such changes are necessary or advisable to improve development potential. As more particularly specified in the final development agreement, the agreement expires fifteen (15) years from the date of its execution.

EXCERPT FROM SW POINTE DEV. AGREEMENT  
Reviewed by Engineering 12/95

this Agreement, the OWNERS shall provide financial security ("Security"). The Security shall be in the amount of: 1) One Hundred percent (100%) of the approved engineer's cost estimate for the improvements remaining to be performed for the particular final map plus 2) Ten percent (10%) <sup>20%</sup> contingency amount as required under Washoe County Development Code 110.610.40.

4.6.1 Posting security: OWNER will provide the Development Review Director or his delegate a cost estimate of the improvements required for the final map <sup>when the final construction drawings are submitted for review. The approval or disapproval of the cost estimate shall be in accordance with the "60 day" submitted schedule. The security required security must be in place any final map agenda items on the consent calendar, if available, for the Washoe County Planning Commission hearing so long as Owner 1) delivers to the COUNTY "60 day" submitted schedule.</sup> which the Development Review Director will approve or disapprove within four (4) working days of OWNERS submittal. ~~The COUNTY must place any final map agenda items on the consent calendar, if available, for the Washoe County Planning Commission hearing so long as Owner 1) delivers to the COUNTY the approved final cost estimate fourteen (14) days prior to the Washoe County Planning Commission hearing on any final map and 2) the required security is posted with the COUNTY seven (7) days prior to the hearing date.~~

4.7 Forms of Security: The financial security shall be in one of the following forms:

4.7.1 Cash to be held by the Washoe County Treasurer. <sup>No - OK to have a bank account in Washoe County. None and interest will be paid to Owner.</sup> The Treasurer shall place the cash in an interest bearing account, and interest earned, less the Treasurer's reasonable administrative costs, will be paid over to the OWNERS under section 4.8 of this Agreement.

4.7.2 An irrevocable letter of credit must be issued by a <sup>licensed to do business in Nevada</sup> federally insured bank or lending institution, must name the COUNTY as the exclusive beneficiary, must be payable at sight to the COUNTY, must be in effect throughout the entire period required by this Agreement and must be in effect for a

at least thirty (30) days after the expiration of all warranties under this t.

4.7.3 An irrevocable certificate of deposit which must be issued by a fully insured bank or lending institution located in Nevada, must name the County as the exclusive beneficiary, and must be for a period of thirty (30) days after the expiration of all warranties under this Agreement. Certificates of deposit shall be grouped together so that the aggregate amount of the certificates of deposit shall be equivalent to the financial security required but each certificate of deposit may be used separately as a reduction in security as set forth below.

4.8 Reduction of Security: As the OWNERS complete each portion of subdivision improvements, public facilities, and public utilities that are secured under section 4.6 of this, the security referred to in section 4.6 of this Agreement shall be reduced as follows:

4.8.1 Procedure: Any portion of the Security posted pursuant to section 4.6 of this Agreement may be reduced following written demand by the County at any time. Within ten (10) days of OWNERS making written demand for reduction, the County Engineer may approve, deny or partially deny OWNERS request for reduction in security provided such action is reasonable. The COUNTY shall provide to OWNERS the amount of the approved reduction in Security within ten (10) days of County Engineer's action. Upon full reduction of each portion of Security posted, the COUNTY will within a reasonable period, execute a certificate of satisfactory completion of the improvement, facility or utility and waiving the right to draw on the Security to the extent of the amount approved.

*No. Once per construction season as per Subdivision Agreement*

*NO - final project approved - means of compliance to terms of all improvements*

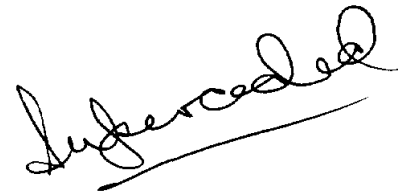

1 **FINAL DEVELOPMENT AGREEMENT**

2  
3 This Agreement is entered into this \_\_\_ day of \_\_\_\_\_, 1996 by and  
4 between the **COUNTY OF WASHOE**, a political subdivision of the State of Nevada  
5 ("COUNTY"); and **BETTY ALYCE JONES, HELEN JEANE JONES, IRIS G.**  
6 **BREWERTON, KENNETH G. WALKER, AND GERALD C. SMITH**, Trustees of The  
7 Neil J. Redfield Trust and **SOUTHWEST POINTE PARTNERS**, a Nevada general  
8 partnership, (collectively referred to as "OWNERS"). For valuable consideration,  
9 receipt of which is hereby acknowledged, the parties agree as follows:  
10

11 **1. GENERAL.**

12 1.1 **Legal Authority.** Nevada Revised Statute ("NRS") 278.0201 to  
13 278.0207 and Washoe County Development Code (the "Code") §§ 110.814.00 to  
14 110.814.95 authorize the COUNTY and the OWNERS to enter into agreements for the  
15 development of real property. This Agreement is a final development agreement, as  
16 defined in Code § 110.814.75, and as provided in NRS Chapter 278.  
17

18 1.2 **The Project.** The OWNERS hold a legal or equitable interest in  
19 certain real property located in COUNTY, a legal description of which is attached as  
20 Exhibit "A". Development of the real property, subject to the terms of this Agreement,  
21 has been authorized by COUNTY under Case No. DA9-1-93 and ancillary cases, and  
22 is described as a residential community which includes 1,090 residential lots with  
23 common open space, a water delivery system (potable and nonpotable), sewer  
24 system, two golf courses with related recreational facilities, and a commercial village  
25 center, the total acreage being  $\pm 3,171.6$  acres, designated under COUNTY land use  
26  
27  
28

1 designations as Low Density Suburban, Low Density Rural, Medium Density Rural,  
2 High Density Rural, and General Rural (the "Project").

3 **1.3 Past Approvals.** The OWNERS have obtained the following  
4 approvals from the COUNTY pertaining to the Project:

- 5
- 6 a) On February 8, 1994 OWNERS obtained approval from  
7 the ~~Washee~~ Board of County Commissioners pursuant to  
8 Code § 110.814.70 of a preliminary development  
9 agreement. *DAR-1-93*
- 10 b) On November 8, 1994 OWNERS obtained approval from  
11 the ~~Washee~~ Board of County Commissioners to amend  
12 the preliminary development agreement.
- 13 c) On May 2, 1995 OWNERS obtained approval from the  
14 ~~Washee County~~ Planning Commission for a Special Use  
15 Permit to grade the first golf course and improve the  
16 construction access. The order issuing such approval is  
17 attached as Exhibit "B". *SPW9-13-93*
- 18 d) On September 5, 1995 OWNERS obtained approval from  
19 the ~~Washee County~~ Planning Commission for a Special  
20 Use Permit to develop a water system having storage of  
21 1.4 million gallons and necessary delivery system. The  
22 order issuing such approval is attached as Exhibit "C"  
23 *SPW9-10-93*
- 24 e) On September 27, 1994 Owners obtained approval from  
25 the Board of County Commissioners for an 18-month  
26 extension to submit a draft final agreement, which Owners  
27 have submitted in compliance with said extension.
- 28 f) On 5/7/96 OWNERS obtained approval from  
the Washoe County Planning Commission for conditions  
to the final development agreement. Said conditions and  
amendments thereto approved concurrently with this  
Agreement by the Board Of County Commissions, and are  
attached hereto as Exhibit "D".

*Reverse  
chronological*

26 **1.4 Ordinance.** This Agreement shall be approved by ordinance. The  
27 Project is to be developed as a single entity and includes uses and development

1 standards consistent with the Washoe County Comprehensive Plan and the Southwest  
2 Truckee Meadows Area Plan.

3           **1.5 Benefit To OWNERS.** The OWNERS acknowledge and agree  
4 that, prior to entering into this Agreement appropriate legal advice and counsel was  
5 sought, that the OWNERS made a voluntary informed business decision to enter into  
6 this Agreement in good faith. The OWNERS further acknowledge and agree that  
7 substantial benefits will accrue to the OWNERS as a result of the OWNERS and the  
8 COUNTY entering into this Agreement, including entitlements to develop the Project  
9 in accordance with this Agreement and the Conditions of Approval, an extension or  
10 opportunity to seek an extension of the time in which to file a final subdivision map  
11 under this Agreement, certainty in the particular on-site and offsite improvements and  
12 requirements which the OWNERS will be responsible for constructing or completing,  
13 and certainty in the imposition of land use fees or obligations which may be imposed  
14 by the COUNTY.  
15

16  
17           **1.6 Benefit to COUNTY.** The COUNTY acknowledges and agrees  
18 that substantial benefits will accrue to the COUNTY as a result of OWNERS and the  
19 COUNTY entering into this Agreement, including the rational, planned land uses and  
20 development of the Real Property.  
21

22           **2. SELECTED DEFINITIONS.**

23           2.1 "Agreement" means this development agreement.

24           2.2 "Conditions of Approval" mean all conditions of the Project  
25 approvals as set forth in the orders from Washoe County attached to this Agreement  
26  
27  
28

1 as Exhibits B, C, and D, which conditions are incorporated herein as provisions of this  
2 Agreement.

3 2.3 "COUNTY" means Washoe County, a political subdivision of the  
4 State of Nevada, and its officers, elected officials, agents, employees, divisions,  
5 departments, committees, boards and commissions.

6 2.4 CC&Rs means the declaration of covenants, conditions and  
7 restrictions which will be drafted by OWNERS, approved by the COUNTY and  
8 recorded against the Real Property, as further provided in the Conditions of Approval.

9 2.5 "Development Standards Handbook" means the development  
10 standards for the Project as set forth in Exhibit "E".

11 2.6 "Golf Course Property" includes all real property for the golf and  
12 related recreational facilities component of the Project.

13 2.7 "OWNERS" mean those property owners identified above and  
14 their successors and assigns.

15 2.8 "Project" means the Southwest Pointe development as approved  
16 by the COUNTY in Case No. DA9-1-93 and this Agreement.

17 2.9 "Public Facilities" are facilities that will be dedicated to the  
18 COUNTY. Public Facilities shall include, but are not limited to: storm drains and drop  
19 inlets; on-site or offsite sewage collection facilities; water rights dedicated for service;  
20 water systems facilities; together with all lines, mains, holding and disposing areas,  
21 tanks, public easements and rights-of-way; and all off-site improvements that include  
22 public roadways, equipment, street lights and traffic signals. OWNER constructed  
23 Public Facilities for water will include all non-golf related improvements consisting of

the required water storage tanks, well improvements, water mains, water services, water meters, gate valves, fire hydrants, flush valves, air release valves and related appurtenances. The Public Facilities for sewer will include sewer manholes, sewer mains, sewer laterals and collection lines within the Common Area Property as well as off-site effluent irrigation lines, tanks and pump stations, and the on-site effluent main line and reservoirs. In addition, Public Facilities also includes improvement of Whites Creek Lane as specified in the Conditions of Approval.

2.10 "Public Utilities" include, but are not limited to, water, sewer, natural gas, electricity, telephone, and cable television, together with all equipment and easements dedicated for these utilities.

2.11 "Real Property" means all the real property described in Exhibit "A". The real property includes the Golf Course Property, the Subdivision Property, and any remaining real property within the Project.

2.12 "Site Plan" means the plans in compliance with Code § 110.814.45 and attached hereto as Exhibit "F", and includes the Development Standards Handbook, Exhibit "E".

2.13 "Subdivision Improvements" are any on-site or off-site improvements or facilities required of residential subdivisions pursuant to this Agreement. Subdivision Improvements include, but are not limited to, all drainage improvements, common area improvements, curbs, streets, gutters, medians, parkways, pedestrian and bike paths, sidewalks, street lights, ~~storm drains~~, any directional traffic devices, and the Public Facilities required in connection with residential development.

2.14 "Subdivision Property" includes all real property for the residential housing component of the Project.

3. **REQUIRED CONTENTS OF AGREEMENT.** Pursuant to Code § 110.814.75, the following matters are included in this Agreement.

3.1 **Preliminary Agreement.** Reference is made to the preliminary development agreement as approved in Case No. DA9-1-93 and amended or superseded by this Agreement.

3.2 **Legal Agreement.** The substance of covenants, grants or easements, or other restrictions proposed to be imposed upon the use of the land, buildings and structures, including proposed easements or grants for Public Utilities shall be as provided in the CC&Rs and as specified in the Conditions of Approval.

3.3 **Site Plan.** A Site Plan in conformance to Code § 110.814.45 is attached to this Agreement as Exhibit "F"; and includes the Development Standards Handbook, Exhibit "E".

3.4 **Installation and Maintenance.** A program for the installation and maintenance of parking areas, lighting, landscaping, private streets, utilities, recreational facilities and other infrastructure is specified in the Conditions of Approval and will be further provided for, in part, in the CC&Rs.

3.5 **Open Space Resources.** A program for the protection of open space resources, approved by COUNTY, is attached as Exhibit "G". (over)

3.6 **Development Schedule And Phasing.** Guidelines for a development schedule and phasing of the Project are more particularly described in the Development Standards Handbook ( See Article I), Exhibit "E".

3.5 No open space shall be sold to a bona fide third party without prior written approval consent of County. As provided in Exhibit "G", after the 10-acre park is constructed, the County shall be responsible for park maintenance and upkeep.

1 ~~The approximate date for the start of construction for the first phase shall be on or~~  
2 ~~before October 1, 1996. The first phase of the Project shall be construction of the first~~  
3 ~~18 holes of the Golf Course Property. All phases after the first phase for Subdivision~~  
4 ~~Improvements shall be constructed within the time frames allowed pursuant to~~  
5 ~~tentative maps and final maps for the Project. Nonresidential development shall be~~  
6 ~~constructed pursuant to special use permits, when applicable, under the time frame~~  
7 ~~provided therein. Other phasing requirements shall be as provided in the Conditions~~  
8 ~~of Approval.~~

9  
10 **3.7 Development Standards Handbook.** A Development Standards  
11 Handbook in compliance with Code § 110.814.35(a) is attached hereto as Exhibit "E".

12 **4. EFFECT OF AGREEMENT.** (OVER)

13 **4.1 Entitlements.** The approval of this Agreement by County  
14 constitutes a vested right of Owners to develop the Real Property as set forth in this  
15 Agreement and pursuant to the land use designations provided herein. Pursuant to  
16 Code § 110.814.15(b), this Agreement does not prevent COUNTY in a subsequent  
17 action applicable to the Real Property from adopting new ordinances, resolutions or  
18 regulations that conflict with those ordinances, resolutions and regulations in effect at  
19 the time this Agreement is made, provided any new ordinances, resolutions or  
20 regulations do not impose upon OWNERS restrictions, requirements or standards  
21 which are more burdensome, more expensive or more onerous to satisfy than those  
22 in effect at the time this Agreement is made; and provided further that any said new  
23 ordinances, resolutions or regulations do not conflict with provisions of this Agreement  
24 in a manner that adversely affects OWNERS. The parties agree such a conflict or  
25  
26  
27  
28

### 3.8 Incorporation of Other Exhibits

Following exhibits are also incorporated

1 inconsistency would prevent development of the Project as set forth in this Agreement.  
2 Nothing contained in this subsection 4.1 shall be construed to impair enforcement or  
3 compliance with the provisions of Code § 110.814.15(c) or (d).

4           **4.2    Subsequent Approvals And Conditions.** Tentative maps and  
5 final maps for Subdivision Property, building permits, variances, parcel maps,  
6 boundary line adjustments, special use permits for nonresidential property, and other  
7 approvals by COUNTY within the Project ("Subsequent Approvals") shall be required  
8 pursuant to Code requirements in existence at the time this Agreement is made,  
9 except as stated otherwise herein. All Subsequent Approvals in conformance with  
10 NRS Chapter 278 and the Code (as amended hereby), and in substantial  
11 conformance with the provisions of this Agreement shall be approved by the COUNTY  
12 as a consent item without public hearing. The Conditions of Approval specified in  
13 Exhibit "B", "C", and "D" may not be amended by Subsequent Approvals without the  
14 consent of OWNERS. Any conditions imposed by COUNTY in Subsequent Approvals  
15 which pertain to the same subject matter as any Conditions of Approval may not  
16 impose restrictions, requirements or standards which are more burdensome, more  
17 expensive or more onerous for Owners to satisfy than any Conditions of Approval,  
18 without the consent of OWNERS; provided that reasonable conditions imposed by  
19 COUNTY in Subsequent Approvals which pertain to matters not addressed by any  
20 Conditions of Approval, or provide more detail and do not conflict with matters  
21 addressed by any Conditions of Approval, shall be allowed.

22           Conditions and provisions hereof regarding construction of off-site or on-site  
23 improvements (e.g. streets and utilities), including development standards and design

guidelines, may be varied upon request of the Owner and approval of the County Engineer.

**4.3 Subsequent Fees.** COUNTY currently imposes four (4) fees for the privilege of developing real property: a water connection fee; a sewer connection fee; a park residential construction tax; and the Regional Road Impact Fee ("RRIF") ("collectively County Fees"). The County Fees shall be imposed on applicable development within the Project in the same manner said fees are imposed for other similarly situated development in the COUNTY, subject to the following conditions.

4.3.1 Provided OWNERS construct a potable water system as part of the Public Facilities to serve the potable water demands of the Project as those demands arise, COUNTY shall charge no water connection fee for development within the Project.

4.3.2 Provided OWNERS receive a credit for all off-site sewer facilities infrastructure constructed by OWNERS, OWNERS shall pay the sewer connection fee at the time and in the amount specified by COUNTY ordinance.

4.3.3 Subject to any credits allowed by a RRIF Capital Front-Ending Agreement, OWNERS shall pay the RRIF at the time and in the amount specified by County ordinance.

4.3.4 Subject to the provisions of an agreement between COUNTY and OWNERS for the construction of neighborhood park improvements within the Project, OWNERS shall pay the park residential construction tax at the time and in the amount specified under NRS 278.497 to NRS 278.4987.

**4.4 No New COUNTY Fees.** Except for the County Fees or as

1 specified in subsections 4.5 and 4.6 below, no new fees or taxes enacted or approved  
2 by COUNTY after the date this Agreement is made for construction or development  
3 within the Project or for capital improvements for Public Facilities shall apply to the  
4 Project.

5  
6 *MADDY* **4.5 Special Assessment Districts.** At the option of OWNERS, the  
7 parties agree that certain Public Facilities shall be financed, constructed and paid for,  
8 in whole or in part, by one or more developer special assessment districts. The  
9 following improvements are agreed to provide a public benefit and are includable at  
10 the discretion of OWNERS in such special assessment districts:

- 11 (a) the construction and land costs of Whites Creek Lane;
- 12 (b) the County-owned nonpotable water system for golf
- 13 course and landscape irrigation;
- 14 (c) the purchase price of creek water rights (with
- 15 supplemental groundwater rights for the nonpotable water
- 16 system and water rights for the potable water system;
- 17 (d) the off-site Public Utilities;
- 18 (e) the County-owned potable water system; and
- 19 ~~(f) the neighborhood park improvements and land costs; and~~
- 20 (f) landscaping improvements in ~~common area~~ and
- 21 trails/paths along public streets.

22 **4.6 Nonpotable Water Agreement.** Any fees, costs and expenses  
23 of OWNERS pursuant to an agreement between the parties for the provision of  
24 nonpotable water for golf course and common area landscape irrigation shall not be  
25 construed as a new fee under subsection 4.4. above.

**4.7 Credits Or Reimbursements Of County Fees.** No successor or assign of OWNERS shall be entitled to a credit or reimbursement of a County Fee or fee imposed pursuant to subsection 4.6 above, unless that successor OWNER obtains an express assignment of the right to the credit or reimbursement from the OWNER who paid for or earned the credit or reimbursement of a County Fee.

**4.8 Parcel Maps.** OWNERS shall be entitled to submit or obtain approval of parcel maps within Project in order to facilitate development, even if said parcel maps create legal parcels within an area of the Project subject to a tentative map, provided that such parcel maps are not used as a subterfuge to create residential lots subject to an approved tentative map. OWNERS shall not be required to dedicate water rights for new parcels created by parcel maps within the Project, if such new parcels are not intended to require potable water service by COUNTY under the provisions of this Agreement.

**4.9 Security For Improvements.** In order to construct improvements pursuant to this Agreement for which COUNTY customarily requires security to be posted prior to commencement, OWNERS shall not be required to provide security to COUNTY for the construction of private streets or Public Utilities which upon completion are not to be owned by COUNTY. Any security required by COUNTY shall be in the amount of:

- (a) One hundred percent (100%) of the approved engineer's cost estimate for the improvements to be constructed; plus
- (b) Twenty percent (20%) of that sum as a contingency amount.

**5. TERM OF AGREEMENT.**

The term of this Agreement shall be fifteen (15) years from the date hereof; provided that all applicable terms of this Agreement shall remain binding and enforceable regarding permits, construction or development on any portion of the Real Property subject to a tentative map, a recorded final map or a special use permit in existence at the time of expiration of this Agreement.

**6. OBLIGATIONS OF OWNERS/ASSIGNMENT.**

The parties acknowledge that OWNERS will sell or otherwise convey title to portions of the Real Property as development occurs. Successors to OWNERS shall acquire rights and assume obligations only to the extent required under this Agreement to develop or use the portion of the Real Property so acquired. Upon conveyance of each portion of Real Property, OWNERS' liability for obligations under this Agreement shall terminate, provided the successor OWNER assumes said obligations. The provisions of this Agreement constitute covenants running with the Real Property. Notwithstanding the provisions of this Section 6, a successor OWNER of a single lot created by final map within the Project shall not have any obligation under this Agreement other than for development and use of the lot so owned consistent with this Agreement.

**7. MISCELLANEOUS.**

**7.1 Governing Law; Venue.** This Agreement is being executed and delivered in Washoe County, Nevada, and is intended to be performed in the State of Nevada, and the laws of Nevada shall govern the validity, construction, enforcement and interpretation of this Agreement. Venue for any legal action arising out of this Agreement shall be in Washoe County, Nevada.

**7.2 Entirety and Amendments.** This Agreement embodies the entire Agreement between the parties and supersedes all prior agreements and understandings, if any, relating to the Project, and may be amended or supplemented only by an instrument in writing executed by the party against whom enforcement is sought, and as provided in Code § 110814.95(b). No oral statements or representations made before or after the execution of this Agreement regarding the subject matter of this Agreement are binding on a party, nor may any such oral statements or representations be relied on by a party.

**7.3 Invalid Provisions.** If any provision of this Agreement is held to be illegal, invalid or unenforceable under present or future laws, such provision shall be fully severable. The Agreement shall be construed and enforced as if such illegal, invalid or unenforceable provision had never comprised a part of the Agreement. The remaining provisions of the Agreement shall remain in full force and effect and shall not be affected by the illegal, invalid or unenforceable provision or by its severance from this Agreement.

**7.4 Parties Bound and Assignment.** Subject to the provisions of Section 6, this Agreement shall be binding upon and inure to the benefit of the parties, and their respective heirs, personal representatives, successors and assigns. In the event COUNTY, for any reason, ceases to have jurisdiction as the applicable local governmental entity regarding the subject matter of all or any part of the Agreement, COUNTY shall require the new entity to assume the applicable obligations hereof.

**7.5 Further Acts.** In addition to the acts recited in this Agreement to be performed, the parties agree to perform, or cause to be performed, any and all further acts as may be reasonably necessary to consummate the obligations contemplated hereby.

**7.6 Headings.** Headings used in this Agreement are used for reference purposes only and do not constitute substantive matter to be considered in construing the terms of this Agreement.

**7.7 Attorneys' Fees.** In the event that any action is necessary to enforce the rights of any party hereto, the prevailing party in any such action shall be entitled to reasonable costs and attorneys' fees.

**7.8 Notice.** All notices given pursuant to this Agreement shall be in writing and shall be given by personal delivery, by facsimile transmission, by United States mail or by United States express

other party. All notices given pursuant to this Agreement shall be deemed given upon delivery.

**7.9 Receipt Defined.** For the purpose of this Agreement, the term "delivery" shall mean any of the following: (a) the date of delivery of the notice or other document as shown on the return receipt; (b) the date of actual receipt of the notice or other document; or (c) in the case of refusal to accept delivery or inability to deliver the notice or other document, the earlier of: (i) the date of the attempted delivery or refusal to accept delivery; (ii) the date of the postmark on the return receipt; or (iii) the date of receipt of notice of refusal or notice of nondelivery by the sending party.

**7.10 Indemnity.** Developer shall indemnify and hold harmless COUNTY and its officers, employees, and agents, from any claims, demands, losses, defense costs, or liability of any kind or nature, which COUNTY may sustain or incur or which may be imposed upon them out of actions by, or the negligence of, Developer, its officers, agents or employees, arising out of Developer's obligations specified in Section 2 hereof, accepting only liability arising out of gross negligence or intentional wrong doing by County, its officers, agents, or employees.

**7.11 Arbitration.** Any dispute arising from rights or obligations of this Agreement shall be submitted to arbitration pursuant to the Commercial Rules of the American Arbitration Association, including any disputes regarding consents or approvals to be given by a party. The decision of the arbitrator shall be final and binding on both parties.

**7.12 Recordation.** This Agreement shall not be recorded, but in order to comply with Code § 110.814.95(c) the Memorandum Of Agreement attached hereto as Exhibit \_\_\_\_ shall be recorded upon execution hereof in the office of the Recorder of Washoe County, Nevada.

**7.13 Exhibits.** All exhibits to this Agreement are incorporated herein as if fully set forth.

**PROPOSED LANGUAGE ON PHASING**  
**FOR DEVELOPMENT STANDARDS HANDBOOK**

Page 1-8     **Development Phasing.**

Construction will commence in late summer or early fall 1996. The project will begin with the development of construction access roads and grading of the initial (lower) golf course. Coincidental with these activities will be the construction of utilities as well as the entry road and the main loop road that services the golf course clubhouse, swim and tennis facility and Phase I residential areas (approximately 400 lots). It is estimated that "intract" improvements for the residential lots in Phase I will occur over a three to four year period following grading of the entry road and main loop road, depending on market conditions.

Construction of the swim and tennis facility is proposed to commence as Phase I approaches "build out".

As the Phase I residential land approaches build out, grading, road improvements and utilities for the Phase II residential areas (approximately 350 lots) will commence. It is estimated that "intract" improvements for the residential lots in Phase II will occur over a three to four year period following grading of the roads, depending on market conditions. The second golf course is proposed for construction during the development of Phase II; however, the demand for golf will dictate whether it occurs sooner or later.

As the Phase II residential land approaches build out, grading and road improvements for the Phase III residential areas (approximately 340 lots) will commence. It is estimated that "intract" improvements for the residential lots in Phase III will occur over a three to four year period following grading of the roads, depending on market conditions.

It should be noted that, depending on market conditions, Phase II and Phase III may be smaller than indicated above, resulting in the potential of one or more additional phases.

23  
24  
25  
26  
27  
28

The proposed neighborhood commercial use, located across from the golf clubhouse area, is projected for development in or beyond Phase III. The precise timing, and whether or not it will be built, will be predicated on market conditions. In any event, at the time the initial phases are developed, there will probably not be enough residents to support neighborhood commercial uses.

Appropriate open space dedications, trail improvements, right-of-way landscaping and other community improvements will occur coincidental to the development of each phase of the project, pursuant to conditions of tentative maps or special use permits.

The time frames mentioned above may be shortened or lengthened by the developer, and the phases may be changed, if the developer believes such changes are necessary or advisable to improve development potential. As more particularly specified in the final development agreement, the agreement expires fifteen (15) years from the date of its execution.

**DRAFT**

**FINAL DEVELOPMENT AGREEMENT**

1  
2  
3  
4 This Agreement is entered into this \_\_\_ day of \_\_\_\_\_, 1996 by and  
5 between the **COUNTY OF WASHOE**, a political subdivision of the State of Nevada  
6 ("**COUNTY**"); and **BETTY ALYCE JONES, HELEN JEANE JONES, IRIS G.**  
7 **BREWERTON, KENNETH G. WALKER, AND GERALD C. SMITH**, Trustees of The  
8 Neil J. Redfield Trust and **SOUTHWEST POINTE PARTNERS**, a Nevada general  
9 partnership, (collectively referred to as "**OWNERS**"). For valuable consideration,  
10 receipt of which is hereby acknowledged, the parties agree as follows:

11  
12 1. **GENERAL.**

13 1.1 **Legal Authority.** Nevada Revised Statute ("NRS") 278.0201 to  
14 278.0207 and Washoe County Development Code (the "Code") §§ 110.814.00 to  
15 110.814.95 authorize the COUNTY and the OWNERS to enter into agreements for the  
16 development of real property. This Agreement is a final development agreement, as  
17 defined in Code § 110.814.75, and as provided in NRS Chapter 278.  
18

19 1.2 **The Project.** The OWNERS hold a legal or equitable interest in  
20 certain real property located in COUNTY, a legal description of which is attached as  
21 Exhibit "A". Development of the real property, subject to the terms of this Agreement,  
22 has been authorized by COUNTY under Case No. DA9-1-93 and ancillary cases, and  
23 is described as a residential community which includes 1,090 residential lots with  
24 common open space, a water delivery system (potable and nonpotable), sewer  
25 system, two golf courses with related recreational facilities, and a commercial village  
26 center, the total acreage being  $\pm 3,171.6$  acres, designated under COUNTY land use  
27  
28

1 designations as Low Density Suburban, Low Density Rural, Medium Density Rural,  
2 High Density Rural, and General Rural (the "Project").

3  
4 **1.3 Past Approvals.** The OWNERS have obtained the following  
5 approvals from the COUNTY pertaining to the Project:

- 6 a) On February 8, 1994 OWNERS obtained approval from  
7 the Washoe Board of County Commissioners pursuant to  
8 Code § 110.814.70 of a preliminary development  
9 agreement.
- 10 b) On November 8, 1994 OWNERS obtained approval from  
11 the Washoe Board of County Commissioners to amend  
12 the preliminary development agreement. *§ SUP amended*
- 13 c) On May 2, 1995 OWNERS obtained approval from the  
14 Washoe County Planning Commission for a Special Use  
15 Permit to grade the first golf course and improve the  
16 construction access. The order issuing such approval is  
17 attached as Exhibit "B".
- 18 d) On September 5, 1995 OWNERS obtained approval from  
19 the Washoe County Planning Commission for a Special  
20 Use Permit to develop a water system having storage of  
21 1.4 million gallons and necessary delivery system. The  
22 order issuing such approval is attached as Exhibit "C"
- 23 e) On \_\_\_\_\_ OWNERS obtained approval from  
24 the Washoe County Planning Commission for conditions  
25 to the final development agreement. Said conditions and  
26 amendments thereto approved concurrently with this  
27 Agreement by the Board Of County Commissions, and are  
28 attached hereto as Exhibit "D".

23 **1.4 Ordinance.** This Agreement shall be approved by ordinance. The  
24 Project is to be developed as a single entity and includes uses and development  
25 standards consistent with the Washoe County Comprehensive Plan and the Southwest  
26 Truckee Meadows Area Plan.

1.5 **Benefit To OWNERS.** The OWNERS acknowledge and agree that, prior to entering into this Agreement appropriate legal advice and counsel was sought, that the OWNERS made a voluntary informed business decision to enter into this Agreement in good faith. The OWNERS further acknowledge and agree that substantial benefits will accrue to the OWNERS as a result of the OWNERS and the COUNTY entering into this Agreement, including entitlements to develop the Project in accordance with this Agreement and the Conditions of Approval, an extension or opportunity to seek an extension of the time in which to file a final subdivision map under this Agreement, certainty in the particular on-site and offsite improvements and requirements which the OWNERS will be responsible for constructing or completing, and certainty in the imposition of land use fees or obligations which may be imposed by the COUNTY.

1.6 **Benefit to COUNTY.** The COUNTY acknowledges and agrees that substantial benefits will accrue to the COUNTY as a result of OWNERS and the COUNTY entering into this Agreement, including the rational, planned land uses and development of the Real Property.

**2. SELECTED DEFINITIONS.**

2.1 "Agreement" means this development agreement.

2.2 "Conditions of Approval" mean all conditions of the Project approvals as set forth in the orders from Washoe County attached to this Agreement as Exhibits B, C, and D, which conditions are incorporated herein as provisions of this Agreement.

2.3 "COUNTY" means Washoe County, a political subdivision of the State of Nevada, and its officers, elected officials, agents, employees, divisions, departments, committees, boards and commissions.

2.4 CC&Rs means the declaration of covenants, conditions and restrictions which will be drafted by OWNERS, approved by the COUNTY and recorded against the Real Property, as further provided in the Conditions of Approval.

2.5 "Development Standards Handbook" means the development standards for the Project as set forth in Exhibit "\_\_\_".

2.6 "Golf Course Property" includes all real property for the golf and related recreational facilities component of the Project.

2.7 "OWNERS" mean those property owners identified above and their successors and assigns.

2.8 "Project" means the Southwest Pointe development as approved by the COUNTY in Case No. DA9-1-93 and this Agreement.

2.9 "Public Facilities" are facilities that will be dedicated to the COUNTY. Public Facilities shall include, but are not limited to: storm drains and drop inlets; on-site or offsite sewage collection facilities; water rights dedicated for service; water systems facilities; together with all lines, mains, holding and disposing areas, tanks, public easements and rights-of-way; and all off-site improvements that include public roadways, equipment, street lights and traffic signals. OWNER constructed Public Facilities for water will include all non-golf related improvements consisting of the required water storage tanks, well improvements, water mains, water services, water meters, gate valves, fire hydrants, flush valves, air release valves and related

appurtenances. The Public Facilities for sewer will include sewer manholes, sewer mains, sewer laterals and collection lines within the Common Area Property as well as off-site effluent irrigation lines, tanks and pump stations, and the on-site effluent main line and reservoirs. In addition, Public Facilities also includes improvement of Whites Creek Lane as specified in the Conditions of Approval.

2.10 "Public Utilities" include, but are not limited to, water, sewer, natural gas, electricity, telephone, and cable television, together with all equipment and easements dedicated for these utilities.

2.11 "Real Property" means all the real property described in Exhibit "A". The real property includes the Golf Course Property, the Subdivision Property, and any remaining real property within the Project.

2.12 "Site Plan" means the plan in compliance with Code § 110.814.45 and attached hereto as Exhibit "\_\_\_".

2.13 "Subdivision Improvements" are any on-site or off-site improvements or facilities required of residential subdivisions pursuant to this Agreement. Subdivision Improvements include, but are not limited to, all drainage improvements, common area improvements, curbs, streets, gutters, medians, parkways, pedestrian and bike paths, sidewalks, street lights, storm drains, any directional traffic devices, and the Public Facilities required in connection with residential development.

2.14 "Subdivision Property" includes all real property for the residential housing component of the Project.

3. **REQUIRED CONTENTS OF AGREEMENT.** Pursuant to Code §

110.814.75, the following matters are included in this Agreement.

3.1 **Preliminary Agreement.** Reference is made to the preliminary development agreement as approved in Case No. DA9-1-93 and amended or superseded by this Agreement.

3.2 **Legal Agreement.** The substance of covenants, grants or easements, or other restrictions proposed to be imposed upon the use of the land, buildings and structures, including proposed easements or grants for Public Utilities shall be as provided in the CC&Rs and as specified in the Conditions of Approval.

3.3 **Site Plan.** A Site Plan in conformance to Code § 110.814.45 is attached to this Agreement as Exhibit "\_\_\_".

3.4 **Installation and Maintenance.** A program for the installation and maintenance of parking areas, lighting, landscaping, private streets, utilities, recreational facilities and other infrastructure is specified in the Conditions of Approval and will be further provided for, in part, in the CC&Rs.

3.5 **Open Space Resources.** A program for the protection of open space resources, approved by COUNTY, is attached as Exhibit "\_\_\_".

3.6 **Development Schedule And Phasing.** The approximate date for the start of construction for the first phase shall be on or before October 1, 1996. The first phase of the Project shall be construction of the first 18 holes of the Golf Course Property. All phases after the first phase for Subdivision Improvements shall be constructed within the time frames allowed pursuant to tentative maps and final maps for the Project. Nonresidential development shall be constructed pursuant to special

use permits, when applicable, under the time frame provided therein. Other phasing requirements shall be as provided in the Conditions of Approval.

**3.7 Development Standards Handbook.** A Development Standards Handbook in compliance with Code § 110.814.35(a) is attached hereto as Exhibit" \_".

**4. EFFECT OF AGREEMENT.**

**4.1 Entitlements.** The approval of this Agreement by County constitutes a vested right of Owners to develop the Real Property as set forth in this Agreement and pursuant to the land use designations provided herein. Pursuant to Code § 110.814.15(b), this Agreement does not prevent COUNTY in a subsequent action applicable to the Real Property from adopting new ordinances, resolutions or regulations that conflict with those ordinances, resolutions and regulations in effect at the time this Agreement is made, provided any new ordinances, resolutions or regulations do not impose upon OWNERS restrictions, requirements or standards which are more burdensome, more expensive or more onerous to satisfy than those in effect at the time this Agreement is made; and provided further that any said new ordinances, resolutions or regulations do not conflict with provisions of this Agreement in a manner that adversely affects OWNERS. The parties agree such a conflict or inconsistency would prevent development of the Project as set forth in this Agreement. Nothing contained in this subsection 4.1 shall be construed to impair enforcement or compliance with the provisions of Code § 110.814.15(c) or (d).

**4.2 Subsequent Approvals And Conditions.** Tentative maps and final maps for Subdivision Property, building permits, variances, parcel maps, boundary line adjustments, special use permits for nonresidential property, and other

1 approvals by COUNTY within the Project ("Subsequent Approvals") shall be required  
2 pursuant to Code requirements in existence at the time this Agreement is made,  
3 except as stated otherwise herein. All Subsequent Approvals in conformance with  
4 NRS Chapter 278 and the Code (as amended hereby), and in substantial  
5 conformance with the provisions of this Agreement shall be approved by the COUNTY  
6 as a consent item without public hearing. The Conditions of Approval specified in  
7 Exhibit "B", "C", and "D" may not be amended by Subsequent Approvals without the  
8 consent of OWNERS. Any conditions imposed by COUNTY in Subsequent Approvals  
9 which pertain to the same subject matter as any Conditions of Approval may not  
10 impose restrictions, requirements or standards which are more burdensome, more  
11 expensive or more onerous for Owners to satisfy than any Conditions of Approval,  
12 without the consent of OWNERS; provided that reasonable conditions imposed by  
13 COUNTY in Subsequent Approvals which pertain to matters not addressed by any  
14 Conditions of Approval, or provide more detail and do not conflict with matters  
15 addressed by any Conditions of Approval, shall be allowed.  
16  
17

18 Conditions and provisions hereof regarding construction of off-site or on-site  
19 improvements (e.g. streets and utilities), including development standards and design  
20 guidelines, may be varied upon request of the Owner and approval of the County  
21 Engineer. *No limit specified*  
22

23 **4.3 Subsequent Fees.** COUNTY currently imposes four (4) fees for  
24 the privilege of developing real property: a water connection fee; a sewer connection  
25 fee; a park residential construction tax; and the Regional Road Impact Fee ("RRIF")  
26 ("collectively County Fees"). The County Fees shall be imposed on applicable

development within the Project in the same manner said fees are imposed for other similarly situated development in the COUNTY, subject to the following conditions.

4.3.1 Provided OWNERS construct a potable water system as part of the Public Facilities to serve the potable water demands of the Project as those demands arise, COUNTY shall charge no water connection fee for development within the Project.

4.3.2 Provided OWNERS receive a credit for all off-site sewer facilities infrastructure constructed by OWNERS, OWNERS shall pay the sewer connection fee at the time and in the amount specified by COUNTY ordinance.

4.3.3 Subject to any credits allowed by a RRIF Capital Front-Ending Agreement, OWNERS shall pay the RRIF at the time and in the amount specified by County ordinance.

4.3.4 Subject to the provisions of an agreement between COUNTY and OWNERS for the construction of neighborhood park improvements within the Project, OWNERS shall pay the park residential construction tax at the time and in the amount specified under NRS 278.497 to NRS 278.4987.

**4.4 No New COUNTY Fees.** Except for the County Fees or as specified in subsections 4.5 and 4.6 below, no new fees or taxes enacted or approved by COUNTY after the date this Agreement is made for construction or development within the Project or for capital improvements for Public Facilities shall apply to the Project.

**4.5 Special Assessment Districts.** At the option of OWNERS, the parties agree that certain Public Facilities shall be financed, constructed and paid for, in whole or in part, by one or more developer special assessment districts. The following improvements are agreed to provide a public benefit and are includable at the discretion of OWNERS in such special assessment districts:

- (a) the construction and land costs of Whites Creek Lane;
- (b) the <sup>county-owned</sup> nonpotable water system for golf course and landscape irrigation;
- (c) ↗ the purchase price of creek water for the nonpotable water system and water rights for the potable water system;
- (d) the off-site Public Utilities;
- (e) the potable water system;
- (f) the neighborhood park improvements and land costs; and
- (g) landscaping improvements in common area.

*Why not RAZ*

**4.6 Nonpotable Water Agreement.** Any fees, costs and expenses of OWNERS pursuant to an agreement between the parties for the provision of nonpotable water for golf course and common area landscape irrigation shall not be construed as a new fee under subsection 4.4. above.

**4.7 Credits Or Reimbursements Of County Fees.** No successor or assign of OWNERS shall be entitled to a credit or reimbursement of a County Fee or fee imposed pursuant to subsection 4.6 above, unless that successor OWNER obtains an express assignment of the right to the credit or reimbursement from the OWNER who paid for or earned the credit or reimbursement of a County Fee.

**4.8 Parcel Maps.** OWNERS shall be entitled to submit or obtain approval of parcel maps within Project in order to facilitate development, even if said parcel maps create legal parcels within an area of the Project subject to a tentative map, provided that such parcel maps are not used as a subterfuge to create residential lots subject to an approved tentative map. OWNERS shall not be required to dedicate water rights for new parcels created by parcel maps within the Project, if such new parcels are not intended to require potable water service by COUNTY under the provisions of this Agreement.

**4.8 Security For Improvements.** In order to construct improvements pursuant to this Agreement for which COUNTY customarily requires security to be posted prior to commencement, OWNERS shall not be required to provide security to COUNTY for the construction of private streets or Public Utilities which upon completion are not to be owned by COUNTY. Any security required by COUNTY shall be in the amount of:

- (a) One hundred percent (100%) of the approved engineer's cost estimate for the improvements to be constructed; plus
- (b) Twenty percent (20%) of that sum as a contingency amount.

**5. TERM OF AGREEMENT.**

The term of this Agreement shall be fifteen (15) years from the date hereof; provided that all applicable terms of this Agreement shall remain binding and enforceable regarding permits, construction or development on any portion of the Real Property subject to a recorded final map or special use permit in existence at the time of expiration of this Agreement.

**6. OBLIGATIONS OF OWNERS/ASSIGNMENT.**

The parties acknowledge that OWNERS will sell or otherwise convey title to portions of the Real Property as development occurs. Successors to OWNERS shall acquire rights and assume obligations only to the extent required under this Agreement to develop or use the portion of the Real Property so acquired. Upon conveyance of each portion of Real Property, OWNERS' liability for obligations under this Agreement shall terminate, provided the successor OWNER assumes said obligations. The provisions of this Agreement constitute covenants running with the Real Property. Notwithstanding the provisions of this Section 6, a successor OWNER of a single lot created by final map within the Project shall not have any obligation under this Agreement other than for development and use of the lot so owned.

**7. MISCELLANEOUS.**

**7.1 Governing Law; Venue.** This Agreement is being executed and delivered in Washoe County, Nevada, and is intended to be performed in the State of Nevada, and the laws of Nevada shall govern the validity, construction, enforcement and interpretation of this Agreement. Venue for any legal action arising out of this Agreement shall be in Washoe County, Nevada.

**7.2 Entirety and Amendments.** This Agreement embodies the entire Agreement between the parties and supersedes all prior agreements and understandings, if any, relating to the Project, and may be amended or supplemented only by an instrument in writing executed by the party against whom enforcement is sought, and as provided in Code § 110814.95(b). No oral statements or representations made before or after the execution of this Agreement regarding the subject matter of this Agreement are binding on a party, nor may any such oral statements or representations be relied on by a party.

**7.3 Invalid Provisions.** If any provision of this Agreement is held to be illegal, invalid or unenforceable under present or future laws, such provision shall be fully severable. The Agreement shall be construed and enforced as if such illegal, invalid or unenforceable

provision had never comprised a part of the Agreement. The remaining provisions of the Agreement shall remain in full force and effect and shall not be affected by the illegal, invalid or unenforceable provision or by its severance from this Agreement.

**7.4 Parties Bound and Assignment.** Subject to the provisions of Section 6, this Agreement shall be binding upon and inure to the benefit of the parties, and their respective heirs, personal representatives, successors and assigns. In the event COUNTY, for any reason, ceases to have jurisdiction as the applicable local governmental entity regarding the subject matter of all or any part of the Agreement, COUNTY shall require the new entity to assume the applicable obligations hereof.

**7.5 Further Acts.** In addition to the acts recited in this Agreement to be performed, the parties agree to perform, or cause to be performed, any and all further acts as may be reasonably necessary to consummate the obligations contemplated hereby.

**7.6 Headings.** Headings used in this Agreement are used for reference purposes only and do not constitute substantive matter to be considered in construing the terms of this Agreement.

**7.7 Attorneys' Fees.** In the event that any action is necessary to enforce the rights of any party hereto, the prevailing party in any such action shall be entitled to reasonable costs and attorneys' fees.

**7.8 Notice.** All notices given pursuant to this Agreement shall be in writing and shall be given by personal delivery, by facsimile transmission, by United States mail or by United States express mail or other established express delivery service (such as Federal Express), postage or delivery charge prepaid, addressed to the appropriate party at the address set forth below:

# I. INTRODUCTION

## Purpose

This Handbook presents design guidelines and standards that will apply to the community at Southwest Pointe. This booklet serves several purposes. First, it will help prospective architects, designers, builders, and owners create residences and improvements that will fit within a defined architectural character. Second, the Handbook is intended to fulfill the requirements of Article 814, Development Agreements, of the Washoe County Development Code. Specifically, Section 110.814.75(g) of this article presents the topics that must be addressed in the Development Standards Handbook. This section of the Development Code is repeated in the Appendix, together with an explanation of where each topic has been addressed in this Handbook. And third, it is intended to provide the county and the residents in the Southwest Truckee Meadows with a feeling for the type of development being proposed.

This Handbook, along with additional provisions and "Residential Lot Declarations" that will be set forth in the Southwest Pointe CC&Rs, form the basis for evaluation of all drawings and specifications for construction submitted to the Southwest Pointe Architectural and Landscape Control Committee (ALCC) for review and approval, including any additions and modifications. The CC&Rs may specify further guidelines or restriction to those provided in this Handbook. When not in conflict, this Handbook is not meant to duplicate or supersede the requirements of Washoe County. Plans for construction will need to be processed through Washoe County and appropriate public agencies as well as through the ALCC.

## Project Description

Setting - Southwest Pointe is set in the context of a rugged mountain backdrop and sagebrush-covered slopes that are punctuated by Thomas and Dry Creeks. The 3,272-acre project is located on a prominent site overlooking the Truckee

## Development Phasing

Construction will commence in late summer or early fall 1996. The project will begin with the development of construction access roads and grading of the initial (lower) golf course. Coincidental with these activities will be the construction of utilities as well as the main entry road and the main loop road that services the golf course clubhouse, swim and tennis club, and Phase I residential areas (approximately 400 lots). An interim clubhouse will be constructed to the south of where the permanent clubhouse will eventually be built. (The golf clubhouse - interim and permanent - is described in Chapter II under the heading Community Buildings.) It is estimated that "intract" improvements for the residential lots in Phase I will occur over a 3 to 4 year period following grading of the entry road and main loop road, depending on market conditions.

As the Phase I residential land approaches build-out, grading, road improvements, and utilities for the Phase II residential areas (approximately 350 lots) will commence. It is estimated that "intract" improvements for the residential lots in Phase II will occur over a 3 to 4 year period following grading of the roads, depending on market conditions. The second golf course is proposed for construction during the development of Phase II; however, the demand for golf will dictate whether it occurs sooner or later. Construction of the swim and tennis club is proposed to commence during Phase II.

As the Phase II residential land approaches build-out, grading and road improvements for the Phase III residential areas (approximately 340 lots) will commence. It is estimated that "intract" improvements for the residential lots in Phase II will occur over a 3 to 4 year period following grading of the roads, depending on market conditions. It should be noted that, Phase II and Phase III may be smaller than indicated above, resulting in the potential of one or more additional phases.

sides of the driving range. The second situation occurs at the golf and tennis club. Around the tennis courts, a 12-foot chain link fence will be constructed, and around the pool safety fencing will be required.

These fencing heights - 8 feet around maintenance area, "net" fencing along the sides of the driving range, fencing around the tennis courts and possibly the pool area - exceed the height requirements stated in Article 406, Building Placement Standards, of the Washoe County Development Code. These standards have been modified through approval of the Final Development Agreement of which this Development Standards Handbook is a part. An administrative waiver will not be required to construct the fences described in this Handbook.

Walls will be reminiscent of the types seen historically throughout the eastern Sierra, using indigenous rock as a key material. Intersections and key places may be highlighted with attractive stone walls. Street signs or neighborhood identification signs may be integrated into walls. Walls will not exceed 6 feet in height.

**Lighting** - Lighting may be provided with landscape uplights on vegetation and pedestrian-scale bollards. Where necessary, along roadways and at intersections, lighting levels should be no more than absolutely required to perform the task for which it is intended (e.g., ambiance, safety).

Lighting levels are important to the overall lighting concept. Lighting is necessary in certain areas. For circulation safety, for functional purposes, and for aesthetics, lighting is often a necessary element. The level of lighting must also be appropriate. In general, lighting levels should be no more than absolutely required to perform the various tasks for which it is intended.

Street lights are required at major intersections (Tentative Map Condition #32). Light standards may be selected from the different types that Sierra Pacific Power Company has available; however, the developer does have the option of selecting different fixtures. Lights may be used as low-level accents for intersection signage and associated landscaping. Uplights to trees around intersections will be flush mounted. Signs should be lit from the ground, backlit, or a combination. Light spillage onto adjacent properties is discouraged. *Prohibited?*

Around the golf club and the swim and tennis club, lights in parking lots may be mounted on 25-30 foot tall poles for pedestrian and vehicle safety. Entry areas and walkways may be lit with landscape lights and bollards less than 48 inches in height. Tennis court lights will use cut-off style sports lights to limit light spill-over onto adjacent property. The multi-purpose sports fields adjacent to the swim and tennis club will not be lit since lighted fields are available at the nearby South Valleys Regional Sports Complex.

The entry at Thomas Creek and the bridge structure may be lit to a level that allows for safe driving and turning movements. The gate house will have overhead downlights for driver and license plate identification. Trees surrounding the entry will be uplit and some 'twinkle' style lights may be used.

Lighting within the neighborhood park will be minimal with a downlight below the shade shelter and an electrical receptacle provided. Field lighting is not desired because of the neighborhood function of the park and the close proximity to existing homes.

**Signs** - Community signs include signs around the project entry, along the main loop road, at neighborhood entries, around the golf club and the swim and tennis club, and street signs. Some of these signs are regulated by Chapter 105 - Off-Premise Sign Regulations and On-Premise Sign Regulations. However, the Final Development Agreement, of which this Development Standards Handbook is an exhibit, is the mechanism by which exceptions to Chapter 105 can be approved. In cases where a special use permit would have been required, no such permit shall be necessary. The staff of the Department of Development Review shall administratively review the proposed sign locations and sign design. **If necessary,** a sign permit shall be obtained. *Edg permit always required*

In regard to off-premise signs, area identification signs are proposed to identify the project, the golf course, the golf club, and the swim and tennis club which includes the neighborhood commercial center. These signs may be constructed around the entry gate house and along the main project entry road (i.e., within the right-of-way of Whites Creek Lane from Thomas Creek Road to the golf and swim

and tennis clubs). The developer shall retain the right to place area identification signs on the fire station and the neighborhood park parcels in a location within 30 feet of the right-of-way. These signs will not exceed 8 feet in height. Illumination will be indirect only.

On-premise signs include signs that advertise the business or activity that is constructed on the premises where the sign is located. Such signs would be limited to the golf course, golf club, and the swim and tennis club, which includes the neighborhood commercial center. These signs may be 8 feet in height, and no special use permit will be required. The allowable sign area shall be 160 square feet. Illumination will be indirect only. Signs may be integrated into the design of a building without <sup>requiring</sup> approval of a special use permit.

The intent is to keep all signs along roadways low, at the eye level of the motorist. Community and neighborhood signs will be integrated with entry monoliths. The sign will have native exterior facia. Sign lettering will be a metal attached to a smooth concrete backing or a cast concrete, mortared into place in the rock veneer.

Street signs for the roads and minor activity areas, such as sports fields, will be accomplished with metal or wood signs mounted on specially-designed posts, consistent with overall community design themes. Where possible, signs will be incorporated into low walls at entry points. Landscaping in front and to the sides of these signs will be kept low to avoid visual obstructions.

**Trails** - The proposed public trail system is consistent with the county's master plan for this park district. Figure 2-7 shows the trail system through the project. Regional public trails are proposed along Thomas Creek for access to the Mt. Rose Crest Trail and around the northern portion of the project for access to the MacKay Fair Flume Trail and the U.S.F.S. parcel in Section 11. Both trails provide access to the Sierra Base Trail, which eventually ties into the Hunter Lake Trail. Portions of the Sierra Base Trail are located on U.S.F.S. property and other portions, especially near Dry Creek, are located on project property. It may be necessary to relocate portions of the existing trail because of golf course and residential development near Dry Creek. ~~Developer?~~

Two trail types are proposed for the development -- private and public. Private trails connect residential neighborhoods to the various project amenities such as the golf/tennis clubs, schools, neighborhood park, and open space. The trails also lead to the exterior public trail system and regional destinations well beyond the project boundary. In compliance with the Conditions of Approval (i.e., Development Agreement Condition #13), a schematic pedestrian circulation plan of the private trail system is shown on Figure 2-7 and on Exhibit F, Sheet 1, Site Plan Layout.

Public trails connect existing residential neighborhoods to destinations such as Mt. Rose, Hunter Lake, and the MacKay Fair Flume Trail. These connections will ensure that public access to public lands to the west is not cut off. The trailhead at the neighborhood park allows for 25-car and 5-truck/trailer parking spaces. Some overnight parking will likely occur, especially for equestrian users whose destinations are sometimes many miles from the trailhead.

The private trails within the street rights-of-way are shown on the street sections in Figures 2-10 through 2-13. On the minor arterial, an 8-foot wide asphalt meandering path is proposed, with a transition to a 6-foot wide sidewalk beyond the entry gate. The 8-foot width is intended to be multi-purpose -- bicycle, pedestrians, in-line skating, etc. (Refer to Figure 2-8.)

Private trails outside of the street right-of-way consist of both primary and secondary types. Primary trails connect high use areas with residential neighborhoods. A 4- to 6-foot wide asphalt trail is proposed. Secondary trails connect residential areas together and also extend to the public regional trail system. A 4- to 6-foot wide packed gravel or decomposed granite trail is proposed.

Deletion here

Public trails will be constructed and maintained by Washoe County. The developer is not responsible for public trails. Specifications for public trails may be varied by Washoe County. Based on current county standards, minimum trail width will be 36 inches clear wherever possible. Grade is proposed to be a maximum of 10 percent for safety and to minimize erosion potential. Some level changes will be required in the Thomas Creek drainage and steeper slopes in the northwest corner of the site. Trail surfacing will probably be compacted dirt, with some small

earthquake. Buildings for human occupancy should not be sited over these faults and a setback is recommended for each side of the fault. The setbacks for each surveyed fault are shown on the site plan and will be identified on tentative and final maps.

### Minimum Lot Width

All residential lots shall comply with the following minimum average width requirements: 1 acre and larger lot, 120 feet; 1/2 acre to under 1-acre lots, 100 feet; and 12,000 square foot lots, 80 feet.

### Grading, Drainage, and Erosion Control

All construction will require some resculpting of the earth's surface. However, the placement of the home, driveway, and other site elements should minimize disruption of the natural topography as much as possible. Where grading is required, the slopes should be gently rounded to blend into the natural contours of the land. Site grading design should also complement and reinforce the architectural and landscape character by screening undesirable views of parking and storage areas and by helping to reduce the perceived height and mass of the architecture.

- All slopes flatter than 2.5:1 will be revegetated.
- All slopes steeper than 2.5:1 will be mechanically stabilized, probably with native rock riprap. *no landscaping on slopes < 10'?*
- Cut/fill slopes will generally be less than 10 feet in height. For slopes greater than 10 feet in height, a landscape treatment will be provided (i.e., seeding with native grasses and shrubs). Although none are anticipated, if there are slopes greater than 30 feet in height, benching will be provided. Trees and shrubs will be planted along the toe of the slope and the benches. *to appear natural and shall undulate*
- Slopes shall be contoured and meander to avoid long continuous horizontal conditions. Landscape pockets consisting of native vegetation and rocks shall be placed along visible slopes. *landscape pockets*  
*will occupy at least 10% of the disturbed area.*

The individual lot purchaser or builder will present drawings to the ALCC for review that are creative and sensitive as to the individual footprint, setting on the lot, and natural grade. To minimize grading, the house pad should step down the hillside rather than sitting on a flat plane. The builder/architect is encouraged to minimize the amount of grading on each lot. This same concept should be carried forth in the design of the hardscape and landscape areas adjacent to the building structure. Every effort should be made to achieve a final design which fits the shape of the lot and the land around it.

The control of water run-off and potential erosion should be a consideration both during construction and in the final design of the home site. Natural surface drainage patterns should be preserved whenever possible. Avoid concentrating surface drainage to reduce the erosion potential.

The preservation of existing vegetation cover minimizes the potential for erosion. Construction equipment should be limited to areas intended for specific site improvements in order to minimize damage to existing vegetative cover. A program of temporary erosion control should be put into effect immediately after site grading is complete. This program should include at least one of the following techniques for stabilizing soil and preventing wind and water erosion: hydro-mulching, wood chip mulch, netting, straw mulch, gravel mulch (suited to vehicle paths), or tacking agents. A program of permanent erosion control measures would, at a minimum, include slope stabilization structures (retaining walls, slope terraces), runoff control structures (diversion dikes, infiltration trenches), or runoff collection features (retention basins, catch basins). (Revegetation and erosion control are also discussed in Chapter V, Landscape Design Guidelines).

Streams and surface water features will be protected against sediment buildup through the use of best management practices in accordance with the current Lake Tahoe Basin Water Quality Management Plan, Best Management Practices.

Dust control methods will comply with the requirements of the Washoe County District Health Department, Air Quality Management. A detailed dust control plan must be prepared prior to issuance of a grading permit for the golf course or approval of a final map (Tentative Map Condition #49 and Special Use Permit

# CHANGES HERE

on 1-acre lots. Large expanses of asphalt or gravel are discouraged, as are large areas of untextured and uncolored concrete. Unpaved parking areas on residential lots are discouraged. The visual impacts of paved areas <sup>will</sup> can be reduced by tucking them into the topography and landscape.

*or buffering it with*

On-street parking is prohibited throughout Southwest Pointe. Each lot must provide off-street guest parking to accommodate two cars. Additionally, the Conditions of Approval (Tentative Map Condition #34) require that guest parking be provided within 500 feet of homes that have lots ranging in size between 12,000 square feet and 1/2 acre. One space shall be provided for every three homes. The parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the tentative map.

## Auxiliary Structures and Site Utilities

Auxiliary structures, such as gazebos, utility sheds, etc., must be designed in a manner that is integrated with the main structure and harmonizes with the natural setting. Auxiliary structures should be situated so as not to interfere with the views and enjoyment of adjacent properties. Plans for such structures must be submitted to the ALCC for review and approval.

All solar and mechanical equipment must be screened. All utility meters and appliances must also be screened. Trash and utility areas should be located to avoid direct views from streets or adjacent properties. These areas should be enclosed with fencing or screens that match residential architectural detailing and materials.

## Fences and Walls

Appropriate design and placement of fences and walls on residential lots is important in maintaining a high quality, rural atmosphere. It is essential that the materials, patterns and textures complement the surrounding architecture wherever possible.

*Under*

Perimeter lot fencing is the same type of fencing as the community screening fence shown in Figure 2-6. Perimeter fencing within neighborhoods must be consistent. The fence is 5 to 6 feet tall with or without stone pilasters. Fencing is either metal balusters or wood members. All exposed wood surfaces will be lightly stained or treated with preservatives for longevity. When a change in elevation occurs, the wall or fence should be stepped in equal intervals. Plant materials or berming will be used to soften a continuous wall or fence. All fencing must be submitted to the ALCC for review and approval. The proposed locations for lot perimeter fencing is shown on a separate exhibit within the Final Development Agreement -- Exhibit F, Sheet 1 entitled Site Plan Layout. It should be noted that these are proposed locations for lot perimeter fencing.

It is up to the individual lot owner whether or not to construct such fencing. *OK when individual lots as specified. When 3 or more, how will alternating fence/no fence be avoided.*

Special consideration will be taken when installing walls so as not to obstruct views from adjacent homes. Any privacy walls and fences will be installed by the homeowner or builder and maintained by the homeowner.

When retaining walls are necessary, they should become an integral part of the design, not an afterthought. The use of several 2- or 3-foot high walls rather than a single taller wall is encouraged. Not only should the retaining walls be designed with careful consideration for strength and provisions for surface and underground drainage, but they should be configured to sensitively fit with the natural terrain and be constructed or faced with materials that blend with the

*no single retaining wall exceeding 5 ft.*

setting. Freestanding walls are appropriate when used as an extension of the residence, to define key outdoor spaces, and to protect from climatic extremes. Wall materials should be consistent with the architectural style of the house.

*shall or complement*

Exterior Lighting

All exterior lighting must be approved by the Architectural and Landscape Control Committee. Homeowners are encouraged to utilize landscape lighting -- to subtly highlight unique architectural features, trees, and focal landscape areas. Lighting

levels should also be provided which insure safe passage along walks to building entries. Lighting of patio and deck areas to provide for nighttime usage is also allowed.

Landscape lighting should be integrated into the overall design of the site. Downlights can be recessed into arbors and soffits. Ground-mounted landscape bollards may also be used. Pole lights and monoliths with lights higher than 48 inches are not allowed. Light sources should not be directly visible. Light trespass and glare onto adjacent properties is not allowed. Lighting should endeavor to highlight special features and use areas rather than a uniform glow across the property.

### Energy Conservation

All residential units shall include site design and building design or construction features and devices which <sup>to promote the</sup> ~~are capable of~~ <sup>ation of</sup> conserving energy. Measures encouraged in the design of all residential structures are:

- Double glazing.
- Size and placement of windows and other major openings shall take into account prevailing breezes during the summer season and protection from stronger winds during the winter season.
- Appropriate design features to deflect sunlight or allow it to enter the residence, depending on seasonal needs.
- Strategically locate and select plant materials in areas adjacent to the residence to reduce temperature buildup and sun penetration during the summer season.

Building construction requires sufficient insulation and insulated glass to meet State of Nevada energy standards. Other building construction energy conservation features are encouraged, such as high efficiency mechanical equipment, high efficiency glass (non reflective), etc.

## Miscellaneous

**Antennas** - All antennas are restricted to the attic or interior of the residence. It is mandatory that all homes be pre-wired to accommodate cable reception. Satellite "dish" antennas are allowed only if adequately screened and not visible from surrounding areas.

**Awnings and Patio Covers** - Awnings and patio covers, if used, must be of solid color canvas within the approved color palette. Fiberglass or sheetmetal awnings are not permitted.

**Gutters and Downspouts** - All gutters and downspouts must be a color to blend into the building back drop, and downspouts shall be located to be least visible.

**Utility Service and Meters** - All utility service shall be underground with no exposure. All utility meters required to be exposed shall be either located to be not visible or enclosed in a cover box compatible with the building siding and as approved by the utility company. Meters shall be recessed in walls with no exposed conduit.

**Mechanical Equipment** - No exposed mechanical equipment is permitted. All exterior mechanical equipment, including solar panels, condensing units, etc. must be screened from view.

**Signs** - Exterior signs other than house numbers are prohibited. During construction or sale, one (1) approved construction/sales sign may be placed in front of each homesite. Real estate sales/listing information must be placed on a panel of the sign just as contractor's or architect's information would be. Additional freestanding signs, "snipes," banners, flags, etc. are prohibited. Political signs, within reason, are excepted from this prohibition.

"Sold" signs?

## Energy Conservation

Southwest Pointe will have all locally available public utilities for energy as well as being very conducive to passive solar access for natural heating to conserve energy. Passive solar access requires consideration of building orientation and

## Maintenance

Common Areas - Landscape, fencing, walls, irrigation systems, etc. installed by the developer will be maintained in a healthy and operational condition and will eventually be transferred to the Homeowners' Association, which will then assume maintenance responsibility. Landscape maintenance will primarily consist of weeding, spraying pre- and post-emergents, insect control, pruning, plant replacement and irrigation system winterizing/repair. Drip irrigation lines will require flushing to remove debris so that emitters do not clog.

Open space and private trail maintenance will include trash pick-up, erosion control, re-surfacing trails, and upkeep of signage. (Washoe County will be responsible for any maintenance activities required on open space that is under their control.) Paved walks will require re-seeding and eventually resurfacing the asphalt. Fencing will need board replacement and re-staining/re-sealing wood members.

Private Yards - The intent of maintenance standards for private yards is to keep the entire project up to high standards. Homeowners will be responsible for maintenance of their own lots. If the required front yard trees should die, they will need immediate replacement with trees of the same size and species. Property owners will also be responsible for maintaining landscaping along the right-of-ways of local and rural streets with direct lot frontage.

## Revegetation and Erosion Control

Revegetation is the process that involves seeds and small plants, fertilization, and soil stabilization once vegetation becomes established. It is one part of the overall erosion control process. Most often the best erosion control is a combination of structural or mechanical land revegetation. Once the ground is disturbed during construction, it is important to revegetate areas to be kept as open space as quickly as possible to minimize wind and water erosion on the soil. Typically, fast-growing annuals and perennials are installed for both short- and long-term stabilization.

**Timing** - The developer will follow the typical Washoe-Storey Conservation District and District Health Department guidelines for disturbed areas. A dust palliative will be applied to areas left undeveloped more than 30 days and a seed mix applied for areas left undeveloped more than 90 days. The preferred season for revegetation without irrigation is early spring after the ground softens. Late fall after the first snow is also acceptable. The developer may elect to seed between the preferred seasons with some supplemental irrigation from a water truck or temporary irrigation.

**Clearing Limits** - Areas to be cleared for development or cut/filled will be surveyed and staked so that equipment can be confined to those disturbed portions only. The objective is to save as much native vegetation within the development as possible for the open space between residential units. Clearing will be done on a phasing schedule as the development proceeds. The exception is the golf course, which will be graded and built in 9- or 18-hole increments.

**Seeding Methods** - Seeding will take place on open areas and slopes 3 to 1 and flatter. Slopes not accessible by drilling machines will either be hydroseeded or seeded with a mechanical broadcaster and raked by hand. Drilling is the preferred method since germination is generally the highest. Hydroseeding will be accomplished in a two step process. Seeding will take place on roughened soil with 30 percent mulch and then blowing the remaining 70 percent of the mulch on top of the seed. This ensures better seed/soil contact.

Conflict? p. 3-2

**Seeding Mixes** - One of the goals is to blend the development into the existing on-site environment. To accomplish this, a seed mix that matches the existing plant material is desired. Since the majority of the open space will not have permanent irrigation, the plants need to survive on rain or snow fall. A combination of woody plants (shrubs) and grasses are proposed for the mix. Also proposed are grindings from existing plants that are cleared. Since the seeds are already acclimated to the site, germination is usually very high. Plants to avoid seeding are those with a high fuel production that create a hazard for wildfires.

## Fire Fuel Breaks and Green Belts

The project site is located in a high fire hazard area as identified by the Nevada Division of Forestry. This is due to the occurrence of lightning and strong westerly winds. Fire suppression over a long period of time has resulted in on-site fuel accumulation that will become a problem during a wildfire.

Mitigation is needed to reduce the fire hazards on the site. Proposed mitigation includes careful structure siting, fire hydrants, fuel breaks around structures, the use of fire resistant/retardant plants, ease of access for fire fighting equipment, and the use of appropriate building materials.

The developer will work with the Division of Forestry to locate firebreaks in appropriate locations. Effective fire protection can be achieved with a wide strip (at least 100 feet) of bare ground around structures created by removing the native shrubs and grasses. However, the bare ground is subject to water and wind erosion, besides being aesthetically unacceptable. A better solution is the use of "green belts". A green belt can be defined as a landscaped and irrigated zone between a structure and the brush-covered wildlands that is designed to halt or slow the spread of fire and to control soil erosion and water runoff. (Refer to Figure 5-1.) Requirements in developing such a green belt are as follows:

1. Removal of highly flammable native brush and grasses, especially cheat grass, from around structures for a distance of 30-50 feet. Remove any dead wood in and around shrubs. This zone will consist of grasses, introduced shrubs, and individual trees pruned up off the ground. All plants will have a high-moisture content because of drip or spray irrigation. The sprinkler system will be permanent and on a controller. Included in this zone is a 10 to 20 foot wide area on both sides of the front driveway. Appropriate planting for this zone are native, naturalized and exotic species that gradually blend to the more native zone beyond. Lawns will be kept to a minimum size for water conservation and sprinklered with an overhead automatic spray system.

*I don't understand where or how this section applies. Firebreaks? Fuelbreaks? Fuel modification?*

## Water Conservation

Water conservation in the Truckee Meadows is a long-term responsibility for all residents, since we live in a desert climate with limited resources. There are many ways to conserve water in the outdoor landscape. Generally, plants will use as much water as a person gives them, so overwatering is the result of owners not realizing proper planting water requirements.

The principals of a relatively recent concept of "Xeriscape" (dry landscape) should be followed in every new development and retrofitted into existing landscapes. The principals are briefly summarized as follows:

- Mulch plantings to keep soil cool and reduce evaporation.
- Plan and design planting/irrigation from a project's beginning.
- Create practical and usable lawn areas of reasonable size and shape.
- Use appropriate plants for the area and group into water zones.
- Improve the soil in the intensive landscape zones with compost or manure.
- Irrigate efficiently with properly designed systems with automatic timers.
- Maintain the landscape appropriately by mowing, pruning and fertilizing properly.

Well done Xeriscape-type designs can typically reduce irrigation water by more than 50 percent, compared with traditional designs dominated by over watering lawns. Over watering can also kill highly drought-tolerant plants and force unwanted growth.

Home buyers in Southwest Pointe will be encouraged to follow the above water conservation methods in their private yard areas within the 30 foot intensive landscape zone surrounding the structure. Lower water bills will be just one of the long term benefits of proper landscaping.

### Fire Protection

Fire protection service is intended to be provided by the Nevada Division of Forestry (NDF), Sierra Fire Protection District. The closest existing station is Galena Station #2, which is located on the Mt. Rose Highway approximately 2 miles west of the intersection of Mt. Rose and Thomas Creek Road.

Consistent with the Southwest Truckee Meadows Area Plan, a one-acre site for a fire station is proposed near the entrance to Southwest Pointe. The site will be offered for dedication prior to recordation of the first final map. According to NDF staff, the station would be 3,800-4,000 square feet with two bays and living quarters. If constructed, there would be two, full-time employees supported by volunteers.

The entrance to Southwest Pointe may be gated at the point where Whites Creek Lane becomes a private road (i.e., near Thomas Creek). The developer has met with NDF staff to discuss their needs in order to maintain emergency access. Fire fuel breaks will also be required in many locations and an acceptable design will be developed with NDF staff. Maintenance of the fire fuel breaks will be the responsibility of the individual homeowner or the Homeowners' Association depending on the location. *Uncler in 5-8, 10, 11*

### Security and Emergency Services

The Washoe County Sheriff's Department is intended to provide police protection service to this site from the main station at 911 Parr Boulevard. There is currently one patrol unit regularly assigned to the area, with an average response time of 10 minutes. The response time in this area will be greatly improved if the Sheriff's Department locates a substation in the community center in the South Valleys Regional Park at the intersection of Whites Creek Lane and Wedge Parkway. The first phase of the park has been constructed. The community center is located in a later phase; therefore, it may be several years before the substation is operational.

## VII. SPECIAL CONDITIONS

### Thomas and Dry Creeks

Two creeks cross the property -- Thomas Creek along the southern and eastern edge and Dry Creek through the western and north central portions of the site. The creeks are bordered by riparian vegetation and a wetlands delineation, prepared by Soil Resource Investigations and approved by the Corps of Engineers, has concluded that wetlands exist along both creeks. These areas will be avoided.

The Conditions of Approval state that a buffer will be provided between the fairways/greens and all creeks (i.e., Special Use Permit Condition #45). The setback of the buffer will comply with 100.200 (e) of the Uniform Building Code (i.e., 50 feet from the centerline of drainage area greater than 5,000 acres). A second condition (i.e., Tentative Map Condition #51) requires that a minimum buffer of 50-feet be provided between any structure and riparian vegetation.

*Crowe?*  
At locations where roadways cross the creeks, the intent is to span the creek and leave all delineated wetlands undisturbed. This will be accomplished through the use of railroad flatbed car bridges. Concrete abutments will be constructed on either side of the creek outside the delineated wetlands. The railroad cars will then be placed to "clear span" the creek bed.

*a Bridge acceptable to  
Washoe County.*

### Wildlife

Portions of the project site are located in the winter range of the Loyalton-Truckee deer herd. The herd summers largely at higher elevations and winters in the lower reaches of the Sierra Nevada. Some residential and golf course development is proposed within the winter range; however, there is also a significant amount of acreage within the winter range that will be left as open space. Some key mule deer winter range habitat has also been identified at the northwest end of Southwest Pointe. For the most part, this area is proposed to be left as open space.

## VIII. DEVELOPMENT PROCESSING

### Relationship to Other Ordinances

The provisions of this Handbook will govern the development of Southwest Pointe. However, where the provisions of the Handbook do not address a specific subject, the provisions of the Washoe County Development Code (Chapter 110) or other ordinances governing the development of land shall prevail, subject to the provisions of the final development agreement.

### Amendments to the Development Standards Handbook

It is anticipated that this Handbook will need to be periodically updated and amended. If modifications are necessary, the Department of Development Review will be notified by letter, stating the changes requested, the reasons for the changes, and the effects of the changes. Minor modifications can be approved at the staff level. The definition of "minor" will be made by the Director of the Department of Development Review. More significant changes must be approved by the Washoe County Design Review Committee.

During the design and construction phase of the project, it will be the responsibility of Southwest Pointe Partners or its successor to initiate the amendment request. This responsibility will eventually be assumed by the Homeowner's Association.

### Approval Process

Tentative Maps, Final Maps and Special Use Permits - A statement of compliance must accompany all tentative maps, final maps and special use permits. (Refer to Appendices C and D.) The compliance statement for tentative maps and special use permits will be completed by the applicant and approved by Southwest Pointe Partners prior to an application being submitted to Washoe

County. The statement of compliance for final maps is a checklist to ensure compliance with the Conditions of Approval. It will be completed by the applicant and submitted with all final maps. It does not need to be approved by Southwest Pointe Partners.

**Building Permits** - Design review will be required of each Lot Developer. Southwest Pointe Partners will provide each Lot Developer with a copy of the approved Development Standards Handbook and CC&Rs. These documents should be reviewed carefully by each Lot Developer.

The Architectural and Landscape Control Committee (ALCC) will review all preliminary and final construction drawings for structures and landscaping prior to their submission to Washoe County. The purpose of this initial plan review is to insure compliance with the Development Standards Handbook and the CC&Rs. Any development plans submitted to Washoe County must be accompanied by verification from the ALCC stating that the plans have been approved by that Committee. Minor variations from the Development Standards may be approved by the ALCC providing that these variation are in conformance with county regulations and the intent of these Development Standards.

Approval by the ALCC does not imply that the plans are in compliance with all applicable county codes, ordinances, or other regulations. Each Lot Developer is responsible for submittal and processing of all plans and permits required by the county prior to the commencement of construction.

Once residential construction has started, Southwest Pointe Partners or its successor will be responsible for preparing a quarterly report indicating the number of building permits issued and explaining other building activity. (Development Agreement Condition #7.)

#### **Financial Assurances for Development of Property**

Financial assurances for the construction of capital improvements shall be provided as required by Washoe County Code or pursuant to subdivision improvement agreements under tentative maps, subject to the provisions of the final development agreement.

# I. INTRODUCTION

## Purpose

This Handbook presents design guidelines and standards that will apply to the community at Southwest Pointe. This booklet serves several purposes. First, it will help prospective architects, designers, builders, and owners create residences and improvements that will fit within a defined architectural character. Second, the Handbook is intended to fulfill the requirements of Article 814, Development Agreements, of the Washoe County Development Code. Specifically, Section 110.814.75(g) of this article presents the topics that must be addressed in the Development Standards Handbook. This section of the Development Code is repeated in the Appendix, together with an explanation of where each topic has been addressed in this Handbook. And third, it is intended to provide the county and the residents in the Southwest Truckee Meadows with a feeling for the type of development being proposed.

This Handbook, along with additional provisions and "Residential Lot Declarations" that will be set forth in the Southwest Pointe CC&Rs, form the basis for evaluation of all drawings and specifications for construction submitted to the Southwest Pointe Architectural and Landscape Control Committee (ALCC) for review and approval, including any additions and modifications. The CC&Rs may specify further guidelines or restriction to those provided in this Handbook. When not in conflict, this Handbook is not meant to duplicate or supersede the requirements of Washoe County. Plans for construction will need to be processed through Washoe County and appropriate public agencies as well as through the ALCC.

## Project Description

Setting - Southwest Pointe is set in the context of a rugged mountain backdrop and sagebrush-covered slopes that are punctuated by Thomas and Dry Creeks. The 3,272-acre project is located on a prominent site overlooking the Truckee

Meadows. The majority of the property has unobstructed views, and the project has been laid out to maximize these views. Both Thomas and Dry Creeks cross the property, and the site plan takes these two prominent features into account. There is some riparian vegetation along the creeks but a majority of the site is covered with moderate to dense stands of bitterbrush and sagebrush and thinly scattered field grass and alfalfa.

As shown in Figure 1-1, the property is bounded by the Toiyabe National Forest to the west, Thomas Creek along the south, and the established neighborhoods of Thomas Creek Estates and Saddlehorn to the southeast and east. Elevations range from approximately 4,950 feet along the eastern portion of the site to 5,900 feet on the west. The property slopes in a southwest to northeast direction with slopes generally ranging from 5 to 15 percent. Moderately steep slopes, generally between 15 and 30 percent, are found at the northern end of the site.

**Site Plan** - The site plan for Southwest Pointe is based on a planning approach that analyzes the constraints and opportunities of the property to identify the most appropriate development areas. Site characteristics, including topography, geology, flora and fauna, drainage, view sheds, access points, and easements were mapped. In addition, surrounding land uses were also considered.

The topography is steep and mountainous along the western boundary and in the "panhandle" to the north. Remaining portions of the site are characterized by gently and moderately sloping terrain with slopes ranging between 5 and 15 percent. These terrain features create panoramic views of downtown Reno and the Southeast Truckee Meadows from nearly every portion of the site.

A number of Holocene faults cross the property, generally running in a north-south direction. These faults define corridors within which development was planned. Holocene faults are defined as faults that show evidence of movement within the past 11,000 years.

Two drainages that form major geographical features traverse the property -- Thomas Creek along the southern and eastern edge and Dry Creek through the western and north central portions of the land. Some sections of the creeks are

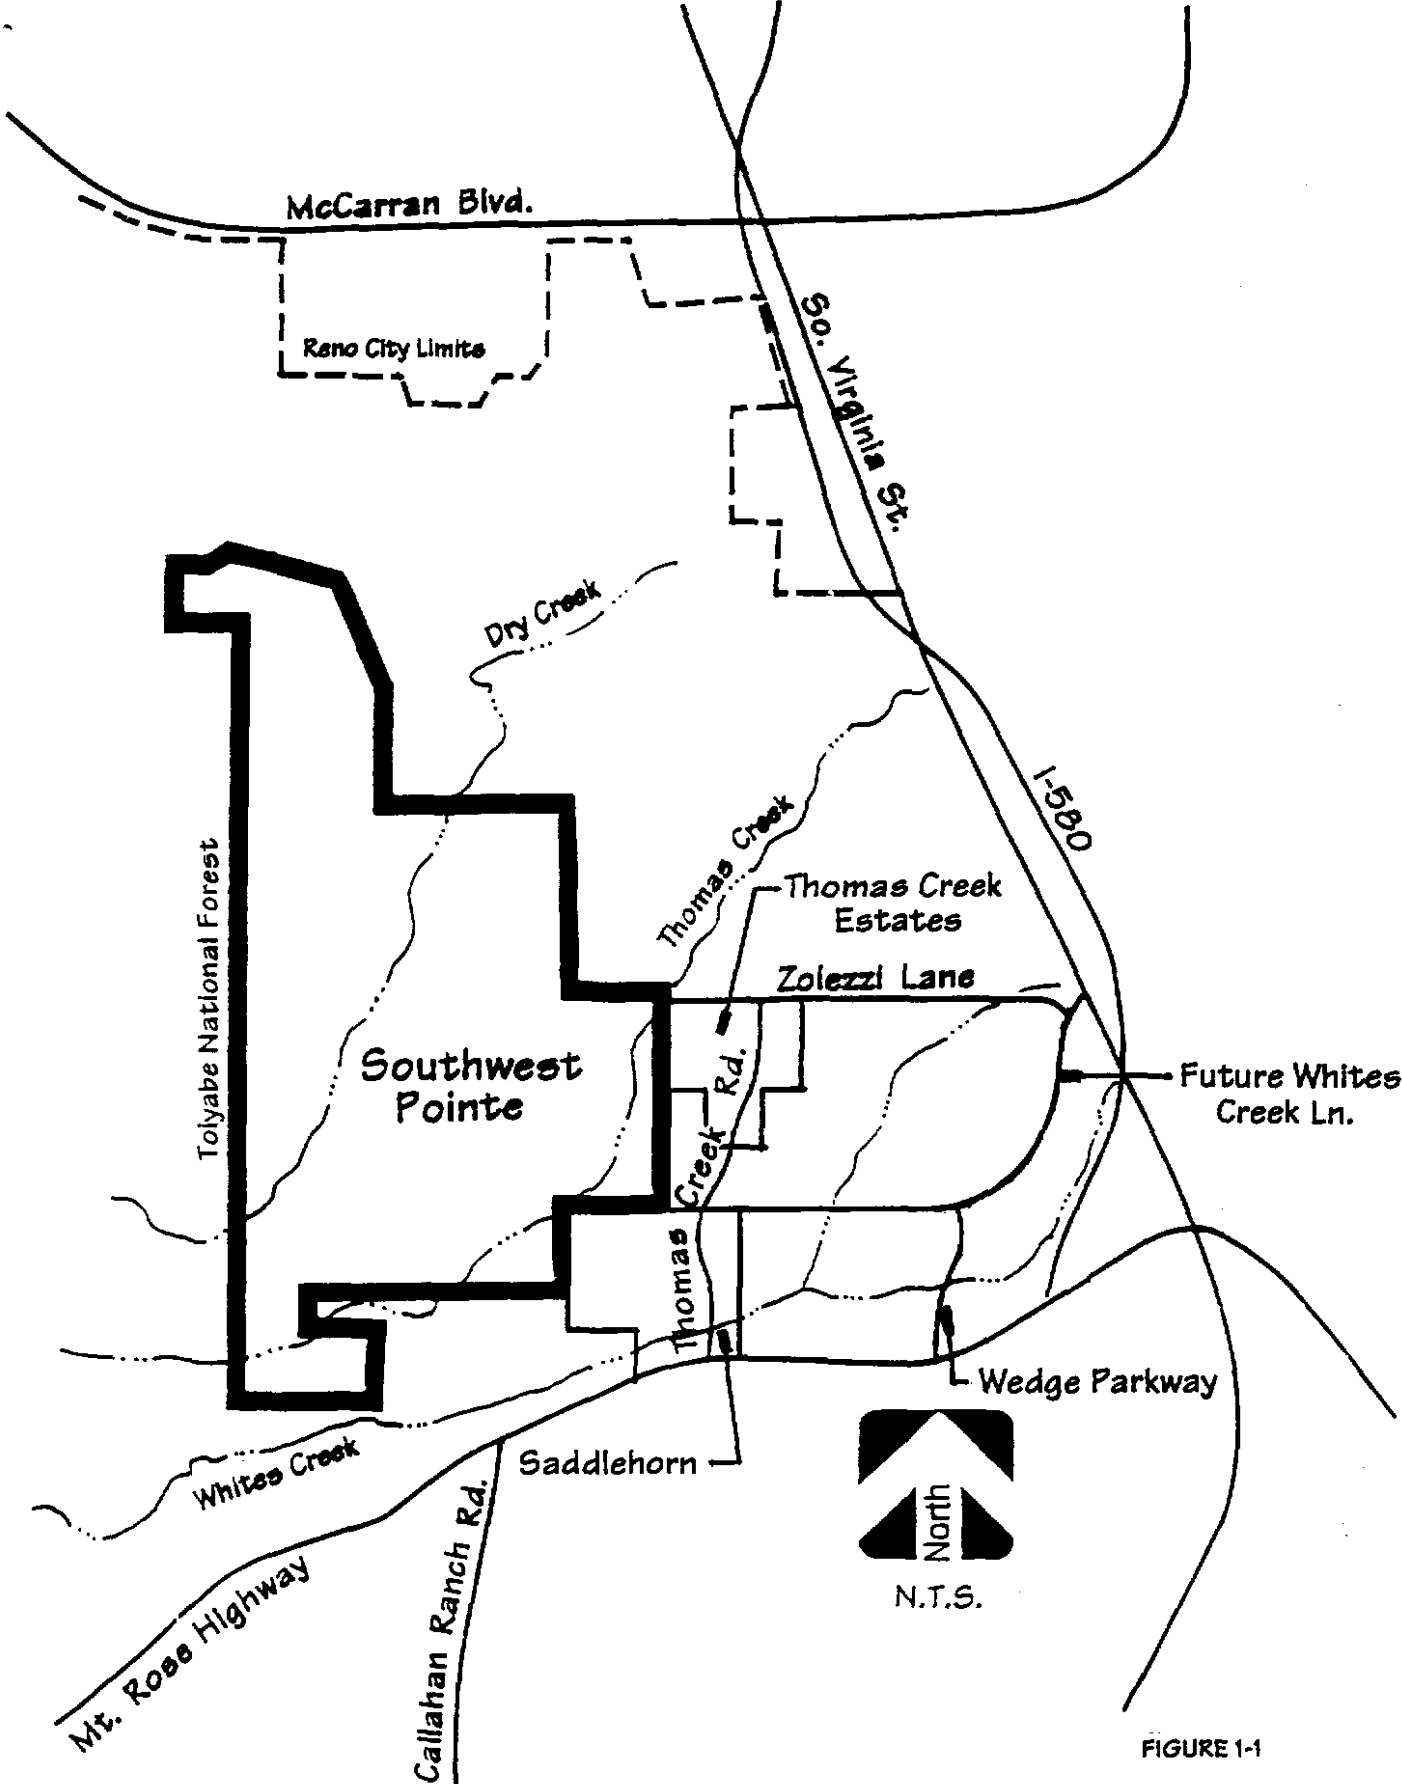

FIGURE 1-1  
VICINITY MAP

*bordered by riparian wetlands and, therefore, setbacks for development are required. These riparian corridors are generally not visible from most of the site; however, these corridors are among the most scenic areas of the property.*

*The winter range for the Loyalton-Truckee deer herd covers the "panhandle" and the north portions of the site. Some residential and golf course development is proposed within the winter range; however, there is also a significant amount of acreage left as open space.*

*Blending the physical characteristics of the property with the allowable lot count of 1,090 single-family dwelling units and the development program, which calls for 36 holes of golf, the following design objectives were formulated and implemented in the site plan:*

- Provide significant natural open space buffers around the periphery of the project to preserve the visual and physical environment of surrounding residents and to focus the views from within the property.*
- Reserve the Thomas Creek and Dry Creek corridors and use creek edges, where feasible, for golf course fairways and for visual amenities from lots.*
- Remain consistent with the intent of the Southwest Truckee Meadows Area Plan. Set aside a location for the civic uses proposed in the Area Plan -- schools, neighborhood park, regional trails, and a fire station.*
- Create a major community entrance at Whites Creek Lane with signage, a gate house, and landscaping. Integrate the bridge structures across Thomas Creek with the community entrance features.*
- Use the earthquake faults and associated building setbacks, wherever practical, as golf course fairways, road right-of-ways, and open space.*
- Establish a rural golf course community theme by using smaller paved road sections, by creating neighborhood enclaves, and by controlling development through comprehensive design standards.*

- Develop a mix of lot sizes within the following parameters: 20 percent one acre and larger, 40 percent 1/2 acre and larger, and 40 percent with a minimum size of 12,000 square feet. All residential units are single-family dwellings; no other housing types are proposed. Primary lot orientation should be to the golf courses and/or the panoramic views.

As shown on the Site Plan on the following page, the land use pattern clusters residential neighborhoods within enclaves created by the golf course fairways. All edges of the proposed development reserve substantial areas of natural open space, ranging from the entire "panhandle" to a minimum of 200 feet to the nearest existing lot. Table 1-1 presents a break down of the proposed land uses. Tables 1-2 and 1-3 present a summary of the various lot types.

Table 1-1

<b>Total:</b>		<b>845</b>	<b>1090</b>	

**Public Facilities** - Various civic uses are shown on the site plan. These include an elementary school, possible middle school, fire station, neighborhood park, and regional trails. The Washoe County School District will be responsible for construction of the elementary and middle schools. A special use permit has already been approved for the elementary school and construction will start in the late spring or summer of 1996. The School District hopes to have the elementary school open in September 1997.

Construction of the middle school is dependent on several factors. First, based on the Conditions of Approval (i.e., Development Agreement Condition #20), the site must be reserved for an off-stream stormwater detention facility for a certain length of time. If the detention facility is not constructed, the site will then be dedicated to the School District for a middle school. The second factor is that the voters of Washoe County must pass a bond issue in November 1996 for future school construction.

A one-acre site for a fire station is shown at the entrance to Southwest Pointe. The site will be dedicated prior to recordation of the first final map (i.e., Development Agreement Condition #27). Construction of the fire station will be the responsibility of the Nevada Division of Forestry (NDF); however, it is possible that the Truckee Meadows Fire Protection District will also be involved in the construction and operation of the station since the location could serve both NDF and Truckee Meadows.

The neighborhood park and the regional, public trail system are discussed in detail in the Open Space Management Plan, which was prepared to comply with the Conditions of Approval (i.e., Development Agreement Conditions #28 through #31). According to the Management Plan, the Washoe County Department of Parks and Recreation will be responsible for constructing and maintaining the regional trails. The neighborhood park will be dedicated to Washoe County after the improvements have been completed. Southwest Pointe Partners or its successor will be reimbursed for the cost of the improvements and for the fair market value of the land from fees collected in Southwest Pointe from the Residential Construction Tax.

## Development Phasing

Construction will commence in late summer or early fall 1996. The project will begin with the development of construction access roads and grading of the initial (lower) golf course. Coincidental with these activities will be the construction of utilities as well as the main entry road and the main loop road that services the golf course clubhouse, swim and tennis club, and Phase I residential areas (approximately 400 lots). An interim clubhouse will be constructed to the south of where the permanent clubhouse will eventually be built. (The golf clubhouse - interim and permanent - is described in Chapter II under the heading Community Buildings.) It is estimated that "intract" improvements for the residential lots in Phase I will occur over a 3 to 4 year period following grading of the entry road and main loop road, depending on market conditions.

As the Phase I residential land approaches build-out, grading, road improvements, and utilities for the Phase II residential areas (approximately 350 lots) will commence. It is estimated that "intract" improvements for the residential lots in Phase II will occur over a 3 to 4 year period following grading of the roads, depending on market conditions. The second golf course is proposed for construction during the development of Phase II; however, the demand for golf will dictate whether it occurs sooner or later. Construction of the swim and tennis club is proposed to commence during Phase II.

As the Phase II residential land approaches build-out, grading and road improvements for the Phase III residential areas (approximately 340 lots) will commence. It is estimated that "intract" improvements for the residential lots in Phase II will occur over a 3 to 4 year period following grading of the roads, depending on market conditions. It should be noted that, Phase II and Phase III may be smaller than indicated above, resulting in the potential of one or more additional phases.

The proposed neighborhood commercial use, located adjacent to the swim and tennis club is projected for development in or beyond Phase III. The precise timing, and whether or not it will be built, will be predicated on market conditions. In any event, at the time the initial phases are developed, there will probably not be enough residents to support neighborhood commercial uses.

Appropriate open space dedications, trail improvements, right-of-way landscaping, and other community improvements will occur coincidental to the development of each phase of the project, pursuant to conditions of tentative maps or special use permits.

The time frames mentioned above may be shortened or lengthened by the developer, and the phases may be changed, if the developer believes such changes are necessary or advisable to improve development potential. As more particularly specified in the final development agreement, the agreement expires fifteen (15) years from the date of its execution.

## II. COMMUNITY DESIGN GUIDELINES

### Community Design Character

Southwest Pointe is located in the uplands area of the Truckee Meadows between the high desert valley floor and the mountain range of the Sierra Nevada's. This area has low vegetation generally of sagebrush and native shrubs.

The Southwest Pointe Community Design Character is intended to be organic to and respectful of the existing natural and regional environment. The existing environment is to be maintained by minimizing grading and earthwork and working with the land's terrain in locating roads and other improvements. Due to the inherent visibility of the site and its natural features, the prescribed architectural and structural character is intended to blend into the natural environment and to enhance the nature of that environment by adding forms, features, texture, colors, and plants that are similar to those on site.

### Community Components

Entry & Gate House - The main project entry from Whites Creek Lane will feature one-way streets with a wide landscaped median between for safety and visual appeal. (Refer to Figure 2-1.) The entry is the visual gateway to the subdivision and the first impression to residents and guests. In that regard, the community character begins here with a strong visual impression.

The entry landscape for the first one quarter mile upon entering the project is a dense, natural forest setting, consisting of predominately native conifers, with a native woodland understory that provides fall color. The intent is to introduce a strong landscape theme consistent with the regional character, while enclosing views from the road. The landscape enclosure will soften the adjacent 3:1 embankments on the sides of the road and effectively screen the elementary school parking lot.

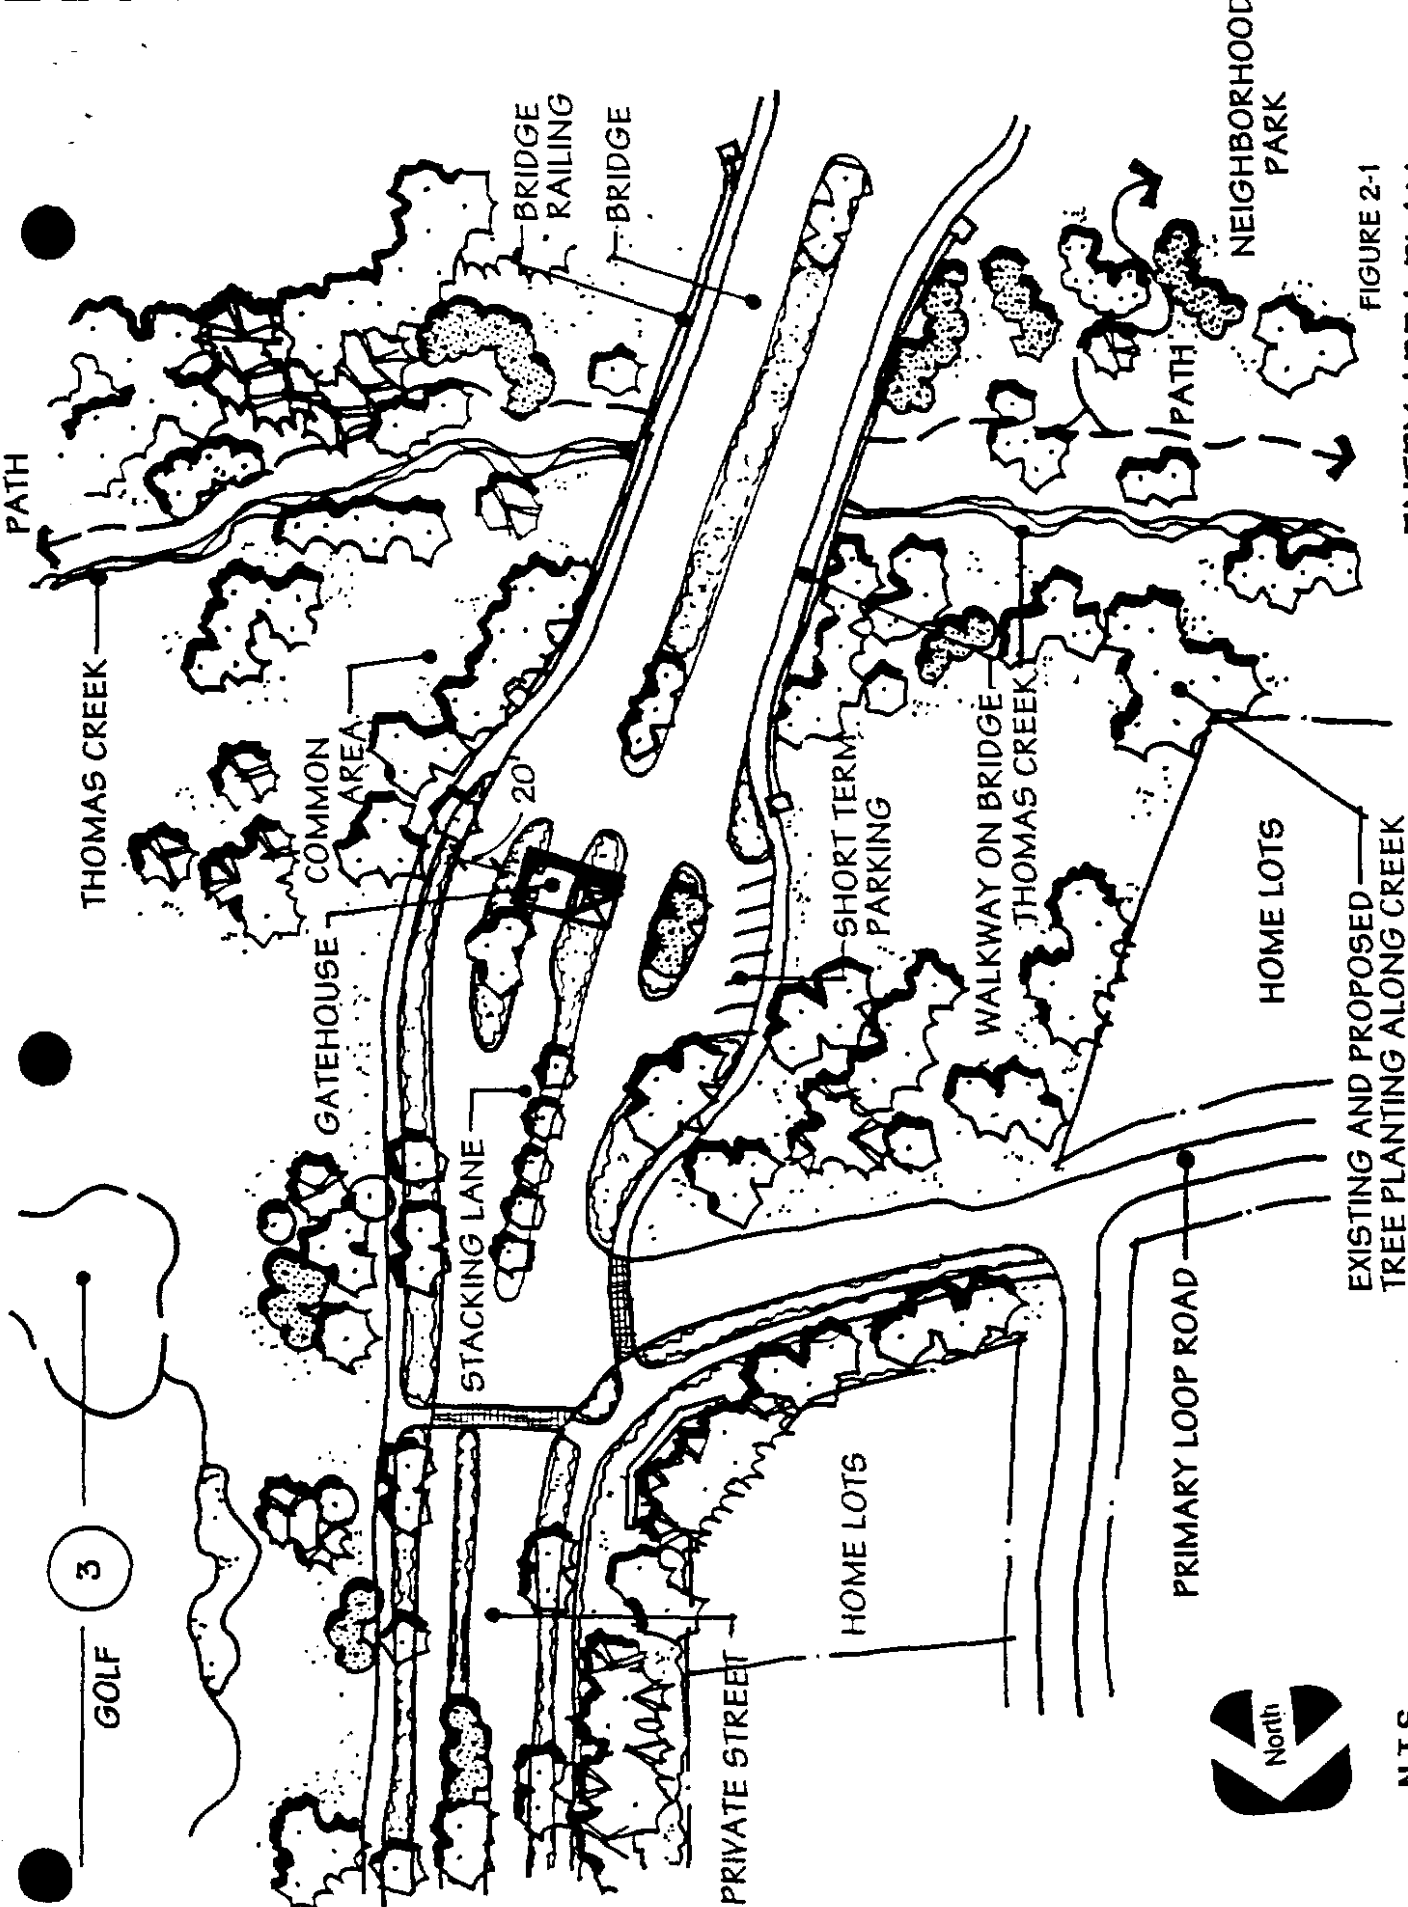

FIGURE 2-1

ENTRY AREA PLAN

The views, at first enclosed, will then dramatically open up at the approach to the bridge and gate house situated at the Thomas Creek crossing, with elevated vistas over fairways and the creek setting. Traveling into the entry area, the motorist approaches the gate house. The gate house will provide controlled access to the community and will direct visitors within Southwest Pointe. The Nevada Division of Forestry will require 20 feet clear and unobstructed for access around the gate house. (Refer to Figure 2-1.)

The gate house has forms and materials resembling those on site and historic to the region. (Refer to Figure 2-2.) Portions of the building's facade are native stone, which establishes natural imagery. Unisex bathroom facilities will be provided. It will not be necessary to provide bathroom facilities for disabled individuals at the gate house. Beyond the entry building are entry gates with stone monuments and a vehicle turn-around. Once the traveler passes the entry, the vistas open, highlighting the project's open space, streetscape, golf course, and neighborhood entrances.

**Neighborhood Entries** - Landscaping, monumentation, and lighting will be used at neighborhood entries in a manner that creates a consistent theme throughout the project. A hierarchy of entries will be created. The treatment depicted in Figure 2-3 will be used at key entry locations along the main loop road. It features a combination of evergreen and deciduous trees with an understory of shrubs. Annuals and perennials will be planted for seasonal color. The entry also includes a retaining wall of native stone within which the neighborhood identification sign or clubhouse sign could be incorporated. Each minor neighborhood entry will be identified with signage, landscaping, and lighting that is consistent with the theme depicted in Figure 2-3.

**Bridges** - Bridge structures will be constructed to span the creeks and drainage ways to minimize grading and site disturbance. The structures may have stone elements at each end with painted decorative metal guard railings to blend in with community standards. (Refer to Figure 2-4.) Native stacked stone may be used to stabilize creek banks at each end of the bridge structure.

FIGURE 2-4  
TYPICAL BRIDGE STRUCTURE

Fences and Walls - There will be two types of community fencing in Southwest Pointe -- split rail and a screening fence. The proposed perimeter location for each type of fence is shown on a separate exhibit within the Development Agreement -- Exhibit F, Sheet 1 entitled Site Plan Layout. These locations are shown in response to comments received at the April 25, 1996 meeting of the Washoe County Design Review Committee. The Committee members recommended that proposed locations for perimeter fencing be shown on the Site Plan. As a result of this recommendation, fencing was added to Sheet 1, Exhibit F. Sheet 1 shows perimeter fencing, as well as interior fencing along the golf course. No fencing along the boundary of the project is proposed. It was agreed that each tentative map would show fencing (location and type) within the interior of the subdivision.

- a. Split Rail Fence - The first will be a low decorative, split fence design either with or without native stone pilasters. (Refer to Figure 2-5.) This fencing type will be a maximum of 3 feet high with an 8" x 8" post. In more prominent locations (e.g., near the entry to the golf and tennis club), native rock pilasters may be used. The fence will follow the ground plane for slopes up to 10 percent; above that the fence will be stepped. The split rail fence is generally used along the golf course.
- b. Screen Fence - The second is a higher metal or wood fence either with or without native stone pilasters which will provide a visual screen and will only be allowed in certain areas of the development. (Refer to Figure 2-6.) The fence is 5 to 6 feet tall with or without stone pilasters. Fencing is either metal balusters or wood members. All exposed wood surfaces will be lightly stained or treated with preservatives for longevity and appeal. Around the golf course maintenance area, an 8-foot tall fence may be used to adequately screen the maintenance equipment, building, etc. This is the only area where this fence type will be higher than 6 feet.

There are two unique situations where other types of fencing are proposed. The first occurs along the sides of the driving range where a "net" type of fencing is necessary. This fencing is required for safety reasons. Generally, this type of "net" fencing is approximately 25 feet in height and will be installed along the

FIGURE 2-5  
SPLIT RAIL FENCE AND PILASTER

FIGURE 2-6  
SCREENING FENCE

sides of the driving range. The second situation occurs at the golf and tennis club. Around the tennis courts, a 12-foot chain link fence will be constructed, and around the pool safety fencing will be required.

These fencing heights - 8 feet around maintenance area, "net" fencing along the sides of the driving range, fencing around the tennis courts and possibly the pool area - exceed the height requirements stated in Article 406, Building Placement Standards, of the Washoe County Development Code. These standards have been modified through approval of the Final Development Agreement of which this Development Standards Handbook is a part. An administrative waiver will not be required to construct the fences described in this Handbook.

Walls will be reminiscent of the types seen historically throughout the eastern Sierra, using indigenous rock as a key material. Intersections and key places may be highlighted with attractive stone walls. Street signs or neighborhood identification signs may be integrated into walls. Walls will not exceed 6 feet in height.

**Lighting** - Lighting may be provided with landscape uplights on vegetation and pedestrian-scale bollards. Where necessary, along roadways and at intersections, lighting levels should be no more than absolutely required to perform the task for which it is intended (e.g., *ambiance, safety*).

Lighting levels are important to the overall lighting concept. Lighting is necessary in certain areas. For circulation safety, for functional purposes, and for aesthetics, lighting is often a necessary element. The level of lighting must also be appropriate. In general, lighting levels should be no more than absolutely required to perform the various tasks for which it is intended.

Street lights are required at major intersections (Tentative Map Condition #32). Light standards may be selected from the different types that Sierra Pacific Power Company has available; however, the developer does have the option of selecting different fixtures. Lights may be used as low-level accents for intersection signage and associated landscaping. Uplights to trees around intersections will be flush mounted. Signs should be lit from the ground, backlit, or a combination. Light spillage onto adjacent properties is discouraged.

Around the golf club and the swim and tennis club, lights in parking lots may be mounted on 25-30 foot tall poles for pedestrian and vehicle safety. Entry areas and walkways may be lit with landscape lights and bollards less than 48 inches in height. Tennis court lights will use cut-off style sports lights to limit light spill-over onto adjacent property. The multi-purpose sports fields adjacent to the swim and tennis club will not be lit since lighted fields are available at the nearby South Valleys Regional Sports Complex.

The entry at Thomas Creek and the bridge structure may be lit to a level that allows for safe driving and turning movements. The gate house will have overhead downlights for driver and license plate identification. Trees surrounding the entry will be uplit and some 'twinkle' style lights may be used.

Lighting within the neighborhood park will be minimal with a downlight below the shade shelter and an electrical receptacle provided. Field lighting is not desired because of the neighborhood function of the park and the close proximity to existing homes.

**Signs** - Community signs include signs around the project entry, along the main loop road, at neighborhood entries, around the golf club and the swim and tennis club, and street signs. Some of these signs are regulated by Chapter 105 - Off-Premise Sign Regulations and On-Premise Sign Regulations. However, the Final Development Agreement, of which this Development Standards Handbook is an exhibit, is the mechanism by which exceptions to Chapter 105 can be approved. In cases where a special use permit would have been required, no such permit shall be necessary. The staff of the Department of Development Review shall administratively review the proposed sign locations and sign design. If necessary, a sign permit shall be obtained.

In regard to off-premise signs, area identification signs are proposed to identify the project, the golf course, the golf club, and the swim and tennis club which includes the neighborhood commercial center. These signs may be constructed around the entry gate house and along the main project entry road (i.e., Whites Creek Lane from Thomas Creek Road to the golf and swim and tennis clubs). The

developer shall retain the right to place area identification signs on the fire station and the neighborhood park parcels in a location within 30 feet of the right-of-way. These signs will not exceed 8 feet in height. Illumination will be indirect only.

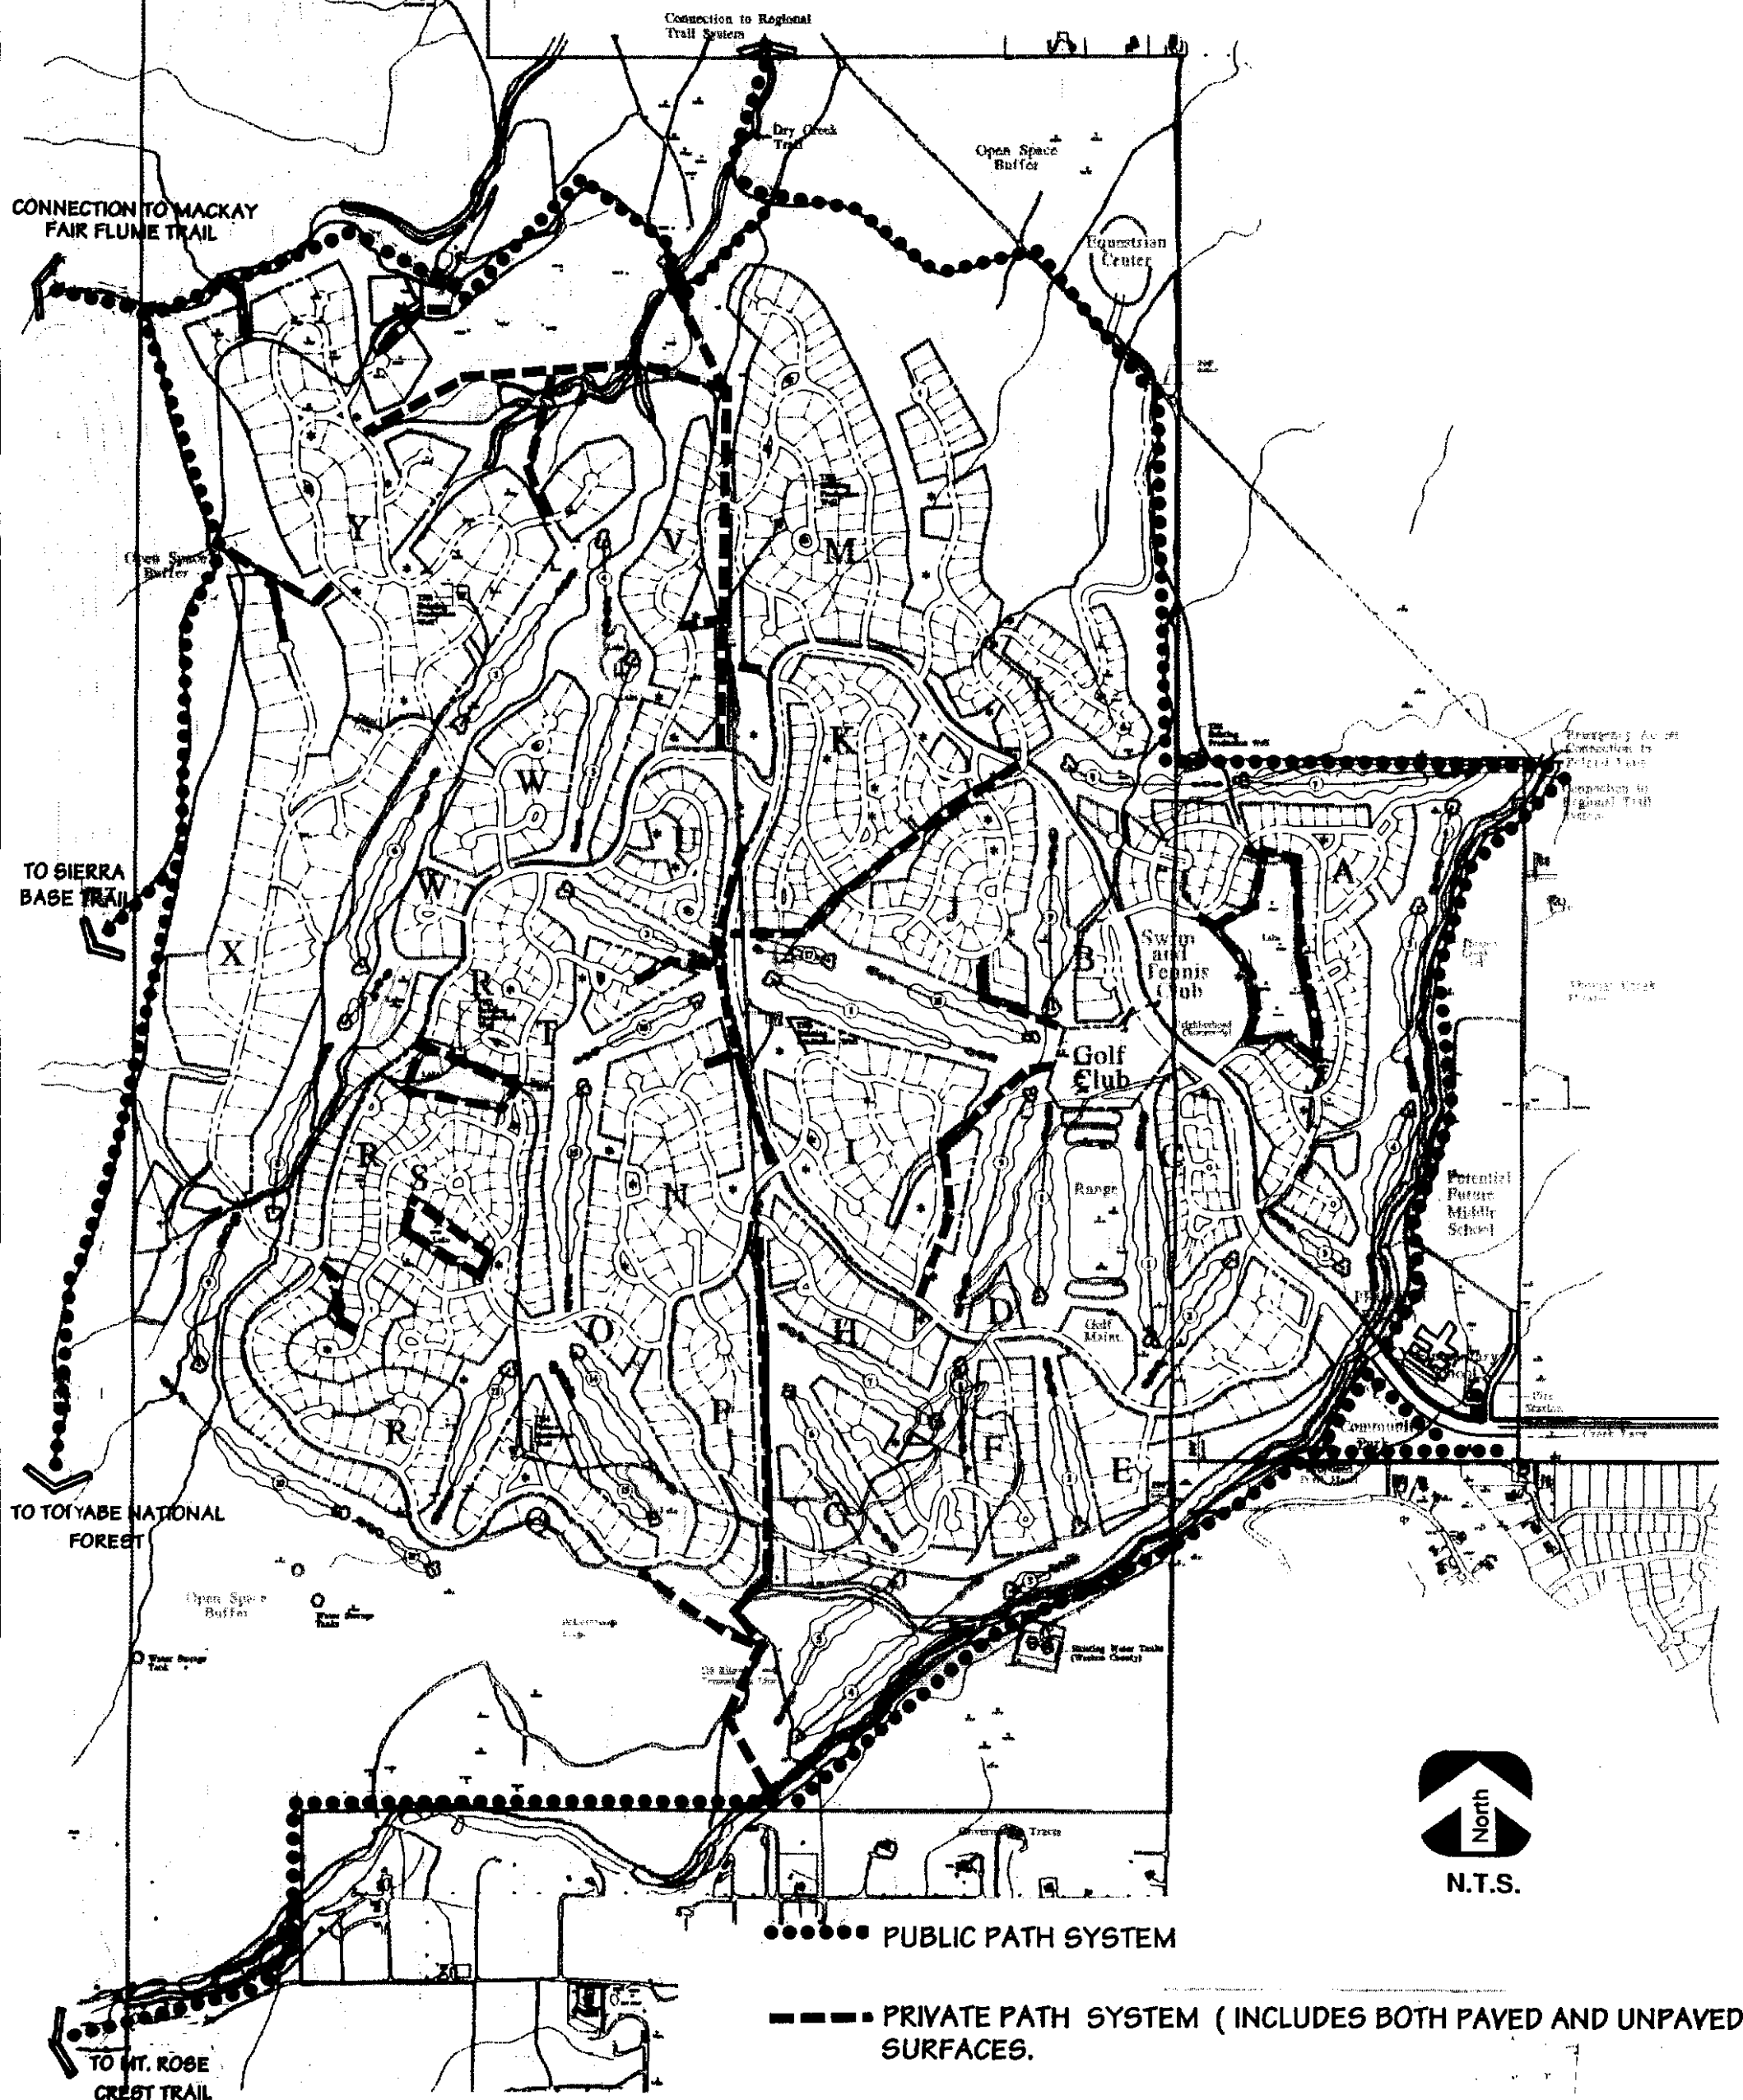

On-premise signs include signs that advertise the business or activity that is constructed on the premises where the sign is located. Such signs would be limited to the golf course, golf club, and the swim and tennis club, which includes the neighborhood commercial center. These signs may be 8 feet in height, and no special use permit will be required. The allowable sign area shall be 160 square feet. Illumination will be indirect only. Signs may be integrated into the design of a building without approval of a special use permit.

The intent is to keep all signs along roadways low, at the eye level of the motorist. Community and neighborhood signs will be integrated with entry monoliths. The sign will have native exterior facia. Sign lettering will be a metal attached to a smooth concrete backing or a cast concrete, mortared into place in the rock veneer.

Street signs for the roads and minor activity areas, such as sports fields, will be accomplished with metal or wood signs mounted on specially-designed posts, consistent with overall community design themes. Where possible, signs will be incorporated into low walls at entry points. Landscaping in front and to the sides of these signs will be kept low to avoid visual obstructions.

**Trails** - The proposed public trail system is consistent with the county's master plan for this park district. Figure 2-7 shows the trail system through the project. Regional public trails are proposed along Thomas Creek for access to the Mt. Rose Crest Trail and around the northern portion of the project for access to the MacKay Fair Flume Trail and the U.S.F.S. parcel in Section 11. Both trails provide access to the Sierra Base Trail, which eventually ties into the Hunter Lake Trail. Portions of the Sierra Base Trail are located on U.S.F.S. property and other portions, especially near Dry Creek, are located on project property. It may be necessary to relocate portions of the existing trail because of golf course and residential development near Dry Creek.

Proposed Regional & Community Park

..... PUBLIC PATH SYSTEM

----- PRIVATE PATH SYSTEM ( INCLUDES BOTH PAVED AND UNPAVED SURFACES.

N.T.S.

FIGURE 2-7  
PUBLIC AND PRIVATE TRAIL SYSTEM

Two trail types are proposed for the development -- private and public. Private trails connect residential neighborhoods to the various project amenities such as the golf/tennis clubs, schools, neighborhood park, and open space. The trails also lead to the exterior public trail system and regional destinations well beyond the project boundary. In compliance with the Conditions of Approval (i.e., Development Agreement Condition #13), a schematic pedestrian circulation plan of the private trail system is shown on Figure 2-7 and on Exhibit F, Sheet 1, Site Plan Layout.

Public trails connect existing residential neighborhoods to destinations such as Mt. Rose, Hunter Lake, and the MacKay Fair Flume Trail. These connections will ensure that public access to public lands to the west is not cut off. The trailhead at the neighborhood park allows for 25-car and 5-truck/trailer parking spaces. Some overnight parking will likely occur, especially for equestrian users whose destinations are sometimes many miles from the trailhead.

The private trails within the street rights-of-way are shown on the street sections in Figures 2-10 through 2-13. On the minor arterial, an 8-foot wide asphalt meandering path is proposed, with a transition to a 6-foot wide sidewalk beyond the entry gate. Both paths will follow the maximum proposed road gradient of 9 percent. The 8-foot width is intended to be multi-purpose -- bicycle, pedestrians, in-line skating, etc. A level dirt/gravel shoulder width of 2 feet will be provided for emergency pull-off. (Refer to Figure 2-8.)

Private trails outside of the street right-of-way consist of both primary and secondary types. Primary trails connect high use areas with residential neighborhoods. A 4- to 6-foot wide asphalt trail is proposed. Secondary trails connect residential areas together and also extend to the public regional trail system. A 4- to 6-foot wide packed gravel or decomposed granite trail is proposed.

Public trails will be constructed and maintained by Washoe County. The developer is not responsible for public trails. Specifications for public trails may be varied by Washoe County. Based on current county standards, minimum trail width will be 36 inches clear wherever possible. Grade is proposed to be a maximum of 10 percent for safety and to minimize erosion potential. Some level changes will be

required in the Thomas Creek drainage and steeper slopes in the northwest corner of the site. Trail surfacing will probably be compacted dirt, with some small wooden creek/swale crossings as required. Pull-outs for horse-bicycle encounters will be provided along the way, especially where trail site distance is minimal. Vertical height clearance on the site is not a problem due to lack of trees everywhere but along portions of Thomas Creek.

**Trail Signs** - Figure 2-9 shows proposed signs for the public trail system and for locations where public and private trails come together. Washoe County will probably install signs at trail heads and at other public access points. The signs are intended to help people determine if the trail is within their level of ability. A regional map may also be displayed, along with warnings for snakes and drinking untreated water. These signs will be maintained by Washoe County. At public/private trail crossings, a small sign denoting the private trail will be installed. Public/private trail signs shall be constructed and maintained by Southwest Pointe Partners or its successor.

### **Street and Median Guidelines**

The roadway sections proposed for Southwest Pointe are shown in Figures 2-10 through 2-13. The street sections vary from a divided minor arterial at the entrance to small lightly traveled rural streets. The developer is responsible for construction of the public minor arterial to the project entrance where it becomes a private road. Washoe County is responsible for maintenance of the public roadway. Past that point, all roads are private and the developer is responsible for construction and maintenance until that responsibility is transferred to the Homeowners' Association. The developer is also responsible for installation and maintenance of all median landscaping and all landscaping along the edge of the minor arterial and collector streets. Maintenance of the landscaping and irrigation systems will initially be the responsibility of Southwest Pointe Partners or its successor until that responsibility is transferred to the Homeowners' Association. The Lot Developer or individual homeowner will be responsible for the installation, irrigation, and maintenance of all street right-of-way landscaping in front of individual lots fronting along private common driveways, rural streets, and local streets.

**60' ROW (COLLECTOR, PRIVATE, ADT = 500 TO 2,000)**

FIGURE 2-15  
 COMMON DRIVEWAYS

Roads will be constructed with a minimum 2 percent crown or cross section to maintain proper drainage. Maximum grade of landscaped areas within the street right-of-way will be 3 to 1. Vertical alignments of streets will be chosen to minimize cuts and fills. Pavement and base sections will be determined in accordance with the recommendations of the geotechnical engineer and Washoe County. All utilities will be placed underground.

**Minor Arterial (Public or Private)** - Whites Creek Lane from Thomas Creek Road to the entry gate house is a public road. From the entry gate house to the first intersection, Whites Creek Lane is classified as a private, minor arterial. The approved public and private street sections are shown in Figure 2-10. The private street will have an 120-foot minimum right-of-way with a minimum of 27-foot median, a 24-foot roadway section on either side of the median, and an 8-foot wide meandering asphalt path on both sides. A concrete header is proposed at the edge of pavement. No parking, except for emergencies, will be allowed. No residential driveway access is allowed.

Street trees will be planted between the meandering paths and street edge in an informal pattern of both deciduous and evergreen trees. Specimen-size trees will be used around the gate house. Near the project entry, a massing of evergreen trees on both sides of the street will focus views to the creek and slow down traffic as the street section transitions to a narrower pavement width. Median trees will be vertical and upright with no overhanging branches. Ground covers and shrubs will be kept low with an informal massing pattern to eventually cover most exposed ground. Flower and foliage color will be emphasized.

From Thomas Creek Road to the project site, landscaping and irrigation will be installed by Southwest Pointe Partners or its successor. Landscaping along this section of roadway may consist mostly of shrubs, ground covers, boulders, and only a few trees so that the residents of Saddlehorn do not have their views of Reno obscured.

**Collector Streets** - The street sections for collector streets are shown in Figure 2-11. From the first intersection to the golf and swim and tennis clubs, a 120-foot right-of-way is shown. The roadside ditch serves a dual purpose -- snow storage and drainage. Residential driveway access will not be allowed. Landscaping along this section of roadway will continue the treatment used along the minor arterial.

Past the golf and tennis clubs, the road narrows to a 60-foot right-of-way with a 24-foot pavement width. (This street section is used in all locations where the average daily traffic ranges from 500 to 8000 ADT.) Either an 8-foot or a 4-foot path or gravel shoulder are shown on both sides, depending on the anticipated average daily traffic. Paths may not be constructed if alternate locations for pedestrian paths are shown on the Pedestrian Circulation Plan. Where necessary, a 12-foot, left-turn lane will be constructed at intersections. A concrete header with a roadside ditch is proposed. No parking, except for emergencies, will be permitted.

The landscaping within the right-of-way will continue to be informal with a combination of deciduous and evergreen trees massed in irregular patterns to simulate a natural forest pattern. Beyond the entrances to the swim and tennis club and golf club, the landscape will transition to a more arid, "high desert" palette of shrubs and ground cover. Irrigation for plant material will be installed and maintained as a part of the common areas. In disturbed areas and along roadside ditches, erosion control grasses and wildflowers will be seeded to minimize erosion and provide seasonal color.

In neighborhoods with lots of 1/2 acre or less, the planting concept will consist of street trees planted in a regular pattern, to be selected from a list of approved tree species with heights under 25-30' at maturity in order to preserve views toward Reno. The intent is to provide summer shade and visual continuity within denser neighborhoods, but in such a way that the street tree pattern is not visibly intrusive because of the tree's height, form, or seasonal color.

**Local Streets** - Local streets provide access within the individual neighborhoods. (Refer to the street sections in Figure 2-12.) A 60-foot right-of-way is shown, with a minimum pavement width of 22 feet, and a 4-foot wide path or gravel shoulder on both sides. Paths may not be constructed if alternate locations are

shown on the Pedestrian Circulation Plan. A concrete header with a roadside ditch is proposed. No parking, except for emergencies, will be permitted. Landscaping and irrigation along local streets will be the responsibility of the Lot Developer or the individual homeowner. Landscaping must be reviewed and approved by the Architectural and Landscape Control Committee.

**Rural Streets** - Rural streets also provide access within individual neighborhoods. As shown in Figure 2-12, rural streets have a minimum 60-foot right-of-way, with a 22-foot pavement width. A concrete header with a roadside ditch is proposed for both snow storage and drainage. No parking, except for emergencies, will be permitted. Landscaping and irrigation along rural streets will be the responsibility of the Lot Developer or the individual homeowner. Landscaping must be reviewed and approved by the Architectural and Landscape Control Committee.

**Common Driveways** - Private, common driveways are used in a few locations where a small group of homes is proposed along collector streets. As shown in Figure 2-13, when a common driveway serves 4 or less lots, the pavement width is 20 feet. When 5 or more lots are served, the pavement widens to 22 feet. No on-street parking, except for emergencies, is permitted. Off-street parking bays in common area will be constructed by the developer. To maintain consistency, landscaping in the area between the collector street and the common driveway will be the responsibility of the developer.

### **Community Buildings**

**Golf Clubhouse** - The golf clubhouse is intended to function as a recreation and social center for Southwest Pointe. The clubhouse is located to maximize views of the two golf courses, Mt. Rose/Slide Mountain, the lights of the City of Reno plus the surrounding hills and valley below. The clubhouse sits on an elevated plateau creating a strong visual impression as a community building. (Refer to Figures 2-14 and 2-15.)

The clubhouse will be approximately 30,000 square feet in size. Because of the residential-style sloping roofs and other roof feature elements which add visual interest, the maximum building height is 48 feet from average grade. In the

Washoe County Development Code, Article 406, Building Placement Standards, and Article 214, Southwest Truckee Meadows, limit building height to 35 feet. These standards have been modified through approval of the Final Development Agreement of which this Development Standards Handbook is a part.

The Golf Clubhouse will provide functional support to the public golf operation, including pro shop, cart rentals and storage, men's and women's locker rooms, snack bar, outdoor barbecue and bar, and administrative offices. The building's basement will house the storage and service spaces, and the upper floor will house the different food and beverage spaces plus the pro shop. The restaurant will be able to accommodate community functions plus special events, such as weddings or parties. The lower floor is mostly below grade as a basement to reduce the overall building height so the building does not dominate the site.

The exterior of the building has a native stone facade at the lower level so that the building appears to grow up from the ground and be visually connected to the site. Other building features, such as columns and chimneys at the upper floor, may also have native stone veneer. Other clubhouse exterior materials include stucco-appearing walls with some wood trim for accent and metal roofing. The roofing color may be of a weathered copper patina, sage green or another natural landscape color to blend in with the natural environment. The stucco color is intended to be earthtone. Some exterior material color selections will be of other natural colors for subtle accents.

An interim clubhouse will be constructed to the south of the permanent clubhouse. (Refer to Figure 2-14.) Modular buildings will be used and will be made architecturally compatible with the guidelines established in this Handbook. The interim facility will be approximately 2,500 to 4,000 square feet and will include a pro shop, cart storage and rentals, snack bar, restrooms, men's and women's locker rooms, and some administrative offices. Completion of the interim building will coincide with the opening of the golf course. The interim building may be operated for a period of 5 years following the golf course opening. Extensions may be administratively granted for periods up to two years, for a maximum of two extensions. A building permit for the permanent clubhouse will not be requested until Southwest Pointe Partners or its successor is ready to construct the

permanent structure. In the Washoe County Development Code, Article 310, Temporary Uses and Structures, limits the types of temporary uses to which modular units can be put to support the construction of a permanent use. Through approval of this Final Development Agreement, of which this Development Standards Handbook is a part, temporary recreational and sales operations have been added to the uses listed under Section 110.310.35.

**Swim and Tennis Club** - The swim and tennis club is intended to provide an additional recreation activity center within Southwest Pointe and will house different indoor exercise spaces plus outdoor tennis and swimming. Dressing facilities, a snack bar, and administration activities will also be indoors. The swim and tennis club will be 10,000-15,000 square feet in size and no more than 30 feet in height. It will be oriented around a town square courtyard opposite the driveway entrance to the golf clubhouse. (Refer to Figure 2-16.) Both driveway entrances will be visually enhanced with landscape medians and decorative streetscape materials. The outdoor swimming area, as well as some of the tennis courts, will have lights for evening use. The exterior design of the swim and tennis club will be compatible with the golf clubhouse and other community buildings. (Refer to Figure 2-17.) The swim and tennis club may be built in phases depending on market conditions and demand for such facilities. Construction will probably start during Phase II of the project.

**Commercial Village** - A maximum 20,000 square foot neighborhood retail and support services complex may be constructed adjacent to the swim and tennis club around the town square. (Refer to Figure 2-15.) It is anticipated that retail uses may consist of a small market, video store, beauty salon, travel agency, and real estate office. The one-story commercial building exterior will be of materials, forms, and colors that match the swim and tennis club and are compatible with other community buildings.

**Fire Station** - A site shall be set aside by the developer on which the Nevada Division of Forestry may construct and operate a two-bay fire station for regional fire protection. The fire station will be located near the elementary school and, if feasible, will have building materials compatible to the other community buildings.

### III. SITE DEVELOPMENT GUIDELINES

The purpose of the site development guidelines is to present methods for integrating homes into the natural setting through sensitive design. These guidelines are intended to apply to individual residences; whereas, the guidelines presented in the previous chapter apply to community buildings and other features.

#### Building Setbacks

Each residential lot will have building setbacks that define where and how structures can be built. The underlying objective is to encourage articulated building forms, one- and two-story massing, unobstructed views, privacy, and varied setback on the street, golf course, and between residences.

The minimum setback and yard dimensions are described below:

<u>Lot Size</u>	<u>Front Yard</u>	<u>Side Yard</u>	<u>Back Yard</u>
1 acre +	30'	12'	30'
1/2 acre +	25'	10'	20'
12,000 sq. ft.	20'	8'	20'

\* Reduced to 20' with side-entry garage.

Projections, such as chimneys, covered porches, decks, roof overhangs, canopies, eaves, or other similar architectural features may extend into a required side, front, or back yard setback not to exceed 2 feet. Some lots may have varying setbacks which relate to unusual property features or configuration and these will be specified by the Residential Lot Declarations. Detached garages are allowed on one acre and larger lots and must be located behind the required front yard setback.

Setbacks from potentially active fault traces have been recommended by the geotechnical engineers. The fault traces that were trenched and staked are judged to be fault traces having relatively high risk of ground rupture during an earthquake. Buildings for human occupancy should not be sited over these faults and a setback is recommended for each side of the fault. The setbacks for each surveyed fault are shown on the site plan and will be identified on tentative and final maps.

### Minimum Lot Width

All residential lots shall comply with the following minimum average width requirements: 1 acre and larger lot, 120 feet; 1/2 acre to under 1-acre lots, 100 feet; and 12,000 square foot lots, 80 feet.

### Grading, Drainage, and Erosion Control

All construction will require some resculpting of the earth's surface. However, the placement of the home, driveway, and other site elements should minimize disruption of the natural topography as much as possible. Where grading is required, the slopes should be gently rounded to blend into the natural contours of the land. Site grading design should also complement and reinforce the architectural and landscape character by screening undesirable views of parking and storage areas and by helping to reduce the perceived height and mass of the architecture. Wherever practicable, re-graded slopes should not exceed 3 to 1. Geotechnical considerations may allow a steeper slope.

The individual lot purchaser or builder will present drawings to the ALCC for review that are creative and sensitive as to the individual footprint, setting on the lot, and natural grade. To minimize grading, the house pad should step down the hillside rather than sitting on a flat plane. The builder/architect is encouraged to minimize the amount of grading on each lot. This same concept should be carried forth in the design of the hardscape and landscape areas adjacent to the building structure. Every effort should be made to achieve a final design which fits the shape of the lot and the land around it.

The control of water run-off and potential erosion should be a consideration both during construction and in the final design of the home site. Natural surface drainage patterns should be preserved whenever possible. Avoid concentrating surface drainage to reduce the erosion potential.

The preservation of existing vegetation cover minimizes the potential for erosion. Construction equipment should be limited to areas intended for specific site improvements in order to minimize damage to existing vegetative cover. A program of temporary erosion control should be put into effect immediately after site grading is complete. This program should include at least one of the following techniques for stabilizing soil and preventing wind and water erosion: hydro-mulching, wood chip mulch, netting, straw mulch, gravel mulch (suited to vehicle paths), or tacking agents. A program of permanent erosion control measures would, at a minimum, include slope stabilization structures (retaining walls, slope terraces), runoff control structures (diversion dikes, infiltration trenches), or runoff collection features (retention basins, catch basins). (Revegetation and erosion control are also discussed in Chapter V, Landscape Design Guidelines).

Streams and surface water features will be protected against sediment buildup through the use of best management practices in accordance with the current Lake Tahoe Basin Water Quality Management Plan, Best Management Practices.

Dust control methods will comply with the requirements of the Washoe County District Health Department, Air Quality Management. A detailed dust control plan must be prepared prior to issuance of a grading permit for the golf course or approval of a final map (Tentative Map Condition #49 and Special Use Permit Condition #18). The dust control plan will address phased grading and stabilization methods including revegetation, application of palliatives, street cleaning, and dust controls on any storage piles located on the site.

### Driveways and Parking

To create a streetscape that blends with the rural setting, driveway widths should be minimized. Maximum paved driveway width outside of the building envelope shown on the final map is 12 feet. Slopes on driveways should generally not exceed 14 percent except in special cases. Provide culverts for driveways that cross landscaped drainage swales. Circular drives are only allowed on 1-acre lots.

Large expanses of asphalt or gravel are discouraged, as are large areas of untextured and uncolored concrete. Unpaved parking areas are discouraged. The visual impacts of paved areas can be reduced by tucking them into the topography and landscape.

On-street parking is prohibited throughout Southwest Pointe. Each lot must provide off-street guest parking to accommodate two cars. Additionally, the Conditions of Approval (Tentative Map Condition #34) require that guest parking be provided within 500 feet of homes that have lots ranging in size between 12,000 square feet and 1/2 acre. One space shall be provided for every three homes. The parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the tentative map.

### Auxiliary Structures and Site Utilities

Auxiliary structures, such as gazebos, utility sheds, etc., must be designed in a manner that is integrated with the main structure and harmonizes with the natural setting. Auxiliary structures should be situated so as not to interfere with the views and enjoyment of adjacent properties. Plans for such structures must be submitted to the ALCC for review and approval.

All solar and mechanical equipment must be screened. All utility meters and appliances must also be screened. Trash and utility areas should be located to avoid direct views from streets or adjacent properties. These areas should be enclosed with fencing or screens that match residential architectural detailing and materials.

## Fences and Walls

Appropriate design and placement of fences and walls on residential lots is important in maintaining a high quality, rural atmosphere. It is essential that the materials, patterns and textures complement the surrounding architecture wherever possible.

Perimeter lot fencing is the same type of fencing as the community screening fence shown in Figure 2-6. The fence is 5 to 6 feet tall with or without stone pilasters. Fencing is either metal balusters or wood members. All exposed wood surfaces will be lightly stained or treated with preservatives for longevity. When a change in elevation occurs, the wall or fence should be stepped in equal intervals. Plant materials or berming will be used to soften a continuous wall or fence. All fencing must be submitted to the ALCC for review and approval. The proposed locations for lot perimeter fencing is shown on a separate exhibit within the Final Development Agreement -- Exhibit F, Sheet 1 entitled Site Plan Layout. It should be noted that these are proposed locations for lot perimeter fencing. It is up to the individual lot owner whether or not to construct such fencing.

Special consideration will be taken when installing walls so as not to obstruct views from adjacent homes. Any privacy walls and fences will be installed by the homeowner or builder and maintained by the homeowner.

When retaining walls are necessary, they should become an integral part of the design, not an afterthought. The use of several 2- or 3-foot high walls rather than a single taller wall is encouraged. Not only should the retaining walls be designed with careful consideration for strength and provisions for surface and underground drainage, but they should be configured to sensitively fit with the natural terrain and be constructed or faced with materials that blend with the setting.

Freestanding walls are appropriate when used as an extension of the residence, to define key outdoor spaces, and to protect from climatic extremes. Wall materials should be consistent with the architectural style of the house.

### Exterior Lighting

All exterior lighting must be approved by the Architectural and Landscape Control Committee. Homeowners are encouraged to utilize landscape lighting -- to subtly highlight unique architectural features, trees, and focal landscape areas. Lighting levels should also be provided which insure safe passage along walks to building entries. Lighting of patio and deck areas to provide for nighttime usage is also allowed.

Landscape lighting should be integrated into the overall design of the site. Downlights can be recessed into arbors and soffits. Ground-mounted landscape bollards may also be used. Pole lights and monoliths with lights higher than 48 inches are not allowed. Light sources should not be directly visible. Light trespass and glare onto adjacent properties is not allowed. Lighting should endeavor to highlight special features and use areas rather than a uniform glow across the property.

### Energy Conservation

All residential units shall include site design and building design or construction features and devices which are capable of conserving energy. Measures encouraged in the design of all residential structures are:

- Double glazing.
- Size and placement of windows and other major openings shall take into account prevailing breezes during the summer season and protection from stronger winds during the winter season.
- Appropriate design features to deflect sunlight or allow it to enter the residence, depending on seasonal needs.
- Strategically locate and select plant materials in areas adjacent to the residence to reduce temperature buildup and sun penetration during the summer season.

Building construction requires sufficient insulation and insulated glass to meet State of Nevada energy standards. Other building construction energy conservation features are encouraged, such as high efficiency mechanical equipment, high efficiency glass (non reflective), etc.

## IV. ARCHITECTURAL DESIGN GUIDELINES

### Residential Design Character

The guidelines seek to establish a community-wide theme for Southwest Pointe that transcends individual property boundaries. Consistent with the Community Design Character described in Chapter II, the Residential Design Character is intended to be respectful of and harmonize with the existing natural and newly created site environment. Building materials, forms, and colors shall be natural in character to blend into and complement the Southwest Pointe character.

The residential design intent is to encourage a variety of residential styles and to encourage creativity and diversity within the community. Creativity will allow for compatibility of golf course homes to the golf course, and compatibility of the hillside homes to the surrounding open space, as an example.

### Building Form, Mass, And Proportions

Residential structures shall employ forms, massing and proportional detailing that relates to the predominantly horizontal context of the upland range. Low forms are encouraged to not compete with the horizontal context. Two-story structures shall have at least 50 percent of the facade appear as a low, one-story structure, this suggests the middle of the structure be two-story with one-story portions around it. This creates a vertically stepped facade from ground up to one-story, up to two-story, and back down. The stepped facade emphasizes the horizontal and appears more organic than tall, two story high wall planes.

Simple, yet bold, roof dominated forms will also emphasize the horizontal features and minimize the appearance of the vertical ways. Hipped roofs are encouraged with a few accent gables as opposed to all gables or shed type roofs.

Wall planes shall also be stepped horizontally (or articulated) with offsets to break up long walls and to create shadows and shading to subdue long wall planes. Covered porches and trellises are also encouraged to create shadows and shading, including heat gain and glare reduction by shading windows and walls. Patios with porches and trellises extend the indoor living space from indoors to the outdoors.

Stepped building forms and the elements of the forms shall be carefully composed in an integrated manner with consideration given to overall, three dimensional proportions as well as the proportions of the individual architectural elements.

### **Architectural Elements**

**Roofing** - Roof surfaces shall have a strong texture, like the natural landscaping with one color to blend with the natural backdrop.

Roofing materials shall be fire resistant. Approved roofing materials consist of slate, concrete shakes, fiber cement shakes/shingles, 40-year fiberglass composition shingles, and metal roofing with ribs or shingles and without exposed fasteners. Wood shake or shingle roofs are not permitted.

Roof elements, such as skylights, exposed vents/flues and metal, shall be colored to match or blend in with the roofing. No exposed rooftop solar panels are permitted.

**Walls** - Wall surfaces shall be selected for durability, weather and fire resistance, minimum maintenance plus compatibility with the regional character, and building style. Besides articulation, wall texture creates more attractive wall surfaces. The use of wall trim can add accent to wall surfaces, if used correctly. Contrasting wall and trim colors are not encouraged. Approved wall surfaces consist of stone veneer, brick, stucco, and wood siding.

**Windows and Doors** - The arrangement, location, size, shape, and relationship of window and door openings shall be composed in an orderly and proportional manner on all exterior facades. Continuity of window and door style shall be considered on all facades as well as within individual facades.

**Chimneys** - Chimneys are an important design element and shall be located and sized to be proportional to the overall building composition. All above roof fireplace flues shall have a chimney enclosure of no less than 2 feet by 5 feet. Stone and brick chimneys are encouraged.

**Exterior Materials And Colors** - The composition of different exterior materials and colors shall be carefully selected and designed to insure compatibility to the building style and regional character. The use of many different materials and colors should be discouraged so that the building form is emphasized. General continuity of exterior materials at different exterior facades is required, although subtle variation from building to building is encouraged. The glass color shall be selected for shading, ultraviolet control and compatibility with other materials. No reflective glass is permitted. Intense and glossy colors are not permitted.

### **Garages And Accessory Structures**

Detached garages and guest houses are permitted only on lots 1 acre or larger in size. As a general rule, other accessory structures are not permitted. These structures may be separated from the residence; however, a connection is required. The connection shall be a trellis arbor or another overhead element.

Small accessory structures, such as a remote spa trellis or other landscape type elements, may be detached if approved by the ALCC.

## Miscellaneous

Antennas - All antennas are restricted to the attic or interior of the residence. It is mandatory that all homes be pre-wired to accommodate cable reception. Satellite "dish" antennas are allowed only if adequately screened and not visible from surrounding areas.

Awnings and Patio Covers - Awnings and patio covers, if used, must be of solid color canvas within the approved color palette. Fiberglass or sheetmetal awnings are not permitted.

Gutters and Downspouts - All gutters and downspouts must be a color to blend into the building back drop, and downspouts shall be located to be least visible.

Utility Service and Meters - All utility service shall be underground with no exposure. All utility meters required to be exposed shall be either located to be not visible or enclosed in a cover box compatible with the building siding and as approved by the utility company. Meters shall be recessed in walls with no exposed conduit.

Mechanical Equipment - No exposed mechanical equipment is permitted. All exterior mechanical equipment, including solar panels, condensing units, etc. must be screened from view.

Signs - Exterior signs other than house numbers are prohibited. During construction or sale, one (1) approved construction/sales sign may be placed in front of each homesite. Real estate sales/listing information must be placed on a panel of the sign just as contractor's or architect's information would be. Additional freestanding signs, "snipes," banners, flags, etc. are prohibited. Political signs, within reason, are excepted from this prohibition.

## Energy Conservation

Southwest Pointe will have all locally available public utilities for energy as well as being very conducive to passive solar access for natural heating to conserve energy. Passive solar access requires consideration of building orientation and

window locations. Window locations should also be chosen to capture breezes for natural ventilation and cross ventilation within the structure for energy conservation.

Solar shading should also be considered for prevention of excessive heat gain, particularly in the summer and from the westly afternoon sun. Exterior shading devices include roof overhangs, trellises and patio covers. Plant material selection may help control solar access, such as deciduous trees for winter access and summer shading.

Building construction requires sufficient insulation and insulated glass to meet State of Nevada energy standards. Other building construction energy conservation features are encouraged, such as high efficiency mechanical equipment, high efficiency glass (not reflective), etc. Single-family homes are required to comply with the regulations pertaining to solid fuel burning devices which have been approved by the District Health Department. Those regulations require that all solid fuel burning devices not emit more that 1 gram per hour. The only devices currently on the market that achieve this low level of emissions are pellet stoves or natural gas fireplaces.

## V. LANDSCAPE DESIGN GUIDELINES

### Landscape Design Character

Landscaping will play a significant role in establishing the character of Southwest Pointe. These landscape guidelines are intended to enhance the character and quality of the community established by the architectural guidelines. The open space system responds to site conditions and creates a visual framework for the entire project. Neighborhood entries and roadway landscaping will reinforce the overall landscape themes which permeate the site and establish a "sense of place" within Southwest Pointe. Also contributing to the overall community identity are other consistent landscape elements such as walls, fences, lighting, signage, and paving.

The golf courses have been carefully situated along the creeks, adjacent to major roads, and routed to take advantage of the panoramic views from the property. The courses have been planned to incorporate manicured lawns for the tees, fairways, and greens with transition landscaping to enhance the beauty of the adjacent native vegetation through contrasts in color and texture. Through careful planning, the golf courses and the entire Southwest Pointe community have been gently blended into the natural environment.

### Landscaping - Common Areas

Landscaping in common areas will be the responsibility of the developer. The intent of landscaping within the project site is both aesthetic and functional. The development will fit the local terrain and environment without looking out of character for northern Nevada (e.g., short grasses, muted grays and sage green colors of shrubs, with evergreens in clustered areas). At the same time, it is important that the landscape create a sense of arrival at the entry and a strong visual unity throughout the project. This will be accomplished through landscaping and consistent signage, walls, fencing, etc.

**Common Area Landscape Guidelines** - The following guidelines apply to common area landscaping:

- The landscape palette is informal and natural, combining the best characteristics of the high desert natural landscape. Native shrubs and ground cover will be massed in groups of a single species, used in combinations that provide contrasting colors, textures and forms in a broad-brushed approach to landscape design. Trees will be massed in naturalistic groupings of a single species, an interplay of evergreens, and contrasting deciduous trees.
- Drought-tolerant, low-maintenance plantings will be used.
- Screening of parking areas, utility enclosures, service yards, and hillsides will be done with evergreen trees and shrubs.
- A variety of plant sizes will be used, with specimen trees at central focal points such as the project entry and street intersections.
- Irrigation systems must be automatic, with a controller and valves. Drip systems will be utilized instead of above-ground spray heads in planter areas. The use of a central control irrigation system on the golf course will facilitate the use of satellite controllers in common areas. This will allow all controller programming from a central source at the clubhouse.
- Shrubs and trees that deer do not prefer will be planted, although deer and especially rabbits will eat almost any plant if hungry enough and during the time when plants are putting on new tender growth.
- Plantings will contain a combination of fast, medium, and slow growth rate types. Eventually the slow growth plants will dominate the landscape, being more disease free and less prone to wind breakage.
- The use of lawn will be restricted to key focal points such as entry locations.
- Future landscape plans in common areas must be consistent with county requirements and approved by the Architectural and Landscape Control Committee. The plant materials list in this Handbook will be followed for planting selection.
- Exposing native rock outcroppings and boulder groupings during grading operations will enhance the overall landscape theme. Ideally, boulders should have at least one third of their total size buried in the ground. This gives rock

a more permanent and natural look rather than just setting them on top of the ground. Boulder size will be a minimum 3 foot diameter, with groupings rather than scattered rock.

### Landscaping - Private Yards

All visible areas of yards not hardscaped must be landscaped in an acceptable form -- either natural, with ornamental plantings, or with both. Landscaping plans for individual residences will be reviewed and approved by the Architectural and Landscape Control Committee. Homeowners purchasing builder products will have up to 6 months to install private landscaping after close of escrow without a penalty. Homeowners purchasing custom lots will have up to 6 months after receiving occupancy permits on their residences to install private landscaping without a penalty. The following guidelines have been created to provide homeowners, architects, designers, and landscapers a reference point from which to develop individual landscape plans. These guidelines may be amended from time to time by the ALCC based on comments and suggestions from designers and homeowners.

Private Yard Guidelines - The following guidelines apply to landscaping in private yards:

- All plant materials selected should be suitable for the climate, soil conditions, and theme of the community. (Refer to Appendix A for a list of recommended plants.)
- Landscape planting palettes should be simple and kept to a limited number of plant materials.
- Plantings should be done in masses or groupings of a single species to avoid complexity.
- Landscape plantings should provide for effective screening of cars, utility enclosures, or any visually undesirable element or structure.
- Planting selections should strive to maximize color during all four seasons.

- All landscaped areas must have an automatic irrigation system, preferable designed by a Landscape Architect or irrigation consultant to ensure efficient water usage.
- Group plants with similar water requirements.

**Front Yard Landscaping** - The following guidelines apply to front yard landscaping:

- "Gravel gardens" are prohibited.
- All visible areas of yard not hardscaped or in decking must be landscaped in an acceptable form.
- Front yards shall be planted with a combination of trees, shrubs, and ground cover or lawn. All lawns shall be sod and cover no more than 20 percent of the total landscape area.
- Except where previously installed by the developer, at least three trees shall be planted in the street right-of-way adjacent to the front of each 1-acre and 1/2-acre residential lot and at least two trees shall be planted in the street right-of-way adjacent to the front of each 12,000 square foot residential lot.
- At least five additional trees shall be planted per front yard on 1-acre lots, three trees per front yard on 1/2-acre lots, and two trees per front yard on 12,000 square foot lots. Groupings of vertical trees are encouraged.

**Side and Rear Yard Landscaping** - The following guidelines apply to side and rear yard landscaping:

- Side yard planting is encouraged to create a sense of privacy between adjacent homes.
- Rear yard planting can provide shade and privacy, define outdoor spaces, and frame views. Care must be taken, however, in planting trees and tall shrubs so as not to obstruct views from adjacent lots to the golf course and mountains. Final placement of all rear yard trees is subject to approval by the Architectural and Landscape Control Committee.

## Maintenance

Common Areas - Landscape, fencing, walls, irrigation systems, etc. installed by the developer will be maintained in a healthy and operational condition and will eventually be transferred to the Homeowners' Association, which will then assume maintenance responsibility. Landscape maintenance will primarily consist of weeding, spraying pre- and post-emergents, insect control, pruning, plant replacement and irrigation system winterizing/repair. Drip irrigation lines will require flushing to remove debris so that emitters do not clog.

Open space and private trail maintenance will include trash pick-up, erosion control, re-surfacing trails, and upkeep of signage. (Washoe County will be responsible for any maintenance activities required on open space that is under their control.) Paved walks will require re-seeding and eventually resurfacing the asphalt. Fencing will need board replacement and re-staining/re-sealing wood members.

Private Yards - The intent of maintenance standards for private yards is to keep the entire project up to high standards. Homeowners will be responsible for maintenance of their own lots. If the required front yard trees should die, they will need immediate replacement with trees of the same size and species. Property owners will also be responsible for maintaining landscaping along the right-of-ways of local and rural streets with direct lot frontage.

## Revegetation and Erosion Control

Revegetation is the process that involves seeds and small plants, fertilization, and soil stabilization once vegetation becomes established. It is one part of the overall erosion control process. Most often the best erosion control is a combination of structural or mechanical land revegetation. Once the ground is disturbed during construction, it is important to revegetate areas to be kept as open space as quickly as possible to minimize wind and water erosion on the soil. Typically, fast-growing annuals and perennials are installed for both short- and long-term stabilization.

**Timing** - The developer will follow the typical Washoe-Storey Conservation District and District Health Department guidelines for disturbed areas. A dust palliative will be applied to areas left undeveloped more than 30 days and a seed mix applied for areas left undeveloped more than 90 days. The preferred season for revegetation without irrigation is early spring after the ground softens. Late fall after the first snow is also acceptable. The developer may elect to seed between the preferred seasons with some supplemental irrigation from a water truck or temporary irrigation.

**Clearing Limits** - Areas to be cleared for development or cut/filled will be surveyed and staked so that equipment can be confined to those disturbed portions only. The objective is to save as much native vegetation within the development as possible for the open space between residential units. Clearing will be done on a phasing schedule as the development proceeds. The exception is the golf course, which will be graded and built in 9- or 18-hole increments.

**Seeding Methods** - Seeding will take place on open areas and slopes 3 to 1 and flatter. Slopes not accessible by drilling machines will either be hydroseeded or seeded with a mechanical broadcaster and raked by hand. Drilling is the preferred method since germination is generally the highest. Hydroseeding will be accomplished in a two step process. Seeding will take place on roughened soil with 30 percent mulch and then blowing the remaining 70 percent of the mulch on top of the seed. This ensures better seed/soil contact.

**Seeding Mixes** - One of the goals is to blend the development into the existing on-site environment. To accomplish this, a seed mix that matches the existing plant material is desired. Since the majority of the open space will not have permanent irrigation, the plants need to survive on rain or snow fall. A combination of woody plants (shrubs) and grasses are proposed for the mix. Also proposed are grindings from existing plants that are cleared. Since the seeds are already acclimated to the site, germination is usually very high. Plants to avoid seeding are those with a high fuel production that create a hazard for wildfires.

A general recommended seed mix is proposed in Table 5-1. More specific seed mixes will be developed during construction based on exposure, seeding timing, soil type, and degree of slope. Since the site is so large, seeding rates will need to be adjusted based on the above factors.

Three to four different grass and shrub types are recommended for a thicker and quicker cover. The wheat grasses are all fire resistant for use near residential units.

Table 5-1  
**General Seed Mix**  
 (In non-irrigated areas)

<u>Common Name</u>	<u>lbs/acre of pure live seed</u>
Indian Ricegrass	2
Fourwing Saltbush	4
Big Sagebrush	2
Great Basin Wildrye	2
Siberian Wheatgrass	4
Canbys Bluegrass	1
Annual Ryegrass	5
Palmer penstemon	1/4
Blue Flax	1/4
Shadescale	4
Total:	24.5 lbs/acre

In areas where drip irrigation is available, such as along roadways and around the golf course, trees and shrubs will be added to the above seed mix from Table A-1 (list of recommended plants). A variety of container sizes will be used, from tube packs to #5 cans, to provide a more natural appearance. Most woody plants are transplanted because of rodent predation to seeds. Larger shrubs and trees will also help stabilized slopes with their larger root mass. New plants will be mulched in the basins to conserve water and reduce weed competition around the root zone.

**Fertilization** - Fertilization will be added to the soils before seeding or during shrub/tree transplanting. Typical recommendations for low fertility sites call for 40 to 80 pounds of nitrogen, 50 to 75 pounds of phosphorous, and 50 pounds of potash per acre incorporated into the seed bed. For shrubs and trees, slow release plant tablets will be added to the planting pit during transplanting.

**Mulching** - Mulching provides a protective layer to help establish plants quicker. It also cools the soil, prevents soil crusting, keeps weed growth down and conserves water around the plant itself. For seeding, a hydromulch made of a wood product will be added to slopes where applicable. On steeper, longer slopes and drainageways, a wood excelsor blanket will be used with either a paper or plastic net backing. Blankets are unrolled and staked into place using wood pegs.

Flatter areas and slopes will be mulched with straw after seeding and either tackified or punched to keep straw in place. Typical rates are 3000 lbs/acre of clean straw, evenly distributed.

Mulching for shrubs and trees will be a ground bark or wood product. A minimum depth of 3 inches will be added to the watering basin and checked after major storms.

As previously mentioned, a dust palliative will be used to minimize wind erosion on areas left undeveloped more than 30 days. This is a only a temporary solution and these areas will need to be re-seeded, since palliatives are tackifiers that reduce soil porosity by forming a soil crust. Foot and vehicle traffic quickly degrade a soil surface, requiring re-application.

All revegetated sites will be inspected by maintenance personnel to repair any gully damage caused by storms, especially during the summer months. Areas of inadequate plant establishment will be re-seeded or re-planted as required. In some areas, temporary chicken wire fencing will be required to prevent rabbit and deer browsing on plants until they are bigger, stronger, and better able to survive on their own.

## Fire Fuel Breaks and Green Belts

The project site is located in a high fire hazard area as identified by the Nevada Division of Forestry. This is due to the occurrence of lightning and strong westerly winds. Fire suppression over a long period of time has resulted in on-site fuel accumulation that will become a problem during a wildfire.

Mitigation is needed to reduce the fire hazards on the site. Proposed mitigation includes careful structure siting, fire hydrants, fuel breaks around structures, the use of fire resistant/retardant plants, ease of access for fire fighting equipment, and the use of appropriate building materials.

The developer will work with the Division of Forestry to locate firebreaks in appropriate locations. Effective fire protection can be achieved with a wide strip (at least 100 feet) of bare ground around structures created by removing the native shrubs and grasses. However, the bare ground is subject to water and wind erosion, besides being aesthetically unacceptable. A better solution is the use of "green belts". A green belt can be defined as a landscaped and irrigated zone between a structure and the brush-covered wildlands that is designed to halt or slow the spread of fire and to control soil erosion and water runoff. (Refer to Figure 5-1.) Requirements in developing such a green belt are as follows:

1. Removal of highly flammable native brush and grasses, especially cheat grass, from around structures for a distance of 30-50 feet. Remove any dead wood in and around shrubs. This zone will consist of grasses, introduced shrubs, and individual trees pruned up off the ground. All plants will have a high-moisture content because of drip or spray irrigation. The sprinkler system will be permanent and on a controller. Included in this zone is a 10 to 20 foot wide area on both sides of the front driveway. Appropriate planting for this zone are native, naturalized and exotic species that gradually blend to the more native zone beyond. Lawns will be kept to a minimum size for water conservation and sprinklered with an overhead automatic spray system.

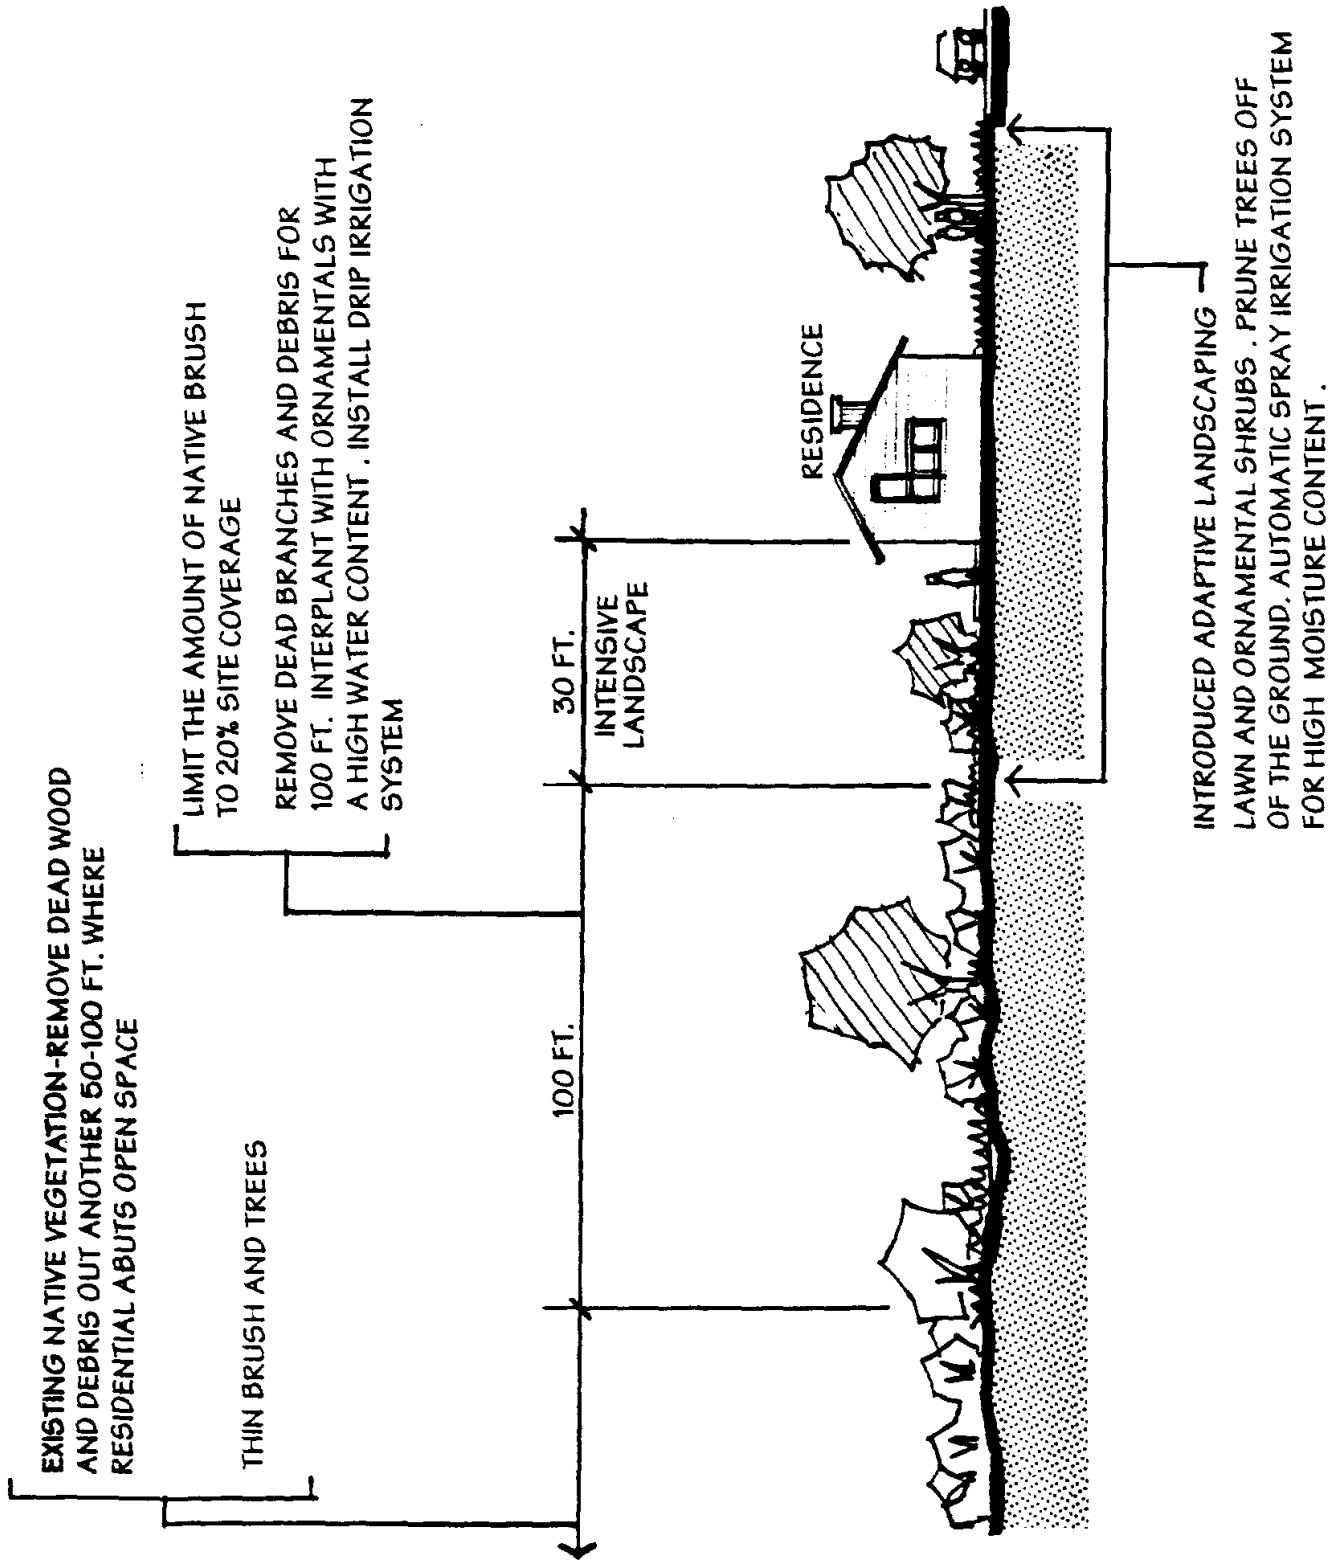

FIGURE 5-1  
FIREBREAKS

2. In the 30 - 100 foot zone around the structures, dead woody plants will be removed. Trees and shrubs will be occasionally pruned and "weedy" species eradicated. This landscape zone is intended to coordinate with the requirements for a managed fire break transition zone. Beyond the 100 foot zone, up to 200 feet, the amount of vegetation will be reduced and the most flammable species thinned.
3. Maintenance of the plantings will include weed control, cutting back woody plants, and removal of plant litter and fallen branches. Part of the effectiveness of a green belt lies in minimizing the volume of fuel available. Without proper maintenance, fire-retardant planting can become a fire hazard over time. Irrigation and maintenance schedules will be provided with final plans for the project.
4. The previous green belt conditions will be a part of the CC&Rs with mandatory enforcement. If property owners do not comply with the conditions, the Homeowners' Association will be authorized to contract for maintenance and bill the property owner.

A crucial step in the planning and construction of a green belt is selection of the plants to use. Listed in Appendix A are recommended species with varying degrees of fire retardance that have value for landscaping in green belts. Although a number of broad similarities may exist within the overall project area, it is not possible to make specific site recommendations until fire hazard, soil, topography, and sun exposure are further studied. Plants listed will be coordinated with those listed in the erosion control section of the Handbook. Generally, green belt species will be planted around structures and at the residential perimeter.

It is important that plants from Appendix A be grouped according to water requirements. Highly drought-tolerant species are often damaged or killed if over-watered. Over watering also forces unwanted growth in the plants and encourages weeds. If two or more species are planted together, it is essential that they have similar water requirements so that they can be watered from the same automatic valve. When an area is irrigated, it should be thoroughly soaked to encourage the roots to grow deeply into the soil. Frequent, light irrigation must be avoided.

## Water Conservation

Water conservation in the Truckee Meadows is a long-term responsibility for all residents, since we live in a desert climate with limited resources. There are many ways to conserve water in the outdoor landscape. Generally, plants will use as much water as a person gives them, so overwatering is the result of owners not realizing proper planting water requirements.

The principals of a relatively recent concept of "Xeriscape" (dry landscape) should be followed in every new development and retrofitted into existing landscapes. The principals are briefly summarized as follows:

- Mulch plantings to keep soil cool and reduce evaporation.
- Plan and design planting/irrigation from a project's beginning.
- Create practical and usable lawn areas of reasonable size and shape.
- Use appropriate plants for the area and group into water zones.
- Improve the soil in the intensive landscape zones with compost or manure.
- Irrigate efficiently with properly designed systems with automatic timers.
- Maintain the landscape appropriately by mowing, pruning and fertilizing properly.

Well done Xeriscape-type designs can typically reduce irrigation water by more than 50 percent, compared with traditional designs dominated by over watering lawns. Over watering can also kill highly drought-tolerant plants and force unwanted growth.

Home buyers in Southwest Pointe will be encouraged to follow the above water conservation methods in their private yard areas within the 30 foot intensive landscape zone surrounding the structure. Lower water bills will be just one of the long term benefits of proper landscaping.

## VI. SERVICES AND FACILITIES

### Water Service

The property is outside the boundary of the South Truckee Meadows General Improvement District/Special Assessment District #18. This property will be developed outside the district; however, all of the potable water facilities not on lots will eventually be dedicated to Washoe County. The developer of Southwest Pointe may construct a new water system since there are no existing facilities to accommodate this project. The Southwest Pointe water system may connect to the existing system. Washoe County has drilled several exploratory wells on the property. These wells will be used as the main production wells for the project.

The elevations at which water storage tanks will be located to obtain the proper pressure have been identified and are shown on the site plan. One or two tanks will be located at an elevation of approximately 5,630 feet. A third and smaller tank will be constructed at an elevation of approximately 5,910 feet. The tanks will have a height of approximately 24 feet. The total water storage requirement is between 1.2 and 1.4 million gallons (i.e., 926,500 gallons residential storage, 240,000 gallons commercial storage, and 120,000 gallons per tank residential fire storage). The lower tank(s) would have a storage requirement of 975,000 to 1.2 million gallons. The upper tank will have a capacity of approximately 200,000 gallons. The tanks have been located in a ravine to screen them from view. If additional screening is necessary, landscaping would be installed to the satisfaction of the Department of Development Review.

To serve the two proposed golf courses in Southwest Pointe, as well as the other courses and parks planned in the vicinity, Washoe County proposes to reuse treated wastewater and untreated creek water from the South Truckee Meadows Wastewater Treatment Plant. The Conditions of Approval for Southwest Pointe (i.e., Development Agreement Condition #26) require the developer to use treated wastewater from the treatment plant. Additionally, as part of the initial

construction, the developer will provide the necessary on-site easements needed to construct the infrastructure and, when the treated wastewater or creek water becomes available, the developer will construct the necessary on-site infrastructure.

Water conservation will result by using and managing resources efficiently and effectively. Reducing domestic water usage is an objective for this development. To achieve this objective the following devices and/or programs will be initiated:

- Water conservation devices will be used throughout Southwest Pointe as specified by current county ordinances.
- Water conservation principals for landscaped areas are addressed at the end of Chapter V.

### Sewer Service

Southwest Pointe will be served by the South Truckee Meadows Wastewater Treatment Plant, and, according to county staff, capacity is available. The plant currently has a capacity of 0.75 million gallons per day (mgd); however, the ultimate capacity is planned to be 6.0 mgd. Based on the number of existing and approved dwelling units within the service area, the current capacity has been allocated. This allocation exists only on paper and would be a problem only if all of the currently approved homes were constructed immediately. According to the county staff, the plant has been designed for expansion, and capacity will be available for this project.

Existing sewer service is only a short distance from Southwest Pointe. A 10-inch line has been extended to Saddlehorn and another 10-inch line serves Southwest Vistas. Because of the topography and site plan, Southwest Pointe may be sewerred to both locations.

### Fire Protection

Fire protection service is intended to be provided by the Nevada Division of Forestry (NDF), Sierra Fire Protection District. The closest existing station is Galena Station #2, which is located on the Mt. Rose Highway approximately 2 miles west of the intersection of Mt. Rose and Thomas Creek Road.

Consistent with the Southwest Truckee Meadows Area Plan, a one-acre site for a fire station is proposed near the entrance to Southwest Pointe. The site will be offered for dedication prior to recordation of the first final map. According to NDF staff, the station would be 3,800-4,000 square feet with two bays and living quarters. If constructed, there would be two, full-time employees supported by volunteers.

The entrance to Southwest Pointe may be gated at the point where Whites Creek Lane becomes a private road (i.e., near Thomas Creek). The developer has met with NDF staff to discuss their needs in order to maintain emergency access. Fire fuel breaks will also be required in many locations and an acceptable design will be developed with NDF staff. Maintenance of the fire fuel breaks will be the responsibility of the individual homeowner or the Homeowners' Association depending on the location.

### Security and Emergency Services

The Washoe County Sheriff's Department is intended to provide police protection service to this site from the main station at 911 Parr Boulevard. There is currently one patrol unit regularly assigned to the area, with an average response time of 10 minutes. The response time in this area will be greatly improved if the Sheriff's Department locates a substation in the community center in the South Valleys Regional Park at the intersection of Whites Creek Lane and Wedge Parkway. The first phase of the park has been constructed. The community center is located in a later phase; therefore, it may be several years before the substation is operational.

The gate house at the entrance to the project may be manned; however, no other private security personnel are planned. During the initial phases of the project, roving security personnel may be used to prevent theft and/or vandalism. The developer will meet with Sheriff's Department staff to discuss their needs in order to maintain emergency access.

### Private Recreation Amenities

The two golf courses proposed in this development are contemplated to be a combination of daily fee-public play and membership play. The golf courses will not be owned or controlled by the Homeowners' Association. Notwithstanding the administration of the entry area, so long as either of the golf courses are available for public play, an easement(s) or some other form of vehicular right-of-way shall protect the public's ability to access the golf course.

The swim and tennis facility shall be controlled by the Homeowners' Association and is not contemplated for use by the general public.

### Financial Assurances for Provision of Services

Financial assurances for provision of services (e.g., private road maintenance, common area landscaping, private recreation amenities, private drainage facilities, and security) shall be provided under the project CC&Rs, which shall provide for funding of these services through assessments and insure collection of assessments through liens on lots.

## VII. SPECIAL CONDITIONS

### Thomas and Dry Creeks

Two creeks cross the property -- Thomas Creek along the southern and eastern edge and Dry Creek through the western and north central portions of the site. The creeks are bordered by riparian vegetation and a wetlands delineation, prepared by Soil Resource Investigations and approved by the Corps of Engineers, has concluded that wetlands exist along both creeks. These areas will be avoided.

The Conditions of Approval state that a buffer will be provided between the fairways/greens and all creeks (i.e., Special Use Permit Condition #45). The setback of the buffer will comply with 100.200 (e) of the Uniform Building Code (i.e., 50 feet from the centerline of drainage area greater than 5,000 acres). A second condition (i.e., Tentative Map Condition #51) requires that a minimum buffer of 50-feet be provided between any structure and riparian vegetation.

At locations where roadways cross the creeks, the intent is to span the creek and leave all delineated wetlands undisturbed. This will be accomplished through the use of railroad flatbed car bridges. Concrete abutments will be constructed on either side of the creek outside the delineated wetlands. The railroad cars will then be placed to "clear span" the creek bed.

### Wildlife

Portions of the project site are located in the winter range of the Loyaltown-Truckee deer herd. The herd summers largely at higher elevations and winters in the lower reaches of the Sierra Nevada. Some residential and golf course development is proposed within the winter range; however, there is also a significant amount of acreage within the winter range that will be left as open space. Some key mule deer winter range habitat has also been identified at the northwest end of Southwest Pointe. For the most part, this area is proposed to be left as open space.

To reduce the impacts of development on the deer herd, the following mitigation measures are proposed:

- Leave open space around the developed area and provide open areas within the development in conjunction with the golf course.
- Seasonal restrictions and/or regulated recreational use in open space areas identified as key mule deer habitat will be enforced. Provisions will be made for these types of restrictions at the time the open space is decided. (Refer to Open Space Management Plan.)
- Boundary fencing is not proposed.

The staff of the Washoe County Department of Parks and Recreation has also expressed interest in stocking Thomas Creek with fish through the Urban Fisheries Program. To accomplish this work, vehicular access to the creek is necessary. Two locations for vehicular access are proposed -- one is at the neighborhood park and the other is from the maintenance road to the existing water tanks.

### Cultural and Archaeological Resources

All cultural resources issues (ethnographic, historic, and prehistoric) are being managed by personnel of Kautz Environmental Consultants, Inc. of Reno, Nevada. All historic and prehistoric sites in Southwest Pointe have been identified and recommendations regarding their significance have been made, or are currently being made (Hutchins and Kautz 1995, Christensen and Kautz 1995, and Christensen and Burns 1996). Recommendations have been passed to the Nevada State Historic Preservation Office (SHPO) in conformity with the Truckee Meadows Regional Plan: Conservation Element (1991, revised).

A total of 88 archaeological sites have been discovered on project lands of which 70 are prehistoric in age, one is historic, and 17 have components of both historic and prehistoric age. A total of 25 non-significant isolated finds have also been

recorded. Nineteen archaeological sites have been recommended as significant and 12 remain unevaluated. The remaining 57 sites are recommended as non-significant resources requiring no further work.

All reports from KEC pertaining to this project have been provided to the Washoe Tribe of Nevada and California and all cultural resource management activities are being arranged through the Tribe's Cultural Resources Coordinator. Already, a valuable and very unusual Native American bas relief effigy located on this land has been donated to the Tribe and, following its removal last year, resides in the Nevada State Museum.

All significant and unevaluated archaeological sites will either be avoided or mitigated during the construction, maintenance, and operation of this project. All mitigation will occur prior to site disturbance, though these activities may be phased in coordination with planned construction.

Prior to mitigation, an Historic Properties Treatment Plan will be submitted to the SHPO, outlining in detail the mitigation procedures to be employed, the precise sample, and the methodological and theoretical framework delineating the inquiry at each site. Following both the acceptance of this plan and completion of the specified fieldwork, construction will begin.

## VIII. DEVELOPMENT PROCESSING

### Relationship to Other Ordinances

The provisions of this Handbook will govern the development of Southwest Pointe. However, where the provisions of the Handbook do not address a specific subject, the provisions of the Washoe County Development Code (Chapter 110) or other ordinances governing the development of land shall prevail, subject to the provisions of the final development agreement.

### Amendments to the Development Standards Handbook

It is anticipated that this Handbook will need to be periodically updated and amended. If modifications are necessary, the Department of Development Review will be notified by letter, stating the changes requested, the reasons for the changes, and the effects of the changes. Minor modifications can be approved at the staff level. The definition of "minor" will be made by the Director of the Department of Development Review. More significant changes must be approved by the Washoe County Design Review Committee.

During the design and construction phase of the project, it will be the responsibility of Southwest Pointe Partners or its successor to initiate the amendment request. This responsibility will eventually be assumed by the Homeowner's Association.

### Approval Process

Design review will be required of each Lot Developer. Southwest Pointe Partners will provide each Lot Developer with a copy of the approved Development Standards Handbook and CC&Rs. These documents should be reviewed carefully by each Lot Developer.

The Architectural and Landscape Control Committee (ALCC) will review all preliminary and final construction drawings for structures and landscaping prior to their submission to Washoe County. The purpose of this initial plan review is to insure compliance with the Development Standards, the CC&Rs, and the overall master plan for Southwest Pointe. Any development plans submitted to Washoe County must be accompanied by verification from the ALCC stating that the plans have been approved by that Committee. Minor variations from the Development Standards may be approved by the ALCC providing that these variation are in conformance with county regulations and the intent of these Development Standards.

Approval by the ALCC does not imply that the plans are in compliance with all applicable county codes, ordinances, or other regulations. Each Lot Developer is responsible for submittal and processing of all plans and permits required by the county prior to the commencement of construction.

#### Financial Assurances for Development of Property

Financial assurances for the construction of capital improvements to be dedicated to the county shall be provided as required by Washoe County Code or pursuant to subdivision improvement agreements under tentative maps, subject to the provisions of the final development agreement.

## RECOMMENDED PLANTS

### Special Uses

Common Name	Botanical Name	Deer Resistant	Drought Tolerant	Revegetation	Erosion Control	Remarks
<b>Deciduous Shrubs</b>						
Cinquefoil	<i>Potentilla fruticosa</i>					
Alpine Current	<i>Ribes alpinum</i>			√		Berries attract birds
Golden Current	<i>Ribes aureum</i>		√	√		Berries attract birds
Siberian Peashrub	<i>Caragana arborescens</i>		√	√		
Redosier Dogwood	<i>Cornus stolonifera</i>			√		Streambank revegetation
Staghorn Sumac	<i>Rhus typhina</i>			√		Good bank cover
Odessa Tamarix	<i>Tamarix odessa</i>		√	√		Spring flowers
Snowberry	<i>Symphoricarpos albus</i>		√	√	√	
Amur Maple (tough)	<i>Acer ginnala</i>					Good fall color
Buffaloberry	<i>Shepherdia argentea</i>		√	√		
Memorial Rose	<i>Rosa wichuraiana</i>				√	Good bank cover
Smoke Tree	<i>Cotinus coggygria</i>	√	√			Interesting flowers
Tartarian Honeysuckle	<i>Lonicera tatarica</i>		√	√		
Western Chokecherry	<i>Prunus virginiana var. demissa</i>					Berries attract birds
Western Sand Cherry	<i>Prunus besseyi</i>		√	√		Berries attract birds
Sweet Mockorange	<i>Philadelphus coronarius</i>					Fragrant
Nanking Cherry	<i>Prunus tomentosa</i>		√	√		
Smooth Sumac	<i>Rhus glabra</i>		√	√		Good bank cover
Squawbush Sumac	<i>Rhus trilobata</i>		√			
Mentor Barberry	<i>Berberis x mentorensis</i>					
Peking Cotoneaster	<i>Cotoneaster acutifolius</i>					

## RECOMMENDED PLANTS

### Special Uses

Common Name	Botanical Name	Deer Resistant	Drought Tolerant	Revegetation	Erosion Control	Remarks
<b>Evergreen Shrubs</b>						
Big Sagebrush	<i>Artemisia tridentata</i>	√	√	√		Sierra native
Bitterbrush	<i>Pershia tridentata</i>		√	√		Sierra native
Fourwing Saltbrush	<i>Atriplex canescens</i>	√	√	√		Sierra native
Greenleaf Manzanita	<i>Arctostaphylos patula</i>		√	√		Sierra native
Scotch Broom	<i>Cytisus scoparius</i>	√	√			
Mountain Mahogany	<i>Cercocarpus ledifolius</i>		√	√		For dry sites
Chinese Juniper	<i>Juniperus chinensis</i>	√	√			
Horizontal Juniper	<i>Juniperus horizontalis</i>	√	√	√		
Oregon Grapeholly	<i>Mahonia aquifolium</i>	√				Medicinal berries
Mugo Pine	<i>Pinus mugo</i>	√				
<b>Deciduous Trees</b>						
Amur Maple	<i>Acer ginnala</i>		√			Good fall color
Black Locust	<i>Robinia pseudoacacia</i>		√			Showy flowers
Amur Chokecherry	<i>Prunus maackii</i>					
European White Poplar	<i>Populus alba</i>					Very fast growth
Golden Willow	<i>Salix alba vitellina</i>					
Aspen	<i>Populus tremuloides</i>					Sierra native
Hackberry	<i>Celtis occidentalis</i>		√			Good shade tree
Idaho Locust	<i>Robinia ambigua 'Idahoensis'</i>		√			Showy flowers
Goldenrain Tree	<i>Koelreuteria paniculata</i>		√			Laterns interesting
Russian Olive	<i>Elaeagnus angustifolia</i>		√			Grey green foliage
Western Catalpa	<i>Catalpa speciosa</i>					
White Oak	<i>Quercus alba</i>					Large shade tree

## RECOMMENDED PLANTS

### Special Uses

Common Name	Botanical Name	Deer Resistant	Drought Tolerant	Revegetation	Erosion Control	Remarks
Bur Oak	Quercus macrocarpa					
Black Locust	Robinia pseudoacacia		√			
Blue Ash	Fraxinus quadrangulata	√	√			
Columnar English Oak	Quercus robur 'Columnaris'					Dark green leaves
<b>Evergreen Trees</b>						
Jeffrey Pine	Pinus jeffreyi	√	√			Sierra native
Ponderosa Pine	Pinus ponderosa	√	√			
Lodgepole Pine	Pinus contorta	√	√			
Rocky Mountain Juniper	Juniperus scopulorum	√	√			Interesting berries
Arizona Cypress	Cupressus arizonica	√	√			
Austrian Black Pine	Pinus nigra					Fast growth
Piñon Pine	Pinus edulis	√	√			
Rocky Mountain Junipers	Juniperus scopulorum	√	√			
Scotch Pine	Pinus sylvestris	√	√			
Singleleaf Piñon Pine	Pinus monophylla	√	√			Nevada state tree
White Fir	Abies concolor	√				Sierra native
Incense Cedar	Calocedrus decurrens	√				Sierra native
Colorado Blue Spruce	Picea pungens glauca	√				Blue color
<b>Ground Covers</b>						
Bearberry	Arctostaphylos uva-ursi	√	√	√	√	Makes a green carpet
Lavendar Cotton	Santolina chamaecyparissus	√	√			Showy flowers
Winter Creeper	Euonymus fortunei					
Snow in Summer	Cerastium tomentosum	√	√		√	Invasive
Periwinkle	Vinca major				√	Invasive
Brooms	Genista spp.	√	√		√	

## RECOMMENDED PLANTS

### Special Use

Common Name	Botanical Name	Deer Resistant	Drought Tolerant	Revegetation	Erosion Control	Remarks
Hall's Japanese Honeysuckle	Lonicera japonica 'Halliana'				√	Fragrant flowers
Potentilla	Potentilla verna					
Virginia Creeper	Parthenocissus quinquefolia				√	Good fall color invasive
Wolly Yarrow	Achillea tomentosa		√			
<b>Grasses and Erosion Control</b>						
Fairway Crested Wheatgrass	Agropyron cristatum				√	
Siberian Wheatgrass	Agropyron sibericum				√	
Western Wheatgrass	Agropyron smithii				√	
Thickspike Wheatgrass	Agropyron dasystachyum				√	
'Covar' Sheep Fescue	Festuca ovina 'Covar'				√	
Tall Wheatgrass	Agropyron elongatum				√	
Indian Ricegrass	Aryzopsis hymenoides				√	
Sand Dropseed	Sporobolus cryptandrus				√	
Alkali Sacaton	Sporobolus airoides				√	

## RECOMMENDED PLANTS FOR LANDSCAPED GREEN BELTS

IN THE 30'-100' FIRE BREAK TRANSITION ZONE

Species	Drought Tolerance	Erosion Control (30-60° Slope)	Growth Height	Mature Height (Inches)	Scale of Use
<i>Achillea tomentosa</i> Woolly Yarrow	Fair		Very Spreading	to 12	Small
<i>Atriplex gardneri</i> Gardner's Saltbush	Excellent	++	Semi Upright	12-18	Medium
<i>Atriplex semibaccata</i> Creeping Australian Saltbush	Excellent	++	Semi Upright	to 12	Large
<i>Cerastium tomentosum</i> Snow in Summer	Good		Spreading	4-6	Medium
<i>Euonymus fortunei</i> var. <i>radicans</i> Common Winter Creeper	Fair-Good	+	Very Spreading	18-24	Medium
<i>Potentilla verna</i> Spring Cinquefoil	Good	+	Spreading	3-6	Medium
<i>Santolina virens</i> Green Lavender Cotton	Excellent	++	Upright	18-24	Large
<i>Santolina chamaecyparissus</i> Lavender Cotton	Excellent	++	Upright	18-24	Large
<i>Vinca major</i> Periwinkle	Good	++	Very Spreading	18-24	Large
<i>Arctostaphylos uva-ursi</i> Bearberry	Excellent	++	Spreading	to 12	Large
<i>Hedera helix</i> English Ivy	Poor	++	Very Spreading	to 12	Large
<i>Hypericum calycinum</i> Aaron's Beard	Good	++	Upright	12-15	Medium - Large
<i>Ceanothus prostratus</i> Squaw Carpet	Excellent	++	Spreading	2-6	Medium

Footnotes for Table A-2

**Drought Tolerance:**  
Excellent - Little supplemental water needed during the dry season  
Very Good - Occasional watering needed 2-4 times during the dry season.  
Good - Requires moderate water (about once a month during dry season)  
Fair - Requires watering every 2-3 weeks.  
Poor - Needs frequent watering (every week to 10 days or more)

The above applies to established plants. Newly planted areas will require substantially more water.

**Erosion Control:** Each species is evaluated as to whether it is good (++) , fair (+) , or not recommended for steeper slopes (30-60°).

**Growth Habit:**  
Very Spreading - Trailing stems or creeping along the ground.  
Spreading - Stems grow horizontally for short distances.  
Semi Upright - Plants grow more or less vertically and forming clumps.  
Upright - Plants distinctly vertical with little lateral spreading.

**Scale of Use:**  
Small - Best suited as a small-scale ground cover (limit use to a few hundred square feet)  
Medium - Good ground cover for medium sized areas.  
Large - Large area ground cover

**Appendix B**  
**Contents of Development Standards Handbook**

Article 814 of the Washoe County Development Code addresses Development Agreements. Section 110.814.75(g) of that Article lists the topics that must be addressed in the Development Standards Handbook. Presented below is an excerpt from that section of the Development Code with a notation stating where each topic is addressed in the Development Standards Handbook.

**Section 110.814.75 Contents of Final Development Agreement**

**g. Development Standards Handbook.** A development standards handbook that provides development standards for the following:

- (1) Architectural style;  
Where is this addressed? Chapter IV
- (2) Energy supply and conservation;  
Where is this addressed? Chapters III & IV
- (3) Land grading, erosion and flood control;  
Where is this addressed? Chapters III & V. Development standards for flood control are not necessary for this project
- (4) Natural hazards;  
Where is this addressed? Chapter III (faults), Chapter V (fire)
- (5) Fire protection, security services and medical services;  
Where is this addressed? Chapter VI
- (6) Housing supply;  
Where is this addressed? Chapter I

- (7) Water supply, treatment, storage, conservation and reuse;  
Where is this addressed? Chapters V & VI
- (8) Wastewater treatment;  
Where is this addressed? Chapter VI
- (9) Maintenance and enhancement of air quality;  
Where is this addressed? Chapter III (dust control), Chapter IV  
(solid fuel burning devices)
- (10) Wildlife and fisheries preservation;  
Where is this addressed? Chapter VII
- (11) Historic, cultural and archaeological resources preservation;  
Where is this addressed? Chapter VII
- (12) Recreational amenities;  
Where is this addressed? Chapter VI (Private), Chapter II (trails)
- (13) Open space provision and maintenance;  
Where is this addressed? Refer to Open Space Management Plan,  
Exhibit G in the Final Development Agreement
- (14) Financial assurances for the development of the property and provision  
of services;

amendment of the development standards handbook;  
Where is this addressed? Chapter VIII

- (17) Documentation verifying the development agreement approval, including reductions of all maps/drawings approved by the Board of County Commissioners as part of the approval of the preliminary development agreement;

Where is this addressed? Exhibit B, C, D in the Final Development Agreement

- (18) Such other information which may be required by the Director of Development Review.

**Appendix C**  
**STATEMENT OF COMPLIANCE**  
**for**  
**TENTATIVE MAPS & SPECIAL USE PERMITS**

This completed Statement of Compliance shall accompany all tentative map and special use permit applications. The compliance statement must be signed and approved by Southwest Pointe Partners prior to an application being submitted to Washoe County.

Approval by Southwest Pointe Partners does not imply that the project is in compliance with all applicable county codes, ordinances, or other regulations. In instances where the tentative map or special use permit is not in compliance with the Final Development Agreement, the Director of Development Review shall determine if the modification is administrative or if it requires an amendment of the Final Development Agreement.

Reviewed and approved by Southwest Pointe Partners on this \_\_\_\_ day of \_\_\_\_\_, 19\_\_.

# PROJECT DESCRIPTION

## 1. For Tentative Map Applications:

### a. Number of Proposed Lots:

12,000 square feet \_\_\_\_\_

1/2 acre \_\_\_\_\_

1 acre + \_\_\_\_\_

Total \_\_\_\_\_

### b. Explain any difference in number and type from that identified in the Final Development Agreement.

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

### c. Acres:

Residential Lots: \_\_\_\_\_

Streets: \_\_\_\_\_

Common Area: \_\_\_\_\_

Open Space: \_\_\_\_\_

Other: \_\_\_\_\_

### d. Density:

Gross: \_\_\_\_\_ d.u./ac

Net: \_\_\_\_\_ d.u./ac

### e. In neighborhoods with 12,000 square foot and 1/2 acre lots, have off-site parking areas been provided at a ratio of one space for every three homes and within 500 feet of homes? (Tentative Map Condition #34)

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

2. **For Special Use Permits:**

Explain the project (e.g., square footage, number of parking spaces, landscaping, architecture)

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

3. What, if any support facilities or major infrastructure components are proposed as a part of this project?

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

# INFRASTRUCTURE/SERVICES

## Transportation

1. Estimate the average daily traffic. On the tentative map, identify the average daily traffic on each street within the boundary of the tentative map. (Tentative Map Condition #22)

---

---

---

---

---

---

---

2. Explain any recommendations for geometric design -- e.g., left-turn storage capacity, site distance, minimum required turning radius. (Tentative Map Condition #22)

---

---

---

---

---

---

---

3. Are the street sections consistent with the Final Development Agreement? (Tentative Map Condition #22)

Yes  No  Not Applicable

If no, explain the differences and justify their use.

---

---

---

4. Do the cul-de-sacs have a minimum pavement radius of 43.5 feet to front face of curb or 45 feet to the edge of pavement? (Tentative Map Condition #23)

Yes  No  Not Applicable

If no, explain the differences and justify their use.

---

---

---

5. Has an emergency access road been shown at the end of all cul-de-sacs that are longer than 1,500 feet? (Tentative Map Condition #28)

Yes  No  Not Applicable

If no, explain the differences and justify their use.

---

---

---

6. Have any at-grade crossings for golf carts been shown on streets with 500 or more ADT? (Tentative Map Condition #33)

Yes  No  Not Applicable

If no, explain why.

---

---

---

---

7. Has a detailed pedestrian circulation plan been submitted? (Development Agreement Condition #13)

Yes  No  Not Applicable

If no, explain why not.

---

---

---

---

### Water Supply

1. What is the estimated water right requirement for this project?

\_\_\_\_\_ acre feet/year

2. Explain how the water right requirements will be met for this project.

---

---

---

---

**Sewer Service**

1. Explain how sewer service will be provided to this project?

---

---

---

---

2. How much sewage will be generated by this project?

---

---

---

**Fire Protection**

1. What is being done to comply with the requirements of the Nevada Division of Forestry? (Tentative Map Condition #83 and Special Use Permit Condition #42)

---

---

---

---

---

---

---

**Open Space/Recreation**

1. Will any open space be offered for dedication as part of this project?  
\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If yes, how many acres are being dedicated, when will the land be dedicated, and what improvements will be located in the open space (e.g., trails, emergency access roads)?

---

---

---

---

---

---

---

---

2. What, if any, private community recreation facilities are proposed? How will these facilities be maintained?

---

---

---

---

---

---

---

---

# DEVELOPMENT STANDARDS

## Community Design Guidelines

1. Are any neighborhood entries proposed?

\_\_\_\_ Yes \_\_\_\_ No \_\_\_\_ Not Applicable

If yes, describe the materials, height, style, color, etc. Show the location(s) on the tentative map or site plan.

---

---

---

---

---

---

---

2. Is the entry(s) design consistent with the Development Standards Handbook (Chapter II)? \_\_\_\_ Yes \_\_\_\_ No \_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

---

---

---

3. Are any community fences and/or walls proposed? \_\_\_\_ Yes \_\_\_\_ No

If yes, describe the materials, height, style, and color. Show the location on the tentative map or site plan.

---

---

---

---

---

---

---

4. Are the fencing and/or walls consistent with the community design standards in the Development Standards Handbook (Chapter II)?

\_\_\_\_ Yes \_\_\_\_ No \_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

---

5. Is any community lighting proposed?  Yes  No  
If yes, describe the location(s), materials, height, style, and lighting levels.

---

---

---

---

---

6. Is the community lighting consistent with the Development Standards Handbook (Chapter II)?  
 Yes  No  Not Applicable  
If no, describe any changes and explain the reasons.

---

---

---

---

---

7. Are any signs proposed?  Yes  No  
If yes, describe the location, size, materials, and color.

---

---

---

---

---

8. Are the signs, if any, consistent with the Development Standards Handbook (Chapter II)?  
 Yes  No  Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

9. Are any private trails proposed?  Yes  No

If yes, show the location on the tentative map or the site plan for the special use permit.

---

---

---

---

---

---

10. Are the private trails, if any, consistent with the Development Standards Handbook (Chapter II)?

Yes  No  Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

---

### Site Development Guidelines

1. What are the proposed building setbacks?

---

---

---

---

2. For residential units, are the building setbacks consistent with the Development Standards Handbook (Chapter III)?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

---

3. Have the setbacks from any potentially active fault traces been identified on the tentative map or site plan for the special use permit?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, explain why not.

---

---

---

---

---

4. What are the minimum lot widths?

---

---

---

---

---

5. Are the widths consistent with the Development Standards Handbook (Chapter III)?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

6. Explain the grading. (e.g., have the slopes been rounded to blend into the natural contours? Has the grading been minimized?) Explain the erosion control techniques (temporary and permanent) that will be used.

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

7. In areas identified as critical mule deer habitat, has the grading been minimized to the maximum extent possible? (Tentative Map Condition #83)

Yes  No  Not Applicable

If no, explain why not.

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

8. Explain how the drainage is being handled.

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

9. Is any lot perimeter fencing proposed?

\_\_\_\_\_ Yes \_\_\_\_\_ No

If yes, describe the materials, height, style, and color. Show the location on the tentative map.

---

---

---

---

---

10. Are the fencing and/or walls consistent with the site development standards in the Development Standards Handbook (Chapter III)?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

---

### Landscape Design Guidelines

1. For a tentative map application, is any common area landscaping proposed? \_\_\_\_\_ Yes \_\_\_\_\_ No

For a special use permit application, is any on-site and/or common area landscaping proposed? \_\_\_\_\_ Yes \_\_\_\_\_ No

If yes, describe the landscaping (e.g., species, irrigation, drought tolerant? amount of turf). Show the locations on the tentative map or site plan for the special use permit.

---

---

---

---

---

---

2. What entity will maintain the landscaping identified in the previous question?

---

---

---

---

---

3. Is the landscaping described in question #1 consistent with landscape design guidelines in the Development Standards Handbook (Chapter V)?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

---

---

---

---

4. Describe the revegetation techniques that will be implemented

---

---

---

---

---

---

---

---

5. What measures will be used to control fugitive dust during construction?

---

---

---

---

---

---

---

---

6. Are any fire fuel breaks required beyond the property line of the residential lots?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If yes, show the locations on the tentative map.

7. Is the design of the fire fuel breaks consistent with the guidelines identified in Chapter V of the Development Standards Handbook?

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

---

---

---

---

8. Explain the water conservation techniques that will be used.

---

---

---

---

---

---

---

---

9. Is a 25-foot landscaped buffer shown between the lots and the collector and minor arterial streets? (Tentative Map Condition #85)

\_\_\_\_\_ Yes \_\_\_\_\_ No \_\_\_\_\_ Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

---

---

---

---

10. Is a 50-foot buffer shown between the structure and any riparian vegetation? (Tentative Map Condition #51)

Yes  No  Not Applicable

If no, describe any changes and explain the reasons.

---

---

---

---

---

---

---

11. Are there any delineated wetlands or Waters of the United States shown within the boundary of the tentative map or on the site plan for the special use permit?

Yes  No

If yes, shown the location on the tentative map or site plan and explain how these features are being avoided.

---

# I. INTRODUCTION

## Purpose

This Handbook presents design guidelines and standards that will apply to the community at Southwest Pointe. This booklet serves several purposes. First, it will help prospective architects, designers, builders, and owners create residences and improvements that will fit within a defined architectural character. Second, the Handbook is intended to fulfill the requirements of Article 814, Development Agreements, of the Washoe County Development Code. Specifically, Section 110.814.75(g) of this article presents the topics that must be addressed in the Development Standards Handbook. And third, it is intended to provide the county and the residents in the Southwest Truckee Meadows with a feeling for the type of development being proposed.

This Handbook, along with additional provisions and "Residential Lot Declarations" that will be set forth in the Southwest Pointe CC&Rs, form the basis for evaluation of all drawings and specifications for construction submitted to the Southwest Pointe Architectural and Landscape Control Committee (ALCC) for review and approval, including any additions and modifications. The CC&Rs may specify further guidelines or restriction to those provided in this Handbook. When not in conflict, this Handbook is not meant to duplicate or supersede the requirements of Washoe County. Plans for construction will need to be processed through Washoe County and appropriate public agencies as well as through the ALCC.

A preliminary development agreement for Southwest Pointe was approved by the Board of County Commissioners on February 8, 1994. Subsequent to that approval, the preliminary agreement was amended on three occasions. The first amendment, approved on September 27, 1994, granted an 18-month extension of time for preparing the final development agreement. The second amendment, approved on November 8, 1994, modified several of the original conditions so that grading of the first 18-hole golf course and installation of utilities could commence, prior to recording the final development agreement. The third

amendment, approved on \_\_\_\_\_, 1996, modified, deleted, updated, and reorganized the conditions of approval. Additionally, special use permits have been approved for the golf course and related facilities (SPW9-13-93) and water system (SPW9-10-93). Copies of the conditions of approval for all actions taken by the Board of County Commissioners and the Washoe County Planning Commission are included as Exhibits \_\_\_\_\_ through \_\_\_\_\_ in the Development Agreement. Additionally as required by Section 110.814.75(g) (17), a copy of the original Concept Plan is included with Exhibit \_\_\_\_\_.

### Project Description

**Setting** - Southwest Pointe is set in the context of a rugged mountain backdrop and sagebrush-covered slopes that are punctuated by Thomas and Dry Creeks. The 3,272-acre project is located on a prominent site overlooking the Truckee Meadows. The majority of the property has unobstructed views, and the project has been laid out to maximize these views. Both Thomas and Dry Creeks cross the property, and the site plan takes these two prominent features into account. There is some riparian vegetation along the creeks but a majority of the site is covered with moderate to dense stands of bitterbrush and sagebrush and thinly scattered field grass and alfalfa.

As shown in Figure 1-1, the property is bounded by the Toiyabe National Forest to the west, Thomas Creek along the south, and the established neighborhoods of Thomas Creek Estates and Saddlehorn to the southeast and east. Elevations range from approximately 4,950 feet along the eastern portion of the site to 5,900 feet on the west. The property slopes in a southwest to northeast direction with slopes generally ranging from 5 to 15 percent. Moderately steep slopes, generally between 15 and 30 percent, are found at the northern end of the site.

**Site Plan** - The site plan for Southwest Pointe is based on a planning approach that analyzes the constraints and opportunities of the property to identify the most appropriate development areas. Site characteristics, including topography, geology, flora and fauna, drainage, view sheds, access points, and easements were mapped. In addition, surrounding land uses were also considered.

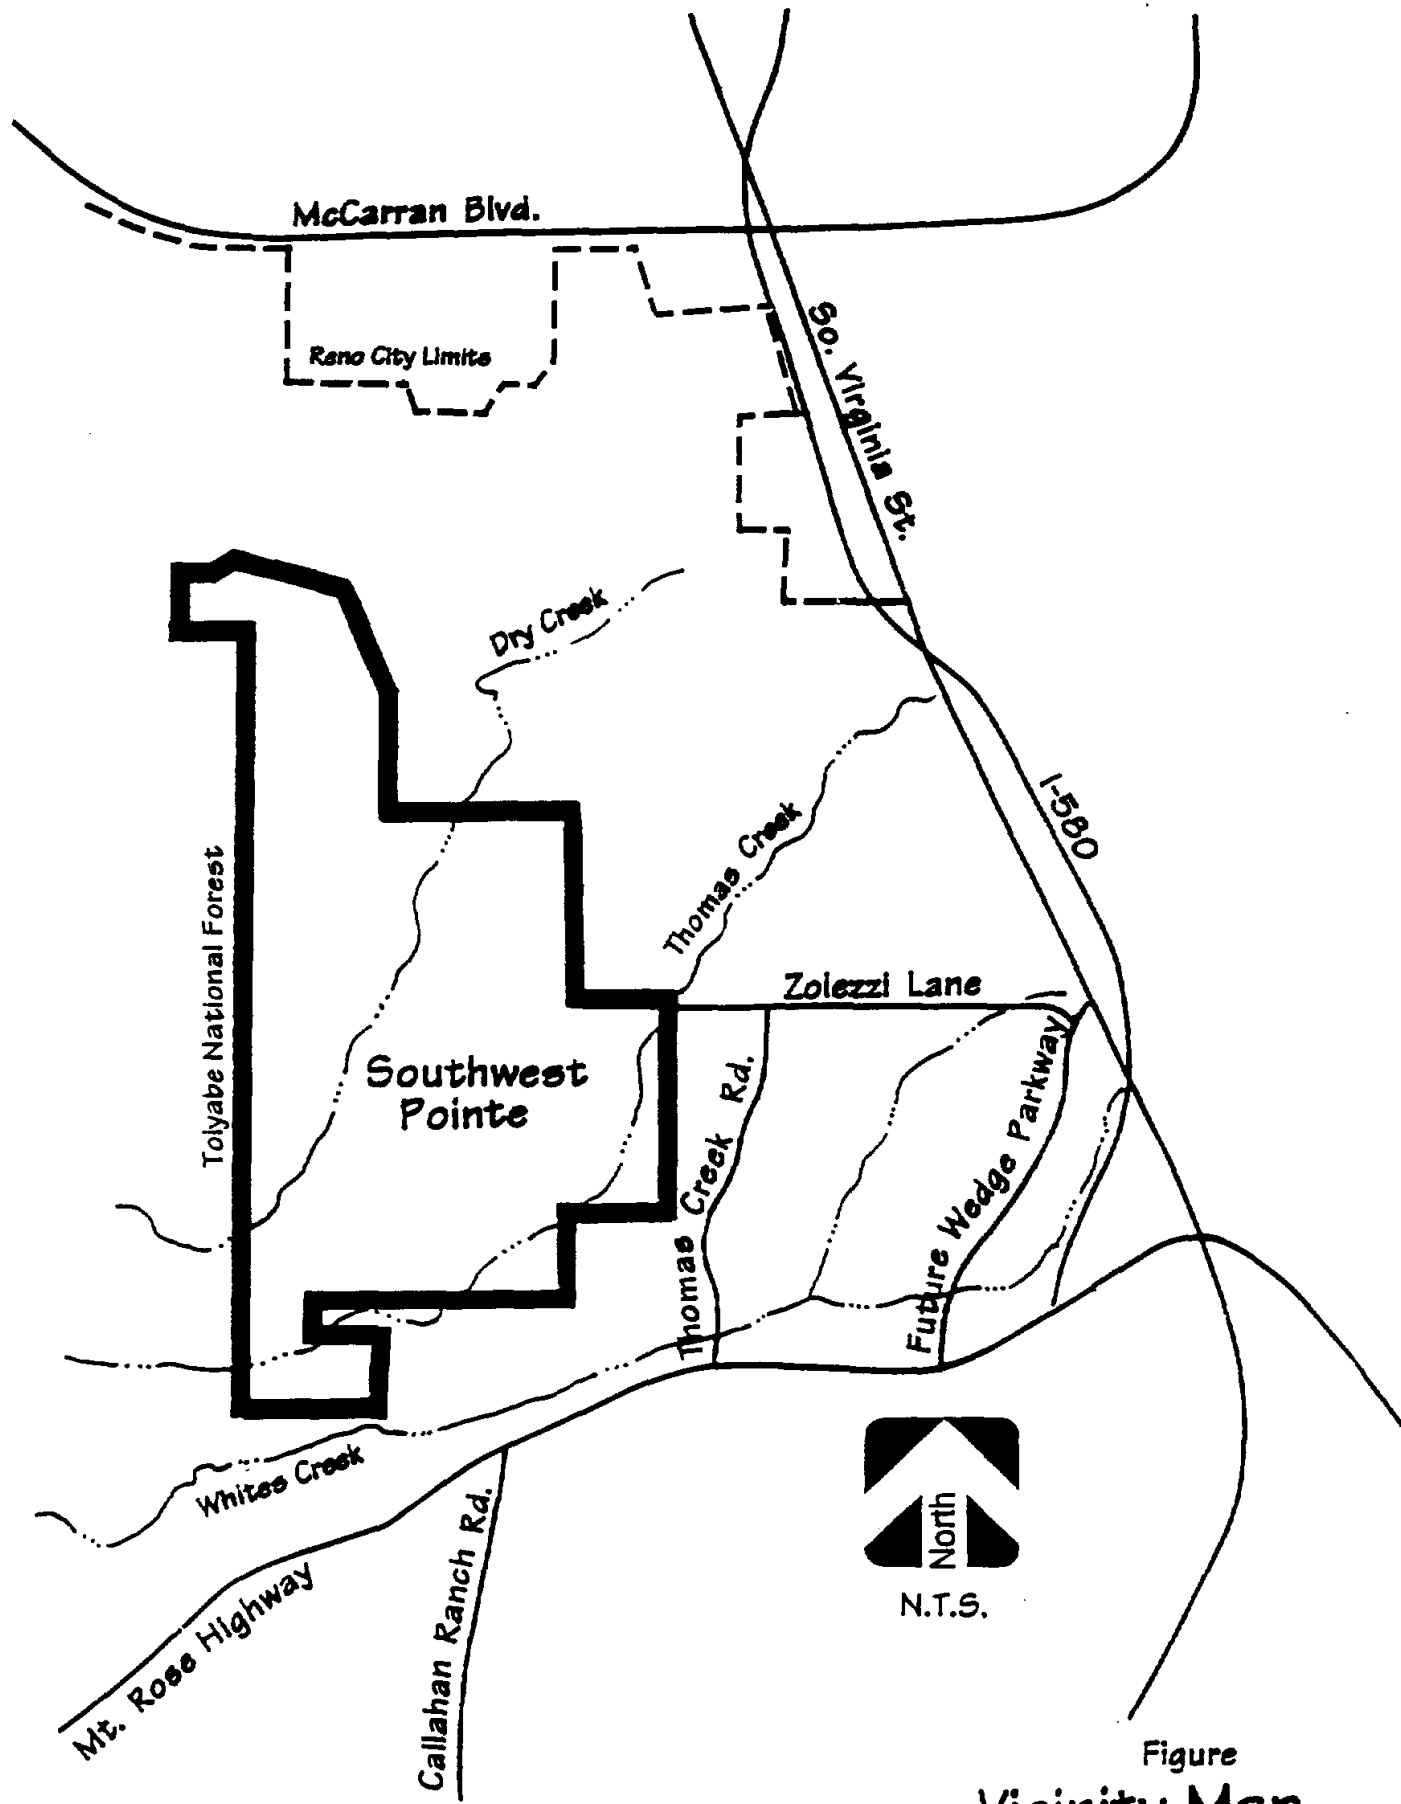

Figure  
Vicinity Map

The topography is steep and mountainous along the western boundary and in the "panhandle" to the north. Remaining portions of the site are characterized by gently and moderately sloping terrain with slopes ranging between 5 and 15 percent. These terrain features create panoramic views of downtown Reno and the Southeast Truckee Meadows from nearly every portion of the site.

A number of Holocene faults cross the property, generally running in a north-south direction. These faults define corridors within which development was planned. Holocene faults are defined as faults that show evidence of movement within the past 11,000 years.

Two drainages that form major geographical features traverse the property -- Thomas Creek along the southern and eastern edge and Dry Creek through the western and north central portions of the land. Some sections of the creeks are bordered by riparian wetlands and, therefore, setbacks for development are required. These riparian corridors are generally not visible from most of the site; however, these corridors are among the most scenic areas of the property.

The winter range for the Loyalton-Truckee deer herd covers the "panhandle" and the north portions of the site. Some residential and golf course development is proposed within the winter range; however, there is also a significant amount of acreage left as open space.

Blending the physical characteristics of the property with the allowable lot count of 1,090 single-family dwelling units and the development program, which calls for 36 holes of golf, the following design objectives were formulated and implemented in the site plan:

- Provide significant natural open space buffers around the periphery of the project to preserve the visual and physical environment of surrounding residents and to focus the views from within the property.
- Reserve the Thomas Creek and Dry Creek corridors and use creek edges, where feasible, for golf course fairways and for visual amenities from lots.

- Remain consistent with the intent of the Southwest Truckee Meadows Area Plan. Set aside a location for the civic uses proposed in the Area Plan -- schools, neighborhood park, regional trails, and a fire station.
- Create a major community entrance at Whites Creek Lane with signage, a gate house, and landscaping. Integrate the bridge structures across Thomas Creek with the community entrance features.
- Use the earthquake faults and associated building setbacks, wherever practical, as golf course fairways, road right-of-ways, and open space.
- Establish a rural golf course community theme by using smaller paved road sections, by creating neighborhood enclaves, and by controlling development through comprehensive design standards.
- Develop a mix of lot sizes within the following parameters: 10-20 percent one acre and larger, 30-40 percent 1/2 acre and larger, and 40-50 percent with a minimum size of 12,000 square feet. All residential units are single-family dwellings; no other housing types are proposed. Primary lot orientation should be to the golf courses and/or the panoramic views.

As shown on the Site Plan on the following page, the land use pattern clusters residential neighborhoods within enclaves created by the golf course fairways. All edges of the proposed development reserve substantial areas of natural open space, ranging from the entire "panhandle" to a minimum of 200 feet to the nearest existing lot. Table 1-1 presents a break down of the proposed land uses.

Table 1-1  
**Land Use Summary**  
 (acres are approximate)

<u>Land Use</u>	<u>Acreage</u>	
Residential	860	(26%)
Golf Course/Roads/Common Area	823	(25%)
Civic Uses	62	(2%)
Village Center	27	(1%)
Open Space	<u>1500</u>	(46%)
TOTAL	<b>3,272</b>	<b>(100%)</b>

**Public Facilities** - Various civic uses are shown on the site plan. These include an elementary school, possible middle school, fire station, neighborhood park, and regional trails. The Washoe County School District will be responsible for construction of the elementary and middle schools. A special use permit has already been approved for the elementary school and construction will start in the late spring or summer of 1996. The School District hopes to have the elementary school open in September 1997.

Construction of the middle school is dependent on several factors. First, based on the Conditions of Approval (i.e., Condition #51), the site must be reserved for an off-stream stormwater detention facility for a certain length of time. If the detention facility is not constructed, the site will then be dedicated to the School District for a middle school. The second factor is that the voters of Washoe County must pass a bond issue in November 1996 for future school construction.

A one-acre site for a fire station is shown at the entrance to Southwest Pointe. The site will be dedicated prior to recordation of the first final map (i.e., Condition #92). Construction of the fire station will be the responsibility of the Nevada Division of Forestry (NDF); however, it is possible that the Truckee Meadows Fire Protection District will also be involved in the construction and operation of the station since the location could serve both NDF and Truckee Meadows.

Proposed Regional & Community Park

N.T.S.

SITE PLAN

The neighborhood park and the regional, public trail system are discussed in detail in the Open Space Management Plan, which was prepared to comply with the Conditions of Approval (i.e., Conditions #93 through #96). According to the Management Plan, the Washoe County Department of Parks and Recreation will be responsible for constructing and maintaining the regional trails. The neighborhood park will be dedicated to Washoe County after the improvements have been completed. Southwest Pointe Partners or its successor will be reimbursed for the cost of the improvements and for the fair market value of the land from fees collected in Southwest Pointe from the Residential Construction Tax.

### Development Phasing

The approximate date for the start of construction for the first phase shall be on or before October 1, 1996. The first phase of the project shall be constructed of the first 18 holes of the golf course. All phases after the first phase for subdivision improvements shall be constructed within the time frames allowed pursuant to tentative maps and final maps for the project. Nonresidential development shall be constructed pursuant to special use permits, when applicable, under the time frame provided therein. Other phasing requirements shall be as provided in the Conditions of Approval.

## II. COMMUNITY DESIGN GUIDELINES

### Community Design Character

Southwest Pointe is located in the uplands area of the Truckee Meadows between the high desert valley floor and the mountain range of the Sierra Nevadas. This area has low vegetation generally of sagebrush and native shrubs.

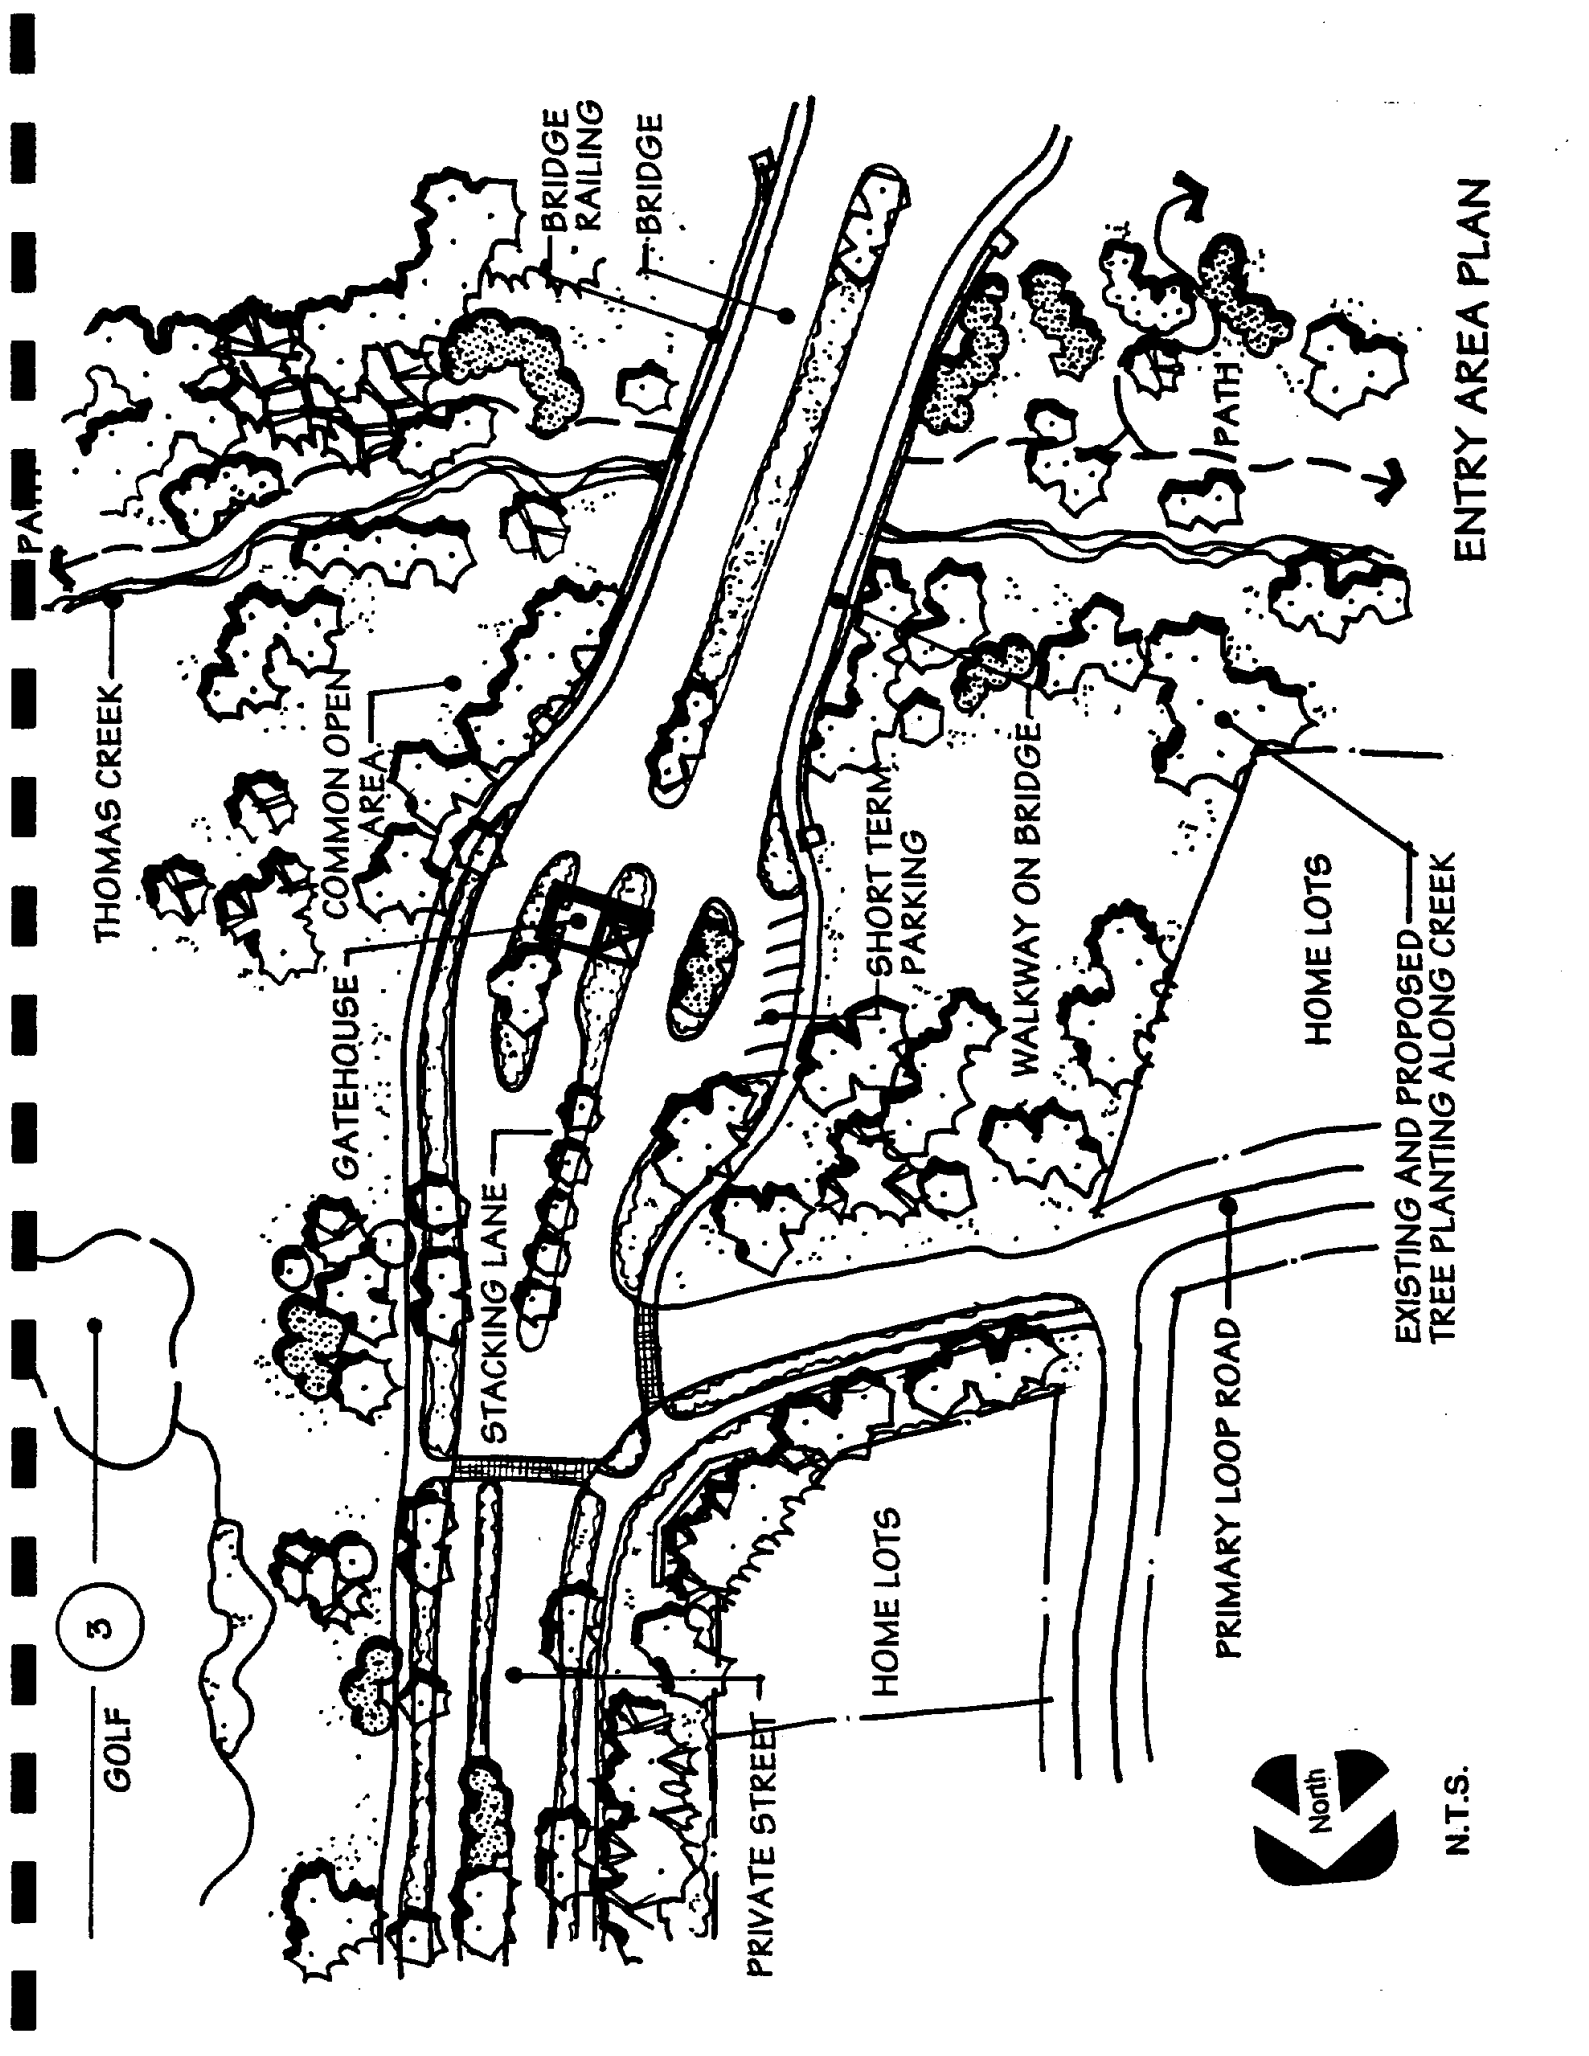

The Southwest Pointe Community Design Character is intended to be organic to and respectful of the existing natural and regional environment. The existing environment is to be maintained by minimizing grading and earthwork and working with the land's terrain in locating roads and other improvements.

Due to the inherent visibility of the site and its natural features, the prescribed architectural and structural character is intended to blend into the natural environment and to enhance the nature of that environment by adding forms, features, texture, colors, and plants that are similar to those on site.

### Community Components

Entry & Gate House - The main project entry from Whites Creek Lane will feature one-way streets with a wide landscaped median between for safety and visual appeal. (Refer to Figure 2-1.) The entry is the visual gateway to the subdivision and the first impression to residents and guests. In that regard, the community character begins here with a strong visual impression.

The entry landscape for the first one quarter mile upon entering the project is a dense, natural forest setting, consisting of predominately native conifers, with a native woodland understory that provides fall color. The intent is to introduce a strong landscape theme consistent with the regional character, while enclosing views from the road. The landscape enclosure will soften the adjacent 3:1 embankments on the sides of the road and effectively screen the elementary school parking lot.

N.T.S.

ENTRY AREA PLAN

The views, at first enclosed, will then dramatically open up at the approach to the bridge and gate house situated at the Thomas Creek crossing, with elevated vistas over fairways and the creek setting. Traveling into the entry area, the motorist approaches the gate house. The gate house will provide controlled access to the community and will direct visitors within Southwest Pointe.

The gate house has forms and materials resembling those on site and historic to the region. (Refer to Figure 2-2.) Portions of the building's facade are native stone, which establishes natural imagery. Beyond the entry building are entry gates with stone monuments and a vehicle turn-around. Once the traveler passes the entry, the vistas open, highlighting the project's open space, streetscape, golf course, and neighborhood entrances.

**Neighborhood Entries** - Landscaping, monumentation, and lighting will be used at neighborhood entries in a manner that creates a consistent theme throughout the project. A hierarchy of entries will be created. The treatment depicted in Figure 2-2 will be used at key entry locations along the main loop road. It features a combination of evergreen and deciduous trees with an understory of shrubs. Annuals and perennials will be planted for seasonal color. The entry also includes a retaining wall of native stone within which the neighborhood identification sign or clubhouse sign could be incorporated. Each minor neighborhood entry will be identified with signage, landscaping, and lighting that is consistent with the theme depicted in Figure 2-3.

**Bridges** - Bridge structures will be constructed to span the creeks and drainage ways to minimize grading and site disturbance. The structures may have stone elements at each end with painted decorative metal guard railings to blend in with community standards. (Refer to Figure 2-4.) Native stacked stone may be used to stabilize creek banks at each end of the bridge structure.

**Fences and Walls** - There will be two types of community fencing in Southwest Pointe. (Refer to Figures 2-5 and 2-6.) The first will be a low decorative, split rail design either with or without native stone pilasters. This fencing type will be a maximum of 3 feet high with an 8" x 8" post. In more prominent locations (e.g.,

TYPICAL BRIDGE STRUCTURE

SPLIT RAIL FENCE AND PILASTER

SCREENING FENCE

near the entry to the golf and tennis club), native rock pilasters may be used. The fence will follow the ground plane for slopes up to 10 percent; above that the fence will be stepped. Fencing around golf holes will be split rail without pilasters.

The second is a higher metal or wood fence either with or without native stone pilasters which will provide a visual screen and will only be allowed in certain areas of the development. Use of these fences will be strictly controlled to preserve the open and rural community theme. The fence is a 5 to 6 feet tall with or without stone pilasters. Fencing is either metal ballasters or wood members. All exposed wood surfaces will be lightly stained or treated with preservatives for longevity and appeal.

Walls will be reminiscent of the types seen historically throughout the eastern Sierra, using indigenous rock as a key material. Intersections and key places may be highlighted with attractive stone walls. Street signs or neighborhood identification signs may be integrated into walls.

**Lighting** - Lighting may be provided with landscape uplights on vegetation and pedestrian-scale bollards. Where necessary, along roadways and at intersections, lighting levels should be no more than absolutely required to perform the task for which it is intended (e.g., ambiance, safety).

Lighting levels are important to the overall lighting concept. Lighting is necessary in certain areas. For circulation safety, for functional purposes, and for aesthetics, lighting is often a necessary element. The level of lighting must also be appropriate. In general, lighting levels should be no more than absolutely required to perform the various tasks for which it is intended.

Street lights are required at major intersections (Condition #35). Light standards may be selected from the different types that Sierra Pacific Power Company has available; however, the developer does have the option of selecting different fixtures. Lights may be used as low-level accents for intersection signage and associated landscaping. Uplights to trees around intersections will be flush mounted. Signs should be lit from the ground, backlit, or a combination. Light spillage onto adjacent properties is discouraged.

Around the golf, tennis and swim center, lights in parking lots may be mounted on 25-30 foot tall poles for pedestrian and vehicle safety. The style, color, and type of light will be coordinated with the intersection lights. Entry areas and walkways may be lit with landscape lights and bollards less than 48 inches in height. Tennis court lights will use cut-off style sports lights to limit light spill over onto adjacent property. The multi-purpose sports fields adjacent to the pool/tennis center will not be lit since lighted fields are available at the nearby South Valleys Sports Complex.

The entry at Thomas Creek and the bridge structure may be lit to a level that allows for safe driving and turning movements. The gatehouse will have overhead downlights for driver and license plate identification. Trees surrounding the entry will be uplit and some 'twinkle' style lights may be used.

Lighting within the neighborhood park will be minimal with a downlight below the shade shelter and an electrical receptacle provided. Field lighting is not desired because of the neighborhood function of the park and the close proximity to existing homes.

**Signs** - Community signing includes project entries, elementary school, neighborhood park, neighborhood entries, street signs, and signs around the golf and tennis club. The intent is to keep all signs along roadways low, at the eye level of the motorist. Community and neighborhood signs will be integrated with entry monoliths. The sign wall will have native exterior fascia. Sign lettering will be a metal attached to a smooth concrete backing or a cast concrete, mortared into place in the rock veneer.

Street signs for the roads and minor activity areas, such as sports fields, will be accomplished with metal or wood signs mounted on specially-designed posts, consistent with overall community design themes. Where possible, signs will be incorporated into low walls at entry points. Landscaping in front and to the sides of these signs will be kept low to avoid visual obstructions.

**Trails** - The proposed public trail system is consistent with the county's master plan for this park district. Figure 2-7 shows the trail system through the project. Regional public trails are proposed along Thomas Creek for access to the Mt.

Proposed Regional & Community Park

..... PUBLIC PATH SYSTEM

----- PRIVATE PATH SYSTEM (INCLUDES BOTH PAVED AND UNPAVED SURFACES. 4 FT. PATHS ON THE LOCAL/COLLECTOR STREET EDGES)

N.T.S.

PUBLIC AND PRIVATE TRAIL SYSTEM

Rose Crest Trail and around the northern portion of the project for access to the MacKay Fair Flume Trail and the U.S.F.S. parcel in Section 11. Both trails provide access to the Sierra Base Trail, which eventually ties into the Hunter Lake Trail. Portions of the Sierra Base Trail are located on U.S.F.S. property and other portions, especially near Dry Creek, are located on project property. It may be necessary to relocate portions of the existing trail because of golf course and residential development near Dry Creek.

Two trail types are proposed for the development -- private and public. Private trails connect residential units to the various project amenities such as the golf/tennis center, schools, neighborhood park, and open space. The trails also lead to the exterior public trail system and regional destinations well beyond the project boundary. In compliance with the Conditions of Approval (i.e., Condition #23), a schematic pedestrian circulation plan of the private trail system is shown in Figure 2-7.

Public trails connect existing residential neighborhoods to destinations such as Mt. Rose, Hunter Lake, and the MacKay Fair Flume Trail. These connections will ensure that public access to public lands to the west is not cut off. The trailhead at the neighborhood park allows for 25-car and 5-truck/trailer parking spaces. Some overnight parking will likely occur, especially for equestrian users whose destinations are sometimes many miles from the trailhead.

The private trails within the street rights-of-way are shown on the street sections in Figures 2-10 through 2-13. On the minor arterial, an 8-foot wide asphalt meandering path is proposed, with a transition to a 6-foot wide sidewalk beyond the entry gate. Both paths will follow the maximum proposed road gradient of 9 percent. The 8-foot width is intended to be multi-purpose -- bicycle, pedestrians, in-line skating, etc. A level dirt/gravel shoulder width of 2 feet will be provided for emergency pull-off. (Refer to Figure 2-8.)

Private trails outside of the street right-of-way consist of both primary and secondary types. Primary trails connect high use areas with residential units. A 4 to 6-foot wide asphalt trail is proposed, with a proposed sustained running slope of 5 percent. Rest areas will be provided every 1000 feet, consisting of a level pad outside of the path travel surface. Secondary trails connect residential

areas together and also extend to the public regional trail system. A 4 to 6-foot wide packed gravel or decomposed granite trail is proposed, with a sustained running slope of 5 percent and rest areas every 1000 feet maximum. Maximum grades in outlying areas will be held below 10 percent wherever practicable.

Public trails will be constructed and maintained by Washoe County. The developer is not responsible for public trails. Specifications for public trails may be varied by Washoe County. Based on current County standards, the following guidelines apply: wherever practicable, minimum trail width will be 36 inches clear. Grade is proposed to be a maximum of 10 percent for safety and to minimize erosion potential. Some level changes will be required in the Thomas Creek drainage and steeper slopes in the northwest corner of the site. Trail surfacing will probably be compacted dirt, with some small wooden creek/swale crossings as required. Pull-outs for horse-bicycle encounters will be provided along the way, especially where trail site distance is minimal. Vertical height clearance on the site is not a problem due to lack of trees everywhere but along portions of Thomas Creek.

Trail Signs - Figure 2-9 shows proposed signs for the public trail system. Signs will be located at trail heads and at other public access points. They are intended to help people determine if the primitive trail is within their level of ability. A regional map will also be displayed, along with warnings for snakes and drinking untreated water. At public/private trail crossings a small sign denoting the private trail will be installed. Public trail signs shall be constructed and maintained by Washoe County.

### Street and Median Guidelines

The roadway sections proposed for Southwest Pointe are shown in Figures 2-10 through 2-13. The street sections vary from a divided minor arterial at the entrance to small lightly traveled rural streets. The developer is responsible for construction of the public minor arterial to the project entrance where it becomes a private road. Washoe County is responsible for maintenance of the public roadway. Past that point, all roads are private and the developer is responsible for construction and maintenance until that responsibility is transferred to the Homeowners' Association. The developer is also responsible for installation and

PRIVATE COMMON DRIVEWAY  
 NOT TO SCALE

# COMMON DRIVEWAYS

maintenance of all median landscaping and all landscaping along the edge of the minor arterial and collector streets. Maintenance of the landscaping and irrigation systems will initially be the responsibility of Southwest Pointe Partners or its successor until that responsibility is transferred to the Homeowners' Association. The Lot Developer or individual homeowner will be responsible for the installation, irrigation, and maintenance of all street right-of-way landscaping in front of individual lots fronting along private common driveways, rural streets, and local streets.

Roads will be constructed with a minimum 2 percent crown or cross section to maintain proper drainage. Maximum grade of landscaped areas within the street right-of-way will be 3 to 1. Vertical alignments of streets will be chosen to minimize cuts and fills. Pavement and base sections will be determined in accordance with the recommendations of the geotechnical engineer and Washoe County. All utilities will be placed underground.

Minor Arterial (Public or Private) - Whites Creek Lane from Thomas Creek Road to the bridge is a public road. From the bridge to the first intersection, Whites Creek Lane is classified as a private, minor arterial. The approved public and private street sections are shown in Figure 2-10. The private street will have an 120-foot minimum right-of-way with a 27-foot median, a 24 foot roadway section on either side of the median, and an 8-foot wide meandering asphalt path on both sides. A concrete header is proposed at the edge of pavement. No parking, except for emergencies, will be allowed.

Street trees will be planted between the meandering paths and street edge in an informal pattern of both deciduous and evergreen trees. Specimen-size trees will be used around the gate house. Near the project entry, a massing of evergreen trees on both sides of the street will focus views to the creek and slow down traffic as the street section transitions to a narrower pavement width. Median trees will be vertical and upright with no overhanging branches. Ground covers and shrubs will be kept low with an informal massing pattern to eventually cover most exposed ground. Flower and foliage color will be emphasized. Around intersection project signage, small irrigated lawn and annuals/wildflowers will be planted for a "high sierra" seasonal color.

From Thomas Creek Road to the project site, landscaping and irrigation will be installed by Southwest Pointe Partners or its successor. Landscaping along this section of roadway may consist mostly of shrubs, groundcovers, boulders, and only a few trees so that the residents of Saddlehorn do not have their views of Reno obscured.

**Collector Streets** - The street sections for collector streets are shown in Figure 2-11. From the first intersection to the golf and tennis club, a 120 foot right-of-way is shown. The roadside ditch serves a dual purpose -- snow storage and drainage. Residential driveway access will be allowed, but minimized. Landscaping along this section of roadway will continue the treatment used along the minor arterial.

Past the golf and tennis club, the road narrows to a 60-foot right-of-way with a 24-foot pavement width. (This street section is used in all locations where the average daily traffic ranges from 500 to 8000 ADT.) Either an 8-foot or a 4-foot path or gravel shoulder are shown on both sides, depending on the anticipated average daily traffic. Paths may not be constructed if alternate locations for pedestrian paths are shown on the Pedestrian Circulation Plan. Where necessary, a 12-foot, left-turn lane will be constructed at intersections. A concrete header with a roadside ditch is proposed. A minimum number of residential driveway access will be permitted. No parking, except for emergencies, will be permitted.

The landscaping within the right-of-way will continue to be informal with a combination of deciduous and evergreen trees massed in irregular patterns to simulate a natural forest pattern. Beyond the Swim and Tennis Club and Golf Club entrances, the landscape will transition to a more arid, "high desert" palette of shrubs and ground cover. Irrigation for plant material will be installed and maintained as a part of the common areas. In disturbed areas and along roadside ditches, erosion control grasses and wildflowers will be seeded to minimize erosion and provide seasonal color.

In neighborhoods with lots of 1/2 acre or less, the planting concept will consist of street trees planted in a regular pattern, to be selected from a list of approved tree species with heights under 25-30' at maturity in order to preserve off-site

views toward Reno. The intent is to provide summer shade and visual continuity within denser neighborhoods, but in such a way that the street tree pattern is not visibly intrusive because of the tree's height, form or seasonal color.

**Local Streets** - Local streets provide access within the individual neighborhoods. (Refer to the street sections in Figure 2-12.) A 60-foot right-of-way is shown, with a minimum pavement width of 22 feet, and a 4-foot wide path or gravel shoulder on both sides. Paths may not be constructed if alternate locations are shown on the Pedestrian Circulation Plan. A concrete header with a roadside ditch is proposed. No parking, except for emergencies, will be permitted. Landscaping and irrigation along local streets will be the responsibility of the Lot Developer or the individual homeowner. Landscaping must be reviewed and approved by the Architectural and Landscape Control Committee.

**Rural Streets** - Rural streets also provide access within individual neighborhoods. As shown in Figure 2-12, rural streets have a minimum 60-foot right-of-way, with a 22-foot pavement width. A concrete header with a roadside ditch is proposed for both snow storage and drainage. No parking, except for emergencies, will be permitted. Landscaping and irrigation along rural streets will be the responsibility of the Lot Developer or the individual homeowner. Landscaping must be reviewed and approved by the Architectural and Landscape Control Committee.

**Common Driveways** - Private, common driveways are used in a few locations where a small group of homes is proposed along collector streets. As shown in Figure 2-13, when a common driveway serves no more than 4 lots, the pavement width is 20 feet. When 5 or more lots are proposed, the pavement widens to 22 feet. No on street parking, except for emergencies, is permitted. Off street parking bays in common area will be constructed by the developer. To maintain consistency, landscaping in the area between the collector street and the common driveway will be the responsibility of the developer.

## Community Buildings

**Golf Clubhouse** - The Golf Clubhouse is intended to function as a recreation and social center for Southwest Pointe. The Clubhouse is located to maximize views of the two golf courses, Mt. Rose/Slide Mountain, the lights of the City of Reno plus the surrounding hills and valley below. The Clubhouse sits on an elevated plateau creating a strong visual impression as a community building. (Refer to Figure 2-14.)

The Golf Clubhouse will provide functional support to the public golf operation, including pro shop, bag storage, cart storage and dressing rooms. The building's basement will house the storage and service spaces, and the upper floor will house the different food and beverage spaces plus the pro shop. The dining spaces will be able to accommodate community functions plus special events, such as weddings or parties. The lower floor is mostly below grade as a basement to reduce the overall building height so the building does not dominate the site.

The exterior of the building has a native stone facade at the lower level so that the building appears to grow up from the ground and be visually connected to the site. Other building features, such as columns and chimneys at the upper floor, may also have native stone veneer. Other Clubhouse exterior materials include stucco-appearing walls with some wood trim for accent and metal roofing. The roofing color may be of a weathered copper patina, sage green or another natural landscape color to blend in with the natural environment. The stucco color is intended to be earthtone. Some exterior material color selections will be of other natural colors for subtle accents.

**Swim and Tennis Club** - The Swim and Tennis Club is intended to provide an additional recreation activity center within Southwest Pointe and will house different exercise spaces indoors plus outdoor tennis and swimming. (Refer to Figure 2-15.) Dressing facilities, snack bar, and administration activities will also be indoors.

The Swim and Tennis Club will be oriented around a town square courtyard opposite the driveway entrance to the Golf Clubhouse. Both driveway entrances will be visually enhanced with landscape medians and decorative streetscape

materials. The outdoor swimming area, as well as some of the tennis courts, will be lighted for evening use. The exterior design of the Swim and Tennis Club will be compatible to the Golf Clubhouse and other community buildings. (Refer to Figure 2-16.)

**Commercial Village** - A maximum 20,000 sq. ft. neighborhood retail and support services complex may be constructed adjacent to the Swim and Tennis Club around the town square. (Refer to Figure 2-15.) It is anticipated that retail uses may consist of a small market, video store; and services may include a beauty salon, travel agency, and real estate office. The one-story commercial building exterior will be of materials, forms, and colors that match the Swim and Tennis Club and are compatible with other community buildings.

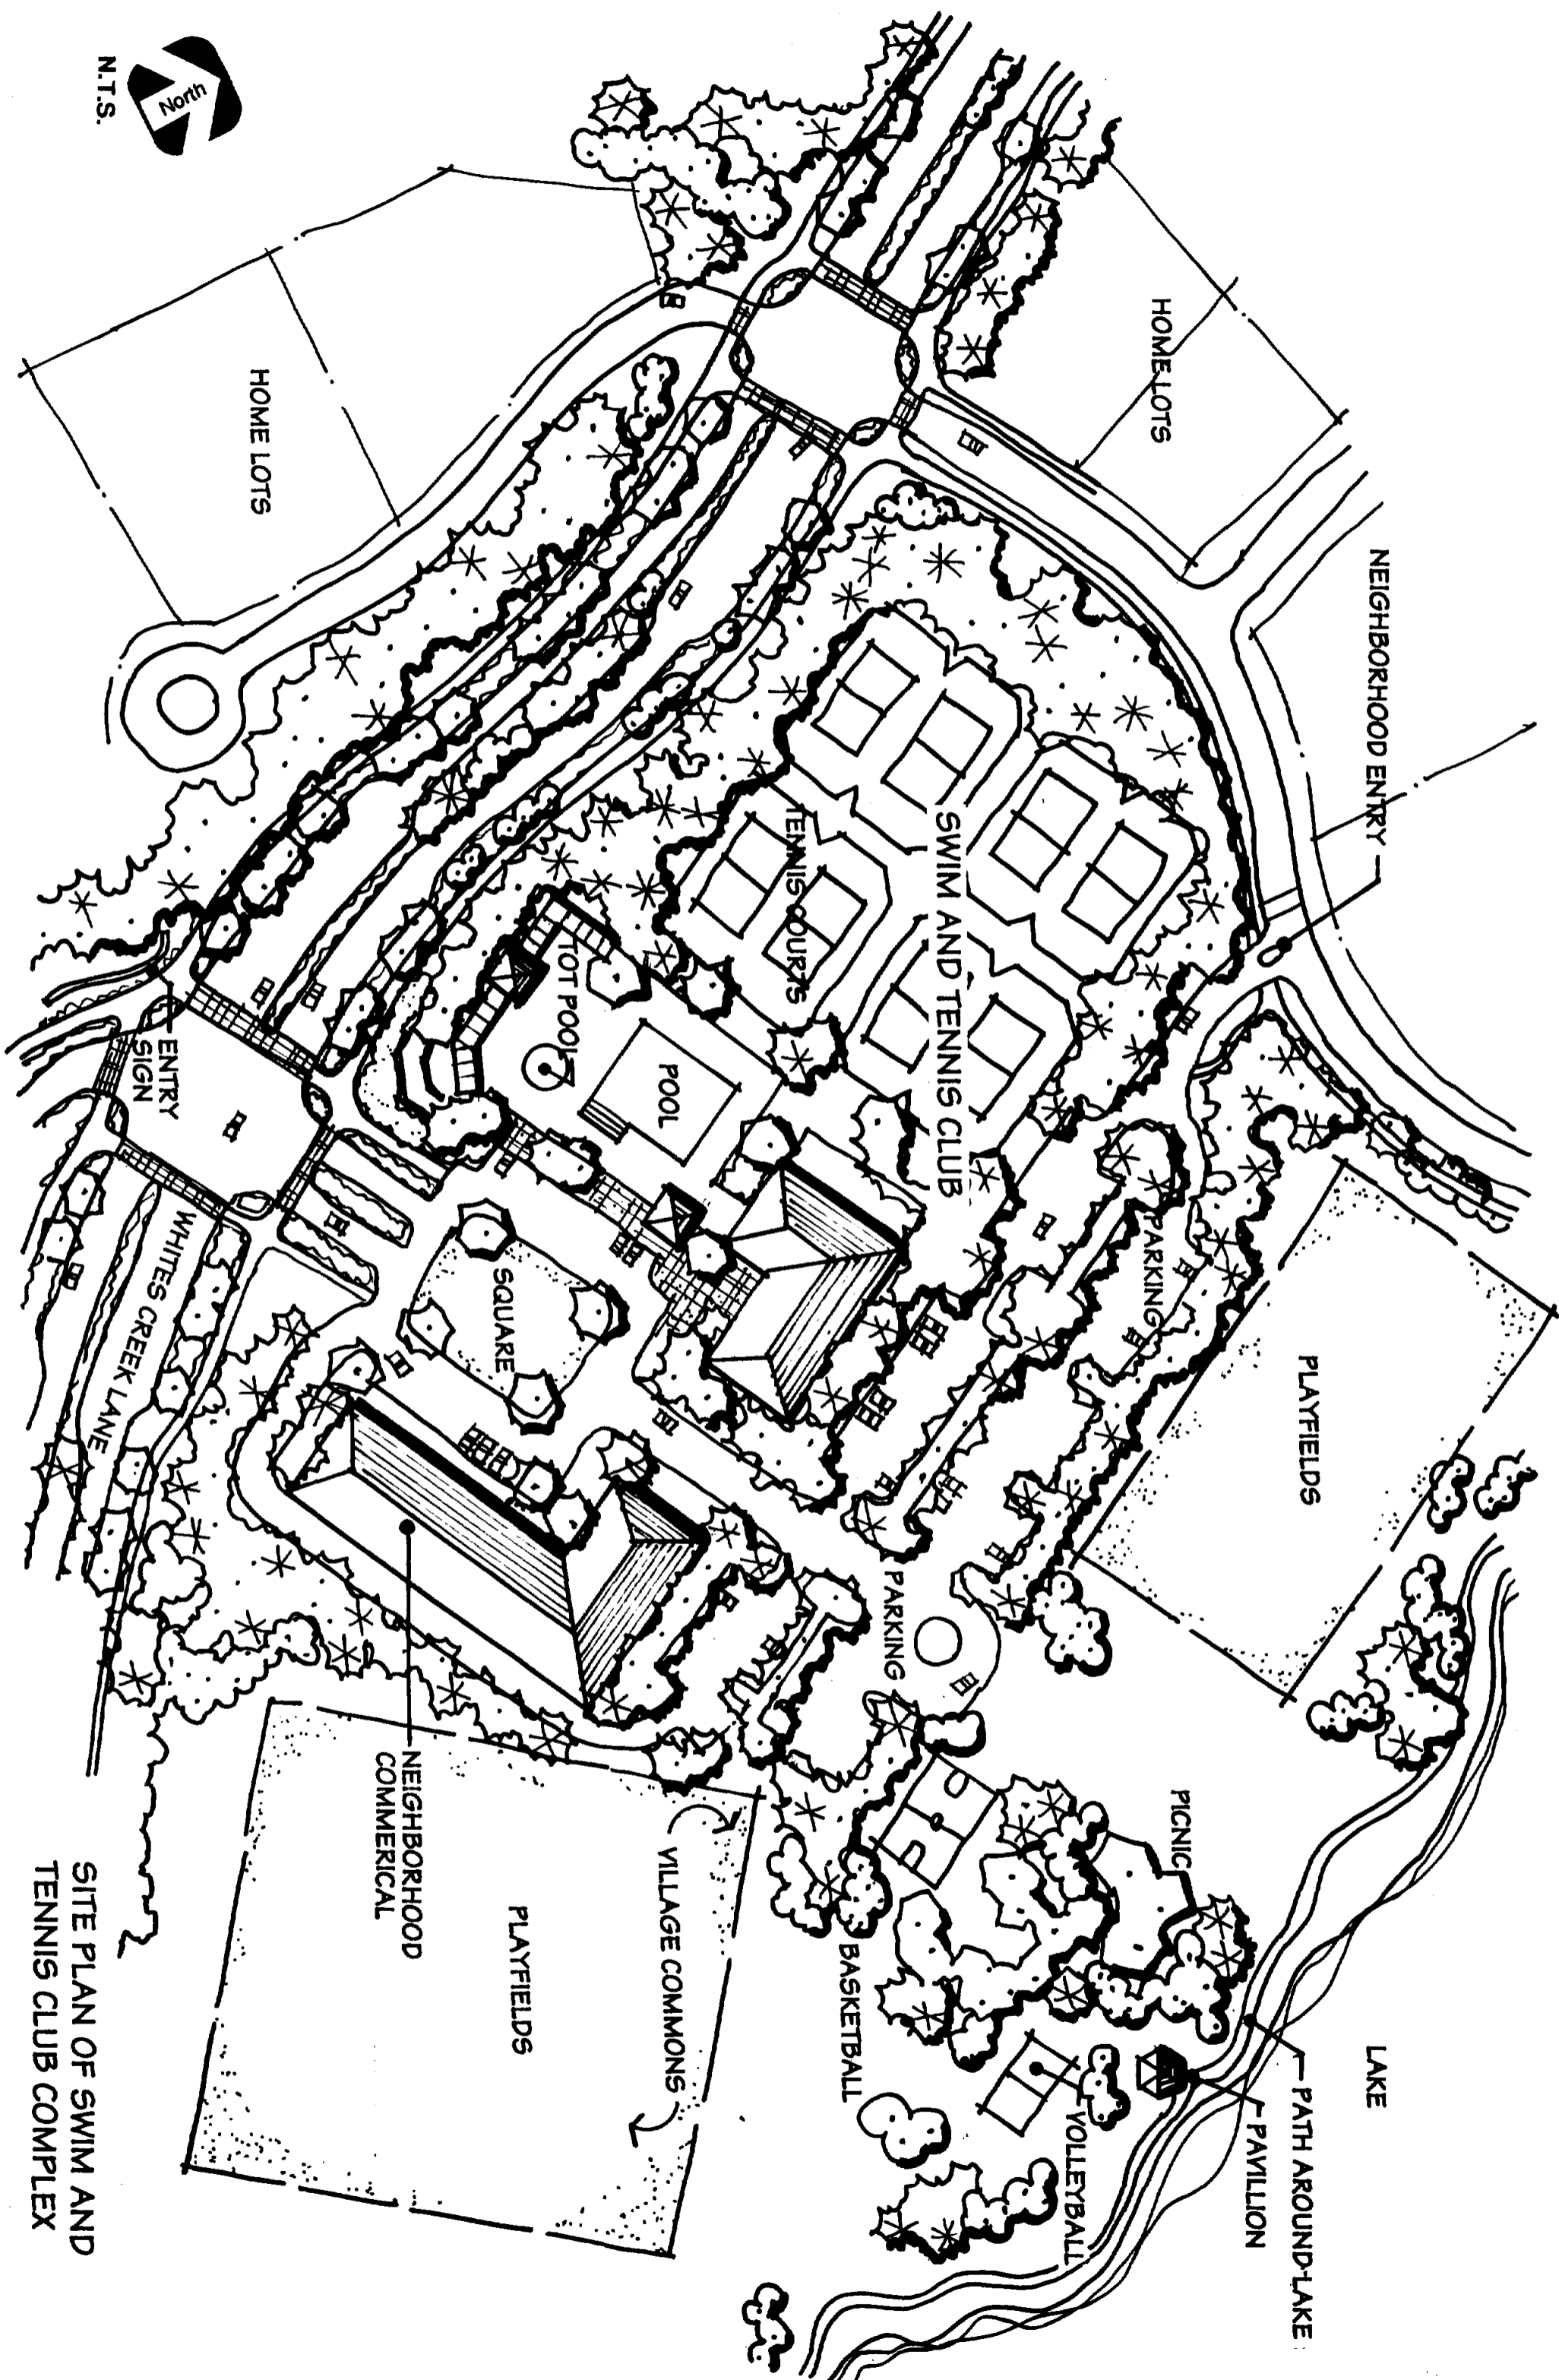

**Fire Station** - A site shall be set aside by the developer on which the Nevada Division of Forestry may construct and operate a two-bay fire station for regional fire protection. The fire station will be located before the entry, and is proposed to have building materials compatible to the other community buildings.

GOLF CLUBHOUSE

SWIM AND TENNIS CLUB

SITE PLAN OF SWIM AND TENNIS CLUB COMPLEX

### III. SITE DEVELOPMENT GUIDELINES

The purpose of the site development guidelines is to present methods for integrating homes into the natural setting through sensitive design. These guidelines are intended to apply to individual residences; whereas, the guidelines presented in the previous chapter apply to community buildings and other features.

#### Building Setbacks

Each residential lot will have building setbacks that define where and how structures can be built. The underlying objective is to encourage articulated building forms, one- and two-story massing, unobstructed views, privacy, and varied setback on the street, golf course, and between residences.

The minimum setback and yard dimensions are described below:

<u>Lot Size</u>	<u>Front Yard</u>	<u>Side Yard</u>	<u>Back Yard</u>
1 acre +	30'	12'	30'
1/2 acre +	25'*	10'	20'
12,000 sq. ft.	20'	8'	20'

\* Reduced to 20' with side-entry garage.

Projections, such as chimneys, covered porches, decks, roof overhangs, canopies, eaves, or other similar architectural features may extend into a required side, front, or back yard setback not to exceed 2 feet. Some lots may have varying setbacks which relate to unusual property features and geometry and these will be specified by the Residential Lot Declarations.

Setbacks from potentially active fault traces have been recommended by the geotechnical engineers. The fault traces that were trenched and staked are judged to be fault traces having relatively high risk of ground rupture during an earthquake. Buildings for human occupancy should not be sited over these faults and a setback is recommended for each side of the fault. The setbacks for each surveyed fault are shown on the site plan and will be identified on tentative and final maps.

### Minimum Lot Width

All residential lots shall comply with the following minimum average width requirements: 1 acre and larger lot, 150 feet; 1/2 acre to under 1-acre lots, 100 feet; and 12,000 square foot lots, 80 feet.

### Grading, Drainage, and Erosion Control

The placement of the home, driveway, and other site elements should minimize disruption of the natural topography as much as possible. Where grading is required, the slopes should be gently rounded to blend into the natural contours of the ground. Site grading should also complement and reinforce the architectural and landscape character by screening undesirable views of parking and storage areas and by helping to reduce the perceived height and mass of the architecture. Wherever practicable, re-graded slopes should not exceed 3 to 1. Geotechnical considerations may allow a steeper slope.

The individual lot purchaser or builder will present drawings to the ALCC for review that are creative and sensitive as to the individual footprint, setting on the lot, and natural grade. The builder/architect is encouraged to minimize the amount of grading on each lot. This same concept should be carried forth in the design of the hardscape and landscape areas adjacent to the building structure. Every effort should be made to achieve a final design which fits the shape of the lot and the land around it.

The control of water run-off and potential erosion should be a consideration both during construction and in the final design of the home site. Natural surface drainage patterns should be preserved whenever possible. Avoid concentrating surface drainage to reduce the erosion potential.

The preservation of existing vegetation cover minimizes the potential for erosion. Construction equipment should be limited to areas intended for specific site improvements in order to minimize damage to existing vegetative cover. Revegetation and erosion control are also discussed in Chapter V, Landscape Design Guidelines.

Dust control methods will comply with the requirements of the Washoe County District Health Department, Air Quality Management. A detailed dust control plan must be prepared prior to issuance of a grading permit for the golf course or approval of a final map (Condition #45). The dust control plan will address phased grading and stabilization methods including revegetation, application of palliatives, street cleaning, and dust controls on any storage piles located on the site.

### Driveways and Parking

To create a streetscape that blends with the rural setting, driveway widths should be minimized. Maximum paved driveway width outside of the building envelope is 12 feet. Slopes on driveways should generally not exceed 14 percent except in special cases. Provide culverts for driveways that cross landscaped drainage swales. Circular drives are only allowed in 1 acre lots.

Large expanses of asphalt or gravel are discouraged, as are large areas of untextured and uncolored concrete. Unpaved parking areas are discouraged. The visual impacts of paved areas can be reduced by tucking them into the topography and landscape.

On-street parking is prohibited throughout Southwest Pointe. Each lot must provide off-street guest parking to accommodate two cars. Additionally, the Conditions of Approval (Condition #40) require that guest parking be provided

within 500 feet of home that have lots ranging in size between 12,000 square feet and 1/2 acre. One space shall be provided for every three homes. The parking areas shall be evenly distributed to avoid large paved areas and shall be shown on the tentative map.

### Auxiliary Structures and Site Utilities

Auxiliary structures, such as gazebos, utility sheds, etc., must be designed in a manner that harmonizes with the main structure. Plans for such structures must be submitted to the ALCC for review and approval.

All solar and mechanical equipment must be screened. All utility meters and appliances must also be screened. Trash and utility areas should be located to avoid direct views from streets or adjacent properties. These areas should be enclosed with fencing or screens that match residential architectural detailing and materials.

### Fences and Walls

Appropriate design and placement of fences and walls on residential lots is important in maintaining a high quality, rural atmosphere. It is essential that the materials, patterns and textures complement the surrounding architecture wherever possible.

No residential fence or wall will exceed 6 feet in height. When a change in elevation occurs, the wall or fence should be stepped in equal intervals. Plant materials or berming will be used to soften a continuous wall or fence. Lot perimeter fencing is allowed. Where the lot abuts the golf course, the perimeter fencing near the golf course must be consistent with the community fencing. (Refer to Community Design Guidelines, Chapter II.) Colors should complement the environment and match other architectural features. Use of darker earth tones is encouraged, with all exposed surfaces finished. All fencing must be submitted to the ALCC for review and approval.

Special consideration will be taken when installing walls so as not to obstruct views from adjacent homes. Any privacy walls and fences will be installed by the homeowner or builder and maintained by the homeowner.

When retaining walls are necessary, they should become an integral part of the design, not an afterthought. The use of several 2 or 3 foot high walls rather than a single taller wall is encouraged. Not only should the retaining walls be designed with careful consideration for strength and provisions for surface and underground drainage, but they should be configured to sensitively fit with the natural terrain and be constructed or faced with materials that blend with the setting.

Freestanding walls are appropriate when used as an extension of the residence, to define key outdoor spaces, and to protect from climatic extremes. Wall materials should be consistent with the architectural style of the house.

### Exterior Lighting

All exterior lighting must be approved by the Architectural and Landscape Control Committee. Homeowners are encouraged to utilize landscape lighting -- to subtly highlight unique architectural features, trees, and focal landscape areas. Lighting levels should also be provided which insure safe passage along walks to building entries. Lighting of patio and deck areas to provide for nighttime usage is also allowed.

Landscape lighting should be integrated into the overall design of the site. Downlights can be recessed into arbors and soffits. Ground-mounted landscape bollards may also be used. Pole lights and monoliths with lights greater than 48 inches in height are not allowed. Light sources should not be directly visible. Light trespass and glare onto adjacent properties is not allowed. Lighting should endeavor to highlight special features and use areas rather than a uniform glow across the property.

## Energy Conservation

All residential units shall include site design and building design or construction features and devices which are capable of conserving energy. Measures encouraged in the design of all residential structures are:

- Double glazing
- Size and placement of windows and other major openings shall take into account prevailing breezes during the summer season and protection from stronger winds during the winter season.
- Appropriate design features to deflect sunlight or allow it to enter the residence, depending on seasonal needs.
- Strategically locate and select plant materials in areas adjacent to the residence to reduce temperature buildup and sun penetration during the summer season.

Building construction requires sufficient insulation and insulated glass to meet State of Nevada energy standards. Other building construction energy conservation features are encouraged, such as high efficiency mechanical equipment, high efficiency glass (non reflective), etc.

## IV. ARCHITECTURAL DESIGN GUIDELINES

### Residential Design Character

The Guidelines seek to establish a community-wide theme for Southwest Pointe that transcends individual property boundaries. Consistent with the Community Design Character described in Chapter II, the Residential Design Character is intended to be respectful of and harmonize with the existing natural and newly created site environment. Building materials, forms, and colors shall be natural in character to blend into and complement the Southwest Pointe character.

The residential design intent is to encourage a variety of residential styles and to encourage creativity and diversity within the community. Creativity will allow for compatibility of golf course homes to the golf course, and compatibility of the hillside homes to the surrounding open space, as an example.

### Building Form, Mass, And Proportions

Residential structures shall employ forms, massing and proportional detailing that relates to the predominantly horizontal context of the upland range. Low forms are encouraged to not compete with the horizontal context. Two-story structures shall have at least 50 percent of the facade appear as a low, one-story structure in height, this suggests the middle of the structure be two story with one-story portions around it. This creates a vertically stepped facade from ground up to one-story, up to two story, and back down. The stepped facade emphasizes the horizontal and appears more organic than tall, two story high wall planes.

Simple, yet bold, roof dominated forms will also emphasize the horizontal features and minimize the appearance of the vertical ways. Hipped roofs are encouraged with a few accent gables as opposed to all gables or shed type roofs.

Wall planes shall also be stepped horizontally (or articulated) with offsets to break up long walls and to create shadows and shading to subdue long wall planes. Covered porches and trellises are also encouraged to create shadows and shading, including heat gain and glare reduction by shading windows and walls. Patios with porches and trellises extend the indoor living space from indoors to the outdoors.

Stepped building forms and the elements of the forms shall be carefully composed in an integrated manner with consideration given to overall, three dimensional proportions as well as the proportions of the individual architectural elements.

### Architectural Elements

Roofing - Roof surfaces shall have a strong texture, like the natural landscaping with one color to blend with the natural backdrop.

Roofing materials shall be fire resistant. Approved roofing materials consist of slate, concrete shakes, fiber cement shakes/shingles, 40-year fiberglass composition shingles, and metal roofing with ribs or shingles and without exposed fasteners. Wood shake or shingle roofs are not permitted.

Roof elements, such as skylights, exposed vents/flues and metal, shall be colored to match or blend in with the roofing. No exposed rooftop solar panels are permitted.

Walls - Wall surfaces shall be selected for durability, weather and fire resistance, minimum maintenance plus compatibility with the regional character and building style. Besides articulation, wall texture creates more attractive wall surfaces. The use of wall trim can add accent to wall surfaces, if employed correctly. Contrasting wall and trim colors are not encouraged. Approved wall surfaces consist of stone veneer, brick, stucco and wood siding.

**Windows and Doors** - The arrangement, location, size, shape, and relationship of window and door openings shall be composed in an orderly and proportional manner on all exterior facades. Continuity of window and door style shall be considered on all facades as well as within individual facades.

**Chimneys** - Chimneys are an important design element and shall be located and sized to be proportional to the overall building composition. All above roof fireplace flues shall have a chimney enclosure of no less than 2 feet by 5 feet. Stone and brick chimneys are encouraged.

### **Exterior Materials And Colors**

The composition of different exterior materials and colors shall be carefully selected and designed to insure compatibility to the building style and regional character. The use of many different materials and colors should be discouraged so that the building form is emphasized. General continuity of exterior materials at different exterior facades is required, although subtle variation from building to building is encouraged. The glass color shall be selected for shading, ultraviolet control and compatibility with other materials. No reflective glass is permitted. Intense and glossy colors are not permitted.

### **Garages And Accessory Structures**

Detached garages and guest houses are permitted only on lots 1 acre or larger in size. As a general rule, other accessory structures are not permitted. These structures may be separated from the residence; however, a connection is required. The connection shall be a trellis arbor, or another overhead element.

Small accessory structures, such as a remote spa trellis or other landscape type elements, may be detached if approved by the ALCC.

## Miscellaneous

**Antennas** - All antennas are restricted to the attic or interior of the residence. It is mandatory that all homes be pre-wired to accommodate cable reception. Satellite "dish" antennas are allowed only if adequately screened and not visible from surrounding areas.

**Awnings and Patio Covers** - Awnings and patio covers, if used, must be of solid color canvas within the approved color palette. Fiberglass or sheetmetal awnings are not permitted.

**Gutters and Downspouts** - All gutters and downspouts must be a color to blend into the building back drop, and downspouts shall be located to be least visible.

**Utility Service and Meters** - All utility service shall be underground with no exposure. All utility meters required to be exposed shall be either located to be not visible or enclosed in a cover box compatible with the building siding and as approved by the utility company. Meters shall be recessed in walls with no exposed conduit.

**Mechanical Equipment** - No exposed mechanical equipment is permitted. All exterior mechanical equipment, including solar panels, condensing units, etc. must be screened from view.

**Signs** - Exterior signs other than house numbers are prohibited. During construction or sale, one (1) approved construction/sales sign may be placed in front of each homesite. Real estate sales/listing information must be placed on a panel of the sign just as contractor's or architect's information would be. Additional freestanding signs, "snipes," banners, flags, etc. are prohibited. Political signs, within reason, are excepted from this prohibition.

## Energy Conservation

Southwest Pointe will have all locally available public utilities for energy as well as being very conducive to passive solar access for natural heating to conserve energy. Passive solar access requires consideration of building orientation and

window locations. Window locations should also be chosen to capture breezes for natural ventilation and cross ventilation within the structure for energy conservation.

Solar shading should also be considered for prevention of excessive heat gain, particularly in the summer and from the westly afternoon sun. Exterior shading devices include roof overhangs, trellises and patio covers. Plant material selection may help control solar access, such as deciduous trees for winter access and summer shading.

Building construction requires sufficient insulation and insulated glass to meet State of Nevada energy standards. Other building construction energy conservation features are encouraged, such as high efficiency mechanical equipment, high efficiency glass (not reflective), etc.

## V. LANDSCAPE DESIGN GUIDELINES

### Landscape Design Character

Landscaping will play a significant role in establishing the character of Southwest Pointe. These landscape guidelines are intended to enhance the character and quality of the community established by the architectural guidelines. The open space system responds to site conditions and creates a visual framework for the entire project. Neighborhood entries and roadway landscaping will reinforce the overall landscape themes which permeate the site and establish a "sense of place" within Southwest Pointe. Also contributing to the overall community identity are other consistent landscape elements such as walls, fences, lighting, signage, and paving.

In addition to providing exciting and challenging play, the golf courses have been carefully situated along the creeks, adjacent to major roads, and routed to take advantage of the panoramic views from the property. The courses have been planned to incorporate manicured lawns for the tees, fairways, and greens with transition landscaping to enhance the beauty of the adjacent native vegetation through contrasts in color and texture. Through careful planning, the golf courses and the entire Southwest Pointe community have been gently blended into the natural environment.

### Landscaping - Common Areas

Landscaping in common areas will be the responsibility of the developer. The intent of landscaping within the project site is both aesthetic and functional. The development will fit the local terrain and environment without looking out of character for northern Nevada (e.g., short grasses, muted grays and sage green colors of shrubs, with evergreens in clustered areas). At the same time, it is important that the landscape create a sense of arrival at the entry and a strong visual unity throughout the project. This will be accomplished through landscaping and consistent signage, walls, fencing, etc.

**Common Area Landscape Guidelines** - The following guidelines apply to common area landscaping:

- The landscape palette is informal and natural, combining the best characteristics of the high desert natural landscape. Native shrubs and ground cover will be massed in groups of a single species, used in combinations that provide contrasting colors, textures and forms in a broad-brushed approach to landscape design. Trees will be massed in naturalistic groupings of a single species, an interplay of evergreens, and contrasting deciduous trees.
- Drought-tolerant, low-maintenance plantings will be used.
- Screening of parking areas, utility enclosures, service yards, and hillsides will be done with evergreen trees and shrubs.
- A variety of plant sizes will be used, with specimen trees at central focal points such as the project entry and street intersections.
- Irrigation systems must be automatic, with a controller and valves. Drip systems will be utilized instead of above-ground spray heads in planter areas. The use of a central control irrigation system on the golf course will facilitate the use of satellite controllers in common areas. This will allow all controller programming from a central source at the clubhouse.
- Shrubs and trees that deer do not prefer will be planted, although deer and especially rabbits will eat almost any plant if hungry enough and during the time when plants are putting on new tender growth.
- Plantings will contain a combination of fast, medium, and slow growth rate types. Eventually the slow growth plants will dominate the landscape, being more disease free and less prone to wind breakage.
- The use of lawn will be restricted to key focal points such as entry locations.
- Future landscape plans in common areas must be consistent with county requirements and approved by the Architectural and Landscape Control Committee. The plant materials list in this Handbook will be followed for planting selection.

- Exposing native rock outcroppings and boulder groupings during grading operations will enhance the overall landscape theme. Ideally, boulders should have at least one third of their total size buried in the ground. This gives rock a more permanent and natural look rather than just setting them on top of the ground. Boulder size will be a minimum 3 foot diameter, with groupings rather than scattered rock.

### Landscaping - Private Yards

All visible areas of yards not hardscaped must be landscaped in an acceptable form -- either natural, with ornamental plantings, or with both. Landscaping plans for individual residences will be reviewed and approved by the Architectural and Landscape Control Committee. Homeowners purchasing builder products will have up to 6 months to install private landscaping after close of escrow without a penalty. Homeowners purchasing custom lots will have up to 6 months after receiving occupancy permits on their residences to install private landscaping without a penalty. The following guidelines have been created to provide homeowners, architects, designers, and landscapers a reference point from which to develop individual landscape plans. These guidelines may be amended from time to time by the review committee based on comments and suggestions from designers and homeowners.

Private Yard Guidelines - The following guidelines apply to landscaping in private yards:

- All plant materials selected should be suitable for the climate, soil conditions, and theme of the community. (Refer to Table A-1 in the appendix for a list of recommended plants.)
- Landscape planting palettes should be simple and kept to a limited number of plant materials.
- Plantings should be done in masses or groupings of a single species to avoid complexity.

- Landscape plantings should provide for effective screening of cars, utility enclosures, or any visually undesirable element or structure.
- Planting selections should strive to maximize color during all four seasons.
- All landscaped areas must have an automatic irrigation system, preferable designed by a Landscape Architect or irrigation consultant to ensure efficient water usage.
- Group plants with similar water requirements.

**Front Yard Landscaping** - The following guidelines apply to front yard landscaping:

- "Gravel gardens" are prohibited.
- All visible areas of yard not hardscaped, or in decking must be landscaped in an acceptable form.
- Front yards shall be planted with a combination of trees, shrubs, and ground cover or lawn. All lawns shall be sod and cover no more than 20 percent of the total landscape area.
- Except where previously installed by the developer, at least three trees shall be planted in the street right-of-way adjacent to the front of each 1-acre and 1/2-acre residential lot and at least two trees shall be planted in the street right-of-way adjacent to the front of each 12,000 square foot residential lot.
- At least five additional trees shall be planted per front yard on 1-acre lots, three trees per front yard on 1/2-acre lots, and two trees per front yard on 12,000 square foot lots. Groupings of vertical trees are encouraged.

**Side and Rear Yard Landscaping** - The following guidelines apply to side and rear yard landscaping:

- Side yard planting is encouraged to create a sense of privacy between adjacent homes.
- Rear yard planting can provide shade and privacy, define outdoor spaces, and frame views. Care must be taken, however, in planting trees and tall shrubs so as not to obstruct views from adjacent lots to the golf course and mountains. Final placement of all rear yard trees is subject to approval by the Architectural and Landscape Control Committee.

## Maintenance

Common Areas - Landscape, fencing, walls, irrigation systems, etc. installed by the developer will be maintained in a healthy and operational condition and will eventually be transferred to the Homeowners Association, which will then assume maintenance responsibility. Landscape maintenance will primarily consist of weeding, spraying pre- and post-emergents, insect control, pruning, plant replacement and irrigation system winterizing/repair. Drip irrigation lines will require flushing to remove debris so that emitters do not clog.

Open space and private trail maintenance will include trash pick-up, erosion control, re-surfacing trails, and upkeep of signage. (Washoe County will be responsible for any maintenance activities required on open space that is under their control.) Paved walks will require re-seeding and eventually resurfacing the asphalt. Related fencing will need board replacement and re-staining/re-sealing wood members.

Private Yards - The intent of maintenance standards for private yards is to keep the entire project up to high standards. Homeowners will be responsible for maintenance of their own lots. If the required front yard trees should die, they will need immediate replacement with trees of the same size and species. Property owners will also be responsible for maintaining landscaping along the right-of-ways of local and rural streets with direct lot frontage.

## Revegetation and Erosion Control

Revegetation is the process that involves seeds and small plants, fertilization, and soil stabilization once vegetation becomes established. It is one part of the overall erosion control process. Most often the best erosion control is a combination of structural or mechanical land revegetation. Once the ground is disturbed during construction, it is important to revegetate areas to be kept as open space as quickly as possible to minimize wind and water erosion on the soil. Typically, fast-growing annuals and perennials are installed for both short- and long-term stabilization.

**Timing** - The developer will follow the typical Washoe-Storey Conservation District and District Health Department guidelines for disturbed areas. A dust palliative will be applied to areas left undeveloped more than 30 days and a seed mix applied for areas left undeveloped more than 90 days. The preferred season for revegetation without irrigation is early spring after the ground softens. Late fall after the first snow is also acceptable. The developer may elect to seed between the preferred seasons with some supplemental irrigation from a water truck or temporary irrigation.

**Clearing Limits** - Areas to be cleared for development or cut/filled will be surveyed and staked so that equipment can be confined to those disturbed portions only. The objective is to save as much native vegetation within the development as possible for the open space between residential units. Clearing will be done on a phasing schedule as the development proceeds. The exception is the golf course, which will be graded and built in 9- or 18-hole increments.

**Seeding Methods** - Seeding will take place on open areas and slopes 3 to 1 and flatter. Slopes not accessible by drilling machines will either be hydroseeded or seeded with a mechanical broadcaster and raked by hand. Drilling is the preferred method since germination is generally the highest. Hydroseeding will be accomplished in a two step process. Seeding will take place on roughened soil with 30 percent mulch and then blowing the remaining 70 percent of the mulch on top of the seed. This ensures better seed/soil contact.

**Seeding Mixes** - One of the goals is to blend the development into the existing on-site environment. To accomplish this, a seed mix that matches the existing plant material is desired. Since the majority of the open space will not have permanent irrigation, the plants need to survive on rain or snow fall. A combination of woody plants (shrubs) and grasses are proposed for the mix. Also proposed are grindings from existing plants that are cleared. Since the seeds are already acclimated to the site, germination is usually very high. Plants to avoid seeding are those with a high fuel production that create a hazard for wildfires.

A general recommended seed mix is proposed in Table 5-1. More specific seed mixes will be developed during construction based on exposure, seeding timing, soil type, and degree of slope. Since the site is so large, seeding rates will need to be adjusted based on the above factors.

Three to four different grass and shrub types are recommended for a thicker and quicker cover. The wheat grasses are all fire resistant for use near residential units.

Table 5-1  
**General Seed Mix**  
 (in non-irrigated areas)

Common Name	lbs/acre of pure live seed
Indian Ricegrass	2
Fourwing Saltbush	4
Big Sagebrush	2
Great Basin Wildrye	2
Siberian Wheatgrass	4
Canbys Bluegrass	1
Annual Ryegrass	5
Palmer penstemon	1/4
Blue Flax	1/4
Shadescale	4
Total:	24.5 lbs/acre

In areas where drip irrigation is available, such as along roadways and around the golf course, trees and shrubs will be added to the above seed mix from Table A-1 (list of recommended plants). A variety of container sizes will be used, from tube packs to #5 cans, to provide a more natural appearance. Most woody plants are transplanted because of rodent predation to seeds. Larger shrubs and trees will also help stabilized slopes with their larger root mass. New plants will be mulched in the basins to conserve water and reduce weed competition around the root zone.

**Fertilization** - Fertilization will be added to the soils before seeding or during shrub/tree transplanting. Typical recommendations for low fertility sites call for 40 to 80 pounds of nitrogen, 50 to 75 pounds of phosphorous, and 50 pounds of potash per acre incorporated into the seed bed. For shrubs and trees, slow release plant tablets will be added to the planting pit during transplanting.

**Mulching** - Mulching provides a protective layer to help establish plants quicker. It also cools the soil, prevents soil crusting, keeps weed growth down and conserves water around the plant itself. For seeding, a hydromulch made of a wood product will be added to slopes where applicable. On steeper, longer slopes and drainageways, a wood excelsor blanket will be used with either a paper or plastic net backing. Blankets are unrolled and staked into place using wood pegs.

Flatter areas and slopes will be mulched with straw after seeding and either tackified or punched to keep straw in place. Typical rates are 3000 lbs/acre of clean straw, evenly distributed.

Mulching for shrubs and trees will be a ground bark or wood product. A minimum depth of 3 inches will be added to the watering basin and checked after major storms.

As previously mentioned, a dust palliative will be used to minimize wind erosion on areas left undeveloped more than 30 days. This is only a temporary solution and these areas will need to be re-seeded, since palliatives are tackifiers that reduce soil porosity by forming a soil crust. Foot and vehicle traffic quickly degrade a soil surface, requiring re-application.

All revegetated sites will be inspected by maintenance personnel to repair any gully damage caused by storms, especially during the summer months. Areas of inadequate plant establishment will be re-seeded or re-planted as required. In some areas, temporary chicken wire fencing will be required to prevent rabbit and deer browsing on plants until they are bigger, stronger, and better able to survive on their own.

### Fire Fuel Breaks and Green Belts

The project site is located in a high fire hazard area as identified by the Nevada Division of Forestry. This is due to the occurrence of lightning and strong westerly winds. Fire suppression over a long period of time has resulted in on-site fuel accumulation that will become a problem during a wildfire.

Mitigation is needed to reduce the fire hazards on the site. Proposed mitigation includes careful structure siting, fire hydrants, fuel breaks around structures, the use of fire resistant/retardant plants, ease of access for fire fighting equipment, and the use of appropriate building materials.

The developer will work with the Division of Forestry to locate firebreaks in appropriate locations. Effective fire protection can be achieved with a wide strip (at least 100 feet) of bare ground around structures created by removing the native shrubs and grasses. However, the bare ground is subject to water and wind erosion, besides being aesthetically unacceptable. A better solution is the use of "green belts". A green belt can be defined as a landscaped and irrigated zone between a structure and the brush-covered wildlands that is designed to halt or slow the spread of fire and to control soil erosion and water runoff. (Refer to Figure 5-1.) Requirements in developing such a green belt are as follows:

1. Removal of highly flammable native brush and grasses, especially cheat grass, from around structures for a distance of 30-50 feet. Remove any dead wood in and around shrubs. This zone will consist of grasses, introduced shrubs, and individual trees pruned up off the ground. All plants will have a high-moisture content because of drip or spray irrigation. The sprinkler system will be permanent and on a controller. Included in this zone is a 10 to 20 foot wide area on both sides of the front driveway. Appropriate planting for this zone are native, naturalized and exotic species that gradually blend to the more native zone beyond. Lawns will be kept to a minimum size for water conservation and sprinklered with an overhead automatic spray system.

EXISTING NATIVE VEGETATION - REMOVE DEAD WOOD AND DEBRIS OUT ANOTHER 50-100 FT. WHERE RESIDENTIAL ABUTS OPEN SPACE

THIN BRUSH AND TREES

LIMIT THE AMOUNT OF NATIVE BRUSH TO 20% SITE COVERAGE

REMOVE DEAD BRANCHES AND DEBRIS FOR 100 FT. INTERPLANT WITH ORNAMENTALS WITH A HIGH WATER CONTENT. INSTALL DRIP IRRIGATION SYSTEM

100 FT.

30 FT.

INTENSIVE LANDSCAPE

RESIDENCE

INTRODUCED ADAPTIVE LANDSCAPING - LAWN AND ORNAMENTAL SHRUBS. PRUNE TREES OFF OF THE GROUND. AUTOMATIC SPRAY IRRIGATION SYSTEM FOR HIGH MOISTURE CONTENT.

2. In the 30 - 100 foot zone around the structures, dead woody plants will be removed. Trees and shrubs will be occasionally pruned and "weedy" species eradicated. This landscape zone is intended to coordinate with the requirements for a managed fire break transition zone. Beyond the 100 foot zone, up to 200 feet, the amount of vegetation will be reduced and the most flammable species thinned.
3. Maintenance of the plantings will include weed control, cutting back woody plants, and removal of plant litter and fallen branches. Part of the effectiveness of a green belt lies in minimizing the volume of fuel available. Without proper maintenance, fire-retardant planting can become a fire hazard over time. Irrigation and maintenance schedules will be provided with final plans for the project.
4. The previous green belt conditions will be a part of the CC&Rs with mandatory enforcement. If property owners do not comply with the conditions, the Homeowners' Association will be authorized to contract for maintenance and bill the property owner.

A crucial step in the planning and construction of a green belt is selection of the plants to use. Listed in Table A-2 in the appendix are recommended species with varying degrees of fire retardance that have value for landscaping in green belts. Although a number of broad similarities may exist within the overall project area, it is not possible to make specific site recommendations until fire hazard, soil, topography, and sun exposure are further studied. Plants listed will be coordinated with those listed in the erosion control section of the Handbook. Generally, green belt species will be planted around structures and at the residential perimeter.

It is important that plants from Table A-2 be grouped according to water requirements. Highly drought-tolerant species are often damaged or killed if over-watered. Over watering also forces unwanted growth in the plants and encourages weeds. If two or more species are planted together, it is essential that they have similar water requirements so that they can be watered from the same automatic valve. When an area is irrigated, it should be thoroughly soaked to encourage the roots to grow deeply into the soil. Frequent, light irrigation must be avoided.

## Water Conservation

Water conservation in the Truckee Meadows is a long-term responsibility for all residents, since we live in a desert climate with limited resources. There are many ways to conserve water in the outdoor landscape. Generally, plants will use as much water as a person gives them, so overwatering is the result of owners not realizing proper planting water requirements.

The principals of a relatively recent concept of "Xeriscape" (dry landscape) should be followed in every new development and retrofitted into existing landscapes. The principals are briefly summarized as follows:

- Mulch plantings to keep soil cool and reduce evaporation.
- Plan and design planting/irrigation from a project's beginning.
- Create practical and usable lawn areas of reasonable size and shape.
- Use appropriate plants for the area and group into water zones.
- Improve the soil in the intensive landscape zones with compost or manure.
- Irrigate efficiently with properly designed systems with automatic timers.
- Maintain the landscape appropriately by mowing, pruning and fertilizing properly.

Well done Xeriscape-type designs can typically reduce irrigation water by more than 50 percent, compared with traditional designs dominated by over watering lawns. Over watering can also kill highly drought-tolerant plants and force unwanted growth.

Home buyers in Southwest Pointe will be encouraged to follow the above water conservation methods in their private yard areas within the 30 foot intensive landscape zone surrounding the structure. Lower water bills will be just one of the long term benefits of proper landscaping.

## VI. SERVICES AND FACILITIES

### Water Service

The property is outside the boundary of the South Truckee Meadows General Improvement District/Special Assessment District #18. This property will be developed outside the district; however, all of the potable water facilities on lots will eventually be dedicated to Washoe County. The developer of Southwest Pointe may construct a new water system since there are no existing facilities to accommodate this project. The Southwest Pointe water system may connect to the existing system. Washoe County has drilled several exploratory wells on the property. These wells will be used as the main production wells for the project.

The elevations at which water storage tanks will be located to obtain the proper pressure have been identified and are shown on the site plan. One or two tanks will be located at an elevation of approximately 5,710 feet. A third and smaller tank will be constructed at an elevation of approximately 5,848 feet. The tanks will have a height of approximately 24 feet. The total water storage requirement is between 1.2 and 1.4 million gallons (i.e., 926,500 gallons residential storage, 240,000 gallons commercial storage, and 120,000 gallons per tank residential fire storage). The lower tank(s) would have a storage requirement of 975,000 to 1.2 million gallons. The upper tank will have a capacity of approximately 200,000 gallons. The tanks have been located in a ravine to screen them from view. If additional screening is necessary, landscaping would be installed to the satisfaction of the Department of Development Review.

To serve the two proposed golf courses in Southwest Pointe, as well as the other courses and parks planned in the vicinity, Washoe County proposes to reuse treated wastewater and untreated creek water from the South Truckee Meadows Wastewater Treatment Plant. The Conditions of Approval for Southwest Pointe

(i.e., #77) require the developer to use treated wastewater from the treatment plant. Additionally, as part of the initial construction, the developer will provide the necessary on-site easements needed to construct the infrastructure and, when the treated wastewater or creek water becomes available, the developer will construct the necessary on-site infrastructure.

Water conservation will result by using and managing resources efficiently and effectively. Reducing domestic water usage is an objective for this development. To achieve this objective the following devices and/or programs will be initiated:

- Water conservation devices will be used throughout Southwest Pointe as specified by current county ordinances.
- Water conservation principals for landscaped areas are addressed at the end of Chapter 5.

### Sewer Service

Southwest Pointe will be served by the South Truckee Meadows Wastewater Treatment Plant, and, according to County staff, capacity is available. The plant currently has a capacity of 0.75 million gallons per day (mgd); however, the ultimate capacity is planned to be 6.0 mgd. Based on the number of existing and approved dwelling units within the service area, the current capacity has been allocated. This allocation exists only on paper and would be a problem only if all of the currently approved homes were constructed immediately. According to the county staff, the plant has been designed for expansion, and capacity will be available for this project.

Existing sewer service is only a short distance from Southwest Pointe. A 10-inch line has been extended to Saddlehorn and another 10-inch line serves Southwest Vistas. Because of the topography and site plan, Southwest Pointe will be sewerred to both locations.

### Fire Protection

Fire protection service is intended to be provided by the Nevada Division of Forestry, Sierra Fire Protection District. The closest existing station is Galena Station #2, which is located on the Mt. Rose Highway approximately 2 miles west of the intersection of Mt. Rose and Thomas Creek Road.

Consistent with the Southwest Truckee Meadows Area Plan, a one-acre site for a fire station is proposed near the entrance to Southwest Pointe. The site will be offered for dedication prior to recordation of the first final map. According to NDF staff, the station would be 3,800-4,000 square feet with two bays and living quarters. If constructed, there would be two, full-time employees supported by volunteers.

The entrance to Southwest Pointe may be gated at the point where Whites Creek Lane becomes a private road (i.e., near Thomas Creek). The developer will meet with NDF staff to discuss their needs in order to maintain emergency access. Fire fuel breaks will also be required in many locations and an acceptable design will be developed with NDF staff. Maintenance of the fire fuel breaks will be the responsibility of the individual homeowner or the Homeowners' Association depending on the location.

### Security and Emergency Services

The Washoe County Sheriff's Department is intended to provide police protection service to this site from the main station at 911 Parr Boulevard. There is currently one patrol unit regularly assigned to the area, with an average response time of 10 minutes. The response time in this area will be greatly improved if the Sheriff's Department locates a substation in the community center in the South Valleys Regional Park at the intersection of Whites Creek Lane and Wedge Parkway. The first phase of the park has been constructed. The community center is located in a later phase; therefore, it may be several years before the substation is operational.

The gate house at the entrance to the project may be manned; however, no other private security personnel are planned. During the initial phases of the project, roving security personnel may be used to prevent theft and/or vandalism. The developer will meet with Sheriff's Department staff to discuss their needs in order to maintain emergency access.

### **Private Recreation Amenities**

The two golf courses proposed in this development are contemplated to be a combination of daily fee-public play and membership play. The golf courses will not be owned or controlled by the Homeowners' Association. Notwithstanding the administration of the entry area, so long as either of the golf courses are available for public play, an easement(s) or some other form of vehicular right-of-way shall protect the public's ability to access the golf course.

The swim and tennis facility shall be controlled by the Homeowners' Association and is not contemplated for use by the general public.

### **Financial Assurances for Provision of Services**

Financial assurances for provision of services (e.g., private road maintenance, common area landscaping, private recreation amenities, private drainage facilities and security) shall be provided under the project CC&Rs, which shall provide for funding of these services through assessments and insure collection of assessments through liens on lots.

## VII. SPECIAL CONDITIONS

### Thomas and Dry Creeks

Two creeks cross the property -- Thomas Creek along the southern and eastern edge and Dry Creek through the western and north central portions of the site. The creeks are bordered by riparian vegetation and a wetlands delineation, prepared by Soil Resource Investigations and approved by the Corps of Engineers, has concluded that wetlands exist along both creeks. These areas will be avoided and will remain undisturbed where feasible.

The Conditions of Approval state that a buffer will be provided between the fairways/greens and all creeks (i.e., Condition #55). The setback of the buffer will comply with 100.200 (e) of the Uniform Building Code (i.e., 50 feet from the centerline of drainage area greater than 5,000 acres). A second condition (i.e., Condition #56) requires that a minimum buffer of 50-feet be provided between any structure and riparian vegetation.

At locations where roadways cross the creeks, the intent is to span the creek and leave all delineated wetlands undisturbed. This will be accomplished through the use of railroad flatbed car bridges. Concrete abutments will be constructed on either side of the creek outside the delineated wetlands. The railroad cars will then be placed to "clear span" the creek bed.

### Wildlife

Portions of the project site are located in the winter range of the Loyalton-Truckee deer herd. The herd summers largely at higher elevations and winters in the lower reaches of the Sierra Nevada. Some residential and golf course development is proposed within the winter range; however, there is also a

significant amount of acreage within the winter range that will be left as open space. Some key mule deer winter range habitat has also been identified at the northwest end of Southwest Pointe. For the most part, this area is proposed to be left as open space.

To reduce the impacts of development on the deer herd, the following mitigation measures are proposed:

- Leave open space around the developed area and provide open areas within the development in conjunction with the golf course.
- Seasonal restrictions and/or regulated recreational use in open space areas identified as key mule deer habitat will be enforced. Provisions will be made for these types of restrictions at the time the open space is deeded. (Refer to Open Space Management Plan.)
- Boundary fencing is not proposed.

The staff of the Washoe County Department of Parks and Recreation has also expressed interest in stocking Thomas Creek with fish through the Urban Fisheries Program. To accomplish this work, vehicular access to the creek is necessary. Two locations for vehicular access are proposed -- one is at the neighborhood park and the other is from the maintenance road to the existing water tanks.

### Cultural and Archaeological Resources

All cultural resources issues (ethnographic, historic, and prehistoric) are being managed by personnel of Kautz Environmental Consultants, Inc. of Reno, Nevada. All historic and prehistoric sites in Southwest Pointe have been identified and recommendations regarding their significance have been made, or are currently being made (Hutchins and Kautz 1995, Christensen and Kautz 1995, and Christensen and Burns 1996). Recommendations have been passed to the Nevada State Historic Preservation Office (SHPO) in conformity with the Truckee Meadows Regional Plan: Conservation Element (1991, revised).

A total of 88 archaeological sites have been discovered on project lands of which 70 are prehistoric in age, one is historic, and 17 have components of both historic and prehistoric age. A total of 25 non-significant isolated finds have also been recorded. Nineteen archaeological sites have been recommended as significant and 12 remain unevaluated. The remaining 57 sites are recommended as non-significant resources requiring no further work.

All reports from KEC pertaining to this project have been provided to the Washoe Tribe of Nevada and California and all cultural resource management activities are being arranged through the Tribe's Cultural Resources Coordinator. Already, a valuable and very unusual Native American bas relief effigy located on this land has been donated to the Tribe and, following its removal last year, resides in the Nevada State Museum.

All significant and unevaluated archaeological sites will either be avoided or mitigated during the construction, maintenance, and operation of this project. All mitigation will occur prior to site disturbance, though these activities may be phased in coordination with planned construction.

Prior to mitigation, an Historic Properties Treatment Plan will be submitted to the SHPO, outlining in detail the mitigation procedures to be employed, the precise sample, and the methodological and theoretical framework delineating the inquiry at each site. Following both the acceptance of this plan and completion of the specified fieldwork, construction will begin.

## VIII. DEVELOPMENT PROCESSING

### Relationship to Other Ordinances

The provisions of this Handbook will govern the development of Southwest Pointe. However, where the provisions of the Handbook do not address a specific subject, the provisions of the Washoe County Development Code (Chapter 110) or other ordinances governing the development of land shall prevail, subject to the provisions of the final development agreement.

### Amendments to the Development Standards Handbook

It is anticipated that this Handbook will need to be periodically updated and amended. If modifications are necessary, the Department of Development Review will be notified by letter, stating the changes requested, the reasons for the changes, and the effects of the changes. Minor modifications can be approved at the staff level. The definition of "minor" will be made by the Director of the Department of Development Review. More significant changes must be approved by the Washoe County Design Review Committee.

During the design and construction phase of the project, it will be the responsibility of Southwest Pointe Partners or its successor to initiate the amendment request. This responsibility will eventually be assumed by the Homeowner's Association.

### Approval Process

Design review will be required of each Lot Developer. Southwest Pointe Partners will provide each Lot Developer with a copy of the approved Development Standards Handbook and CC&Rs. These documents should be reviewed carefully by each Lot Developer.

The Architectural and Landscape Control Committee (ALCC) will review all preliminary and final construction drawings for structures and landscaping prior to their submission to Washoe County. The purpose of this initial plan review is to insure compliance with the Development Standards, the CC&Rs, and the overall master plan for Southwest Pointe. Any development plans submitted to Washoe County must be accompanied by verification from the ALCC stating that the plans have been approved by that Committee. Minor variations from the Development Standards may be approved by the ALCC providing that these variation are in conformance with county regulations and the intent of these Development Standards.

Approval by the ALCC does not imply that the plans are in compliance with all applicable county codes, ordinances, or other regulations. Each Lot Developer is responsible for submittal and processing of all plans and permits required by the county prior to the commencement of construction.

#### *Financial Assurances for Development of Property*

Financial assurances for the construction of capital improvements to be dedicated to the County shall be provided as required by Washoe County Code or pursuant to subdivision improvement agreements under tentative maps, subject to the provisions of the final development agreement.

**APPENDIX**

Table A-1  
RECOMMENDED PLANTS

*Special Uses*

Common Name	Botanical Name	Deer Resistant	Drought Tolerant	Revegetation	Erosion Control	Remarks
<b>Deciduous Shrubs</b>						
Cinquefoil	Potentilla fruticosa					
Alpine Current	Ribes alpinum			√		Berries attract birds
Golden Current	Ribes aureum		√	√		Berries attract birds
Siberian Peashrub	Caragana arborescens		√	√		
Redosier Dogwood	Cornus stolonifera			√		Streambank revegetation
Staghorn Sumac	Rhus typhina			√		Good bank cover
Odessa Tamarix	Tamarix odessa		√	√		Spring flowers
Snowberry	Symphoricarpos albus		√	√	√	
Amur Maple (tough)	Acer ginnala					Good fall color
Buffaloberry	Shepherdia argentea		√	√		
Memorial Rose	Rosa wichuraiana				√	Good bank cover
Smoke Tree	Cotinus coggygia	√	√			Interesting flowers
Tartarian Honeyeuckle	Lonicera tatarica		√	√		
Western Chokecherry	Prunus virginiana var. demissa					Berries attract birds
Western Sand Cherry	Prunus besseyi		√	√		Berries attract birds
Sweet Mockorange	Philadelphus coronarius					Fragrant
Nanking Cherry	Prunus tomentosa		√	√

**RECOMMENDED PLANTS FOR LANDSCAPED GREEN BELTS**  
 IN THE 30'-100' FIRE BREAK TRANSITION ZONE

Species	Drought Tolerance	Erosion Control (30-60° Slope)	Growth Height	Mature Height (Inches)	Scale of Use
<i>Achillea tomentosa</i> Wooly Yarrow	Fair		Very Spreading	to 12	Small
<i>Atriplex gardneri</i> Gardner's Saltbush	Excellent	++	Semi Upright	12-18	Medium
<i>Atriplex semibaccata</i> Creeping Australian Saltbush	Excellent	++	Semi Upright	to 12	Large
<i>Cerastium tomentosum</i> Snow in Summer	Good		Spreading	4-6	Medium
<i>Euonymus fortunei</i> var. <i>radicans</i> Common Winter Creeper	Fair-Good	+	Very Spreading	18-24	Medium
<i>Potentilla verna</i> Spring Cinquefoil	Good	+	Spreading	3-6	Medium
<i>Santolina virens</i> Green Lavender Cotton	Excellent	++	Upright	18-24	Large
<i>Santolina chamaecyparissus</i> Lavender Cotton	Excellent	++	Upright	18-24	Large
<i>Vinca major</i> Periwinkle	Good	++	Very Spreading	18-24	Large
<i>Arctostaphylos uva-ursi</i> Bearberry	Excellent	++	Spreading	to 12	Large
<i>Hedera helix</i> English Ivy	Poor	++	Very Spreading	to 12	Large
<i>Hypericum calycinum</i> Aaron's Beard	Good	++	Upright	12-15	Medium - Large
<i>Ceanothus prostratus</i> Squaw Carpet	Excellent	++	Spreading	2-6	Medium

Footnotes for Table A-2

**Drought Tolerance:** Excellent - Little supplemental water needed during the dry season  
Very Good - Occasional watering needed 2-4 times during the dry season.  
Good - Requires moderate water (about once a month during dry season)  
Fair - Requires watering every 2-3 weeks.  
Poor - Needs frequent watering (every week to 10 days or more)

The above applies to established plants. Newly planted areas will require substantially more water.

**Erosion Control:** Each species is evaluated as to whether it is good (++), fair (+), or not recommended for steeper slopes (30-60°).

**Growth Habit:** Very Spreading - Trailing stems or creeping along the ground.  
Spreading - Stems grow horizontally for short distances.  
Semi Upright - Plants grow more or less vertically and forming clumps.  
Upright - Plants distinctly vertical with little lateral spreading.

**Scale of Use:** Small - Best suited as a small-scale ground cover (limit use to a few hundred square feet)  
Medium - Good ground cover for medium sized areas.  
Large - Large area ground cover

Conceptual Park Plan.....	3
Trail System.....	5
 <b>Appendix</b>	
Letter from Washoe County Dept. of Parks and Recreation .....	A-1

## Open Space Management Plan

This plan has been prepared to comply with the Conditions of Approval for Southwest Pointe (Case No. DA9-1-93). Specifically, the following conditions are relevant:

28. Prior to the approval of the final development agreement, an open space management plan and map shall be prepared that specifies the ownership of open spaces, type of uses allowed, phasing of open space dedication, phasing of trail construction and who is responsible for maintenance. This plan shall address the provisions of Section 110.408.45 of the Development Code. Common areas shall be maintained by the homeowner's association and provisions be made for perpetual funding for maintenance. Prior to approval of the final development agreement, a government entity (e.g., United States Forest Service, Washoe County Parks Department, etc.) or a non-profit organization (e.g., Washoe Parks Foundation) shall be identified that will accept the dedication of the open space buffers identified on the Concept Plan, which consists of approximately 1,500 acres.
29. The final development agreement shall include a provision for public open space that prohibits the sale of any open space without the consent of Washoe County.
30. A minimum 10-acre public park site shall be offered for dedication to the county. A sketch plan will be included in the final development agreement. The final park design shall be mutually agreeable to the county and the developer. The developer will construct the recreational facilities in the park and then be reimbursed for the cost of the construction from the Residential Construction Tax. The responsibility of park maintenance shall be negotiated by the developer and Washoe County prior to the approval of the final development agreement.
31. The developer will work together with staff from the Department of Parks and Recreation to locate the proposed regional public trails to the satisfaction of Washoe County and the developer.

This Open Space Management Plan has been prepared to address these conditions. This document was approved by Karen Mullen, Assistant Director of the Washoe County Department of Parks and Recreation. (Refer to attached letter.)

## **Neighborhood Park**

A neighborhood park is planned near the entrance to Southwest Pointe. As shown in Figure 1, the park will be constructed on the south side of Whites Creek Lane and on the east side of Thomas Creek. If the Washoe County Parks Commission and the Board of County Commissioners will allow the developer to construct the park pursuant to a construction and dedication agreement acceptable to the county and the developer, then the park will be dedicated to Washoe County after the improvements have been completed; however, the land will be placed in escrow prior to commencement of construction. Southwest Pointe Partners or its successor will be reimbursed for the cost of the improvements from fees collected in Southwest Pointe from the Residential Construction Tax. All funds collected from the Residential Construction Tax from this project will be dedicated to reimbursement of the developer to the extent of the costs incurred, subject to the limitations of NRS Chapter 27B.

It is important to ensure that recreational facilities are developed in a time frame that coincides with the demands created by development. A construction agreement will be negotiated and construction on the neighborhood park will commence at approximately the time of issuance of the 400<sup>th</sup> building permit and the park will be completed prior to issuance of the 650<sup>th</sup> building permit. Southwest Pointe Partners or its successor will be responsible for preparing a parcel map or final map to create the park parcel.

A conceptual plan of the park is presented in Figure 1. The park is located on the east side of Thomas Creek and on the south side of Whites Creek Lane. This segment of Whites Creek Lane is a public road. The park consists of approximately 15 acres. The area to the east is generally undeveloped with the developed portion of the park located on the western half of the site to take

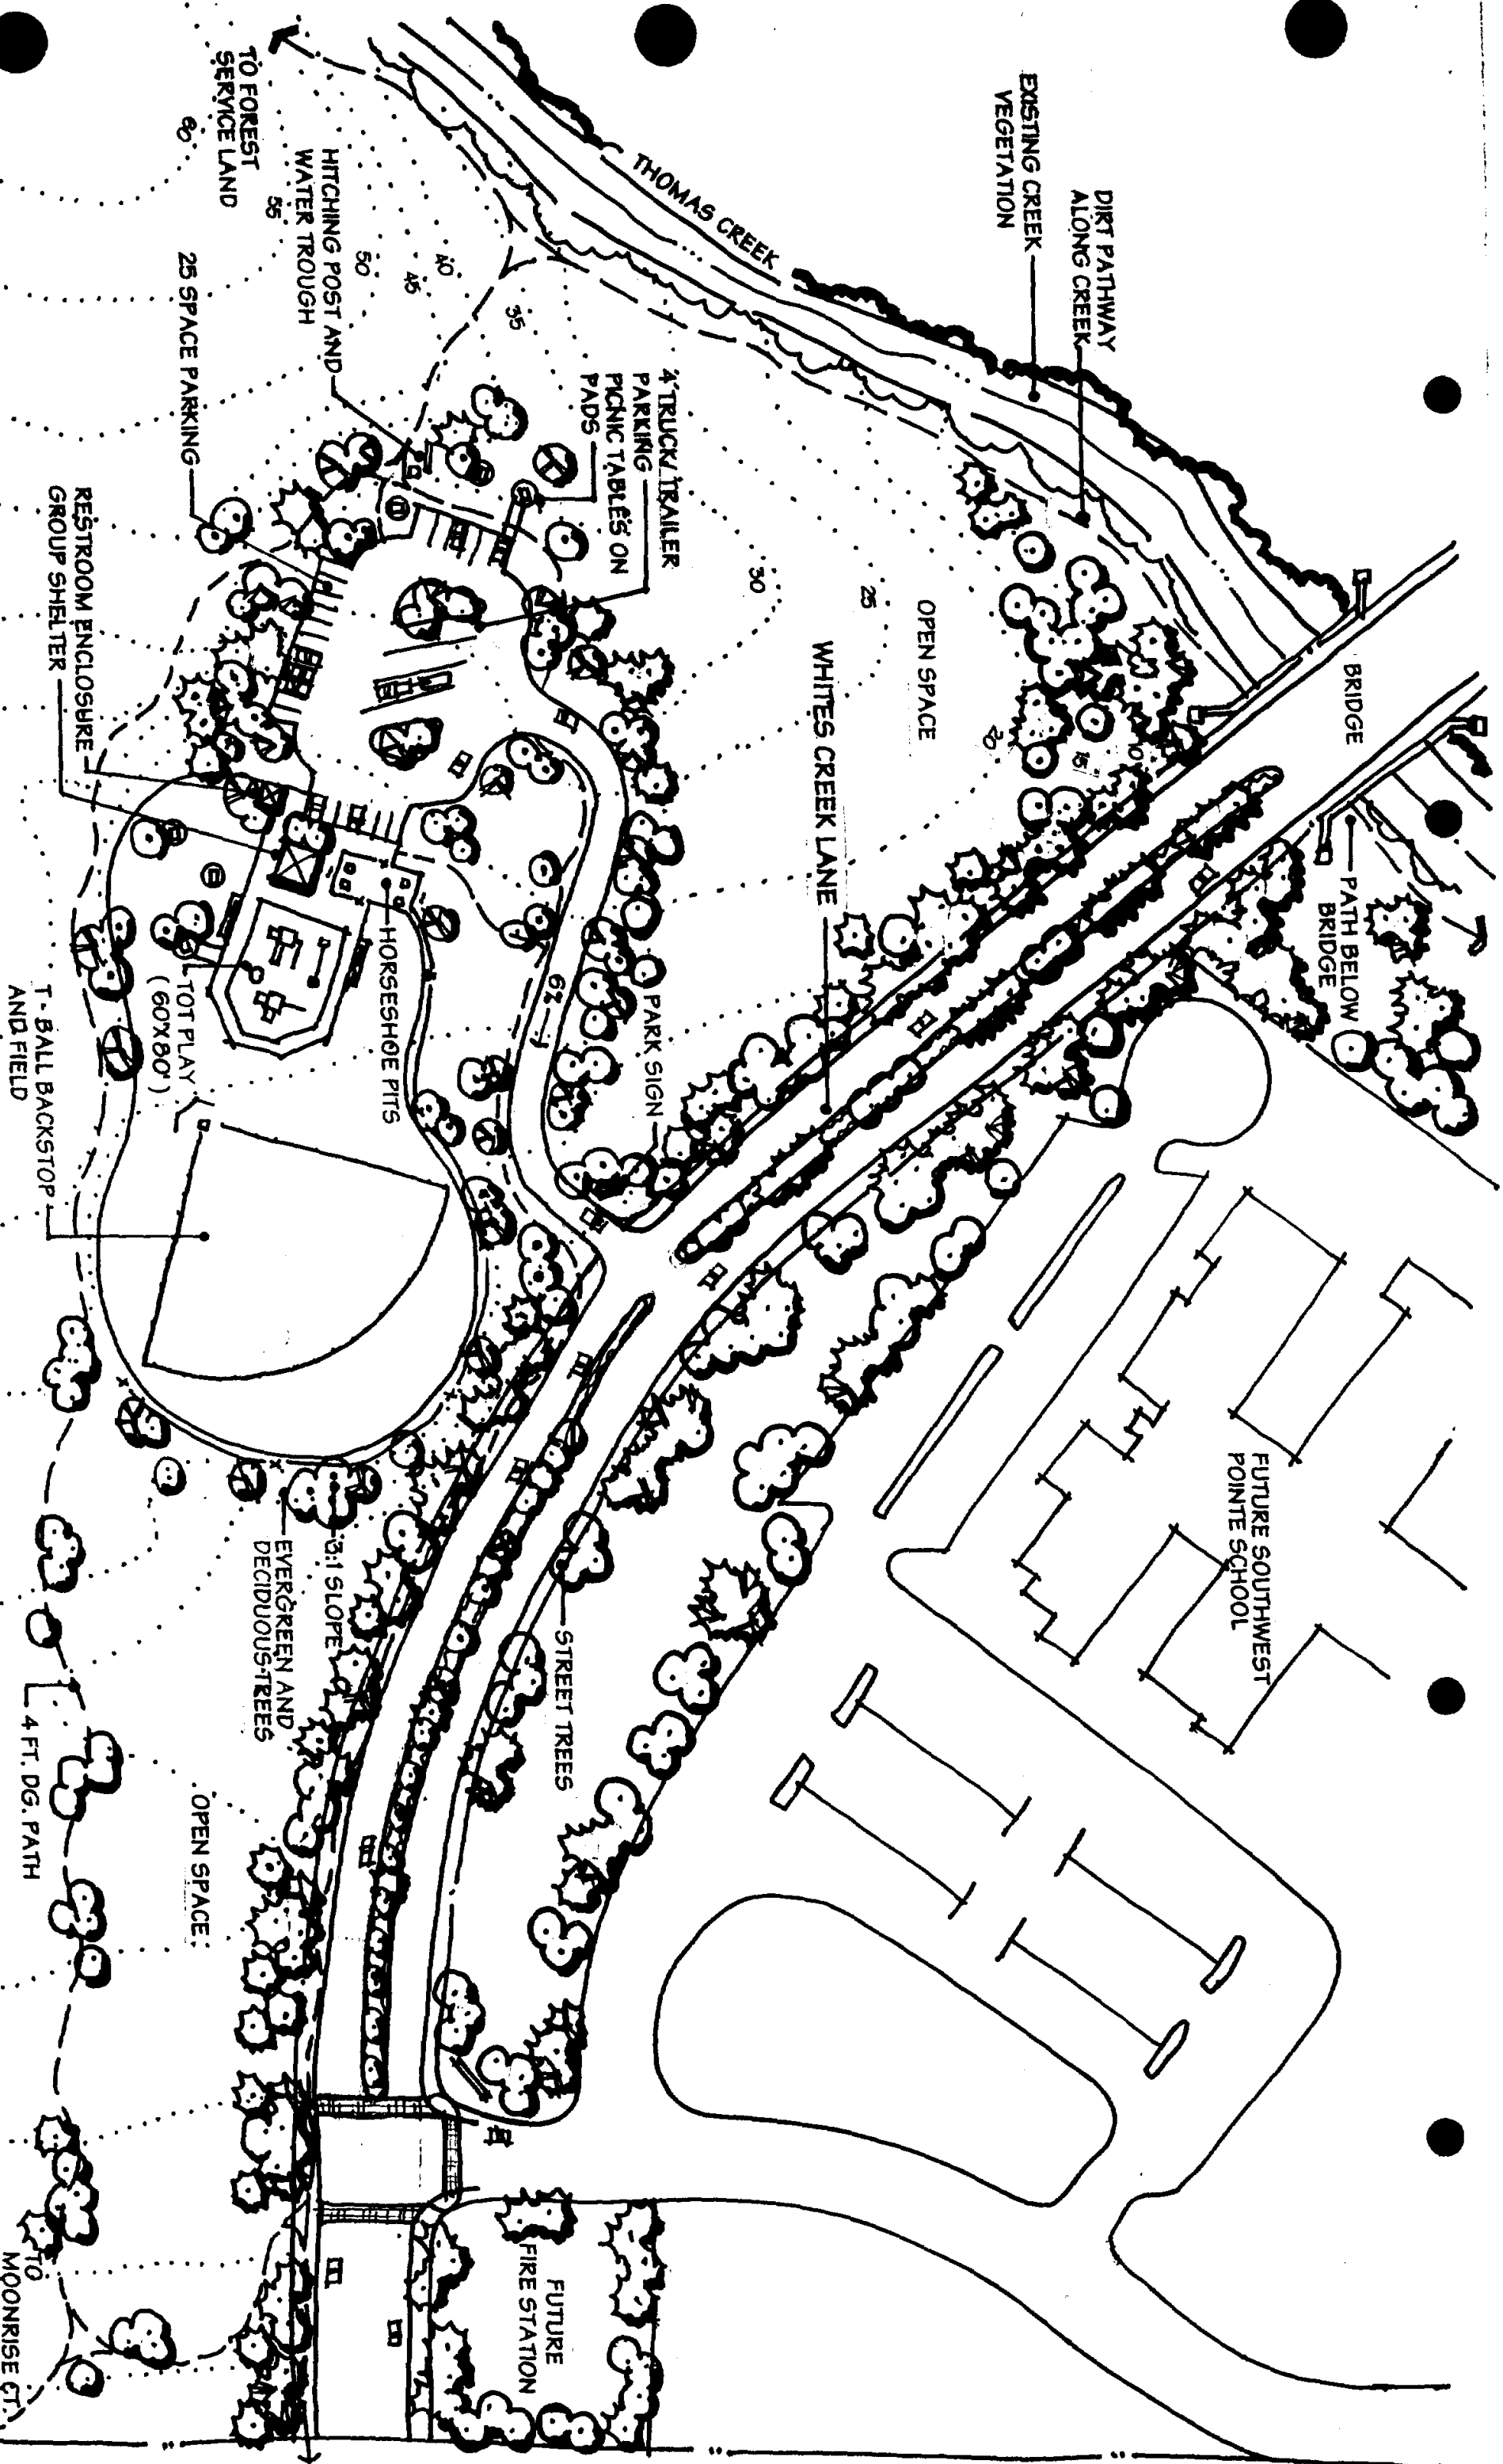

FIGURE 1  
 WASHOE COUNTY NEIGHBORHOOD PARK AT EAST ENTRY - 15 ACRES

SCALE: 1" = 100'

advantage of the creekside location. Proposed facilities include a children's play area, "T" ball field, landscaped areas, trail head, parking areas (for passenger vehicles and truck/trailers), paths, and individual and group picnic areas. The "T" ball backstop is proposed for the lawn area, with 4-foot tall fencing along the perimeter. A hitching post and water trough are proposed for horses entering the regional trail system along Thomas Creek. The ball field will not be lit since lighted fields are available at the nearby South Valleys Regional Sports Complex. These facilities have been identified after meetings with the staff of the Washoe County Parks and Recreation Department.

Washoe County will be responsible for maintenance of the park once it has been dedicated to the county. Since the park is located along the main entrance road into Southwest Pointe, the landscaping along Whites Creek Lane and transitioning into Thomas Creek will be embellished beyond what is typically found in county parks. The Department of Parks and Recreation has agreed to maintain the landscaping that will be installed along Whites Creek Lane within the boundary of the park.

## **Multi-Purpose Trails**

The proposed public trail system is shown in Figure 2 and is consistent with Washoe County's master plan for this park district. Public trails are proposed along Thomas Creek for access to the Mt. Rose Crest Trail and trailhead and around the northern portion of the project for access to the MacKay Fair Flume Trail and the U.S.F.S. parcel in Section 11, which is proposed for a future community or regional park. Both trails provide access to the Sierra Base Trail, which eventually ties into the Hunter Lake Trail. Portions of the Sierra Base Trail are located on U.S.F.S. property and other portions, especially near Dry Creek, are located on Southwest Pointe. It will be necessary to relocate portions of the existing dirt road because of golf course and residential development along Dry Creek. In total, approximately 6 miles of public trails are proposed. In addition to the trails mentioned above, the Department of Parks and Recreation anticipates linking Whites Creek and Thomas Creek with a trail.

FIGURE 2  
PUBLIC TRAIL SYSTEM

*Handwritten signature and date:*  
6/12/96

A system of internal private trails that connect to the public trails will be developed, and the location will be determined by the internal street system and/or parcelization. Southwest Pointe Partners or their successor will be responsible for construction and maintenance of all private trails.

Access to the public trail system will be available at several locations. The only access point with public parking will be at the neighborhood park, which will include the trailhead and parking areas. Access for individuals without vehicles is available from Whites Creek Lane, Zolezzi Lane, the neighborhood park, and the future regional or community park in Section 11. Motorized vehicles will be prohibited. The trails will be available for use by hikers, bicyclists, pedestrians, and equestrians.

The public trails will be constructed in the open space around Southwest Pointe. The trails will be located in a manner acceptable to Southwest Pointe Partners or their successor and the Washoe County Department of Parks and Recreation. Construction and maintenance of the trails will be the responsibility of Washoe County. When construction of the first 18-hole golf course is completed, the open space along Thomas Creek adjacent to the golf course and Phase I residential areas will be dedicated to Washoe County. Should the county desire to construct the trail along Thomas Creek in conjunction with construction of the golf course and/or the Phase I residential area, the developer will offer an easement or other acceptable entry agreement for this purpose, with language acceptable to both parties. These easements will ultimately be dedicated on future applicable final maps.

The staff of the Washoe County Department of Parks and Recreation has also expressed interest in stocking Thomas Creek with fish through the Urban Fisheries Program. To accomplish this work, vehicular access to the creek is necessary. Two locations for vehicular access are proposed -- one is at the neighborhood park and the other is off of the maintenance road to the existing water tanks.

## Open Space

The site plan identifies approximately 1,500 acres of natural open space. The open space is located around the periphery of the project and provides a generous buffer between Southwest Pointe and all adjacent properties. Within the project itself, the goal is to create an open feeling through the lot layout, controls on fencing, siting of homes, and development of 36 holes of golf that meander through the neighborhoods.

As explained previously, to facilitate development of a public trail system along Thomas Creek, the open space along the creek will be dedicated or an easement will be granted when the first golf course is completed. The remaining open space will be dedicated as development progresses. With each final map on land adjacent to open space, an open space parcel will be created. When the map is recorded, the open space parcel will be deeded to Washoe County.

Only minimal disturbance of the natural habitat will be allowed. Deed restrictions shall restrict future use to open space. Motorized vehicle use by the public will be prohibited. Some of the permitted uses will include public trails, emergency access roads, water tanks and associated maintenance roads, fire breaks, stormwater detention ponds, and any other utility uses necessary to serve the project. Any non-open space related improvements made by the developer in the open space shall remain the responsibility of Southwest Pointe Partners or their successor. Any improvements made and/or owned by Washoe County or another public entity will be the responsibility of that entity to maintain. Public access to designated wetlands will be restricted and seasonal restrictions and/or regulated recreational use in areas identified as key mule deer habitat will also be enforced. Provisions will be made for these types of uses and restrictions at the time of deeding.

Prior to dedication or grant of easements of the open space to Washoe County, Southwest Pointe Partners or their successors will be responsible for any maintenance that may be required. Possible maintenance activities may include debris and litter removal, fire prevention measures required by the Nevada Division of Forestry, and measures for habitat enhancement for mule deer that may be developed in consultation with the Nevada Department of Wildlife.

Washoe County will be responsible for any maintenance activities required on property that is under its control. Maintenance activities for which the county is responsible may be identified by Southwest Pointe Partners or their successor at the time of deeding.

On residential lots adjacent to open space, fences should be used sparingly and with consideration for protection of privacy for key outdoor areas on the lot, safety, or animal control. Lot perimeter fencing is allowed. Specific design details are included in the Development Standards Handbook and may also be addresses in the CC&Rs. Proposed locations for perimeter lot and golf course fencing are shown in the Development Agreement, Exhibit F, Sheet 1 Site Plan - Layout.

ARROWCREEK SUBDIVISION UNIT 25  
COMMON AREA MAINTENANCE EASEMENT

A parcel of land being a portion of Parcel 1A of Subdivision Tract Map 3944, File Number 2543082, of the Official Records of Washoe County, Nevada, situate in Section 22 and Section 23, Township 18 North, Range 19 East, M.D.M., Washoe County, Nevada, and more particularly described as follows:

Beginning at a point on the Northeasterly boundary of said Parcel 1A from which the South Quarter Corner of said Section 22 bears South  $37^{\circ}41'52''$  West a distance of 4321.76 feet; thence along said Northeasterly boundary South  $31^{\circ}21'11''$  East a distance of 27.61 feet; thence departing said Northeasterly boundary South  $33^{\circ}30'51''$  West a distance of 78.04 feet;

thence South  $35^{\circ}18'10''$  East a distance of 11.45 feet;

thence South  $46^{\circ}56'35''$  East a distance of 225.76 feet;

thence from a tangent which bears South  $84^{\circ}28'21''$  East, along a circular curve to the right with a radius of 170.32 feet and a central angle of  $54^{\circ}58'13''$  an arc length of 163.41 feet;

thence South  $29^{\circ}30'08''$  East a distance of 125.15 feet;

thence along a tangent circular curve to the right with a radius of 50.00 feet and a central angle of  $43^{\circ}08'40''$  an arc length of 37.65 feet;

thence South  $13^{\circ}38'32''$  West a distance of 99.08 feet;

thence along a tangent circular curve to the right with a radius of 67.00 feet and a central angle of  $28^{\circ}32'21''$  an arc length of 33.37 feet;

thence South  $42^{\circ}10'53''$  West a distance of 5.81 feet;

thence along a tangent circular curve to the left with a radius of 13.00 feet and a central angle of  $100^{\circ}06'03''$  an arc length of 22.71 feet;

thence with a non-tangent line South  $34^{\circ}55'00''$  West a distance of 6.44 feet;

thence from a tangent which bears North  $55^{\circ}5'00''$  West, along a circular curve to the right with a radius of 100.00 feet and a central angle of  $10^{\circ}52'40''$  an arc length of 18.99 feet;

thence along a tangent circular curve to the left with a radius of 224.50 feet and a central angle of  $10^{\circ}40'17''$  an arc length of 41.81 feet;

thence with a non-tangent line North  $35^{\circ}03'20''$  East a distance of 14.50 feet;

thence from a tangent which bears South  $54^{\circ}52'52''$  East, along a circular curve to the left with a radius of 5.00 feet and a central angle of  $82^{\circ}56'15''$  an arc length of 7.24 feet;

thence North  $42^{\circ}10'53''$  East a distance of 7.50 feet;

thence along a tangent circular curve to the left with a radius of 25.00 feet and a central angle of  $28^{\circ}32'21''$  an arc length of 12.45 feet;

thence North  $13^{\circ}38'32''$  East a distance of 132.01 feet;

thence along a tangent circular curve to the left with a radius of 20.00 feet and a central angle of  $60^{\circ}35'07''$  an arc length of 21.15 feet;

thence North  $46^{\circ}56'35''$  West a distance of 228.26 feet;

thence from a tangent which bears North  $79^{\circ}43'41''$  West, along a circular curve to the right with a radius of 163.50 feet and a central angle of  $44^{\circ}25'31''$  an arc length of 126.77 feet;

thence North  $35^{\circ}18'10''$  West a distance of 114.80 feet;

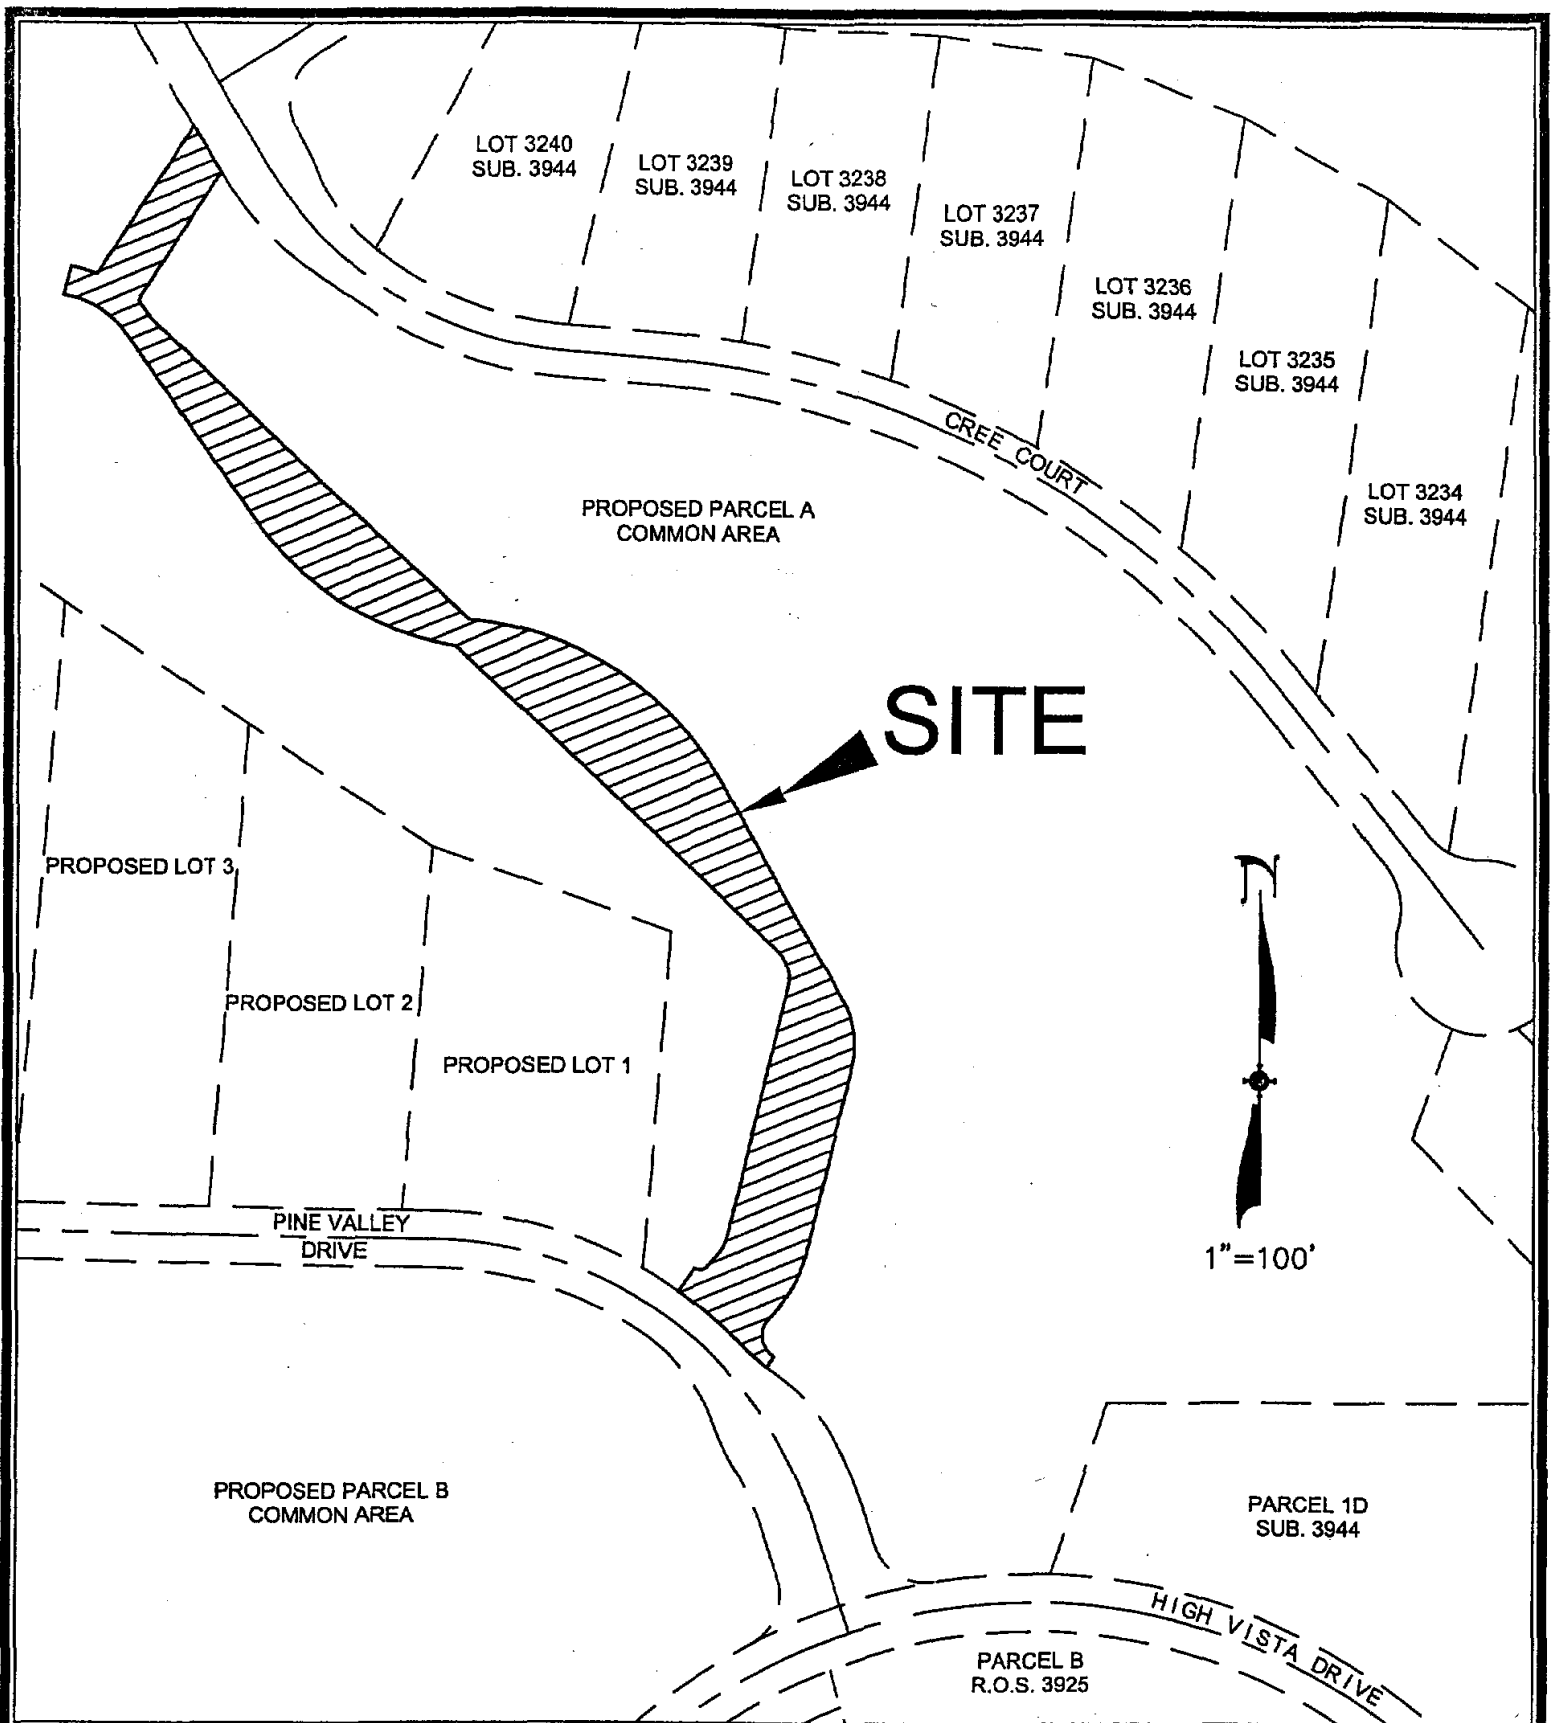

thence along a tangent circular curve to the left with a radius of 48.50 feet and a central angle of  $45^{\circ}49'53''$  an arc length of 38.80 feet;  
thence with a non-tangent line North  $14^{\circ}47'00''$  East a distance of 15.06 feet;  
thence from a tangent which bears South  $79^{\circ}43'58''$  East, along a circular curve to the right with a radius of 63.50 feet and a central angle of  $12^{\circ}25'11''$  an arc length of 13.76 feet;  
thence with a non-tangent line North  $33^{\circ}30'51''$  East a distance of 90.43 feet to the Point of Beginning.

Said parcel contains an area of approximately 26,907 square feet.

BASIS OF BEARINGS: Nevada State Plane Coordinate System, West Zone Grid, NAD83, per said Subdivision Tract Map 3944.

**COMMON AREA MAINTENANCE EASEMENT**  
**(Drainage)**

THIS GRANT OF EASEMENT, made and entered into this \_\_\_\_ day of \_\_\_\_\_  
2001, by and between **SOUTHWEST POINTE ASSOCIATES, L.L.C.**, a Delaware limited liability  
company, hereinafter referred to as "Grantor"; and **ARROWCREEK HOMEOWNERS**  
**ASSOCIATION**, a Nevada nonprofit corporation, hereinafter referred to as "Grantee".

**WITNESSETH:**

For and in consideration of the sum of One Dollar (\$1.00) and other good and valuable  
consideration, receipt is hereby acknowledged, Grantor hereby grants to Grantee a permanent  
easement for the purpose of use, repair and maintenance of a drainage ditch and related drainage  
facilities as common area (as defined in that certain Declaration Of Covenants, Conditions And  
Restrictions recorded on October 17, 1997 as Document No. 2145699 in the office of the Recorder  
of Washoe County, Nevada) upon, over, across and through the land herein described, together with  
the perpetual right to enter upon said land to maintain and repair said common area.

The easement granted hereby is located in the County of Washoe, State of Nevada, more  
particularly described in Exhibit "A", attached hereto and by this reference made a part hereof.

This is a nonexclusive grant of easement and to the extent that other uses do not interfere with  
the use of said easement by Grantee as permitted herein, Grantor, its successors and assigns, shall be

permitted to use the same for any purpose it may desire. Grantee shall give reasonable prior notice to Grantor of any work to be performed on the easement area, and Grantee shall cooperate and diligently work to avoid unreasonable interference, disturbance, safety hazards, or impairment to Grantor's golf course operations or play.

The covenants and agreement herein contained shall inure to the benefit of and shall be binding upon the executors, administrators, heirs, successors and assigns of the parties and shall be, and are, covenants running with the land binding upon said property of Grantor and for the benefit of Grantee.

TO HAVE AND TO HOLD, said easement and right-of-way unto the Grantee and unto its successors and assigns forever.

IN WITNESS WHEREOF, Grantor hereto has executed this Grant of Easement the day and year first above written.

Re: Drainage and Water Line Easements

Dear Rich:

Enclosed please find easements for signature. These easements have been redrafted now that we have verification of ownership of the real property involved. You will need to fill in the APNs on these easements prior to completion of the documents. You will also need to remove the original exhibits from the old drafts previously sent to you, and attach them to these documents. If you wish to return these easements to me, I will get them recorded, or you can submit them to the title company for recording.

Sincerely,

ROBERT M. SADER

**EASEMENT FOR WATERLINE AND  
EMERGENCY ACCESS RIGHT-OF-WAY**

THIS GRANT OF EASEMENT, made and entered into this \_\_\_\_\_ day of \_\_\_\_\_, 2001, by and between **SOUTHWEST POINTE ASSOCIATES, L.L.C.**, a Delaware limited liability company, hereinafter referred to as "Grantor"; and the **COUNTY OF WASHOE**, a political subdivision of the State of Nevada, hereinafter referred to as "Grantee".

**WITNESSETH:**

For and in consideration of the sum of One Dollar (\$1.00) and other good and valuable consideration, receipt is hereby acknowledged, Grantor hereby grants to Grantee a nonexclusive permanent easement and right-of-way for a water transmission line, access road and related facilities as well as access for emergency vehicles upon, over, across and through the land herein described, together with the perpetual right to enter upon said land to construct, reconstruct, maintain and repair said water transmission line and access road at Grantee's expense and the further right to remove trees, bushes, undergrowth and other obstructions interfering with the location, construction and maintenance of said water transmission line and access road.

The easement and right-of-way granted is situate in the County of Washoe, State of Nevada, more particularly described in Exhibit "A" attached hereto and by this reference made a part hereof.

This is a nonexclusive Grant of Easement and to the extent that other uses do not interfere with the use of said easement by Grantee as permitted herein, Grantor, its successors and assigns, shall be permitted to use the same for any purpose they may desire. Grantee shall be responsible for repair of damage caused by repair and maintenance.

The covenants and agreement herein contained shall inure to the benefit of and shall be binding upon the executors, administrators, heirs, successors and assigns of the parties and shall be, and are, covenants running with the land binding upon said property of Grantor and for the benefit of Grantee.

TO HAVE AND TO HOLD, said easement and right-of-way unto the Grantee and unto its successors and assigns forever.
